Le président: Nous avons pris note de votre observation, monsieur Barrett. Pour la gouverne de ceux qui viennent d'arriver, j'ai présenté au Comité un télégramme reçu de la part de l'Association des produits chimiques agricoles. Comme nous étions en train de discuter le bill C-157 et de la possibilité de poursuivre nos travaux en ce sens, j'ai cru que je

[Text]

Committee and to the Chemical Association to present it to the meeting. It reads as follows:

Re our telegram concerning our request to appear before the Standing Committee in respect to Bill C-157. We would advise for your further information that our concern lies with the lack of a right of appeal under the Act should a registration be refused and with Clause 5 sub-clause (d) and (e) of the Bill as regards the regulations

[Interpretation]

me devais de lire le télégramme de cette association.

«Rappel: Notre télégramme relatif à notre demande de comparaître devant le Comité permanent à l'égard du bill C-157. A titre de renseignement supplémentaire, nous nous inquiétons surtout de l'absence de droit d'appel dans la loi pour les cas où l'enregistrement est refusé, ainsi que de l'article 5, paragraphes d) et e) du bill, à l'égard du règlement.»

• 0945

Now, at that point we discussed it but avoided arriving at a decision, feeling that we would like to have the advice of the witnesses and then the Committee will make a decision.

Mr. Williams, do you have some comments?

Mr. Clermont: Mr. Chairman, again when you say we would like to have the advice of the witnesses, I am sorry to say I do not like your expression. We should be able to make up our minds if we agree that those people should be called as witnesses. I do not like the expression that we should have the advice of the witnesses.

The Chairman: Maybe I am expressing a personal opinion, but I would like to have the advice of the witnesses.

Mr. Clermont: Yes, but the other members may not like to have their advice.

The Chairman: Is there any difference of opinion?

Mr. Douglas: Mr. Chairman, I do not think there is really a difference of opinion, but perhaps the word "comment" would be more acceptable than the word "advice".

The Chairman: I would accept that correction.

Mr. Danforth: I feel that since this is a Bill that has considerable effect on the industry that has made this request, they should have ample opportunity to present their feelings and although they have stipulated two particular parts of this Bill, we may find that they have other advice and suggestions to give which may affect other clauses of this Bill.

I think since we are starting out under the new provisions and the new rules we will, of course, have to go carefully, but I feel that the industry in this case has every right to make such an appeal and I think the Committee would be remiss in its obligations to try to

A ce moment-là, nous en avons discuté mais nous n'avons pas pris de décision croyant qu'il serait préférable d'entendre d'abord les conseils de nos témoins. Monsieur Williams, auriez-vous quelque chose à dire à ce sujet?

M. Clermont: Encore une fois, monsieur le président, quand vous dites que nous voudrions avoir les conseils des témoins, je regrette de dire que je n'aime pas du tout cette expression. Nous devrions être capables de décider nous-mêmes si oui ou non une personne doit comparaître à titre de témoin. Je n'aime pas du tout l'idée ou l'expression que nous devrions avoir l'avis des témoins.

Le président: Disons que j'exprime une opinion personnelle, mais j'aimerais avoir l'avis des témoins.

M. Clermont: Peut-être que les autres membre ne sont pas du même avis?

Le président: Y a-t-il une divergence de vue à ce sujet?

Mr. Douglas: Monsieur le président, je ne crois pas qu'il y ait vraiment une divergence de vue, mais je crois que l'expression «commentaires» serait préférable au mot «conseils».

Le président: D'accord.

M. Danforth: J'ai l'impression qu'étant donné qu'il s'agit d'un bill ayant des répercussions considérables sur l'industrie qui a formulé cette demande, on devrait leur donner tout le loisir de formuler leurs opinions. Même s'ils ont précisé deux parties du bill, peut-être qu'ils ont d'autres opinions ou d'autres suggestions pratiques à nous communiquer touchant les autres parties du bill. Étant donné que nous nous réunissons maintenant en vertu du nouveau Règlement, nous devons peut-être être prudents, mais j'estime que l'industrie a le droit de faire cette demande et je crois que le Comité manquerait gravement à son devoir qui est de présenter le meilleur

[Texte]

make as good a Bill as possible if it did not take advice from whatever authentic source it may come.

I would certainly support Mr. Clermont's contention that first, the Committee has the right to decide whether or not it shall hear witnesses and second, that this request be given the sympathetic consideration it deserves and we do invite them to make a representation in regard to the regulations.

Mr. Gleave: I think I, along with Mr. Clermont, raised the question of whether the request of this particular group should be complied with. I think it should be complied with. They have some matters they want to bring to this Committee before the Bill is passed and I think they should have the opportunity.

In regard to the question you put to the meeting as to whether or not we should hear from the witnesses, well, I would understand that the Minister is a member of this Committee—he is not? My stand on this is that the witnesses are here to provide information, to give us advice on matters of procedure. I do not think they are here to give us advice on who we call before this Committee. That is my opinion.

The Chairman: I am not sure that they are here to advise us on matters of procedure. I think that is within our own control. I think they are here to advise us as to the implications of the Bill, and so on.

Mr. Gleave: Right; agreed, Mr. Chairman.

Mr. McKinley: Mr. Chairman, I think from the very fact that these people have asked to appear here there must be something they do not think we are aware of, and there must be something they think is being jeopardized to a certain extent or they would not have asked for permission to appear here. I think they should be invited to appear.

The Chairman: Thank you, Mr. McKinley.

M. Lessard (Lac Saint-Jean): Monsieur le président, je voudrais avoir un renseignement. L'article 5 de ce Bill est-il formulé de la même manière que dans la loi qui sera remplacée? Parce qu'à l'article 13, il est prévu que:

la loi sur les produits antiparasitaires, chapitre 209 des Statuts révisés,

sera remplacée par ce projet de loi. Dans cette loi, au chapitre 209, l'article équivalent

[Interprétation]

bill possible, si nous n'acceptons pas les conseils qui nous viennent de part et d'autre.

J'appuie donc ce que M. Clermont a dit à l'effet que, premièrement, le Comité doit décider si oui ou non il entendra les témoins, et deuxièmement, nous devrions accueillir avec sympathie cette demande, et les inviter à nous faire part de leurs opinions à l'égard des règlements.

M. Gleave: Je crois que, de même que M. Clermont, j'avais soulevé cette question de l'accueil à faire à la demande de ce groupe particulier. Je crois que nous devrions y donner suite, surtout si le groupe a quelque chose à dire au Comité avant que la loi soit adoptée. On devrait leur en donner l'occasion.

Quant à la question que vous avez posée aux députés, à savoir si nous devrions entendre les témoins, je crois comprendre que le ministre fait partie du Comité. Non? Il ne l'est pas? Mon attitude à cet égard est que les témoins sont ici pour fournir des renseignements, pour nous conseiller sur les questions de procédure. Je ne crois pas qu'ils soient ici pour nous aviser quant aux témoins à convoquer, du moins c'est mon opinion.

Le président: Je ne suis pas du tout certain qu'ils soient ici pour nous aviser au sujet des questions de procédure qui relèvent de nous effectivement. Je crois qu'ils sont ici pour nous conseiller quant aux répercussions que le bill pourra avoir.

M. Gleave: Je suis de votre avis, monsieur le président.

M. McKinley: Monsieur le président, je crois que le seul fait que ces personnes aient demandé à comparaître signifie qu'elles constatent quelque chose que nous ignorons peut-être, et qui pourrait constituer une menace. Autrement ils ne nous auraient pas demandé la permission de comparaître. Je crois que nous devrions leur donner cette permission.

Le président: Monsieur Lessard.

Mr. Lessard (Lac-Saint-Jean): Mr. Chairman, I would like to get some information. Is clause 5 which we find in the bill, drafted in the same way as in the Act which is to be replaced? Because clause 13 provides that:

The Pest Control Products Act, chapter 209 of the Revised Statutes of Canada

will be replaced by this bill. In this Act, in chapter 209, was the terminology exactly the

[Text]

sur les règlements était-il exactement le même? Il est probable que si l'article est formulé de la même façon et que la compagnie a eu une expérience malheureuse, à cause de cet article, c'est pourquoi elle s'inquiète.

• 0950

Nous ne connaissons pas les règlements établis par le gouverneur en conseil, on ne nous les a pas donnés, mais ils empêchent peut-être justement cette compagnie-là d'atteindre ces buts. Évidemment, si ses buts ne sont pas louables c'est une autre question.

Mr. Barrett: Mr. Chairman, I think we should ask them here. I feel that while I might deny their problems here, I would not want to deny their right to come here if they have requested it.

Mr. Olson: I think we should bear in mind that what this Committee is now doing is legislating in a substitute or a replacement forum for the process of legislation that formerly took place in the committee of the whole House on the floor of the House. Of course, at that position there was no opportunity for witnesses to be called to appear before that Committee of the Whole and, indeed, even the officers from the Department who are here, who were, in fact, invited to sit as advisers in the Committee of the Whole could not speak even in that position.

So let us bear that in mind. When a matter is referred to a standing committee it is, of course, usually for the purpose of making an investigation. In those cases, of course, there is the matter of calling witnesses and it is usually, and in my view quite properly done, that is, to call outside witnesses.

I do not take any absolute objection to calling outside witnesses before this Committee even when we are legislating, but I think we had better bear in mind that there is a substantial difference between what we are doing now and what is contained in the terms of reference for this Committee or any other standing committee to do a job of investigating.

And the other point that was made, while the Minister was a member of that Committee by reason of being a member of the House, he has not been elevated to the position of being a member of this Committee yet, although perhaps he ought to be. Insofar as the two matters that have been raised, that they should have the right of appeal of a

[Interpretation]

same in the corresponding section on Regulations? It is probable that if the clause is drafted in the same manner and the company has had an unfortunate experience because of this section, the company is showing concern for this reason.

We do not know the regulations which were established by the Governor in Council, we were not informed of them, but it is perhaps precisely these regulations which prevent that company from reaching its objective. Obviously, if its objectives are not laudible, that is another matter.

M. Barrett: Je crois que nous devrions peut-être leur demander de venir. Même si je ne suis pas de leur avis quant aux difficultés soulevées, je ne voudrais pas leur nier le droit de comparaître devant nous.

M. Olson: J'aurais deux choses à dire. Je crois qu'il ne faut pas oublier qu'à l'heure actuelle le Comité légifère à la place, ou constitue le forum qui remplace effectivement le comité plénier de la Chambre.

Le comité plénier n'avaient pas le loisir d'appeler de témoins et, en fait, même les fonctionnaires du ministère qui sont ici, ont été invités, de conseiller le comité plénier et n'ont pas eu le droit de parole.

Gardons cela à l'esprit. Lorsqu'une question est maintenant déferée à un comité plénier, normalement, c'est pour mener enquête. Dans ces cas-là, évidemment, il y a la disposition qui veille à la convocation des témoins, et, ce qui est fait à mon sens d'une façon presque courante c'est de convoquer des témoins de l'extérieur.

Je ne vois pas d'objection absolue à convoquer des témoins de l'extérieur devant notre comité même quand il s'agit de légiférer, mais je crois qu'il faut nous rappeler qu'il y a une différence marquée entre ce que nous faisons à l'heure actuelle et ce qui est convenu dans le mandat de ce comité ou de tout autre comité permanent quand il s'agit de faire enquête.

Quant à l'autre point soulevé, même si le ministre était membre de ce comité-là à cause de son mandat de député à la Chambre, on n'a pas procédé à sa nomination même s'il elle aurait peut-être dû être faite. Quant aux qu'ils aient le droit d'appel, d'interjeter appel deux questions qui ont été soulevées, soit d'une décision qui a été rendue à l'égard de

[Texte]

decision that is handed down with respect to registration, the question that comes up is: appeal to whom?

It will be a technical matter that is involved and a group of technical people from the Department will decide on the basis of the evidence that they have, using the technical competence that they have with respect to whether—may I have a look at the telegram—they may appeal against a decision for non-registration.

Are we going to then set up another technical committee that they can appeal to, or would it be an appeal back to the same technical people who decided in the first place? Certainly, whether or not it is written specifically and categorically into the Act that they should have a right to reconsideration any time there is any change or new evidence that the technicians can look over, that is one thing, and they would always have that, and they have always had it in the past—a right to reconsideration.

But to ask that it be written into the Act that they have a right to appeal, surely if we are going to be responsible and reasonable, we would have to know who they are going to appeal it to. Back to the same people? On the same evidence that they had in the past? If they ask for reconsideration on some matter that has changed—if technology has advanced and so on—then I can see it.

We would never deny them the right to reconsideration—you could call it reconsideration or an appeal or whatever it is—but I think that if we are going to have that written into the Act, we should also go the next step and say who are they going to appeal it to?

• 0955

With regard to the other two sections, clause 5, subclause (d) and (e), they are questioning what would be in the regulations respecting the registration of controlled products, establishment, inspection, operations and that sort of thing. Well, that is not new. It may not be exactly the same words, and technology has changed, so the regulations may be slightly different. But that kind of provision is contained in all the...

[Interprétation]

l'enregistrement. Je pose cette question, en appeler à qui?

C'est une question technique qui est mise en cause et certains membres du personnel technique du ministère et en jugeront au moyen des preuves qui leur sont soumises en usant de leur compétence, à savoir si—puis-je voir le télégramme—il y a droit d'appel quant au refus d'enregistrement. Allons-nous alors établir un autre comité technique auprès duquel on pourrait interjeter appel ou est-ce l'appel serait renvoyé au même groupe technique qui en avait décidé au tout début?

Évidemment que ce soit ou non mentionné spécifiquement et catégoriquement dans la Loi, qu'il y a droit d'appel chaque fois qu'il y a un changement ou de nouvelles preuves que les techniciens peuvent constater, cela a toujours existé et on a toujours eu le droit de faire réexaminer le cas. Quand on demande que ce soit inclus dans la loi, qu'on ait le droit de faire appel si nous voulons être responsables et raisonnables, il faut savoir à qui on en appellerait. Aux mêmes personnes? D'après les mêmes preuves qu'ils ont eues auparavant? Si on demande un nouvel examen en ce qui concerne les points qui ont changé, la technologie par exemple, là je comprendrais.

Nous ne refuserions jamais la permission de faire examiner le cas à nouveau.

Je crois que s'il faut l'inclure dans la Loi, nous devrions aussi aller un peu plus loin et préciser à qui on interjetterait appel.

Quant à l'article 5, le paragraphe (d) et (e), il s'agit de savoir ce qui se trouverait dans les règlements quant à «l'enregistrement des produits antiparasitaires et des établissements,» ainsi qu'à «l'inspection et l'exploitation des établissements.» Ce n'est pas nouveau. Ce ne sont plus exactement les mêmes mots car la technologie a changé, les règlements changeront peut-être, mais ce genre de disposition est contenue, dans tous...

[Text]

An hon. Member: Other than the establishments, we have never had establishments.

Mr. Olson: Oh, yes, pardon me. Other than the establishments. It seems to me that their advice—and we will seek their advice whether they appear before or after the passage of this Act with respect to making these regulations which will come afterwards. I would caution you insofar as the time factor is involved in calling outside witnesses before this Committee, and yet that is for you to decide. But this is the situation as far as I am concerned in that respect.

I have one other point I may make, and that is that essentially the same thing happens under the Food and Drug Act. There is no right in the statute for anyone to appeal against decisions that are made with regard to this kind of thing under the Food and Drug Act.

Mr. Gleave: Mr. Chairman, I am not particularly interested at the moment in arguing the points which this group has raised. Their arguments may be valid or they may not be valid. What I am interested in is that this group who is going to be affected by this legislation has asked to appear here and put forth their point of view.

I would like to hear what they have to say. If in our opinion, they cannot substantiate their point, well and good. I regret, when we are considering this, that none of the farm groups have taken any interest in it, although this affects, vitally, the farmers and the compensation which they may or may not have to pay. None of the co-operatives—and they are deeply involved in the manufacture of chemicals, at least in Western Saskatchewan and I think they are here in Ontario, or at least they distribute it—none of these people have chosen to appear here and say these regulations affect their members. I do not think anyone has ever been asked. That is for the Chairman to answer, but I do not think anyone has been asked to appear before this Committee.

The Chairman: No one has been asked to appear, and no one has asked to appear other than the group that we are considering at the moment.

Mr. Gleave: Right. Therefore, on this basis, Mr. Chairman, I would move that we grant their request. That motion is in order.

The Chairman: Mr. Danforth?

[Interpretation]

Une voix: Autre que les établissements, nous n'avons jamais eu établissements.

M. Olson: Oh oui, pardonnez-moi. Autre que les établissements. Il semble que leur conseil et nous allons leur demander leur conseil, lorsqu'ils comparaitront, avant ou après l'adoption du projet de loi, quand il s'agira d'établir des règlements, ce qui viendra par après.

En ce qui concerne l'élément temps pour convoquer des témoins de l'extérieur à comparaître devant notre comité, la décision est la vôtre et voilà la situation en ce qui me concerne.

Il y a un autre point aussi que je pourrais peut-être souligner et c'est que la même chose se produit en vertu de la Loi sur les aliments et les drogues. Il n'y a pas de droit d'appel mentionné dans la Loi contre une décision de ce genre en vertu de la Loi sur les aliments et les drogues.

M. Gleave: Monsieur le président, je ne suis pas tout à fait particulièrement intéressé à l'heure actuelle à mettre en doute les arguments soulevés ici. Les arguments sont peut-être valides, peut-être ne le sont-ils pas. Ce qui m'intéresse c'est que le groupe touché par cette mesure législative a demandé tout simplement de comparaître pour nous faire part de leur opinion.

J'aimerais bien savoir ce qu'ils ont à dire. S'ils ne sont pas capables de prouver leur allégations, tant pis, ce que je regrette c'est qu'aucun groupe de cultivateurs n'a porté intérêt à cette mesure législative qui les affecte directement en ce qui a trait aux indemnités. Aucune des coopératives, qui du reste sont profondément engagées dans la fabrication de produits chimiques, surtout dans l'Ouest de la Saskatchewan, et ici en Ontario, personne n'a demandé à comparaître en prétendant que ces règlements toucheraient ses membres. Est-ce qu'on leur a demandé de comparaître? Le président devrait nous répondre, mais je ne crois pas qu'on ait demandé à qui que ce soit de comparaître.

Le président: On n'a demandé à personne et personne n'a demandé à comparaître, sauf le groupe que je viens de mentionner.

M. Gleave: Donc, en nous fondant sur ceci, monsieur le président, je propose donc que nous acceptions leur demande si cette proposition est conforme à l'ordre et recevable.

Le président: M. Danforth.

[Texte]

Mr. Danforth: Mr. Chairman, I would like to make some comments on the statement made by the Minister. I think that we have arrived right at the crunch of the thing. We have a principle involved here. The Minister states that we are dealing with legislation and it is his opinion that perhaps this is not the time to hear witnesses. I fail to understand this in any terms of reference of the Standing Committee. I thought that we did have the power.

Mr. Olson: I did not question that.

Mr. Danforth: Since we have the power to call witnesses, and since we are dealing with legislation that is actually intruding into the normal business operations of an industry, and they make a request to express an opinion before us, I fail to see how we, as Committee members, can do anything else than grant a request that has come through the proper channels in the proper manner. To say when we have legislation before us that we should confine ourselves only to departmental witnesses—and I have no comments against their competence. I think they are very competent, but they are only going to explain actually the provisions of the bill. They cannot interpret to us the effects that will happen when the bill is put into law.

● 1000

I think it is up to us, as a Committee, to investigate both sides of the legislation when it is brought before us. I certainly would lose interest in this Committee if I found that all we were doing was bringing the legislation before us and determining whether or not it was put into legal terms or not. I want to find out the ramifications of this legislation, and I want to know the effects of it before I am prepared to give my stamp of approval on it.

I think that since this is the first occasion this has arisen, I am going to support wholeheartedly Mr. Gleave's contention that these witnesses be allowed to appear before us.

The Chairman: Mr. Pringle?

Mr. Pringle: My question has been partially answered, but I am wondering whether there is some specific information which could be made available to us at this time with regard to the background which could give some explanation to the request for appearance. Has there been some previous discussions or complaints or problems, if you like, with the people who designed the act and if so, could

[Interprétation]

M. Danforth: J'aimerais bien formuler des commentaires au sujet de la déclaration du ministre. Je crois que nous sommes arrivés au cœur même du problème. Quand le ministre dit que nous traitons de mesures législatives, il pense peut-être que ce n'est pas le moment d'entendre des témoins. Je ne comprends pas du tout que cela tombe sous le mandat du Comité. Il semble que nous en ayons le droit.

M. Olson: Je ne mets pas cela en doute.

M. Danforth: Et, alors, si nous avons le pouvoir de convoquer des témoins et puisque nous traitons de mesures législatives, qui s'intercalent réellement dans l'exploitation normale d'une industrie, et que cette industrie nous demande d'exprimer son opinion, je ne vois pas du tout comment nous, à titre de membres du Comité, pouvons agir autrement que d'agréer la demande qui nous est parvenue en bonne et due forme et dire que lorsque nous avons une mesure législative devant nous, nous ne devrions nous limiter qu'aux témoins du ministère. Je ne veux pas mettre en doute leur compétence, mais tout de même, ces témoins nous expliqueront tout simplement les dispositions du bill. Ils ne peuvent certainement pas interpréter pour nous quels seront les résultats lorsque le projet de loi sera mis en vigueur.

Je pense que c'est à nous en tant que Comité d'écouter les deux sons de cloche vis-à-vis de la Loi dont nous sommes saisis. Et certainement, je perdrais tout intérêt dans ce Comité si tout ce que nous avons à faire est d'entendre la lecture du projet de Loi et d'écouter les commentaires à savoir si ce projet est conforme ou non au langage légal habituel. Ce que je voudrais, c'est de connaître les répercussions, les conséquences de ce projet de loi, avant de pouvoir l'approuver.

Étant donné que c'est là la première occasion que nous avons de le faire, je vais soutenir M. Gleave de tout cœur pour que les témoins puissent comparaître.

Le président: M. Pringle.

M. Pringle: Eh bien, on a déjà répondu en partie à ma question, mais je me demandais, s'il y avait des renseignements particuliers, spécifiques, dont nous pourrions avoir connaissance actuellement en ce qui concerne les antécédents, l'historique qui permettrait d'expliquer la raison des demandes de comparution. Est-ce qu'il y a eu dans le passé des discussions, ou des plaintes, ou des problèmes

[Text]

we get an explanation of this, because I have to agree that we would be remiss were we just adopt the attitude that we would not acknowledge the request of witnesses who wished to come here and explain their position with regard to legislation. I find it difficult to argue the point.

Mr. Cobbe: Mr. Chairman, I was wondering if the gentlemen who are here this morning could outline the procedure as it exists with a manufacturer in his request to have an approval of his product; the procedure that is taken and the opportunity that these people have to either appeal or discuss the decision with the people who make this decision.

The Chairman: Do you wish to say something, Mr. Olson?

Mr. Olson: Mr. Chairman, a Cabinet meeting started at 10 o'clock which I must attend at least for a while, because there are some items of concern to the Department. Therefore, I think I ought to go. I would just like to say this and perhaps it is repetitive, however I did not challenge the right of this Committee to call witnesses. I certainly do not do that.

I would like you to bear in mind what the consequences may be if we start to call outside witnesses before a Committee that is legislating, rather than doing a job of investigating, because if this process begins then you would have to take into account the rights of literally dozens of other people to appear before this Committee and also take into account the time factors that are involved in doing this. With that caution, the Committee can decide. The officers from the Department who are here will be very happy to explain the situation with respect to the matter of appeal in other acts and that sort of thing, and also the matter of not only what will happen under this act in writing the regulations, but what has been done in the past. There is no great departure there at all, as far as I can see.

Mr. Barrett: Mr. Chairman, I would like to ask a supplementary question of the Minister before he leaves. We are in the transitional period at this moment between the old and the new. There are other Bills before the Committees of this House—and this is historical in a sense—and they are going through

[Interpretation]

qui sont survenus entre ces personnes et ceux qui ont rédigé le projet de loi?

Et si c'est le cas, est-ce que l'on pourrait entendre ces explications, parce que je dois reconnaître que, d'après moi, nous ne ferions pas ce que l'on doit faire si on ne reconnaît pas les demandes de comparution des témoins qui veulent expliquer leur position vis-à-vis de la Loi. Je pense qu'il serait difficile de repousser ces demandes.

M. Cobbe: Monsieur le président, j'aimerais que les membres ici présents, ce matin, décrivent la procédure que doit suivre un fabricant lorsqu'il veut faire approuver un de ses produits et les possibilités dont ils peuvent se prévaloir lorsqu'ils veulent en appeler d'une décision rendue ou en discuter.

Le président: Monsieur Olson?

M. Olson: Monsieur le président, si vous me permettez, il y a une réunion de cabinet qui a débuté à 10 heures et à laquelle je dois participer, du moins pour un certain temps, car plusieurs points à l'étude concernent mon ministère. Je vais donc devoir vous quitter. Je voudrais simplement vous dire, c'est peut-être une répétition mais, néanmoins, je n'ai pas prétendu que le Comité ne pouvait convoquer des témoins. Je voulais simplement souligner le danger qu'il pourrait y avoir à entendre des témoins de l'extérieur pour un comité qui discute de législation.

Si nous nous engageons sur cette voie, il nous faudra tenir compte du droit de comparaître de douzaines d'autres personnes, qui veulent venir ici, se faire entendre, et d'un certain nombre d'autres facteurs. Il appartient au Comité de décider. Les fonctionnaires du ministère, qui sont ici présents, seront très heureux de vous expliquer la situation en ce qui concerne le droit d'appel dans le cas d'autres lois, de même que, non seulement ce qui surviendra lors de la rédaction des règlements, mais également ce qui s'est passé antérieurement.

M. Barrett: Monsieur le président, avant que le ministre ne parte, j'aimerais lui poser une autre question. Nous passons présentement de l'ancienne méthode à la nouvelle. D'autres Comités de la Chambre étudient d'autres bills. Des témoins ont été convoqués lors de l'étude du bill omnibus de même que

[Texte]

the bills. For instance, on the omnibus bill, they had their witnesses appear, the same as the other Bills. They have gone through that process before arriving at this stage. In other words, this could have, should have or would have been done heretofore. Therefore, we are in the legislative situation, different and contrary to what we may do in the future when we are building up some problems, and we will hold these Committees and have witnesses, many of them, before we formulate any legislation.

Mr. Olson: There is another analogy that could be drawn, I suppose, and that is the one that deals with taxation and indeed the budget bills that come from the Minister's budget speech. There are literally hundreds of people who are vitally concerned with what is involved in those bills. Yet if we were to adopt the system of calling as witnesses everyone who has a very legitimate interest in those bills, I rather doubt we would get very far in actually dealing with the legislation. This is something that you will have to take into account.

• 1005

Mr. Pringle: Mr. Chairman, I agree with that completely, but I think we should take into consideration that we have an organization representing industrial concerns which has apparently taken some exception and feels it would like the opportunity to present its case with regard to this legislation. This is the reason why I was wondering if there is some information that we should have with respect to previous submissions which have been made by this organization which would help solve this and give us the opportunity of making a decision as to whether or not we should support the request. We have just received this this morning without any information or explanation whatsoever as to why they are making the request, other than that they want to be here.

The Chairman: I have Mr. Downey, Mr. Douglas and Mr. Howard. I will recognize Mr. Downey first.

Mr. Downey: Exactly how long is it, Mr. Chairman, since this bill was revised, or since this legislation has had any consideration?

The Chairman: We are amending a bill which was enacted first in 1939.

Mr. Downey: That is 29 or 30 years. Do you not think that in view of the fact that it has been this long that it would certainly be

[Interprétation]

lors de l'étude d'autres bills. Nous sommes appelés à approuver un projet de loi, mais contrairement à ce qui pourrait se passer à l'avenir, nous tiendrons plusieurs séances de Comité et entendrons des témoins avant d'en arriver à la formulation proprement dite du texte de loi.

M. Olson: Il y a également un autre aspect, celui des crédits budgétaires qui découlent du discours du budget. Il y a des centaines de gens qui sont fondamentalement intéressés par ce qui est prévu dans ces projets de loi et, pourtant, si on devait décider de convoquer des témoins, de convoquer toute personne qui a un intérêt légitime dans l'affaire, je me demande jusqu'où nous irions dans le processus d'adoption du projet de loi.

M. Pringle: Monsieur le président, je suis parfaitement d'accord avec cela mais, néanmoins, je pense qu'il faut tenir compte du fait que nous avons ici un organisme représentant des intérêts industriels et qui ont pris offense, en quelque sorte, du fait qu'ils ne peuvent soumettre leur point de vue. Est-ce qu'il n'existe pas certains détails, relatifs aux dépositions déjà faites par cet organisme, qui pourraient nous aider à régler le problème en nous permettant de décider, nous-mêmes, si nous devons ou non accéder à leur demande. On nous donne ce télégramme, ce matin, et nous ne possédons aucune explication sur la raison pour laquelle ils font cette demande.

Le président: M. Downey, M. Douglas, puis M. Howard. Monsieur Downey d'abord.

M. Downey: A quand remonte, monsieur le président, la dernière révision de ce bill?

Le président: Nous sommes en train d'amender un projet de loi qui a d'abord été promulgué en 1939.

M. Downey: Ça fait donc 29 ans. Est-ce que vous ne pensez pas, justement parce que ça fait aussi longtemps, qu'il serait utile d'enten-

[Text]

advantageous to have industry in to give us their recommendations on this? I do not think we can look at everything in the light of the time it takes. We must look at some of these things in the light of the need for better legislation, and we certainly need all the information we can get on this. It is not like the budget, which is revised every year and sometimes two or three times a year.

The Chairman: Thank you, Mr. Downey. We will hear Mr. Williams and then I will recognize Mr. Douglas, Mr. Howard, and Mr. Gauthier.

Mr. S. B. Williams (Deputy Minister of Agriculture): Mr. Chairman, I would not presume to give advice to the Committee, but the question was raised as to whether the witnesses had any information as to the basic reason why they are asking to appear to request, among other things, that an appeal procedure be established. I can only interpret; I cannot give you a firm answer from direct knowledge of my own as to why they are, but I think it would be useful to say that under the new hazardous substances bill there is provision that under Governor in Council authority any hazardous substance can be placed on a prohibited list. The original bill did not allow for an appeal. This association, among others, made representations to the government and an appeal procedure has been established.

I think there is a basic difference between the two bills in that under the previous wording of this hazardous substances bill, the substance could be put on the prohibited list based on no information from the manufacturer or distributor. I think under this bill the Department receives all the evidence that the company or the distributor is able to submit prior to making a decision. Therefore, there is some difference between the two situations. That is all I am saying. I believe that the background of this is that in respect of the hazardous substance act, the act does provide for an appeal.

• 1010

I may say that under our own Fertilizers Act we have, not an appeal procedure, but we have provision for a hearing any time before we can cancel, and it is the intent of this act to provide the same thing by regulation, before we can cancel a registration. I think the same philosophy applies there, namely, that you should allow the people who are going to be affected to make representations prior to an act taking place. Presumably under this act—and we do, as I say, have it

[Interpretation]

dre les responsables de l'industrie nous communiquer leur point de vue à ce sujet. Je ne pense pas que l'on puisse tout étudier compte tenu du temps dont nous disposons. Il nous faut examiner certains points et, surtout, obtenir tous les renseignements possibles. C'est différent du budget qui, lui, est révisé deux ou trois fois par an.

Le président: Merci, monsieur Downey. M. Williams, puis M. Douglas, M. Howard et M. Gauthier.

M. S. B. Williams (sous-ministre de l'Agriculture): Monsieur le président, j'espère que l'on ne croira pas que je donne des conseils au Comité, mais je me demande si les témoins avaient les renseignements concernant les raisons pour lesquelles ils nous demandaient le droit de pouvoir interjeter appel lorsqu'un refus leur est signifié. Je ne peux pas vous donner une interprétation catégorique de la raison pour laquelle ils font cette demande, mais je pense qu'il est bon de dire que d'après le nouveau projet de loi sur les substances dangereuses, il y a une clause qui prévoit que, par arrêté ministériel, il est possible de mettre n'importe quelle substance sur la liste des substances dangereuses. Le bill original ne permettait pas d'interjeter appel. Cette association, ainsi que d'autres, ont fait des requêtes à ce sujet et une procédure d'appel a été créée.

Je pense qu'il y a une différence entre les deux projets de loi, en ce sens que, d'après la loi antérieure sur les substances dangereuses, d'après le texte de la loi, la substance pouvait être mise sur cette liste sans que le fabricant ou le distributeur puisse fournir de détails pertinents à l'affaire. Je crois qu'aux termes du projet actuel, le Ministère reçoit les renseignements que le manufacturier ou le distributeur veut lui communiquer, avant de prendre une décision. Il y a donc une différence.

Je pourrais également ajouter que, d'après la loi sur les engrais chimiques, nous n'avons pas de procédure d'appel; disons que nous avons possibilité d'entendre qui que ce soit avant d'annuler cet enregistrement. Et je pense que cela s'applique ici également. En effet, il faudrait permettre à ceux que la loi touchera de se faire entendre avant que la loi ne soit votée.

Par conséquent, d'après cette loi et comme c'est le cas pour la loi sur les engrais chimi-

[Texte]

under the Fertilizers Act—before we cancel it we give them an opportunity to make representations. We state that we propose to cancel the registration and we give them every opportunity to make representations which, of course, is in the nature of an appeal, as it is under the hazardous substance act. This is an appeal, or a hearing against a product being put on this prohibited list in the other act.

The Chairman: Mr. Douglas.

Mr. Pringle: Could I ask a supplementary question which is related to this very question? Do we have any precedents where registrations have been refused, or have been cancelled and there has been a request for an appeal and an appeal has been granted?

Mr. Williams: I would say that we have many precedents where the Department, in its normal administrative procedures has refused registration and where appeals have been made at various levels from the Minister down, and in these cases it is reconsidered.

I will ask Mr. Jefferson to give you an estimate of the number of appeals that have been refused and allowed. If Mr. Jefferson is unable to furnish these figures we will get them for you.

Mr. C. H. Jefferson (Director of Plant Products Division): Mr. Chairman, further to what Mr. Williams has said, in the normal procedure of registration there is an interplay in the assessment of the evidence that is presented in support of the application for registration and occasions do arise where in the judgment of officials and their advisers there is not sufficient support for a registration. I believe that this area was largely covered at Tuesday's sitting.

The number of standing registrations at the moment is in the neighbourhood of 3,300. They are annual registrations and there is a turnover of somewhere in the neighbourhood of between 300 and 500 products per annum. Old products drop out and new products come in. Against that a rough estimate of the number of contentious refusals to register would be in the order of less than 10, and the number that would reach the director-general's level or beyond the immediate administration of the Act would be in the order of one or perhaps two a year.

The Chairman: Thank you, Mr. Jefferson.

I apologize to Mr. Douglas for having permitted this interjection. Mr. Douglas, you are now recognized.

[Interprétation]

ques, nous leur donnons la possibilité de se faire entendre avant de retirer leur produit. C'est en quelque sorte un droit d'appel semblable à celui qui existe sous l'empire de la loi sur les substances dangereuses.

Le président: Monsieur Douglas?

M. Pringle: Est-ce qu'un enregistrement a déjà été refusé, ou retiré, et qu'un appel ait été interjeté et accordé?

M. Williams: Il existe beaucoup de précédents où le ministère, de par la procédure administrative ordinaire, a refusé d'enregistrer un produit et un appel a été interjeté à différents niveaux.

M. C. H. Jefferson (Directeur, Division de produits végétaux): Monsieur le président, à la suite de ce que vient de dire M. Williams, dans la procédure normale d'enregistrement d'un produit, il y a un échange de vues dans l'évaluation des preuves et des témoignages qu'on entend pour l'acceptation du produit, et il se trouve des cas où de l'avis des responsables, il n'est pas juste et valable d'accepter cette demande. Je pense que nous en avons beaucoup parlé, notamment mardi.

Le nombre de cas qui sont soumis actuellement est d'environ 3,300. Ce sont des enregistrements annuels et il y a un roulement en quelque sorte d'environ 300 à 400 produits par an, c'est-à-dire d'anciens produits qui disparaissent et de nouveaux produits qui apparaissent. Lorsqu'il y a un refus d'enregistrement, c'est seulement dans dix cas sur la totalité de ces cas, et le nombre de ceux qui se rendent au niveau du directeur général ou au-delà se résume à un ou deux par an, en moyenne.

Le président: Merci monsieur Jefferson. Je m'excuse auprès de M. Douglas d'avoir laissé la parole à M. Jefferson. Je lui donne maintenant la parole.

[Text]

Mr. Douglas: My question has been partly answered. I was going to ask how much consultation has been held with chemical people and others interested in the formulation of this proposed act. I presume from some of the answers that there is a more or less constant interplay between people making chemicals and wanting to register them and the Department and I would assume that the reason for this proposed act was to bring the regulations up to date in line with the obvious needs.

• 1015

To go a little further on the question of procedure—and I would not be able to quote any direct statement to this effect—I believe that in our discussions of the rule changes in the House back in December one of the advantages attached to committees being given the responsibility for dealing with legislation at this stage was that we would have the opportunity and the right to call witnesses.

I certainly think there is every justification in this case for acceding to the request of the Chemicals Association to appear before us, and I do not think it would unduly delay our procedures. If we do find that we get involved with too many witnesses and that they are not contributing we would have the right to say, well, that is enough witnesses, we do not want to spend any more time at that, and call an end to it. Apparently there has been only one request and I would be in favour of acceding to that request.

The Chairman: Gentlemen, I have Mr. Howard, Mr. Gauthier and Mr. Côté who wish to ask questions.

Would the Committee agree to refer this motion to the Steering Committee for further study, that we proceed with the bill as we were on Tuesday last, and that before we complete consideration of clause 1 we decide whether the Agricultural Chemicals Association should be called and what the course of our Committee should be.

Is it agreed that we refer this motion to the Steering Committee in the hope that they might meet over their lunch hour and give us some guidance at our next meeting?

M. Côté (Richelieu): Je serais d'accord.

The Chairman: I have a motion but I think it would have to be by general agreement, if we decided to do that.

[Interpretation.]

M. Douglas: Eh bien, on a répondu en partie à ma question. Je voulais savoir combien de discussions, de consultations ont eu lieu avec les responsables des produits chimiques. En fait, je voulais savoir comment cette décision a été prise. Je pense qu'il y a plus ou moins un échange permanent entre les fabricants cherchant un enregistrement et les responsables du ministère, et je pense que la raison de ce projet de loi était de mettre à jour les règlements afin de répondre aux besoins actuels.

Maintenant, en ce qui concerne la procédure, et je ne pourrais pas véritablement citer des déclarations faites à ce sujet, je pense que dans la discussion des modifications du règlement de la Chambre, en décembre, l'avantage qu'il y avait à donner aux comités le pouvoir de discuter des projets de loi, c'est que nous aurions la possibilité, le droit de convoquer des témoins. Je pense certainement que cela nous donne le droit d'accéder à la requête de l'Association des fabricants de produits chimiques, et je ne pense pas que cela retarderait notre procédure. Si nous constatons que nous avons trop de témoins à entendre et que cela ne nous apporte rien, eh bien, nous avons le droit de dire: cela suffit, nous n'avons pas besoin de passer plus de temps à cela. Mais apparemment, il y a une seule demande de faite, et je ne vois pas pourquoi on ne pourrait pas l'accepter.

Le président: Eh bien, messieurs, j'ai M. Howard, M. Gauthier et M. Côté qui veulent poser des questions. Le Comité accepterait-il de renvoyer cette motion au Comité directeur qui en étudierait les tenants et les aboutissants et voir si nous ne pourrions pas poursuivre maintenant l'étude du projet de loi, et avant de terminer l'examen de l'article 1, nous prenions une décision, à savoir si cette association doit ou non se présenter.

Est-ce que vous êtes d'accord, donc, pour renvoyer cette motion au Comité directeur espérant que peut-être au cours du déjeuner, il pourrait étudier la chose et nous en donner réponse lors de la prochaine séance?

Mr. Côté (Richelieu): I move that we do that.

Le président: J'ai déjà une motion mais je crois qu'il faut qu'elle soit acceptée à l'unanimité si nous devons l'accepter.

[Texte]

Mr. Gleave: Mr. Chairman, with all due respect, I do not see anything to be gained by such a procedure. The main job of the Steering Committee as I understand it, is to work out and suggest to the Committee the order of business coming before it. Now this particular matter before us has nothing to do with the general order of business coming before this Committee but with a particular request put before this Committee by this organization to appear. I fail to see where we advance our cause by going back to the Steering Committee. We might as well make the decision now. Do we want them or do we not want them?

The Chairman: Mr. Gauthier, I will recognize you in a moment.

May I suggest that there is a little difference. One could say that this is actually an arm of the legislative function of parliament. In the passing of any bill heretofore private groups have had the opportunity of lobbying with members, even in an unofficial calling of a committee. I think probably there would be lots of reasons that this particular group might want to meet with members of the Committee and with members of parliament generally.

In inviting them into this meeting, constituted as it is, we are probably getting into a rather dangerous area but I am prepared to be guided by the wisdom of the Committee.

I am going to recognize Mr. Howard, Mr. Gauthier and Mr. Côté because they are on my list, and then I will recognize new questioners.

• 1020

Mr. Howard (Okanagan Boundary): Mr. Chairman, I was intending to speak to the general proposition of calling witnesses and not to the matter of whether it should be decided by the Steering Committee. I do feel that we should look at the fact that we are establishing a precedent—we are breaking new ground here in our legislative procedures, and that if we do call witnesses then we are establishing a precedent that surely somebody is going to follow in the future. This place seems to operate on precedents and the mere fact that we had, at one time, allowed witnesses to appear before a committee is going to be sufficient reason for someone to insist that there is a right for someone else to appear.

[Interprétation]

M. Gleave: Monsieur le président, très respectueusement, je ne vois pas ce que l'on aurait à gagner en agissant ainsi. Le travail du Comité directeur d'après ce que je crois savoir dans l'ensemble, est de décider ou disons de mettre sur pied et de suggérer l'ordre du jour de nos réunions du Comité. Cette question dont nous sommes saisis n'a absolument rien à voir avec l'ordre du jour du Comité, mais porte sur une demande particulière qui a été soumise au Comité par cet organisme qui demande à comparaître. Je ne vois absolument pas de quelle manière nous avancerions en renvoyant cela au Comité directeur. Il faudrait prendre la décision immédiatement. Voulons-nous les voir, oui ou non?

Le président: Oui, monsieur Gauthier, je vous donnerai la parole dans un instant.

A titre de renseignement, je pourrais vous dire qu'il y a une légère différence. On pourrait dire que c'est là un bras du rôle législatif du Parlement plutôt et non pas du gouvernement. Dans le vote d'une loi quelconque, jusqu'à présent, les groupes privés ont eu la possibilité de discuter avec les membres officieusement, dans les coulisses, et je pense qu'il y a beaucoup de raisons pour lesquelles ce groupe particulier préférerait se réunir avec les membres du comité, avec les députés en général.

Je pense que lorsqu'on les invite à une séance comme celle-ci, telle qu'elle se déroule, je pense que l'on entre dans une zone assez dangereuse, mais pour ma part, je suis prêt à suivre la sagesse du comité.

Maintenant je donne la parole à M. Howard, puis à M. Gauthier, et ensuite à M. Côté, et ensuite je donnerai la parole à d'autres personnes.

M. Howard (Okanagan-Boundary): Monsieur le président, concernant cette question de comparution des témoins, je ne veux pas aborder la question du Comité directeur pour le moment. Je pense, pour ma part, que nous devrions voir que nous sommes en train d'établir un précédent ici. Nous abordons du nouveau dans nos procédures législatives, et si nous invitons des témoins, il y aura là un précédent que certains vont suivre à l'avenir, car on semble toujours agir sur précédent ici et le fait que l'on ait permis une fois à des témoins de témoigner, cela suffira pour que d'autres permettent à d'autres témoins de venir comparaître.

[Text]

I think that this is an unnecessary step to take. As the Chairman pointed out a minute ago, anyone who has a point they want to make has the opportunity to lobby and to make representations on a personal basis to members of the Committee or to other members of the house.

I see no reason that we should not accept a written submission from these people, if they wish to make copies available to the members of the Committee, which could be studied and perhaps even included with the records of the Committee, but I am opposed to the idea of allowing witnesses in at this time—certainly on something which is not of major consideration. I think it would be foolish to take this step at this time and I am going to vote against the proposition.

M. Gauthier: Je vous remercie, monsieur le président. Laissez-moi vous dire que la discussion en cours ce matin me surprend beaucoup. J'étais sous l'impression, mais peut-être en était-ce une fausse, que la nouvelle méthode de travail, qui consiste à renvoyer un bill en comité, nous permettrait de convoquer les témoins au besoin. Le Comité avait tout le loisir, et on l'a dit dans les journaux, à la télévision, à la radio, de traiter sur place avec les personnes intéressées. Or, les seules personnes vraiment intéressées sont, en l'occurrence—les producteurs de ces mêmes produits et les consommateurs, c'est-à-dire les cultivateurs qui les emploient.

J'écoutais la remarque tout à l'heure d'un de nos collègues, disant qu'il était surpris de voir que les cultivateurs n'étaient pas venus au Comité, et il est inconcevable que l'occasion de le faire ne leur soit pas donnée. Monsieur le président, on fait plus que cela, on ne les invite même pas! Et aujourd'hui, je me rends compte qu'on ne leur permettra même pas de se présenter au Comité! Eh bien, là, je pense bien que le travail du Comité est tout autre que ce à quoi nous nous attendions. Je suis certain que parmi les producteurs, ceux qui sont prêts à venir témoigner et donner leur opinion, car ils sont vraiment intéressés, se sont déjà vu refuser des permis d'enregistrement. Ceci a eu pour effet de les mécontenter, mais ils n'avaient aucun recours. Quel jeu a pu se faire dans ces refus!

Nous avons ici des fonctionnaires, qu'on appelle des conseillers, pour nous orienter, mais somme toute, je crois bien que ce sont les grands penseurs des lois, ceux qui les rédigent, mais je ne voudrais pas aller trop loin, car je reconnais leur compétence. Mais, à mon avis, je crois qu'il serait normal que ceux qui subiront l'effet des lois, puissent avoir le droit de venir exprimer leur opinion

[Interpretation]

Je pense que c'est là une mesure inutile. Comme l'a dit le président, quiconque a un avis à donner, il aura la possibilité de le faire dans les coulisses et de faire des représentations dans les coulisses auprès des membres du comité, ou auprès des membres du Parlement, les députés.

Je ne vois aucune raison pour laquelle on n'accepterait pas un mémoire de ces personnes si elles veulent en envoyer des exemplaires aux membres du Comité qui pourraient l'étudier et on pourrait même le mentionner dans le rapport, mais je m'oppose à l'idée de permettre aux témoins de comparaître en ce moment sur quelque chose qui ne fait pas l'objet d'une étude majeure. Je ne suis pas disposé à accepter cela et je voterai contre la proposition.

Mr. Gauthier: Mr. Chairman, thank you. Let me say that I am quite surprised this morning by the discussion. I was under the impression—it might be a wrong impression that I had—that the new working method that consists in sending a bill to Committee, would enable us to call witnesses whenever necessary. The Committee had all the possibilities in the world, this was told on radio, television and in the newspapers, of dealing on the spot with all people concerned. Now, the only people who are really interested are, in this instance, the producers of these products and the consumers, i.e. the farmers using them.

I was listening to the observation made earlier by one of our colleagues who said that he was surprised to see that the farmers had not come to the Committee, and that it was unthinkable that the opportunity to do so be denied them. Well, Mr. Chairman, we do more than that, they are not even invited to come. Moreover, today I realize that now we will not even allow them to come before the Committee.

Therefore, I believe that the Committee's work is totally different from what was expected by everyone. I am sure that some producers, especially those who are ready to give evidence and voice their opinion—because they really are interested—have already been refused certification. This has caused discontent amongst them, but they had no possibility of appealing to this.

Here we have officials who are called advisers, to guide us. I recognize the competence of these people, but apart from this, I believe that those who are going to be affected by the laws should be given the right to come before the Committee. It is unthinkable that this should not be so.

[Texte]

à ce Comité et il est inconcevable qu'il en soit autrement.

Qui sait, nous aurions peut-être des surprises, ils pourraient nous apporter des arguments auxquels nous n'avons jamais pensé.

Je tiens à ce que nous tous du Comité, ayons toujours à l'esprit que notre travail essentiel et précis, à mon avis, est de nous renseigner à fond, afin de voter une loi qui s'adaptera le mieux à toutes les circonstances. Mais si nous refusons tout témoignage, alors, nous retombons dans les mêmes erreurs que par le passé. Merci.

• 1025

M. Côté (Richelieu): Monsieur le président, tout comme M. Gauthier, je suis un peu surpris, de la tournure des événements, mais dans un autre sens.

Depuis le début de nos discussions se rattachant aux trois bills que nous avons votés jusqu'à maintenant, il semble qu'il y ait une règle établie à l'effet de prolonger le débat. S'il s'agit de défendre les cultivateurs, nous agissons de telle sorte que la discussion ne porte que sur ce sujet et il en est ainsi dans le cas des compagnies. Pour ma part, je ne sais plus qui on veut défendre! Selon moi, la Loi est faite dans le but d'essayer de protéger les cultivateurs ou certaines personnes qui de loin ou de près sont rattachées à l'agriculture, mais qui n'ont aucune possibilité de voir les effets néfastes de certains produits.

Des spécialistes du ministère préparent un projet de loi mais ils subissent des pressions. Tout à l'heure, nous avons entendu des représentants, des témoins qui nous ont dit que suivant le télégramme que vous avez reçu, il y a eu certaines remarques à l'effet que la loi les affectait de telle ou telle façon. Alors, ils savent la raison pour laquelle ils ont préparé le projet de loi tel quel, et ils savent déjà pourquoi ces témoins-là veulent témoigner. S'ils viennent ici, je comprends, comme M. Gleave disait tout à l'heure, qu'ils aimeraient être renseignés afin de bien représenter ces personnes-là.

Mais moi, je me place à un autre point de vue et je dis: «Moi, je veux défendre les cultivateurs». Alors nous allons faire venir des cultivateurs, ainsi que des représentants d'associations agricoles. Nous aurons ainsi, non pas un comité qui légifère en matière de législation, mais un comité d'enquête. Nous allons enquêter peut-être dix jours, trois semaines, nous allons faire des enquêtes et ce n'est pas notre rôle.

Notre rôle est de légiférer suivant le projet de loi, ou les questions qu'on peut poser à ceux qui sont vraiment au courant des problèmes des consommateurs, ou qui sont en

[Interprétation]

We might have surprises, certainly. Perhaps the reasons they will give us will be different from what we have thought about, but the Committee must remember that its main and specific work in my opinion is to have full information on the Bill so that the Bill which will be voted upon, which will be passed, will be the best in the circumstances and if the Committee turns down any possibility of hearing witnesses then we fall into the same errors as before. Thank you very much.

Mr. Côté (Richelieu): Like Mr. Gauthier, Mr. Chairman, I am surprised to see the turn events have taken but for a different reason. Since the beginning of our discussion on the three bills that we have passed so far, it seems to me that we have established a rule to extend the debate. Do we defend the farmers, do we defend the companies? I do not know who we are defending now. This is the problem. I believe the Act aims at protecting the farmers or some people who are closely or remotely related with agriculture—with farming—but who have no chance whatsoever to see the harmful effect of certain products.

Department experts are preparing a draft for a bill but they are under pressure. Earlier we heard the members who said that they had received telegrams stating that the senders would be adversely affected.

So they know now why the bill was drafted in such a haphazard way. And they know why those witnesses want to testify. I can understand, as Mr. Gleave said a while ago, that they would like to be informed so as to be able to represent these people properly.

But I'm looking at this from another angle. I'm looking after the farmer's interests so we're going to bring farmers here and agricultural associations. We shall then have a committee of enquiry rather than a legislative committee. We shall investigate for 10 days or so, maybe three weeks. We are going to investigate and this is not our role.

Our task is to legislate according to the bill or question the experts who really know the consumers' problem or who are in contact with manufacturers or producers. And I do

[Text]

contact avec les producteurs et la ou les compagnies qui font tel produit. Nous avons les témoins et je ne pense pas que, comme M. Gauthier disait tout à l'heure, nous en refusions présentement. A mon avis, nous n'empêcherions personne de venir témoigner.

Mais, nous sortons des cadres de notre pouvoir actuellement, nous pouvons le faire, mais où cela nous mènera-t-il? Je crois que pour ma part, si on disait: «Nous acceptons cela», alors, immédiatement, je convoque des associations de cultivateurs, car, en accord avec la teneur du bill, je suis plus intéressé à défendre les cultivateurs que les compagnies, car il sera plus facile pour ces dernières de le faire amender que ce ne le sera pour les agriculteurs.

Vraiment, je ne sais plus qui on veut défendre quand on fait venir des témoins; nous, nous avons toujours le loisir de questionner des fonctionnaires, en cas de doute, nous pouvons les convoquer à titre privé. Et lorsque le président vous a proposé, tout à l'heure, le renvoi de cette loi au Comité qui pourrait étudier si nous avons le droit de le faire ou attendre encore un peu, à ce moment-là, s'il y en a qui veulent faire venir des représentants des compagnies, ils peuvent le faire et se renseigner à fond. Alors, je m'oppose absolument, parce que ce serait créer un précédent dont nous ne verrions pas la fin. C'est mon opinion.

The Chairman: Thank you, Mr. Coté. I think this is an introduction of the danger that we might be getting into; if we call one group we will have to call farmers' groups and every other group. So the legislative process in which we are engaged could be completely delayed. I am recognizing Mr. McKinley.

Mr. McKinley: Mr. Chairman, I suggest that we are getting into the very basis of the change in the rules, and I believe that the only reason the rules were changed to get rid of the resolution stage and have token speeches on second reading was simply because the bills would be able to be given more of a hearing in committee. The calling of witnesses, I believe, was particularly mentioned.

I might also add for Mr. Coté's benefit that the registering of new products when the farmers need them is also as much a protection to the farmer as not registering, in many cases.

I can talk from personal experience on some things that were needed in the poultry industry in the way of vaccines and so on, and were not allowed into this country, not registered for a long time after they could

[Interpretation]

not think, as Mr. Gauthier was saying a while ago, that we are refusing witnesses at present. I do not think we would prevent anyone testifying.

But we are going beyond the limits of our authority now. If we do this where will it lead to? If we proceed along those lines, I personally will call in farmers' associations immediately for in accordance with the content of the bill I'm on the side of the farmers rather than on the companies'. The companies can get amendments easier than the farmers.

Really I'm not sure whose side we're on when we call witnesses. We have all the time in the world to question department officials, in case of doubt and we can have them along unofficially when the Chairman proposed just now that the bill be sent back to committee to see whether we are entitled to do this or wait a while, if there then are some who want to have company representatives as witnesses, they can do so and get the most exhaustive information possible. So, I am most definitely opposed to this because it would create a precedent with unpredictable consequences.

Le président: Je pense que c'est là un aperçu des dangers que nous courrons: si nous appelons un groupe, nous devrons en appeler un autre, et puis, un autre, et puis un autre. Et, par conséquent, le processus législatif pourrait en être complètement retardé. Je donne maintenant la parole à M. McKinley.

M. McKinley: Monsieur le président, cette discussion nous amène au fondement des modifications du règlement, et je pense que ces règlements ont été tout simplement modifiés parce que les bills pourraient être mieux étudiés en comité. La possibilité d'entendre des témoins avait, je crois, été signalée.

J'aimerais ajouter, à l'intention de M. Coté, que l'enregistrement de nouveaux produits lorsque les fermiers en ont besoin, est une protection qui vaut autant pour les fermiers que s'il n'y a pas d'enregistrement.

Personnellement, je connais le cas de vaccins qui étaient nécessaires pour l'industrie avicole, qui n'ont pas été acceptés dans ce pays et qui n'ont pas été enregistrés, alors qu'ils auraient pu l'être. J'ignore pourquoi.

[Texte]

have been, although I do not know for what reason. But it cost the poultry producers of this country a lot of money until it was done, and it was not done until there was enough pressure put on to get it done. For that reason I say that we are protecting the farmer just as much in that regard as we are in not registering products that are not fit to be used in this country.

• 1030

I think the only reason that the new rules passed in the House—I know I have a speech still in my office—was that we were given assurance that bills would be able to be heard, witnesses would be able to be called in the committee, and the bills given thorough reading to save time in the House.

Also, I would like to suggest that if this is done it will save time on third reading when it goes back to the House. And if it is not done I think there will be, maybe, some hold-up on these bills for some of these reasons when it goes back to third reading. So I do not think we are going to get into trouble time-wise. I think, in the long run, we are going to save as much time by hearing these people because there must be something they want to say. I think it is their right to be heard and I think it is the members' right, in the fact that they passed the new rules, to hear them and to find out and be satisfied with that and when it goes back for third reading it is passed and it is over.

The Chairman: Gentlemen, I have three members who wish to ask questions, Mr. Danforth, Mr. Lessard and Mr. Lambert. I would ask permission of the Committee to terminate the discussion then and to call for the question.

I recognize Mr. Danforth.

Mr. Danforth: Mr. Chairman, what I wish to discuss now and ask questions on is in clarification at the position of the Committee on this vote. My understanding is that under the new rules and provisions this Committee has the power to hear witnesses without limitation.

Mr. Clermont: This is not a new rule; committees had the power before.

Mr. Danforth: I agree, but would you please hear me out?

Mr. Clermont: I am not agreeing with you; this is not a new power.

Mr. Danforth: Please hear me out.

The Chairman: Mr. Danforth has the floor.

[Interprétation]

Mais je sais que les éleveurs de volailles ont perdu beaucoup d'argent et que des changements ne sont survenus qu'après que de nombreuses pressions furent exercées. C'est pour quoi, j'affirme que les fermiers sont protégés de cette façon, tout comme ils le sont lorsque l'enregistrement est refusé à des produits jugés inacceptables.

Les nouveaux règlements ont été approuvés en Chambre parce qu'on nous a assuré que les bills seraient étudiés, que des témoins pourraient être convoqués en Comité et que cette étude des bills épargnerait beaucoup de temps en Chambre.

Nous sauverons également du temps lorsque viendra le moment d'approuver le bill en troisième lecture, en Chambre. Si nous n'agissons pas ainsi nous perdrons du temps au moment de la troisième lecture. Je crois qu'en fin de compte nous sauverons beaucoup de temps à entendre ces gens, car ils ont certainement quelque chose à dire. Je crois, personnellement, qu'ils ont le droit d'être entendus et que les députés, qui ont approuvé le nouveau Règlement, ont le droit de les entendre, et quand ça passera en troisième lecture, ce sera passé très rapidement et voté très rapidement.

Le président: Messieurs, j'ai encore trois noms sur ma liste: M. Danforth, M. Lessard et M. Lambert. Je demanderais la permission du comité de clore le débat et de demander le vote ensuite. Je donnerai alors la parole à M. Danforth.

M. Danforth: Monsieur le président, ce que je veux discuter maintenant, et poser des questions à ce sujet, c'est un éclaircissement de l'attitude du Comité vis-à-vis ce vote. Si j'ai bien compris, en vertu des nouveaux règlements, le comité a le droit et le pouvoir d'entendre des témoins sans limite.

M. Clermont: Ce n'est pas un nouveau règlement. C'est ce qui existait auparavant.

M. Danforth: D'accord, mais écoutez-moi, s'il vous plaît.

M. Clermont: Je ne suis pas d'accord; il s'agit d'un nouveau pouvoir.

M. Danforth: Veuillez m'entendre.

Le président: M. Danforth a la parole.

[Text]

Mr. Danforth: Under the provisions of the new rules, this Committee has the power given to it to call witnesses. Therefore, since this is the provision and the rules as laid down by Parliament, this Committee cannot vote that witnesses be not heard. We can only vote that a request of a certain group be not heard. We cannot, in my submission, take the position that this Committee cannot call witnesses because this is laid down by the provisions of Parliament. We are therefore bound by the rule that we must call witnesses.

Now my point is this: This amendment deals only with the request of this specific group to be heard and this is all that we can vote on, "yes" or "no" whether this particular request is acceded to by the Committee. We cannot vote on the legislative aspect; because legislation is before the Committee we cannot call witnesses. This has been decided by Parliament. It cannot be changed by us, so when we are voting we are only voting as to whether the request of a particular group to appear before this Committee is acquiesced in or not. I think this should be perfectly clear before we vote.

I think it would be unfortunate indeed, Mr. Chairman, for us as a Committee to be placed in a position where separately we are going to invite groups to appear before us and act as their spokesmen before a standing committee when it would be just as logical and much more simple for the committee to hear these submissions as a group and in speaking towards a written submission which had a great deal of merit.

The only weakness of a written submission is the fact that you are not able to ask questions on the various points that may come up.

So, Mr. Chairman, I fail to see the logic in trying to curtail the work of a committee because a time factor keeps cropping up. Are we on a schedule? Have we so many hours to deal with each bill? If we have I think we should know it now. My idea of committee work is that we work together in a non-partisan way in order to try to provide for Parliament the very best possible bill. I think if we approach it in this way we will get somewhere.

• 1035

The Chairman: Thank you. I think you have made your point. Mr. Clermont?

[Interpretation]

M. Danforth: En vertu du nouveau règlement, le Comité a reçu le pouvoir de convoquer les témoins. Par conséquent, étant donné que cette disposition et ce règlement existe et a été établi par le Parlement, le Comité ne peut pas décider qu'il ne peut pas entendre les témoins. On peut tout simplement décider que la demande d'un certain groupe ne sera pas entendue. A mon avis on ne peut pas présumer que le Comité n'a pas le droit de convoquer des témoins car cela a été établi par le Parlement. Par conséquent, nous sommes tenus par cette règle à l'effet que nous convoquons des témoins.

Voici ce que je voulais dire: L'amendement traite seulement du groupe particulier à être entendu. C'est la seule chose sur laquelle nous pouvons voter «oui» ou «non» si cette demande particulière sera agréée par le Comité. Nous ne pouvons pas voter sur l'aspect législatif; puisque c'est l'aspect législatif qui est devant le comité, on ne peut pas convoquer les témoins. Cela a été décidé par le Parlement et nous ne pouvons le changer. Nous votons seulement quant à savoir si la demande faite par un groupe particulier sera agréée, oui ou non. Je crois que ça devrait être éclairci et très clair dans notre esprit avant de voter.

Je trouve, monsieur le président, que ce serait malheureux que nous, en tant que Comité, soyons mis dans une situation où nous aurions à être le porte-parole de certains groupes auprès du Comité directeur alors que ce serait aussi logique d'entendre et beaucoup plus simple d'entendre leurs mémoires à titre de groupes et en discutant un mémoire ayant beaucoup de mérite.

La seule différence avec un mémoire écrit, c'est que vous n'êtes pas en mesure de poser des questions sur les différents points qui sont soulevés.

Par conséquent, monsieur le président, je ne vois pas du tout la logique en cause si nous voulons essayer de restreindre le travail d'un comité en raison de ce facteur temps. Est-ce que nous avons un horaire d'établi? Est-ce que nous avons tout simplement un certain nombre d'heures pour discuter de ces bills. Si tel est le cas, je crois que nous devrions savoir ce que je pense du travail de comité, c'est que nous travaillons ensembles de façon non partisane pour essayer de donner au Parlement le meilleur bill possible. Si nous adoptons cette attitude, nous ferons des progrès.

Le président: Merci, monsieur Danforth. Monsieur Clermont?

[Texte]

M. Clermont: Monsieur le président, voici la question supplémentaire que je voulais poser à M. Danforth: Les membres insistent sur le fait que c'est un nouveau règlement qui veut qu'un comité ait le droit d'appeler des témoins. Or ce n'est pas un nouveau règlement, nous avions ce droit avant. L'article 65, prévoit qu'un membre d'un comité peut, sur une déclaration écrite au président, demander qu'un groupe ou une personne soit demandé d'apparaître comme témoin devant un comité. C'est prévu.

Je soutiens, Monsieur Danforth, que les règlements des comités permettaient avant et, le permettent encore, à un comité d'entendre des témoins. Mon objection du début, monsieur le président, portait sur l'expression que vous avez utilisée. J'ai accepté la correction de M. Douglas, précisant que nous avons le droit et que c'est notre devoir de solliciter des commentaires des fonctionnaires du gouvernement et pour terminer, je n'y vois pas d'objections.

Cependant, quand M. Howard prétend qu'en acceptant un témoin ici, nous créerions un précédent, moi je sais, monsieur le président, que dans d'autres comités, même sous l'empire des anciens règlements, les comités ont eu des témoignages de personnes de l'extérieur et je crois que si nous autorisons les représentants de «l'Association des producteurs de produits chimiques» de venir devant ce comité, ce ne serait pas créer un précédent.

The Chairman: Thank you, Mr. Clermont.

Mr. Barrett: Mr. Chairman, I have a supplementary also along those lines for clarification, if I may. It was mentioned in relation to witnesses—and I am not saying this is normal because I do not know that much about the procedure—that generally speaking when committees were meeting they would discuss what witnesses were necessary to add to their whole philosophy. Then they would be referred to the steering committee who would indicate or check the availability, the time lag and all this sort of thing, and find out what these witnesses would have to suggest; then would hear them.

We would listen to the report and, if there was dissatisfaction, then there would be a motion such as we have on the floor at the moment which would be right and they would then have to agree or disagree with one specific witness. We would request them, not vice versa.

The Chairman: Thank you, Mr. Barrett. Mr. Lessard?

[Interprétation]

Mr. Clermont: Mr. Chairman, the supplementary question I wanted to put to Mr. Danforth was this one. Members insist on the fact that it is a new Standing Order that stipulates that we have a right to call witnesses before the Committee. Now, this is not a new regulation. We had this right before. According to Standing Order 65 a member of a Committee may, through a written statement to the Chairman, request that a group or a person be called to appear as witnesses before a Committee. Provision has been made for this.

My argument was, Mr. Danforth, that the Committee Standing Orders previously allowed us, and still allow us, to call witnesses. Mr. Chairman, my first objection had to do with the expression you used. I accepted the correction by Mr. Douglas that we have the right and that it was our duty to request comments from officials of the government, and in conclusion, I do not see any objection.

However, when Mr. Howard said that if we were to accept a witness here it would be creating a precedent, I know, Mr. Chairman, that in other Committees, even under the former Standing Orders, Committees had testimony from persons from the outside. And I think that if we were to accept the representatives of the Pharmaceutical Manufacturers Association of Canada to appear before this Committee, it would not be a precedent.

Le président: Merci, monsieur Clermont.

M. Barrett: Monsieur le président, une question supplémentaire pour éclaircir le sujet si je le puis. On a mentionné en ce qui concerne les témoins, et je crois que c'est normal, parce que je ne connais pas trop la procédure, mais en général lorsque les comités se réunissaient, ils discutaient ce que pouvaient ajouter les témoins à toute notre philosophie. On en parlait ensuite au Comité directeur et ce Comité directeur vérifiait la disponibilité et les heures qui restaient, etc., et ce que les témoins auraient à dire.

Ensuite nous les entendrions, et si à la suite de ça il y avait mécontentement, il y aurait une motion telle que nous avons devant nous à l'heure actuelle et ensuite il faudrait être d'accord ou en désaccord avec un témoin précis. Mais ce serait nous qui ferions la demande et pas le contraire.

Le président: Merci, monsieur Barrett. Monsieur Lessard?

[Text]

M. Lessard (Lac-Saint-Jean): Monsieur le président, je comprends que la situation est assez difficile, surtout que l'expérience ait nouvelle, comme le soulignait M. Gauthier. Tout le monde du moins est d'accord pour dire que les nouveaux règlements veulent que les bills soient envoyés en comité pour être étudiés en deuxième lecture. C'est certainement une amélioration, apportée afin que les bills soient mieux étudiés et plus en profondeur. Auparavant, nous n'avions pas l'avantage, en Chambre, d'avoir les fonctionnaires des divers ministères pour les soumettre à nos questions, mais maintenant nous l'avons. Est-ce que nous devons aller plus loin? Nous ne créons pas de précédent, en acceptant des témoins de l'extérieur; Comme l'a dit M. Clermont, nous avons toujours reçu des témoins de l'extérieur qui sont venus à notre demande, ou quand certains ont exprimé le désir de venir.

Je pense que c'est à nous de décider si nous devons accepter ceux qui demandent à apparaître devant nous ou les refuser, et non si nous avons le droit ou pas d'appeler des témoins, parce que nous avons de droit, c'est clair. C'est un règlement qui existe et nous ne pouvons le changer. Naturellement, je serais enclin à croire qu'appeler des témoins pourrait ajouter à l'intérêt de l'étude d'un bill en particulier. Nous pourrions en faire l'expérience, et, si l'expérience n'est pas satisfaisante, une autre fois refuser certains témoignages surtout originant de l'extérieur. Seulement, j'accepterais la proposition dans ce cas-ci. Je réserve ma décision pour une autre circonstance: si je ne suis pas satisfait de cette expérience la prochaine fois je m'y opposerai catégoriquement.

Une voix: Est-ce à mon tour, monsieur le président?

• 1040

The Chairman: I will hear Mr. Lambert because I had him on the list, and then the question has been called.

M. Lambert (Bellechasse): Lors de la première séance régie par les nouveaux règlements M. le Président avait demandé la permission, pour lui et la comité directeur, de convoquer des témoins et une autre fois, même s'il n'y avait pas quorum. Cette mesure aurait pu faciliter le travail du Comité. Le projet de loi à l'étude est excessivement sérieux, et il n'est pas seulement à l'avantage des producteurs, mais également à l'avantage des consommateurs. Je ne voudrais pas donner l'impression au public que nous partons en guerre contre les fabricants de produits pesticides, insecticides ou autres.

[Interpretation]

Mr. Lessard (Lac-Saint-Jean): Mr. Chairman, I understand that this is a difficult situation, particularly as the experience is a new one as Mr. Gauthier pointed out. Everyone, at least, agrees that according to the new Standing Orders bills to be considered on Second Reading be sent to Committee. It is an improvement that was introduced so that bills would get more thorough consideration. Before that we did not have the advantage in the house of having the officials from the various Departments to subject them to our questioning. We do now have this advantage. Should we go further? I do not think there is a precedent being created by accepting outside witnesses. As Mr. Clermont has said, we have always had witnesses from the outside who came when we asked them, or when some also expressed the wish to come.

I think it is up to us to decide whether we are to accept those who are asking to appear before us or refuse them. It is not a question of deciding whether we have the right or not to call witnesses. I think we do have the right to call witnesses. This is clear. We are entitled to do so. The Standing Orders are there, and we cannot change them. Personally I would be inclined to think that calling witnesses might add interest in the consideration of a particular bill. I think we could try it out. If the experiment is not successful, at another time we could refuse certain testimony, particularly from the outside. However, I would be inclined to accept the proposal in this particular case. I reserve my decision for another circumstance: if I am not satisfied with the experiment at this time, then next time I shall be categorically opposed to it.

An hon. Member: Is it my turn, Mr. Chairman?

Le président: Oui, monsieur Lambert, je l'avais sur la liste et ensuite on a demandé le vote.

Mr. Lambert (Bellechasse): At the first sitting under the new Standing Orders the Chairman had asked for permission, for himself and the Steering Committee, to be able to summon witnesses, and to repeat this on another occasion, even if there was no quorum. This step could have facilitated the Committee's work. The bill which is before us is an extremely serious one, and it is not only to the advantage of producers, but also to the advantage of consumers. I would not want to give the public the impression that we are waging war against the manufacturers of pesticides, insecticides and so on.

[Texte]

A mon point de vue, si nous voulons aller véritablement au fond des choses, pour avoir une législation qui soit équitable pour tout le monde, fabricants, consommateurs ou producteurs, nous devons prendre toutes les dispositions nécessaires que nos fonctionnaires, ceux qui seront chargés d'appliquer la loi, soient en mesure de faire un travail efficace et sans hésitation.

Je ne doute pas du tout de la compétence de nos fonctionnaires, mais toute loi est contestable. La preuve, c'est que deux avocats vont lire la même loi et l'interpréter de façon différente. Et pour trancher la question, on fait appel à une troisième personne: on appelle ça un juge, qui lui a toute l'autorité voulue, à tort ou à raison, il tranche la question en vertu de son autorité.

Dans le cas présent, mon point de vue est que si les fabricants ont présenté une demande pour venir témoigner devant le Comité, nous pourrions limiter nos travaux afin de les entendre. Ceci nous permettra de faire à la Chambre, un rapport intelligent, un rapport dans lequel nous pourrions écrire: «Le Comité a fait son possible pour aller véritablement au fond de tous les problèmes, sans travailler ni contre les fabricants, ni contre les consommateurs, ni contre les producteurs, mais il a travaillé pour trouver une solution équitable pour tout le monde». C'est mon point de vue.

The Chairman: Gentlemen, I do not wish to limit discussion, but we have other members who wish to ask questions. I think we have had quite a good discussion. The question has been called.

Mr. Gleave: As the mover of the motion I have been attempting to get your attention. I think I should be able to say a few words.

The Chairman: I recognize Mr. Gleave, Mr. Roy and then Mr. LaSalle.

Mr. Gleave: My point of view is that we are proposing to legislate on the basis that we are going to affect the rights and privileges of a great many individuals and also of some commercial concerns. I think because we are doing this that we should be very careful to ensure that those individuals or concerns should be able to bring their opinions before this Committee, especially when it is going to affect their welfare and even their means of livelihood.

The Chairman: Thank you, Mr. Gleave, Mr. Roy?

[Interprétation]

In my opinion, we really want to get to the bottom of things and have a bill which is going to be fair to everyone, whether they be manufacturers, consumers or producers. We must take every available step so that our officials, those who have to apply the Act may be able to do effective work without hesitation.

I have no doubt about the competence of our officials, but any law is debatable. The proof is that two lawyers will read the same Act and interpret it in two different ways. And to decide on the matter you have to appeal to a third party and the third party is called a judge and has all the authority, and he decides on the matter, right or wrong, by virtue of his authority.

So I think that in the case now before us, my opinion, at least, is that if the manufacturers have requested to be heard by the Committee, we might perhaps limit our work to give them a hearing. This will enable us to have an intelligent report for the House, in which we could say that the Committee did its best to get to the bottom of all problems without working either against producers, manufacturers or consumers, but tried to find a fair solution for everyone. This is my opinion.

Le président: Messieurs, je ne voudrais pas limiter la discussion, mais il y a d'autres députés qui veulent poser des questions. Je crois que la discussion a été utile. On a tout de même demandé le vote.

M. Gleave: A titre de proposeur de la motion, j'ai tenté d'obtenir votre attention. Je crois que je devrais avoir la permission de dire quelques mots.

Le président: Je donne la parole à M. Gleave, ensuite à M. Roy et ensuite à M. Lessard.

M. Gleave: Mon opinion, monsieur le président, c'est que nous nous proposons de légiférer sur la base que nous allons affecter les droits et les privilèges d'un très grand nombre de personnes, et aussi de certaines sociétés ou compagnies commerciales. Je crois donc qu'étant donné que nous le faisons, nous devrions faire bien attention que les personnes en cause ou les sociétés ou les compagnies en cause soient en mesure de présenter devant le Comité leurs opinions, tout particulièrement lorsque cela affecte leur bien-être et même leur survie économique.

Le président: Merci, monsieur Gleave. Monsieur Roy?

[Text]

M. Roy (Laval): Merci, monsieur le président. Juste un mot avant la mise aux voix. J'ai écouté, de part et d'autre, le pour et contre de cette proposition et, comme mes collègues l'on mentionné, je pense bien que le but de ce Comité est d'être le plus efficace possible, afin de mieux servir notre agriculture. Personnellement, je pense que le but du Comité est celui-ci: que nous acceptions d'accueillir des représentants et ainsi de suite.

A ce moment-là, je pense, cependant, qu'il faudrait peut-être faire une distinction, toutes les compagnies sont ordinairement membres d'associations. Ainsi, lorsque nous discutons de la Loi sur les aliments du bétail, je serais d'avis que nous convoquions des représentants d'une association telle que la Canadian Feed Manufacturers et dans le cas de la Loi sur les engrais chimiques, la Canadian Fertilizers' Association. Chacune des provinces est représentée au sein de l'Association; par exemple, l'Ontario Plant Food Council, dans la province de Québec, il y a l'Association des engrais chimiques du Québec Inc; dans l'horticulture, la Fédération canadienne de l'horticulture et l'Association des jardiniers-maraîchers.

Pour ce qui est de la représentation de la classe agricole, nous pourrions nous entendre avec des associations soit syndicales ou des coopératives. Mais je ne verrais pas d'un bon œil, par exemple, et je m'y opposerais toujours, que nous recevions une compagnie plutôt qu'une autre.

Tout comme moi, vous comprendrez que si, à tel jour donné, nous recevons une compagnie, pourquoi ne le ferions-nous pas le lendemain pour une autre? En agissant ainsi, nous prolongerions les travaux du Comité indéfiniment et nous n'atteindrions pas le but que nous nous sommes fixé, à savoir de rendre le Comité le plus efficace possible.

• 1045

Alors, c'est peut-être un sous-amendement que je ferais à la proposition, autrement, je voterai contre la motion s'il n'est pas mentionné que ce sera des associations et non pas des compagnies privées qui seront convoquées à ce Comité. Je pense que celles-ci peuvent être très bien représentées, faire du lobbying, mais pas à ce Comité.

The Chairman: Thank you, Mr. Roy. I should point out that the request before the Committee is from an association of agricultural chemicals, so we are quite within your interpretation.

I will now recognize Mr. La Salle.

[Interpretation]

Mr. Roy (Laval): Thank you, Mr. Chairman. Just one word before the vote. I listened to all sides of the argument with regard to this proposal and as was mentioned by my colleagues I think that the object of the Committee is to be as effective as possible so as to render better service to our agriculture. Personally, I think that the object of the Committee is to accept representatives, and so forth.

I think perhaps we might have to make some distinction here. Normally, all companies belong to an association. So I would be in favour of having before us when we discuss, for instance the Livestock Feed Assistance Act, representatives from the Canadian Association of Feed Manufacturers. When we are discussing chemical fertilizers, then we could have the Canadian Fertilizers' Association. Each of the provinces is represented in the Association: for instance, in Ontario, the Plant Food Council; in Quebec, there is the Quebec Chemical Fertilizers Association; in the field of horticulture, the Canadian Horticultural Council and the Market-gardeners Association.

With regard to the representation of farmers, perhaps we could reach an understanding with associations, either union based or cooperative.

But I would always be opposed to having one particular company rather than another. You will agree with me, I think, that if we hear a particular company on a given day, we could hear another company on the following day—why not? But by acting this way though, we would extend the work of the Committee indefinitely and this would prevent us from reaching the goal we have ourselves, namely to make this Committee as effective as possible.

Therefore, it is perhaps a sub-amendment I might make to the motion itself because otherwise I will have to vote against the motion if it is not mentioned that it would be associations and not private companies that would be summoned before the Committee. I think companies can be very well represented, do their own lobbying, but not here at the level of the Committee.

Le président: Merci, monsieur Roy. Je devrais peut-être signaler que la demande nous vient de la part d'une Association de fabricants de produits chimiques agricoles et, par conséquent, cela est conforme à votre interprétation. Je vais donner la parole à M. LaSalle.

[Texte]

M. La Salle: Deux mots, monsieur le président. Je pense que les propos de M. Roy sont assez clairs et très acceptables aussi.

Je voulais tout simplement dire que je crois que nous ferions une grave erreur de refuser, par exemple, d'entendre des hommes qui sont doués d'une grande expérience. Tout en reconnaissant la compétence à tous nos fonctionnaires, je pense que le gouvernement aurait à profit de pouvoir collaborer et entendre à l'occasion des hommes, des industriels qui, de par leur expérience, pourraient nous donner des conseils très avantageux. Et dans ce sens-là, ne serait-ce que pour les services qu'ils peuvent nous rendre, et Dieu sait s'ils le peuvent, parce que personnellement, je reconnais facilement qu'il y a des hommes d'affaires qui pourraient collaborer avec le gouvernement et rendre un service très considérable et à l'État et à la population en général. Et à partir de cette considération, je pense que nous n'avons pas le droit de fermer la porte à ces témoins, nous avons même de très bonnes raisons pour les inviter.

Le président: Merci, monsieur La Salle.

Gentlemen, the question is as follows: Moved by Mr. Gleave that the request of the Canadian Agricultural Chemicals Association to appear before this Committee be granted.

M. Roy (Laval): Voulez-vous répéter, s'il vous plaît?

The Chairman: It is moved by Mr. Gleave that the request of the Canadian Agricultural Chemicals Association to appear before the Committee be granted.

Motion agreed to.

Mr. Barrett: I just want to clarify one thing. Mr. Chairman, in order to avoid this sort of thing would it be reasonable and acceptable that the Steering Committee meet to specifically lay down some ground rules so that we will not have to go through this sort of thing again. There would then be no reason for us to have to accept every association or non-group. Rather, that we will request—in the knowledge that we all have—the people whom we want to have appear before us, or they can advise us by telegram before we actually sit down with the bill. It should be done ahead of time rather than precisely at this moment. This is my philosophy.

The Chairman: Right. By way of explanation I should say that this telegram arrived on my desk last evening at approximately 7.30. There was no opportunity to call the Steering Committee together before our meeting this morning and I thought that as it probably would have to come before the

[Interprétation]

Mr. La Salle: Just two words. I think that Mr. Roy's remarks were clear and quite acceptable.

I simply wanted to say that I think it would be quite an error on our part to refuse to hear men with a great deal of experience. While recognizing the qualifications of our officials I think the government would benefit through cooperating with and occasionally hearing men from industry who by their experience could give us very sound advice. In this sense if it were only for the services they could render us—Heaven knows that they can—because personally I recognize readily that there are businessmen who could co-operate with the government and render considerable service both to the government and to the public at large. And on the basis of this consideration I do not think that we are entitled to close any doors to these witnesses. On the contrary, we have every reason to invite them.

The Chairman: Thank you, Mr. La Salle.

La question est la suivante. Il est proposé par M. Gleave que la demande de l'Association des fabricants de produits chimiques agricoles, présentée au Comité, soit agréée.

Mr. Roy (Laval): Would you repeat it a little more slowly, Mr. Chairman?

Le président: Il est proposé par M. Gleave que la demande de l'Association canadienne des fabricants de produits chimiques agricoles de comparaître devant ce Comité soit agréée.

La proposition est adoptée.

M. Barrett: Je voudrais éclaircir un point, monsieur le président, afin de définir certaines choses. Est-ce que ce serait raisonnable que le comité directeur se réunisse et établisse des lignes directrices afin que cela ne se répète pas? Il n'y a pas de raison pour que nous devons accepter toutes les associations qui viennent. Mais le comité directeur pourrait nous le dire avant qu'on commence à étudier le bill; nous devrions savoir à l'avance à quoi nous attendre.

Le président: Je dois peut-être dire que le télégramme est arrivé sur mon bureau hier soir à 7 heures et demie environ. Je n'ai pas eu le temps de réunir le comité directeur avant notre réunion de ce matin et j'ai pensé que le Comité, dans son ensemble, devrait de toute façon en prendre connaissance, ce qui

[Text]

whole Committee anyway that it probably would not have shortened our discussion very much in any event.

• 1050

Mr. Barrett: What would have happened if you had been absent?

The Chairman: That is a highly improbable situation.

Mr. Roy (Laval): Monsieur le président, je m'excuse. Je n'étais pas ici au début de la séance, mais pourrais-je voir le contenu du télégramme? Je m'excuse si...

The Chairman: Yes. For the benefit of those who came in late, the telegram which was received last evening reads as follows:

MR. B. S. BEER, M.P., CHAIRMAN
STANDING COMMITTEE ON AGRICULTURE.

PARLIAMENT BLDGS. OTTAWA, ONT.
RE OUR TELEGRAM CONCERNING
OUR REQUEST TO APPEAR BEFORE
THE STANDING COMMITTEE IN RESPECT
TO BILL C-157, WE WOULD ADVISE
FOR YOUR FURTHER INFORMATION
THAT OUR CONCERN LIES WITH THE
LACK OF A RIGHT OF APPEAL UNDER
THE ACT SHOULD A REGISTRATION BE
REFUSED, AND WITH CLAUSE 5 SUB-
CLAUSE (D) AND (E) OF THE BILL AS
REGARDS THE REGULATIONS.

Gentlemen, may I ask a little guidance here? Certainly we will be in communication with the Secretary of the Canadian Agricultural Chemicals Association, inviting them to appear before this Committee. Would it be the wish of the Committee that the Association should prepare a written brief and present it to the Committee at the outset of their presentation, and that they would then be available for questioning? Would this not expedite the business of the Committee? Is it agreed?

Some hon. Members: Agreed.

The Chairman: Gentlemen, I am not too sure there is much to be gained by proceeding with a discussion of Bill C-157 until we have heard the witnesses.

Mr. Gleave: There are one or two questions hanging over from our last meeting, Mr. Chairman, to which I would like an answer. One is the information in two of the bills regarding the term "justice", and the question was asked whether this referred to justice of the peace. This information was going to be

[Interpretation]

n'aurait pas tellement réduit la durée de notre discussion.

M. Barrett: Que serait-il arrivé si vous aviez été absent?

Le président: La situation ne se reproduira plus.

Mr. Roy (Laval): Mr. Chairman, I apologize. I was not here at the beginning of the meeting, to could I read the telegram?

Le président: Oui, pour ceux qui n'étaient pas ici. Le télégramme qui a été reçu se lit ainsi: «Notre télégramme relatif à notre demande de comparaître devant le Comité permanent à l'égard du bill C-157. A titre de renseignement supplémentaire, nous nous inquiétons surtout de l'absence de droit d'appel dans la loi pour les cas où l'enregistrement est refusé et pour l'article 5, paragraphes d) et e) du bill à l'égard du règlement.»

Maintenant, messieurs, est-ce que je pourrais vous demander votre avis, vos conseils. Nous serons certainement en communication avec le secrétaire de l'Association canadienne des produits chimiques et agricoles pour les inviter à comparaître devant notre Comité. Est-ce que le Comité désire que l'Association prépare un mémoire écrit pour le présenter au Comité dès le début de sa comparution et, qu'ensuite, les témoins soient disponibles pour qu'on leur pose des questions? Est-ce que cela aiderait? D'accord?

Des voix: D'accord.

Le président: Messieurs, je ne suis pas trop certain que la discussion du bill C-157 progresse vraiment avant d'avoir entendu les témoins.

Mr. Gleave: J'avais posé une question à la dernière réunion, monsieur le président, j'aimerais bien avoir une réponse. Tout d'abord, je voulais un renseignement, les renseignements suivants: dans deux des bills, l'expression «justice», on se demandait s'il s'agissait de «juge de paix» ou non. Le renseignement

[Texte]

given to us. Perhaps we may have it now. It is justice of the peace?

An hon. Member: Yes.

The Chairman: Gentlemen, there seems to be some disposition to call Bill C-156, which is a short bill. The witnesses present are competent and capable to deal with it. Is it the wish of the Committee that we proceed with Bill C-156?

Mr. Howard (Okanagan Boundary): Mr. Chairman, a number of us have another committee meeting at 11 o'clock.

The Chairman: Gentlemen, I would direct your attention to Bill C-156. The long title is as follows: "An Act to amend the Animal Contagious Diseases Act." We will proceed on open questioning on Clause 2. Mr. Danforth.

Mr. Danforth: Mr. Chairman, before we begin our questioning on this, may we request that a general explanation be given, especially in regard to the reason it was felt that the bill should be amended, so that we may have some idea of when the last bill was before Parliament for consideration, and why it was felt that amendments were needed at this time, and some general information on the bill itself?

The Chairman: Thank you. I will call on Mr. Williams.

• 1055

Mr. Peters: Mr. Chairman, before Mr. Williams replies, would it be possible in this information to provide the Committee with some of the history of the payments, and the indications of what came to the Department of what the replacement value of the animals would be. In other words, the relationship between what we paid under the Animal Contagious Diseases Act and what the farmer believed his compensation should have been?

The Chairman: I understand that will be included in Mr. Williams' remarks. Mr. Williams?

Mr. Williams: Mr. Chairman, the proposed amendments to the Animal Contagious Diseases Act embody two major changes. One deals with the way in which compensation rates are set for animals ordered slaughtered. The second provides for an appeal by the owner against a compensation award under the Act.

For the past 43 years, the federal government has compensated owners of animals that

[Interprétation]

devrait être donné et nous pourrions peut-être l'avoir maintenant. S'agit-il d'un juge de paix?

Une voix: Oui.

Le président: Messieurs, il semble qu'on serait disposé à étudier le bill C-156 qui est très court. Les témoins sont ici; ils sont très capables d'en discuter. Est-ce que le Comité désire que nous abordions le bill C-156?

M. Howard (Okanagan-Boundary): Monsieur le président, plusieurs d'entre nous ont une autre séance de comité à 11 heures.

Le président: Messieurs, nous aborderons maintenant l'étude du bill C-156 dont le titre au long est le suivant: Loi modifiant la Loi sur les épizooties. Nous allons commencer par l'article 2.

M. Danforth: Avant de commencer à poser des questions à ce sujet, monsieur le président, est-ce que nous pourrions demander une explication générale, surtout à l'égard de la raison pour laquelle on a trouvé que le bill devrait être modifié, afin de savoir à quel moment la dernière modification a été présentée au Parlement et pourquoi l'on pense que c'est nécessaire de modifier la Loi encore une fois? Peut-être aussi une explication générale au sujet du bill.

Le président: Merci. Je passe la parole à M. Williams.

M. Peters: Serait-il possible aussi de dire au Comité un peu l'historique ainsi que tout ce que le ministère aurait pu apprendre en ce qui concerne la valeur de remplacement des animaux? En d'autres termes, quel serait le rapport entre ce que nous avons versé en rapport avec la Loi sur les épizooties et la compensation donnée aux cultivateurs?

Le président: Je crois comprendre que cela est inclus dans les remarques de M. Williams.

M. Williams: Monsieur le président, le bill modifiant la Loi sur les épizooties comporte deux changements: le premier est la façon d'établir la compensation ou l'indemnité pour les animaux détruits et, deuxièmement, on prévoit un appel pour le cultivateur en cause. Depuis deux ans, le gouvernement fédéral a compensé les cultivateurs pour les animaux détruits en vertu de la Loi sur les épizooties en raison de la maladie de Johnne, l'érucellose

[Text]

have been ordered destroyed under eradication programs for Jones' disease, Brucellosis and Tuberculosis.

Up until and including now, compensation rates have been prescribed in the Act. For the period 1925 to 1949, the compensation rates were a maximum of \$60 for grade cattle and \$150 for purebred cattle. The basis for this compensation was two-thirds of the value of the animal slaughtered.

In 1949, the compensation rates were revised to provide a maximum of \$40 for grade cattle and \$100 for purebred cattle. The full value was paid up to the maximum rate. Thus there was a change in maximum and a change in philosophy in estimating the amount within that maximum. In the latest revision, in 1958, rates were established at a maximum of \$70 for grades and \$140 for purebreds.

It should be noted that the owner's total return for an animal ordered slaughtered is the meat salvage value plus the compensation awarded by the government. Where the sale of the animal's carcass is unlawful, that is to say, where the animal is condemned and cannot be used for normal meat purposes, an additional amount equal to the value the carcass would have had if the sale were lawful is paid to the owner by the government. So it should be noted that the owner's returns under this compensation comes from two sources: the direct compensation paid, and the salvage value of the animal. If there is no salvage value of the animal—that is, no normal salvage value in terms of meat—the government pays an equivalent payment in addition to the original payment. So there are two payments made in all cases to owners of animals ordered slaughtered.

The proposed revision retains this provision, that is to say, the dual source, so that the farmer would either be able to recover the meat salvage value by selling the carcass, or where this is forbidden, by recovering the carcass value from the government.

The amendment provides that compensation rates would no longer be set by the Act. These maximum rates would be established by Governor in Council. This would allow a more flexible approach to compensation. Value of purebred livestock, and indeed of grade dairy cattle, for instance, can change markedly even within a year's time.

The second change being proposed is the amendment to provide for appeal against a compensation award. At the present time no such appeal is available.

[Interpretation]

et la tuberculose. Jusqu'à maintenant, les taux d'indemnité ont été prescrits dans la Loi. Pour la période de 1925 à 1949, l'indemnité maximum était de \$60 pour le bétail ordinaire et \$150 pour le bétail de race. L'on se fondait sur les deux tiers de la valeur des animaux détruits.

En 1949, les taux d'indemnité ont été révisés pour prévoir un maximum de \$40 pour le bétail ordinaire et \$100 pour le bétail de race. La pleine valeur était donnée jusqu'au maximum, jusqu'à concurrence du maximum. Donc, il y a eu un changement dans le maximum ainsi qu'un changement dans la façon d'estimer la valeur en dedans de ce maximum. La dernière révision qui s'est faite en 1958 établissait les taux au maximum de \$70 pour le bétail ordinaire et \$140 pour le bétail de race.

C'est à noter que le gain total du propriétaire pour l'animal détruit c'est la valeur de la viande, ainsi qu'une indemnité parce qu'il a été détruit. Lorsque la vente de la carcasse est illégale, c'est-à-dire que lorsque l'animal est condamné et ne peut servir à la consommation, d'ordinaire, une somme additionnelle égale à la valeur de la carcasse, égale plutôt à la valeur que la carcasse aurait eue si la vente avait été légale, est payée au propriétaire par le gouvernement. Par conséquent, ce que reçoit le propriétaire en vertu de cette indemnité vient de deux sources; tout d'abord, l'indemnité directe de la valeur de la viande de l'animal. S'il n'y a pas de façon normale, le gouvernement verse une somme équivalente, en plus du versement initial. Il y a donc deux versements dans chaque cas aux propriétaires dont les animaux doivent être abattus.

Les révisions proposées maintiennent cette disposition, c'est-à-dire la double source, de sorte que le cultivateur peut ou bien vendre la carcasse et récupérer la valeur ou, si c'est interdit, récupérer de la part du gouvernement la valeur de la carcasse.

Les modifications, les amendements prévoient que les indemnités ne seront plus prescrites par la Loi. Le maximum serait établi par le gouverneur en conseil, ce qui permettrait une attitude beaucoup plus souple à l'égard du versement des indemnités. La valeur du bétail et du troupeau laitier peut changer énormément même dans l'espace d'un an. Le deuxième changement proposé par ce bill, c'est qu'on prévoit un appel contre le montant de l'indemnité accordée. A l'heure actuelle, il n'y a pas de disposition prévoyant un appel.

[Texte]

The amended Act would permit the owner of an animal ordered slaughtered to appeal against the amount of the award, or to appeal where no compensation is awarded at all under the appeal provisions included in the Pesticide Residue Compensation Act. That is to say, this Act itself does not spell out the details of the appeal; it refers to the other Act that this Committee has dealt with.

• 1100

The one other point that I should note is that the appeal privileges will not delay the destruction of diseased animals. The animals will be ordered destroyed, and the appeal would take place after that. It is believed by the Department that this is essential in its disease control program. Thank you, Mr. Chairman.

The Chairman: Certainly, Mr. Williams. I have Mr. Moore, Wetaskiwin.

Mr. Moore (Wetaskiwin): Mr. Chairman, I feel that there has been a need for a change for a long time, and I am thinking of a specific case. I do not know how this Act will affect such a case, but I am thinking of a case where a man imports a herd sire, say, from a different country, and possibly pays \$10,000 for this animal. A \$10,000 price, of course, does not compare with the amount...

The Chairman: Your microphone, please. Would you repeat please?

Mr. Moore (Wetaskiwin): I am thinking of a specific case of a man importing herd sire for the sum, just to use a figure of \$10,000 and naturally any act that we have had in the past, and I presume this one, does not allow for that type of figure. The sire was, naturally, TB tested and so forth before coming into the country and he refused permission for a government man to retest this animal for the simple reason that if the animal had reacted to the test his compensation would have been in line with the figures that Mr. Williams has just given us.

Therefore, he said that he could not allow this animal to be tested, and I do not know whether the battle is still going on or not but at any rate he was winning the battle at that time. He refused to let the tester sent out to his farm test the animal and I am wondering whether this new Bill, which I am sorry I have not read yet, provides greater compensation for this type of case?

[Interprétation]

Cela permettrait au propriétaire des bovins abattus d'en appeler contre l'indemnité accordée ou lorsqu'il n'y en a pas, de retomber dans le cas des autres lois contre les produits antiparasitaires.

L'autre point que je devrais peut-être signaler, c'est que les dispositions, les privilèges d'appel ne retarderont pas la destruction des animaux condamnés. Le ministère estime que c'est essentiel pour contrôler justement les épizooties.

Le président: Merci, monsieur Williams. J'ai M. Moore (Wetaskiwin) maintenant.

M. Moore (Wetaskiwin): Monsieur le président, je pense à un cas particulier donné. Je ne sais pas dans quelle mesure cela a rapport avec notre cas, mais je pense à l'importation d'un animal reproducteur, au prix de \$10,000, par exemple.

Le président: Votre microphone, je vous prie. Pourriez-vous recommencer s'il vous plaît?

M. Moore (Wetaskiwin): Je pense au cas particulier d'un homme qui importe des taureaux pour la somme, disons, de 10,000 dollars; et, bien sûr, les lois que nous avons eues dans le passé, ou celle-ci, d'ailleurs, ne parlent pas d'un chiffre de ce genre. Le taureau avait, bien sûr, été soumis à un test antituberculeux avant d'être admis dans le pays, et la personne en question a refusé qu'un inspecteur du gouvernement fasse un deuxième test sur l'animal, pour la simple raison que si l'animal avait mal réagi à ce deuxième test, l'importateur aurait simplement reçu une indemnité de l'ordre de celles que vient de mentionner M. Williams.

Par conséquent, il a dit qu'il ne pouvait pas autoriser un test sur l'animal. Je ne sais pas où en est l'affaire, mais à ce moment-là il gagnait la partie. Il a refusé que l'inspecteur du gouvernement aille faire ce test sur l'animal. Alors, je me demande si le nouveau Bill, que malheureusement je n'ai pas encore lu, prévoit une plus grande indemnité pour un cas de ce genre.

[Text]

The Chairman: I have other questioners, but I will recognize Mr. Williams in answer to your question.

Mr. Williams: Mr. Chairman, the question that has been raised by Mr. Moore is a most difficult one in the view of the Department. To answer his question specifically, this Bill does not make any provision for that, nor does it prohibit it; all it does is transfer the power to set maximums from the Act itself to the Governor in Council. This in itself obviously will give greater flexibility and will permit the government to deal with special cases, but the problem of providing compensation under this Act for top quality, expensive pure-bred animals is a most difficult one. The difficulty stems from the problem of establishing what might be called values for this class of stock.

I think you gentlemen will all realize that top quality or high priced pure-bred stock is often bought at prices that may or may not bear too much resemblance to actual value. They are speculative purchases. They are purchases in which advertising plays a very large part.

The philosophy that the Department has entertained on this matter in the past is that commercial insurance is available to farmers for animals of this class and it is normal practice for people purchasing high quality, high priced animals to take out additional insurance through commercial channels against condemnation and other risks, including breaking legs and anything of that nature for which, of course, no compensation is available.

I think you gentlemen also appreciate that there are many, many diseases that animals are heir to that are not covered by federal compensation in any event.

In view of those difficulties I would not want to mislead the Committee into thinking it is our intention to recommend to the Governor in Council that the maximums will automatically include coverage for what might be called high priced pure-bred livestock falling in the category that Mr. Moore has described.

• 1105

Mr. Moore (Wetaskiwin): I quite agree.

The Chairman: Thank you, Mr. Moore. I recognize Mr. Danforth.

Mr. Danforth: Mr. Chairman, since this Bill is an Act to amend the Animal Contagious Diseases Act and it deals with diseases that

[Interpretation]

Le président: Il y a d'autres personnes qui veulent poser des questions, mais je donne la parole à M. Williams pour qu'il vous réponde.

M. Williams: Monsieur le président, il est très difficile de répondre à la question de M. Moore, du point de vue du Ministère. Pour répondre précisément à la question, le bill ni ne prévoit ni n'interdit de chose de ce genre; il ne fait qu'attribuer au gouverneur en conseil le pouvoir de fixer des maximums. Cela même donnera, c'est évident, une plus grande souplesse, et permettra au gouvernement de résoudre les cas particuliers, mais le problème des indemnités à accorder en vertu de la présente Loi pour les animaux de race de qualité supérieure est très difficile à résoudre. La difficulté provient du fait qu'il est difficile d'établir ce que l'on pourrait appeler des valeurs pour cette catégorie de bétail.

Je pense que vous vous rendez tous compte, messieurs, que les animaux de race de qualité supérieure ou très prisés sont souvent achetés à un prix qui peut avoir ou ne pas avoir grand rapport avec leur valeur réelle. Ce sont des achats spéculatifs, dans lesquels la publicité joue un grand rôle.

Le ministère, à ce sujet, a toujours maladies qui ne sont pas couvertes par l'assurance-commerciales pouvaient assurer le bétail de ce genre pour les agriculteurs, et qu'il était normal que les éleveurs qui achetaient des animaux de qualité supérieure et très coûteux eussent une assurance privée supplémentaire pour se couvrir en cas de contamination de l'animal ou d'autres risques, comme pattes cassées, etc., pour lesquels, bien sûr, aucune indemnisation n'est prévue.

De plus, vous vous rendez certainement compte, messieurs, qu'il y a toutes sortes de maladies qui ne sont pas couvertes par l'assurance fédérale et qui malgré tout risquent de frapper le bétail.

Étant donné toutes ces difficultés, je ne voudrais pas donner à tort au Comité l'impression que nous entendons recommander au gouverneur en conseil que les maximums prévoient automatiquement une protection dans le cas du bétail de race et de prix élevé de la catégorie qu'a décrite M. Moore.

M. Moore (Wetaskiwin): Je suis tout à fait d'accord.

Le président: Merci, monsieur Moore. Monsieur Danforth?

M. Danforth: Monsieur le président, étant donné que le présent Bill vise à amender la Loi sur les épizooties, et qu'il traite de mala-

[Texte]

are of such a serious nature that the government intervenes and destroys livestock on a producer's farm or in his possession, and in the introduction we had the mention of cattle and, I note in the bill, horses, may I ask whether or not other forms of livestock are included in this Bill?

I am thinking of hog cholera; the diseases that occasionally cause the destruction of herds of sheep; infestations of rabies where dairy cattle may be affected. I am just wondering whether those provisions are under this Bill. If not, why are they not under this Bill which deals specifically with this particular problem?

The Chairman: Mr. Williams?

Mr. Williams: The situation here is that we have two types of programs under the Animals Contagious Diseases Act. Where we go in and we do not have tests or the nature of the disease is such that the entire herd is destroyed—namely, the diseased animals plus all contacts whether or not they do have the disease; the diseases you mentioned, Mr. Danforth, are symptomatic of that area, hog cholera, foot and mouth disease—the Act provides that the full market value be paid.

Scrapie, I believe, is the disease in question; which is the main disease under the Act. Compensation is awarded on a completely different basis in that the action here is to order destroyed the entire herd whether or not they have the disease. They may simply have been in contact. The other diseases which fall into a somewhat different nature, brucellosis, tuberculosis and Johnes' disease, are not diseases that spread with the same epidemic rates as do the former diseases that fell in the former classes.

Here disease control is for a dual purpose. One is to assist the farmer in identifying the disease and removing diseased animals from his herd in order that the average productive level of his herd may be raised, and that he will not have an attenuating type disease within his herd that is causing what in some cases almost could be considered hidden losses.

In addition to that, it has the secondary purpose of providing against the spread of this disease to other herds. We have two philosophies here, where you are taking action against a disease of epidemic proportions, as it could become epidemic, and you order everything destroyed, in which case the Act provides for full market value.

[Interprétation]

dies qui sont si graves que le gouvernement peut intervenir et détruire le bétail d'un éleveur, et étant donné que dans l'introduction, on parlait de bétail, et que je remarque que dans le Bill on mentionne les chevaux, est-ce que je pourrais savoir si, oui ou non, il y a d'autres catégories de bétail prévues dans ce Bill?

Je pense, par exemple, au choléra des porcs, aux maladies qui parfois entraînent la destruction de troupeaux de moutons, aux épidémies de rage qui peuvent affecter les vaches laitières. Est-ce que tout cela est prévu dans le Bill? Sinon, pourquoi ne pas l'avoir inclus dans ce Bill, qui traite précisément de ce problème particulier?

Le président: Monsieur Williams?

M. Williams: La situation c'est que nous avons deux types de programme qui relèvent de la Loi sur les épizooties. Lorsque nous intervenons et qu'il n'y a pas de tests, ou que la maladie est telle que le troupeau entier est détruit—c'est-à-dire les animaux atteints et tous ceux qui ont eu des contacts avec eux, qu'ils soient ou non affectés, en particulier dans le cas de ces maladies que vous avez mentionnées, M. Danforth, comme le choléra des porcs, la fièvre aphteuse, et ainsi de suite—la Loi prévoit que l'on rembourse la totalité de la valeur marchande.

La maladie en question est, je le pense, la tremblante, qui est l'infection principale prévue par la Loi. L'indemnisation se fait selon un principe complètement différent, puisqu'il s'agit ici d'ordonner que l'on abat le troupeau entier, que les animaux aient ou non la maladie, et même s'ils ont simplement été en contact avec des animaux atteints. Les autres maladies, qui sont d'une nature un peu différente, comme la brucellose, la tuberculose et la maladie de Johnes, ne s'étendent pas avec la rapidité d'une épidémie comme le font les maladies plus graves.

Dans ces cas-là, l'intervention a un double objet. D'une part, elle a pour but d'aider l'agriculteur à identifier la maladie et à retirer les animaux atteints de son troupeau pour améliorer la qualité moyenne du troupeau et éviter qu'il y ait dans son troupeau des maladies affaiblissantes qui causent ce qu'on pourrait parfois même appeler des pertes cachées.

D'autre part, l'intervention a pour but d'empêcher la dissémination de la maladie à d'autres troupeaux. Par conséquent, il y a deux idées de base: d'une part, on prend des mesures contre la maladie qui a des proportions épidémiques, puisqu'elle pourrait tourner en épidémie, et l'on ordonne que tout le troupeau soit détruit, auquel cas la Loi pré-

[Text]

With the other diseases we are dealing with at present, the second situation that I described prevails.

Mr. Danforth: I quite understand the explanation given, Mr. Chairman, but I just wonder if Mr. Williams could give just a little more detail. Under one, we get the full market value. I can understand and appreciate that, but under this bill and in his explanation I think Mr. Williams said that by an act of the Governor in Council a rate would be established which could be paid, plus the market value of any of the carcass. Would it not be the object of this Bill that we have before us, as was outlined by Mr. Williams in the other instance, of paying full market value?

Mr. Williams: That is correct, Mr. Chairman. The intent of the total two payments is to provide full market value within the limitations that I mentioned in respect of top quality pure-bred livestock.

• 1110

Mr. Danforth: Thank you, Mr. Chairman.

The Chairman: Thank you, Mr. Danforth. Mr. Peters?

Mr. Peters: I am interested, really, in two phases. First, I would like to know what John's disease is.

Mr. Williams: I am afraid that for a technical description you are going to have to wait until I have some supporters here, but it is a debilitating disease of a dysentery type that is identifiable by testing the animals. The animals waste under this disease, become unthrifty and eventually a fairly large percentage of them die.

Mr. Peters: Does it have a common name?

Mr. Williams: That is its common name, John's disease. It is not found in this country to any particular extent. All animals coming into this country are tested for it and we maintain prohibitions against it and things of that nature.

Mr. Peters: I am interested really in two things. One is why we are not interested in things like foot and mouth disease where the herd has to be slaughtered for control and where, in many cases, a farm has to be put under quarantine for a period of time. Even

[Interpretation]

voit une indemnisation pour la totalité de la valeur marchande.

D'autre part, dans le cas des autres maladies que nous étudions actuellement, la seconde situation que je vous ai décrite s'applique.

M. Danforth: Je comprends très bien l'explication qui m'a été donnée, monsieur le président, mais je me demande simplement si M. Williams pourrait nous donner un peu plus de détails. Dans le premier cas, on obtient la totalité de la valeur marchande. Je comprends très bien cela, mais, en vertu du Bill et, je crois, d'après les explications de M. Williams, il semble que, par un décret du gouverneur en conseil, on fixerait un taux d'indemnisation qui serait payé en plus de la valeur marchande de chaque carcasse. Est-ce que le présent Bill n'aurait pas pour objet, comme cela a été indiqué par M. Williams dans l'autre cas, le paiement de la valeur marchande totale?

M. Williams: Oui, c'est exact, monsieur le président. L'objet, c'est que le total des deux paiements fournisse la totalité de la valeur marchande, dans le cadre des limites que j'ai indiquées en ce qui concerne le bétail de race et de qualité supérieure.

M. Danforth: Merci, monsieur le président.

Le président: Merci, monsieur Danforth. Monsieur Peters?

M. Peters: Il y a deux aspects de la chose qui m'intéressent. Tout d'abord, j'aimerais savoir ce qu'est la maladie de John's.

M. Williams: Je pense que pour avoir une description technique, il vous faudra attendre d'avoir quelques experts ici; mais c'est une maladie affaiblissante du type dysenterie qui peut être détectée par des tests faits sur les animaux. Les animaux atteints de cette maladie souffrent de diarrhée, et finalement un grand pourcentage d'entre eux meurent.

M. Peters: Est-ce que cette maladie a un nom commun?

M. Williams: La maladie de John's est son nom commun. On ne la trouve pas beaucoup au Canada. Tout le bétail importé est soumis à des tests, et les animaux atteints sont refusés.

M. Peters: Ce qui m'intéresse, en fait, ce sont deux choses. D'une part, pourquoi ne nous soucions-nous pas d'une maladie comme la fièvre aphteuse, où le bétail doit être abattu pour éviter la contamination et où, dans bien des cas, l'exploitation agricole doit

[Texte]

in cases of brucellosis there sometimes is a quarantine where the cost goes beyond the actual slaughtering of the cattle, why are we not interested in providing in those cases where this is a control project—and this is true with rabies and foot and mouth particularly, and also applies to hens in certain diseases—where it is a control, that we are not interested in paying the replacement value, rather than the market value.

Now, the average Holstein price in Ontario for a mature pure-bred cow would run \$700 plus, depending on the market, and I will agree with Mr. Williams that there is a great deal of difficulty in establishing what that average price would be. I agree that when you get into the realm of a \$10,000 bull, to increase the price of that bull, neighbours may sell it back and forth, and the price is not \$10,000 but \$30,000 and this is a very common practice in Ontario for developing an export price.

However, it seems to me that where the average is considerably higher and where you have to slaughter for control, as distinct from slaughtering for brucellosis because brucellosis comes in a different category, that we should be paying the replacement value for that herd—no, we do not. We in many cases only pay about 10 per cent of the cost of it, or 20 per cent of the cost of it. I would think this is spreading into Charlais and other cattle that are in that kind of a category.

The second point that I am interested in is—and I know the complications—but I wonder why we do not apply the terms of this bill, which are very stringent terms, to the rabies control program, and put rabies under it. I am aware of the wild-life and all the other problems, but we do not seem to be getting anywhere with rabies control. Under the Animal Contagious Diseases Act that we have had for 40 or 50 years, we have got rid of brucellosis, most areas in Canada are brucellosis free, we have developed an enviable record in the world for selling or moving livestock back and forth on this continent, and we are free of most of these diseases except rabies.

I know rabies has a cyclic action, but we do not seem to be getting any closer to putting an end to this. A few years ago, in my area, it was an epidemic it has been epidemic in parts of Quebec, it has been at epidemic level in other areas, and it seems to me that if it was put under the same terms as this the federal government would be able to say to Lands and Forests in Ontario that they would have to do some control in their field, that a

[Interprétation]

être mise en quarantaine pour un certain temps. Même dans le cas de brucellose il y a parfois une période de quarantaine à subir. Et pourquoi ne cherchons-nous pas à prévoir ces cas, puisqu'il s'agit d'un projet de surveillance, de contrôle, dans le cas, notamment, de la fièvre aphteuse? Cela s'applique également aux poulets et aux autres maladies. Pourquoi ne cherchons-nous pas à payer la valeur de remplacement plutôt que la valeur marchande?

Le prix moyen des Holstein, en Ontario, pour une vache pur sang, serait, disons, à partir de \$700. Selon le marché, je reconnais avec M. Williams, évidemment, qu'il y a beaucoup de difficultés à fixer le prix moyen. Je reconnais que quand on tombe dans le domaine des taureaux à \$10,000 pour augmenter le prix du taureau, il y a un échange d'un voisin à l'autre, ce qui fait monter le prix jusqu'à parfois \$30,000 et cela permet de monter la valeur marchande du bétail.

Mais, il me semble que, lorsque la moyenne est assez supérieure à ce chiffre et qu'il faut faire un abattage pour ces vérifications, je ne parle pas de la brucellose parce qu'elle entre dans une autre catégorie, disons que pour ces contrôles, il faudrait verser le prix de remplacement de ce bétail. Alors, ce n'est pas ce que l'on fait parce que dans certains cas, on paie même simplement 10 p. 100 du coût de remplacement, ou 20 p. 100 même du coût de remplacement. Et, je pense que cela s'étend également aux Charolais et à d'autres types de bétail.

Deuxièmement, je me demande, je sais que cela est compliqué pourquoi nous n'appliquons pas les modalités de cette loi qui sont très rigides? Pourquoi cela ne s'applique-t-il pas au programme de lutte contre la rage? Je sais que c'est là quelque chose de très compliqué, mais il semble que l'on ne va nulle part avec ce programme de lutte contre la rage. Les programmes des 40 ou 50 dernières années nous ont permis de nous débarrasser de la brucellose. Nous avons établi un record, en quelque sorte, mondial, de ventes ou de transferts de bétail dans le continent tout entier. Et, nous n'avons plus ces maladies, sauf la rage.

Je sais que la rage a une action cyclique mais, malgré tout, nous n'avons rien fait qui nous permette d'espérer voir la fin de cette maladie qui a eu des proportions épidémiques, il y a quelques années, je crois, au Québec notamment. Il me semble que si cela était inclus dans ce projet de loi, le gouvernement fédéral pourrait alors dire au Service des terres et forêts de l'Ontario: «eh bien, il vous faut faire quelque chose dans ce

[Text]

number of other people would be involved, and the federal government would then be able to put in a real control program and maybe get around to wiping out rabies.

• 1115

The Chairman: Mr. Williams?

Mr. Williams: Mr. Chairman, there were two questions dealt with: one was the question as to why we do not pay replacement value instead of market value. I think that I would have to say in reply to that that it would be our feeling that basically market value has to be replacement value. I know that there is a great deal of argument, and we are continuously in argument with people who have had their animals ordered destroyed, as to whether or not they were able to replace them. We also have to recognize, though, that under this program we are performing a service to agriculture as a whole, but we also are performing a specific service to that farmer, and it is going to be extremely difficult for us to allocate how much of the service is to that farmer and how much is to agriculture as a whole.

However, I do think that has to be given some consideration when one thinks of this because, as you well know, there are many other diseases that are not notifiable diseases where the farmer receives no compensation whatsoever. His animals die. They are not of necessity ordered destroyed.

Mr. Peters: A supplementary question to that. Is it not true, though, that there are categories of this problem? I am not so insistent that replacement value be applied to Bangs disease, brucellosis, because this is not a total thing and we do not quarantine, as a rule. We quarantine for movement, but we do not quarantine in the sense of total quarantine. But in a case of a total quarantine where you are talking about scabies or you are talking about foot and mouth, this is really a national problem; it is not a farm problem. The food and drug people move in and the Department of Agriculture moves in and they take over that farm and they have control of it not only for that period but perhaps for a year or two. Does it not seem that there is a difference between where we are talking about national eradication of a problem against what is a contagious disease?

Mr. Williams: Yes, Mr. Chairman, there is a very distinct difference and we treat the diseases that fall into these different categories differently. On the diseases to which you

[Interpretation]

domaine et cela impliquerait un certain nombre d'autres personnes; alors le gouvernement fédéral pourrait vraiment mettre sur pied un programme de contrôle qui permettrait d'éliminer complètement la rage.

Le président: Monsieur Williams.

M. Williams: Monsieur le président, il y a eu deux questions. D'une part pourquoi est-ce qu'on ne verse pas le prix de remplacement plutôt que le prix marchand; eh bien, je pense que c'est que nous pensons que la valeur marchande doit être normalement la valeur de remplacement. Bien sûr, on peut en discuter. On discute toujours de cette question avec les personnes qui ont vu leur bétail abattu. Il y a toujours des discussions, parce qu'ils prétendent que cela coûte plus cher de le remplacer. Mais, il ne faut pas oublier non plus que, dans ce programme, nous rendons service à l'agriculture dans son ensemble, mais également nous rendons un service particulier à l'agriculteur en question, à l'éleveur en question. Et, je pense qu'il va nous être très difficile de décider quelle est la part de service que nous rendons à l'agriculture et quelle est celle que nous rendons à cet éleveur particulier.

Mais, malgré tout, il ne faut pas oublier qu'il y a un certain nombre de maladies qui ne peuvent pas être remarquées et pour lesquelles l'éleveur ne reçoit aucune indemnité. Et, si ses animaux meurent, il ne peut pas être indemnisé.

M. Peters: Mais, n'est-il pas vrai, néanmoins, qu'il y a des catégories, des degrés de difficultés dans ce problème? Personnellement, je ne suis pas catégorique, je ne veux pas dire qu'il faudrait obligatoirement appliquer la valeur de remplacement à certaines maladies. La quarantaine ne s'applique pas en totalité, simplement au transfert. Mais, lorsqu'il y a une quarantaine pour la fièvre aphteuse ou pour une ou deux autres maladies, le ministère de l'Agriculture intervient alors et puis les services d'hygiène interviennent, s'en occupent. Non pas seulement pour cette période donnée, mais cela peut se prolonger pendant encore une année ou deux et il me semble, à ce moment-là, qu'il y a là quelque chose de différent. On parle d'une part de la suppression complète d'un problème, d'une maladie contagieuse.

M. Williams: Il y a une différence dans le traitement de ces maladies. Pour la maladie que vous citez, le bill exige qu'on verse la valeur marchande. La méthode d'évaluation

[Texte]

referred, the bill orders that market value be paid. If we eradicate the whole herd, we pay market value. The method of valuation that we follow is done by a tripartite group; a three-man group is set up to commercially evaluate every animal ordered destroyed under those particular diseases: one man from the Health of Animals, one from the Livestock Branch, and one a nominee of the breeder or the breed association depending upon the problem. So it is market value, and if market value is correctly determined, presumably that is replacement value. This is the procedure that we do follow.

In respect of rabies which is the second question that was raised, the problem here is at the present time it is not technically possible to undertake an eradication program for rabies for two reasons, one of which you mentioned, sir, and that was that the main reservoir of rabies is in the wild-life of this country, but the second one is associated with the fact that there is no test for rabies until the disease is in its terminal stages. In other words, for these other diseases such as Johne's, there is brucellosis, tuberculosis, we do have blood tests or other tests where we can determine that the animal either is going to come down with the disease or is a carrier of the disease. We can determine this with a great deal of accuracy.

Such tests are not available for rabies, for some other diseases such as Anthrax, in which case we do jointly with provinces pay compensation for animals that actually succumb to the disease. However, we have no method under which we can order animals destroyed because by the time we are able to recognize the disease they probably are dead or are so close to being dead that it would be futile to order them destroyed.

Mr. Peters: Are we doing any work on this? I realize that you examine the brain tissue of an animal that has died from rabies and are able to ascertain through certain examinations that this is actually the cause of death, but are we doing any work on this?

Mr. Williams: I am afraid, Mr. Chairman, that I cannot answer that question specifically. I will answer it later as to whether we are doing specifically work on the serological or any other method of determination of rabies prior to its terminal stages. We do have a research group that is working continuously on the problem of the improvement of serological and other techniques for the early

[Interprétation]

suivie est une évaluation faite par un groupe tripartite qui évalue, du point de vue commercial, chaque animal qui doit être abattu pour ces maladies données. Ce groupe est composé d'un représentant de la Direction de l'hygiène vétérinaire, d'un représentant de la Division des bestiaux et d'un représentant de l'Association des éleveurs.

Maintenant, en ce qui concerne la rage qui est le deuxième problème que vous avez soulevé, actuellement, il paraît qu'il n'est pas possible, techniquement, d'entreprendre un programme d'éradication de la rage pour deux raisons: d'abord celle que vous avez citée vous-même, c'est-à-dire que c'est parmi la faune que l'on trouve la source principale de rage. Mais, le deuxième élément est qu'il n'est pas possible de faire des prélèvements, des vérifications de la rage avant que la rage n'ait atteint son stade final, contrairement à la maladie de Johne, à la brucellose, à la tuberculose et à d'autres maladies où on peut déterminer que l'animal va attraper la maladie, qu'il est pathogène, porteur de la maladie.

Mais, ce n'est pas la même chose pour la rage. Dans certains cas, nous pouvons agir avec les provinces et aider conjointement l'agriculteur. Mais, on ne peut absolument rien faire pour la rage parce que, au moment où on connaît, où on identifie la rage, l'animal est soit mourant, soit mort, et il est inutile, à ce moment-là, de faire quoi que ce soit.

M. Peters: Est-ce qu'on étudie la question de près? Est-ce qu'on fait des recherches à ce sujet? Je sais que vous avez fait des prélèvements sur des tissus cérébraux d'animaux qui ont été atteints par la rage et que vous avez pu, par certains examens, déterminer que c'était là véritablement la cause de la mort de l'animal. Mais, est-ce que l'on fait véritablement quelque chose dans ce genre?

M. Williams: Eh bien, je m'excuse, monsieur le président, je ne pourrais pas répondre d'une façon précise à cette question. Je le dirai plus tard si nous faisons effectivement des travaux de recherches d'ordre biologique, ou autres, pour déterminer la rage avant qu'elle n'atteigne son stade final. Nous avons un groupe de recherche qui travaille en permanence sur la question de l'amélioration des

[Text]

detection of disease, but to answer specifically in respect to rabies, I am afraid that I cannot at the present moment, although work is going on in the world on this subject.

Mr. Peters: What is the percentage of rabies as a disease against some of the others—brucellosis for instance? The question should be, is this a major problem in the agricultural field?

Mr. Williams: In terms of total deaths it is a very minor problem. The problem is however, related to its transmissibility to humans rather than it being an agricultural problem. I do not have with me at this instant the figures as to the amount of compensation we pay on rabies, but it is very minor in comparison with brucellosis and tuberculosis.

The Chairman: Mr. McKinley?

Mr. McKinley: Mr. Chairman, I was wondering there is a payment made for Newcastle disease in poultry, I believe.

Mr. Williams: No, there is no payment made for Newcastle disease at the present time.

Mr. McKinley: When did that stop?

Mr. Williams: You mean the year?

Mr. McKinley: Yes.

Mr. Williams: I am afraid I could not quote that at the moment but I could have that information for you in a few minutes, Mr. McKinley.

Mr. McKinley: Are there any other diseases of poultry for which payment is made?

Mr. Williams: No, we have no continuing programs similar to this. There could be a program under the other section of our Act where full market value would be paid. But this is not a continuing program such as the programs in relation to Johne's disease, brucellosis and tuberculosis.

Mr. McKinley: Is there any consideration given—this is a special request from a constituent—to compensation being paid for leukosis?

Mr. Williams: At the present time, no.

[Interpretation]

techniques sérologiques et autres techniques de détection de la maladie. Mais, pour vous répondre spécifiquement sur le problème de la rage, je ne peux rien vous dire de précis, sinon que dans le monde entier on fait des recherches.

M. Peters: Est-ce que je pourrais poser une autre question? Quel est le pourcentage de cas de rages, par rapport aux cas de brucellose, disons? Est-ce que c'est là un problème grave en agriculture?

M. Williams: Eh bien, disons que du point de vue de la mort totale, c'est un problème mineur. Le problème, néanmoins, porte sur le fait que c'est une maladie qui peut être transmise aux humains plutôt que sur le fait que c'est une maladie grave pour l'agriculture. Je ne peux pas vous donner de chiffres sur les indemnités que nous avons versées dans le cadre de la rage. Mais disons que c'est très faible par rapport à la brucellose et à la tuberculose.

Le président: Monsieur McKinley?

M. McKinley: Monsieur le président, je me demandais s'il y a des versements accordés pour la maladie de Newcastle.

M. Williams: Non, aucune indemnité n'est versé pour la maladie de Newcastle.

M. McKinley: Depuis quand ont-elles cessé?

M. Williams: Vous voulez dire quelle année?

M. McKinley: Oui.

M. Williams: Je m'excuse de ne pas pouvoir vous donner l'année. Je pourrais l'obtenir pour vous dans quelques instants.

M. McKinley: Y a-t-il d'autres maladies des volailles pour lesquelles on verse des indemnités?

M. Williams: Non, nous n'avons aucun programme permanent qui soit semblable à celui-ci. Il peut y avoir un programme dans le cadre d'autres articles de la Loi, en vertu duquel on rembourserait la valeur marchande totale mais ce n'est pas un programme du même type que ceux qui combattent la maladie de Johne, la tuberculose ou la brucellose.

M. McKinley: Est-ce qu'on envisage, c'est là une demande d'un de mes électeurs, d'accorder des indemnités pour la leucose?

M. Williams: Actuellement, non.

[Texte]

Mr. McKinley: Thank you.**The Chairman:** Thank you, Mr. McKinley. I recognize Mr. Moore (Wetaskiwin).**Mr. Moore (Wetaskiwin):** For clarification, Mr. Chairman, when you speak of the market value of dairy cattle, this does not depend on their carcass value but on the going price of dairy cows at that particular time. Is that correct, Mr. Williams?**Mr. Williams:** That is correct, yes. The market value is not defined as the market value for food purposes but it is the market value for the purposes for which the animal was intended.**Mr. Moore (Wetaskiwin):** Yes. In other words, in the last 30-odd years they have varied somewhere between \$20 and \$350, depending on their price at that time.

Just one point for further clarification. When we speak of a pure-bred animal we definitely mean registered, do we not?

Mr. Williams: Our normal requirement in respect of pure-bred is that it is registered or eligible for registration.**Mr. Moore (Wetaskiwin):** Yes. Thank you.**The Chairman:** Thank you, gentlemen. Shall Clause 1 carry? Mr. Danforth.**Mr. Danforth:** Before Clause 1 carries, I would like to clarify one point in my mind. Mr. Williams answered my question completely when I asked the intent of this bill to pay market value with the prescribed compensation plus the market value of the carcass. But when I read this bill it does not state this specifically. There is no guarantee of this that I can find in the bill. It just states that the amounts are paid as prescribed by the Governor in Council.

As in the other bills we have dealt with, there are no provisions made. This is what I am beginning to wonder about. It seems that in each of these bills that we are dealing with, "amount as prescribed" has been taken away and left entirely to the discretion of the Governor in Council which is, in fact, the government or the department that is concerned.

• 1125

I would like an explanation from either Mr. Williams or the Minister as to whether it is the intent in these bills to take away prescribed guidelines and leave this entirely to departmental discretion. Just what are the

[Interprétation]

M. McKinley: Merci.**Le président:** Monsieur Moore a maintenant la parole.**M. Moore (Wetaskiwin):** Pour éclairer un point, monsieur le président, lorsque vous parlez de valeur marchande du bétail laitier, monsieur Williams, est-ce que vous parlez de la valeur de la carcasse, ou de la valeur au marché des vaches laitières?**M. Williams:** Oui, c'est exact. La valeur marchande ne dépend pas de la valeur marchande à des fins d'alimentation, c'est la valeur marchande basée sur la fin à laquelle le bétail est destiné.**M. Moore (Wetaskiwin):** Donc, au cours des quelques 35 dernières années, cette valeur est passée d'environ \$20 à \$350.

Je voudrais simplement ajouter quelque chose d'autre. Lorsque nous parlons de pur-sang, nous parlons de bétail enregistré, n'est-ce pas?

M. Williams: Nos exigences normales vis-à-vis du pur-sang sont que ce soit un animal enregistré, ou admissible à l'enregistrement.**M. Moore (Wetaskiwin):** Merci, monsieur.**Le président:** L'article 1 est-il adopté? Monsieur Danforth.**M. Danforth:** Je voudrais avoir quelques renseignements supplémentaires. M. Williams n'a pas complètement répondu à la question lorsque je lui ai demandé quelle était la portée de ce projet de loi. Est-ce qu'on envisage de payer la valeur marchande à titre d'indemnité, en plus de la valeur marchande de la carcasse? Mais ce n'est pas précisé dans le projet de loi. Ce n'est pas garanti. Il est simplement indiqué que les montants seront versés selon les prescriptions du gouverneur en conseil.

Comme dans les autres projets de loi étudiés, il n'y a pas de dispositions en ce sens. Il me semble que dans tous ces projets de loi, c'est le gouverneur en conseil qui décide, c'est-à-dire le gouvernement ou le ministère intéressé qui décide, puisqu'on a supprimé l'expression «le montant précisé».

J'aimerais que soit M. Williams, soit le ministre, nous explique si on a l'intention de supprimer, dans ces projets de loi, ces lignes directrices, et de laisser tout cela aux bons soins du ministère. En fait, qu'en est-il?

[Text]

facts that cause such amendments to be brought before us at this time?

Mr. Williams: The answer, Mr. Chairman, lies in the explanation that I gave earlier in respect of the returns coming from two sources. I believe I stated that the intent was that these two sources would provide a total return. The requirement in this bill, incidentally, is not different from that in the other Act that is being repealed. In other words the other Act did not specify; it simply set a maximum. And the proposal here is that the Governor in Council will set the maximum. This maximum cannot be defined as being the market value of the animal because of the fact that the returns come from the two sources.

Mr. Danforth: But, Mr. Chairman, if it is the intent of the bill that any producer who has had by government action the destruction of an animal or animals in all justice receive total payments, which could be described as market value, why is it, with all the legal talent that we have available in the Department that such intent is never prescribed in the bills?

Mr. Williams: I think that I should add to this that I mentioned earlier that there were two sources of benefits under the control programs that are governed by this portion of the Act. One was of direct assistance to the farmer and the other portion was of indirect assistance to the agricultural community as a whole.

I said at that time that it was extremely difficult to assess exactly how much benefit accrued to the farmer himself and what percentage benefit accrued to the community as a whole. And it is for this reason that the two types of diseases are handled in a different way. In one we do prescribe market value. In the other one we prescribe a maximum plus the salvage value.

The Chairman: Mr. Williams, is it correct for the Committee to assume that anything that is prescribed becomes hard and fast and requires an amendment from time to time which may not be readily undertaken? With this lack of prescribed amount then, of course, there is flexibility where immediate action can be taken by the Governor in Council. Is the Committee correct in assuming that?

Mr. Williams: It is correct in assuming, Mr. Chairman, that under the present procedure these have been in effect since 1958, I believe, and cannot be changed without the Act's coming before the House. Under the new

[Interpretation]

M. Williams: Monsieur le président, la réponse se trouve dans les explications que j'ai données précédemment des recettes provenant des deux sources. Je pense avoir dit que nous désirions faire entrer les recettes de ces deux sources sous une même rubrique. Les exigences de ce projet de loi sont identiques à celles de l'autre Loi qui ne précisait pas. Elle ne faisait qu'indiquer un maximum. Or, on dit tout simplement ici que c'est le gouverneur en conseil qui fixera ce maximum. Ce maximum ne peut pas être considéré comme la valeur marchande, parce que les recettes proviennent des deux sources.

M. Danforth: Monsieur le président, si le projet de loi doit permettre à tout producteur qui voit son bétail ou un animal abattu par décision du gouvernement d'obtenir le remboursement total sur la base de la valeur marchande, comment se fait-il alors que tous les experts juridiques qu'il se trouve dans le ministère n'aient pas réussi à l'indiquer dans la loi?

M. Williams: Je dois vous rappeler que j'avais dit précédemment qu'il y a deux sources d'avantages dans le cadre de ce programme. D'abord, l'aide directe aux agriculteurs et, deuxièmement, l'aide indirecte à l'ensemble du monde agricole.

J'ai dit à ce moment-là qu'il était excessivement difficile d'évaluer exactement la quantité de bénéfices qu'en tirait le cultivateur et le monde agricole dans son ensemble. C'est pour cette raison que les deux maladies sont traitées différemment. Dans un cas, on précise la valeur marchande, dans l'autre, nous prescrivons un maximum, plus la valeur de récupération.

Le président: Est-ce que le Comité peut alors supposer que tout ce qui est voté est immuable et exige de temps à autres un amendement selon les procédures établies? Comme le montant n'est pas prescrit, il est possible d'agir plus rapidement puisque c'est le gouverneur en conseil qui est responsable. Est-ce exact?

M. Williams: Oui. Il est juste de penser qu'en vertu de la procédure actuelle, c'est le cas depuis, je pense, 1958, et il est impossible de le modifier sans que la Loi soit soumise à la Chambre. Selon la nouvelle procédure, il

[Texte]

procedure it will be possible to change them on relatively short notice.

The Chairman: So it can be kept more current?

Mr. Williams: That is correct. That is the intention.

Mr. Danforth: Mr. Chairman, I certainly appreciate your remarks on this, but they do not answer the question that I have posed on this particular section. I am sure it is the intent of the bill, and it is my understanding that Mr. Williams agreed with me, to see that compensation is to the degree of fair market value. As a matter of fact, I note in the bill appeal sections that make it possible, when it is thought that this course of action is not followed, for an appeal to be made.

• 1130

My question is this. Since it is the intent of the bill, as we all understand it—and I am not speaking of “maximum amounts”, which is being omitted; I am speaking of the power of the Governor in Council—to pay compensation to the degree of market value, why is it not prescribed as such in this bill?

Although we may understand it as such as a Committee and be given to understand by the witnesses that it is the intent under this bill, I see nothing in this bill as it is before us, and I am sure the regulations will not stipulate, that such a course of action is mandatory. Therefore this is why I pose my question. If this is the intent, why is it not prescribed in the bill? It has nothing to do with flexibility because the market value itself can change from time to time and the Governor in Council under this bill has the right and the ability to change it.

Mr. Pringle: Could I ask my question before he answers? Is it not possible, Mr. Chairman, that under the terms that Mr. Danforth is suggesting we would be creating an added burden to the compensation program through the fact that we would then be adding the extra problem of what is market value. This could delay and hinder and create a real problem for the Department in arranging for compensation to the farmers. Is this a possibility?

Mr. Williams: Mr. Chairman, there appears to be some misunderstanding about my remarks, and I think I should clarify them. What I had intended to convey was that under those diseases, where we move in and order everything eradicated—whether or not

[Interprétation]

sera possible d'apporter les modifications sur le champ.

Le président: Il est donc possible de le tenir plus à jour.

M. Williams: C'est exact.

M. Danforth: Monsieur le président, je vous remercie de ce que vous avez dit à cet égard, mais cela ne répond pas tout à fait à la question que j'avais posée sur cet article. Je suis sûr que l'objet du bill, et je crois que M. Williams était d'accord, est que l'indemnité soit égale à la valeur marchande équitable. En fait, je constate dans le bill un article relatif aux appels qui permet d'interjeter appel si cette procédure n'est pas suivie.

La question que je posais est qu'étant donné que l'intention même du projet de loi, tel que nous le comprenons tous, et je ne parle pas du montant maximum que l'on élimine, mais du pouvoir donné au gouverneur en conseil, qui est de verser une indemnité jusqu'à concurrence de la valeur marchande, pourquoi ne pas l'indiquer comme tel dans le bill?

Même si nous, du Comité, comprenons qu'il s'agit de cela, et que les témoins nous laissent croire que c'est l'intention du bill, je ne vois rien dans le projet de loi devant nous et je suis certain que le Règlement ne précisera pas plus que cette procédure est obligatoire. C'est la raison pour laquelle je pose la question. Si c'est l'intention du projet, pourquoi ne pas l'inclure dans le bill? Cela n'affecte en rien sa souplesse car la valeur marchande peut changer de temps à autre, et le gouverneur en conseil, en vertu du bill, a le droit et le pouvoir de le modifier.

M. Pringle: Puis-je ajouter une autre question avant de répondre. N'est-il pas possible, dans les conditions énoncées par M. Danforth, de croire que nous ajoutons au fardeau au programme d'indemnités en raison du fait que nous y ajouterions le problème à savoir quelle est la valeur marchande équitable. Ce qui pourrait peut-être entraîner des délais et créer de véritables difficultés pour le ministère lors de l'établissement de l'indemnité à remettre aux fermiers. Est-ce possible?

M. Williams: Monsieur le président, je devrais peut-être éclaircir ce que j'ai dit. M. Danforth a probablement bien compris ce que j'ai dit. Ce que je voulais dire c'est qu'en vertu de ces maladies, là où nous ordonnons que le troupeau soit abattu qu'il y ai symptô-

[Text]

there is or is not evidence of the disease; they may simply be contacts of disease—we do pay market value and that is so specified.

I then explained that under this portion of the bill the benefits accrue in two directions. One directly to the farmer, and the other to the public as a whole.

It is because the portion of compensation that the government proposes to pay, and has paid over the past 40-odd years, is in proportion to the interest of the general public as opposed to that farmer himself, that it is not considered the words "full market value", or suitable words of this nature, can be used in connection with the compensation under programs of control of the diseases that I mentioned and that are covered by this clause.

Mr. Danforth: May I have a supplementary, Mr. Chairman? Mr. Williams's explanation of "full market value" is quite understandable and quite complete. My problem does not lie here, but with the particular bill we are now considering where we are in effect going to destroy an animal, or cause an animal to be destroyed. I fail to see, since the animal belongs to a private individual, why there should be a difference in the compensation that he will be paid.

• 1135

Since the animal is to all intents and purposes a total loss to him, other than the recovery value of the carcass and the amount paid to him by government, why can he not expect to receive full market value, as he would had he only one animal and it was destroyed because of foot and mouth disease. I fail to see the difference.

Mr. Williams you have stated, no doubt with good reason, that the benefit to the community is taken into consideration. However, I am unable to tie the two together, as to why the benefit to the community should subtract from the remuneration paid to the particular farmer who is subject to this action.

Mr. Williams: Mr. Chairman, this is a very difficult question. It is not our intent that the benefit to the community will subtract from it; it is our intent that the direct benefit to the farmer will subtract from it. Let us take the case of a farmer who has 30 cows in an area where a brucellosis program is in effect, in and on testing his herd we find that one animal has brucellosis. We condemn that animal take it out of the herd and order it slaughtered.

[Interpretation]

mes de maladie ou pas; même s'il y a eu simplement contact avec la maladie, nous payons effectivement la valeur marchande.

En plus, j'ai essayé d'expliquer qu'en vertu de cette partie de la loi, on est en présence de deux sortes de bénéfices: le fermier en tire, le premier, directement profit, et le public, en général, en bénéficie indirectement.

C'est parce que la part d'indemnités que le gouvernement se propose de donner, et qu'il a déjà effectivement payée depuis 40 ou 50 ans, est proportionnée à l'intérêt public général, plutôt qu'à celui du cultivateur lui-même, que l'on estime que l'expression «pleine valeur marchande» ou toute expression du même genre, puisse être employée en rapport avec l'indemnité en vertu des programmes de contrôle des maladies que j'ai énoncés et qui sont visés par cette section.

M. Danforth: Puis-je poser une question supplémentaire? L'explication de M. Williams au sujet de la pleine valeur marchande est très compréhensible et très complète mais ce n'est pas là mon problème, mais avec le projet de loi que nous étudions à l'heure actuelle, il s'agit d'abattre ou de faire en sorte d'abattre un animal. Étant donné que nous abattons un animal qui est la propriété d'un particulier, je ne vois pas alors pourquoi il devrait y avoir une différence dans l'indemnité qui lui est payée.

Car, à toutes fins pratiques, l'animal est une perte totale sauf la récupération de la carcasse et l'indemnité qu'il reçoit du gouvernement. Et, alors, pourquoi ne peut-il pas s'attendre à avoir la pleine valeur marchande tout comme s'il n'avait qu'un seul animal et qu'il était détruit par la fièvre aphteuse. Je ne vois pas du tout la différence. M. Williams a dit, et avec raison j'en suis sûr, qu'il faut aussi tenir compte de l'intérêt public. Cependant je ne vois pas le lien entre les deux. Pourquoi l'intérêt public devrait-il se soustraire de l'indemnité particulière versée au cultivateur victime de cette action?

M. Williams: Il s'agit là d'une question assez difficile. Ce n'est pas notre intention de faire en sorte que l'intérêt public passe avant le cultivateur: notre intention veut que l'intérêt direct du cultivateur découle de l'intérêt public. Mettons par exemple qu'un cultivateur possède 20 ou 30 vaches dans une région soumise à un programme de lutte contre la brucellose. Et, en examinant son troupeau, nous découvrons qu'une vache est atteinte de brucellose. Nous conduisons cette vache hors du troupeau et nous ordonnons qu'elle soit abattue.

[Texte]

Presumably, we have performed a service to that farmer, because we had not gone in, identified that animal and taken it out, in several months or several years—I do not know how long because the spread of this disease and everything else is a very difficult question—it is entirely possible that his whole herd would have contracted brucellosis. Therefore, we believe that a brucellosis eradication program has direct benefit—and I am using brucellosis as an example here—to the farmer concerned, who in turn by allowing that animal to be slaughtered, is performing a service to his neighbours and to agriculture as a whole.

The proposal under this, basically, is to compensate him for the service that the entire program is providing to the community as a whole, rather than for that portion of the service that is directed directly to him.

Having said that, however, I think you will appreciate that if we take out the whole herd, we have not provided him with any particular service in preventing the spread of the disease within his herd. We may have provided him with some service possibly in terms of improved performance of whatever replacement herd he may have.

This is why I say it is a very difficult question, and why we do not specify that it should be full market value, whereas under the other programs we do specify.

The Chairman: May I make an observation, à propos Mr. Danforth's question. If we were to spell out "full market value" in the act, then, of course, any salvage value as a result of an animal having been destroyed, for a disease where there is a salvage value, would have to be paid to the government and that would be much more complicated than to have an understanding whereby compensation would be such and such, and that the net return to the farmer would be equivalent of full market value. Is this not the crux of the situation?

Mr. Williams: Basically, yes.

Mr. Danforth: Mr. Chairman, may I continue my line of questioning? I think with Mr. Williams's explanation we are approaching the area that interests me. Mr. Williams, with your explanation, which does clarify the point to a marked degree, since the government alleges that a service has been performed to the farmer, which I do not question at all,

[Interprétation]

Si en vertu de ce programme, nous ne l'avions pas détachée et abattue, dans quelques mois ou dans quelques années—il s'agit là encore une fois d'un autre point difficile—il est fort possible que le troupeau entier aurait été atteint de brucellose après un certain moment. Nous croyons donc que le programme de détection de la brucellose, et je me sers de la brucellose comme exemple seulement, est d'un avantage direct envers le cultivateur concerné qui à son tour rend un service à ses voisins et à l'agriculture dans son ensemble lorsqu'il consent à ce que l'animal soit abattu.

En fait, nous voulons dédommager le cultivateur, pour le service que le programme dans son ensemble rend à la collectivité dans son ensemble plutôt que pour cette partie du service qui est liée directement au cultivateur en particulier.

Ceci étant dit, et je crois que vous me comprendrez, si toutefois on enlève à l'agriculteur son troupeau entier, vous ne lui rendez pas grand service en tant que prévention de la maladie. Vous lui aurez peut-être rendu service dans le sens qu'il pourrait éventuellement obtenir un meilleur rendement de la part d'un troupeau de remplacement. Et c'est la raison pour laquelle je dis que la question est très difficile, et c'est la raison pour laquelle nous ne précisons pas que l'indemnité doit correspondre à la pleine valeur marchande. Tandis qu'en vertu d'autres programmes, nous le précisons.

Le président: Est-ce que je pourrais faire une remarque au sujet de la question posée par M. Danforth. Si nous mentionnons «la pleine valeur marchande» dans le texte de loi, toute valeur de récupération résultant de l'abattage d'un animal pour cause de maladie, au cas où il y aurait une telle valeur de récupération, devrait être remboursée au gouvernement. Ce qui semble beaucoup plus compliqué que si l'entente veut que l'indemnité soit de tel ou tel montant et que le produit net de la récupération et de l'indemnité versé au cultivateur soit l'équivalent de la pleine valeur marchande. N'est-ce pas là le nœud du problème?

M. Williams: Dans l'essentiel, oui.

M. Danforth: Est-ce que je pourrais continuer mes questions. Je crois qu'avec l'explication de M. Williams nous nous rapprochons maintenant du domaine qui m'intéresse.

En raison de vos explications, M. Williams, qui éclaircissent la situation jusqu'à un certain point, est-ce que je pourrais alors vous demander, ou ajouter, étant donné que le

[Text]

may I then ask how the value of this service is determined, and how the Governor in Council is going to determine the recompense or compensation? How is this arrived at?

Mr. Williams: We propose to establish, not by a hard and fast formula, I may say, because there are always difficulties about hard and fast formulas, some type of a floating average based upon performance on certain fixed markets. This will not be specified, incidentally, by Governor in Council, because we are not particularly anxious to be tied to a hard and fast formula, but we propose to relate it to the performance on certain markets of classes of cattle, of the type and kind. We believe that through the appeal procedure we have now provided sufficient latitude that it will not take long to set a series of precedents that will remove any difficulty in terms of determining the figure to recommend to the Governor in Council.

• 1140

Mr. Danforth: Mr. Chairman, may I then ask a further question?

If I understand Mr. Williams correctly then, under this proposed act where we are breaking new ground, it would be quite conceivable if a claim were put in for a milk cow, destroyed under the program, the Governor in Council may establish a market price by taking the average market price on a series of markets, and prescribe a reduction of 20 per cent, and assume that the service to the farmer is of the value of 20 per cent, pay the farmer on 80 per cent of this market value, and then, through a series of actions on his part, as you have said, and the appeals following, establish a working formula for this particular method. Is this my understanding of your explanation?

Mr. Williams: Mr. Chairman, I am not sure whether Mr. Danforth suggested that the Governor in Council would, by regulation, establish a formula or whether the Department would be guided by a formula in making its recommendations to the Governor in Council.

Mr. Danforth: My implication was not the actions of the Governor in Council. I am sorry if I gave that impression. I am interest-

[Interpretation]

gouvernement prétend qu'il y a un service rendu aux cultivateurs, et je ne mets aucunement cela en doute, comment on détermine la valeur de ce service rendu et de quelle façon le gouverneur en conseil établira ce qu'il estime être un dédommagement équitable ou une indemnité équitable? Comment arrive-t-on à ce chiffre?

M. Williams: Nous nous proposons de faire le lien—non pas par une formule rigide, car il est toujours difficile d'établir une formule rigide—en établissant une moyenne flottante fondée sur le rendement de certains marchés fixes. Ceci ne sera pas mentionné précisément par le gouverneur en conseil car nous ne voulons pas être liés à une formule rigide, mais nous nous proposons de la relier au rendement de certains marchés de bestiaux de la même classe, du même genre et de la même catégorie. Nous croyons que grâce à la procédure des appels nous avons maintenant donné suffisamment de latitude pour que cela ne prenne pas trop de temps pour créer une série de précédents qui pourraient éliminer tout doute quant aux difficultés à établir le chiffre à recommander au gouverneur en conseil.

M. Danforth: Est-ce que je pourrais poser une question supplémentaire alors?

Si j'ai bien compris l'explication de M. Williams, dans l'application de ce projet de loi nous abordons un terrain nouveau. Serait-il concevable alors que pour une réclamation faite au gouverneur général en conseil concernant une vache laitière qui aurait été abattue en vertu du programme, le gouverneur en conseil pourrait alors établir un prix de vente en prenant la moyenne de la valeur marchande sur une série de marchés, et réduise le montant de 20 p. 100 en prétendant que la valeur du service rendu à la collectivité ou au cultivateur équivaut à 20 p. 100 et paie le cultivateur pour l'équivalent de ces 80 p. 100, et qu'ensuite, à la suite de diverses actions du gouvernement et d'appels qui s'ensuivraient on pourrait établir une formule pour ce genre de réclamations. C'est bien ce que j'ai compris?

M. Williams: Je ne sais pas si M. Danforth essaie de dire que c'est le gouverneur général en conseil qui établirait au moyen d'un règlement une formule ou si c'est le ministère qui serait guidé lors de ses recommandations au gouverneur en conseil.

M. Danforth: Ce que je voulais laisser entendre, ce ne sont pas les actions du gouverneur en conseil, je m'excuse si j'ai laissé

[Texte]

ed in the actual mechanics of it. This could be the mechanics of it. This is how the Department officials in charge would arrive at a value.

Mr. Williams: We do not propose, at least at this moment, to use a firm formula for what benefits will accrue to the farmer vis-à-vis the general public, because we do not believe that an over-all percentage would be a responsible approach.

As I mentioned, if one reactor were taken out of a very large herd presumably the benefit to the farmer of its being detected is much greater than if it were found that his whole herd were reactors.

Therefore, we do not wish to tie ourselves to a specific percentage.

We wish to have the maximum compensation set at a level that would allow us, as departmental officials, to operate within that maximum, plus the salvage values, so that these various factors could be taken into consideration without breaching the maximum.

Mr. Danforth: If I understand you correctly, then, it is actually a departmental estimation of the value to the farmer in the compensation being paid, subject to appeal by the injured party?

Mr. Williams: That is correct.

Mr. Danforth: These are the mechanics of it?

Mr. Williams: Yes; and subject to appeal.

Mr. Danforth: Thank you, Mr. Chairman.

Mr. Peters: If I may ask a supplementary question, Mr. Chairman, I gather from the last remark that the appeal applies both to the slaughtering of a herd and to our paying of compensation? Is that so? Does it apply to both? I gathered that it did not; that it applied only to where we are slaughtering the herds.

Mr. Williams: No, it applies to the whole thing—any animal slaughtered under the provisions of this Act. It does not matter which part of the Act.

Mr. Peters: If that is true I am quite pleased to hear it, but I do not see how it can be, in light of the explanation. By Order in Council you will establish in one case the rate of compensation, and in the other you will use the market value, where you slaughter the herd. But you will have an Order in Council setting maximums for one

[Interprétation]

cette expression, mais il se peut que cela puisse se produire de cette façon. Les fonctionnaires en arriveraient à cette valeur de cette façon, n'est-ce pas?

M. Williams: A l'heure actuelle, du moins, nous ne nous proposons pas d'avoir une formule rigide et ferme quant aux avantages qui seraient rendus aux cultivateurs vis-à-vis du grand public, par rapport au grand public. Nous ne croyons pas en effet qu'un avantage général serait la bonne méthode, car ce serait beaucoup plus facile de l'établir dans le sens d'un seul animal que dans le cas d'un troupeau entier. Nous ne voulons pas nous en tenir à un pourcentage établi.

Ce que nous voulons avoir c'est un maximum d'indemnité qui puisse nous permettre, à titre de fonctionnaires, d'agir à l'intérieur de ce maximum en plus de la valeur de récupération, afin que tous ces cultivateurs soient pris en considération sans enfreindre le maximum.

M. Danforth: Alors si je vous ai bien compris, c'est une estimation, une évaluation de la part du ministère quant à la valeur qui doit revenir aux cultivateurs, toujours sujet à l'appel de la part de la personne visée.

M. Williams: C'est exact.

M. Danforth: C'est là la procédure, n'est-ce pas?

M. Williams: C'est exact, toujours sous réserve d'un appel.

M. Danforth: Merci, monsieur le président.

M. Peters: D'après votre dernière remarque, l'appel concernerait à la fois l'abattage d'un troupeau et le paiement d'une compensation? Or, je croyais que seul l'abattage était concerné.

M. Williams: Non, cela s'applique à l'ensemble, à tout animal abattu, en vertu des dispositions de la présente loi, peu importe de quelle partie de la loi.

M. Peters: Si c'est vrai, je suis très heureux, mais je ne vois pas du tout comment cela peut être vrai, à la suite de l'explication donnée. Car, par décret du gouverneur en conseil, vous aurez fixé le taux d'indemnité dans un cas et dans l'autre, vous emploierez la valeur marchande, là où vous abattez le troupeau dans son ensemble. Vous aurez donc un décret fixant des maxima dans un cas?

[Text]

Mr. Williams: That is correct.

Mr. Peters: I do not see how there can be an appeal against that.

Mr. Williams: Against what?

Mr. Peters: Against the maximum that is set by Order in Council.

Mr. Williams: Excuse me. There is no appeal against the maximum.

Mr. Peters: Therefore, the appeal really applies only . . .

Mr. Williams: The right to appeal applies to anybody who is awarded less than the maximum, right down to zero.

In addition to that, in the case of those who are under the other part of the Act not covered by this amendment it applies to them against the award of market value.

Mr. Peters: Yes.

• 1145

Mr. Williams: You will appreciate, however, that in that case the market value is assessed by a tribunal which includes a representative of the aggrieved party.

Mr. Peters: Yes; I can see where this would be subject to opinion, but I do not see where the other is subject to opinion.

As I see it, we are using a fairly definite formula, and the Order in Council will establish that formula.

Mr. Olson: Mr. Chairman, there can be an appeal under the other section if there is an award of compensation of something less than the maximum, and the appeal would be for from whatever the amount was up to the maximum. It could not, of course, go beyond the maximums because there is a law setting down maximums and the ways and means of arriving at those maximums.

Mr. Peters: But the maximum in all cases, at least in my experience, is considerably below market value.

Mr. Olson: That may be, but all we are asking of Parliament now is to give us authority to go up to the maximum and not leave it wide open to any amount. That was the case under the Act previously. Maximums were set down.

Mr. Peters: Yes; and I do not disagree with it; but I just do not see how the appeal will work, or why there they should necessarily be one, because we are setting the compensa-

[Interpretation]

Mr. Williams: C'est exact.

M. Peters: Alors je ne vois pas du tout comment on peut interjeter appel contre cette décision.

Mr. Williams: Contre quoi?

M. Peters: Contre le maximum fixé par décret.

Mr. Williams: Mais il n'y a pas d'appel contre le maximum.

M. Peters: Alors, l'appel concerne seulement . . .

Mr. Williams: Le droit d'appel vaut pour quiconque se voit accorder moins que le maximum, jusqu'à zéro. Et en plus, il s'applique aux autres personnes qui sont concernées par les autres parties de la loi mais non par cet amendement contre l'attribution de la valeur marchande.

M. Peters: Oui.

Mr. Williams: Mais je crois que dans ces cas-là, la valeur marchande est accordée par un tribunal qui inclut un représentant du plaignant.

M. Peters: Oui, ce pourrait être une question de point de vue, mais non dans l'autre cas. Il s'agit d'une formule plutôt définie, étant donné que ce serait décidé par un arrêté ministériel.

M. Olson: Il pourrait y avoir un appel en vertu de l'autre section si l'indemnité est pour un montant inférieur au maximum. Et l'appel pourrait être interjeté pour n'importe quel montant jusqu'au maximum. La loi prévoit le maximum et la façon d'y arriver.

M. Peters: Mais le maximum, dans tous les cas, d'après les expériences que j'ai, est bien inférieur à la valeur marchande.

M. Olson: C'est la seule chose que nous demandons maintenant au Parlement de faire, c'est de nous donner l'autorisation d'aller jusqu'au maximum, mais de ne pas laisser la porte ouverte à n'importe quel montant.

M. Peters: Je ne suis pas en désaccord, mais je ne vois pas du tout comment fonctionnerait l'appel ou pourquoi il y aurait nécessairement appel, étant donné que nous

[Texte]

tion maximum by Order in Council. Our argument has been that that is not necessarily market value.

Mr. Olson: But under one section an award could be made at something less than the maximum prescribed by the Governor in Council, and if at any time such an award was made then you would have the right to appeal.

Under the other section, which relates to market value, if you are not satisfied with what is determined to be the market value you can appeal that, too.

Mr. Peters: Yes, I suppose so.

The Chairman: Gentlemen, we have arrived at our time of adjournment. Are you disposed to carry clause 1?

An hon. Member: We do not have a quorum. Clause 1 stood.

The Chairman: Gentlemen, we will meet again next Tuesday morning, and you will be advised by notice what the order of business will be.

Mr. Peters: Mr. Chairman, before we adjourn may I ask whether, for our information, the Minister could present to us—and I do not suggest that it be in terms of actual cases—some indication of the circumstances in which compensation has been paid, and to what maximum, under both sections?

I am still interested in why there should be an appeal, because I think we will find that the maximums here have also been the minimums.

Mr. Williams: We have that information and we will obtain it for the next meeting.

The Chairman: The meeting is adjourned to the call of the Chair.

[Interprétation]

établissons le maximum de l'indemnité dans l'arrêté ministériel. Évidemment, ce que nous prétendons c'est que ce n'est pas nécessairement une juste valeur marchande.

M. Olson: Mais en vertu d'une section, l'indemnité pourrait être fixée à moins que le maximum établi par le gouverneur en conseil, et si on versait moins que le maximum, on aurait le droit d'appel. En vertu de l'autre partie, si l'on n'est pas convaincu de la juste valeur marchande, on pourrait aussi en appeler.

M. Peters: Oui.

Le président: Messieurs, nous en sommes arrivés à notre heure d'ajournement. Êtes-vous disposés à adopter l'article premier?

Une voix: Nous n'avons pas le quorum. Article 1 réservé.

Le président: Messieurs, notre prochaine réunion aura lieu mardi prochain. Vous recevrez un avis quant à savoir ce que nous étudierons à ce moment-là.

M. Peters: Avant l'ajournement, monsieur le président, est-ce que je pourrais demander si le ministre pourrait nous donner, à titre de renseignement... je ne veux pas dire les cas exacts, mais une indication du maximum des indemnités qui ont été versées en vertu de chaque partie? Ce qui m'intéresse particulièrement, c'est de savoir pourquoi il devrait y avoir appel, parce que les maxima ici ont été aussi les minima.

M. Williams: Nous avons ces renseignements. Nous vous les donnerons à la prochaine réunion.

Le président: La séance est levée.

MINUTES OF PROCEEDINGS

TUESDAY, February 4, 1969.
(19)

The Standing Committee on Agriculture met at 9.48 a.m. this day, the Chairman, Mr. Beer, presiding.

Members present: Messrs. Barrett, Beer, Clermont, Cobb, Côté (*Richelieu*), Danforth, Douglas, Gleave, Horner, Howard (*Okanagan Boundary*), Lambert (*Bellechasse*), La Salle, Lessard (*Lac-Saint-Jean*), McKinley, Peters, Roy (*Laval*), Southam, Stewart (*Okanagan-Kootenay*), Thomson (*Battleford-Kindersley*), Whicher—(20).

Also present: Mr. Ritchie, M.P.

Witnesses: From the Canadian Agricultural Chemicals Association: Dr. G. S. Cooper, President; Mr. J. A. Oakley, Vice President; Mr. J. Chevalier, Executive Secretary who is also Executive Secretary of the next named Association; *and from the Canadian Manufacturers of Chemical Specialties Association:* Mr. J. W. Kennedy, President.

At 9.50 a.m., the absence of a quorum having been noted, proceedings were suspended until a quorum was present, namely 9.56 a.m.

On Bill C-157, the Pest Control Products Act, it was agreed to continue to let Clause 4 stand and to proceed to consider Clause 5.

The Chairman introduced the witnesses.

Mr. Chevalier read a statement of the Canadian Agricultural Chemicals Association and a related letter from the Canadian Manufacturers of Chemical Specialties Association.

The witnesses were questioned and, on completion thereof, Clause 5 was allowed to stand.

At 12.05 p.m., the Committee adjourned to the call of the Chair.

PROCÈS-VERBAUX

MARDI 4 février 1969.
(19)

Le Comité permanent de l'agriculture se réunit ce matin à 9 h. 48, sous la présidence de M. Beer, président.

Présents: MM. Barrett, Beer, Clermont, Cobb, Côté (*Richelieu*), Danforth, Douglas, Gleave, Horner, (*Okanagan-Boundary*), Lambert (*Bellechasse*), La Salle, Lessard (*Lac-Saint-Jean*), McKinley, Peters, Roy (*Laval*), Southam, Stewart (*Okanagan-Kootenay*), Thomson (*Battleford-Kindersley*), Whicher—(20).

Aussi présent: M. Ritchie, député.

Témoins: De l'Association canadienne de produits chimiques agricoles: M. G. S. Cooper, président; M. J. A. Oakley, vice-président; et M. J. Chevalier, secrétaire de direction de cette Association et de la suivante. *De l'Association des chimistes manufacturiers canadiens de spécialités:* M. J. W. Kennedy, président.

Le quorum n'y étant pas à 9 h. 50, on attend, pour commencer les délibérations, que le Comité soit en nombre—soit à 9 h. 56.

Sur le Bill C-157—Loi sur les produits antiparasitaires—on décide de continuer à réserver l'article 4 et de passer à l'examen de l'article 5.

Le président présente les témoins au Comité.

M. Chevalier lit une déclaration de l'Association canadienne de produits chimiques agricoles, ainsi qu'une lettre y ayant trait de l'Association des chimistes manufacturiers canadiens de spécialités.

Les témoins sont interrogés, puis on décide de réserver l'article 5.

A midi 05, on lève la séance jusqu'à nouvelle convocation du président.

*Le secrétaire du Comité,
Michael A. Measures
Clerk of the Committee,*

EVIDENCE

(Recorded by Electronic Apparatus)

Tuesday, February 4, 1969

● 0948

The Chairman: Gentlemen, the meeting will come to order.

We are privileged this morning to have with us representatives of two organizations with interlocking directors, shall I say, the Canadian Agricultural Chemicals Association and the Canadian Manufacturers of Chemical Specialties Association, each organization having the same directors.

I would like to introduce the gentlemen who sit on my right. First of all Mr. Chevalier, Secretary Manager of both organizations; Dr. Cooper, Mr. Kennady and Mr. Oakley. It is my understanding that the gentlemen present have a brief which they would like to present to the Committee. We will hear that brief in one minute.

We were last on Clause 4 of Bill No. C-157 — An Act to regulate products used for the control of pests and the organic functions of plants and animals. That Clause was allowed to stand.

Since our witnesses here today are concerned with Clause 5, I propose to continue to let Clause 4 stand and proceed to Clause 5. Is it agreed?

Mr. Horner: Mr. Chairman, on a point of order, I do not want to disrupt the Committee proceedings or in any way hold these gentlemen back from presenting their brief, but I cannot let you continue without drawing to your attention the fact that you have not got a quorum. As I understand it, a quorum is half the Committee plus one. Is this going to be a standard practice or what is the situation? We do not have a quorum and it is my understanding that this Committee has not granted you the right to carry on without a quorum.

● 0950

The Chairman: I think your point is well taken. If you are going to raise an objection then the Committee will have no alternative but to wait until some additional members come and if we do not obtain a quorum we will have no choice but to adjourn the meeting.

Mr. Horner: Well, I count 14 and I raise the objection. There are only eight members of the Conserva-

[Interprétation]

TÉMOIGNAGES

(Enregistrement électronique)

Le mardi 4 février 1969.

Le président: Messieurs, à l'ordre s'il vous plaît.

Nous avons l'honneur, ce matin, d'avoir parmi nous les représentants de deux organismes ayant une direction commune, l'Association canadienne de produits chimiques agricoles et l'Association des chimistes manufacturiers canadiens de spécialités.

Tout d'abord, à ma droite, M. Chevalier, secrétaire exécutif des deux associations, MM. Cooper, Kennady et Oakley.

Si j'ai bien compris, ils ont un mémoire qu'ils voudraient bien présenter au comité. Nous entendrons ce mémoire dans un instant.

Nous en étions à l'article 4 du bill C-157, *Loi ayant pour objet de réglementer les produits utilisés pour détruire les parasites et agir sur les fonctions organiques des plantes et des animaux*. L'article 4 a été réservé.

Comme nos témoins de ce matin ont rapporté l'article 5, j'ai l'intention de laisser l'article 4 sous réserve et d'aborder l'article 5. D'accord?

M. Horner: J'en appelle au Règlement, monsieur le président.

Je ne voudrais pas interrompre les travaux du comité, ni empêcher ces messieurs de présenter leur mémoire, mais je ne puis vous laisser continuer sans attirer votre attention à l'effet que vous n'avez pas le quorum. Si j'ai bien compris, le quorum c'est la moitié des membres du Comité plus un. Est-ce ce que c'est une pratique normale ou quoi? Si j'ai bien compris, le comité ne vous a pas donné la permission de travailler sans le quorum.

Le président: Je crois que vous avez probablement raison. Si vous voulez vous y opposer, le comité n'aura pas d'autre choix sauf d'attendre les autres membres du comité. Si nous n'avons pas le quorum nous n'aurons pas le choix, il faudra nécessairement ajourner la réunion.

M. Horner: J'en compte quatorze, il n'y a que huit membres ici. La plupart des 30 membres du Comité

[Text]

tive Party on this Committee. Most of the 30 are liberal and it your job to get the members here.

The Chairman: Your objection is upheld. Mr. Douglas.

Mr. Douglas: I have sat on committees before the rule changes where agreement was reached that we could continue business and ratify it when a quorum appeared. It seems to me that we could quite well try that this morning. I propose to move that we hear the witnesses and ratify the proceedings when we have a quorum.

The Chairman: First of all, we would not be able to receive the motion since the meeting is not duly convened; and secondly, since there does not really appear to be a disposition to proceed on that basis, we will have to wait.

Mr. Douglas: Unless we can proceed by agreement.

An hon. Member: We could not vote anyway, Mr. Chairman, unless we did have a quorum.

M. Roy (Laval): Monsieur le président, est-ce qu'on ne pourrait pas débiter les travaux, même si on ne peut pas voter?

The Chairman: I now see a quorum, gentlemen. Are we agreed that Clause 4 shall stand and we shall proceed with Clause 5?

Some hon. members: Agreed.

The Chairman: Gentlemen, my introduction was detracted from slightly because of a complication. For the benefit of those who have just come in I should introduce the witnesses again. On my right Mr. Chevalier, Dr. Cooper, Mr. Kennady and Mr. Oakley representing the Canadian Agricultural Chemicals Association and the Canadian Manufacturers of Chemical Specialties Association.

Gentlemen, it is my understanding that these witnesses have a brief which they would like to present to the Committee at this time and I have the pleasure in introducing Mr. Chevalier.

Mr. J. Chevalier (Executive Secretary, Canadian Manufacturers of Chemical Specialties Association): Mr. Chairman, members of the Committee, on behalf of both associations I would like to express our appreciation for the opportunity which you have afforded us today to appear before you.

I should point out that Dr. Cooper on my immediate right is President of the Canadian Agricultural Chemicals Association. Mr. Kennady on Dr. Cooper's right is President of the Canadian Manufacturers of

[Interpretation]

sont des libéraux. C'est à vous de veiller à ce que les députés soient présents.

Le président: Vous avez raison. Monsieur Douglas.

M. Douglas: J'ai déjà fait partie du comité avant le changement dans le règlement où nous étions d'accord pour continuer à travailler, sujet à la ratification du quorum, lorsqu'il serait là. Nous pourrions peut-être l'essayer ce matin. Je propose donc officiellement que nous écoutions les témoins et que nous ratifiions la procédure par la suite.

Le président: Tout d'abord, nous ne pourrions pas laisser la motion ou considérer la motion comme recevable étant donné qu'il n'y a pas de quorum. La réunion n'a pas débuté officiellement, et deuxièmement, on ne semble pas vouloir procéder de cette façon. Alors, il faudrait attendre.

M. Douglas: A moins que tous y consentent.

Une voix: Nous ne pourrions pas voter de toute façon, monsieur le président.

Mr. Roy (Laval): Mr. Chairman, could we not start the proceedings even though we cannot vote?

Le président: Nous sommes en nombre maintenant, messieurs.

Sommes-nous d'accord que l'article 4 soit réservé et que nous abordions l'article 5?

Des voix: D'accord.

Le président: Je crois que ma présentation a été interrompue un peu en raison de certaines complications, je crois que, pour ceux qui viennent d'entrer, je devrais peut-être présenter encore une fois nos invités. A ma droite, M. Chevalier, le docteur Cooper, M. Kennady et M. Oakley qui représentent l'Association des chimistes manufacturiers canadiens de spécialités et l'Association canadienne des produits chimiques agricoles. Ils ont un mémoire à présenter. J'ai donc l'honneur de vous présenter M. Chevalier.

M. J. Chevalier (secrétaire exécutif, Association canadienne des produits chimiques agricoles): Messieurs, au nom des deux associations j'aimerais bien vous exprimer notre reconnaissance de nous avoir donné l'occasion aujourd'hui de comparaître devant vous. Je devrais peut-être dire que le docteur Cooper, à ma droite, est le président de l'Association canadienne de produits chimiques agricoles, et M. Kennady, à la droite de M. Cooper, est le président de l'Association des chimistes manufacturiers canadiens

[Texte]

Chemical Specialities Association and a Vice-president of the Canadian Agricultural Chemicals Association. Mr. Oakley on the extreme right is Vice President of the Canadian Agricultural Chemicals Association. I am Executive Secretary of both associations.

If it is your pleasure, Mr. Chairman, I can proceed with the reading of this.

The Chairman: We would be pleased if you would.

Mr. Chevalier: This is a statement of Canadian Agricultural Chemicals Association to the Standing Committee on Agriculture in respect to Bill C-157.

The Canadian Agricultural Chemicals Association incorporated under the Companies Act of Canada, represents Canadian Manufacturers, formulators and distributors of agricultural chemicals.

Agricultural chemicals, in the form of pest control products, are vital to Canadian agricultural producers in both crop protection and animal production. Without these products the value of Canadian agricultural production would be drastically reduced.

In general, the association feels that the present Pest Control Products Act has been a good one and, in its essentials, has adequately withstood the tests of time. Nevertheless there are significant areas of this Act where amendment is desirable.

● 1000

The Canadian Agricultural Chemicals Association, therefore, welcomes the introduction of Bill C-157 and after review, is satisfied that in general the Bill will provide for effective and equitable control over pest control products in the public interest.

There are certain points in connection with the Bill, however, which the association feels bound to comment on.

Significant by its absence in the Bill is the need for a right of appeal in respect to the provisions of the Act dealing with registration or offences.

Specifically, as regards registration, the interpretation of one individual leading to the refusal of a registration should be subject to appeal by the applicant. Also, under Section 9 (2) (c) there should be provision for a right of appeal where an inspector can detain a product for up to six months even though it has not been established that there is anything wrong with the product.

Section 5 (k) is a further example of the need for a right of appeal from arbitrary decision. This Section deals with regulations respecting packaging labelling and advertising.

[Interprétation]

de spécialités et vice-président de l'Association canadienne de produits chimiques agricoles.

M. Oakley, à la droite complètement, est vice-président de l'Association canadienne de produits chimiques agricoles, moi-même je suis secrétaire exécutif des deux organismes.

Voulez-vous, monsieur le président, que j'aborde maintenant la lecture de notre mémoire?

Le président: Oui.

M. Chevalier: Il s'agit d'une déclaration présentée par l'Association canadienne de produits chimiques agricoles au Comité permanent de l'agriculture concernant le Bill C-157.

L'Association Canadienne de Produits Chimiques Agricoles, constituée en vertu de la Loi des Compagnies du Canada, représente les manufacturiers canadiens, créateurs et distributeurs de produits chimiques agricoles.

Les produits chimiques agricoles tels que les produits antiparasitaires sont de toute première importance pour les producteurs agricoles canadiens, pour la protection des récoltes et l'élevage des animaux. Sans ces produits, la qualité de la production agricole canadienne serait terriblement réduite.

En général, l'Association pense que la Loi en question sur les produits antiparasitaires a été bien faite et qu'elle a, pour l'essentiel, supporté convenablement l'épreuve du temps. Toutefois, il existe dans cette Loi des points importants qu'il serait souhaitable de modifier.

L'Association Canadienne de Produits Chimiques Agricoles fait donc bon accueil à la présentation du Bill C-157 et après examen, note avec satisfaction qu'en général le Bill prévoit un contrôle efficace et équitable des produits antiparasitaires dans l'intérêt public.

Cependant, l'Association pense devoir faire des commentaires sur certains points de ce Bill.

Significative par son absence du Bill est la nécessité d'un droit d'appel en ce qui a trait aux dispositions de la Loi portant sur l'enregistrement ou les infractions.

Plus précisément, en ce qui a trait à l'enregistrement, l'interprétation d'un particulier ayant entraîné un refus d'enregistrement devrait pouvoir faire l'objet d'un appel par le candidat. Dans la Section 9 (2) (c) il devrait exister une disposition prévoyant un droit d'appel dans le cas où un inspecteur peut retenir un produit, pendant aussi longtemps que six mois, même s'il n'a pas été établi que ce produit était défectueux.

La Section 5 (k) est un autre exemple illustrant la nécessité d'un droit d'appel d'une décision arbitraire. Cette Section porte sur les règlements concernant l'emballage, l'étiquetage et la publicité.

[Text]

A right of appeal is also necessary when dealing with offences by agents or employees or by arbitrary action on the part of inspectors.

Subsection (2) (a) and (b) of Section 4 is not a desirable inclusion in the Act. Subsection 2 (a) and (b) seeks to control the formulation of products for export to foreign countries according to Canadian standards of registration. The reason for such control has no apparent justification and could well hinder the export of such products. Subsection 2 (a) and (b) would also require that a foreign manufacturing establishment submit to Canadian control should it export products to a Canadian plant and, subsequently, should such products be shipped interprovincially in Canada. The implementation of such control does not appear possible and, requiring it as a condition would restrict the availability of imported materials in Canada.

Section 5 (d) should not include the registration of establishments. There is no apparent justification for the registration of an establishment. The registration of the product should be adequate.

Section 5 (e) provides for the establishment of regulations respecting the inspection and operation of establishments. Authority over in-plant operations in the new Act is needless in the opinion of the association. Although it is appreciated that in some instances present quality control procedures are less than satisfactory it is suggested that these should be upgraded and that end product analysis is still the most effective form of quality control.

Mr. Chairman, with your permission I might read the supporting letter which I wrote to you from the Canadian Manufacturers of Chemical Specialties Association. This is addressed to Mr. Beer.

Dear Mr. Beer:

The Canadian Manufacturers of Chemical Specialties Association incorporated under the Companies Act of Canada, represents manufacturers in Canada of consumer chemical products such as aerosols, soaps, detergents, sanitary chemicals, waxes, floor finishes, automotive chemicals and house and garden pesticides.

The association has an interest in Bill C-157 by reason of the involvement of certain of its members in the manufacture of household and garden pesticides.

The appropriate division of the association has reviewed the Bill and the statement of the Canadian Agricultural Chemicals Association.

As a consequence the Canadian Manufacturers of Chemical Specialties Association, by means of this letter, advises its full support of the position adopted by the Canadian Agricultural Chemicals Association.

[Interpretation]

Un droit d'appel est également nécessaire pour les infractions commises par des agents ou employés ou pour action arbitraire de la part des inspecteurs.

L'existence du paragraphe (2) (a) et (b) de la Section 4 n'est pas nécessaire dans cette Loi. Le paragraphe (2) (a) et (b) vise à contrôler la composition des produits destinés à l'exportation en pays étranger d'après les Normes Canadiennes d'Enregistrement. La raison d'un tel contrôle n'a aucune justification apparente et pourrait bien faire obstacle à l'exportation de ces produits. Le paragraphe 2 (a) et (b) exigerait également qu'un établissement industriel étranger se soumette à un contrôle canadien s'il exporte des produits vers une usine canadienne et si, par la suite, ces produits sont, au Canada, transportés d'une province à l'autre. La mise en oeuvre d'un tel contrôle ne paraît pas possible et s'il devenait une condition requise, il en résulterait une réduction de la disponibilité des matériaux importés au Canada.

La Section 5 (d) ne devrait pas inclure l'enregistrement des établissements. Il n'existe pas de justification apparente pour l'enregistrement des établissements. L'enregistrement des produits devrait être suffisant.

La Section 5 (e) prévoit la création de règlements concernant l'inspection et l'exploitation des établissements. Le droit d'autorité sur le fonctionnement intérieur d'une usine, dans la nouvelle Loi, est inutile au dire de l'Association. Bien qu'on sache que dans certains cas les procédés actuels de contrôle de la qualité sont moins que satisfaisants, il est proposé que ces procédés soient améliorés et que l'analyse du produit fini est encore le moyen le plus efficace de contrôler la qualité.

Monsieur le président, avec votre permission, je pourrais peut-être vous donner lecture de la lettre envoyée par l'Association des chimistes manufacturiers canadiens de spécialités. Elle est adressée à M. Beer.

Cher Monsieur Beer,

L'Association des Chimistes Manufacturiers Canadiens de Spécialités, constituée en vertu de la Loi des Compagnies du Canada, représente les manufacturiers canadiens de produits chimiques de consommation tels qu'aérosols, savons, détersifs, produits sanitaires, cires, apprêts à planchers, produits chimiques pour véhicules motorisés, et insecticides potagers et domestiques.

L'Association s'intéresse au Bill C-157 en raison de la participation de certains de ses membres à la fabrication des insecticides potagers et domestiques.

La section appropriée de l'Association a examiné le Bill et le rapport de l'Association Canadienne de Produits Chimiques Agricoles.

Il s'ensuit que l'Association des Chimistes Manufacturiers Canadiens de Spécialités fait savoir par la présente qu'elle donne son appui total à la position prise par l'Association Canadienne de Produits Chimiques Agricoles.

Veuillez agréer, cher Monsieur Beer, l'expression de nos sincères salutations.

[Texte]

The Chairman: Thank you, Mr. Chevalier.

Gentlemen the witnesses are now available for questioning. I have on my list Mr. Danforth and Mr. Gleave.

Mr. Danforth: Mr Chairman, am I to understand that we can take these questions as we see them and not necessarily in the order in which they are outlined in the submission?

The Chairman: I think you are at liberty to do that.

Mr Danforth: May I, through you, assure the witnesses this morning, Mr. Chairman, that any questions we pose are not in the nature of criticism, but with a sincere desire to elicit the information we seek. Thank you.

● 1005

My questions this morning deal with the submission regarding subclause 2 (a) and (b) of Clause 4. I can appreciate the contention of the witnesses that perhaps it is quite restrictive to control the formulation of products that are used for export, because it seems justifiable to believe that they would be subject to the controls of the country to which they are exported.

However I am not quite aware of the reasoning behind the reverse procedure where the companies submit that perhaps chemicals imported into this country should not be subject to the same licencings and controls as our Canadian products. Certainly the interpretation under subclause (2) (a) and (b) of Clause 4 is for the protection of both the users of the chemicals and the public. I am wondering what the reasoning is when they say that: The implementation of such control does not appear possible and, would restrict the availability of imported materials. Are there not some instances where the very thing we wish to do is restrict the availability of some of these materials until there is no doubt that they do meet Canadian standards?

Mr. Chevalier: I will start on this one and if I run into trouble I might ask for help.

I would suggest that the two situations are not quite the same. The export situation is a situation where we are suggesting that we should control the standards of importation of a foreign country. This is our interpretation of what is in the bill. The import situation is not quite the same unless I have misread your question and the bill, in that we are not objecting, in fact we are endorsing the concept of products coming in and being controlled, but we see an impracticability where there is an attempt to control the manufacturing establishment in a foreign country through means of, say, planned inspection. Our interpretation of the bill

[Interprétation]

Le président: Merci, monsieur Chevalier. Messieurs, vous pouvez poser des questions aux témoins. J'ai, sur ma liste, MM. Danforth et Gleave. Monsieur Danforth.

M. Danforth: Monsieur le président, dois-je comprendre que nous pouvons poser nos questions comme bon nous semble et non pas nécessairement dans l'ordre des points énoncés dans le mémoire?

Le président: Oui, je crois que vous êtes libres.

M. Danforth: Puis-je assurer les témoins de ce matin que les questions que nous allons poser ne sont pas des critiques, mais un effort sincère pour obtenir tous les renseignements que nous désirons? Merci.

J'ai une question qui a trait au paragraphe (2) a) et b) de l'article 4. Je comprends l'allégation des témoins que le contrôle de la composition de produits destinés à l'exportation peut constituer une restriction, car il semble justifiable de croire qu'ils seraient contrôlés par le pays dans lequel ils sont exportés.

Mais, je ne comprends pas du tout le raisonnement contraire, selon lequel les sociétés semblent croire que les produits chimiques importés dans notre pays ne devraient pas être réglementés comme les produits canadiens. L'interprétation des paragraphes (2) a) et b) de l'article 4 sont destinés à protéger à la fois les usagers et le grand public. Je me demande pourquoi ils disent que la réglementation de ces produits ne semble pas possible et ne restreindrait la quantité de matériaux importés. N'est-ce pas précisément ce que nous voulons faire parfois, de restreindre l'importation de ces matériaux jusqu'à ce qu'il n'y ait aucun doute qu'ils satisfassent aux exigences canadiennes?

M. Chevalier: Je pourrais peut-être tenter de vous répondre et si j'ai trop de difficultés, je demanderai de l'aide.

Les deux situations ne sont pas tout à fait identiques. Celle de l'exportation est une situation où nous prétendons que nous devrions contrôler les normes des importations d'un pays étranger. C'est notre interprétation du bill. Quant à l'importation, la situation est différente en ce que, si j'ai bien compris votre question, et le bill, nous ne nous opposons pas, nous appuyons en fait le principe du contrôle des produits importés. Mais ça nous semble plus pratique si l'on tente de contrôler le manufacturier d'un pays étranger, au moyen par exemple, d'une inspection systématique. C'est notre interprétation du bill. Il s'agit de l'examen

[Text]

is what is implied there. It is an examination, inspection, or a control situation in respect to a foreign establishment, a foreign manufacturing facility. The product, yes, but the manufacturing establishment, no. Is this your basic understanding of it, Dr. Cooper?

Dr. G. S. Cooper (President, Canadian Agricultural Chemicals Association): Yes, this was definitely my thinking. For your clarification and possibly our misinterpretation if we could put it as such, a company like ourselves would formulate or have formulated in the United States, we will say, a product which would be subsequently imported into Canada, and under this particular section, if we were to ship that or convey it from one province to the other, we would be in violation of this act, unless that particular manufacturing site had complied with the prescribed conditions and operated as such. Does this explain one of the points that we were discussing?

Mr. Danforth: Mr. Chairman, I can certainly appreciate how there could be some difficulty if this is the interpretation. I wonder if it was not the intent of this bill—and certainly we shall question our departmental officials on this very point—that we were more interested in the actual content and action of the chemicals themselves on being imported, rather than the establishments where they might be formulated or where primary production takes place.

• 1010

Dr. Cooper: Well, sir, this is a point. Without the right of appeal the intent is always good. However, the interpretation of the intent is sometimes very restricting, and this is one reason why we wish to have included the right of appeal. Now I am aware of intent in many, many acts and many bills. However, it is the interpretation of the intent at a much later date. Hopefully this act will be in for many years, as was the previous one. However, I do not like to see intent left without some limitation or explanation put on the intent. Without the right of appeal it is our feeling that (2) could be misconstrued in the future which would restrict a bonafide Canadian subsidiary of an American company moving products which were manufactured under their standards, and which should be acceptable to Canada from one province to another.

Mr. Danforth: Thank you, Mr. Chairman. If I may return to questioning, I will pass.

The Chairman: Thank you. I recognize Mr. Gleave.

Mr. Gleave: Mr. Chairman, are there any government checks or inspections now in effect at chemical plants in Canada?

The Chairman: Dr. Cooper?

[Interpretation]

ou l'inspection d'une entreprise étrangère. Nous sommes d'accord pour contrôler le produit mais non pas l'entreprise. N'est-ce pas votre avis, M. Cooper?

M. Cooper (Président, Association canadienne de produits chimiques agricoles): Monsieur Chevalier, c'est ce que je crois moi aussi. Si nous avons bien compris, une société comme la nôtre aurait mis au point aux États-Unis, par exemple, un produit qui serait par la suite importé au Canada. En vertu de cet article particulier, si nous devons le transporter d'une province à l'autre, ce serait une infraction à la Loi, à moins que le lieu de fabrication ait satisfait aux exigences et y ait plié son exploitation. Est-ce que cela explique le point en cause?

M. Danforth: Je comprends que, si c'est la bonne interprétation, il y aura certainement des difficultés, mais je me demande si c'était là l'intention du bill—et nous allons certainement nous renseigner auprès de nos fonctionnaires à ce sujet—mais je me demande si nous n'étions pas plus intéressés à la teneur même et l'action du produit chimique que l'on importe plutôt qu'à l'entreprise où les produits étaient fabriqués initialement.

M. Cooper: Sans le droit d'appel, l'intention est toujours bonne. Toutefois, l'interprétation de l'intention du Bill est parfois très restreignante et c'est une des raisons pour lesquelles nous désirons introduire le droit d'appel. Je comprends l'intention que l'on trouve dans plusieurs mesures législatives, mais il s'agit d'une interprétation subséquente. La Loi sera vraisemblablement en vigueur pendant un certain nombre d'années, tout comme son prédécesseur. Je n'aime donc pas qu'on laisse l'intention passer sans explication ou restriction. Et, sans le droit d'appel, nous avons l'impression qu'on a mal interprété le paragraphe (2) plus tard afin d'empêcher une filiale canadienne d'une usine américaine de transporter d'une province à l'autre les produits qu'elle aura fabriqués selon leurs normes et qui seraient acceptables au Canada.

M. Danforth: Merci, monsieur le président, si l'on me permet de poser une question plus tard, je m'abstiendrai pour l'instant.

Le président: Monsieur Gleave.

M. Gleave: Monsieur le président, quelles sont les mesures de contrôle du gouvernement canadien ou quelles sont les inspections en vigueur à l'heure actuelle aux usines de produits chimiques au Canada? Est-ce qu'il y en a?

Le président: Monsieur Cooper?

[Texte]

Dr. Cooper: Are you talking about quality, sir, or conditions?

Mr. Gleave: I am talking about quality in total. To put it in simple language, I assume you people represent companies which are now manufacturing chemicals that are distributed in Canada. At the present time what government inspections, checks or analyses are made in your plants of the products you are selling?

Dr. Cooper: At the present time, so far as quality is concerned, there is no plant inspection per se. However, under the Plant Products Division the government does have a number of inspectors who pick up our products from time to time, which are then forwarded to the government analyst, who in turn will ascertain whether or not these materials meet guarantee. If they fall below guarantee, they are then quarantined or disposal must be made of them by the company to the satisfaction of the Plant Products Division.

Mr. Gleave: If a plant brings out a new formulation which is essentially a new product, is this new product checked out or is it submitted to the appropriate agencies for a quality check?

Dr. Cooper: Yes, sir. When a formulation change is made we notify the registration people, and if it is a completely different formulation we will obtain a specific registration covering that particular formulation. For example, a wettable powder, an emulsifiable concentrate or a granular material will be registered separately.

Mr. Gleave: I asked a question of one of the government witnesses the other day in regard to the labelling of formulations. For example, when we use a chemical on the farm it has a brand name. It is sometimes difficult to know just exactly what we are using, if you understand what I mean.

I would be interested in knowing if we can simplify this by using—and I do not know if the term applies—the generic or foundation name of the base chemical from which it comes. I forget how many hundred there were, but I was told there were two or three hundred different names that could be used and, of course, this makes it impossible for an ordinary individual who is using it in spraying weeds or insects to know what basic chemical he is using. Is it possible for this to be simplified in terms of labelling so that a farmer would know if he was using an ester formulation or a saline formulation, and so on, and come to a conclusion as to the type of chemical he was really using?

● 1015

I do not know if I have made myself clear, but I am trying to do so.

[Interprétation]

M. Cooper: Est-ce que vous parlez de qualité ou de condition?

M. Gleave: Je parle de la qualité dans son ensemble. Pour simplifier la question, je présume que vous représentez des usines ou des compagnies qui fabriquent à l'heure actuelle des produits chimiques distribués dans tout le Canada. Ce que je vous demande c'est, à l'heure actuelle, quelles sont les inspections ou les contrôles ou les analyses de la part du gouvernement faites dans vos usines à l'heure actuelle sur les produits que vous vendez?

M. Cooper: A l'heure actuelle, il n'y a pas d'inspection de l'établissement en ce qui concerne la qualité mais à la division de la réglementation des produits, il y a un certain nombre d'inspecteurs qui, de temps à autre, prennent nos produits qui sont ensuite envoyés à l'analyste du gouvernement qui, à son tour, détermine si oui ou non on peut garantir le produit. Sinon, on les met en quarantaine et la compagnie doit prendre les mesures voulues pour satisfaire aux exigences de la division de la production des plantes.

M. Gleave: Si vous deviez obtenir une nouvelle formule qui, en fait, se trouve à être un nouveau produit, est-ce que ce nouveau produit est vérifié ou est-il présenté ou soumis au gouvernement afin d'être vérifié ou contrôlé, quant à la qualité?

M. Cooper: Si nous faisons des changements de formule, nous prévenons l'enregistrement et si la formule est tout à fait différente, nous obtiendrons un enregistrement spécial pour la nouvelle formule. Cela pourrait être une poudre, un concentré à émulsion ou un produit granulaire et qui serait enregistré séparément.

M. Gleave: J'ai posé la question au fonctionnaire du gouvernement l'autre jour en ce qui concerne l'étiquetage des produits. Lorsque nous employons ces produits sur la ferme, nous trouvons une marque de commerce. Il est parfois difficile de savoir exactement ce que nous employons si vous me comprenez bien.

Ce que j'aimerais savoir c'est: est-ce que nous pourrions simplifier toute la procédure en employant les termes génériques ou le nom de base du produit chimique d'où il provient. On m'a dit, j'oublie maintenant, qu'il y avait 200 ou 300 noms différents qu'on pourrait employer et cela rend impossible pour un particulier qui l'emploie comme produit antiparasitaire de savoir exactement quel produit chimique il emploie. Serait-il possible de simplifier la chose du point de vue de l'étiquetage afin que le cultivateur sache s'il emploie une formule saline ou autre et en arriver à une conclusion quant aux produits chimiques qu'il emploie? Je ne sais pas si c'est clair.

[Text]

Dr. Cooper: I believe I understand your question, sir, and to be practical I could answer it in two ways. Theoretically what you are asking should be possible; practically speaking it is not, or will not be simply because the generic names that are being assigned to our newer chemicals are completely asinine. They are getting worse than the chemical names themselves. If we are to accept these unholy names that are being foisted upon us—I am now speaking of the public—as generic names, then this defeats the whole purpose. It is better to have a common name which is understood by the public than to use a generic name which is meaningless.

Unfortunately, companies will develop compounds for which there is no generic name. We use the chemical name and the trade name, and many times the trade name becomes the accepted name by the public. I have always been a little bit hesitant about changing from an accepted trade name to a generic name which is meaningless so far as the public is concerned. Can we overcome this? I say we cannot, and for the simple reason that a common name is not given until long after the product has been offered for sale because this name has to be accepted by the International Common Names Committee, and they are slower than the proverbial snail in getting around to assigning names.

We are asked to submit three or four names that could be used as common names. However, recently even the names that the companies do submit are being disregarded, and I feel that it is not a practical thing to put a generic or common name on a compound. It would probably be better to approach it from a different aspect so that all of the product that is made up from that given compound gets that one name, a simple, meaningful name, and not a generic or common name.

I can give you a good example of this. There is a product that is used in the fungicide field called Cyrex. This is a trade name. However, the International Common Names Committee gave it the name Dodine and that name was given long after the product Cyrex was on the market.

Most of the growers today know Cyrex but not many of them know Dodine. The same thing applies to Malathion. Malathion was a trade name until the company was asked to give up the trade name and use Malathion as the common name. This has worked extremely well, but unfortunately it is not always the case that a company has the opportunity of giving up a trade name to become a common name, and keep the product known by the name which was the original trade mark name. However, I cannot see in this matter of labelling that we are going to solve a great deal by going to the common names. Have I answered your question?

[Interpretation]

M. Cooper: Je crois comprendre votre question et pour être pratique je pourrais y répondre de deux façons: tout d'abord, en théorie, ce que vous demandez devrait être possible. Du point de vue pratique, toutefois, il ne l'est pas ou ne le sera pas tout simplement parce que le terme générique que l'on assigne au nouveau produit chimique est fou sinon pire que les noms des produits chimiques eux-mêmes. Si nous devons accepter tous ces noms stupides que l'on fait savoir au public, cela ne serait pas conforme à notre objectif; il vaudrait mieux avoir une expression commune ou ordinaire qui serait comprise par le public plutôt que d'employer le terme générique qui ne serait pas compris.

Malheureusement, les compagnies fabriquent des composés pour lesquels il n'y a pas de terme générique. Nous employons la marque de commerce et parfois, la marque de commerce devient l'expression acceptée par le grand public. J'ai toujours hésité à passer d'une marque de commerce à un terme générique qui n'a aucun sens pour le public. Est-ce que nous pourrions contourner ces difficultés? Je prétends que non pour le simple fait qu'un nom ordinaire n'est pas donné jusqu'à ce que le produit ait été mis en vente pendant un long moment, une longue période car le nom doit être accepté par le comité qui détermine les expressions et qui prend son temps.

On nous demande de présenter trois ou quatre noms que l'on pourrait employer comme terme ordinaire mais tout récemment, même ces noms présentés par les compagnies sont laissés de côté. Je crois donc que cela ne serait pas pratique de mettre une expression générique ou un nom commun sur un composé. Ce serait peut-être préférable de le faire d'une façon différente ou d'un autre point de vue. Par conséquent, tous les produits formés de ces composants devraient avoir un nom différent et non pas un nom commun ou un nom générique.

Je pourrais vous donner un exemple, un bon exemple d'un produit employé dans le domaine des fongicides qu'on appelle «Cyrex». C'est la marque de commerce. Toutefois, le comité l'a appelé «Dodine» et ce nom lui a été attribué bien après que le produit eut été mis en vente.

La plupart des cultivateurs connaissent le «Cyrex» tandis qu'ils ne connaissent pas l'autre nom. Même cas pour Malathion, qui était une marque de commerce jusqu'à ce qu'on ait demandé à la compagnie d'abandonner cette marque de commerce et de l'employer comme nom commun. Cela a très bien marché mais malheureusement, ce n'est pas toujours le cas. Une compagnie n'a pas toujours l'occasion d'abandonner une marque de commerce qui devient un nom commun et de continuer à faire connaître le produit sous ce nom qui était autrefois la marque de commerce. Je ne pense pas que dans l'étiquetage nous résolvions les problèmes en adoptant des noms communs. Est-ce que j'ai répondu à votre question?

[Texte]

Mr. Gleave: You have answered it, Mr. Chairman, fairly enough. You said that what I suggest is impossible.

The Chairman: Mr. Gleave, would you yield for a supplementary or do you wish to proceed?

Mr. Gleave: Yes, as a matter of courtesy, if I can come back to my question.

The Chairman: Mr. Roy.

M. Roy (Laval): J'ai une question supplémentaire au sujet de l'identification des produits. La tendance actuelle des compagnie n'est-elle pas de plus en plus de vous demander l'étiquetage privé? Si oui, qui alors va faire les inspections et les travaux de contrôle de qualité au niveau du distributeur, du producteur et du consommateur?

De plus en plus, on remarque qu'une compagnie ou une association exige un produit, par exemple, le Cyprex dont vous avez parlé tantôt. Est-ce qu'on demande également de donner à ce produit une marque de commerce propre, un étiquetage privé quelle que soit la compagnie?

● 1020

The Chairman: Dr. Cooper?

Mr. Roy (Laval): I can ask my question in English, if you wish.

Dr. Cooper: If you would. I missed part of it. You were asking about...

Mr. Roy (Laval): Private label control. Is it actually the trend now that the company asks for private labelling of the specific product that they sell?

Dr. Cooper: Do we ask for the name?

Mr. Roy (Laval): Yes. Does the company ask you to manufacture some specific product under their own label? What happens there on the quality control as between the distributor and the consumer?

Dr. Cooper: You mean if a company wished to have a product manufactured by us, we will say, under their label.

Mr. Roy (Laval): On their own label?

Dr. Cooper: If we are manufacturing under somebody else's label, they are the registrant; we are not. We would manufacture for them and we would meet the specifications that they laid down when they registered the product. They would have to register the product, and as the registrant they must accept full responsibility of that product if it is found to be deficient by the inspectors.

[Interprétation]

M. Gleave: Vous y avez répondu. Vous avez dit que c'était impossible.

Le président: Voulez-vous renoncer à le parole pour une question supplémentaire, monsieur Gleave, ou voulez-vous continuer?

M. Gleave: Oui, certainement, à condition de pouvoir revenir à mon propos.

Le président: Monsieur Roy.

Mr. Roy (Laval): I have a supplementary question regarding the identification of products. At the present time, is there not a greater tendency for companies to seek a private label? If so, who then carries out the inspections and various procedures for quality control at the distributor, producer and consumer levels?

Increasingly we see that a company or an association demands a product like Cyprex, for instance, that you were mentioning a little while ago. Does one also request to give this product a trade-mark of its own, a private label, whatever the company may be?

Le président: Monsieur Cooper?

M. Roy (Laval): Je peux poser ma question en anglais, si vous voulez.

M. Cooper: S'il vous plaît. Je n'ai pas tout à fait compris votre demande.

M. Roy (Laval): Est-ce la tendance à l'heure actuelle que la compagnie demande l'étiquetage privé pour le produit que vous vendez?

M. Cooper: Est-ce que nous demandons le nom?

M. Roy (Laval): Oui. Est-ce que la compagnie vous demande de fabriquer sous sa propre étiquette? Qu'est-ce qui arrive en vertu du contrôle de la qualité?

M. Cooper: Vous voulez dire si une compagnie voulait nous faire fabriquer un produit, disons, avec leur propre étiquette?

M. Roy (Laval): Sous leur propre marque?

M. Cooper: Si nous fabriquons un produit sous la marque d'une autre société, c'est elle qui le fait enregistrer pas nous. Nous fabriquerions le produit pour eux, en respectant les exigences établies au moment de l'enregistrement du produit. C'est eux qui font enregistrer le produit, et ils doivent donc accepter toute responsabilité pour ce produit si les inspecteurs le trouvent défectueux.

[Text]

We must keep our manufacturing specifications exactly to what that company has requested, for if we fail and they are found delinquent in their product, then they can counter-sue us as we did the manufacturing for them. We would become the party of the second part in a law suit.

Mr. Roy (Laval): Does the company make the registration or you?

Dr. Cooper: The company that wants to sell the material must become the registrant, if it is going to be under their own label. If it is our product, then they can only distribute for us and we are the registrant.

Mr. Roy (Laval): To get back to Mr. Gleave's question. If we put on the label the ingredients used in this product, the consumer can find exactly the same product under different labelling, but the popularity of the product will depend on the publicity that you give it.

Dr. Cooper: Right.

Mr. Roy (Laval): I think at the consumer level, that is important. There are a lot of similar products being sold, and a lot depends on the publicity that you give it.

Dr. Cooper: But do not forget that most of—

Mr. Roy (Laval): It would be a good thing for the consumer to know the ingredients.

The Chairman: Thank you, Mr. Roy. I think we should return to Mr. Gleave.

Mr. Gleave: I will move on at this point, but I would point out to these gentlemen that our problem in Western Canada, and I am a farmer, is that we have a lot of salesmen selling us these chemicals, and each one is pushing a product.

Our problem is to find out what is in the product so as to be able to make an intelligent decision as to what we should use. I would say, with all due respect, you should concern yourselves with assisting the farmer to make an intelligent decision.

I would like to ask a question on your representation regarding the imports of chemicals. You say, in your brief, and I suppose you are quite justified, that it is impractical for Canadians to say they are going to put inspectors in plants in, let us say, Great Britain or the United States, from where we import. There may be others for all I know. What control is there, for example, on the weed control chemicals we import from England? Are there any controls on this or is it just the same thing as you have described before? Somebody here picks up a can, and looks at what is in

[Interpretation]

Nous devons nous en tenir aux exigences précises de la société quant à la fabrication, car, si nous ne le faisons pas, et que les inspecteurs trouvent le produit défectueux, la société peut alors à son tour tenter un procès contre nous, étant donné que nous avons fabriqué le produit pour elle. Nous serions alors impliqués au second titre dans un procès.

M. Roy (Laval): Est-ce la société, qui enregistre le produit, ou vous?

M. Cooper: La société qui veut vendre le produit doit l'enregistrer elle-même, si elle le vend sous sa marque. Si c'est notre produit, la société ne peut alors que le distribuer, et c'est nous qui l'enregistrons.

M. Roy (Laval): Pour en revenir à la question de M. Gleave. Si nous indiquons sur l'étiquette les ingrédients du produit, les consommateurs pourraient trouver exactement le même produit sous d'autres marques de commerce, mais le succès du produit dépend de la publicité que l'on fait en sa faveur.

M. Cooper: C'est vrai.

M. Roy (Laval): Je crois qu'au niveau du consommateur, c'est important. Il se vend beaucoup de produits identiques, et beaucoup dépend de la publicité qu'on leur fait.

M. Cooper: Mais n'oubliez pas que la plupart des...

M. Roy (Laval): Ce serait une bonne chose que le consommateur pût connaître les ingrédients.

Le président: Merci, monsieur Roy. Je crois que nous devrions revenir à M. Gleave.

M. Gleave: Je vais m'éloigner de ce point, mais j'aimerais signaler à ces messieurs que le problème que nous avons dans l'Ouest du Canada—et je suis moi-même agriculteur—c'est que nous avons beaucoup de vendeurs qui nous vendent ces produits chimiques, et que chacun essaie de placer un produit particulier.

Le problème que nous avons, c'est de découvrir quels sont les ingrédients des produits, afin d'en arriver à une décision intelligente quant au produit à utiliser. Je dirais donc que vous devriez vous soucier d'aider l'agriculteur à prendre une décision intelligente.

J'aimerais poser une question au sujet de vos réflexions en ce qui concerne l'importation de produits chimiques. Vous dites dans votre mémoire, et je suppose que vous avez raison qu'il est insensé de dire que les Canadiens vont placer des inspecteurs dans des usines, disons, d'Angleterre ou des États-Unis, ou de tout autre pays duquel nous importons des produits. Quel contrôle exerce-t-on, par exemple, sur les herbicides que nous importons d'Angleterre? Exerce-t-on un contrôle sur ces produits ou est-ce la situation que vous venez de décrire? Est-ce que quelqu'un ici exami-

[Texte]

the can, or before a country exports a product to Canada, do they send an analysis of it to the Department of Agriculture and say, "This is what is in the product we are going to send to Canada"?

● 1025

The Chairman: Dr. Cooper?

Dr. Cooper: I do not believe so, sir, for the simple reason that if we are going to bring in a compound from Great Britain, we would register the product under our name, and we would register what that formulation is.

As far as the manufacturer is concerned, he would only manufacture to our specifications. Again we have a check on him, and if we are found delinquent, we would then go back and take legal action against the manufacturer of that substance. Therefore, his responsibility to Canada is nil in some respects, although his responsibility to us is still great, in that he must manufacture according to our specifications. In so doing we are accepting the full responsibility for that product in Canada.

If the British company wishes to sell its material in Canada, it must also register it in the same way as a Canadian company. So, there is no difference here that I can see. It is still the registrant who must accept the responsibility. It is to the advantage of a registrant to make sure that his supplier is manufacturing to his specifications.

Mr. Gleave: Then if I get the picture, the testing of the Department of Agriculture is usually done after the product is out in the field and people are using it, rather than before it goes out in the field: am I correct?

Dr. Cooper: To the best of my knowledge, this is correct, yes, sir.

Mr. Gleave: So that a product could be released, it could go out and unfortunate things could happen before a check was made?

Dr. Cooper: This can always happen, sir, in life. I do not care if you are driving a new car, or if you are talking about a pesticide, or about the chairs that you sit on, something can go wrong. We do not deny this. We try to restrict this but no matter what we do, we will never solve all the problems that might arise. We do a good job with our quality control, but as you say, I do not care what legislation we pass, you are never going to get the 100 per cent protection that you are talking about.

[Interprétation]

ne ce qui se trouve à l'intérieur de l'emballage, ou est-ce que le pays étranger qui exporte le produit au Canada envoie auparavant une analyse du produit au ministère de l'Agriculture en donnant les ingrédients du produit qu'il va exporter au Canada?

Le président: Monsieur Cooper?

M. Cooper: Je ne le crois pas, monsieur, pour la simple raison que si nous importons un composé de Grande-Bretagne, nous enregistrons le produit sous notre nom, ainsi que ses ingrédients.

Quant au fabricant, il fabrique le produit d'après nos exigences précises. Encore une fois, nous pouvons le contrôler et, si le produit est défectueux, nous pouvons nous en prendre au fabricant et tenter des poursuites contre lui. Sa responsabilité envers le Canada est donc nulle à certains égards, bien que sa responsabilité envers nous soit encore très grande, puisqu'il doit fabriquer le produit selon nos exigences. Ainsi, nous acceptons la pleine responsabilité du produit au Canada.

Si la société britannique veut vendre son produit au Canada, elle doit aussi le faire enregistrer, tout comme doit le faire une société canadienne. Je ne peux donc voir là aucune différence. C'est toujours celui qui fait enregistrer le produit qui en accepte la responsabilité. Dans son propre intérêt, la personne qui fait enregistrer un produit doit veiller à ce que son fournisseur le fabrique selon les exigences qu'elle lui a posées.

M. Gleave: Donc, si je comprends bien, les essais du ministère de l'Agriculture se font, d'habitude, une fois que le produit est sur le marché et que les gens l'emploient, plutôt qu'avant la mise en vente. Est-ce exact?

M. Cooper: Pour autant que je sache, monsieur, oui, c'est exact.

M. Gleave: Donc, un produit pourrait être mis en vente et des choses malheureuses pourraient se produire avant que la vérification n'eût été faite?

M. Cooper: Ce sont des choses qui arrivent, monsieur. Qu'il s'agisse d'une nouvelle voiture, d'un produit antiparasitaire ou du fauteuil dans lequel vous êtes assis, il peut toujours y avoir quelque chose de défectueux. Nous ne nions pas cela. Nous essayons de limiter les défauts possibles, mais quoi que nous fassions, nous ne pourrions jamais résoudre tous les problèmes qui pourraient se poser. Nous faisons de notre mieux dans notre contrôle de la qualité, mais, comme vous le dites, peu importe les mesures législatives adoptées, vous n'obtiendrez jamais la protection à 100 p. 100 dont vous parlez.

[Text]

Mr. Gleave: Mr. Chairman, I was not talking of 100 per cent protection. I was talking about the method of protection we are using, and what I am interested in is whether these products are licensed, checked out before they are licensed, or whether they are checked out after they have gone into distribution. This is my point.

I have lived a fair while too, and I know that you do not protect yourself against everything. However, I am interested in quality control and the point at which it happens.

Dr. Cooper: Every formulation that we make or are responsible for is checked out with supporting data and so forth, and a decision is made as to whether this product shall be permitted to be sold or not. This is the registration, right?

Mr. Gleave: Who makes the decision? Does any inspection enter in at this point where the decision is made?

Dr. Cooper: Inspection no, but a discussion must come into it, because we must submit what our formulation is and what will be in there.

Mr. Gleave: To whom?

Dr. Cooper: To the Department of Agriculture.

Mr. Gleave: I see. On every product before it is released you must submit specifications.

The Chairman: And samples.

Dr. Cooper: Samples if required, yes, sir. We usually supply samples to the research stations and so forth, so that the data that is being gathered is based upon that formulation.

The Chairman: Thank you, Mr. Gleave. Mr. Horner?

• 1030

Mr. Horner: Yes, my questions concern Clause 9 and in your brief you are concerned about the right of appeal. Under Clause 9, supposing your product was taken off the market, and held off the market, could you not take legal action against the government or against the inspectors if you felt that your product was unjustly held off the market?

Dr. Cooper: There is nothing here which would lead me to believe that I could take such action. I would have to sue the Crown, and this would be an extremely difficult thing to do unless there is a right of appeal. We may not wish to sue. All we are asking for is the right to go before an independent board to verify a decision.

[Interpretation]

M. Gleave: Monsieur le président, je ne parlais pas de protection à 100 p. 100. Je parlais plutôt de la méthode de protection que nous employons. Ce qui m'intéresse, c'est de savoir si ces produits sont vérifiés avant la délivrance d'un permis ou s'ils sont vérifiés une fois qu'ils ont été mis en vente. C'est là ce dont je voulais parler.

Je ne suis pas jeune, moi non plus, et je sais bien qu'il est impossible de se protéger complètement. Je m'intéresse, toutefois, au contrôle de la qualité, et au moment où il se fait.

M. Cooper: Chaque formule que nous fabriquons ou dont nous sommes responsables est vérifiée, avec les données voulues à l'appui, et l'on décide d'autoriser ou non la vente du produit. Il s'agit ici de l'enregistrement. Entendu?

M. Gleave: Qui prend la décision? Est-ce qu'une inspection est faite à ce moment-là?

M. Cooper: Il n'y a pas d'inspection, non, mais il y a une discussion, car nous devons soumettre notre formule et en donner les ingrédients.

M. Gleave: A qui?

M. Cooper: Au ministère de l'Agriculture.

M. Gleave: Je vois. Donc, avant qu'un produit soit mis en vente, il faut que vous en soumettiez les ingrédients.

Le président: Et des échantillons.

M. Cooper: Si on nous les demande, oui. Nous fournissons généralement des échantillons aux laboratoires de recherches, de manière que les données rassemblées se fondent sur cette formule.

Le président: Merci, monsieur Gleave. Monsieur Horner?

M. Horner: Je voudrais poser une question au sujet de l'article 9. Vous semblez, dans votre mémoire, vous soucier du droit d'appel. En vertu de l'article 9, si votre produit était retiré du marché, est-ce que vous ne pourriez pas intenté un procès contre le gouvernement ou contre les inspecteurs mêmes? Si vous trouvez que votre produit a été saisi injustement.

M. Cooper: Il n'y a rien ici qui me laisse croire que je puisse intenté un tel procès. Il faudrait que j'intente un procès à la Couronne, n'est-ce pas? Ce qui serait extrêmement difficile, à moins qu'il y ait un droit d'appel. Nous voudrions peut-être ne pas le faire, mais tout ce que nous demandons c'est le droit de nous présenter devant un tribunal indépendant pour vérifier la décision prise.

[Texte]

You are going one step further than we wish to go. We possibly could initiate suit against the Crown, but we would prefer to have a board of arbitration or a board of appeal, rather than resort to a court of law for every little thing that goes on.

Mr. Horner: Am I interpreting Clause 9 in the correct manner when I believe that under it the Crown could not hold a product off the market longer than six months without stating reasons or justifying such action?

Dr. Cooper: No, it is six months or:

... unless before that time proceedings have been instituted in respect of the violation in which event the control product may be detained until the proceedings are finally concluded.

Mr. Horner: They are talking of court proceedings there, are they?

Dr. Cooper: Yes.

Mr. Horner: This is really the only way they envision your appeal. It would be to the courts. Am I right?

Dr. Cooper: Yes. We would be guilty. If it got this far, we would not have a hope. We would have to go to court and fight.

Dr. Horner: You would be guilty until you were proven innocent.

Dr. Cooper: Right.

Mr. Horner: Until you proved yourselves innocent.

Dr. Cooper: Right.

Mr. Horner: And actually you believe the direct opposite, that you are innocent until you are proven guilty.

Dr. Cooper: No, I certainly do not. I believe, though, that I should have the right to ask an inspector why he is holding this, what his justifications are. He can come in and red-tag my material for six months. This may be a very crucial period of time.

This inspector may not like the colour of my eyes, or my tie. And do not forget, we are all human beings. He could theoretically—I am not saying he would, but he could theoretically—put a red tag on that material and it could not be sold. It is a detention, so we could not do a thing about it. He can do that for six months, which would be long past the selling season. And it may be found that there is nothing wrong with it. Do you follow me?

[Interprétation]

Vous allez un peu plus loin que nous. Il serait peut-être possible d'intenter un procès contre la Couronne, mais nous préférons avoir un tribunal d'arbitrage ou un tribunal d'appel, plutôt que d'avoir recours à un tribunal, pour tout ce qui se passe.

M. Horner: Est-ce que j'ai bien interprété l'article 9, si je comprends qu'en vertu de cet article la Couronne ne pourrait saisir un produit pour plus de six mois sans justification?

M. Cooper: Non, six mois ou:

A moins que, avant cela, des procédures n'aient été instituées auquel cas le produit relativement à la contravention, antiparasitaire peut être retenu jusqu'à la fin des procédures.

M. Horner: On y parle de procédures judiciaires, n'est-ce pas?

M. Cooper: Oui.

M. Horner: Si c'est vraiment le seul moyen d'envisager votre affaire, ce serait auprès d'un tribunal, n'est-ce pas?

M. Cooper: Nous serions coupables si on en arrivait à ce point-là, nous n'aurions aucune chance. Nous devrions plaider devant le tribunal.

M. Horner: Vous seriez coupables jusqu'à ce qu'on prouve le contraire.

M. Cooper: En effet.

M. Horner: Vous seriez coupables jusqu'à ce que vous prouviez vous-mêmes que vous êtes innocents.

M. Cooper: En effet.

M. Horner: Et, en fait, vous croyez juste le contraire, que vous êtes innocents jusqu'à ce qu'on prouve votre culpabilité.

M. Cooper: Je crois que je devrais avoir le droit de demander à un inspecteur pourquoi il retient ce produit, quelles sont ses justifications. Il peut retenir mon produit pendant six mois. C'est peut-être à un moment très important, très délicat. L'inspecteur n'aime peut-être pas la couleur de mes yeux ou de ma cravate. Mais n'oublions pas que nous sommes des êtres humains. Il pourrait, en théorie—je ne dis pas qu'il le ferait en pratique—mais, en théorie, il pourrait retenir mon produit, mon matériel et on ne pourrait le vendre. C'est une retenue. Nous ne pourrions absolument rien y faire. Il peut le faire pendant six mois. Ce qui dépasserait de beaucoup la saison de vente et ensuite on pourrait fort bien trouver qu'il n'y a rien de mal chez le produit. Est-ce que vous comprenez?

[Text]

Mr. Horner: Yes.

Dr. Cooper: Or we may challenge the finding of the analyses of a lab, and find out that the lab made a mistake. Do not forget that we are all human, and labs are labs, and they also make mistakes. Fortunately our government laboratory is an excellent one, and we have wonderful co-operation with them, and we have no problems.

Do not get me wrong. All we are talking about is the possibility, and black and white can be interpreted in many ways. All we are saying is that we have no immediate problem, but let us make this as concise for the future as possible. And the right of appeal, I feel, should go in.

Mr. Horner: But do you not feel you would have, in a sense, the right of appeal. Let us suppose that an inspector did not like the colour of your eyes and red-tagged your product, do you not think you could then appeal to the Minister and to the Department, in a sense go over the inspector's head and get a fair hearing that way?

Dr. Cooper: You are supposing we could. There is nothing here that tells me I can do this, and this is an Act, is it not? Why is it not in here?

Mr. Horner: You would suggest then that we add a paragraph (d) to that clause, granting the right of appeal. How would you formulate an independent body? It would have to be a chemist, would it not? It would have to consist of . . .

Dr. Cooper: As long as you have the intent in the Act, its makeup can be arranged. It can be made up of two or three members of the Department of Agriculture. I am not too concerned about the makeup. What I am concerned about is the right of appeal, to get certain things straightened out. Do you follow me? We are not asking for anything that is . . .

Mr. Horner: No, I quite agree with you, Dr. Cooper, but I want to pursue the thing until the Committee fully understands what point you are trying to make, and whether or not you have got an appeal or have not. And that is why I am asking these questions. I agree that it should be there, but I wanted to fully solicit the exact workings of the Act, in seeing whether or not you have no right of appeal.

● 1045

Mr. Howard (Okanagan Boundary): Who makes the original inspections or decisions on the part of the government?

Dr. Cooper: You are talking about the registration of the product?

Mr. Howard (Okanagan Boundary): If a product were to be red-tagged, as you say, who makes the decision? Who does the chemical analysis of the product?

[Interpretation]

M. Horner: Oui.

M. Cooper: Ou on pourrait mettre en doute les décisions ou les données d'un laboratoire et trouver que le laboratoire s'est trompé—nous sommes tous des êtres humains, comme je l'ai dit, ils peuvent se tromper eux aussi. Nous avons beaucoup de collaboration de la part du gouvernement et de son ministère de l'Agriculture.

Ne vous trompez pas. Tout ce dont nous parlons, ici, c'est de la possibilité; quand c'est écrit, il y a moyen de l'interpréter de plusieurs façons. A l'heure actuelle, nous n'avons pas de problèmes immédiats, mais nous voudrions voir inclure le droit d'appel.

M. Horner: Est-ce que vous n'auriez pas, dans un sens, un droit d'appel? Supposons qu'un inspecteur, en fait, n'aime pas la couleur de vos yeux, et qu'il retienne votre produit, est-ce que vous ne pourriez pas en appeler au ministre et au ministère? Par conséquent, aller par dessus la tête d'un inspecteur pour obtenir une décision juste.

M. Cooper: Vous supposez tout cela, mais il n'y a rien dans la loi qui dit que je puis le faire.

M. Horner: Vous proposez donc que nous ajoutions un alinéa d) vous donnant droit d'appel. Et alors, comment entrevoiez-vous un tribunal indépendant? Il s'agirait de chimistes indépendants?

M. Cooper: Aussi longtemps que vous avez cette intention dans la loi, les modalités peuvent être décidées par, par exemple, deux ou trois fonctionnaires du ministère de l'Agriculture. Peu m'importe la façon. Ce qui m'importe, c'est le droit d'appel pour essayer d'en arriver à une décision juste. Vous me comprenez? Nous ne demandons rien d'extraordinaire.

M. Horner: Je suis tout à fait d'accord, docteur Cooper, mais je voulais poursuivre sur ce point jusqu'à ce que le Comité comprenne bien ce que vous voulez dire, et comprenez si, oui ou non, vous avez le droit d'appel. C'est la raison pour laquelle je pose ces questions. Je suis d'accord qu'on devrait l'inclure. Je voulais savoir exactement de quelle façon on applique la loi, pour voir si oui ou non vous avez le droit d'appel.

M. Howard (Okanagan-Boundary): Est-ce que je pourrais demander qui fait l'inspection originale ou qui prend la décision originale de la part du gouvernement?

M. Cooper: Est-ce que vous parlez de l'enregistrement du produit?

M. Howard (Okanagan-Boundary): Si on devait retenir un produit, comme vous le dites, qui en fait l'analyse chimique, qui prend la décision?

[Texte]

Dr. Cooper: I am not an authority on the business, although I probably know what happens. An inspector is free to walk into any establishment and obtain a sample of a registered product which has a pest control product number, which is necessary before a company can offer a pesticide for sale. He can take a sample of that pesticide. Usually he will purchase it—a nominal amount, a small amount—and a sample is taken and forwarded to the government laboratories where the federal analysts will then analyse the sample to see whether it meets the guarantee. If it does not, then we are notified and the material is detained, put under detention.

Mr. Howard (Okanagan Boundary): If you had a different product, would it go to the same analyst? Do all products that are examined go to the same analyst?

Dr. Cooper: They go to the same laboratory.

Mr. Howard (Okanagan Boundary): And there are a number of analysts in the laboratory?

Dr. Cooper: Oh, yes, there will be a number there. I am sure that they have one or two that do specific groups or family groups because of the complication or the high degree of skill that is necessary. One or two would do one group of compounds, or even one compound, because you would not have all your chemists trained to do some of these compounds.

Mr. Howard (Okanagan Boundary): So there are a number of specialists involved in covering a whole range of products. All of the products on the market would require a whole stable of specialists.

Dr. Cooper: Yes.

Mr. Howard (Okanagan Boundary): In other words, if you had an appeal board you would have to have an equivalent stable. In fact you would have to have a complete duplication of the present facilities in order to have an appeal board, would you not?

Dr. Cooper: No, not necessarily. An appeal board would be made up of only a very small number of people who would, in their good judgment, decide whether the action was correct and proper.

Mr. Howard (Okanagan Boundary): You would not have to do a special chemical analysis?

Dr. Cooper: Oh, no. We are not challenging the report of the lab. We do request, and we have received excellent co-operation from the lab. If they take a sample of a product and find that it is deficient, we will question or ask for part of that

[Interprétation]

M. Cooper: Je ne suis pas une autorité en la matière, bien que je sache ce qui se passe. Un inspecteur peut se présenter à n'importe quel établissement et obtenir un échantillonnage d'un produit enregistré qui porte un numéro d'enregistrement absolument nécessaire avant de pouvoir vendre un produit. Il peut donc prélever un échantillonnage de ce pesticide. D'habitude, on l'achète en petite quantité et on prend un échantillonnage de ce pesticide que l'on transmet ensuite au laboratoire du gouvernement, où les analystes du gouvernement analysent l'échantillonnage pour savoir si oui ou non on rencontre les exigences de la garantie. Sinon, on nous avertit et le matériel ou le produit est retenu.

M. Howard (Okanagan-Boundary): Si j'avais un produit différent, est-ce que le produit serait envoyé au même analyste?

M. Cooper: Les produits vont tous au même laboratoire.

M. Howard (Okanagan-Boundary): Et il y a beaucoup d'analystes dans ce laboratoire?

M. Cooper: Au même laboratoire, oui. Il y a un certain nombre d'analystes. Je suis sûr qu'il y en a un ou deux qui font certains groupes spécifiques, groupes génériques, en raison de la spécialité requise, de la grande compétence requise. Il y en a un ou deux qui feraient un groupe de composés ou même un seul composé. Tous les chimistes ne seraient pas nécessairement formés pour traiter de différents composés.

M. Howard (Okanagan-Boundary): Pour toute la gamme des produits, cela nécessiterait tout un groupe de spécialistes.

M. Cooper: Oui.

M. Howard (Okanagan-Boundary): En d'autres termes, si vous aviez une commission d'appel, il faudrait toute une équipe, encore une fois, de spécialistes, si vous vouliez avoir une commission d'appel, n'est-ce pas?

M. Cooper: Pas nécessairement. Une commission d'appel ne serait composée que d'un très petit nombre de personnes qui décideraient si la décision originale est juste et exacte.

M. Howard (Okanagan-Boundary): Est-ce qu'il ne s'agirait pas d'une analyse chimique spéciale?

M. Cooper: Non. Nous ne mettons pas en doute le rapport présenté par les laboratoires. Nous demandons, et nous avons eu une collaboration excellente de la part des laboratoires. Quand ils prennent un échantillonnage et le trouvent défectueux, nous demandons une partie de cet échantillon et nous en faisons l'analyse dans nos propres laboratoires pour voir si c'est

[Text]

sample, and run it through our own lab to see whether it is true. And we usually find it so.

There is good liaison here. We are not questioning the competency or the reports that are coming forth from this lab. We feel that this is an excellent lab and has been doing a fantastic job.

Mr. Howard (Okanagan Boundary): So it is not the chemical analysis.

Dr. Cooper: No.

Mr. Howard (Okanagan Boundary): What phase is it that you are questioning?

Dr. Cooper: Time.

Mr. Howard (Okanagan Boundary): The administrative level.

The Chairman: I will have to ask the co-operation of the Committee in making our supplementaries as brief as possible, or else we do impose an injustice on the recognized questioner. Will you conclude as soon as you can?

Mr. Howard (Okanagan Boundary): I am sorry to take so long, but I am trying to establish this point, whether or not it is practical to have a duplication of service for an appeal board. Is it practical to do all of it all over again? Are you not involving the equivalent of a whole government department in order to have an appeal board? I am merely trying to establish this point.

Mr. J. W. Kennady (President, Canadian Manufacturers of Chemical Specialties Association): Mr. Chairman, may I make a comment? I think really what we are talking about here, gentlemen, is an element of time involved in the product that is under question. We are not questioning the scientific knowledge that it has presented. It is strictly a matter of time with reference to the use of the product by the farmer. He is under the gun at many times because he may need a product. The company who has had a sample picked up and had it questioned is under the gun as to time. Really what we are asking for here is not a special appeal board, but—

An hon. Member: An ombudsman.

Mr. Kennady: —fast administrative action.

The Chairman: Mr. Horner?

Mr. Horner: Yes, Mr. Chairman. This is the point, Mr. Kennady, that I was concerned about: the six months period that would, in effect, be one year as the use of chemicals is really of a seasonal nature.

[Interpretation]

vrai ou non. Et d'habitude nous trouvons qu'ils ont raison.

Par conséquent, il y a une bonne liaison entre les deux. Nous ne mettons pas en doute la compétence ou ni, même, les rapports présentés par ces laboratoires. Nous trouvons que les laboratoires sont excellents, qu'ils font un bon travail.

M. Howard (Okanagan-Boundary): Par conséquent, ce n'est pas l'analyse chimique.

M. Cooper: Non.

M. Howard (Okanagan-Boundary): Alors, quel est le motif de votre critique?

M. Cooper: Le temps en cause.

M. Howard (Okanagan-Boundary): A l'échelon administratif.

Le président: Voulez-vous, s'il vous plaît, poser de brèves questions supplémentaires. Est-ce que vous pourriez conclure, s'il vous plaît.

M. Howard (Okanagan-Boundary): Je m'excuse d'avoir pris autant de temps, mais j'essaie d'établir si, oui ou non, c'est pratique d'avoir un chevauchement de travaux ou de services en vue de créer une commission d'appel. Je me demande si c'est pratique de tout recommencer le travail. Est-ce qu'il ne sera pas nécessaire de créer un autre ministère pour avoir une commission d'appel? C'est ce que j'essaie de faire ressortir.

M. J. W. Kennady (Président de l'Association des chimistes manufacturiers canadiens de spécialités): Est-ce que je pourrais faire un commentaire, s'il vous plaît? Je crois que ce dont nous parlons, messieurs, c'est une question de temps pour un produit mis en cause ou mis en doute. Nous ne disons pas que nous mettons en doute les connaissances scientifiques, mais c'est tout simplement une question de temps en ce qui concerne l'utilisation du produit par le cultivateur qui est lui aussi, limité dans son temps et, qui peut avoir besoin d'un produit. La compagnie dont le produit a été retenu subit de fortes pressions quant au temps et ce que nous demandons ce n'est pas un tribunal d'appel spécial, mais...

Une voix: Un ombudsman.

M. Kennady: ...une action rapide de la part de l'administration.

Le président: M. Horner.

M. Horner: Voici le point qui me préoccupait M. Kennady. La question de la période de six mois qui pourrait en fait en être une d'un an pour les produits chimiques saisonniers.

[Texte]

Mr. Kennedy: That is correct.

Mr. Horner: So that six months, in effect, could be a year in some cases. I wonder, Dr. Cooper, if we included a clause (d) in this section which would read something like this—and I am just going to pose this as a question to you, whether it would be satisfactory to you people—that the company whose product has been seized or detained be granted the right at any time after the detention of the product to appeal to an independent board consisting of representations from the industry and the Department. What would you think of a clause like that?

The Chairman: I am sure that the witnesses could not be expected to draft the legislation, Mr. Horner, nor do I think it is fair for them to comment on that type of question. You are at liberty to question the witnesses, but I don't think that would include asking them whether or not this would be suitable to them.

Mr. Horner: I disagree with you, Mr. Chairman. We are here to try and make this a workable Act; I would be shirking my duty if I did not ask that. We have representatives before us who have a complaint against the Act as it is now drafted. Many, many briefs presented to committees from time to time do, in fact, contain suggested amendments.

This brief, in particular, does not. I am asking their opinion of a supposed amendment that could well be included in the Bill. The Committee does not have to accept their approval or disapproval. I just asked them for an opinion as to whether or not something like that would grant them the appeal which they say they desire.

The Chairman: If Dr. Cooper wishes to answer the question, I will grant it.

Dr. Cooper: Yes, I feel that this would give us what we need.

Mr. Horner: Thank you. I have one more question, Mr. Chairman, and that has to do with Clause 5 (d).

You suggest, and I agree with you, that if the product is registered you do not see any reason why the establishment has to necessarily be registered. What would you say if the Committee decided to delete all words after the words "respecting the registration of control products" in subclause (d) and added the words "and the manufacturing of such products"; in other words, delete "and of establishments in which any prescribed control products are manufactured and prescribing the fees therefor"?

Is there any other place in the Act which refers to or suggests that establishments should be registered? Subclause (e) does, in a sense, but it does not necessarily say that the establishments must be registered; it just says, "respecting the inspection and operation of establishments in which any prescribed control

[Interprétation]

M. Kennedy: C'est exact.

M. Horner: Ainsi six mois pourrait être l'équivalent d'un an dans certains cas.

Et alors, M. Cooper, si nous ajoutons un paragraphe d) qui se lirait ainsi:—et je vous demande si ce serait satisfaisant—que la compagnie dont le produit a été retenu ou détenu ou saisi, ait un droit d'appel utilisable à n'importe quel moment après la saisie du produit ou la retenue du produit, envers un tribunal indépendant composé des représentants de l'industrie et du Ministère. Que pensez-vous d'un tel paragraphe?

Le président: Je suis sûr que les témoins ne peuvent pas s'attendre à rédiger des mesures législatives et je ne trouve pas que cela soit juste de leur demander un commentaire sur ce genre de texte. Vous avez la liberté de questionner les témoins, mais quand vous leur demandez si telle clause les satisfait ou non, je trouve que vous allez un peu loin.

M. Horner: Je ne suis pas en accord avec monsieur le président. Nous sommes ici pour essayer de concevoir un projet de loi le plus pratique possible. Je manquerais à mon devoir si je ne le faisais pas. Et, si nous avons des témoins qui se plaignent contre la rédaction actuelle du Bill, plusieurs mémoires présentés au comité de temps à autre, proposent en fait des modifications.

Le présent mémoire n'en comporte pas, mais j'essaie d'obtenir leur opinion au sujet d'un amendement qui pourrait être inclus dans le projet de loi. Le Comité n'est pas tenu d'accepter leur approbation ou leur désapprobation. Je leur demande leur opinion. A savoir si cela répondrait à ce qu'ils désirent.

Le président: Si M. Cooper veut répondre à la question, je vais lui donner la permission de le faire.

M. Cooper: Oui, je trouve que cela me satisfait, oui.

M. Horner: Une dernière question, monsieur le président, qui a trait à l'article 5 (d).

Vous dites—et je suis d'accord avec vous—que si le produit est enregistré, vous ne voyez pas du tout pourquoi l'établissement doit l'être aussi. Et alors, au paragraphe d), de l'article V, que diriez-vous si le Comité décidait de biffer tous les mots après «l'enregistrement des produits contrôlés» du paragraphe (d), ensuite qu'il ajoutait les mots «et la fabrication de tels produits antiparasitaires» et supprimait l'expression «et des établissements qui les fabriquent et prescrivant les droits d'enregistrement».

Y a-t-il un autre endroit dans le Bill où l'on suggère que les établissements doivent être enregistrés? Au paragraphe (e)? — oui, dans un certain sens, on trouvera la même disposition, mais elle ne veut pas nécessairement dire que les établissements doivent être enregistrés. On dit tout simplement: «concernant l'exploita-

[Text]

products are manufactured;". I do not think that Sub-clause (e) would necessarily require establishments to be registered. Do you see what I mean? Is there any other place in the Act that would require that? Is registering, in your mind, the same thing as licencing, or similar?

● 1045

Dr. Cooper: It has always been my thought that you register at no cost, but you are licenced at a fee; however, it is tantamount to the same thing: you are issued a certificate or whatever it is. I have always looked at it this way: one is with a fee and one is without.

Mr. Horner: Thank you, Dr. Cooper. Mr. Chairman, I will forego any further questions now and I will not move any amendment until later on in the Committee. Before we are through, I would like the Committee to consider the suggested amendment I made here a while ago during the questioning.

Mr. J. A. Oakley (1st Vice President, Chevron Chemical (Canada) Limited, Canadian Agricultural Chemicals Association): Mr. Chairman, further to Mr. Horner's question, Clause 4(2)(b) also specifies the registration of an establishment.

An hon. Member: "was registered and operated as prescribed."

Mr. Horner: But there is no fee mentioned there. I do not take objection to the fact that you register, or that you are a registered manufacturer of a chemical; I do not take any objection to this. I do not like the idea of having to pay a fee. That is why I asked the question about licencing and fees.

The Chairman: Mr. Clermont?

M. Clermont: Monsieur le président, puis-je me permettre une suggestion de régie interne? Lorsque nous avons des témoins qui présentent un mémoire concernant un bill en particulier, ne serait-il pas préférable d'inviter aussi les fonctionnaires du ministère? M. Danforth et M. Gleave ont posé certaines questions, à savoir qu'il nous faudra questionner davantage nos fonctionnaires. J'ai l'expérience du Comité des finances, du commerce et des questions économiques, où nous avons étudié les accords Kennedy et la Loi sur l'antidumping.

Lorsque nous avons des témoins du secteur privé, les fonctionnaires du ministère des Finances et du ministère du Revenu national étaient aussi présents. Ceci permettait aux députés de poser des questions directement aux fonctionnaires. A quelques occasions, monsieur le président, un malentendu ou un manque de communication entre l'association en question et les fonctionnaires a été immédiatement corrigé.

[Interpretation]

tion et l'inspection des établissements dans lesquels des produits contrôlés sont manufacturés».

Je ne trouve pas personnellement que le paragraphe (e) nécessite forcément l'enregistrement des établissements. Comprenez-vous ce que je veux dire? Y a-t-il un autre endroit dans la Loi où l'on exige que cela se fasse? Est-ce que enregistrement et permis d'exploitation, sont synonymes dans votre esprit?

M. Cooper: A mon sens, un enregistrement se fait sans frais, alors que le permis d'exploitation comporte un droit. Alors, j'ai toujours considéré que lorsqu'on émettait un certificat, on pouvait le faire avec ou sans frais.

M. Horner: Merci, M. Cooper. Je n'ai pas l'intention de poser d'autres questions à l'heure actuelle. Et j'ai l'intention de proposer des amendements plus tard seulement, mais avant de terminer, j'aimerais bien que le Comité prenne en considération le texte, ou l'amendement dont j'ai parlé tout à l'heure.

M. J. A. Oakley (Vice-Président, Association canadienne de produits chimiques agricoles): M. le président, à la suite de la question de M. Horner, j'aimerais préciser que l'article 4 (2) (b) spécifie également l'enregistrement d'un établissement.

Une voix: «était enregistré et exploité de la manière prescrite.»

M. Horner: Mais il n'est pas question ici d'une redevance. Je ne m'oppose pas au fait que l'on s'enregistre, que vous soyez un fabricant enregistré d'un produit chimique. Je ne m'oppose pas à cela. Mais, je n'aime pas l'idée d'avoir à payer une redevance. C'est pourquoi j'ai soulevé la question des droits et de l'enregistrement.

Le président: Monsieur Clermont.

Mr. Clermont: Mr. Chairman, could I make a suggestion regarding rules of procedure? When we have witnesses who submit a brief concerning a specific bill, could we not have the officials from the Department here too? Mr. Danforth and Mr. Gleave have raised some questions, namely that we will have to put more questions to our officials. I have had as experience the Committee on Finance, Trade and Economic Affairs where we have studied the Kennedy Round Agreement and the Anti-Dumping Act. When we had witnesses from private industry, the officials from the Department of Finance and from the Department of National Revenue were also attending. This enabled Members to put questions directly to the officials. On a number of occasions, Mr. Chairman, a lack of communication or a misunderstanding between the Association concerned and the officials was corrected immediately.

[Texte]

Je suggérerais qu'à l'avenir, lorsque nous aurons des témoins du secteur privé à ce Comité, nous devrions aussi avoir les fonctionnaires des ministères correspondants.

The Chairman: I recognize your point. This morning, we are questioning witnesses of two associations in response to a request from these associations. No doubt members of the Committee will be making notes and observations concerning the questioning this morning. We will later have an opportunity of questioning the departmental people.

M. Clermont: J'ai l'expérience d'autres comités et, si ma suggestion était suivie, vous pourriez éviter des délais.

A tout événement, je voulais seulement faire une suggestion sur la régie interne. Je sais que la chose a très bien fonctionné dans un autre comité et on a ainsi évité des retards dans des réunions subséquentes.

Un des témoins a mentionné à quelques reprises qu'il voulait avoir un droit d'appel.

Il a parlé, à une occasion, d'un corps indépendant. Il a dit ensuite qu'il n'aurait pas d'objection à ce que ce droit d'appel soit dirigé vers des officiers ou des chimistes du ministère de l'Agriculture.

Si je me souviens bien, la semaine dernière, un des fonctionnaires du ministère de l'Agriculture nous a dit que, dans les règlements qui seront émis selon l'article 5, il y aura un droit d'appel. Est-ce exact, monsieur le président?

The Chairman: I would have to refer to the record. I am not sure if the record would indicate that a departmental person said that there would be, but I am inclined to believe that that was indicated.

● 1050

Mr. Clermont: Mr. Danforth was told last week by a representative of the Department of Agriculture that under Clause 5 there would be, and the Minister added that under the present regulation there is an appeal.

Mr. Peters: Mr. Chairman, this is really a point of order. . .

The Chairman: I am advised that there is the right of appeal.

Mr. Peters: I would suggest that you ask the departmental officials who are here.

[Interprétation]

I would suggest that in the future when we have witnesses from private industry before the Committee, we should have the officials from the corresponding departments.

Le président: J'enregistre votre suggestion. Ce matin, nous interrogeons deux associations à leur propre demande. Il n'y a aucun doute que les membres du Comité prennent des notes et font des observations au sujet de l'interrogatoire de ce matin. Nous aurons la possibilité plus tard de questionner les fonctionnaires du ministère.

Mr. Clermont: I have had experience in other committees, and if you were to follow my suggestion you could avoid delays.

In any event I merely wanted to make a suggestion regarding the rules of procedure. I know that this has worked out very well in other committees and this helped avoid delays in subsequent meetings.

One of the witnesses has mentioned several times that he wanted to have the right to appeal. On one occasion, he referred to an independent body. Then he said there would be no objections to have this appeal directed to officials or chemists from the Department of Agriculture.

If I recall correctly, last week one of the officials from the Department of Agriculture told us that in the regulations that will be issued under Clause 5, there will be a right of appeal. Is this true, Mr. Chairman?

Le président: Alors, il faudra que je vous renvoie au compte-rendu. Je ne sais pas si le compte-rendu précise que les fonctionnaires ont dit que tel était le cas. Mais, je crois que cela était indiqué.

M. Clermont: La question, en réponse à M. Danforth, un fonctionnaire a dit qu'en application de l'article 5, le ministre affirmait que d'après le règlement actuel, il y a un droit d'appel.

M. Peters: Monsieur le président, j'en appelle vraiment au Règlement.

Le président: Il y a droit d'appel.

M. Peters: On peut poser la question aux fonctionnaires qui sont ici?

[Text]

The Chairman: I have been advised that there is the right of appeal.

M. Clermont: Je veux bien permettre à d'autres députés de poser leurs questions.

Au sujet du paragraphe 2, alinéas a) et b) de l'article 4, vous prétendez que cet article n'est pas nécessaire, parce qu'il n'est pas nécessaire que les produits chimiques destinés à l'exportation soient produits selon les normes canadiennes d'enregistrement.

Pourquoi selon vous cet article n'est-il pas nécessaire?

Dr. Cooper: Yes, sir. For instance, let us say Jamaica has requested a Canadian company to formulate a pesticide for them. They have presented the specifications for the formulation they require. Now, no person shall export out of Canada such product unless it complies with prescribed conditions and was registered and operated as prescribed, (a) or (b). The question here is: Suppose Canada did not like that formulation, what could be done?

This is the right of the other country to ask, is it not? We bring the product in; it gives employment to our local plants: it is manufactured and canned and sent out according to their specifications. I just question what is the interest of the Canadian government in that product which is taking a complete route and is not going to stay in here. It will be manufactured here and then shipped out.

This is why we feel that unless there is more explanation, there are these situations that evolve. We formulate material on sugar cane and send it back out. We are sending it to Asia and other countries on their specification. We have no control; we are just accepting the job of doing what they want and nothing else.

Mr. Lessard (Lac-Saint-Jean): But you are not offering that product on the Canadian market?

Dr. Cooper: No, absolutely not.

Mr. Lessard (Lac-Saint-Jean): And there is no possibility that could happen?

Dr. Cooper: No.

The Chairman: I now recognize Mr. Douglas.

Mr. Douglas: I was interested in this discussion about Clause 4 (2) (a) and (b) and I am wondering if there is not perhaps an international agreement between nations that Canada is obliged to live up to that

[Interpretation]

Le président: Il y a un droit d'appel, on me l'a dit.

Mr. Clermont: I am quite willing to give other members a chance to put questions.

With regard to subsection 2, paragraphs (a) and (b) of section 4 you state that this section is useless because it is not necessary that chemical products for export be produced according to Canadian registration standards.

Could you tell us the reason why this section is useless?

M. Cooper: Oui, monsieur. L'article 2. Prenons par exemple le cas de la Jamaïque. La Jamaïque a demandé à une société canadienne de préparer une formule de produit antiparasitaire. Ce pays nous a donné les caractéristiques de la formule nécessaire. Maintenant, aucune personne n'exportera du Canada des produits à moins qu'ils ne soient conformes aux prescriptions prévues en a) et b).

La question qui se pose ici est la suivante: En supposant que le Canada n'aime pas cette formule, que pourrait-on faire?

L'autre pays n'a-t-il pas le droit de demander ce qu'il désire? Le produit est importé; il fournit de l'emploi au Canada, il est fabriqué ici et il est mis en boîte et envoyé à la Jamaïque conformément aux spécifications jamaïcaines.

Pour quelles raisons est-ce que le Canada doit s'intéresser à un produit qui est fabriqué ici, mais qui ne restera pas ici, qui sera envoyé à l'étranger?

Voilà pourquoi nous pensons qu'à moins qu'il y ait plus d'explications, surgiront des difficultés relatives à des situations qui changent. Nous préparons des produits et nous les expédions. Nous en envoyons en Asie et dans d'autres pays, selon ce qu'ils nous demandent. Nous ne contrôlons pas ces spécifications. Nous acceptons simplement le travail et nous faisons ce qu'ils veulent. Rien d'autre.

M. Lessard (Lac-Saint-Jean): Mais ce produit n'est pas offert sur le marché canadien?

M. Cooper: Absolument pas.

M. Lessard (Lac-Saint-Jean): Et il n'y a aucune possibilité que cela se produise?

M. Cooper: Non.

Le président: La parole est à M. Douglas.

M. Douglas: Je m'intéresse à ce qui a été dit à l'article 4, (2) a) et b).

Je me demande s'il n'y a pas des accords internationaux qui obligent le Canada à approuver de tels règlements?

[Texte]

requires this sort of regulation. I believe a question like this developed in connection with the Animal Contagious Diseases Act, which required this type of regulation because of an international commitment. Is there not an international commitment in this field too?

Dr. Cooper: As far as pesticides are concerned, sir, I am not aware of any such commitment. I am aware of the Animal Contagious Diseases Act, and so forth, but personally I know of no commitment in so far as Canada is concerned along this line.

Mr. Douglas: On the import side you question the need for this regulation, too, but I can see a need for this especially where finished products are imported, as some of them are from outside of Canada for sale directly to the users. I think we need this for that purpose, if nothing else. Would that not be true?

● 1055

Dr. Cooper: I believe something is needed here, but I am not sure that (2) (a) and (b) are couched or termed in the right kind of language to achieve that which we wish.

Mr. Douglas: I see. To go down to Clause 5 (d) where you question the need for the registration of premises, is there any real objection to registering the premises when other provisions provide for inspections of products, approval of storage and products, and control of products? It seems to me that in order to do this effectively the inspectors will have to know the location of these places where chemicals are made and stored and sold.

I cannot see why it should not be desirable to have registration of premises.

Farmers have to register their farms when they want quotas to be able to deliver grain; they have to register their farms if they want a quota for dairy production, and so on. I cannot see any real objection to registering premises.

Dr. Cooper: There are two points here; one is, what is the fee for?

Mr. Douglas: As you stated, probably registration does not involve fee at all.

Dr. Cooper: That is right, but a fee is implied by the very presence of the words. "And prescribing the fees therefor." What does this mean? Surely I am not misinterpreting the words.

Mr. Douglas: Where are those words? I am talking about Clause 5 (d).

Dr. Cooper: Clause 5 (d). It says:

(d) respecting the registration of control products and of establishments in which any prescribed control products are manufactured and prescribing the fees therefor;

[Interprétation]

Je crois que ce point précis a été soulevé au sujet de la Loi sur les épizooties et que des règlements du genre avaient été rendus nécessaires en raison d'un accord international.

Est-ce qu'il n'y a pas, ici aussi, un accord international?

M. Cooper: En ce qui concerne les produits antiparasitaires, je ne suis au courant d'aucun engagement de ce genre. Je sais qu'il y en a pour les maladies contagieuses chez les animaux, mais je ne sais qu'il en existe dans ce domaine-ci.

M. Douglas: Du point de vue de l'importation, vous mettez également en doute la nécessité d'un tel règlement. Pour ma part, j'en vois la nécessité dans le domaine de l'importation de produits finis dont certains sont vendus directement au public. C'est pourquoi il nous faut ce genre de protection. Est-ce que ce n'est pas vrai?

M. Cooper: Je crois qu'une telle protection est nécessaire mais je ne suis pas certain que (2) a) et b) soient rédigés dans des termes qui nous permettent d'atteindre le but que nous nous proposons.

M. Douglas: Passons à l'article 5 d). Vous mettez en doute le besoin d'enregistrer les établissements. Pourquoi s'y opposer lorsque d'autres dispositions prévoient l'inspection des produits, l'inspection des entrepôts et des produits et le contrôle des produits. Il me semble que pour faire ce travail de façon efficace, les inspecteurs devront savoir où les produits sont fabriqués, entreposés et vendus. Je ne vois pas pourquoi il ne serait pas bon d'enregistrer les établissements.

Les agriculteurs doivent enregistrer leurs exploitations agricoles lorsqu'ils veulent un quota de produits laitiers ou de céréales. Je ne vois pas pourquoi on ne pourrait pas enregistrer les établissements ici.

M. Cooper: Il y a deux éléments. Premièrement pourquoi doit-on payer une redevance?

M. Douglas: L'enregistrement n'entraîne pas de redevance.

M. Cooper: C'est exact, mais implicitement on parle de redevances puisque le texte dit: «prescrivant les droits d'enregistrement». Qu'est-ce que signifient ces mots?

M. Douglas: Où sont ces mots? Je parle de l'article 5 d).

M. Cooper: Il s'agit de 5 d)

Concernant l'enregistrement des produits antiparasitaires et des établissements qui les fabriquent et prescrivant les droits d'enregistrements;

[Text]

Mr. Douglas: That is right. Well, it may be that some fees may be called for for some of that, but it does not say in the regulations there has to be a fee for everything.

Dr. Cooper: I can see fees for the registration of products, yes. This is what we have now. For the registration of a product there is a registration fee with which I agree, but if I have to register my plant I do not see why I have to pay another fee.

Mr. Douglas: You are talking about fees, but the objection in your brief has nothing to do with fees, it just states that your objection was to the registration.

Dr. Cooper: Registration, yes. We are registered companies. We have to register to get our names, and so forth. We have to be registered companies. Now, how often do we have to register our names?

Mr. Douglas: I would think you would not be required to register again if it is already registered.

Dr. Cooper: You cannot operate and sell in Canada unless you are a registered company.

Mr. Douglas: I cannot really see the objection to registering the premises or the establishment if you are registering the company; I cannot see the difference. I am not going to argue with you about it, but I just do not see the difference.

I have a very high regard for the chemical companies, although I have had some trouble. I am a farmer and I have had lawsuits with one or two of them, but I have a very high regard for the chemical industry and the vital role it plays in agriculture. I do not want you to get the idea that I am completely critical of your brief. I appreciate the fact that you would support the idea, in the main, of the whole Bill. Thank you.

● 1100

The Chairman: Mr. Southam?

Mr. Southam: Thank you, Mr. Chairman. My comment or question now will be quite brief, because most of the points that I had in mind have been discussed, particularly the subject introduced by Mr. Horner with respect to writing something into this Bill at the suggestion of the witnesses for the right of appeal. Carrying this one step further, and just as a matter of clarification, Mr. Chairman.

Suppose an inspector made a decision that he was going to red tag a product for, say, six months—and here again I think there is this problem of the six months; it is quite a serious time lapse as far as the

[Interpretation]

M. Douglas: C'est exact. Il se peut que certains droits d'enregistrement soient imposés. Mais rien ne dit que des droits doivent être perçus en toute circonstance.

M. Cooper: Que l'on mette des droits d'enregistrement d'un produit, c'est ce que nous avons maintenant. D'accord. Nous avons un droit d'enregistrement. Je suis d'accord à 100 p. 100, mais si je dois enregistrer mon établissement, je ne vois pas pourquoi je dois payer un autre droit d'enregistrement.

M. Douglas: Dans votre mémoire, vous ne vous opposez pas aux droits, mais à l'enregistrement même.

M. Cooper: Oui, à l'enregistrement. Notre compagnie est enregistrée. Nous devons nous enregistrer pour avoir un nom. Il nous faut nous enregistrer. Mais, combien de fois faut-il le faire?

M. Douglas: Je ne crois pas que vous soyez tenu de l'enregistrer une nouvelle fois, si elle l'est déjà.

M. Cooper: Vous ne pouvez pas opérer au Canada si la compagnie n'est pas enregistrée.

M. Douglas: Je ne vois pas pourquoi vous vous opposez à l'enregistrement des locaux si vous enregistrez la compagnie. Ce n'est pas parce que je veux débattre la question avec vous que je le dis, mais seulement parce que je ne vois pas la différence.

J'ai la plus grande estime pour les compagnies de produits chimiques, même si, en tant que cultivateur, j'ai eu certaines difficultés avec une ou deux d'entre elles. Je n'en respecte pas moins l'industrie chimique, qui est certainement essentielle pour l'agriculture. Je ne veux pas que vous pensiez que je suis opposé à votre mémoire. Je me rends compte que vous êtes prêt, en fait, à approuver ce projet de loi.

Le président: Monsieur Southam.

M. Southam: Merci, monsieur le président. Mes commentaires, mes questions seront très brèves, car le plupart des sujets que j'avais à l'esprit ont été discutés, en particulier le sujet abordé par Monsieur Horner pour l'addition d'une clause qui garantirait le droit à un appel. Je voudrais obtenir un éclaircissement, monsieur le président.

Supposons qu'un inspecteur a décidé de suspendre la vente d'un produit pour six mois. C'est un délai assez long pour la société et qui peut représenter une grosse perte de revenus. Supposons qu'il y a appel, et qu'on prouve que l'inspecteur s'est trompé, est-ce que la

[Texte]

company and possible loss of business is concerned. Suppose that when an appeal is made the inspector is found to be wrong; would the chemical company then have a right to compensation for the loss of business due to the mistake and if so, how would this be arrived at?

Dr. Cooper: In general practice I believe the company has no recourse whatsoever as far as compensation is concerned, and I do not think any of our companies are concerned with this aspect. We are just trying to get this into perspective so that we have some protection. This will not happen as of today, we know, but all we are looking for is to improve this to where there is some protection built in if the necessity does come up.

But, no, if you took it to the n^{th} degree and the company was found not guilty I am sure that we would not be able to get redress from the Crown for that loss of business, and I do not think the company would.

Mr. Southam: It seems to me there could be an injustice there. However, I thought it would be a good question for clarification. I go along with Mr. Douglas' thinking that as far as the registration of products and premises is concerned, one fee would suffice, but I still like the idea of having control and the right to go in and check, as Mr. Douglas points out. Farmers are subjected to this type of supervision and—

Dr. Cooper: I think under Clause 5 (d) we would register or list the places where we are going to manufacture, which would be part of the registration of the product name. I do not see any need for a special thing here. If we had to put down where we are manufacturing as part of the form, then this would become a redundancy. I do not see any reason for it. Just put it down that the manufacturing place must be listed with the registration.

Mr. Southam: In other words by the very fact that you are registering a product you would have to give the name and address, location and so on, and it would all be automatic anyway.

Dr. Cooper: Right.

Mr. Southam: Thank you, Mr. Chairman.

The Chairman: Thank you, Mr. Southam. Mr. Roy.

Mr. Roy (Laval): Thank you, Mr. Chairman. I am going to be very brief, a little more so than my friend, Mr. Horner, here. I heard that this morning he did not want to start because we did not have a quorum. Back to the Bill.

Voici ma première impression sur le bill. Je pense d'abord à l'article traitant de publicité: c'est très important pour les compagnies et nous sommes heureux de rencontrer les représentants de l'Association des chimistes manufacturiers canadiens de spécialités. La publicité peut être très trompeuse et je pense que si on enlevait l'alinéa k de l'article 5 le consommateur perdrait une excellente protection. On sait qu'actuellement, pour les compagnies. . .

[Interprétation]

compagnie aurait droit à une compensation? Comment s'y prendrait-on?

M. Cooper: En général, je crois que la société n'a aucun recours en ce domaine. D'ailleurs, je crois qu'aucune de nos sociétés ne s'intéresse vraiment à cet aspect de la chose. Nous essayons simplement de placer cela dans un contexte approprié de façon à avoir une certaine protection. Cela ne se produira pas aujourd'hui même, nous le savons. Mais, nous voulons simplement améliorer cela de façon à avoir une protection qui soit prévue dans la loi au cas où le besoin s'en ferait sentir.

Non, je ne crois pas qu'une société, si l'on poussait cela au bout, si la société n'est pas coupable, je suis certain que nous ne pourrions pas obtenir des dommages et intérêts de la Couronne pour nos pertes de revenue, et la société elle-même ne le pourrait pas.

M. Southam: Il me semble qu'il pourrait y avoir une injustice ici. Je pensais que ce serait une bonne question pour obtenir un éclaircissement. Je suis d'accord avec la philosophie de M. Douglas en ce qui concerne l'enregistrement des établissements et des produits. Un seul droit pourrait suffir, mais j'aime l'idée de pouvoir contrôler ces établissements. Comme le disait M. Douglas, les agriculteurs sont soumis à ce genre de surveillance.

M. Cooper: En application du paragraphe d), nous enregistrons ou ferons la liste des endroits où nous fabriquons et cela fera partie de l'enregistrement de la marque du produit. Je ne pense pas qu'il soit nécessaire de prévoir quelque chose de plus. Il suffit de faire figurer le lien de fabrication dans l'enregistrement.

M. Southam: Il suffit simplement de dire que l'endroit et l'adresse où le produit est fabriqué doit figurer sur l'enregistrement du produit.

M. Cooper: C'est exact.

M. Southam: Merci, monsieur le président.

Le président: Merci, monsieur Southam. Monsieur Roy.

M. Roy (Laval): Merci, monsieur le président. Je serais très bref. Je reviendrais au projet de loi, car ce matin M. Horner ne voulait pas commencer car il n'y avait pas quorum.

This is my first impression of the Bill. First, there is the item dealing with advertising. it is very important for the companies, and we are very happy to meet the representatives of the Canadian Manufacturers of Chemical Specialties Association. Advertising may be very misleading and I think that if were to remove paragraph (k) of clause 5, the consumer would lose an excellent protection. We know that at the present time, companies . . .

[Text]

— the new product is always more things and more profits at the end of the year, but I think that the problem is still how to use the product, and if it is the wish of the Committee we might make the suggestion to the people that perhaps they should invest their money in the technical services and promote their product through their technical services. That would be better, I think, for the consumer instead of pushing the publicity. All products are always "new". With only this word "new", they can increase their sales, but I think that with the agriculture industry, to know how to use the product is most important, but it is always the brand name that is promoted.

● 1105

Je pense qu'en enlevant l'article prévoyant le droit de regard du ministère quant à la publicité, nous ne rendrions pas réellement service au consommateur.

A l'article 5 d) pourquoi vous objecteriez-vous à mentionner l'établissement où le produit est fabriqué? Dans la Loi sur les aliments du bétail, par exemple, on exige que le nom de l'endroit où sont manufacturés les produits, qu'ils soient mélangés préparés ou produits finis soit inscrit sur l'étiquette. C'est une protection pour les deux parties et les objections que vous apportez ne me semblent pas suffisantes pour retirer l'article.

L'alinéa b du paragraphe 1 de l'article 4 protège autant le consommateur que la compagnie, en exigeant le contrôle de la composition des ingrédients. C'est tout à fait normal, je pense. Cette mesure n'est pas exclusive à la Loi sur les produits antiparasitaires mais elle existe également dans la Loi sur les aliments du bétail. Et il a toujours eu, ou il peut y avoir une sélection, ou un autre choix d'ingrédients. Je pense que cette protection doit demeurer.

Au sujet du droit d'appel, votre demande a certainement pu être considérée, mais il y a danger car si le produit est vendu pendant une période de six mois, cela signifie une période d'un an au point de vue consommation. Par exemple un produit pour le verger, qui est resté sur le marché pendant six mois est un danger pour les producteurs qui peuvent perdre leur récolte au cours de l'année. Il nous faut absolument agir rapidement. Plus les exigences seront sévères au niveau de l'enregistrement, plus meilleur sera le résultat, même pour les compagnies: la compétition sera beaucoup plus normale avec des normes plus sévères et ce faisant nous rendrons réellement service à la classe agricole.

Monsieur le président, je suis bien heureux d'avoir rencontré les représentants de l'Association qui nous ont présenté un excellent mémoire: mais je pense que le Bill C-157, tel qu'il nous est présenté représente, tant pour les compagnies que pour le consommateur les garanties nécessaires dans le secteur agricole comme dans tout autre secteur. C'est mon opinion, monsieur le président.

[Interpretation]

... le nouveau produit est censé être toujours le plus sûr. Le problème est de savoir comment utiliser le produit. Et si c'est possible, le comité devrait faire une suggestion d'après laquelle les fabricants devraient investir de l'argent dans un service technique, afin de promouvoir leur produit et de s'occuper des problèmes des consommateurs plutôt que de faire de la publicité. Un produit est toujours nouveau pour un consommateur et c'est un facteur qui augmente les ventes. Je pense que pour l'agriculteur il est plus important de savoir comment se servir du produit plutôt que d'avoir simplement une marque.

I believe that if we remove the clause that provides for the Department's right to check advertising, we would not really be tendering service to the consumer.

Regarding clause 5 (d), why should you object mentioning the establishment where the product is manufactured? In the Feeding Stuffs Act, for instance, it is stated the name of the place where the products are made, whether premixes or finished product, should be specified on the tag. This is a protection for both parties and I do not feel that your objections are sufficient to remove the clause.

Paragraph (b), subsection 1, of clause 4 protects both the company and the consumer, by demanding that the composition of the ingredients be controlled. This is perfectly normal. This measure is not only in the Pest Control Products Act, but it is also to be found in the Feed Stuffs Act. And these has always been, or there can be, a selection at another choice of ingredients. I believe this protection should be maintained.

As concerns the right of appeal your request may certainly have been considered, but a danger exists here because if a product is sold for six months in so far as the consumer is concerned this means a one-year period. For instance, a product to be used in orchards which has remained on the market for a period of six months is a hazard for producers who may lose their crop in the course of the year. This is why we should act quickly. The stricter the requirements are at the level of registration, the better will be the results, even for firms. Competition will be far more normal with stricter standards and by doing this we will be rendering a real service to our farmers.

Mr. Chairman, I am very happy to have met the representatives of the Association who presented an excellent brief, but I believe that Bill C-157, as submitted to us, represents, for the companies as well as the consumers the necessary guarantees in the agricultural field as well as in any other field. This is my opinion, Mr. Chairman.

[Texte]

The Chairman: Thank you. Mr. Peters?

Mr. Peters: Is the registration plant number, if you have a number now, attached to the retail label as well as to the registration number of the product itself? Is there any identification of the plant doing the manufacturing?

Dr. Cooper: In our case, just the registration number. Where the plant manufacturing—no. Most of our products have a lot number which specifies what lot, where—and this lot is then traceable back to the time and the place of manufacture.

Mr. Peters: How?

Dr. Cooper: Because of the number given. If it is C0025, this automatically gives the place of manufacture and the time of manufacture, so that if I know a certain product is in question—and many growers question products—I immediately find out what the lot number was and go back.

Mr. Peters: But he does not know.

Dr. Cooper: No, he does not know, but I know.

Mr. Peters: Is there any reason why he should not know?

Dr. Cooper: Well, why should he know?

Mr. Peters: He is the one making the complaint. How is he going to make the complaint against a particular company in a particular location?

Dr. Cooper: The registration number.

Mr. Peters: The registration number, Mi. Chairman, I would maintain, is probably held by a number of manufacturers.

Dr. Cooper: No, no. One person. One firm has one number.

Mr. Peters: Why would it be?

Dr. Cooper: Why?

Mr. Peters: If I hold a registration number for a specific product, I might ask four or five manufacturers to make this product for me.

Dr. Cooper: This you could do, but you are the registrant. You are taking full responsibility.

● 1110

As far as the farmer is concerned, he could not care less where it was manufactured as long as you are the

[Interprétation]

Le président: Merci. Monsieur Peters.

M. Peters: Est-ce que l'enregistrement, s'il s'agit d'un numéro, sera attaché à l'étiquette pour la vente au détail en même temps que le numéro d'enregistrement du produit lui-même? Est-ce qu'il y a une identification de l'usine qui s'occupe de la fabrication?

M. Cooper: Dans notre cas, seul le numéro d'enregistrement figure. L'usine, non. Nos produits ont un numéro de lot qui spécifie à quel lot ils appartiennent et par lequel on peut retrouver le lot, sa date et son lien de fabrication.

M. Peters: Comment?

M. Cooper: A cause du numéro. Par exemple: Le numéro C-0025 donne automatiquement l'endroit de fabrication et la date de fabrication. Donc, si j'apprends qu'un certain produit n'est pas excellent, si un certain nombre de cultivateurs se plaignent de ce produit, je peux immédiatement retracer le lot auquel il appartient.

M. Peters: Mais l'agriculteur ne doit-il pas le savoir?

M. Cooper: Non, il ne le sait pas, mais moi je le sais.

M. Peters: Y-a-t-il une raison de le lui cacher?

M. Cooper: Pourquoi voulez-vous qu'il le sache?

M. Peters: C'est lui qui se plaint, comment va-t-il se plaindre s'il ne sait pas quelle est la société et quel est l'endroit qui correspond au numéro de l'enregistrement.

M. Cooper: Le numéro d'enregistrement . . .

M. Peters: Monsieur le président, le numéro d'enregistrement; je maintiens que ces produits sont fabriqués par un grand nombre de fabricants.

M. Cooper: Une société possède un seul numéro.

M. Peters: Comment cela se fait-il?

M. Cooper: Comment.

M. Peters: Si j'ai un numéro d'enregistrement pour un produit particulier, je peux demander à quatre ou cinq fabricants de le fabriquer pour moi.

M. Cooper: Vous pouvez faire cela, mais c'est vous qui avez l'enregistrement, c'est vous qui êtes responsable. En ce qui concerne l'agriculteur, il se moque éperdument de l'endroit où le produit est fabriqué, tant que c'est à vous d'accepter la responsabilité. Si

[Text]

man who has to accept the responsibility. If anything happens through that product not being correct in strength or contamination or anything else and he suffers a loss, he can get redress for this loss, but it does not matter where that particular material is manufactured.

Mr. Peters: Would this number be available to the inspector?

Dr. Cooper: Oh, certainly, it is on the cans or—

Mr. Peters: No, no. Would the lot number provide the information to the inspector as to which plant it was manufactured in?

Dr. Cooper: Only if he asks. It is a company code; this is all it is; but of everything we manufacture, sir, we have to keep a retention sample. We do this for our own protection. Therefore, of every batch of material that is turned out a retention sample is retained for a period of at least two to five years, or until we feel that the product has disappeared.

Therefore, if you have a complaint two years from now against one of our products I can tell you when it was manufactured and I can also produce in a court of law the sample that was taken from the material that you used. This is one way we have of protecting ourselves against people who make fraudulent claims. We have to have some protection, too, and this is what the code number does on the lot number. It is the same in the veterinary drug and pesticides fields where it is extremely important, and we keep a retention sample of every lot we produce.

Mr. Peters: I may be wrong, but it seems to me that probably you have a point in clause 5 (d) in asking that there not be a fee for this registration. It is my opinion that some protection is really being provided if there is a plant registration number on the product.

An hon. Member: How much is the fee.

Mr. Peters: I do not think it really matters what the fee is. It has not been designated by Order in Council. We do not know what the fee is. There is none at the present time.

Mr. Horner: May I ask a supplementary?

The Chairman: Mr. Horner?

Mr. Horner: Under clause 5 (d) Mr. Cooper, as it is worded, could not a fee be actually levied against each product so manufactured?

Dr. Cooper: It is.

Mr. Horner: But as clause 5(d) is worded a fee could be actually levied on the manufacture for each product, and it always has been. The fee is actually always levied on each product manufactured.

[Interpretation]

quelque chose doit se produire si un produit n'est pas acceptable, n'est pas suffisamment fort ou s'il est contaminé et si l'agriculteur subit une perte, il peut obtenir des dommages et intérêts pour cette perte. Peu importe où ce produit a été fabriqué.

M. Peters: Est-ce que ce numéro d'enregistrement sera fourni à l'inspecteur?

M. Cooper: Bien sûr, certainement, il figure sur les bidons.

M. Peters: Non, non. Le numéro de lot donnera-t-il les renseignements nécessaires en ce qui concerne l'usine dans laquelle le produit a été fabriqué?

M. Cooper: S'il le demande seulement. C'est un code pour la compagnie, rien d'autre. Pour tout ce que nous fabriquons, monsieur, nous devons garder un échantillon, nous gardons l'échantillon pendant toute protection. Toute série de produits qui est envoyée correspond à un échantillon qui est conservé entre deux et cinq ans ou jusqu'au moment où ce produit a disparu, à notre avis.

Donc, si vous avez une plainte dans deux ans, au sujet d'un de nos produits, je peux vous dire quand il a été fabriqué et je peux vous donner l'échantillon qui a été pris du produit que vous avez utilisé. C'est la façon de nous protéger contre ceux qui se plaignent de façon frauduleuse. Il nous faut nous protéger aussi. Voilà ce que l'on peut obtenir avec le numéro de code. Pour les produits vétérinaires, c'est très important, tout comme pour les produits antiparasitaires. Nous gardons un échantillon pour chaque série que nous fabriquons.

M. Peters: Je crois que vous avez raison de demander qu'il n'y ait pas de droit en 5 (d). Mais il y a certainement une protection puisqu'il y a un numéro d'enregistrement qui donne l'usine. Cela n'a pas d'importance. Le droit importe peu. Il est déterminé par décret ministériel.

M. Horner: Une question supplémentaire rapide.

Le président: Monsieur Horner?

M. Horner: En application du paragraphe (d), monsieur Cooper, sous son libellé actuel, est-ce qu'on ne pourrait pas lever un droit sur chaque produit fabriqué?

M. Cooper: C'est le cas.

M. Horner: Un droit pourrait être demandé au fabricant pour chaque produit. Cela a toujours été le cas.

[Texte]

Dr. Cooper: For each registration number you get you pay a fee.

Mr. Whicher: On a supplementary. How much has that fee been in the past?

Dr. Cooper: The fee has been roughly \$20.

Mr. Whicher: It is something like getting married. You have to pay for it. What difference does \$20 make to big firms?

Dr. Cooper: Suppose we have five plants in which we manufacture.

Mr. Whicher: Yes.

Dr. Cooper: We have to register five plants. This then becomes \$100.

Mr. Whicher: How many new products do you put out each year?

Dr. Cooper: We are lucky if we put out one in five years.

Mr. Whicher: Then it is \$20.

Dr. Cooper: But there is registration every year, do not forget.

Mr. Whicher: Is the fee paid every year?

Dr. Cooper: Yes; we have a re-registration fee of \$5.00 rather than the \$20 initial fee; for each and every product.

Mr. Whicher: It seems to me that those of you who are paying 52 per cent corporation tax, are talking about small potatoes, relative to the monetary value of the fee. You may have something in principle, but the monetary value is very small.

Dr. Cooper: We are not here to discuss the monetary pros or cons at least, it is not my intention to do so. I am here mainly to discuss an act which we also may be interpreting wrongly.

However, we feel that the registration of controlled products is adequate and that establishments are only incidental and will become part of the registration. Perhaps we are interpreting this wrongly.

The Chairman: I would like to return to Mr. Peters.

● 1115

Mr. Peters: Mr. Chairman, I was not raising this relative to the fee. My point is that the farmer might have some protection by sending the carton of a particular pesticide back to the manufacturer so that he, or the inspector, would be able to ascertain from the label what plant had manufactured that particular product,

[Interprétation]

M. Cooper: On paie un droit pour chaque numéro d'enregistrement qu'on obtient.

M. Whicher: Une question supplémentaire. De combien a été ce droit dans le passé?

M. Cooper: D'une vingtaine de dollars.

M. Whicher: C'est comme quand on se marie, il faut payer. \$20 ne font pas une grande différence pour de grandes sociétés.

M. Cooper: Supposons que nous avons cinq usines dans lesquelles nous produisons.

M. Whicher: Oui.

M. Cooper: Si on doit enregistrer 5 usines, c'est \$100.

M. Whicher: Combien de produits fabriquez-vous chaque année?

M. Cooper: Nous en sortons un tous les cinq ans, si nous avons de la chance.

M. Whicher: Donc, c'est \$20.

M. Cooper: Mais, n'oubliez pas que l'enregistrement est annuel.

M. Whicher: Est-ce que vous payez le droit chaque année?

M. Cooper: Il y a un droit de réenregistrement de \$5 au lieu de \$20 pour le premier enregistrement.

M. Whicher: Et, comme vous payez 52 p. 100 d'impôts sur les sociétés,—ici il ne s'agit vraiment que de bagatelles—c'est très peu de chose. La valeur monétaire est très limitée.

M. Cooper: Nous ne parlons pas du pour et du contre du point de vue monétaire. En tout cas, je n'ai pas l'intention de le faire. J'essaie d'avoir une loi que nous interprétons peut-être mal, nous-mêmes, mais nous pensons que l'enregistrement de produits contrôlés est suffisant et que le reste est secondaire et que cela fait déjà partie de l'enregistrement.

Le président: Monsieur Peters.

M. Peters: Je ne pose pas de questions au sujet du droit. L'agriculteur pour être protégé, lorsqu'il se plaint d'un bidon, d'un produit antiparasitaire quelconque, il peut se plaindre au fabricant. Il pourra s'assurer immédiatement ou l'inspecteur pourra s'assurer en lisant l'étiquette qui a fabriqué et où a été fabriqué

[Text]

or whether it had been manufactured in more than one. It seems to me, therefore that there might be some advantage in having on it either the name of the plant and its address, or a registration number. You would probably agree to a plant registration number rather than the name and location.

What facility have you available, and how accurate is it, for labelling relative to potency and testing for residue under specific conditions, so that you can properly label that product as doing what you say it does?

Dr. Cooper: How extensive?

Mr. Peters: Yes; what facilities . . .

Dr. Cooper: To answer your question, sir, in our industry I know specific companies who hold patents on these materials. We have probably one of the most up-to-date labs in North America. . .

Mr. Peters: I do not mean from a chemical point of view. I am speaking from the farmer's point of view. He buys a product. He has no argument about what is in it, because he does not know—and he does not give a damn. He wants to know what potency it will have at the specified rate of use and also—the problem we are running into with new chemicals—whether there is a residue problem.

Are you leaving this up to the government? Are you putting out a product and then having the government prove you are wrong, or are you in a position to ascertain accurately what that product will do?

Dr. Cooper: I wish one of your statements was correct. Unfortunately, the government does nothing. We are talking about residues and potencies and so on. I maintain that all the government is doing is checking.

We have to supply the methods; we have to supply the data; we have to supply the whole of its ramifications. We do this in great detail and the government has the right to accept or reject our methods. They will try to duplicate the methods that we use, which is fine; we have no arguments; but when we recommend a rate and a use we know what those residues will be.

Mr. Peters: How do you know?

Dr. Cooper: Because we carry out hundreds and hundreds of tests.

Mr. Peters: Field tests?

Dr. Cooper: Field tests by the thousands; and I gather up material all across Canada and send products not only to our laboratory but to private laboratories to have them continually assayed for residue.

I must submit this data to the food and drug administration which in turn, will go over it. They will challenge my method, and from time to time they check on produce to see whether or not we are exceeding the tolerance level.

[Interpretation]

ce produit. C'est pourquoi il me semble qu'il serait peut-être avantageux d'indiquer le nom de l'usine et son adresse ou un numéro d'enregistrement.

Je pense que l'on pourrait peut-être donner l'emplacement de l'usine, l'adresse de l'usine. Quelles installations avez-vous et quelle est la précision de votre étiquetage, en ce qui concerne la puissance, les essais au sujet de certains résidus, sous certaines conditions, de façon à pouvoir étiqueter le produit de façon appropriée, pour vous assurer qu'il donnera les résultats spécifiés.

M. Cooper: Vous parlez de l'étendue?

M. Peters: Oui; quelles installations . . .

M. Cooper: Pour répondre à votre question, monsieur, je connais des sociétés particulières qui détiennent un brevet sur ces produits. Nous avons sans doute les laboratoires les plus modernes d'Amérique du nord.

M. Peters: Je ne parle pas du point de vue chimique. Je parle de l'effet pour l'agriculteur. L'agriculteur achète un produit, il ne sait pas du tout ce qu'il y a dedans, il s'en moque, d'ailleurs. Il veut savoir quelle est la puissance du produit, quel effet il aura lorsque on l'utilise à une certaine concentration. Et, avec le nouveau produit chimique, nous avons des problèmes de résidus. Est-ce que c'est au gouvernement de faire les essais? Est-ce que vous fabriquez le nouveau produit, est-ce au gouvernement de prouver que cela ne va pas?

M. Cooper: J'aimerais bien que vous ayez raison. Malheureusement, le gouvernement ne fait rien. Nous parlons des résidus, de la teneur, de la puissance, etc. Tout ce que le gouvernement fait, c'est de vérifier. Nous devons fournir les méthodes, nous devons donner tous les renseignements, nous devons tout fournir. Maintenant, nous faisons cela en détail et le gouvernement a le droit d'accepter ou de rejeter nos méthodes. Il essaie de reproduire les méthodes que nous utilisons. C'est très bien, mais nous ne nous y opposons certainement pas. Nous recommandons un taux et une utilisation et nous saurons quels seront les résidus.

M. Peters: Comment le savez-vous?

M. Cooper: Nous faisons des centaines et des centaines d'essais.

M. Peters: Des essais pratiques?

M. Cooper: Des essais pratiques par milliers et j'obtiens des données dans tout le pays. Je les envoie, non seulement à nos laboratoires, mais à des laboratoires privés pour nous assurer qu'ils font des expériences continues au sujet des résidus. Je soumetts les résultats à l'Administration des aliments et drogues qui les étudiera et qui examinera mes méthodes et, de temps à autre, elle vérifiera le produit pour savoir si nous dépassons le niveau de tolérance.

[Texte]

Mr. Peters: How do you operate in this way prior to your registration being certified?

Dr. Cooper: We go and pay for, or hire, small fields, or field trials, or we have the federal or provincial research department carry out tests for us. They are treated with a chemical at different rates, are harvested and the balance of the crop is destroyed. This we have to do, and have to pay for, because this produce cannot enter into trade.

We do this all across Canada, at usually from eight to ten locations, so that we have a difference in soil conditions and in weather conditions, and so on. Therefore, we know when we market a product that if the recommendation on the label is followed correctly no residue hazard will result, and that it will be effective for its prescribed use. If we say, "Use eight ounces per acre," you will get control, under normal conditions, with that particular rate.

● 1120

Mr. Peters: On this eight ounces how much of a tolerance would there be? How much of a safety factor do you have?

Dr. Cooper: In the case of residue we would be working at a minimum of probably 100 to 150. One hundred is the bare minimum with which we are working, and usually it is more than that because the rates are not set by tolerance alone.

Mr. Peters: One hundred would be no tolerance. It would be exactly eight ounces. One hundred and fifty would give you some, but 100 would not, would it?

Dr. Cooper: I am not quite sure that I follow you.

Mr. Peters: Obviously, under given circumstances, tolerance of 100 would be the maximum use of that product to produce under ideal conditions the maximum effect without any bad effects. There would be no tolerance. The tolerance would be the amount of protection; if you say to use eight ounces you would have to be able to use perhaps 16 ounces without producing a dangerous effect.

Dr. Cooper: Yes; this depends what we are looking at. If we are looking at the rate, we usually work at three rates if we are doing residue work. This would be "x", "2x" and "3x" so that we have a picture. If by mistake you doubled the dose we would know what the effects would be. When they set the tolerance for that eight ounce rate for that given product at, say, five parts per million, this has a safety factor of a hundred plus so that quite conceivably you could go to 16 ounces without getting near a dangerous level, but we know the residue picture.

Mr. Peters: What information is put on the red tag when an inspector goes into your plant and red tags something? What information is on this red tag, be-

[Interprétation]

M. Peters: Comment faites-vous avant que votre enregistrement soit certifié?

M. Cooper: Comment faisons-nous? Nous payons ou nous engageons des gens qui s'occupent des faits pratiques où nous avons des services de recherches ou alors des laboratoires provinciaux font des essais pour nous. On fait des traitements avec des produits chimiques, avec différentes teneurs et la récolte est faite et ce qui reste est détruit, car les produits ne peuvent certainement pas être vendus dans le commerce. C'est pourquoi la récolte est détruite.

Nous faisons cela dans tout le Canada. Nous faisons cela entre huit à dix endroits différents. Nous avons donc différentes conditions de sol, différentes conditions climatiques, etc. C'est pourquoi nous savons que lorsque nous vendons un produit, avec recommandations sur l'étiquette, si elles sont suivies soigneusement, il n'entraînera aucun danger en ce qui concerne les résidus. Et, ce produit sera efficace. Dans des conditions normales, nous obtiendrons donc des résultats normaux.

M. Peters: Quel est le facteur de sécurité?

M. Cooper: En ce qui concerne les résidus? Nous travaillons à un minimum de 100 à 150. 100 est un minimum absolu. Et, en général, nous allons plus loin que cela car les taux ne sont pas fixés par les tolérances.

M. Peters: 100 ne représente aucune tolérance? C'est 8 onces, protection maximum? 150, mais 100 ne vous donnerait rien, n'est-ce pas?

M. Cooper: Je ne suis pas sûr de vous suivre.

M. Peters: La tolérance, dans les circonstances données, serait de 100 et représenterait l'utilisation maximum du produit, dans des conditions idéales, pour donner un effet maximum sans aucun effet néfaste, sans tolérance. La tolérance constituerait la protection supplémentaire, si l'on demande d'utiliser 8 onces, il faudrait pouvoir utiliser 16 onces, sans causer d'effets dangereux.

M. Cooper: Oui, bien sûr. Tout dépend du point de vue. Si on examine la teneur, nous avons, en général, trois teneurs. Si nous étudions les résidus, il y aurait X, 2X, 3X. Mais si par erreur vous doublez la dose, nous pourrions constater les effets produits. Si la tolérance d'un produit dont la teneur est de 8 onces est fixée à 5 parties par million, il y a un facteur de sécurité de plus de 100. Donc, il est parfaitement concevable qu'on puisse aller jusqu'à 16 onces sans créer un niveau dangereux, mais il ne faut pas oublier l'aspect des résidus.

M. Peters: Quels renseignements y a-t-il sur l'étiquette rouge lorsque l'inspecteur pose une étiquette rouge? Qu'est-ce qu'il y a sur cette étiquette rouge,

[Text]

cause as I understand it he comes in without a warrant? They actually give him power to enter your premises and to interfere with your operations. What information does he have to put on that red tag?

Dr. Cooper: He does not have to give us any. He just prohibits sales.

Mr. Peters: Does he not at that time have to provide the chemical analysis?

Dr. Cooper: I cannot answer that one; I will to ask Mr. Kennedy.

The Chairman: Mr. Kennedy?

Mr. Kennedy: Mr. Chairman, he would not have to give it at that time. Subsequently you could get an analysis as produced in a government laboratory, but usually the inspectors pick samples in the field. I do not know of any instances where they come into the plant for in-plant inspection.

May I just digress for a moment here because I think there is a practical question that has been asked and has not been answered? I am primarily a production man so I look at this in-plant inspection and registration perhaps in a different way.

First of all, in producing pesticidal products that are registered, analysis is on the label and our companies want to produce to this analysis. During the process of making these compounds or formulating them there is a constant check by our control laboratories to determine whether the product is coming up to specifications. Furthermore, it is not shipped out or offered in trade, it does not leave our premises, until such a time as it does come up to these specifications; otherwise it does not go out.

As Dr. Cooper has said, retain samples of each batch, if it is a batch process, are kept for a minimum of two to five years depending upon the activity of the product in the field, how fast it disappears in commerce.

As for in-plant inspection, we do not see any real need for this. The products, as I said, are controlled through control laboratories to the registration label specifications and to our own, which are often much more definitive in the content of specifications than the required specifications of the label. Concerning the safety of the people in the plants, we are constantly inspected by provincial authorities and municipal authorities for safety of the operators producing the products and as to contamination of these products if there is more than one product produced in the plant.

● 1125

Concerning registration of the plant, I presume it would be possible the way it is stated here to have a registration of each product produced in that in-plant establishment, wherever it might be. To us this appears

[Interpretation]

car il agit sans mandat, si je comprends bien? Il peut pénétrer dans vos locaux et même nuire à l'exploitation. Que doit-il indiquer sur l'étiquette rouge?

M. Cooper: Il n'est pas obligé d'indiquer quoi que ce soit. Il ne fait qu'interdire la vente.

M. Peters: Ne doit-il pas donner les résultats de l'analyse chimique?

M. Cooper: Je ne peux pas répondre à cette question.

Le président: Monsieur Kennady?

M. Kennedy: Il n'est pas nécessaire qu'il le fasse à ce moment-là. Il peut, par la suite, vous donner le résultat d'une analyse faite dans un laboratoire d'État, mais en général, l'inspecteur prend ses échantillons dans les champs. Je ne connais pas de cas où l'inspecteur ait pénétré dans l'établissement pour y effectuer une inspection. Je crois qu'il y a une question d'ordre pratique qui a été posée et à laquelle on n'a pas répondu. Je m'occupe essentiellement de la production, c'est pourquoi je vois l'inspection et l'enregistrement sur place d'une façon différente.

En premier lieu, pour la production de pesticides enregistrés, les résultats de l'analyse figurent sur l'étiquette et la société s'efforce d'y conformer son produit. Lors de la fabrication de ce mélange, il y a une vérification constante par le laboratoire de contrôle pour s'assurer que le produit correspond bien aux normes. De plus, il n'est pas vendu sur le commerce, ni expédié, il ne quitte pas l'établissement tant qu'il ne correspond pas aux normes.

Comme l'a dit M. Cooper, nous conservons des échantillons de chaque lot, pour au moins deux à cinq ans, selon la consommation du produit dans le commerce.

En ce qui concerne les inspections dans les usines, nous n'en voyons pas l'utilité. Comme je l'ai dit, nous avons des laboratoires de contrôle pour nous assurer que le produit correspond aux normes de l'étiquette d'enregistrement et à nos propres normes qui sont beaucoup plus rigides. Pour ce qui est de la sécurité dans les usines, il y a des inspections périodiques des autorités municipales et provinciales, sur la sécurité de ceux qui produisent ces produits et les possibilités de contamination lorsque plusieurs produits sont fabriqués dans l'usine.

En ce qui concerne l'enregistrement de l'usine, je pense qu'il serait possible, d'après le libellé du bill, d'enregistrer chaque produit fabriqué dans une usine. Pour nous, c'est simplement un double de l'enregis-

[Texte]

to be just a duplication of a registration we already have to offer the product in commerce.

The Chairman: Thank you, Mr. Kennady. Mr. Peters?

Mr. Peters: Mr. Chairman, concerning this red tagging, I am not familiar with any of these pesticides—it is a long time since I farmed—but I know in the Food and Drug Directorate when an inspector comes in and puts a seizure on a cheese factory, or something of this nature, while the Act does not demand he do certain things he does certain things, and one of them is to provide the operator with the reason why the seizure is applied.

It is a holding seizure, quite often, until he can make a number of tests but he has to provide certain information and he does that, and when the situation is corrected then that product can be untagged by the inspector. This is why I asked what information was provided. Just because somebody laid a charge against a product that would not, in my opinion, warrant red tagging it because there would be a number of factors involved that do not involve the chemical analysis of the particular product.

The Chairman: Dr. Cooper?

Dr. Cooper: In the past we have had no particular problems. However, in the fertilizer end of it which is another section, the inspector can come in and if there is a deficiency or he feels that there is, he can actually put red tags preventing the sale on that material and you cannot remove this until you have satisfied the inspector or his superior that this has been corrected.

Either you take the product back and rework it to come up to guarantee or you may at times sell it under the analysis that it actually came out to be, so that you can red tag it and it can be held. However, I think we were using this more as an example of why we wanted the right of appeal. We do not feel we are going to have any particular problems with this, but we want the right of appeal. The same thing is in Clause 5 Subclause (k):

respecting the packaging, labelling and advertising of control products and packages thereof;

Suppose the government or somebody in the government, some individual, decided we were to use a brown octagon shaped glass with a rubber-stopper. This is packaging, right? They could tell us, but who knows packaging better than the companies do? Perhaps that product cannot be held in a brown octagon rubber-stopped bottle. We would want the right of appeal to indicate our side and that we cannot package this in this particular type of bottle because of these facts. So, all we are illustrating primarily in some of these examples is the need for appeal so that we get more than one man's decision.

[Interprétation]

trement déjà nécessaire pour lancer le produit sur le marché.

Le président: Merci, monsieur Kennady. Monsieur Peters.

M. Peters: En ce qui concerne ces étiquettes rouges, je ne connais pas les pesticides puisqu'il y a longtemps que j'ai abandonné l'exploitation agricole. Mais je sais que dans la Direction des aliments et drogues, lorsqu'un inspecteur interdit un produit quelconque, même si la loi n'exige pas qu'il fasse certaines choses, il les fait quand même, et il donne notamment au fabricant les raisons pour lesquelles un produit est saisi. Il s'agit bien souvent d'une saisie temporaire pendant qu'il fait des essais. Mais il doit fournir certains renseignements et il le fait, et lorsque la situation est rectifiée, l'interdiction est levée par l'inspecteur lui-même. C'est pourquoi j'ai demandé quels renseignements sont fournis. Le fait qu'une personne porte plainte contre un produit n'entraîne pas automatiquement l'interdiction car il peut y avoir des facteurs qui entrent en jeu et qui n'exigent pas une analyse chimique de ce produit en particulier.

Le président: Monsieur Cooper?

M. Cooper: Par le passé, nous n'avons pas eu de difficultés particulières. Cependant, dans le domaine des engrais,— il s'agit d'un autre produit,—un inspecteur peut venir, et s'il constate ou soupçonne une insuffisance, il peut poser l'étiquette rouge qui empêche la vente de ce produit. Et on ne peut pas l'enlever avant d'avoir convaincu l'inspecteur ou ses supérieurs que la situation a été rectifiée. Soit que le produit est repris pour le conformer aux normes soit qu'il soit vendu selon la formule chimique qui a été révélée à l'analyse. Donc on peut mettre cette étiquette rouge et l'interdire. Nous nous sommes simplement servis de cet exemple comme une raison pour laquelle nous voulons un droit d'appel. Nous ne pensons pas que nous aurons de difficultés particulières à ce sujet, mais nous voulons avoir le droit d'appel. C'est la même chose pour l'article 5, paragraphe (k):

Concernant l'emballage, l'étiquetage, et l'annonce de produits antiparasitaires et des colis les contenant.

En supposant que le gouvernement, ou un fonctionnaire, voulait que l'on se serve d'un verre octogonal brun avec un bouchon en caoutchouc, c'est un emballage, n'est-ce pas? Mais qui connaît mieux l'emballage que l'entreprise? Peut-être que la bouteille octogonale brune avec un couillon en caoutchouc n'est pas l'emballage voulu. Nous voulons avoir un droit d'appel pour vous exprimer notre avis, pour expliquer pourquoi on ne peut pas emballer tel produit dans une bouteille de ce genre à cause de telle et telle raisons. Donc, nous illustrons essentiellement par ces exemples, vous la nécessité de pouvoir faire appel de façon que la décision ne soit pas laissée à une seule personne.

[Text]

[Interpretation]

Mr. Peters: Mr. Chairman, I agree they should have the right to appeal, but they have made a damn poor case for it to date. I really do not see where there has been any particular problem in the past, although I presume there has been. It is my opinion that they should have the right to appeal against a decision. I think this should be inherent in all this legislation, but in my opinion the witnesses have not made much of a case for it, although I think there is a case.

M. Peters: Monsieur le président, je suis tout à fait d'accord qu'ils aient le droit de faire appel, mais jusqu'ici ils n'ont certainement pas justifié leur cause. Je ne vois pas où il y a eu des problèmes dans le passé, bien que je suppose qu'il y en ait eu. Je crois qu'ils devraient avoir le droit d'en appeler d'une décision. Toutes les mesures législatives devraient renfermer une telle disposition, mais les témoins n'ont pas justifié leurs réclamations.

● 1130

M. La Salle: À propos du droit d'appel, le député de Laval (M. Roy) a dit, si j'ai bien compris, que cela pourrait permettre, par exemple, à un produit dangereux de rester sur le marché pendant un certain temps. Je croyais que le droit d'appel permettait à la compagnie d'exiger de la part de l'inspecteur une analyse plus rapide pour permettre au produit, s'il n'est pas vraiment dangereux, d'être remis le plus tôt possible sur le marché; car, il faut tenir compte du dommage que cela pourrait causer à l'Association. J'aimerais avoir une explication.

Mr. LaSalle: With regard to the right of appeal, the member for Laval (Mr. Roy) said, if I understood him rightly, that this could allow a dangerous product to remain on the market for a certain length of time. I thought personally that the right of appeal would allow the company to require from the inspector a more speedy analysis, so that if the product is not really dangerous it can come back on the market sooner, for the damage suffered by the Association must be taken into account. I would like to have an explanation.

Dr. Cooper: Yes, certainly. To answer your question specifically, we would not want a product held up six months—we would want some action taken. Normally the action is such that there would be no red tagging done until a deficiency was shown up. This is the general procedure. However, as this is outlined here, it is possible for a man to do something beyond what the current procedure is, and he could hold it up for six months. All we are asking is that if such a thing did occur we would have the right to appeal, to say that this is being unjustly held and that we want some action taken on it. We would like to speed it up because we feel six months is far too long.

M. Cooper: Oui, certainement. Pour répondre de façon précise à votre question. Nous ne voudrions pas qu'un produit soit interdit pour six mois. Nous voudrions qu'on prenne des mesures. Normalement, la façon de procéder est telle qu'il n'y aurait pas d'interdiction jusqu'à ce qu'on ait démontré que le produit est défectueux. C'est la procédure normale. Toutefois, de la façon dont le décrit le Bill, ce serait possible qu'une personne fasse plus que la procédure normale et ainsi retenir le produit pendant six mois. Tout ce que nous vous demandons, c'est que si cela se produit, nous aimerions avoir le droit d'appel pour prouver que le produit est retenu injustement. Et, que nous voudrions que des mesures soient prises. Nous voudrions accélérer les choses. Nous croyons que six mois c'est beaucoup trop long.

The Chairman: Thank you, Dr. Cooper. I recognize Mr. Whicher.

Le président: Merci docteur Cooper. M. Whicher.

Mr. Whicher: Our friend said he was in the production business more than in other lines. May I ask him how many products in his plant he has had red tagged in the last year?

M. Whicher: Notre ami a dit qu'il est du domaine de la production. Est-ce que je peux vous demander combien de produits de votre usine ont été étiquetés depuis un an?

Mr. Kennady: I can only recall one, sir, and that was on the basis of analysis.

M. Kennady: Un seul, sur la base d'une analyse.

Mr. Whicher: Before it got out?

M. Whicher: Voulez-vous dire avant que le produit soit sorti?

Mr. Kennady: Are you talking about in plant or in the field?

M. Kennady: De l'usine ou dans les champs?

Mr. Whicher: No, in the plant.

M. Whicher: Non, de l'usine.

Mr. Kennady: From our own experience?

M. Kennady: D'après notre expérience personnelle?

Mr. Whicher: Yes.

M. Whicher: Oui.

Mr. Kennady: None in agricultural chemicals, sir.

M. Kennady: Aucun de nos produits agricoles.

[Texte]

Mr. Whicher: That is what I mean. It does not seem to be a very serious problem.

Mr. Horner: These people here do not represent more than one plant.

Mr. Whicher: Yes, I know, but he told me that he was in the production business and that he has not had one experience in the last year. How many have you had in the last five years?

Mr. Kennady: Probably two, sir, and this was operator error which we caught in the process of manufacturing the product.

Mr. Whicher: Mr. Chairman, I do not have another question but I want to make a remark. Evidently, when you have two in five years, it still can be a serious problem. However, I feel that Mr. Clermont made a very solid point when he suggested that members of the staff should be here to answer some of these questions.

A great deal of our deliberations this morning has been on the fee situation and the right of appeal. Although I have only heard Mr. Horner a few times, he gave one of his better efforts this morning when he said that these people should have the right of appeal. Mr. Horner said that he had a good man in his place last week but, had he been here, he would have known that the staff of the Department of Agriculture said that by regulation there would be a right of appeal.

Mr. Horner: On a point of order, the regulations can be changed without consulting Parliament, the Committee or anyone else. The right of appeal should be written in the act, as is provided for in Bill C-154. This is the point that I was trying to make and this is the point that this brief before us is making.

Mr. Whicher: Mr. Horner may be very loud but, on the other hand, —

The Chairman: Order, please.

Mr. Whicher: —the fact is that he and his party may be against the regulations. As a matter of fact, in many instances I am too. I noticed that during the Diefenbaker years you fellows were not opposed to regulations as much as you are right now. But at the same time I want to say —

● 1135

Mr. Horner: Now just —

The Chairman: Order, please. We have had some transgression. We must remember that we have witnesses before us to be questioned. I think other remarks really do not contribute to our making progress.

Mr. Horner: I agree with you, Mr. Chairman.

I want to raise a question of privilege.

[Interprétation]

M. Whicher: Il me semble que le problème n'est pas tellement grave.

M. Horner: Ces personnes ne représentent qu'une seule usine.

M. Whicher: Oui, mais il a dit qu'il était du domaine de la production et qu'il n'a pas eu d'interdiction depuis un an. Combien depuis cinq ans?

M. Kennady: Environ deux. Et il s'agissait d'erreurs dans le procédé de fabrication de ces produits.

M. Whicher: Je n'ai pas d'autres questions à poser mais je voulais faire remarquer que même s'il n'y a eu que deux interdictions en 5 ans, ça pourrait constituer un problème grave. Mais je crois que M. Clermont avait vraiment raison quand il a proposé d'inviter un des fonctionnaires de l'Agriculture à venir répondre à certaines de ces questions.

Une grande partie de nos délibérations ce matin portait sur la question des frais et du droit d'appel. Je n'ai entendu M. Horner que très peu souvent, mais ce matin il s'est vraiment démené lorsqu'il a dit que ces gens devraient avoir le droit d'appel. M. Horner dit qu'il a été remplacé par un homme compétent la semaine dernière, mais s'il avait été ici lui-même, il aurait su que le personnel du ministère de l'Agriculture a dit que, dans le règlement, il y aura un droit d'appel.

M. Horner: J'en appelle au Règlement. Le règlement peut être modifié sans que le Parlement, ni le comité, soit consulté. On devrait insérer le droit d'appel dans la Loi tout comme on le trouve dans le bill C-154. C'est ce que je voulais faire remarquer, comme l'a fait le mémoire.

M. Whicher: M. Horner parle très fort, mais, par ailleurs, ...

Le président: A l'ordre.

M. Whicher: Le fait demeure que lui et son parti sont peut-être contre le règlement. Je le suis moi aussi pour certains points. J'ai remarqué qu'au cours du règne de M. Diefenbaker, vous n'étiez pas opposé au règlement, pas autant que vous l'êtes à l'heure actuelle. Mais je voudrais ajouter que ...

M. Horner: Un instant.

Le président: Un peu d'ordre, s'il vous plaît. Il y a des infractions ici. N'oubliez pas que nous avons des témoins ici auxquels nous devons poser des questions. Les autres observations n'apportent absolument rien à la discussion.

M. Horner: Une question de privilège. Je suis d'accord avec vous monsieur le président.

[Text]

The Chairman: Mr. Whicher, would you address your questions to the witnesses, please?

Mr. Whicher: I will carry on.

Mr. Horner: Mr. Chairman, I have a question of privilege which takes precedence over any questions or points of order.

Mr. Chairman, the member imputed that we were against regulations and are against regulations now. Such is not the case. Neither I in this Committee nor the Conservative Party at any time has ever suggested that we are against regulations.

All we are saying is that the right of appeal should be written into the act, not in the regulations. And we are just being told they may be in the regulations—we have not seen a copy of the regulations of any of these acts. As we have said time and time again, we are not against regulations, we realize that regulations have to be made to apply the act but we believe that the right of appeal should be written in the act. I would hope I have made this abundantly clear.

Mr. Whicher: Mr. Horner, if I have hurt your feelings then I would certainly apologize, because we would not want to do that. My point was to bring to the witnesses' attention—they have very fine briefs, and I do not blame them for being worried about the right of appeal—that the Minister said last week that through regulations, which is a matter of policy—whether it is good or bad, some are for it and some are against it—there definitely would be a regulation giving the right of appeal.

That is why, Mr. Chairman, we should have members of the staff here. They should be here to verify these statements such as the one that I am now making. Some senior official of the department should be here to set these witnesses' minds at ease and to assure them that they are not just going to be led down the garden path.

Furthermore, in the matter of fees I think that we should have a member of the department here to give their side of the story. There is a missing link here. In any event, members of the department should be here so that they can be questioned. Mr. Chairman, I certainly do not pretend to be the most efficient man—as a matter of fact, in many instances I am very inefficient—but I feel that for the sake of efficiency around this table we should have members of the department here on all occasions.

The Chairman: I think that the Committee will agree that there are two ways of approaching this. It was certainly the thinking of the Chair that we would give our undivided attention to the witnesses this morning and that the members of the Committee then would have an opportunity of questioning representatives of the department on another occasion or later in this meeting, if we had concluded questioning of the

[Interpretation]

Le président: Monsieur Whicher, pourriez-vous s'il vous plaît, vous en tenir à interroger les témoins.

M. Whicher: Oui, Monsieur le président.

M. Horner: J'ai une question de privilège à soulever qui a préséance sur tous les appels au règlement.

Monsieur le président, le député a laissé croire que nous étions opposés au règlement et que nous sommes toujours contre le règlement. Ce n'est pas le cas. Je n'ai jamais, dans ce Comité, et les conservateurs n'ont jamais laissé entendre qu'ils étaient contre le règlement.

Nous disons simplement que le droit d'appel devrait être inséré dans la Loi et non pas dans les règlements, ou ne pas censé être dans le règlement. On peut nous dire qu'ils sont censés être dans le règlement, mais nous n'avons pas vu le règlement en question. J'ai déjà soulevé cette question. J'espère que c'est clair. Nous ne sommes pas contre le règlement, nous savons qu'il doit s'appliquer à la Loi, mais nous croyons que le droit d'appel devrait être inséré dans la Loi.

M. Whicher: Si je vous ai blessé, je m'excuse car ce n'est pas notre intention. Mais je voulais attirer l'attention des témoins. Le mémoire qu'ils nous ont présenté est excellent. Je ne les blâme pas du tout de se préoccuper du droit d'appel. Mais, le ministre a dit la semaine dernière, que le règlement, et c'est une question de principe, qu'il soit bon ou mauvais, il y en a qui sont pour, d'autres contre, mais il a dit qu'il y aurait un règlement où vous auriez le droit d'appel.

Je crois, monsieur le président, que c'est la raison pour laquelle nous devrions avoir des fonctionnaires du ministère ici pour vérifier et confirmer les déclarations comme celle-ci. Nous devrions donc avoir des fonctionnaires supérieurs du ministère pour rassurer les témoins qu'on ne veut pas les tromper.

De plus, je crois que les fonctionnaires pourraient donner leur côté de l'histoire en ce qui concerne les frais. Les témoins nous ont conté la leur. Il y a un chafon qui manque et, ce sont les fonctionnaires du ministère auxquels nous pourrions poser des questions. Monsieur le président, je ne prétends pas être l'homme le plus efficace au monde, parfois je suis même inefficace, mais je trouve que pour accroître l'efficacité de notre comité, nous devrions avoir des fonctionnaires du ministère en permanence ici.

Le président: Merci. Je crois que le Comité est d'accord qu'il y aurait deux façons d'aborder le problème. Je crois que le président du moins était d'avis que nous devrions consacrer toute notre attention aux témoins, ce matin, et que les membres du Comité auraient ensuite l'occasion de poser des questions aux représentants du ministère peut-être plus tard, au cours de la présente séance. Si nous avions terminé notre interrogatoire des témoins. Il y aurait peut-être d'autres façons de procéder, mais c'est la façon dont

[Texte]

witnesses. Maybe there are other ways of doing it but that was the way we approached it this time.

I would like to recognize Mr. Cobbe.

Mr. Cobbe: Thank you, Mr. Chairman. Dr. Cooper, may I refer to what we may call the licensing of a plant. I think we all agree that the purpose of the act is to protect the farmer, the manufacturer and everyone concerned. I am a firm believer that all plants where such produce is being manufactured or assembled should be licensed to afford adequate protection. For example, if I chose to go into this type of business and there was no control over my plant operation then adequate protection would not be afforded you. In my opinion, it is most important to license a plant that produces or assembles the product.

Dr. Cooper: I am very interested in your appraisal of this. However, who would set up the standards and who would be responsible for maintaining them? I think it can only be predicated upon the registration of the product, what is supposed to go into the product, and the name. I cannot see where licensing a plant is going to protect the farmer, I cannot see where it protects the manufacturer at all in that he is supposed to manufacture that which he is representing—and if he does not, then he is guilty of a misdemeanour and is chargeable under this proposed act. Where does registration of a plant help the farmer?

• 1140

Mr. Cobbe: I feel it is quite possible that an error could be made in the plant. Possibly there are other commodities around which could get into your production. I admit I am not totally familiar with it, but when we speak of protection to the farmer we mean that the farmer has the right of appeal and is granted a sum of money. However, I think we are totally aware that you never recover 100 per cent, and every step that can be made toward protection should be followed.

Dr. Cooper: May I state that I have been involved in many lawsuits as an expert witness, and in this way involved directly, and in many, many cases the farmer has received 100 per cent more than he should have received. In many, many cases just settlement has been made to the farmer by the chemical company if the mistake was made within the plant.

In fact, I know of a chemical company that settled the other day strictly because the mistake was made within the plant, and the company said, "We admit the mistake. We are paying you full compensation". This was for a crop which the farmer had only partially lost, but he received full compensation for the complete crop. So, the farmer has good protection against chemicals. In fact, in my opinion the chemical companies have no protection. I will be honest. I am not trying to defend the chemical companies, but I hope some day I will go into court and win a case. I have yet to win a case against misuse.

[Interprétation]

nous avons envisagée la chose ce matin. La parole est à M. Cobbe?

M. Cobbe: Quand nous avons parlé de l'enregistrement d'une entreprise, je crois que nous sommes tous d'accord, que la Loi est destinée à protéger le cultivateur, le fabricant et tous ceux qui sont en cause. Je crois fermement que toutes les entreprises où l'on fabrique ou mélange ces produits devraient avoir un permis d'exploitation pour leur propre protection. Si je me lance dans de telles entreprises et qu'il n'y a aucun contrôle sur mon exploitation, je ne me sentirais pas suffisamment protégé.

M. Cooper: Votre opinion est fort intéressante. Toutefois, qui établira les normes et qui sera responsable de les appliquer? Je trouve qu'on ne peut les justifier que si on exige l'enregistrement des produits, de leurs composantes, et de son appellation. Je ne vois pas du tout comment le permis d'exploitation va protéger le cultivateur ni le fabricant qui doit fabriquer ce qu'il s'est engagé à fabriquer. S'il ne le fait pas, il est coupable et on doit lui intenter un procès en vertu de cette loi.

Quand le permis d'exploitation aide-t-il le cultivateur?

M. Cobbe: Je crois qu'il se peut qu'il y ait des erreurs dans l'usine et dans le domaine d'autres produits qui entrent dans le composé de votre produit.

Quand nous parlons de protection du cultivateur et que le cultivateur a le droit d'appel et qu'on lui donne une certaine somme d'argent, je suis sûr que nous savons tous qu'on ne récupère jamais 100 p. 100 de tout ce qu'on perd, et tout ce qu'on peut faire pour le protéger devrait être fait.

M. Cooper: J'ai probablement été témoin, expert-témoin, dans plusieurs causes et le cultivateur a plus d'une fois reçu beaucoup plus que ce qu'il aurait dû recevoir. Dans plusieurs cas, le cultivateur a reçu un règlement très équitable de la part du fabricant de produits chimiques.

En fait, je connais un fabricant de produits chimiques, qui, juste l'autre jour, réglé une cause parce qu'il y avait eu erreur de la part de la compagnie. La compagnie a admis son erreur et a rémunéré au complet le cultivateur pour la perte de toute sa récolte alors qu'il n'en avait perdu qu'une partie.

Le cultivateur est donc vraiment bien protégé contre les produits chimiques. En fait, à mon sens, ce sont les fabricants qui n'ont aucune protection. Honnêtement, je n'essaie pas de défendre les fabricants de produits chimiques, mais un jour j'espère que je pourrai gagner une cause. Je n'ai jamais gagné une cause dans le cas d'un mauvais emploi du produit.

[Text]

Mr. Cobbe: I have never seen anybody go into a court and win, but I think in an effort to keep it out of court it is an advantage to both parties to have as much protection as possible and therefore I feel that inspection of a plant or licensing of a plant is important.

Dr. Cooper: You see, the thing that worries me—if I may just take a further moment of your time—if we go back to the first page of Bill C-157, Clause 2, Interpretation, subclause (c) states:

(c) “control product” means any product, device, organism, substance or thing that is manufactured, represented, sold or used as a means for directly or indirectly controlling, preventing, destroying, mitigating, attracting or repelling any pest. . .

When you look at all of these things, all of the things that go in there, we are going to have to register practically everything we do, nearly every plant we own, because a lot of our material goes indirectly into this — not directly, but indirectly. I simply question the intent of this subclause. We can only go on what is shown here, and when you look at this and this, what does it mean? I do not know.

It refers to a “control product”, which even means shovels and hoes and so forth—which are all part of pest control—and the oils or the intermediate products that go in, which indirectly become part of the control product. Where do we start and where do we stop in this registration? These are the areas that I am not sure of.

The Chairman: Gentlemen, we have reached the hour of adjournment. In view of the fact that we have out of town witnesses present, I wonder if the Committee would be agreeable to sitting until 12 o'clock with the hope that we might conclude?

Some hon. Members: Agreed.

The Chairman: On my list I have the names of some gentlemen who have not had an opportunity of asking any questions this morning and I would like to give them an opportunity first.

Mr. Cobbe: I just have one more question.

• 1145

The Chairman: I will recognize you, Mr. Cobbe, to conclude your questions.

Mr. Cobbe: I will be very brief. Dr. Cooper, the final paragraph of clause 9(2) on page 6 commences with the words “unless before”. This would indicate to me that the word “unless” refers to the fact that there has been an appeal or that there has been an opportunity for consultation between the party that rejected the product and the company that produced it.

[Interpretation]

M. Cobbe: Je n'ai jamais vu qui que ce soit qui ait gagné devant le tribunal, mais afin de donner la plus grande protection à toutes les parties en cause, l'inspection de l'usine, ou le permis d'exploitation, à mon sens, serait utile et important.

M. Cooper: Si je puis prendre juste une minute: ce qui me préoccupe, c'est, si nous revenons au bill C-157, à l'article 2 c):

«produit, antiparasitaire» signifie un produit, un dispositif, un organisme, une substance ou une chose qui est fabriqué, représenté, vendu ou utilisé comme un moyen en vue de contrôler, empêcher, détruire, amoindrir, attirer ou repousser, directement ou indirectement, un parasite . . .

Quand vous examinez toutes ces choses, quand vous voyez tout ce qui entre dans ce paragraphe, il nous faudra enregistrer pratiquement tout ce que nous faisons, car indirectement, beaucoup de choses entrent dans ces choses, non pas directement mais indirectement, et alors pour revenir à votre question quant à savoir l'interprétation de cela, nous devons nous fier à ce que nous avons devant nous qui est tout de même la loi, et lorsque vous examinez cette terminologie, qu'est-ce que cela signifie? Je ne le sais pas moi.

Quand on dit «un produit en vue de contrôler» les huiles, ou le produit intermédiaire, ou les composantes, ou les ingrédients qui deviennent partie du produit de contrôle, où arrêtons-nous, et où commençons-nous cet enregistrement? Voilà les domaines dont je ne suis pas sûr.

Le président: Messieurs, nous en sommes arrivés à l'heure d'ajournement. Vu le fait que nous avons des témoins de l'extérieur, je me demande si vous seriez d'accord pour siéger jusqu'à midi, espérant que nous pourrions peut-être terminer notre interrogatoire.

Des voix: D'accord.

Le président: J'ai sur ma liste des noms de personnes qui n'ont pas encore eu l'occasion de poser des questions. J'aimerais donc leur donner l'occasion d'en poser quelques-unes.

M. Cobbe: Il me reste une question à poser.

Le président: Je vous donne la parole pour conclure vos questions.

M. Cobbe: Docteur Cooper, à la page 6, dernier paragraphe, article 9, quand on dit «à moins que», à la ligne 43, cela m'indique à moi, que les mots «à moins que» se rapportent au fait qu'il y a eu un appel ou l'occasion de consultation entre le producteur du produit et celui qui l'a refusé.

[Texte]

The point I am getting at is do you not have immediate access to discuss the problems with the people? We have been referring to the inspector all along, but the inspector is only one person. Is this not what is covered in that last paragraph?

Dr. Cooper: That paragraph states:

unless before that time proceedings have been instituted in respect of the violation in which event the control product may be detained until the proceedings are finally concluded.

I would construe this as legal proceedings taken by the Department of Agriculture, through the Plant Products Division, against the offender. This would be the actual calling of this particular man into court because he failed to comply with some section of the act or regulations.

Mr. Cobbe: Thank you, Mr. Chairman.

The Chairman: I now recognize Mr. Lessard, Mr. McKinley, Mr. Lambert and Mr. La Salle, and I hope that your questions will be brief.

Mr. Lessard (Lac-Saint-Jean): I will be very brief, Mr. Chairman.

Monsieur le président, j'ai écouté très attentivement les points soulevés par les membres du Comité, et les réponses et les explications données par nos témoins. Je peux vous assurer personnellement, que, lorsque les fonctionnaires du ministère seront ici, nous pourrons les questionner en profondeur sur les points soulevés, de façon à nous assurer que vous aurez bien vos droits et la protection auquel vous avez droit. Ceci vaut également pour les fermiers.

Si, par hasard, il n'y avait pas de changement apporté à la loi, si elle était adoptée telle quelle, et si, au cours de son application, il se produit une situation qui vous est nettement préjudiciable. Il sera dans l'ordre que vous portiez cette situation à la connaissance des législateurs, de façon qu'elle soit corrigée. Votre Association est suffisamment représentative pour que vous puissiez vous faire, jusqu'à un certain point, les gardiens de vos droits.

Dr. Cooper: I agree with you, sir. When it comes to the regulations we do not hesitate to request assistance or changes in the regulations to clarify, assist or even to add further protection to the public because we also have a stake in pesticides and as a lot of people think, it is not all money.

However, we are talking mainly about regulations. We feel, in proposing an act, that we would like that act to be as comprehensive and as complete as possible, because in order to change an act we have to go back and introduce a bill, which takes time, and so

[Interprétation]

Est-ce qu'il n'y a pas moyen de discuter immédiatement avec les gens qui l'ont produit? Nous avons parlé de l'inspecteur jusqu'ici, mais l'inspecteur n'est qu'une seule personne. N'est-ce pas ce qu'on vise dans le dernier paragraphe?

M. Cooper: Le paragraphe dit:

à moins que, avant cela, des procédures n'aient été instituées relativement à la contravention, auquel cas le produit antiparasitaire peut-être retenu jusqu'à la fin des procédures.

Personnellement, je l'interprèterais comme voulant dire des procédures légales ou judiciaires initiées par le ministère de l'Agriculture, par l'intermédiaire de la Division des produits végétaux, contre le producteur. Ce serait une action intentée contre le type parce qu'il aurait enfreint un article de la loi ou des règlements.

M. Cobbe: Merci, monsieur le président.

Le président: M. Lessard, M. McKinley, M. Lambert, M. La Salle, et j'espère que vos questions seront brèves. Monsieur Lessard.

M. Lessard (Lac-Saint-Jean): Je serai très bref, Monsieur le président.

Mr. Chairman, I listened with a great deal of attention to the points raised by members of the Committee and the answers and—explanations given by our witnesses this morning. I can assure you that when we have the Department officials before us we will be able to question them thoroughly on the points raised so as to be quite certain that you will get the protection to which you are entitled and that your rights are being respected. This also applies to the farmer.

I think that if per chance there were no amendments made to the Bill and that it were passed as it is, what I would like to know personally is during the course of the application of this Act whether there are any situations which occur which might be definitely prejudicial to you. I think it would certainly be in order to inform the legislators if this were to happen and thus ensure the situation is corrected. Your Association is sufficiently representative to be the guardian of your rights to a certain extent.

M. Cooper: Je suis tout à fait d'accord, monsieur, et quand il s'agit des règlements, nous n'avons aucune hésitation à demander de l'aide ou des changements dans les règlements, pour éclaircir, ou pour aider, ou même pour protéger davantage le grand public, car nous aussi nous avons une mise dans cette question des pesticides. Ce n'est pas tout simplement une question d'argent.

Mais nous parlons surtout des règlements. Nous croyons que lors de l'adoption de la loi, ou quand nous proposons une loi, nous voudrions que la mesure soit aussi complète que possible, car pour changer, modifier une loi, cela prend du temps.

[Text]

forth. Let us produce an act that will stand the test of time for the next 15, 20 or 25 years. We can change the rate very, very easily without involving the time of people such as yourselves, and so forth. Let us have the best bill we can have.

We are just bringing this up because we feel that clarification at this time can save us, and we will go to our government representatives and discuss with them certain very simple changes in the regulations. It will only take a matter of a week or two weeks to change this. The regulations are the most important thing, but I would like to see the act as good as we can make it for as long as we can make it.

The Chairman: Thank you, Dr. Cooper. Mr. McKinley?

Mr. McKinley: Thank you, Mr. Chairman. I want a little more information about what is going on at the present time in connection with the registration of plants that are producing these products. When you have a product which is registered for sale, is it government practice to have a special registration so that a plant can produce that particular product?

• 1150

Dr. Cooper: They have a registration for that product and we produce it in any plant we see fit.

Mr. McKinley: At the present time that plant does not have to be registered in a particular way to produce that product?

Dr. Cooper: That is correct.

Mr. McKinley: But does it have to come from a plant that is registered or licensed?

Dr. Cooper: No. It can be manufactured any place as long as the product is registered and we stay with our registration formula. The government has every right to analyse that formula in any way it wants, to see whether we are complying with our registered formulation.

We sometimes have to move from one plant to another, and this is another thing. We may be manufacturing compound A in plant B today. Then all of a sudden there is a change in demand of some other compound, so we will shut down that plant making compound B, and move B to plant Y, simply because the government or a contract may come in that requires plant B to continue making a certain compound which is not a pesticide. Therefore, we do change plants from time to time.

We may also change plants because of objections from municipalities, because of odours. We may have

[Interpretation]

Obtenons donc une mesure législative qui pourra durer quinze, vingt ou vingt-cinq ans. C'est possible de changer les règlements facilement sans que cela prenne le temps de députés comme vous, par exemple. Obtenons la meilleure loi possible; c'est la seule raison pour laquelle nous avons soulevé ce point.

Si nous éclaircissons le problème maintenant, cela va nous épargner du temps. Nous pourrions ensuite discuter avec les représentants du gouvernement les changements dans les règlements qui sont très faciles à réaliser. Cela ne prend qu'une semaine ou deux. Les règlements sont très importants, mais j'aimerais que le bill soit le meilleur bill possible et que la loi dure le plus longtemps possible.

Le président: Merci, docteur Cooper. Monsieur McKinley?

M. McKinley: Merci, monsieur le président. En ce qui concerne l'enregistrement d'usines qui produisent des produits, j'aimerais bien avoir quelques renseignements supplémentaires quant à ce qui se passe à l'heure actuelle.

Quand vous enregistrez un produit pour la vente, est-ce l'habitude ou la pratique du gouvernement d'avoir une inscription spéciale pour que l'usine puisse fabriquer ce produit particulier?

M. Cooper: Il y a une inscription ou l'enregistrement du produit particulier, mais nous le produisons dans n'importe quelle usine.

M. McKinley: En d'autres termes, ce n'est pas nécessaire que l'établissement même soit enregistré pour produire le produit?

M. Cooper: En effet.

M. McKinley: Mais est-ce que cela doit venir d'un établissement qui a un permis d'exploitation ou qui est enregistré?

M. Cooper: Non, il peut être fabriqué n'importe où, aussi longtemps que le produit lui-même est enregistré et que nous nous en tenons à la formule d'enregistrement. Le gouvernement a tout le loisir d'analyser cette formule, de la façon désirée, pour voir si nous nous en tenons à la formule enregistrée.

Parfois nous devons déménager d'une usine à une autre, autre chose, il se peut que le composé A se fabrique dans l'usine B, aujourd'hui, et qu'à un moment donné, la demande soit forte sur un autre composé et par conséquent, nous fermons l'usine qui fabrique B, et nous allons déménager B à l'usine Y, tout simplement parce que le gouvernement ou un contrat exigerait que l'usine B fabrique un produit qui ne soit pas un pesticide.

Par conséquent, nous changeons d'usine de temps à autre, ou d'établissement. Il y a aussi la possibilité de

[Texte]

an excellent plant and all of a sudden someone kicks. They say they do not like the smell. So we will shut that plant down and move the manufacturing of that compound over to some other building. This is only a physical move: it has nothing to do with the formulation or anything else. This is where I do not see why registration is necessary for the actual physical plant itself.

Mr. McKinley: You are saying that these different plants do not have to be registered on their own, but they are connected with a head plant, or a head office.

Dr. Cooper: The company.

Mr. McKinley: A company that is registered.

Dr. Cooper: Yes.

Mr. McKinley: So what you are against in this bill is that you are afraid they are going to make you register each plant to produce each product?

Dr. Cooper: Yes. What purpose does it serve? We are at a loss as to why we should register a plant. We think there are better ways of controlling the product from the plant. We realize this is what we are after, control of the product.

What is the best way to control a product? Is it to set up specifications of a plant and then have to hire umpteen dozen inspectors to go in there? Who are going to set the standards for this registration?

I feel there is another way this can be controlled other than to make plants be registered per se. This is a physical plant registration. We still want product control. This is what we are after.

Mr. McKinley: With regard to the appeal, I think what was said the other day from the departmental officials was that anyone would have the right to appeal to the Minister. We all know that Ministers are very hesitant to over-rule inspectors who may be hired by themselves. This is the kind of appeal that you feel is not good enough?

Dr. Cooper: We are looking for an appeal against many decisions made by one individual, against one man's interpretation of a section of the act. This is what I am after. I wanted it to be a three-man decision, not a one-man decision. Packaging, we agree, should be controlled, but we want a fair shake on an appeal board. If we feel we are being discriminated against, then we would have the right to appeal.

● 1155

We are not only talking about this particular aspect of detention; we are talking about the interpretation of the act in any particular case. There are many broad things here, and I may come into power, or be a power within this group and say that I interpret this act this way, and you as the registrant are going to apply.

[Interprétation]

changer, en vertu d'objections de la part des municipalités pour des questions d'odeurs, par exemple. Tout à coup, quelqu'un se plaint de l'odeur et alors, nous fermons une usine parfaite et nous déplaçons la fabrication de ce composant à un autre établissement. Il s'agit d'un déménagement physique, uniquement. Cela n'a rien à voir avec la formule. Et alors, je ne vois pas du tout pourquoi il serait nécessaire d'enregistrer l'établissement ou le lieu de l'établissement.

M. McKinley: Vous voulez dire que les diverses usines n'ont pas besoin d'être inscrites ou enregistrées, elles-mêmes, mais que le siège social doit l'être.

M. Cooper: La compagnie.

M. McKinley: Une compagnie qui est enregistrée.

M. Cooper: Oui.

M. McKinley: Ce à quoi vous vous opposez c'est que vous craignez qu'on vous forcera à enregistrer chaque usine relativement à chaque produit.

M. Cooper: C'est ça. Quel est l'objet, quel est le but d'un tel enregistrement? Nous ignorons pourquoi il faudrait enregistrer l'établissement. Nous croyons qu'il y a de meilleurs moyens de contrôler le produit qui sort de cette usine. Voilà, ce que nous recherchons, c'est le contrôle du produit même.

Et alors, quelle est la meilleure façon de réglementer le produit? Est-ce par la normalisation de l'établissement, et en engageant des inspecteurs ensuite à la douzaine qui établiraient des normes pour cet enregistrement? J'estime, personnellement, qu'il y aurait un autre moyen de contrôle, autre que l'enregistrement de l'établissement en soi. Ce que nous voulons toujours, c'est le contrôle du produit.

M. McKinley: En ce qui concerne l'appel, je crois que, l'autre jour, le fonctionnaire du ministère a dit que tout le monde pourrait interjeter appel auprès du ministre. Tout le monde sait que les Ministres hésitent à prendre une décision contraire à ses inspecteurs. C'est le genre d'appel qui ne suffit pas, à votre avis?

M. Cooper: Nous voudrions un appel contre les décisions prises. Je voudrais que la décision soit prise par un trio et non par un seul homme. Dans le cas de l'emballage, nous sommes d'accord qu'il doit y avoir un contrôle, mais nous voulons avoir la possibilité d'interjeter appel.

Il s'agit de l'interprétation d'un article de la loi dans un cas en particulier. Il y a de nombreux domaines assez vastes, ici. Je peux représenter une puissance dans ce groupe et dire: «j'interprète la loi de cette façon, et vous, en tant que fabricants enregistrés, vous devez obéir à ma décision».

[Text]

Where is your right if you feel that I am being too strict? This is all we are asking, the right of appeal. I think it should be so indicated in the bill, and then further explained in the regulations. You mentioned that the Minister or someone has said that there is a right of appeal, but I can only go on black and white. I have not seen this, nor would I agree that such a thing is going to be there until it appears in the copy that I have been permitted to read. I am criticizing only this, and saying that to make it a better act, the right to appeal should appear here, and let the regulations govern it.

Mr. McKinley: I must say I can agree with that. We have not seen the regulations that make this bill operative either. Everything is the Governor in Council, and they make regulations. We have not seen anything at all. I think we should, after questioning the officials, make an attempt to put something like that in there.

The Chairman: Thank you, Mr. McKinley. Mr. Lambert.

M. Lambert (Bellechasse): Merci bien. À la lumière des renseignements qui ont été donnés ce matin, nous pouvons dire que le Comité a été bien inspiré d'accepter la venue ici de ces représentants de l'industrie.

Je m'adresse à M. Cooper, qui est président de la *Canadian Agricultural Chemicals Association*. Pouvez-vous dire au Comité combien de membres il y a dans cette association? Deuxièmement, combien de vos produits chimiques sont visés par le Bill C-157? Je pose cette question-là, monsieur le président, à cause du paragraphe analysant l'article 5 (d) dans le mémoire de l'Association et qui dit ceci:

Il n'existe pas de justification apparente pour l'enregistrement des établissements. L'enregistrement des produits devrait être suffisante.

Le Comité pourrait-il connaître le nombre des établissements intéressés et le nombre des produits visés? Peut-être cela nous permettrait-il de mieux comprendre votre requête pour le droit d'appel dans le bill C-157.

Dr. Cooper: I will ask the executive secretary to report on the members of CACA.

M. Chevalier: Monsieur le président, nous avons actuellement 43 membres actifs dans l'Association. Au sujet des produits, je demanderais au Dr. Cooper de répondre.

Dr. Cooper: As far as registered products are concerned, I would have to ask the government specifically how many they have registered. I would say it would be somewhere around 1,300 or 1,400. I may be out quite a bit here, but you must remember that each company may register the same product, but this constitutes a different registration. Two companies must have different numbers for the same product. Do you follow me?

[Interpretation]

Où est votre droit d'appel si vous pensez que je suis trop strict? Voilà, tout ce que nous demandons. Nous voulons avoir le droit d'appel. Et je pense que cela doit être indiqué dans la loi de façon précise et expliqué de façon plus précise dans le règlement. Vous dites que le ministre ou quelqu'un a dit qu'il y aura droit d'appel. Je veux le voir en noir et blanc. Je ne crois en rien tant que je ne le verrai pas figurer dans le texte que je suis autorisé à lire. Je ne fais que critiquer en disant que pour améliorer la Loi, le droit d'appel doit y figurer, et qu'ensuite le règlement prévoit les modalités.

M. McKinley: Je suis d'accord, mais nous n'avons pas vu le règlement d'application de la loi. C'est toujours le gouverneur en conseil qui rédige le règlement. Nous n'avons encore rien vu. Et je pense qu'après avoir interrogé les fonctionnaires, nous devrions prévoir un libellé de ce genre.

Le président: Merci, monsieur McKinley. Monsieur Lambert?

Mr. Lambert (Bellechasse): Thank you. I do believe that in the light of the information we were given this morning, the Committee was quite right in asking these representatives from the firms to come.

I would like to ask Mr. Cooper who is the Chairman of the Canadian Agricultural Chemicals Association, to tell us how many members there are in this particular association? Secondly, how many of your chemical products are referred to by Bill C-157? I put this question, Mr. Chairman, in relation with section 5 (d) in the brief of the Association which reads as follows:

There is no apparent justification for the registration of an establishment. The registration of the products should be adequate.

Could you tell the Committee the number of establishments concerned and the number of products referred to? This might enable us to understand better your request, concerning the right of appeal in Bill C-157.

M. Cooper: Je demanderais au secrétaire exécutif de faire rapport aux membres de la CACA.

Mr. Chevalier: Mr. Chairman, we have 43 active members in the Association, and so far as concerns products I will have Dr. Cooper answer.

M. Cooper: En ce qui concerne les produits enregistrés, je devrai demander au gouvernement exactement combien il y en a. Je pense qu'il s'agit de 1,300 ou 1,400. Je me trompe peut-être beaucoup, mais chaque société peut enregistrer le même produit. Ce qui compte comme un enregistrement distinct. Deux sociétés peuvent avoir des numéros différents pour le même produit. Vous me suivez?

[Texte]

Mr. Lambert (Bellechasse): Yes.

Dr. Cooper: For DDT you may have 100 registrations, 100 registration numbers. But we have somewhere, I imagine, around 1,300 or 1,400 registrations that we have to contend with.

M. Lambert (Bellechasse): J'ai une question supplémentaire, monsieur le président. Je pense que c'est là une question excessivement importante pour vos clients, les acheteurs de produits antiparasitaires. Généralement, le client n'est pas tellement familier avec la nature de tel ou tel ou tel produit. Généralement, lorsqu'on achète un produit d'une compagnie responsable il est tout à fait normal que le client, celui qui a utilisé le produit et qui n'en a pas été tout à fait satisfait, regarde tout d'abord le nom de l'établissement qui lui a fourni ce produit. Si l'établissement ou la compagnie en question doit lui apporter des renseignements supplémentaires ou s'il peut contester la valeur d'un composant utilisé par la compagnie, à ce moment l'inscription du nom peut faciliter l'éclaircissement de la situation entre les parties intéressées. Mais ma pensée première est celle-ci: je pense qu'il serait justifié que le nom de l'établissement figure sur l'étiquette.

● 1200

The Chairman: Thank you, Mr. Lambert. Is there a reply, Dr. Cooper?

Dr. Cooper: Well, we always put on the labels. There is always the head office or the main office to which a grower can always write asking for further information or reporting that he has a problem. Usually this will bring somebody immediately to ascertain what his problem is. Let us not fool ourselves here: in business we have good companies and we have bad ones, but the good company will soon go to a grower and ascertain what his problem is.

By the same token—you talk about education—the industry does a great deal in trying to educate the public in the use of pesticides and we feel that the government has to play a part as well as industry. I spend roughly half of my time in speaking to the public about how to use pesticides correctly and not to over-use them, and to be careful about wildlife and pollution.

The Chairman: Mr. LaSalle?

M. LaSalle: Monsieur le président, selon moi, il est évident que ce droit d'appel ne gêne absolument pas l'agriculteur. Ce droit d'appel permettra à l'inspecteur d'arrêter un produit qui serait dangereux; d'un autre côté, il me semble très justifié de la part de l'Association de demander ce droit d'appel pour sa protection.

[Interprétation]

M. Lambert (Bellechasse): Oui.

M. Cooper: Par exemple, pour le DDT, vous pouvez avoir cent numéros d'enregistrement; mais nous avons environ 1,300 ou 1,400 enregistrements dont nous devons tenir compte.

Mr. Lambert (Bellechasse): I have a supplementary, Mr. Chairman. I believe this is a very important question for you, customers, the buyers of pesticides. Generally, the customer is not too familiar with the nature of such and such a product. Generally, when purchasing a product from a responsible company, it is perfectly normal that the customer, the person who has used the product and who was not entirely satisfied with it, looks first of all at the name of the establishment manufacturing the product.

If the establishment or the firm concerned must give him extra data or if he can contest the value of an ingredient used by the company, then the printed name could make it easier to clarify the situation among the interested parties. My first thought though, is this: I believe it would be justified for the name of the establishment to be written on the label.

Le président: Merci, monsieur Lambert. Est-ce que vous avez une réponse à donner, docteur Cooper?

M. Cooper: Nous apposons toujours les étiquettes. Il y a toujours le siège social ou le bureau principal auquel un cultivateur peut s'adresser pour demander davantage de renseignements ou pour signaler qu'il a certaines difficultés. D'habitude, un représentant ira le voir immédiatement pour savoir quelle est sa difficulté. Ne nous leurrions pas ici. En affaires, nous avons de bonnes compagnies et de mauvaises compagnies. Mais les bonnes compagnies iront immédiatement voir le producteur pour faire enquête.

Il y a également une question d'éducation. Il faut apprendre au public comment se servir des produits antiparasitaires. Le gouvernement s'en occupe mais quant à moi, je passe la moitié de mon temps à expliquer au public comment se servir des antiparasitaires, comment ne pas trop les utiliser et faire attention à la faune et au problème de la pollution.

Le président: Monsieur LaSalle?

Mr. LaSalle: Mr. Chairman, in my mind it is obvious that this right of appeal is no problem to the farmer. This right of appeal will enable an inspector to stop a dangerous product. On the other hand, it seems to me that it is very justified on the part of the Association to ask for this right of appeal for its own protection.

[Text]

C'est peut-être un manque d'expérience, mais je me demande comment il se fait que l'Association demande ce droit d'appel et que certains membres du Comité avouent que le ministre a garanti, la semaine dernière, ce droit d'appel. Si le ministre l'avait garanti, l'Association serait au courant. De plus, s'il l'a garanti, pourquoi n'est-il pas inclus dans la Loi? Je ne sais pas, monsieur le président, si vous pouvez donner une réponse. Il y a sûrement un manque de communication quelque part.

The Chairman: My understanding was that this would be referred to in the regulations, which is not necessarily spelled out in the Act.

Gentlemen, we have reached our second hour of adjournment.

Mr. Peters: Could I just ask one question before we adjourn? How does the Association arrive at the label of "dangerous" on products—toxic, poisonous. . .

The Chairman: Please speak into your microphone.

Mr. Peters: How do they arrive at this protection for the individual who may be handling these products?

Dr. Cooper: This has been arrived at by the Department of Agriculture, Plant Products Division. They have arrived at this through their own good judgment and through co-operation with the Association.

Mr. Peters: You really have a formula, then?

Dr. Cooper: Yes, there is a formula that we apply to new compounds and I believe industry has played its part here. There are certain compounds that we feel should not get into public hands; they should be in the hands of specialists. The Department of Agriculture, Plant Products Division, and the Feed Fertilizer & Pesticide Section have done a wonderful job in co-operating with us and we hope we will be able to continue this so we can keep products in their right perspective so far as the public is concerned.

The Chairman: Gentlemen, I am sure you would wish me to express your appreciation to our witnesses this morning, Dr. Cooper, Mr. Chevalier, Mr. Kennady and Mr. Oakley, for the brief which they have presented and for the excellent way in which they have answered our questions.

Thank you, gentlemen, very much for appearing.
Shall Clause 5 stand?

● 1205

Some hon. Members: Agreed.

Clause 5 stood.

The Chairman: The meeting is adjourned to the call of the Chair.

[Interpretation]

Maybe I am not experienced enough, but I wonder why the Association asks for such a right while some Committee members say that the Minister guaranteed this right of appeal last week. If the Minister had guaranteed this right, the Association would be well aware of it. Moreover, if it is guaranteed, why is it not stated in the Act? Could you answer this, Mr. Chairman? There must surely be a lack of communication somewhere.

Le président: Je croyais que cela figurerait dans le Règlement et que cela ne figurerait pas dans la Loi. Messieurs, nous en arrivons à l'heure de lever la séance.

M. Peters: Puis-je poser une dernière question avant l'ajournement? Comment l'Association en arrive-t-elle à rédiger une étiquette «danger» pour les produits toxiques, les poisons, . . .

Le président: Veuillez parler devant le micro.

M. Peters: Comment en arrive-t-on à cette protection pour l'individu qui manipule ces produits?

M. Cooper: C'est votre propre ministère de l'Agriculture, Division des produits végétaux, qui en est arrivé là, grâce à son bon sens, et en collaboration avec l'Association.

M. Peters: Vous avez une formule n'est-ce pas?

M. Cooper: Il y a une formule que nous appliquons aux nouveaux mélanges, et l'industrie y joue un rôle. Il y a certains mélanges qui ne doivent pas être donnés au public, mais ce sont des spécialistes qui doivent s'en servir; et le ministère de l'Agriculture, Division des produits végétaux et section des engrais et pesticides, a fait un excellent travail et nous a donné une excellente collaboration. Nous espérons continuer à travailler avec cette division de façon à maintenir un cadre dans lequel les produits seront utilisés.

Le président: Je suis sûr que vous serez d'accord avec moi pour féliciter les témoins, M. Cooper, M. Chevalier, M. Kennady, et M. Oakley. Ils nous ont présenté un mémoire très intéressant et ils ont répondu de façon remarquable à nos questions. Merci beaucoup Messieurs d'être venus.

L'article 5 est-il réservé?

Des voix: D'accord.

L'article 5 est réservé.

Le président: La séance est levée jusqu'à la convocation du président.

MINUTES OF PROCEEDINGS

THURSDAY, February 6, 1969.
(20)

The Standing Committee on Agriculture met at 9:41 a.m. this day, the Chairman, Mr. Beer, presided.

Members present: Messrs. Barrett, Beer, Clermont, Cobbe, Côté (*Richelieu*), Danforth, Douglas, Gauthier, Gleave, Horner, Howard (*Okanagan Boundary*), Korchinski, La Salle, LeBlanc (*Rimouski*), Lessard (*Lac-Saint-Jean*), Lind, Moore (*Wetaskiwin*), Peters, Roy (*Laval*), Southam, Thomson (*Battleford-Kindersley*), Whicher, Yanakis—(23).

Also present: Mr. C. Stewart, M.P.

Witnesses: From the Department of Agriculture: The Honourable H. A. Olson, Minister; Mr. S. B. Williams, Deputy Minister; Mr. C. R. Phillips, Director General of Production and Marketing; Mr. C. H. Jefferson, Director of Plant Products Division.

The Committee resumed consideration of Clause 4 of Bill C-157, the Pest Control Products Act.

Following questioning of the Witnesses, Clause 4 was carried.

On Clause 5, there were questions and that clause was carried.

Clause 6 was carried.

Following brief questioning, Clause 7 was carried.

Clause 8 was carried.

On Clause 9, Mr. Horner moved an amendment:

That the following be added as Subclause (6): The company whose product has been seized or detained be granted the right at any time after the detention to appeal before an independent board consisting of representation from the industry and the Department of Agriculture.

[Traduction]

PROCÈS-VERBAUX

JEUDI 6 février 1969.
(20)

Le Comité permanent de l'agriculture se réunit ce matin à 9 h. 41, sous la présidence de M. Beer, président.

Présents: MM. Barrett, Beer, Clermont, Cobbe, Côté (*Richelieu*), Danforth, Douglas, Gauthier, Gleave, Horner, Howard (*Okanagan Boundary*), Korchinski, La Salle, LeBlanc (*Rimouski*), Lessard (*Lac-Saint-Jean*), Lind, Moore (*Wetaskiwin*), Peters, Roy (*Laval*), Southam, Thomson (*Battleford-Kindersley*), Whicher, Yanakis—(23).

Aussi présent: M. C. Stewart, député.

Témoins: Du ministère de l'Agriculture: L'honorable H. A. Olson, ministre; M. S. B. Williams, sous-ministre; M. C. R. Phillips, directeur général de la Production et des marchés; M. C. H. Jefferson, directeur de la Division des produits végétaux.

Le Comité reprend l'étude de l'article 4 du Bill C-157, Loi sur les produits antiparasitaires.

On interroge les témoins, puis l'article 4 est adopté.

Sur l'article 5, on pose des questions, puis l'article est adopté.

L'article 6 est adopté.

Après un bref interrogatoire, l'article 7 est adopté.

L'article 8 est adopté.

Sur l'article 9, M. Horner propose une modification:

Que l'on ajoute la disposition suivante, en tant que paragraphe (6):

La société dont le produit a été saisi ou retenu a le droit, à tout moment qui suit la rétention, d'en appeler à un conseil indépendant composé de représentants de l'industrie et du ministère de l'Agriculture.

With discussion of the motion continuing, Clause 9 was allowed to stand.

Le débat sur la proposition se poursuivant, l'article 9 est réservé.

At 12:05 p.m. the Committee adjourned to the call of the Chair.

A midi 05, le Comité s'ajourne jusqu'à nouvelle convocation du président.

Le secrétaire du Comité,
Michael A. Measures
Clerk of the Committee.

[Text]

EVIDENCE

(Recorded by Electronic Apparatus)

Thursday, February 6, 1969

• 0939

The Chairman: Gentlemen, please come to order. When the Committee met last we stood Clause 4 and heard witnesses under Clause 5. I propose to the Committee that we return to Clause 4 and open the meeting for questioning.

Our meeting this morning is graced by the presence of the Minister and representatives of the Department. I am sure there are questions. I recognize Mr. Horner.

• 0940

Mr. Horner: On Clause 4, Mr. Chairman, I would like to ask the Minister whether he really feels that it is necessary, after each product that a company puts out which would come under this Bill is registered, also to register the manufacturing establishment?

An hon. Member: Under Clause 5?

Mr. Horner: No, Clause 4; I am looking at Clause 4, subclause (2), and paragraph (b) of subclause (2) which deals with the registering and the operation of the establishment as prescribed.

The Chairman: Are you under Clause 4, Mr. Horner?

Mr. Horner: Yes; subclause (2)(b). Under Clause 4, Mr. Chairman, it reads this way:

No person shall... send or convey from one province to another any prescribed control product unless such product was manufactured in an establishment...

and then subclause (b) says that that establishment must be:

... registered and operated as prescribed.

[Interpretation]

TÉMOIGNAGES

(Enregistrement électronique)

Le jeudi 6 février 1969

Le président: Messieurs, un peu d'ordre, s'il vous plaît. A notre séance précédente, nous avons réservé l'article 4 et avons entendu les témoins convoqués pour étudier l'article 5. Je propose donc au Comité que nous revenions à l'article 4 maintenant, et que nous commençons la réunion par des questions. Notre séance est rehaussée ce matin, par la présence du ministre et des représentants du ministère. Je suis sûr que vous avez des questions à leur poser. Je donne la parole à M. Horner.

M. Horner: Auparavant, monsieur le président, j'aimerais demander au ministre s'il estime vraiment nécessaire, après l'enregistrement de chaque produit fabriqué par une compagnie, ce qui relèverait du présent bill, d'enregistrer aussi l'établissement même, la fabrique même?

Une Voix: A l'article 5?

M. Horner: Je regarde l'article 4, paragraphe (2), l'alinéa b) du paragraphe (2) qui a trait à l'enregistrement de l'établissement.

Le président: En êtes-vous à l'article 4, monsieur Horner?

M. Horner: Oui, à l'alinéa b) du paragraphe (2). A l'article 4, monsieur le président on peut lire:

Le président: En êtes-vous à l'article 4, monsieur Horner?

M. Horner: Oui, monsieur le président, à l'article 4, paragraphe (2). On y dit que:

(2) Nul ne doit...envoyer ou transporter d'une province à une autre un produit antiparasitaire prescrit à moins que ce produit antiparasitaire n'ait été fabriqué dans un établissement...

Puis on dit à l'alinéa b) que cet établissement doit être:

... enregistré et exploité de la manière prescrite.

[Text]

The Chairman: I thank you. Mr. Minister?

Hon. H. A. Olson (Minister of Agriculture): I can understand the relationship between Clause 4 and what you are talking about, but the question relates to Clause 3 (1), does it not?

No person shall manufacture, store... under unsafe conditions.

Mr. Thomson (Battleford-Kindersley): Mr. Chairman, in fairness to the Minister of Agriculture I wonder if he is aware that the gentlemen who presented a brief the other day were objecting to licensing or charging a fee for the patents?

The Chairman: I presume the Minister has been informed of our discussions the other day.

Mr. Olson: Yes, we were.

The Chairman: Does the Minister have any further comment in relation to Mr. Horner's question?

Mr. Olson: The problem that we are having, Mr. Chairman, is that the question relates to three clauses: 3, part of 4 and 5(d).

Mr. Horner: Yes, I know it does.

Mr. S. B. Williams (Deputy Minister of Agriculture): The purpose of the registration of establishments, and the provision that regulations can be made setting forth terms and conditions within these establishments, is solely to give an additional assurance to the users of the products that they have been produced under, as Mr. Olson pointed out, the Clause 3 (1) safe conditions; at least, they have not been produced under unsafe conditions.

I think that a parallel, if I might call it that is to be found, for example, under our egg grading regulations where there is provision for registration of establishments. Certainly our graders can say, when they examine a group of eggs whether or not they fall in such a grade. We believe, and I think the industry believes, that it is advantageous to the integrity of the grade if these eggs are handled under certain conditions. For example, that they are kept in a establishment where it is possible to control the temperature within certain limits. This means that the shelf life of these eggs and consequently the integrity of the grade is improved.

We believe that the registration of plants, in order to ensure that they have the facilities that will permit them to make a product with minimum chances of mixing, adulteration and things of this nature, is valuable. I was going

[Interpretation]

Le président: Merci. Monsieur le ministre?

L'hon. H. A. Olson (ministre de l'Agriculture): Je comprends le lien qui existe entre l'article 4 et ce dont vous parlez, mais je crois que la question a vraiment trait à l'article 3 (1) n'est-ce pas?

3. (1) Nul ne doit fabriquer, ... dans des conditions dangereuses.

Mr. Thomson (Battleford-Kindersley): Je me demande, pour être juste envers le ministre de l'Agriculture, s'il sait que ces messieurs qui ont présenté le mémoire, l'autre jour, s'opposaient à l'enregistrement.

Le président: Je suppose que le ministre est au courant de ce qui s'est passé l'autre jour.

Mr. Olson: Je le suis.

Le président: Avez-vous d'autres commentaires à ce sujet?

Mr. Olson: Le problème auquel nous avons à faire face vient de ce que cette question touche trois articles: 3, 4 et 5 d).

Mr. Horner: Oui, je suis d'accord. C'est vrai.

Mr. S. B. Williams (sous-ministre de l'Agriculture): L'objet de l'enregistrement des établissements et de la disposition prévoyant qu'on peut établir des règlements pour les établissements en cause, est de donner l'assurance aux usagers du produit que ces produits ont été fabriqués aux termes de l'article 3 (1), dans des conditions sûres ou, du moins, pas dans des conditions dangereuses.

Je crois qu'un parallèle existe avec cette situation qui prévaut dans le domaine du classement des œufs, où les établissements sont enregistrés. Évidemment, nos classeurs peuvent dire lorsqu'ils examinent les œufs s'ils tombent dans telle ou telle catégorie. Nous croyons et je crois que l'industrie le croit également qu'il est avantageux que les œufs soient manipulés en respectant certaines conditions. Par exemple, que les œufs soient entreposés dans un établissement où il est possible de régler la température. La vie de l'œuf et sa qualité ne peuvent que s'en trouver améliorées.

Nous croyons que l'enregistrement de ces établissements est utile parce qu'il nous permettrait de nous assurer qu'ils sont bien équipés et que les produits ne risquent pas d'être avariés. J'allais dire que l'enregistrement est

[Texte]

to say essential, but probably "essential" is too strong a word: valuable in terms of the final integrity of the product.

• 0945

Mr. Horner: Mr. Williams, each product the establishment puts on the market is registered and the formula examined very closely by the Department of Agriculture and, I would assume, also by the Food and Drug Directorate. Why is it necessary to register the establishment and also, as subclause (b) suggests, lay down rules to outline the manner in which the establishment must be operated as prescribed? If we accept this formula here, what else are we going to be asked to accept in our free society?

The Chairman: Mr. Williams?

Mr. Williams: Mr. Horner's question was why do we need to register it. It is simply to provide for better control. While the product is registered, we do not sample each and every package that comes on the market. We do have a system of inspection of the product when it is on the market to see if it is up to its registered composition, efficacy, or any of the factors that are covered by the registration.

However, as part of the entire process of scrutinizing these on the market, we believe that if we have some assurance that they are produced under these conditions that the amount of scrutiny that is necessary may be somewhat reduced, but, in addition, we believe that the product is going to be a better product. It is probably truer in respect of some of the biological pesticides than it is of the straight chemical pesticides. In other words, this Bill covers quite a wide range of products.

Basically, If I may repeat what I have said, we believe it will improve the integrity of the product in the eyes of the user and will reduce the amount of control work that is necessary within the Department.

Mr. Horner: Supposing for a minute agree with you on the registering of the company. Why does it also have to operate as prescribed? Is not the long hand of the government reaching to some depth into private enterprise if we are going to outline through a system of regulations and acts that a company must operate as prescribed?

Mr. Williams: Mr. Chairman, I suppose it will depend entirely upon the type of thing that is prescribed in terms of operations. I suppose there are items of operation that may be very critical. I am afraid that I cannot name them, but I can ask our people here for specific ones.

[Interprétation]

essentiel mais le terme aurait probablement été mal choisi.

M. Horner: Monsieur Williams, chaque produit que la fabrique met sur le marché est enregistré, la formule est minutieusement examinée par le ministère de l'Agriculture et, je présumerais, aussi par la Direction des aliments et drogues. Pourquoi alors serait-il nécessaire d'enregistrer l'établissement? Pourquoi, comme le suggère l'alinéa b), faudrait-il établir la méthode selon laquelle l'établissement doit être exploité.

Si nous acceptons cette formule, qu'est-ce qu'on nous demandera encore d'accepter?

Le président: Monsieur Williams.

M. Williams: La question de M. Horner était celle-ci: Pourquoi devons-nous l'enregistrer? C'est tout simplement pour obtenir un meilleur contrôle. Si le produit est enregistré, nous ne faisons pas l'échantillonnage de chaque emballage qui est mis sur le marché. Nous vérifions le produit, lorsqu'il est mis en vente, pour nous assurer qu'il contient les ingrédients requis, qu'il a l'efficacité voulue et qu'il respecte les divers points prévus dans l'enregistrement. Nous croyons que si nous avions, au départ, une certaine assurance que le produit a été fabriqué d'après certaines normes, il en résulterait une réduction du degré de vérification nécessaire, mais en même temps, nous croyons que le produit serait un meilleur produit. C'est probablement plus vrai à l'égard de certains pesticides biologiques que ce ne le serait pour les insecticides chimiques. En d'autres termes, nous visons une gamme assez vaste de produits.

Pour répéter, donc, nous croyons que cela améliorerait l'intégrité du produit aux yeux de l'utilisateur et éliminerait une certaine partie du travail de vérification.

M. Horner: Supposons que je suis d'accord avec vous au sujet de l'enregistrement de la compagnie. Pourquoi devrait-elle fonctionner de la manière prescrite? Est-ce que le gouvernement ne va pas un peu loin en disant à l'entreprise privée qu'elle doit fonctionner de telle ou telle façon?

M. Williams: Je suppose, monsieur le président, que tout dépendrait du genre de règlements qui seraient établis. J'imagine qu'il y a certains aspects de l'exploitation qui pourraient être très critiques. Moi, je ne pourrais pas vous donner des exemples précis, mais je pourrais demander à mes fonctionnaires de le faire.

[Text]

Suppose it is a biologic that has to be prepared under certain conditions in terms of temperature or pressure: it might be considered advisable to prescribe that it is. We, for example, prescribe this same sort of thing in meat packing plants in relation to canned meat products. We prescribe it in respect of many of the vegetable products so that a product cannot be sold as a sterile products unless it has been subjected to certain temperatures for a certain of time.

Mr. Horner: On meat packing plants I remember a few years ago cases where in Ontario a lot of horse meat, I believe, was sold as hamburger and the federal government was a long time in catching up to it; in fact, I do not think they did. It was a provincial department that finally caught up with that particular case.

Mr. Williams: We only can control under our Act. The only thing we can control are plants that sell meat interprovincially.

Mr. Horner: I realize that. I did not intend to get into the question of meat packing.

Mr. Chairman, I will not ask any further questions, but I fail to see why we have to prescribe a method of operation and register the establishment if a formula has to be registered for every product the establishment puts out and if tests are made to make sure that that product lives up to its formula.

• 0950

The Chairman: Thank you, Mr. Horner. I recognize Mr. Danforth.

Mr. Danforth: Mr. Chairman, my questions follow along the same line as those put by Mr. Horner, who dealt with registration, the prescribed operation of a plant, products used in Canada and exported from one province to another. However, I am a bit curious why the Department finds it necessary to use the same terminology and the same conditions in respect of a product that is to be exported out of the country.

Suppose, for example, that a foreign subsidiary comes in and sets up a plant for the sole purpose of obtaining in its raw form a specific chemical in that it is available in Canada only and provides this chemical as one of the basic components perhaps in an operation in Great Britain. As I understand the terms of this bill, it would be absolutely necessary for this particular plant to be registered under the Canadian department and to operate under such conditions as are prescribed by the Canadian government, yet the product

[Interpretation]

Mais supposons qu'il s'agit d'un produit biologique qui doit être préparé dans certaines conditions de température ou de pression. Il serait peut-être souhaitable de prescrire ou d'ordonner que cela se fasse. Par exemple, nous prescrivons ce même genre de choses dans les salaisons, pour ce qui est des viandes en boîtes. De même, pour certains légumes, afin que ces produits ne puissent être qualifiés de stériles, si certaines conditions de températures n'ont pas été respectées.

M. Horner: Quand vous parlez des salaisons, cela me rappelle qu'il y a quelques années, en Ontario, une grande quantité de viande de cheval avait été vendue pour de la «viande à hamburger» et le gouvernement fédéral a mis bien du temps avant de s'en rendre compte. En fait, je ne crois pas qu'il l'ait fait. C'est un ministère provincial, en fin de compte, qui a réussi à déceler le cas.

M. Williams: Notre compétence ne touche que notre texte de loi. Nous ne pouvons vérifier que les salaisons qui font le commerce inter-provincial.

M. Horner: Je vois. Je n'avais d'ailleurs pas l'intention de soulever la question des salaisons. Je ne poserai pas d'autres questions, monsieur le président, mais je ne vois pas pourquoi il faut prescrire la méthode d'exploitation et enregistrer l'établissement si l'usine doit enregistrer la formule de chaque produit qu'elle fabrique et si des vérifications sont faites pour s'assurer que le produit est conforme à cette formule.

Le président: Merci, monsieur Horner. Monsieur Danforth.

M. Danforth: Mes questions ont trait à celles posées par M. Horner.

En parlant de l'enregistrement et de la prescription des établissements et du transport des produits d'une province à une autre, je serais curieux de savoir pourquoi le ministère trouve qu'il serait nécessaire d'employer la même terminologie et les mêmes conditions pour un produit qui doit être exporté du Canada.

Voici un exemple: supposons qu'une filiale étrangère vienne au Canada, établisse une usine pour la seule fin d'obtenir un produit chimique qui serait disponible au Canada seulement et qui voudrait fournir ce produit chimique comme composant d'un produit en Angleterre par exemple. Si j'ai bien compris, ce serait nécessaire que l'établissement soit enregistré sous le ministère canadien et exploite l'usine dans les conditions prescrites par le gouvernement du Canada; mais le produit n'aurait rien à voir avec les produits

[Texte]

in itself may have nothing to do with any Canadian products or Canadian use. Why is it felt necessary to have these registrations, conditions and regulations, when we are dealing strictly with exports?

Mr. C. R. Phillips (Director General of Production and Marketing): Mr. Chairman, the terms

...shall export out of Canada, or send or convey from one province to another... are the normal ones put in federal legislation indicating that they cannot deal with intra-provincial. The federal authority extends to export and interprovincial movement. The gross position here is that they can prescribe conditions for export, interprovincial trade, with respect to all plants.

I think it was explained at an earlier meeting that the intention here is to provide the authority that Mr. Williams referred to for those certain products which are of a nature that need special care in the plant—such as biologics. It is not the intention to have this extend across the whole field. Why should “export” be in there? Because under certain conditions in our international relationships we are expected to be able to certify and, if those conditions arise, then we would be in a position to certify by prescribing conditions in the plants.

Mr. Danforth: May I ask if such regulations are international in nature—that chemical firms from which Canadian farmers obtain products operate under the same terminology and the same regulations? Are we as Canadian farmers protected by other governments to this degree?

Mr. Phillips: Yes. One that may not be a good analogy—this is outgoing, I think you were speaking about coming in—is that in terms of outgoing, for example, we are up against a situation where Italy will not accept our meat unless it is certified that estrogens were not used in the production of the meat. By having this control under the Food and Drugs Act, let us say, and also under the Meat Inspection Act we are in a much better position to certify with respect to estrogens. I am using that as an example. It could be in the pests control area. I have no examples of it at the moment but I would expect that it could very well occur in terms of biologics.

Mr. Danforth: Thank you, sir. If I may pursue this just a little bit further, is there agreement between nations or between industry itself on these conditions and regulations as prescribed, or are the conditions as

[Interprétation]

canadiens ni avec l'emploi au Canada. Je me demande alors pourquoi on trouve que c'est nécessaire d'avoir ces enregistrements et ces conditions et ces règlements quand nous parlons uniquement d'exportations.

M. Phillips (directeur général de la production et des marchés): En ce qui concerne «exporter du Canada ou envoyer ou transporter d'une province à une autre», il s'agit de l'expression ordinaire que l'on emploie dans toute mesure législative pour indiquer qu'on ne peut pas, qu'il ne s'agit pas du mouvement à l'extérieur ou à l'intérieur de la province. Ici, on veut dire qu'on peut prescrire les conditions pour l'exportation ou le mouvement interprovincial à l'égard de n'importe quel établissement.

Je crois que l'objet c'est de donner l'autorisation, comme l'a expliqué M. Williams, pour les produits qui sont de nature à exiger une attention spéciale dans l'usine, tel qu'un produit biologique. Ce n'est pas notre intention de l'appliquer partout ou dans tous les cas. Pourquoi l'expression «exportation»? Il y a certaines conditions dans nos rapports internationaux où il faut que nous soyons en mesure de certifier et si ces conditions arrivent, eh bien, nous serions alors en mesure de certifier les produits.

M. Danforth: Puis-je demander si de tels règlements sont internationaux et si les fabriques de produits chimiques d'où les cultivateurs obtiennent leurs produits sont exportés en vertu des mêmes règlements? Nous, les cultivateurs et les Canadiens, sommes-nous protégés dans la même mesure par les autres gouvernements?

M. Phillips: Oui. Ce n'est peut-être pas la même chose mais une analogie tout de même en ce qui concerne les exportations, nous nous trouvons en face d'une situation par laquelle l'Italie n'accepte pas notre viande à moins que nous ne puissions certifier que nous n'avons pas employé ces pratiques pour la production de la viande. Si ce contrôle relève de la direction des aliments et drogues ainsi que de l'inspection de la viande, nous sommes en meilleure position pour certifier. Je l'emploie tout simplement à titre d'exemple; cela pourrait se faire aussi dans le domaine des produits antiparasitaires mais aucun exemple ne me vient à l'idée à l'heure actuelle.

M. Danforth: Merci monsieur. Est-ce que je pourrais poursuivre ma question un peu plus loin, monsieur le président? Y a-t-il un accord entre les pays ou entre l'industrie elle-même ou dans l'industrie elle-même en ce qui

[Text]

prescribed and put out in this proposed act of a Canadian nature only?

• 0955

Mr. Williams: Mr. Chairman, the short answer is no. We do not have an international convention on pesticides similar to our International Plant Protection Convention.

Mr. Danforth: I have one more question, Mr. Chairman, and then I will pass on this particular line of questioning.

Since we are dealing with the regulations, which I think Mr. Horner pointed out very justly do interfere with the free enterprise of a particular company and perhaps a particular product, may I ask how many allied acts such an establishment will have to operate under? It states as conditions: registered and operated as prescribed. Now will the regulations all be prescribed in this proposed act; will they be partially prescribed in this proposed act and in other acts such as the Food and Drugs Act; are there other particular departments which will enter into the governing, of this; or just exactly what is the status under which such operations will take place?

Mr. Williams: As I understand it, the reference is to plants that are manufacturing pesticides?

Mr. Danforth: Yes.

Mr. Williams: To the best of my knowledge, this is the only legislation under which they would be required to be registered, unless we are referring to the economic operation of the plant—income tax or things of that nature. However, many other acts require registration of plants. So if that same plant were producing other products—if for example it happened to be producing biologics and biologics for human use in Canada at the same time—registration for that latter purpose could be required under the Food and Drugs Act as well. If, for example, it were producing other products, which I do not have an example of at the moment, it could be under some other act. But it is my understanding that in so far as pesticides are concerned this proposed act is the only one that will govern the registration of the plant.

Mr. Danforth: May I ask then where Food and Drug enters into the picture—in the registration of the particular product itself?

Mr. Williams: Food and Drug enters into the picture in the registration. Before our department will register a pesticide the

[Interpretation]

concerne les conditions et les règlements prescrits? Est-ce universel ou est-ce que les conditions citées dans la Loi sont de nature canadienne seulement?

M. Williams: Non. Nous n'avons pas d'accord international sur les produits antiparasitaires ou pesticides comme l'accord international sur la production des plantes.

M. Danforth: Une dernière question, monsieur le président, et je céderai la parole. Puis-je demander, étant donné qu'il s'agit de règlements, comme l'a signalé M. Horner à juste titre, et que ces règlements rentrent dans le domaine de l'entreprise privée, une compagnie ou une fabrique particulière ainsi qu'un produit particulier, puis-je demander combien de lois connexes contrôleraient les conditions, l'enregistrement et l'exploitation pour un établissement? Est-ce que les règlements seront tous prescrits dans cette Loi, est-ce qu'ils seront en partie prescrits dans la présente Loi et ensuite ajoutés à d'autres lois par exemple, en vertu de la *Loi sur les aliments et drogues*? Est-ce qu'il y a d'autres ministères qui entreront dans cette réglementation? Quel est le statut exact en vertu duquel cette exploitation a lieu?

M. Williams: Si j'ai bien compris, vous parlez d'établissements qui produisent des pesticides.

M. Danforth: Oui.

M. Williams: Au mieux de ma connaissance, c'est la seule mesure législative en vertu de laquelle les produits devraient être enregistrés ou les établissements devraient être enregistrés à moins que nous ne parlions de l'impôt sur le revenu ou de l'exploitation économique de l'établissement. Il y a toutefois plusieurs autres lois qui exigent l'enregistrement des usines et alors si l'usine fabriquait d'autres produits, par exemple, si elle produisait des produits biologiques pour les humains, l'enregistrement à cette dernière fin pourrait être requis en vertu de la *Loi sur les aliments et drogues*. Ce serait le cas, par exemple, si elle fabriquait d'autres produits en vertu d'autres lois, mais si j'ai bien compris, en ce qui concerne les pesticides, c'est la seule loi qui viserait l'enregistrement de l'établissement.

M. Danforth: Puis-je alors demander où la *Loi sur les aliments et drogues* entre dans cette question?

M. Williams: La direction des aliments et drogues entre en jeu dans le sens qu'avant que notre ministère puisse enregistrer un pes-

[Texte]

material that is obtained by this department from the person seeking registration is referred to Food and Drug for their opinion on whether the levels of residue demonstrated in this submission for registration will or will not be harmful to the Canadian population. So it is part of the registration process of the product, not of the plant.

Mr. Danforth: Thank you, sir.

Mr. Southam: Mr. Chairman, I have a supplementary question.

The Chairman: Is it a brief question?

Mr. Whicher: Mine is supplementary too.

The Chairman: I recognize Mr. Whicher.

Mr. Whicher: Mr. Chairman, one of the main objections of industry the other day was to what they described as a registration problem. Personally, I cannot see any problem at all.

How much does it cost to register a product? They objected to the cost. They said that not only did a new product have to be registered but an old one had to be reregistered each year, and they kicked about the cost. How much is it?

Mr. Williams: The fee for registration of a pesticide is \$20.

Mr. Whicher: For the product?

Mr. Williams: For each product, and for reregistration it is \$5.

Mr. Whicher: And they reregister each year? So is the plant had 100 products it would cost \$500 a year.

Mr. Williams: That is correct.

Mr. Whicher: Mr. Chairman, it seems to me that this is a very small cost. There may be a nuisance value there—someone suggests that interferes with free enterprise—but I respectfully point out the Deputy Ministers brought up such things as vegetable products and meat packing. In the dairy industry, of course, every plant in Canada is registered no matter how many plants you have. I do not know whether it is registered with the federal department, but certainly it is registered with the provincial authorities and certainly in that instance the fee is \$10 a year. There is no nuisance value whatsoever to the industry, because registration goes out automatically each year. Does it go out automatically in connection with these plants?

[Interprétation]

ticide, le matériel obtenu du ministère de la part de la personne qui demande l'enregistrement est déferé à la direction des aliments et drogues, pour savoir si le niveau de résidu démontré dans cette demande d'enregistrement sera nuisible ou non à la population canadienne. Cela fait donc partie de la procédure de l'enregistrement du produit. Du produit et non pas de l'établissement.

M. Danforth: Merci, monsieur.

M. Southam: J'aurais une question supplémentaire à poser, si le comité a l'intention de passer à une autre question.

Le président: Est-elle longue?

M. Whicher: J'ai aussi une question supplémentaire.

Le président: M. Whicher.

M. Whicher: Non seulement un nouveau produit doit être enregistré mais un autre doit être réinscrit chaque année. Quels seraient les frais de cet enregistrement?

M. Williams: Le droit est de \$20.

M. Whicher: Pour chaque produit?

M. Williams: Pour l'enregistrement initial et la réinscription c'est \$5.

M. Whicher: Chaque année? Et par conséquent, s'ils avaient 100 produits, cela coûterait \$500 par année?

M. Williams: C'est exact.

M. Whicher: Monsieur le président, à mon sens ce sont des frais très minimes. On semble croire que cela nuit à la libre entreprise, mais le ministre a parlé des viandes et des légumes. Chaque entreprise de l'industrie laitière est enregistrée. Je ne sais pas si c'est auprès du ministère fédéral mais certainement auprès du gouvernement provincial, et les frais ici sont de \$10 par année. Est-ce que cet enregistrement est automatique?

[Text]

Mr. Williams: Are you thinking of the plants?

Mr. Whicher: Yes.

Mr. Williams: This is a new provision. Nothing has happened as yet. Until this bill is passed no plants are registered at the present time.

• 1000

Mr. Whicher: If the plant is up to date and the year past is kept up to your regulations it will go out automatically, I presume?

Mr. Williams: I do not believe we have any intention at the moment of requiring reregistration of the plants on an annual basis. It is the product on which we require reregistration on an annual basis.

Mr. Whicher: Well, that makes it even better then. I want to ask one more question about the export of products which the industry brought up the other day, and they mentioned the country of Jamaica as an example. It was stated that they might require some product and they would dictate what went into this product, but it might not come up to Canadian specifications; that is, you would not want to sell it to our farmers, but Jamaica said that it would be all right. Would you allow this product to be manufactured by a pesticide plant and exported?

Mr. Williams: I suppose, Mr. Chairman, the only answer I can give to a hypothetical question is a hypothetical answer. It would depend upon how grievous the deviation was from what we considered reasonable and responsible. We certainly do provide, under many of our other acts, different types or certification, depending upon the requests and needs of the country to which the product is going.

For example, livestock exported to one country may go in quite easily with no tests for brucellosis, let us say, because they may have no brucellosis. If they wish us to certify seed potatoes as being free from "X" disease, depending upon our capability for doing it we will do that, but if they do not, we will not.

Therefore, in almost all products the type of certification we provide depends upon the requirements of the country of entry, subject always to whatever international obligations we may have in this respect.

Mr. Whicher: Mr. Chairman, I will now finish with a passing comment.

I agree with this right down the line and I point out such things as Danish furniture. No manufacturer of furniture in Denmark can

[Interpretation]

M. Williams: Parlez-vous des établissements?

M. Whicher: Oui.

M. Williams: C'est une nouvelle disposition. Rien ne s'est produit jusqu'ici et rien ne pourra se produire jusqu'à ce que la Loi soit adoptée. Aucun établissement n'est enregistré à l'heure actuelle.

M. Whicher: Si c'est un établissement moderne et conforme au règlement, j'imagine que cela se fera automatiquement?

M. Williams: Je ne crois pas que nous ayons l'intention à l'heure actuelle d'exiger une nouvelle inscription chaque année. C'est le produit qui doit être enregistré chaque année.

M. Whicher: Ce qui améliore encore la situation. Je voulais poser une autre question au sujet de l'exportation des produits. L'industrie a soulevé la question l'autre jour, en mentionnant la Jamaïque, de la possibilité de commander un produit en précisant sa composition, mais il ne répondrait peut-être pas aux exigences canadiennes. Ce qui revient à dire que vous ne voudriez pas le vendre aux cultivateurs canadiens même si la Jamaïque disait qu'il n'y a aucun danger. Est-ce que vous autoriseriez un fabricant de produire et d'exporter le produit?

M. Williams: Je suppose qu'une question hypothétique, exige une réponse hypothétique. Tout dépendrait du degré de déviation de ce qu'on considère raisonnable. Évidemment, plusieurs mesures législatives prévoient différents modes d'homologation selon les besoins du pays auquel le produit est exporté. Par exemple, le bétail exporté dans un pays pourrait être accepté sans même un examen en vue de la brucellose, par exemple, peut-être parce qu'il n'y a pas de brucellose justement. Si le pays veut qu'on certifie que les pommes de terre de semence sont exemptes de telle ou telle maladie, nous pourrions le faire dans la mesure du possible mais s'il ne l'exige pas, nous ne le ferons pas.

Pour presque tous les produits, le genre de certificat que nous émettons dépend des exigences des pays importateurs, sujet toujours aux exigences internationales.

M. Whicher: Une dernière remarque en terminant. Je suis tout à fait d'accord et notamment pour les meubles danois. Pour qu'un fabricant de mobilier au Danemark puisse exporter son produit, il doit satisfaire à cer-

[Texte]

export anywhere in the world, unless his product comes up to a certain standard. Each year they have an examination of that furniture and if there is the slightest deviation, if the product is not up to standard, that particular firm cannot export. That is why Danish furniture is so highly regarded all over the world. I hope the same thing applies to pesticides and their export so far as Canada is concerned. Thank you, Mr. Chairman.

The Chairman: Mr. Côté?

M. Côté (Richelieu): Monsieur le président, M. Williams a répondu assez bien à la question que j'avais l'intention de poser.

L'article 4, dont on parle actuellement, a fait l'objet d'échanges serrés avec les témoins, la semaine dernière. Les témoins disaient qu'en raison d'un tel contrôle, il n'y a aucune justification apparente qui pourrait faire obstacle à l'exportation de ces produits. Nous avons alors posé des questions et ils ont fait une comparaison avec la Jamaïque. On est toujours conscient du produit qu'on peut vendre et si, malgré nous, on l'interdit au Canada et si le pays importateur, par exemple, la Jamaïque, est prêt à l'accepter, il y a toujours une question de valeur morale pour un pays de vérifier si un produit est condamné ou s'il est recommandé pour la vente à l'intérieur du pays. Par incompetence ou par ignorance, le pays importateur peut accepter un mauvais produit. C'est pourquoi, il est très important de ne pas modifier le Bill afin d'éviter des situations fâcheuses.

J'accepterais l'article tel quel, parce que c'est le seul obstacle que craignaient les témoins, c'est-à-dire l'exportation de produits indésirables et condamnés pour la vente au Canada. Si on biffait une partie du paragraphe (2), on permettrait ainsi l'exportation de produits indésirables. De plus, sur le plan moral de l'exportation, cela ne serait pas profitable pour nous.

Je serais d'accord pour accepter l'article tel quel.

● 1005

The Chairman: I think Mr. Williams will comment on this observation.

Mr. Williams: Mr. Chairman, I would like to comment. I was not present on Tuesday when the other witnesses were heard, but the only reference to the Jamaican market that our people within the Department have been able to find is a request from the Jamaican government for certification that, in fact, the pesticides being exported to that market did meet Canadian standards.

The Chairman: Thank you, Mr. Williams. I now recognize Mr. Clermont.

[Interprétation]

taines normes. On examine le mobilier chaque année et s'il y a la moindre déviation, on en interdit l'exportation. Ce qui fait la renommée du mobilier danois partout au monde. J'espère qu'on fera la même chose pour les pesticides au Canada. Je vous remercie, monsieur le président.

Le président: M. Côté.

Mr. Côté (Richelieu): Mr. Chairman, I think Mr. Williams answered the question which I intended putting.

Under Clause 4 that we are discussing at the present time, was the one that was most discussed with the witnesses last week. The witnesses said that because of such a control, there is no apparent justification that might create obstacles for exporting these products. We then asked questions and they made a comparison with Jamaica. We are always conscious of the product we can sell and if, in spite of ourselves, it is prohibited here in Canada, and if the importing country, Jamaica for example, is ready to accept it, I think that there is always the question of the moral value for the country to check whether a product is condemned or whether it is recommended for sale within the country. Through incompetence or ignorance the importing country may accept a bad product. That is why it is very important not to amend the bill, so as to avoid troublesome situations.

I think I would accept the clause exactly as it is, because it is the only obstacle that the witnesses feared, that is exporting undesirable and condemned products for sale in Canada. If we were to take out part of subclause 2, we would thus allow to export undesirable products. Moreover, from the moral point of view of exports, this would not be to our own benefit.

I would agree to accept the clause as it is.

Le président: M. Williams a un commentaire à faire à ce sujet.

M. Williams: Monsieur le président, je veux faire un commentaire. Je n'étais pas ici mardi lorsque les autres témoins ont été entendus, mais la seule référence au marché de la Jamaïque que nous ayons pu relever au ministère a été une demande d'homologation des pesticides exportés à la Jamaïque comme quoi ils sont conformes aux normes canadiennes.

Le président: Merci, monsieur Williams. Je passe la parole à M. Clermont.

[Text]

M. Clermont: Monsieur le président, mes questions concernant l'article 4 ont été répondues par les fonctionnaires du ministère. J'espère que vous avez conservé mon nom sur la liste pour l'article 5. Je reviens de nouveau à la charge, monsieur le président, pour dire qu'à l'avenir, lorsque nous aurons des témoins du secteur privé, nous devrions avoir également des représentants du ministère concerné. Si des représentants du ministère concerné assistent à la séance, lorsque ces témoins viendront comparaître, nous éviterons une séance additionnelle. J'espère que vous conserverez mon nom sur la liste pour l'article 5.

The Chairman: Thank you, Mr. Clermont. Your admonition will be brought before the steering committee and we will make a recommendation to the Committee as a whole. Mr. Douglas?

Mr. Douglas: Mr. Chairman, I agree with Mr. Clermont's opinion that it would be well to have at least some departmental officials at the table and available for questioning at times when we have visiting witnesses from outside the department.

Something occurred to me and I would have asked it on Tuesday, but we ran out of time. It is in connection with this registration. It seems to me that there might be an advantage, not only to the chemical industry but to the consumers of these products, to have this registration carried out, particularly in the light of new plants that may be established from time to time.

One could not be too sure, I believe, when a new plant is set up whether or not it might turn out to be a fly-by-night outfit that could get its customers in trouble. Not only that, but it could cause trouble in the whole industry. I think for this reason only registration of plants and operations is desirable. I do not know if there is anything to this or not, but that is a point I thought might be made.

The Chairman: Thank you, Mr. Douglas. I now recognize Mr. Thomson.

Mr. Thomson (Battleford-Kindersley): Mr. Chairman, my questions have already been asked.

The Chairman: Thank you, Mr. Thomson. Mr. Southam?

Mr. Southam: Thank you, Mr. Chairman. My supplementary question deals with the subject introduced by Mr. Horner and spoken to by Mr. Danforth, and I think Mr. Whicher touched on what I am most interested in. I think I detected a feeling of reluctance on the

[Interpretation]

Mr. Clermont: Mr. Chairman, my questions regarding clause 4 have been answered by the officials of the Department. I hope that you have kept my name on the list with regard to clause 5. Mr. Chairman, I would like to say again that in the future when we have witnesses from private industry here, we should also have officials from the Departments concerned here. If officials from the Departments concerned take part here, this will avoid an extra sitting.

I hope you will keep my name on the list with regard to clause 5.

Le président: Merci monsieur Clermont. Nous soumettrons votre admonition au comité directeur. Monsieur Douglas.

M. Douglas: Monsieur le président, je suis d'accord avec M. Clermont. Il serait nécessaire qu'au moins un fonctionnaire du ministère soit présent lorsque des représentants de l'extérieur viendront témoigner ici.

J'aurais certainement posé cette question mardi, si j'en avais eu le temps, au sujet de cet enregistrement. Il me semble qu'il serait avantageux, non seulement pour l'industrie chimique mais également pour le consommateur de ces produits, que cet enregistrement soit appliqué particulièrement vis-à-vis des nouveaux établissements. Il est difficile de savoir dans certains cas, si ces usines ne sont pas des usines clandestines qui causeraient des ennuis aux clients et rendraient un mauvais service à l'industrie. Je crois que cette raison seule suffirait à justifier l'enregistrement des établissements et des exploitations. Je ne sais pas s'il y a lieu de s'en soucier, mais il me semblait bon de le faire remarquer.

Le président: Merci monsieur Douglas. Monsieur Thomson.

M. Thomson (Battleford-Kindersley): Il n'est pas nécessaire que je pose mes questions, elles ont déjà été posées.

Le président: Merci monsieur Thomson. M. Southam.

M. Southam: Monsieur le président, une question supplémentaire qui se rapporte à celles de MM. Horner et Whicher. Cette question m'intéresse beaucoup. J'ai remarqué une certaine hésitation de la part du témoin, mardi, au sujet des frais d'enregistrement des

[Texte]

part of the witnesses on Tuesday relative to the cost of licensing products and their plants, too. I am thinking of the monetary problem here. They seem to feel that if they are going to have to pay a licence fee for a certain number of products and a licence fee for the plant itself it could become a rather burdensome annual cost.

• 1010

In the case of a plant which had 10, or 15, or 20 products under licence, with annual payment of these fees, could there not be a compromise so that they could register their plants without their being charged a fee? That would help to lighten the burden. I can see that in some plants it would run into a great deal of money. Which, in the final analysis would be passed on to the consumer. In other words, the registration would be automatic, without any assessment of a separate charge. What is the witness's comment on that suggestion?

Mr. Phillips: Mr. Chairman, at the moment we have no plans for fees for the registration of plants. Indeed, in our general operation in the areas of feed, fertilizer and pesticide, and so on our tendency has been—indeed, regulations respecting fertilizers are before the Governor in Council now—to reduce the annual registration and have it extended for a longer period, such as five years rather than one, and with no change in the fee. It is just to cover part of the cost of the application.

Another reason for proceeding in that way in a critical area such as pesticides is that if you are reducing the annual review of the product to assist in lowering the cost of inspection we should have the opportunity to examine the plants. The fees are not intended as a revenue-producer.

Mr. Southam: Do I understand, then, Mr. Chairman, that you would depend more or less on the cost relative to these inspections on the product and that the plant would be registered automatically?

Mr. Phillips: As a general statement, it would be fair to say that there will be no additional cost in the gross registration of pesticides and plants.

Mr. Southam: Thank you, Mr. Chairman.

The Chairman: Thank you, Mr. Southam. I recognize Mr. Lessard.

M. Lessard (Lac-Saint-Jean): Monsieur le président, toujours au sujet de l'article 4, j'aimerais obtenir une précision qui me semble importante en rapport avec les déclarations de nos témoins de mardi. Supposons une com-

[Interprétation]

produits et des usines. Si ces gens doivent payer des redevances pour certains produits, et ensuite pour l'usine, cela représente un fardeau annuel assez considérable.

Dans le cas d'une usine qui a 15 ou 20 produits, sous permis, monsieur le président, je me demande si on ne pourrait pas en arriver à un compromis, leur permettant d'enregistrer les usines sans avoir à payer une redevance. Car s'il y a beaucoup de produits, cela peut vraiment entraîner des frais considérables qui, en dernière analyse, seront payés par le consommateur. Autrement dit, l'enregistrement serait automatique sans qu'on leur impose un droit supplémentaire. Qu'en pensez-vous?

M. Phillips: Monsieur le président, en ce qui concerne cette question, nous n'avons pas l'intention, pour l'instant, d'imposer une redevance sur l'enregistrement des usines. D'ailleurs, en ce qui concerne les produits antiparasitaires et les engrais, et ainsi de suite, la tendance a été de réduire les frais d'enregistrement annuels et même de prolonger l'enregistrement sur une plus longue période, soit 5 années au lieu d'une, sans accroître les redevances, qui ne font que couvrir les frais de la demande. C'est pourquoi, dans un domaine important comme celui des produits antiparasitaires, si l'on élimine l'analyse annuelle du produit afin de réduire les frais d'inspection, il importe qu'on puisse inspecter les usines. Il ne s'agit pas du tout d'obtenir de l'argent.

M. Southam: Donc, monsieur le président, on compte sur les redevances relatives aux inspections et les usines seraient enregistrées automatiquement?

M. Phillips: En général, je pense qu'il est juste de dire qu'il n'y aura pas de frais supplémentaires, en ce qui concerne l'enregistrement en masse des produits antiparasitaires et des usines concernées.

M. Southam: Merci, monsieur le président.

Le président: Merci, monsieur Southam. Je donne maintenant la parole à M. Lessard.

Mr. Lessard (Lac-Saint-Jean): Mr. Chairman, still on clause 4, I would like to have a clarification which seems important to me, concerning statements made by our witnesses last Tuesday. Let us suppose we have a firm

[Text]

pagnie qui aurait plusieurs usines au Canada, situées dans les diverses provinces, et que dans chaque usine on produise une dizaine de produits différents. Supposons l'usine A, en Ontario, qui fabrique un produit numéro 3. La compagnie fabrique ce produit à cet endroit, parce qu'il y a la matière première sur place. Mais supposons que subitement, une force incontrôlable, l'oblige à fabriquer le produit numéro 3, dans une usine de Colombie-Britannique.

Ce produit numéro 3 ayant été enregistré et étant supposément produit à l'usine A, disons, en Ontario, peut-il être produit en Colombie-Britannique sans qu'il soit nécessaire à la compagnie d'obtenir l'autorisation? Peut-on faire enregistrer un produit fabriqué en Ontario, puis changer le lieu de fabrication sans demander un nouvel enregistrement?

The Chairman: Mr. Williams?

Mr. Williams: If it is a registered product which he can produce at the present moment anywhere in Canada he could produce it at 10 plants simultaneously with only one registration. When this new act comes into effect the intent will be that a registered product can be produced in any registered plant anywhere in Canada, presuming he meets the patent requirements and so forth.

The Chairman: Mr. Jefferson has a comment.

Mr. C. H. Jefferson (Director of Plant Products Division): Mr. Chairman, in the light of current information there are no pesticides being produced at the moment that appear to qualify for prescription in the sense of providing that plants in which they are made require registration.

It is anticipated, however, that perhaps within the life of a new act—say five years hence—there could be a biological-type product, for example, that could be an excellent vector for a pathogen that could be readily spread throughout the country by this vehicle, and the only way to deal with that really effectively would be through a pre-audit of that operation to prevent its happening—to make sure that the product was produced under sterile conditions. There could be a radioactive-type pesticide that could create a hazard if it were not on specification. This simply provides the authority to deal with these eventualities if they occur.

• 1015

As I say, at the moment, at least as far as the Plant Products Division is concerned, we have no recommendation in mind requiring

[Interpretation]

with many plants in Canada, in the various provinces, and that each plant would manufacture about 10 different products. Let us suppose factory "A", in Ontario, that manufactures product number 3. The company manufactures that product in Ontario because the raw materials are to be found on the spot. But let us suppose that all of a sudden, for an uncontrollable reason, product number 3, has to be produced in British Columbia.

This number 3 product having been registered and being supposedly manufactured in plant "A", let us say in Ontario, can it be produced in B.C. without the company having to apply for authorization? Can you register a manufactured product in Ontario, then change the place of manufacture without applying for new registration?

Le président: Monsieur Williams?

M. Williams: Si c'est un produit enregistré et si, à l'heure actuelle, il peut le produire n'importe où au Canada, il peut le produire dans 10 usines simultanément en vertu d'un seul enregistrement. Lorsque la nouvelle loi entrera en vigueur, si le produit est enregistré, on pourra le produire dans toutes les usines enregistrées, n'importe où au Canada, à condition qu'il satisfasse aux exigences du brevet.

Le président: M. Jefferson voudrait faire un commentaire.

M. C. H. Jefferson (directeur de la Division des produits végétaux): Monsieur le président, à la lumière des renseignements dont nous disposons, aucun produit antiparasitaire n'est produit qui semble y satisfaire, en ce sens, que l'usine qui les produit doit être enregistrée. Mais, supposons, que durant la vie utile d'une nouvelle loi, mettons cinq ans, un produit de type biologique qui serait un excellent secteur pour un pathogène, et qui le répandrait dans tout le pays, et que la seule façon de résoudre la question serait de contrôler la production de façon à éviter ce genre de choses. S'assurer que le produit est préparé sous des conditions stériles. Un antiparasitaire de type radioactif peut constituer une menace s'il n'est pas préparé selon les normes. Cette mesure nous donne simplement l'autorité de régler cette éventualité si elle se présente.

En ce qui concerne la Division des produits végétaux, nous n'avons aucune recommandation quant à l'enregistrement des produits

[Texte]

any registration of plants within the immediate or even foreseeable future.

The Chairman: Thank you, Mr. Jefferson. I recognize Mr. Horner.

Mr. Horner: Mr. Williams, you stated that up until now no plants had been registered. Am I correct in that?

Mr. Williams: That is correct.

Mr. Horner: Why do you now feel it necessary to have plants registered?

The Chairman: I think that question has just been answered.

Mr. Horner: I heard the answer. I will put the question in a different way. In answer to a previous question you said that you felt that a once-in-a-lifetime registration of a plant would be sufficient to allow your Department to police the industry.

The Chairman: Mr. Williams?

Mr. Williams: When I talked of a once-in-a-lifetime registration I was not implying that we would never look at the plant again.

For example, to go back to the old case of meat packing establishments, we register them. From time to time we ask them to make changes as their equipment may become such as not to be particularly suitable any longer, and things of that nature, but it is still the original registration. This is all I was trying to say.

Mr. Horner: What actual effect will a once-in-a-lifetime registration have? You are always registering the products and you are inspecting the formulae and the makeup of the products at all times?

Mr. Williams: The purpose of requiring registration is so that we have authority to say that no plant can produce such-and-such unless it is a registered plant. It is an enforcement measure. If they are not meeting the changed conditions, or if they are not keeping their plant up to date, shall I say—things of that nature—we are able to cancel the registration so that they cannot continue to operate and put an inferior, or unsatisfactory, or dangerous, product on the market.

Mr. Horner: Yes; but they cannot put a dangerous product on the market. You can red tag it, as the witness said on Tuesday, and take it off the market immediately.

Mr. Williams: That is correct; if we had inspectors in every plant at all times and if

[Interprétation]

dans l'avenir immédiat ou dans l'avenir prévisible.

Le président: Merci, monsieur Jefferson. Je passe la parole à M. Horner.

M. Horner: Monsieur Williams, vous avez déclaré qu'aucune usine n'a été enregistrée jusqu'ici. Est-ce exact?

M. Williams: C'est exact.

M. Horner: Pourquoi pensez-vous qu'il soit maintenant nécessaire d'enregistrer les usines?

Le président: Je pense que nous venons de répondre à cette question.

M. Horner: J'ai entendu la réponse. Je vais poser la question autrement.

Vous avez dit que vous voulez un seul enregistrement de l'usine durant sa vie utile, et que ce sera suffisant pour permettre à votre ministère de contrôler l'industrie?

Le président: M. Williams.

M. Williams: Eh bien! lorsque j'ai parlé d'un enregistrement unique, je ne voulais pas dire que nous n'inspecterons l'usine qu'une seule fois. Reprenons une fois de plus le cas des établissements d'emballage de viande. Nous les enregistrons puis, de temps à autre, nous leur demandons de transformer leurs installations, si elles ne sont plus appropriées, mais l'enregistrement est toujours le même. C'est tout ce que je voulais dire.

M. Horner: Quel effet réel aura un enregistrement unique et définitif? Vous enregistrez toujours le produit et vous contrôlez la formule et la composition du produit à tous moments.

M. Williams: Le but de l'enregistrement, est qu'alors nous aurons l'autorité d'interdire une usine de produire tel et tel produit, à moins qu'elle ne soit enregistrée. C'est une mesure coercitive. Si l'usine ne s'en tient pas aux normes, si elle n'est pas suffisamment moderne et ainsi de suite, nous pouvons annuler l'enregistrement, et ainsi empêcher l'usine de produire un produit inférieur et de le mettre sur le marché.

M. Horner: Elle ne peut pas mettre un produit dangereux sur le marché; car vous pouvez lui mettre une étiquette rouge et en arrêter la commercialisation.

M. Williams: C'est exact, si nous avons des inspecteurs dans toutes les usines à tout

[Text]

we did 100 per cent inspection of the commodities coming out of them.

Mr. Horner: Are you going to have an inspector in all plants after this bill is...

Mr. Williams: There is no intention of having inspectors continuously in any plants.

Mr. Horner: I have no further questions.

The Chairman: Thank you, Mr. Horner. I recognize Mr. Gleave.

• 1020

Mr. Gleave: I wish to pursue a point which I raised when you were before us the other day. I do not know whether I am using the right phrase but I asked about using generic terms and the labelling of these products so that the user would have a clearer idea of what he was buying and what he was using, and if I recall, the answer I got from Mr. Phillips was that there were 200 or 300 of these and that it could not be done.

The answer I got from the chemical people the other day, again speaking from memory, is that maybe it could be done in terms of numbers of names, but that what happened is that by the time it got out of the plant the plant people had put their trade names on it and the generic name got lost in the process. Did I get a full answer from Mr. Phillips the other day, and in the light of what these people say, is there any possibility of straightening this out?

Mr. Jefferson: Mr. Chairman, the trade, of course, like to use their trade names and the legislation would not prevent the trade from using their trade names. But the current regulations and the authority in this Bill do require that the active ingredients of the product be labelled with the generic name, or the chemical name if there is not a generic name. It must be referred to in what we term the name statement of the product. If it is "Joe Bloe's Weed Killer" it has to be "Joe Bloe's 2-4-D Weed Killer"—2-4-D being a generic term or a common name; an abbreviation of a rather complex chemical name. In addition to its having to be in the name statement it must also be in the guarantee statement, which is a declaration of the active ingredient content, both quantitatively and qualitatively. So the information is there if one reads the label.

[Interpretation]

moment et si nous faisons l'inspection de toutes marchandises produites par l'usine.

M. Horner: Est-ce que vous aurez des inspecteurs dans chaque usine?

M. Williams: Non, nous n'avons pas l'intention d'avoir des inspecteurs attachés de façon permanente à chaque usine.

M. Horner: C'est tout, monsieur le président.

Le président: Merci, monsieur Horner. Je donne maintenant la parole à M. Gleave.

M. Gleave: Je voudrais revenir à un point que j'ai soulevé lorsque vous avez témoigné l'autre jour. J'ai demandé si l'on pourrait pas utiliser le terme générique, je ne sais pas si c'est l'expression exacte, pour l'étiquetage des produits, de façon que l'utilisateur ait une meilleure idée de ce qu'il achète et de ce qu'il utilise.

Si je me souviens bien de la réponse que M. Phillips m'a donnée, il y a deux ou trois cents noms de ce genre et cela, on ne pouvait pas le faire. La réponse des gens de l'industrie chimique, et je parle à nouveau de mémoire, était que ce serait peut-être possible en ce qui concerne les noms, mais ce qui se produit c'est que, une fois que le produit sort de l'usine, les gens de l'usine y apposent leur marque commerciale. Le nom générique se perdant en cours de route. Ai-je eu l'autre jour une réponse complète de la part de M. Phillips, et, à la lumière de ce que ces gens ont dit, y a-t-il un moyen de résoudre ce problème?

M. Jefferson: Il est évident que les revendeurs veulent se servir de leurs marques de fabrique. Et on ne peut les en empêcher. Mais les dispositions actuelles et l'autorité de ce bill veulent que les ingrédients actifs du produit soient étiquetés sous leurs noms génériques, ou chimiques à défaut de noms génériques. Cela doit être mentionné dans ce que nous appelons le nom de déclaration du produit. S'il s'agit d'un désherbant, par exemple, ce sera le "Joe Bloe's 2-4-D, 2-4-D étant l'abréviation générique d'une désignation chimique complexe. Cela doit également figurer dans la déclaration de garantie, qui est une description à la fois quantitative et qualitative des ingrédients actifs utilisés—Toutes les données figurent ainsi sur l'étiquette.

[Texte]

Mr. Williams: May I ask Mr. Jefferson, Mr. Chairman, to carry that in so far as advertising is concerned.

Mr. Jefferson: Mr. Chairman, with respect to advertising, the present regulations do not cover advertising. I am not sure how it could be possible to require the advertising statement in every case to refer to the generic or the chemical name. It would louse up the message in many cases because of the difficulty of not having a common name or a generic name, and some of the chemical terms, as you will appreciate, are virtually unreadable, let alone pronounceable. So I do not know just how it would be possible—and this was referred to earlier—to simplify the language for some 350 different active ingredients that occur in pesticides, either singly or in various combinations.

Mr. Gleave: Mr. Chairman, the answer I am getting is that it is not possible to move in this direction or to get some action in this direction? If I have to accept this answer I will accept it, but I get a little fed up with getting lots of salesmanship when what I really want to know is what is in the can. That is essentially what we get too often on the buying end. Maybe it is not pronounceable but that does not bother me. It may bother me if it is not readable but it has to be pretty bad English to be not readable.

The Chairman: Mr. Phillips will comment.

Mr. Phillips: Supplementary to what Mr. Jefferson has said: Mr. Jefferson has said that the legislation now provides, and will continue to provide, for the proper identification of the product with the name of the chemical, or the generic name, or the common name—something more than just the words “weed killer”. He went on to say that in terms of the current legislation advertising is not covered. We have been informed that in terms of advertising in commodity legislation there is no need for it because the Criminal Code covers the matter of false and misleading advertising.

• 1025

The Chairman: I recognize Mr. Danforth.

Mr. Danforth: Mr. Chairman, I have been very much impressed by some of the answers we have been given by the witnesses this morning, and Mr. Jefferson's answer on the registration of plants certainly cleared up a lot of doubt that I had in my mind.

[Interprétation]

M. Williams: Est-ce qu'on pourrait demander également que cela figure dans la publicité?

M. Jefferson: Monsieur le président, les règlements actuels ne s'appliquent pas à la publicité. Je ne vois pas comment il serait possible d'exiger que le message publicitaire donne dans tous les cas le nom chimique ou générique. Il est certain que le message publicitaire serait complètement déformé en l'absence d'un nom courant ou générique pour la spécialité. Sans compter que certains des termes chimiques, vous vous en rendez compte, sont pratiquement illisibles et encore moins prononçables. Je ne vois donc pas comment cela serait possible. Il a été précédemment question de simplifier les noms des quelque 350 ingrédients actifs qui sont utilisés dans les antiparasitaires.

M. Gleave: Monsieur le président, donc la réponse qu'on me donne est qu'il n'est pas possible de progresser dans ce sens ou d'obtenir des mesures dans ce domaine. Si je dois accepter cette réponse, je l'accepterai, mais j'en ai un peu par-dessus la tête de ces considérations commerciales. Lorsque nous achetons, ce que nous voulons savoir c'est ce qu'il y a réellement dans le flacon. Ce n'est peut-être pas prononçable, mais cela ne me fait rien. Je serais peut-être ennuyé si ce n'était pas lisible, mais il faudrait que ce soit de l'anglais joliment mauvais pour que cela arrive.

Le président: Une question supplémentaire.

M. Phillips: Une question supplémentaire à l'intervention de M. Jefferson. M. Jefferson a dit que la loi prévoit maintenant et continuera à prévoir l'identification appropriée du produit, avec le nom des composants chimiques, ou le nom générique, ou encore le nom courant, avec quelque chose de plus que le simple mot: «herbicide». Il a poursuivi en nous disant qu'avec la loi actuelle, la publicité n'est pas affectée. On nous a informé qu'en ce qui concerne la publicité, la législation en matière de commodités n'intervient pas, du fait que le Code criminel couvre les cas de publicité mensongère ou trompeuse.

Le président: Une question supplémentaire. Je passe la parole à M. Danforth.

M. Danforth: J'ai été fortement impressionné par certaines des réponses fournies par les témoins ce matin, et celle de M. Jefferson au sujet de l'enregistrement des usines a certainement dissipé un grand nombre de mes doutes.

[Text]

I would like to pursue this matter if I may, Mr. Chairman, in another area but I think it is covered under Clause 4. I am wondering about the status of, for example a commercial sprayer or an individual who makes a chemical for a prescribed purpose who is perhaps a commercial farmer and not a licensed industry, as prescribed under Clause 4.

Most of the chemicals being used on the farms today are registered, or perhaps all of them are registered. But we are finding more and more a tendency towards the combination of chemicals for a dual or perhaps a triple purpose in their use; and some farmers have found to their dismay that some of these chemicals, when mixed, produce an entirely new compound and that some of the prescribed activities are either curtailed or, in other instances, magnified in their action.

Is there any control over this? Will there be stated on the prescribed or registered chemicals that under no condition should chemical "X" be used in conjunction with chemical "Y", or that if chemical "X" is to be used in conjunction with chemical "Y" certain conditions must be met? How are we going to control this? In effect a commercial sprayer, or one who sprays commercially, in combining registered compounds is perhaps manufacturing a new formula and by carrying it by plane, or by truck, or tank, he is transporting it and could be transporting it interprovincially, and by using it he is selling it, all of which conditions are carefully set out under this Bill and under this Clause. What is the status of this commercial sprayer and what safeguards do we have in this regard?

Mr. Jefferson: Mr. Chairman, I think I can perhaps answer this in two parts. First, labelling—and labelling includes more than just the printed paper on a package; it also includes the supplemental literature that goes with a product when it is purchased—is required to carry information on the compatibility of a particular pesticide with others with which it might be mixed. The trade normally will voluntarily include the positive statement that it will mix with certain materials, and similarly they will want to put on directions covering those mixtures that should not be made because of the incompatibility of the ingredients. But this is subject to review and scrutiny and assessment in the registration process and the review of labels, so that although there are errors of omission occasionally, by and large these are very few. So the information is there with the product as it is offered for sale.

[Interpretation]

Je voudrais aller un peu plus loin, monsieur le président, dans un autre domaine qui est couvert, je crois, par l'article 4. Et je me demande quelle est la situation en ce qui concerne par exemple un pulvérisateur professionnel, ou un individu fabriquant un produit chimique à certaines fins spécifiques, et qui est peut-être un fermier et non un industriel enregistré conformément à l'article 4.

La plupart des produits chimiques utilisés aujourd'hui dans les exploitations agricoles sont enregistrés, peut-être même tous. Mais on constate des tendances de plus en plus nettes à mélanger certains produits pour arriver à deux ou trois fins diverses. Des agriculteurs ont constaté à leur grand dam que certains de ces produits chimiques, lorsqu'ils sont combinés, donnent un mélange entièrement nouveau, les effets normalement obtenus étant soit amoindris, soit au contraire suractivés.

Y a-t-il quelque contrôle là-dessus? Indiquera-t-on l'étiquette des produits qu'en aucun cas le produit X ne doit être utilisé avec le produit Y, ou que le produit X, s'il est combiné avec le produit Y, doit l'être sous certaines conditions particulières. Comment allons-nous contrôler cela, car en fait un pulvérisateur commercial, lorsqu'il mélange des composés industriels, fabrique peut-être une nouvelle formule. A l'aide de son réservoir, de son camion ou d'un avion, il transporte ce produit, pouvant même faire des transports interprovinciaux, et en s'en servant, il le vend. Toutes ces opérations étant soigneusement régies par ce Bill et cet article, quelle sera alors la situation juridique de ce pulvérisateur, et de quelles garanties pouvons-nous nous entourer à son égard?

M. Jefferson: Je pourrais peut-être, monsieur le président, répondre en deux parties. Tout d'abord, en invoquant l'étiquetage, et celui-ci comprend beaucoup plus que le petit papier imprimé qui se trouve sur le contenant. Il y a aussi la documentation qui accompagne le produit lorsqu'on l'achète. On exige que des renseignements au sujet de la compatibilité d'un pesticide particulier avec d'autres soient inclus dans les informations que contient la documentation. Habituellement, les fabricants indiquent d'eux-mêmes les mélanges possibles. De la même façon, ils ont l'intention de donner des instructions à propos des combinaisons à éviter en raison de l'incompatibilité des ingrédients. Tout cela est sujet à examen lors du processus d'enregistrement des marques, si bien que malgré quelques erreurs d'omission, les renseignements sont là au moment de la mise en vente du produit.

[Texte]

Secondly, at the moment the commercial pest control operator is now free, in effect, to do as he pleases as far as direct federal supervision is concerned, but in some cases not with respect to provincial legislation. For example, the Ontario regulations constrain him to provide a control service and to use those products in accordance with their registered uses. As a matter of fact, I believe that only registered pesticides can now be legally used in the Province of Ontario.

• 1030

With respect to the provisions of this bill, where provincial legislation does not prevent the kind of thing that you are referring to—inappropriate mixtures and their sale to farmers—then it is our intention to develop regulations that will be operative and will prevent these individuals from selling this kind of a product and peddling this kind of a use, if you like, that would result in a product or a service that was either not effective or was going to cause damage or create a residue hazard.

The Chairman: Thank you, Mr. Jefferson. Shall Clause 4 carry?

Mr. Danforth: Mr. Chairman, may I please be permitted to carry on with a few supplementaries on this subject that I consider to be very important. Mr. Jefferson's explanation was quite full and I appreciate it, but I have two supplementaries.

In a combination of a series of complete registered products is the onus left strictly to the chemical company which is submitting a product for registration to supply information and experimental data with respect to the degree it will combine or not combine with other products, or does the Department through its extension service run the same degree of testing on this particular aspect of the product as it does on its component parts?

The Chairman: Mr. Jefferson?

Mr. Jefferson: Mr. Chairman, while the onus, of course, is on the applicant to support his representations for registration, in our regulatory function we are concerned as to the credibility of the information that is provided. In this process, depending on how reliable the data looks and its source, we may involve the research branch of the Department, in our examination of that product to what amounts to a verification test. It may not be as extensive as the work that was done by the firm but it will at least provide, if you

[Interprétation]

Deuxièmement, alors que l'exploitant de produits antiparasitaires est libre, pour le moment, de faire ce qu'il veut—car un exploitant de produits antiparasitaires est libre de faire ce qu'il veut, en ce qui concerne la surveillance fédérale directe, mais non, dans certains cas, en ce qui concerne les mesures législatives provinciales. Les règlements de l'Ontario, par exemple, forcent l'exploitant à fournir un service de contrôle et à employer ces produits selon l'usage enregistré. En fait, j'ai l'impression que seuls les produits antiparasitaires enregistrés peuvent être employés, légalement, en Ontario.

En ce qui concerne les dispositions du présent bill, là où la législation provinciale n'empêche pas le genre de choses que vous mentionnez, soit les mélanges inappropriés et leur vente aux cultivateurs, ce serait alors notre intention d'établir des règlements qui entreraient en vigueur et empêcheraient ces gens de vendre ce genre de produits ou d'en préconiser un usage qui rendrait le produit ou le service inefficace ou qui causerait des dommages ou une menace de résidus.

Le président: Merci, monsieur Jefferson. Est-ce que l'article 4 est adopté?

M. Danforth: Monsieur le président, est-ce que je pourrais continuer avec quelques questions supplémentaires à ce sujet, car j'estime que la question est importante. L'explication de M. Jefferson a été très complète et je l'apprécie, mais j'aurais deux questions supplémentaires à poser.

Dans une combinaison d'une série complète de produits enregistrés, est-ce que c'est la stricte responsabilité de la compagnie de présenter la demande d'enregistrement, de fournir les renseignements, les données au sujet des expériences, quant à la mesure dans laquelle le produit se mélange ou non avec d'autres produits, ou est-ce que le ministère, grâce à son service d'extension, fait les mêmes essais pour ces produits tout comme pour ses composants, ses ingrédients?

Le président: Monsieur Jefferson?

M. Jefferson: Monsieur le président, même si le fardeau relève de celui qui demande l'enregistrement pour prouver la demande, du point de vue de la réglementation, nous devons vérifier l'exactitude des données. Et selon que les renseignements soient ou non fiables, ou nous semblent fiables, nous pourrions peut-être demander à la division des recherches du ministère de faire une vérification ou un essai du produit. Ce ne serait peut-être pas aussi complet que l'essai fait par la compagnie, mais, au moins, pour l'éva-

[Text]

like, a third party assessment to verify that in fact the data is good. Does this answer your question?

Mr. Danforth: Yes. I have one further supplementary, if I may, Mr. Chairman, and it deals with the custom sprayer or the custom operator. I was very interested in the remarks to the effect that perhaps this matter would be considered fully under regulation and the necessary action taken. Could the witnesses give me some indication whether they feel that a commercial sprayer who has a seat of operation and, in effect, combines various chemicals for a specific purpose, could be classified as a manufacturer and would his premises be subject to registration? Also, because of the fact that the custom sprayer sells and distributes these products and he is a man that the farmers rely on, and perhaps will have to do so even more in the future as spraying and the use of chemicals becomes increasingly intricate and the machinery becomes even more involved and costly, can the witnesses say whether or not he should be duly licensed or registered both as a distributor and as a manufacturer under this proposed Act?

• 1035

The Chairman: Mr. Jefferson?

Mr. Jefferson: Mr. Chairman, it is again going to depend on the circumstances that develop. In the sense of the degree of risk, if you like, to the public interest or the farmers' interest that is associated with this kind of an operation, the authority would be here. I would suspect that if provincial action had been taken to, in effect, license these people—as is the case in Ontario—the exemption provision of this bill would be brought into effect to avoid a duplication of regulations. That is not a specific answer.

Mr. Danforth: My particular concern is that there would be a definite avenue whereby the welfare of the farmers and the products would be under direct supervision in this particular field to the same degree as they are in connection with the primary manufacture of the chemicals themselves. This is the point that I am trying to make.

The Chairman: I think Mr. Williams has a comment.

Mr. Williams: Mr. Chairman, if I might make a supplementary answer to the one Mr. Jefferson has provided, I think it is fair to say that when this legislation was drawn up it was not our intention to cover the type of

[Interpretation]

luation et la vérification, nous en faisons. C'est ce que vous demandez, monsieur Danforth?

M. Danforth: Oui. Une autre question supplémentaire, si vous me le permettez, monsieur le président. Il s'agit du pulvérisateur commercial. En vertu des règlements, cette question sera probablement étudiée et les mesures prises en conséquence. Les témoins pourraient-ils m'indiquer s'ils estiment qu'un pulvérisateur commercial qui a un siège d'exploitation et qui, en fait, combine ou mélange différents produits chimiques à des fins précises, pourrait être classé comme fabricant et est-ce que son établissement serait alors sujet à l'enregistrement? De plus, en raison du fait que le pulvérisateur commercial vend et distribue ces produits et que c'est un homme auquel les cultivateurs se fient et qu'ils devront le faire de plus en plus, à l'avenir, au fur et à mesure que la pulvérisation et l'emploi de produits chimiques augmente et devient de plus en plus complexe et que les machines deviennent de plus en plus compliquées, les témoins pourraient-ils alors nous dire si ces pulvérisateurs doivent être enregistrés ou avoir un permis d'exploitation, en vertu de la présente loi, en tant que distributeurs et en tant que fabricants?

Le président: Monsieur Jefferson?

M. Jefferson: Monsieur le président, encore une fois, cela dépendra des circonstances. Selon la mesure de risques, si vous voulez, pour l'intérêt du public ou l'intérêt du cultivateur en cause dans cette exploitation, l'autorité se trouverait dans la loi. J'imagine que si la province avait pris des mesures pour enregistrer ces producteurs ou ces pulvérisateurs, comme c'est le cas dans l'Ontario, on éliminerait le double emploi de ses fonctions grâce à cette mesure législative. Cette réponse n'est pas précise.

M. Danforth: Ce qui me préoccupe plus précisément, c'est qu'il y a certainement moyen d'assurer ou de garantir, de surveiller l'intérêt du cultivateur ou des producteurs, dans la même mesure qu'on le fait pour la compagnie qui fabrique le produit chimique. C'est ce que j'essaie d'éclaircir.

Le président: Je crois que M. Williams a un commentaire.

M. Williams: Monsieur le président, si je puis donner une réponse supplémentaire à celle donnée par M. Jefferson, je crois qu'il serait juste de dire ou exact de dire que nous n'avions pas l'intention, lorsque nous avons

[Texte]

operation that Mr. Danforth has described as a manufacturing operation. Rather, the intent was to utilize the provisions of Sections 31 and 33—I believe those are the two most applicable ones—to make it an offence for anybody to use a control product under unsafe conditions. In other words, it was our feeling that the question of custom sprayers and things of this nature could probably be regulated in a sufficiently satisfactory manner, subject to the conditions that Mr. Jefferson outlined in respect of provincial authority and so forth, by making it an offence to use any control product under unsafe conditions.

Mr. Danforth: But these commercial sprayers would not normally be registered federally under this proposed Act and in each instance a great deal of attention would have to be given to the provincial regulations in this regard. Am I correct in that assumption?

Mr. Williams: I think that was our intent. However, in further explanation I would say that if, for example, a very large and complex type of operation grew up it might be felt desirable to consider him a manufacturer and register him. On the other hand, I think everyone here appreciates the fact that the question of custom spraying covers a very, very wide gamut of operations. It goes from those people who are carrying on the type of operation that Mr. Danforth described to the people who are simply spraying their neighbours' fields at a very minimum charge per acre. Certainly we have no intent and no wish to put many of those operations under a registration procedure.

The Chairman: Thank you, Mr. Danforth.

Clause 4 agreed to.

On Clause 5—Regulations

Mr. Horner: In Clause 5, and particularly subclause (d), we are dealing with control of the company and the product. We are also dealing with the matter of prescribing the method by which the manufacturing could be carried out. Is it the intention of the Department to actually recommend under Clause 5(d) and (e) the prescribed methods of manufacturing in any way?

• 1040

The Chairman: Mr. Jefferson?

Mr. Jefferson: Mr. Chairman, as indicated earlier, these subclauses are there to make operative the provisions of Clause 4(2) and to the extent that products are prescribed for purposes of registering or regulating the

[Interprétation]

rédigé la mesure législative, de gouverner le genre d'exploitation décrite par M. Danforth, à titre de fabricant. Mais, plutôt, nous avons l'intention de nous reporter à l'article 31 et à l'article 33, qui sont à mon avis les deux plus applicables, pour que ce soit une infraction pour quiconque d'employer un produit antiparasitaire dans des conditions dangereuses. En d'autres termes, les pulvérisateurs commerciaux et autres choses de cette nature pourraient peut-être réglementer de façon satisfaisante, sous ces articles, les conditions énoncées par M. Jefferson, en ce qui concerne l'autorité provinciale, en précisant que ce serait une infraction d'utiliser un produit antiparasitaire dans des conditions dangereuses.

M. Danforth: Mais ces pulvérisateurs commerciaux, normalement, ne seraient pas enregistrés auprès du gouvernement fédéral, en vertu de cette loi. Il faudrait examiner les règlements provinciaux, très attentivement dans chaque cas, n'est-ce pas, à cet égard? Ma supposition est-elle correcte?

M. Williams: Je crois que c'était notre intention, oui. Mais, pour suppléer à ces renseignements, je dirais que s'il s'agit d'une opération très complexe nous pourrions peut-être, alors, la considérer comme fabricant et l'enregistrer. En ce qui concerne la pulvérisation sur demande, il y a une très vaste gamme dans ce domaine. Et si vous ne parlez que des pulvérisateurs qui le font pour leurs voisins à des frais très minimums par acre. Il y a certainement beaucoup de ces opérations, de ces exploitations que nous n'avons aucunement l'intention ni le désir d'enregistrer.

Le président: Merci, monsieur Danforth.

L'article 4 est adopté.

L'article 5—Règlements.

M. Horner: Dans l'article 5, et particulièrement le paragraphe d), nous parlons du contrôle du fabricant et du produit. Nous traitons aussi de la question de prescrire la méthode de fabrication. Est-ce l'intention du ministère de recommander, en fait, en vertu de l'article 5 d et e, de prescrire les méthodes de fabrication d'une certaine façon?

Le président: Monsieur Jefferson?

M. Jefferson: Monsieur le président, comme nous l'avons indiqué un peu plus tôt, ces paragraphes sont là en vue de l'application du paragraphe (2) de l'article 4. Et dans la mesure où les produits sont prescrits aux fins

[Text]

manufacturing process itself, then I think the intention would be to prescribe procedures of manufacture and so on. For example these could be; not permitting for the manufacture of insecticides and fungicides the use of equipment that was used for the manufacturing and formulation of herbicides, because of the high risk of cross contamination—this kind of thing.

Mr. Horner: Clause 5(k) deals with packaging and labelling. I can well understand the labelling, but is it the intention of the department to recommend how the product shall be sold, the type or size of packaging, or anything like that?

Mr. Jefferson: Mr. Chairman, we had in mind, with respect to this provision, carrying on an authority which exists under the current Act. For example, if a particular product happens to be a fire hazard, such as sodium chlorate, then the packaging for that should be of non-combustible material; or perhaps a material like selenium or antimony, which may be very effective as a bait, to prescribe that such a highly dangerous bait material must be in a tamper-proof type of container that ants can get into but youngsters cannot; or it may be a material which is quickly destroyed by ordinary radiation, in which case the prescription would be that it must be in opaque containers rather than clear glass. This is the type of standard, if you like, which is contemplated here.

Mr. Horner: In that same subclause what is meant by "respecting the advertising of the product"? As I said, I can understand the labelling but is this faulty advertising you are concerned with?

Mr. Jefferson: Yes, Mr. Chairman, this would be the type of thing, or it may well be, in getting back to an earlier question here, that in certain types of advertising the principle active ingredient must be declared along with the trade name. As an example, this is kind of thing could be provided for.

Mr. Horner: I have no further questions.

The Chairman: Mr. Danforth.

Mr. Danforth: Mr. Chairman, this Clause brings up one of the major points raised by the witnesses from the industry at a previous meeting, when they indicated that there were a large number of regulations that would be

[Interpretation]

de l'enregistrement ou aux fins de la réglementation du processus de fabrication même, je crois que l'objet serait alors de prescrire des procédés de fabrication, et ainsi de suite. Cela pourrait être par exemple, de ne pas permettre d'utiliser pour la fabrication d'insecticides et de fongicides du matériel qui avait servi à la fabrication et à la mise au point d'herbicides, en raison du grand risque de contamination.

M. Horner: L'alinéa k) de l'article 5 traite de l'emballage et l'étiquetage. Je comprends très bien que l'on veuille réglementer l'étiquetage, mais est-ce l'intention du ministère d'établir comment on doit vendre le produit, dans quelle taille et quelle sorte d'emballage, etc?

M. Jefferson: Monsieur le président, nous avons l'intention, par cette disposition, de maintenir l'autorité qui existe déjà aux termes de la Loi actuelle. Par exemple, si un produit particulier est inflammable, comme le chlorure de sodium, il doit être emballé avec une matière non combustible; ou dans le cas du sélénium ou de l'antimoine, qui peuvent être très efficaces comme appât, on prescrit que ces produits si dangereux doivent être dans un contenant que l'on ne puisse ouvrir, et dans lequel les fourmis puissent pénétrer, mais que les enfants ne puissent toucher; ou encore, s'il s'agit d'une matière qui est facilement détruite par les rayons ordinaires, on prescrit que le contenant doit être en matière opaque, et non en verre transparent. C'est là le genre de normes, si vous voulez, que l'on prévoit ici.

M. Horner: Qu'est-ce que l'on entend, dans ce même alinéa, par l'expression «concernant l'annonce de produits antiparasitaires»? S'agit-il de la publicité trompeuse?

M. Jefferson: Oui, monsieur le président, c'est de ce genre de choses qu'il s'agit; ou bien cela pourrait signifier, pour en revenir à une question posée tout à l'heure, que dans certains genres de publicité, il faut que l'ingrédient principal soit déclaré en même temps que la marque de commerce. C'est là le genre de choses que l'on veut réglementer.

M. Horner: C'est tout, je n'ai pas d'autres questions.

Le président: Monsieur Danforth?

M. Danforth: Monsieur le président, cet article soulève l'un des points principaux mentionnés par les témoins de l'industrie lors d'une réunion précédente, lorsqu'ils nous avaient dit qu'il y avait un très grand nombre

[Texte]

necessary and to which they would have to be subject carrying out the intent of this Bill. They pointed out to the Committee that in the Bill there did not seem to be any avenue of appeal regarding what they might consider undue hardship under any series or any single regulation as prescribed. In reading the Bill and thinking about their contention in this regard I am inclined to become quite sympathetic with their contention. I think it is well pointed out under two sections of this clause: for example, in Clause 5 (e), a regulation

• 1045

(e) respecting the inspection and operation of establishments in which any prescribed control products are manufactured:

As an example, there may be a chemical where the department may feel there are three steps necessary in the refining of this particular product to obtain the end result whereas a company might feel that two steps only are necessary to obtain the desired result. Therefore, there would be a conflict of opinion. However, under this Bill the company would have no recourse. They would have to accept as prescribed the rulings of this Bill and the ruling of the inspector.

Another example is subclause (f) under which the Governor in Council may exempt any control product. For example, two companies may each be making a product quite similar in nature: under this Bill one product could be exempt from certain regulations but in the case of the allied product it might be felt not desirable at that time to exempt it. This, too, would be a conflict of opinion. Since these regulations are quite extensive and do have quite a control over a particular industry, should there not be such a provision written into the Bill rather than merely leaving the matter to such regulations as may be prescribed. In this way there would be an avenue of appeal and then there would be no contention or argument. This appeal would be provided for.

Mr. Chairman, I do not wish to make a statement at this time, but I note that in other Bills brought before this Committee where farmers were concerned that they were given a direct avenue of appeal, and I am just wondering if this other industry is not entitled to the same consideration by the Committee.

Mr. Williams: I do not know, Mr. Chairman, if I can add much to the discussion that took place previously on this. The position of

[Interprétation]

de règlements qui seraient nécessaires et auxquels ils devraient se soumettre pour l'application de la loi envisagée. Ils ont signalé aux membres du Comité qu'il ne semblait pas y avoir dans le Bill de mention d'un droit d'appel à l'égard de ce qu'ils pourraient estimer être un traitement trop sévère en vertu d'un règlement ou d'une série de règlements. En lisant le Bill, et en songeant à ce qu'ils nous ont dit à cet égard, je suis porté à défendre leur point de vue. Je crois que cela ressort bien de deux sections de cet article. Par exemple, le règlement suivant à l'alinéa e) de l'article 5;

e) concernant l'inspection et l'exploitation des établissements dans lesquels est fabriqué un produit antiparasitaire prescrit.

Il peut y avoir, disons, un produit chimique pour lequel le ministère est d'avis que trois étapes sont nécessaires dans le raffinage afin de parvenir au résultat final, alors qu'une société estime que deux étapes seulement sont nécessaires. Il y aurait donc conflit d'opinions. Mais en vertu de ce Bill la société n'aurait aucun recours. Elle devrait accepter tout simplement le règlement prescrit en vertu de cette loi et la décision de l'inspecteur.

Un autre exemple en est l'alinéa f), selon lequel le gouverneur en conseil peut exempter n'importe quel produit antiparasitaire. Par exemple, deux compagnies peuvent fabriquer chacune un produit presque identique: or, en vertu de ce Bill, l'un des produits pourrait être exempté de certains règlements, alors que l'on pourrait estimer qu'il n'est pas souhaitable, à ce moment-là, d'exempter le produit connexe. Là encore, il y aurait conflit d'opinions. Étant donné l'ampleur de ces règlements et l'étendue de leur contrôle sur une industrie particulière, ne devrait-on pas inclure une disposition de ce genre dans le Bill, au lieu de laisser tout simplement la question aux règlements qui pourraient être prescrits. Il y aurait ainsi un droit d'appel, et cela éviterait les discussions et les conflits. Le droit d'appel existerait.

Je ne veux pas me lancer dans un discours, mais je constate que dans certains autres Bills soumis à notre Comité, et qui concernaient les agriculteurs, on avait donné à ces derniers un droit d'appel, et je me demande si cette autre industrie n'a pas droit à la même considération de la part du Comité.

M. Williams: Je ne sais pas, monsieur le président, si je peux ajouter beaucoup à la discussion qui a déjà eu lieu à ce sujet. Le

[Text]

the department is that it would be most unwise in terms of dollars to provide for an appeal procedure that required a duplication of the technical expertise to be found within the department. In other words, if it were to be referred to some other jurisdiction, it would seem to me that they would have to set up the expertise to evaluate the submission of the applicant for registration. This means, then, if one accepts that—and I am not suggesting that the Committee must accept it; I am not suggesting that at all—it is our feeling on the matter that it would be most difficult and most expensive to set up this type of thing. If one accepts that, it then becomes a question as to whether or not it is necessary to put in as a provision the right of any applicant for registration to appeal to a higher level within the department, whether that be the deputy minister, the minister, or the director general of the branch, or whatever level it might be. I suppose that our feeling within the department is that these appeals take place at all times anyway. Anybody who is unhappy about the action of a person at one level in the department certainly has never been constrained, to my knowledge, because it was not written into some Act that he had the right to appeal to another level. He has always made these appeals.

I suppose my only concern, gentlemen—and this is very much a philosophical one—is that a person who knows his opinion or decision is liable to appeal with any degree of frequency will tend to take less responsibility about his decision, in that he may say, "All right, I will turn it down. I do not want to take the weight of this decision. I will turn it down and let the deputy minister or the minister decide." I am giving a very personal opinion on this matter, but I would hate to see our employees within the department developing this philosophy that there is no need for them to look at this too hard because somebody at a higher level is going to decide finally. I personally believe that authority has to be delegated downward to the people who have the technical knowledge and the responsibility for the assessment of these products.

• 1050

Having said that I do not believe that in any way, shape or form, one should reach the conclusion that I am against appeal procedures because we do embody them. We embody them in the regulations. We have them in our Fertilizers Act.

In general, however, the appeals there are associated with a cancellation. We have them in our Canada Grain Act. It is against a cancellation, and in general the appeal takes the

[Interpretation]

ministère estime qu'il serait très imprudent, du point de vue financier, de prévoir une procédure d'appel qui nécessiterait que l'on double le personnel d'experts techniques que nous avons dans le ministère. En d'autres termes, s'il fallait renvoyer la décision à une autre autorité, il serait nécessaire, je pense, d'établir un groupe d'experts pour évaluer la déclaration de celui qui demande l'enregistrement. Cela veut dire que, si l'on acceptait cette mesure—et je ne veux absolument pas dire que le Comité devrait l'accepter—il serait, à notre avis, très coûteux et très difficile même d'établir ce genre de groupe. Si l'on accepte cela, il faut alors décider s'il est nécessaire ou non d'inclure une disposition donnant à tout candidat à l'enregistrement le droit d'en appeler à un niveau supérieur au sein du ministère, qu'il s'agisse du sous-ministre, du ministre, du chef de la direction ou de qui que ce soit. J'ai l'impression qu'au sein du ministère, nous estimons que ces appels se font sans cesse de toute façon. Qui-conque est mécontent de la décision prise par une personne à un niveau du ministère n'a certainement jamais été limité, pour autant que je sache, sans prétexte que le droit d'en appeler à un autre niveau n'était pas spécifiquement inclus dans la loi. Nul ne s'est jamais gêné pour en faire appel.

Ma seule préoccupation, messieurs,—et c'est une préoccupation purement philosophique—c'est qu'une personne qui sait que sa décision ou son avis sont souvent sujets à un appel tendra à prendre moins de responsabilités à l'égard de sa décision, et se dira peut-être: «Très bien, je vais refuser. Je ne veux pas prendre la responsabilité de cette décision. Laissons au sous-ministre ou au ministre le soin de décider.» C'est là un avis très personnel, mais je n'aimerais pas du tout voir nos employés du ministère acquiescer cette mentalité et estimer qu'ils n'ont pas besoin d'examiner la situation de trop près, puisque de toute façon quelqu'un d'autre va le faire à un niveau plus élevé. Personnellement, j'estime que l'autorité doit être déléguée vers le bas aux personnes qui ont les connaissances techniques nécessaires et sont chargées d'évaluer ces produits.

Ceci dit, je ne crois pas que l'on doive en arriver en aucune façon à la conclusion que je suis contre la procédure d'appel, car, en fait, nous la mettons en application, au moyen des règlements. Mais de façon générale, les appels que l'on trouve dans ces lois se trouvent en rapport avec une annulation; nous les trouvons dans la *Loi sur les grains canadiens*. C'est contre l'abrogation du permis. En général, l'appel prend la forme suivante: que la

[Texte]

form of the Act or the regulations saying that arbitrary decisions cannot be made; that if we wish to cancel something, the man whose something is being cancelled is entitled to a hearing in the Department prior to that. In other words, he is entitled to make his case.

As I said earlier with regard to the registration of pesticides, the man makes his case to start with. It is a technical decision. It is not a judicial decision, and this is where I find some difficulty where a man has submitted a very detailed and very voluminous technical resume of the qualifications where our people—I should not say a great number, but a considerable number of departments are involved in this decision. I think one appreciates this, mainly as I mentioned this morning the Food and Drug Directorate.

Other people that are involved are the Forestry Branch of the Department of Forestry and Rural Development, the Canadian Wildlife Service of the Department of Indian Affairs and Northern Development, and the Department of Fisheries, because of possible implications of the registration of a certain pesticide to their areas of jurisdiction. I do find some difficulty, frankly, in having an appeal as opposed to a hearing.

Now, having said that, I must repeat that I personally am not against appeal procedures. We go through them every day, but I do have some, as I say, philosophical concern about it. And I would have a great deal of concern, I think, strictly from the cost standpoint of duplicating the technical aspects or the technical expertise that is found within the Department and all these other departments.

Mr. Danforth: Mr. Chairman, may I pursue this? I can certainly appreciate the position of the Department in this regard, and my desire in the clarification of this point is that I feel that I am not interested in a direct appeal against the findings of a particular laboratory or in the registration of a particular product which would, as has been pointed out, require the duplication of some very technical services. I am not particularly interested in that aspect of it.

What I am interested in, Mr. Chairman, is in the remarks that have been put out that there are appeals taking place in the normal course of the implementation of most of these acts. My point is, since there are appeals taking place, I think they should be under prescribed conditions as set out in the act. If they want to call them hearings, I am prepared to go along with the hearing aspect of it. But I feel that in this particular interest, this particular act, when we are dealing with a whole industry—two industries as a matter of fact—we are dealing with agriculture and we are

[Interprétation]

Loi ou les règlements prescrivent qu'une décision arbitraire ne peut être prise; que si nous voulons annuler quelque chose, la personne qui fait l'objet d'une annulation a droit à une audience préalable au ministère. En d'autres termes, il a droit d'être entendu.

Comme je l'ai dit plus tôt, en ce qui concerne l'enregistrement des pesticides, l'homme présente sa cause tout d'abord; il s'agit d'une décision technique et non pas, si je puis dire, une décision légale ou juridique. C'est alors que j'ai une certaine difficulté alors qu'une personne aurait présenté un résumé très technique et très détaillé et qu'un certain nombre d'hommes dans notre ministère sont impliqués ou sont en cause. D'autres intéressés appartiennent aux Forêts, à la Faune, au Nord canadien, aux Pêcheries, en raison de certaines applications de l'enregistrement de certains pesticides dans leur propre compétence. Mais je trouve un peu difficile franchement, de prévoir un appel par opposition à une audience.

Cela dit, je dois répéter que, personnellement, je ne suis pas contre la procédure d'appel. Nous en avons tous les jours, nous les voyons tous les jours. Et comme je l'ai dit, je m'en préoccupe du point de vue philosophique un peu. Et du point de vue financier, je me préoccupe beaucoup plus du double emploi de l'expertise qui se fait dans notre ministère et dans tous les autres ministères.

M. Danforth: J'apprécie certainement l'attitude du ministère à cet égard. Je la comprends très bien. Je ne suis pas particulièrement favorable à un appel direct, interjeté contre les données trouvées par un laboratoire ou dans l'enregistrement d'un produit, ce qui exigerait, comme on l'a dit, le double emploi ou le chevauchement de certains services très spécialisés. Ce n'est pas cet aspect-là qui m'intéresse.

Ce qui m'intéresse, monsieur le président, c'est tout ce que l'on a dit à l'effet qu'il y a certainement des appels qui ont lieu dans le cours normal de l'application de la plupart de ces mesures législatives. Et alors, étant donné que ces appels ont lieu, j'ai l'impression qu'ils doivent avoir lieu en raison de prescriptions dans la Loi. Si ces appels doivent avoir lieu, je suis prêt à accepter les audiences, mais non dans ce but particulier, alors que nous traitons d'une industrie ou de deux industries plutôt, l'agriculture et l'industrie des produits chimiques, lorsque nous traitons

[Text]

dealing with the chemical industry. When we are dealing with two industries, we are dealing on a seasonal aspect where time is a very vital factor. For example, a whole shipment of pesticides may be held up at a very crucial time where maybe there is only a two or three-day factor, or five or six-day factor, under the clauses of this bill as I understand them. One individual can make the primary decision which could affect two industries. Now, surely it is not asking too much to have written into this particular bill definite mechanics whereby the decision of the one individual can be reconsidered and evaluated, and either confirmed or perhaps rejected at the time.

• 1055

This, Mr. Chairman, is what I am particularly interested in. Here we have departmental regulations to which, under the bill as given to the Committee, there is no redress or appeal as such. I am not interested, as I pointed out before, in the chemical laboratory aspect of it. I am interested in the mechanics, more or less in the field.

The Chairman: Mr. Williams.

Mr. Williams: If I could say one word in respect to this once again, Mr. Chairman. I trust it will not be repetitious. In so far as registration is concerned, it is not the decision of one individual. Therefore, I believe Mr. Danforth must be referring to Clause 9 (1) and (2), the question of seizure and detention of a commodity that is on the market. I could not agree more with Mr. Danforth, that in many agricultural operations time is very much of the essence. And I think it is just for that reason that we believe that this inspector must have the right to detain it. This crop, this commodity, if it is bad or if it is dangerous or if it is hazardous, must be detained very quickly. He must have the power to do this as quickly as possible so that it does not enter use and does not destroy some farmer's crop or does not render the product of this crop unsuitable for human consumption, or something of that nature.

Now, having said that, once again he reports these detentions, and I believe that we do have a very free access to the higher people, the higher levels within the Department where these people do, if they feel there is a problem, appeal the decision of this inspector. But I do not think that we would be adverse at all to putting something in the bill that required the inspector to take action within such-and-such a time so that this commodity would not be held up, or that the person whose commodity was put under detention had the authority to have a hearing at departmental headquarters, or make a submit-

[Interpretation]

de deux industries et d'un aspect saisonnier où le temps est très important, alors que toute une livraison de pesticides pourrait être retardée à un moment très important, très critique, alors que l'emploi doit en être fait dans cinq ou six jours. En vertu de cette mesure législative, si j'ai bien compris, un seul individu pourrait prendre la décision principale qui affecterait deux industries. Assurément, ce n'est pas trop demander que d'inclure dans ce bill particulier un mécanisme définitif pour que la décision d'un particulier puisse être étudiée de nouveau et réévaluée et soit confirmée ou soit rejetée, à ce moment-là.

C'est cela, monsieur le président, qui me préoccupe le plus. Nous avons ici les règlements ministériels qui, en vertu de la Loi présentée au comité, ne comportent aucune procédure d'appel. Encore une fois, je ne m'intéresse pas à l'aspect du laboratoire, si vous le voulez, mais plutôt de ce qui se produit dans l'entreprise agricole.

Le président: M. Williams.

M. Williams: Je voudrais dire un mot à ce sujet, monsieur le président, sans trop me répéter. En ce qui concerne l'enregistrement, ce n'est pas la décision d'un seul individu. C'est pourquoi je pense que M. Danforth se réfère probablement aux paragraphes 9 (1) et 9 (2) sur la saisie, les confiscations d'un produit sur le marché. Je suis entièrement d'accord avec M. Danforth que dans de nombreuses exploitations agricoles, le temps joue un rôle essentiel. C'est d'ailleurs exactement pour cette raison que nous pensons que cet inspecteur doit avoir le droit de saisie. Cette denrée, si elle est mauvaise, si elle est dangereuse, il faut la confisquer très rapidement. Il doit avoir la possibilité de le faire aussi rapidement que possible de façon qu'il ne soit pas utilisé, qu'il ne détruise pas la récolte d'un agriculteur ou qu'il ne la rende pas inutilisable pour la consommation même.

Il fait rapport de ses confiscations et je crois que nous pouvons contacter directement le fonctionnaire supérieur du ministère et c'est là qu'on peut faire appel à la suite des décisions de l'inspecteur si on le juge bon. Mais je ne crois pas que nous nous opposions de quelque façon que ce soit à prévoir une disposition de la Loi exigeant que l'inspecteur agisse dans un certain délai de façon que la denrée ne soit pas retardée ou que la personne dont la denrée a été confisquée, ait la possibilité d'être entendue au bureau central du ministère ou ailleurs. Je ne m'y oppose pas du tout.

[Texte]

sion on this matter. I do not find any particular difficulty with this type of approach.

Mr. Peters: Is Mr. Danforth making reference to this clause or is it to the other clause. Because I remember at the last sitting, Mr. Danforth raised the question about a particular commodity. There was a long delay taking place in the registration of this, and there was considerable difference of opinion between experts as to whether or not it should be registered, whether the commodity should be registered. The appeals to that would be totally different appeals than the appeals to Clause 9. I ask this for clarification, because if we are discussing the reluctance by inspectors and departmental officials to recognize a newly developed product, I think that kind of appeal would be totally different from an appeal to a seizure by an inspector. I would like to know which we are talking about.

Mr. Danforth: Mr. Chairman, I am dealing at present with the latter and it brought up by the matter of appeal. I think under the former there is recourse and I am delighted to have the witness state that the department would find no great difficulty in entertaining, perhaps, an objective of this Committee to have the mechanics set out. This is brought up particularly by the information elicited at the last hearing.

• 1100

It seemed that if an inspector is proven to be wrong, normally there is no redress for any loss of sales over a period of a week, or any crop loss that may be caused by the actions of an inspector which are taken with the very best of intent for the protection of the farmers. This is why I am particularly interested, because the onus is on the government. The governmental department has to take the responsibility and there is no redress as far as the company is concerned under direct legal action. This is why I am very interested in having this particular point cleared up.

Mr. Williams: Mr. Chairman, I would like to ask a question. I was not present at the meetings on Tuesday. I was just wondering if the trade had documented in any way, shape or form where their operations had been impaired by, shall I say, arbitrary action on the part of either the Department or any of its inspectors and whether they felt that they should be entitled to compensation if, for example, our man put something under detention because of suspicion and later released it.

[Interprétation]

M. Peters: Est-ce que la question de M. Danforth s'adresse, se rapporte à cet article ou à un autre article? M. Danforth nous parle du cas où certaines denrées particulières sont retardées, sont bloquées en ce qui concerne l'enregistrement. Les experts n'étaient pas tous d'accord, il y avait une grande variété d'opinions en ce qui concerne l'enregistrement. L'appel au sujet d'un enregistrement serait un appel tout à fait différent de celui de l'article 9. Il s'agit d'un autre titre d'appel. Je voudrais avoir cet éclaircissement, car nous discutons les hésitations qu'ont les inspecteurs ou les fonctionnaires du ministère à admettre que c'est un nouveau produit. L'appel que l'on fait à ce sujet serait tout à fait différent de ceux qu'on peut faire à la suite de la saisie d'un produit. J'aimerais savoir de quel appel nous parlons.

M. Danforth: Monsieur le président, je parle de ce dernier cas. Je suis très heureux d'entendre le témoin dire qu'il ne serait pas très difficile pour le ministère de s'occuper des dispositions permettant d'arriver à cela. Cela se rapporte à ce qui a été dit lors de la dernière séance.

Si un inspecteur se trompe, si on prouve qu'il s'est trompé, normalement il n'y a pas de compensation pour les pertes de ventes d'une semaine ou les pertes de récoltes pouvant découler de mesures prises par un inspecteur, mesures prises dans les meilleures intentions du monde pour protéger l'agriculteur. C'est pourquoi cette question m'intéresse tout particulièrement. En fait, c'est au gouvernement d'accepter la responsabilité. C'est au ministère d'accepter la responsabilité et il n'y a pas de compensation en ce qui concerne la société, à la suite de poursuites judiciaires. C'est pourquoi je voudrais que ce point particulier soit éclairci.

M. Williams: Monsieur le président, je voudrais poser une question. Je n'ai pas assisté à la séance de mardi. Est-ce qu'il y a eu des cas où l'exploitation a été perturbée par des décisions arbitraires du ministère ou des inspecteurs. En supposant, par exemple, que l'on ait bloqué un produit qui ensuite a été débloqué?

[Text]

The Chairman: I think I would be at liberty to report here that my view is that there was no criticism. They did not indicate that there had been any hardship; there had been complete co-operation and satisfaction, but they were a little bit concerned about what might happen in the future. Is that a fair expression of their feelings?

Mr. Horner: Yes. They said that in the past, though, that a number of products had been "red labelled", to use the expression. I think one manufacturer said that in two cases in the past five years, there had been—

Mr. Williams: Oh, yes; we have put products under detention. I am not arguing about that at all. I was just wondering whether they did feel that they had a claim against the government where our people put things under detention and later released them.

Mr. Horner: They did not have a claim, but they did want the right to appeal the decision your Department makes, not under Clause 5, but Clause 9.

Mr. Peters: That is the point I tried to make in my question to Mr. Danforth. It is not under Clause 5. Their appeal was to the judicial sections in Clause 9 and I think that is a different kind of appeal. The question that Mr. Danforth raised the other day and that Mr. Williams answered was concerning a specific problem that had been detained in the finalizing of a decision for five years over a new chemical. I think the Committee would like to know whether Mr. Danforth is interested in moving an amendment to provide for appeal in this clause for that kind of decision?

The Chairman: The Chair has not received notice of any amendment under this clause. I do have two or three names; we are anxious to make a little progress. I have Mr. Douglas, Mr. Barrett and Mr. Thomson to be recognized.

Mr. Southam: Mr. Chairman, I have a supplementary to the question just put by Mr. Williams with respect to the witnesses at the last meeting on Tuesday. On this topic of compensation for the trade in case of a decision detrimental to them they said that they were interested in the appeal factor, but they had not made any claim for compensation in case of a wrong decision and they did not have any such intention; that was not in their minds at all. That is just to clarify the question Mr. Williams posed.

The Chairman: Thank you, Mr. Southam. Mr. Douglas?

[Interpretation]

Le président: D'après moi, il n'y a pas eu de critique. Ils n'ont pas dit qu'ils avaient eu des difficultés, mais simplement qu'ils éprouvaient certaines inquiétudes quant à l'avenir. C'est bien cela?

M. Horner: Oui, car un certain nombre de produits ont été étiquetés «en rouge» pour reprendre l'expression consacrée. Un fabricant a dit qu'à deux reprises, ces cinq dernières années...

M. Williams: Je ne parle pas de la confiscation. Je voulais savoir si ces gens pensaient qu'ils pouvaient se plaindre du gouvernement à la suite de mesures prises à la suite de confiscations débloquées par la suite.

M. Horner: Ils ne se plaignaient pas, mais ils voulaient avoir la possibilité de faire appel, pas en vertu de l'article 5, mais en vertu de l'article 9.

M. Peters: Il ne s'agit pas de l'article 5. L'appel sera porté aux dispositions juridiques de l'article 9. C'est un appel tout à fait différent. La question qu'a soulevée M. Danforth et à laquelle a répondu M. Williams se rapporte au problème particulier de la confiscation et de la décision définitive, après cinq ans, en ce qui concerne un nouveau produit chimique. Je pense que le Comité voudrait savoir si M. Danforth est intéressé à proposer une modification prévoyant un appel, dans cet article, à la suite de ce genre de décision.

Le président: La présidence n'a reçu aucun préavis de modification pour cet article. J'ai deux ou trois noms; je voudrais que nous avançons. J'ai M. Douglas, M. Barrett et M. Thomson.

M. Southam: J'ai une question supplémentaire à poser à la suite de la question de M. Williams au sujet des témoins de mardi dernier. Ces gens nous ont dit qu'ils s'intéressaient au facteur appel, mais qu'ils ne voulaient pas de compensation à la suite de décisions erronées et qu'ils n'avaient pas l'intention d'en demander.

Le président: Merci, monsieur Southam. Monsieur Douglas?

[Texte]

Mr. Douglas: I do not know whether this is the proper time to bring this up or not, Mr. Chairman, but there is a problem with a chemical in Western Canada and, I suppose, in all of Canada. It is the wild oat chemical Avadex and some fears have been expressed that it is going to be scarce again this year. I understand one company only has the right to manufacture this. Is it Monsanto? How long does one company retain the exclusive right to manufacture a chemical like this and what are the prospects for a supply of this chemical this year?

• 1105

The Chairman: Mr. Jefferson will provide this information.

Mr. Jefferson: Mr. Chairman, Monsanto is the manufacturer of the Avadex formulations. I believe there are two different formulations. If I recall correctly the product came on the market about eight years ago, 1960 I believe. I do not know how long their patent protection lasts. The figure of 17 years runs in my mind, but this is a matter which is quite outside the scope of our activities.

With respect to the shortage, I think this product is in worldwide demand and it is only manufactured, I believe, at one point and that is St. Louis, Missouri. There is only one manufacturing plant and the company has not been able to keep up with the demand.

There is an alternative product made by Union Carbide, but the method of application is different. One is a preplant and one is a post emergence product.

The Chairman: Mr. Barrett, do you have a question?

Mr. Barrett: Mr. Chairman, I would like to make a comment on a point that was touched on by Mr. Douglas. I think some of the people here are at a loss to a degree to understand how a product gets on the market in the first instance. I happen to be affiliated with a company that had several by-products, not necessarily in this particular field, but by-products nevertheless. Long, long before these are put on the market they have their research people; they have their marketing people; they have all the facilities to look into the situation, and they are dealing with government long before they start to produce these particular products. They know all the problems that exist.

Therefore, I do not think this is strange to any particular chemical group, or any other group, that is in the market in Canada. There

[Interprétation]

M. Douglas: Je ne sais pas si c'est le moment de poser cette question, monsieur le président. Il y a un problème en ce qui concerne les produits chimiques dans l'Ouest et dans tout le Canada. Il s'agit de l'avadex. Il est possible qu'il y ait pénurie une fois de plus cette année. Une compagnie seulement a le droit de fabriquer ce produit. Il s'agit de la compagnie Monsanto? Combien de temps est-ce qu'une compagnie conserve le droit d'être la seule à fabriquer un produit comme celui-ci et quelles sont les possibilités d'approvisionnement de ce produit cette année?

Le président: M. Jefferson vous répondra.

M. Jefferson: Monsieur le président, Monsanto est le fabricant de la formule «avadox». Je crois qu'il y a deux formules différentes. Le produit, je crois, a été lancé sur le marché il y a environ huit ans, en 1960, je crois. Je ne sais pas combien de temps dure la protection que leur donne le brevet. Je crois qu'il s'agit de dix-sept ans, mais c'est une question qui est tout à fait en dehors du cadre de nos activités.

En ce qui concerne la pénurie, ce produit est demandé dans le monde entier. Je crois qu'il est fabriqué à un seul endroit, à Saint-Louis, Missouri. Il y a une seule usine de fabrication et la compagnie n'a pas réussi à satisfaire la demande.

Il y a un autre produit fabriqué par Union Carbide, mais la méthode d'application est différente. L'un est utilisé avant que l'on plante et l'autre après.

Le président: Monsieur Barrett, vous avez une question?

M. Barrett: Monsieur le président, je voudrais faire un commentaire sur une question que M. Douglas a abordée. Je crois que certains membres du Comité sont un peu perdus. Ils se demandent comment un produit est lancé sur le marché pour la première fois. Parfois, ils viennent de compagnies qui ont des sous-produits d'une autre catégorie et, longtemps avant la fabrication et la commercialisation, les chercheurs et les gens du marketing examinent la situation et le gouvernement peut examiner lui aussi le produit.

Donc, ce n'est pas particulier à un groupe chimique qui se trouve au Canada ou à d'autres groupes qui se trouvent au Canada. Je

[Text]

is also the patent process that was suggested a moment ago. They involve themselves in all these areas. I really think they were overdramatic when they appeared before us last week; I can only feel that they were overdramatic. There is no reason to assume as they began with government that they cannot live with government. This is the feeling I have in relation to this particular Bill.

The Chairman: Thank you, Mr. Barrett. Mr. Thomson?

Mr. Thomson (Battleford-Kindersley): Mr. Chairman, in relation to something that has been said, as I understood the companies' desire for appeal the other day they said it was a matter of time and urgency. For example, as you know the spraying season is a short one and they may have a whole year's supply of spray tied up for a year and the emphasis, as I understood it, was on their desire for appeal as the matter really was a problem at time.

If—and I say "if" as I understood them—there was a problem, if something was red tagged, they should be able to appeal quickly so that if nothing was wrong with the product they could put it on the market that season, rather than carry it over for another year.

In dealing with any proposed amendment I think this is where they desired the emphasis to be placed, at least as I understood it.

The Chairman: Is there a comment?

Mr. Williams: Well, only this: I suppose it is somewhat repetitious, but certainly under Clause 9 (2)—and as I mentioned earlier I believe that the inspector must have this authority to act immediately for exactly the same reasons as the Chemical Association put forward the need to have decisions on the matter quickly if it is detained for reasons the inspector will release it the next day if its problem is corrected.

So far as appeals I will guarantee everyone in this room—or any other room, I suppose—that any time any sizable quantity of product is put under detention about which the company itself has no reservations, a telegram will be on my desk that day, or on the Minister's desk that very same day. Therefore, when we are speaking on appeals, the appeal procedure, I can assure you, is extremely rapid.

When we do not hear about it is when the company itself may have some reservations about the product. But certainly, as I said before, there are no reservations that I know

[Interpretation]

pense que lorsqu'ils attaquent un certain domaine, il y a la question de l'achat du brevet. Tous ces domaines sont examinés et je crois que ces gens ont été beaucoup trop pessimistes lorsqu'ils sont venus ici. Ils disent qu'ils ne peuvent pas supporter les exigences du gouvernement; je ne crois pas que ce soit exact.

Le président: Merci, monsieur Barrett. Monsieur Thomson?

M. Thomson (Battleford-Kindersley): Des compagnies, l'autre jour, ont demandé le droit d'appel. Elles ont dit que c'était une question de temps et d'urgence. Comme vous le savez, la saison de pulvérisation est courte et parfois un stock pour une année entière peut être bloqué pendant un an. Ils souhaitent pouvoir faire appel très rapidement. S'il y a une difficulté, si le produit est étiqueté en rouge, ils veulent pouvoir agir rapidement de façon à pouvoir vendre le produit sur le marché cette année-là au lieu d'attendre un an. En ce qui concerne les projets de modification, pour eux, le plus important, c'est le facteur temps. C'est comme ça que je l'ai compris du moins.

Le président: Quelqu'un a-t-il des observations à faire là-dessus?

M. Williams: Peut-être que je me répète, mais, en vertu du paragraphe 2 de l'article 9, si un produit est confisqué pour une certaine raison, l'inspecteur doit avoir l'autorisation d'agir immédiatement pour exactement les mêmes raisons que l'Association des fabricants de produits chimiques a demandé qu'on agisse rapidement. Si le produit n'est pas défectueux, l'inspecteur le libère le lendemain.

En ce qui concerne les appels, je peux garantir à tous, ici ou ailleurs, que toutes les fois qu'une quantité importante d'un produit est confisquée alors que la compagnie n'a aucune réserve au sujet de ce produit, je reçois un télégramme le jour même, ou le ministre reçoit un télégramme le jour même. Donc la procédure d'appel est très rapide.

Lorsque nous n'en entendons pas parler, c'est que la compagnie elle-même a quelques réserves quant à ce produit. Comme je l'ai dit avant, les compagnies n'hésitent nullement à

[Texte]

of on the part of any company to appeal to any level within the Department if it considers that it has an excellent case.

Mr. Thomson (Battleford-Kindersley): A supplementary question, Mr. Chairman. In the case of Mr. Williams and the Department officials at the moment I do not think we have any complaint. I think they are probably very fair, but speaking generally would you care to comment on whether it should be a regulation or whether it should be written in the act? Would this be a fair question? We are not complaining about you, but tomorrow it could be someone else that we might have reason to complain about.

Mr. Williams: All I can say in that case is that if this is the problem, if this is a real problem—and there have been many ministers and many deputy ministers since this Act was written—it would seem to me that the industry should have been able to document the fact that it was a problem. But if it may be a problem, the only recourse is for appeal outside the Department. I am talking now about a formal appeal within this. That, in my view, is highly impractical. They would have to be able to document the fact that they have been hurt in the past. As I say, this Act has been in effect for a great length of time under a great number of people.

The Chairman: Mr. Barrett.

Mr. Barrett: I am just going to ask one question for my own information, if I may, Mr. Chairman. Was the tagging of these items due to a control process breaking down within a manufacturing plant, or was it a case of a new product put out without, shall we say, proper agreement with the government in the first instance as to whether this product was reasonable or acceptable? Was it just a control process that broke down within that organization, within that factory?

Mr. Williams: I do not think I could detail all the reasons why various commodities have been detained. I suppose probably the most common reason for detention is incorrect labelling. Mr. Jefferson or Mr. Houghton might wish to comment on this matter. Certainly I do not believe that it is because people are trying to sell a product that is not registered.

Mr. Jefferson: Mr. Chairman, perhaps the most significant reason for detention is in the area of labelling, as Mr. Williams has mentioned; where the product has been found on analysis to be way off specifications that are inherent in the labelling. For clarification, there are two areas of concern. One is the

[Interprétation]

faire appel au Ministère, si elles considèrent qu'elles ont une bonne cause.

M. Thomson (Battleford-Kindersley): Dans le cas de M. Williams et des fonctionnaire du ministère, je n'ai pas à me plaindre d'eux. Pensez-vous pouvoir nous dire pour quelles raisons cela devrait plutôt figurer dans le règlement plutôt que dans la Loi?

Nous ne nous plaignons pas de vous mais il y en aurait peut-être d'autres plus tard au sujet desquels nous aurions raison de nous plaindre.

M. Williams: Tout ce que je peux dire dans ce cas, si tel est le problème, que ce problème est réel. De nombreux ministres et sous-ministres ont passé depuis que la loi a été rédigée. J'espère qu'on pourra prouver que c'était un véritable problème. S'il y a vraiment des difficultés, le seul recours est de faire appel en dehors du ministère. Je pense à un appel selon les formes qui, à mon avis, n'est pas pratique du tout, s'il n'est pas prouvé qu'il y a vraiment un problème car, comme je l'ai déjà dit, cette Loi est appliquée depuis très longtemps et par beaucoup de gens.

Le président: Monsieur Barrett.

M. Barrett: Je voudrais poser une question pour ma propre gouverne, si vous m'y autorisez, monsieur le président, lorsqu'il y a eu saisie, est-ce qu'il s'agissait de produits nouveaux, de produits qui ont été mal fabriqués à la suite des difficultés dans une usine, ou bien d'un contrôle de fabrication dans une usine.

M. Williams: Je ne crois pas pouvoir vous donner toutes les réponses pour lesquelles il y a eu saisie. Je pense que la raison la plus courante des confiscations est un mauvais étiquetage. M. Jefferson ou M. Houghton pourraient peut-être nous parler de cette question. Mais je ne crois pas que c'est parce que des gens essaient de vendre un produit qui n'est pas enregistré.

M. Jefferson: Monsieur le président, la raison la plus courante des confiscations est la question de l'étiquetage, mais comme l'a indiqué M. Williams, parfois le produit n'est pas du tout conforme aux caractéristiques prévues sur l'étiquette. Si vous me permettez de revenir à un autre domaine, Monsieur le pré-

[Text]

action of an inspector in detaining a product which has been registered and which is on the market for sale and for purchase. This is where the red tagging takes place. The other area of concern to industry is in the delays that do occur in processing an application for registration.

A few statistics might help clarify the logistics of this situation. Since 1960 they have presented for registration and have had registered 95 new chemicals. These are new, discrete chemicals. The total number of new products in 1968 was 315. The number of new chemicals like barabane in Avedex—have I got the right common name?—ranges from 7 in one year to 17 in another year. The average cost of research is probably not less than \$2 million per product, so here in a period of eight years we have had to process something well over \$200 million worth of research and data. If the number of new products were to increase, to double this incidence and we were not able to anticipate it, then there would be a delay in the processing of that product and the trade naturally would be concerned at that kind of delay.

● 1115

The Chairman: A clarification for the record, Mr. Jefferson. You said \$200 million. Did you mean that, or was it \$2 million?

Mr. Jefferson: I meant \$200 million; over this period of eight years, roughly 95 new products at about a minimum of \$2 million per product.

Mr. Horner: By the industry?

Mr. Jefferson: By the industry but also by governments and by private research institutions.

The Chairman: Mr. Williams has a comment.

Mr. Williams: I think it might help clarify the situation if I explained very briefly the procedures that are followed in this kind of inspection. Our inspectors under this Act do not simply go into a place where this product is being sold, stored or held and say to the fellow, "This does not look very good, I am going to put it under detention." They go in and take samples, send them to a laboratory where the samples are tested, and the results go back through a district supervisor to the inspector; then he issues a detention certificate. He is required to specify in the certificate the reasons why he put it under detention, among many other things. He puts these

[Interpretation]

sident, pour éclaircir la situation, certains produits ont été enregistrés, ils sont sur le marché et ils ont été vendus, c'est alors que l'inspecteur peut y mettre une étiquette rouge. Il y a un autre domaine qui préoccupe l'industrie. Il s'agit des retards en matière d'enregistrement pour la fabrication.

Je peux vous donner des exemples en ce qui concerne cette situation. Depuis 1960, on a soumis pour enregistrement, et on a enregistré quatre-vingt-quinze produits chimiques, il s'agit de nouveaux produits chimiques. Le nombre de nouveaux produits en tout, en 1960, était de trois cents quinze. Le nombre de nouveaux produits chimiques comme barabane ou avadex, s'échelonnait entre sept en une année et dix-sept une autre année. La moyenne des frais de recherches n'est certainement pas inférieure à deux millions de dollars par produit, donc sur huit ans, nous avons dû faire des examens au coût de plus de deux cent millions de dollars pour les recherches et les données. Si le nombre de nouveaux produits double et que nous ne puissions pas prendre les devants il y aurait alors un retard dans la fabrication de ce produit et l'industrie, évidemment, pourrait s'inquiéter de ces retards.

Le président: Éclaircissements, monsieur Jefferson, deux cent millions de dollars ou deux millions?

M. Jefferson: Je voulais dire deux cents millions sur huit ans, à peu près quatre-vingt-quinze nouveaux produits à environ deux millions de dollars par produit.

M. Horner: Par l'industrie?

M. Jefferson: Par l'industrie, par l'État et par les institutions de recherches privées.

Le président: M. Williams a un commentaire.

M. Williams: Je pense qu'il serait bon que j'éclaircisse la situation pour les députés et que j'explique quelle est la procédure suivie pour ce genre d'inspection. Nos inspecteurs, dans l'application de la Loi, ne se contentent pas d'aller à un endroit où le produit est fabriqué, stocké et déclarent: «Ce produit n'a pas l'air très bon et je veux le confisquer». Je parle évidemment de gens qui ont travaillé dans des laboratoires, de gens qui ont évalué les résultats et qui alors sont adressés aux supérieurs du district qui envoient un inspecteur, qui rédige un certificat de confiscation. Dans ce certificat, il doit préciser les raisons pour lesquelles le produit est confisqué, il fixe

[Texte]

tags on it and this operation in fact prohibits the man from moving or selling this product.

When I said the most common reason for detention was incorrect labelling, I really meant that the most common cause of detention, without this chemical analysis, was when it was obvious to the inspector that a product was incorrectly labelled. I do not know of examples of it, but it is quite a formal procedure. It is not something that the man does because his wife did not kiss him good-bye that morning and he is in a bad temper.

Mr. Barrett: If that is all she did not do, he was very lucky.

Mr. Gleave: In the amount of \$200 million for research, are there any figures available as to what percentage of this is industry research and what percentage is government or National Research Council?

Mr. Jefferson: Mr. Chairman, the figure is very much a ball-park figure and the \$2 million is an industry figure. The cost of researching a new pesticide ranges from \$1 million to \$8 million. I may not have been entirely accurate in saying that it included some government research. It could include work done by government agencies on behalf of a manufacturer, and not necessarily in Canada but in the United States, the United Kingdom, Europe or wherever that product happened to have originated.

Mr. Gleave: I suppose some of it could be basic research—I think the term is pure research—which actually released information on which the companies would then go to work.

Mr. Horner: On the question of research and registration of products, can you assure the Committee that through undue restrictive registration of the products and now of the plants the competitive factor within the industry will not be limited.

• 1120

The Chairman: Mr. Williams.

Mr. Williams: For what my assurance is worth, Mr. Chairman, I can assure you that it is not the intent of this legislation to in any way, shape or form, inhibit competition within the industry.

[Interprétation]

cette étiquette sur le produit et cela interdit à quiconque de transporter ou de vendre le produit.

Je dis que la raison principale de confiscation était l'étiquetage défectueux, je voulais dire que la cause la plus courante de confiscation, en dehors de l'analyse chimique, était le mauvais étiquetage. Je ne peux pas vous en donner des exemples, car c'est une procédure assez complexe. Ce n'est pas fait à cause de la mauvaise humeur de l'inspecteur.

M. Barrett: Bon!

M. Gleave: En ce qui concerne les frais de recherches de deux cent millions de dollars, y a-t-il des chiffres au sujet du pourcentage représenté par la recherche dans l'industrie? Quel pourcentage est représenté par l'État et par le Conseil national de recherches.

M. Jefferson: Monsieur le président, le chiffre est difficile à préciser. Les deux millions sont un chiffre moyen, pour le secteur industriel c'est entre un et huit millions disons. Voilà une approximation des frais de recherches pour un nouveau produit anti-parasitaire.

J'ai dit que cela comportait des recherches faites par l'État, cela n'est pas toujours très exact; cela peut comprendre des travaux faits par des organismes de l'État, un fabricant; et pas nécessairement au Canada. Ces recherches peuvent être faites au Royaume-Uni, aux États-Unis ou ailleurs lorsque ce produit vient de l'étranger.

M. Gleave: Dans certains cas il s'agit de recherches fondamentales ou de recherches pures qui permettent d'obtenir des données, qui servent de base au travail, je suppose?

M. Horner: En ce qui concerne la recherche et l'enregistrement, pouvez-vous nous assurer qu'en raison de restrictions inacceptables de l'enregistrement des produits, puis des usines, que cela ne limitera pas la concurrence?

Le président: Monsieur Williams.

M. Williams: Croyez-moi, je peux vous dire que ce n'est pas l'intention de cette mesure législative de limiter d'une façon ou d'une autre la concurrence dans l'industrie.

[Text]

Mr. Horner: Take for example Avadex: when it first came out it sold at a high price and a limited amount was sold. I think it is a logical assumption now to believe that with volume manufacturing it is cheaper. With the volume that is now manufactured and sold I think farmers generally tend to believe that the price should be moving downward, but, instead of that, in fact it may be even moved up when it should not have changed at all. Why is this? Is there not enough competition in the industry?

Mr. Williams: I suppose that the answer here in this particular commodity list must lie in the statement that Mr. Douglas made, namely, that this is a patented product and that the competitive product probably is not as highly regarded, by some at least, as is this product.

Mr. Horner: This is what I was leading up to. In your licensing of plants and in your registration of products, are you certain that you have not in any way lessened competition? For example, you stated Avadex was a patented product. You do not in any way pass on or make public the formulas of the products that you inspect or register.

Mr. Williams: No, we do not.

Mr. Horner: In fact, it is against the regulations to pass on formulas.

Mr. Williams: I think the only answer that I can give to this question really is this: if the active ingredient of any pesticide is not patented, there is no reason why a hundred people cannot register a pesticide containing that particular active ingredient; that is, there is no reason under our act. The act is a completely different act.

Mr. Horner: Can a patent remain in effect for a given product only for a certain length of time?

Mr. Williams: I am afraid, Mr. Chairman, I am not in a position to answer that question. We can get that information for the Committee, but I think it is covered by another act. Mr. Jefferson suggests 17 years, but I think it depends very much on the commodities. We can get that information easily.

The Chairman: Thank you, Mr. Horner. I recognize Mr. Cobbe, then Mr. Moore and Mr. Danforth.

[Interpretation]

M. Horner: Prenons, par exemple, le cas de «Avadex». Lorsque ce médicament est sorti pour la première fois sur le marché, il se vendait cher et on en a peu vendu. Maintenant, je crois qu'il est logique de supposer que lorsqu'on le fabriquera en grande série, son prix baissera. Depuis qu'il est fabriqué en grande série et vendu en grandes quantités, les agriculteurs pourraient croire que le prix devrait descendre. En dépit de cela, le prix n'a pas changé et risque même de monter. Il n'y a pas eu de changement. Comment cela se fait-il? Est-ce qu'il n'y a pas suffisamment de concurrence dans l'industrie pour obliger cette évolution?

M. Williams: La réponse en ce qui concerne cette denrée particulière confirme ce qu'a dit M. Williams. C'est un produit breveté et le produit n'est pas considéré comme ayant de concurrent capable d'obtenir la même estime.

M. Horner: Je voulais en arriver là. Lorsque vous enregistrez les usines, lorsque vous enregistrez les produits, êtes-vous certains que vous n'avez pas réduit la concurrence?

Vous avez dit, par exemple, qu'«Avadex» était un produit breveté. Vous ne dévoilez pas les formules des produits que vous enregistrez.

M. Williams: Non, nous ne le faisons pas.

M. Horner: En fait, c'est contraire aux règlements que de le faire.

M. Williams: Je ne peux donner qu'une seule réponse à cette question. Si les ingrédients actifs de tous produits antiparasitaires ne sont pas brevetés, il n'y a pas de raison pour que cent personnes n'enregistrent pas cent produits ayant la même formule. Il n'y a aucune raison à l'application de notre loi. Notre projet de loi ne s'occupe pas de ces cas-là.

M. Horner: Est-ce qu'il y a un nombre maximum d'années d'application pour un brevet?

M. Williams: Je ne peux pas répondre à cette question. Il s'agit de l'application d'une autre loi. M. Jefferson a dit qu'il s'agissait de dix-sept ans. Cela dépend de la denrée, mais nous pourrions certainement vous fournir les renseignements plus tard.

Le président: Merci, monsieur Horner. Je passe la parole à M. Cobbe, puis à M. Moore, et à M. Danforth.

[Texte]

Mr. Cobbe: Mr. Chairman, it would appear that maybe the appeal should be under Clause 9 rather than Clause 2, but there is one matter on the appeal which concerns me, and the witnesses we had last week seemed to be more concerned with time delay than they were with anything else in bringing an appeal so as to get their product on the market. From what I have experienced in connection with the preparation of a resolution for appeal, we will have to establish all the regulations which would apply under the appeal. By the time we establish that, I can see where the process of an appeal is going to be much slower than it is under the present regulations, because if you have to abide by the regulations of the appeal you are going to have to follow the regulations and it is going to slow down the operation. I see a direct appeal here resulting in a slow-down in the industry.

Mr. Horner: The industry would not have to slow down.

The Chairman: I recognize Mr. Moore (Wetaskiwin).

Mr. Moore (Wetaskiwin): Mr. Chairman, in the case of a farmer using a product that either fails to do what it is advertised to do, or that proves to be harmful, what recourse has he?

• 1125

Mr. Williams: I suppose the member is asking for a legal opinion as to what it is. I think the only part of that I would be in a position to answer is that that was covered under our compensation act which this Committee has already considered, namely, if it was harmful to the farmer. If it was a registered commodity, used in accordance with directions, and was harmful in that it resulted in damage to the farmer because of lack of markets for his crop, or impaired his ability to market that crop, he could be entitled to compensation and the Minister could pay compensation to him for the loss of ability to market the crops, and the Minister could take recourse against the manufacturer or he could require the farmer to take recourse against the manufacturer.

Mr. Moore (Wetaskiwin): Thank you.

The Chairman: Mr. Danforth has a question.

Mr. Danforth: Mr. Chairman, I have a question which I think comes under this clause. It may appear to be hypothetical, but it is something that could happen, especially as chemicals get more complex in their basic

[Interprétation]

M. Cobbe: Monsieur le président, il semble que la clause d'appel devrait figurer à l'article 9 plutôt qu'à l'article 2. J'ai un commentaire à faire au sujet de l'appel. Les témoins que nous avons eus la semaine dernière semblaient plus intéressés au retard qu'au droit d'appel, c'est-à-dire de la mise en marché des produits. D'après cela, si nous voulons prévoir la préparation d'une résolution en matière d'appel, il faudrait établir tous les règlements concernant cet appel. Jusqu'à ce que nous ayons fait cela, le processus d'appel sera très ralenti comparé à l'application du règlement actuel car si on doit respecter un règlement, il faudra le suivre de près. Cela ralentira la procédure.

M. Horner: L'industrie n'en souffrira pas.

Le président: Monsieur Moore.

M. Moore: Dans le cas d'un agriculteur qui se sert d'un produit qui n'agit pas selon les effets promis par la réclame, quels sont les recours?

M. Williams: Le membre du comité me demande une opinion juridique au sujet de cette situation. Je ne peux répondre que d'une seule façon.

Ce cas est couvert par la Loi sur l'indemnisation qui a déjà été étudiée par le comité. Si le produit est enregistré et qu'il est utilisé selon le mode d'emploi et qu'il en résulte un effet nuisible qui entraîne des pertes pour l'agriculteur pour des raisons de mévente de sa récolte, ou de vente moins profitable, il pourra avoir droit à des dommages et le ministre pourrait lui verser une indemnité pour la mévente de sa récolte, ensuite le ministre pourrait poursuivre le fabricant, ou demander à l'agriculteur de poursuivre le fabricant.

M. Moore (Wetaskiwin): Merci.

Le président: M. Danforth a une question à poser.

M. Danforth: Monsieur le président, j'ai une question concernant l'application de cet article. C'est peut-être une question qui peut sembler hypothétique, mais c'est quelque chose qui pourrait se produire tout particuliè-

[Text]

constitution. This is the clause that sets out the regulations by Governor in Council. I was very interested in the information given on a previous bill that the qualitative or quantitative analysis procedure is becoming more and more able to detect the effects of prescribed chemical.

My point is this: what happens if it is found by a laboratory analysis that residue which had previously escaped detection or other factor is present in a registered widely used pesticide, that would in essence create a problem in food consumption or for the primary producers?

Firstly, does the Department then cancel the registration immediately of such a product? Secondly, even though it is the beginning of a season when this product would normally be used and a chemical company has large amounts on hand, what is the procedure for keeping it off the market? Thirdly, is there any compensation or redress by the company, other than legal action, if the Department takes such measures?

Mr. Williams: I suppose, Mr. Chairman, the answer to the first part of the question, as to what action the Department would take, would depend to a very great extent on the significance of this newly-discovered contamination.

I would hope, at least, that the first action the Department would take would be immediate consultation with the manufacturer to see if the offending ingredient could, in fact, be removed, or through some dilution procedure or something of this nature its effects mitigated. If this was not satisfactory, I would think—and once again I am saying this depends upon the seriousness of the whole thing—that the action the Department would take would be to cancel registration until the problem was solved.

In so far as recourse on the part of the manufacturer is concerned there is no agricultural legislation under which he is entitled to anything from the government because of that action.

Mr. Danforth: It would have to be a civil action.

Mr. Williams: I would say yes.

Mr. Danforth: A supplementary question. If, as pointed out by the witness, this was

[Interpretation]

rement parce que la formule des produits chimiques devient particulièrement complexe. C'est au sujet de la clause qui permet au gouverneur en conseil de fixer les règlements. J'ai été très intéressé par les renseignements qui ont été donnés au sujet d'un autre bill d'après lesquels les procédures d'analyse quantitative et qualitative permettent de mieux en mieux déceler les résultats de l'utilisation de certains produits chimiques.

Ma question est la suivante. Qu'est-ce qui se passe si, à la suite d'une analyse de laboratoire, on constate qu'un résidu qui avait auparavant échappé à la détection ou qu'un autre facteur existant dans un produit antiparasitaire enregistré et largement utilisé, soulève en fait des problèmes quant à l'utilisation des produits dans l'alimentation ou pour la production d'aliments?

Premièrement, est-ce que le ministère annule l'enregistrement de ce produit immédiatement? Deuxièmement, si l'on est au début d'une saison où ce produit est utilisé normalement et où la compagnie en possède de larges stocks, quelle est la procédure qui interdira la mise en marché? Troisièmement, si le gouvernement prend de telles mesures, autres que légales, la compagnie sera-t-elle tenue de verser des indemnités?

M. Williams: La réponse à la première partie de la question est la suivante: En ce qui concerne les dispositions que prendra le ministère, cela dépendra dans une très large mesure de la signification de la découverte de cette contamination. La première mesure, je l'espère, serait d'entrer immédiatement en rapport avec le fabricant pour voir si l'ingrédient dangereux peut être supprimé ou si l'on pouvait mitiger ses effets néfastes. Si cela ne suffisait pas, je pense, une fois de plus cela dépend de la gravité du problème, je crois que le ministère annulerait l'enregistrement jusqu'au moment où le problème serait résolu, en ce qui concerne les recours du fabricant. Il n'y a pas de lois agricoles qui lui permettent d'obtenir quoi que ce soit du gouvernement à la suite de cela.

M. Danforth: Je pense qu'il devrait entamer des poursuites juridiques.

M. Williams: En effet.

M. Danforth: Une question supplémentaire. Si on considère que ce problème est grave,

[Texte]

deemed to be a very serious factor, would the Department then immediately put under tag all available supplies of such a chemical?

Mr. Williams: I beg your pardon.

The Chairman: Put it under tag.

Mr. Danforth: Would the normal course of action be to put under detention all the available supplies of such a chemical?

Mr. Williams: Yes, we would immediately withdraw registration and would notify our inspectors in the field that all product in the field was to be put under detention.

Mr. Danforth: Is there provision under this particular Clause to make such action possible in regard to cancellation of a registered product?

Mr. Williams: Yes. Under this act?

Mr. Danforth: Yes.

Mr. Williams: Yes, we can withdraw registration. I might say that when we speak of this question of compensation, whether the government should or should not pay compensation to such a firm, I would think that most firms would be extremely grateful to us, because once this fact became known I would think that the commercial claims against them, if this product went out, would be extremely serious.

• 1130

Mr. Danforth: The point that bothers me, Mr. Chairman, in this particular instance is the fact that under the provisions of this Act we have a registered product registered by government from a registered and controlled environment being put on the market under regulations laid down by the government. Then if subsequent action by the government takes this product off the market I am just wondering what the position of the government would be in an action of this kind.

Mr. Williams: While I said the government would take it off the market, I strongly suspect that action would not be necessary by the government. I strongly suspect that if we were able to point out to a firm that because of a newly developed technique they, in fact, were selling a product that was hazardous, probably all of the firms that are in operation at the present time would immediately recall all that product without our needing to put it under detention.

We might use the detention procedure in order to assist them because we have people in the field and it might be their wish, and I

[Interprétation]

est-ce que le ministère confisquerait les stocks existants de ce produit chimique?

M. Williams: Pardon?

Le président: Est-ce qu'il confisquerait?

M. Danforth: Est-ce que par ces dispositions, on bloquerait tous ces stocks?

M. Williams: Oui, nous supprimerions immédiatement l'enregistrement. Nous ferions savoir à nos inspecteurs que tous les stocks doivent être bloqués.

M. Danforth: Et alors, est-ce qu'en vertu de cet article particulier, une mesure semblable pourrait être prise à l'égard de l'annulation d'un produit enregistré?

M. Williams: Oui.

M. Danforth: En vertu de la loi?

M. Williams: Oui, nous pourrions annuler l'enregistrement. Je pourrais peut-être ajouter aussi que lorsque nous parlons d'indemnité, à savoir si oui ou non le gouvernement devrait payer une indemnité à une société, j'ai l'impression que la plupart des compagnies nous seraient très reconnaissantes car une fois le danger reconnu, les réclamations civiles que l'on pourrait faire si le produit était mis sur le marché seraient extrêmement graves.

M. Danforth: Ce qui me préoccupe dans ce cas particulier, c'est que, en vertu des dispositions de ce bill, nous nous trouvons en face d'un produit enregistré par le gouvernement et mis sur le marché selon des règlements établis par le gouvernement. Si le gouvernement retirait le produit du marché, qu'elle serait exactement sa position?

M. Williams: J'ai dit que le gouvernement le retirerait du marché, mais j'ai l'impression qu'il n'aurait pas à poser le geste lui-même.

Si nous étions en mesure de signaler à une compagnie, en raison d'une technique nouvellement découverte, qu'elle vend un produit dangereux, je crois que toutes les entreprises qui existent à l'heure actuelle retireraient elles-mêmes le produit sans que nous ayons à intervenir. Nous pourrions peut-être employer la saisie et la retenue pour les aider à le faire, car nous avons des gens sur place qui pourraient aider à cet égard.

[Text]

think it would, from my knowledge of the industry.

Mr. Danforth: May I be permitted, Mr. Chairman, one more supplementary and then I will pass? Mr. Williams was speaking of his knowledge of the industry and Mr. Jefferson, and I know they are closely associated with it. Is it the view of the witnesses that the standard procedures in the laboratories of the industry are comparable to government procedures and that the industry might pick up such a mitigating factor even prior to government laboratory tests?

Mr. Williams: I think I would have to say, yes. In the larger ones I think there is some range, but in general the pesticide industry is large, not small. It is a complex industry; it requires a great many facilities in order to produce pesticides.

Mr. Danforth: Thank you.

The Chairman: Mr. Gleave has a supplementary.

Mr. Gleave: Have you ever run into any problems concerning the carriers that farmers and other people use? For instance, we use diesel fuel sometimes as a carrier for a chemical, particularly when using aircraft and I have known people to use just use ordinary detergents, claiming they can get a better kill or a better fix on the plant. Have you ever run into the problems of some carrier altering the chemical and causing damage?

Mr. Jefferson: I do not recall a specific case in detail but I do recall that there have been cases where the detergent or surfactant or some other additive has significantly altered the effectiveness of a pesticide and made it less useful than otherwise it would have been, and also made it more dangerous than otherwise it would have been.

• 1135

Mr. Gleave: But no restrictions have been put on in this regard.

Clauses 5 and 6 agreed to.

Clause 7—Powers of Inspectors.

Mr. Danforth: Is there any variance in the nomenclature of this particular clause and the previous clause, and if so, why?

Mr. Jefferson: Mr. Chairman, this clause has been amended to coincide with the word-

[Interpretation]

M. Danforth: Une dernière question supplémentaire et, ensuite, je céderai la parole. M. Williams a parlé de ses connaissances de l'industrie, et M. Jefferson et moi-même savons qu'ils y sont associés de très près. Les témoins croient-ils que la procédure normale dans les laboratoires de l'industrie même se compare favorablement aux procédures du gouvernement et que les laboratoires pourraient déceler ces facteurs, même avant les essais en laboratoire du gouvernement?

M. Williams: Je dirais oui, pour les laboratoires de plus grande importance, mais en faisant remarquer qu'en général l'industrie des produits antiparasitaires est importante. C'est une industrie complexe et elle a besoin de nombreux dispositifs pour préparer ces produits antiparasitaires.

M. Danforth: Merci.

Le président: M. Gleave aurait une question supplémentaire.

M. Gleave: Avez-vous déjà eu des problèmes par rapport aux véhicules utilisés par les fermiers. J'explique. On utilise parfois l'essence diesel comme véhicule pour les produits chimiques mais je connais des personnes qui utilisent des détergers ordinaires pour s'assurer que les produits antiparasitaires se fixent aux plantes et ainsi obtenir de meilleurs résultats. Est-il déjà arrivé que ces véhicules aient endommagé le produit chimique et causé des dégâts?

M. Jefferson: Je ne me souviens pas d'un cas particulier, dans tous ses détails, mais je me souviens qu'il y a eu des cas où un détergent ou un autre additif avait changé considérablement la nature même d'un pesticide, ce qui le rendait moins efficace qu'il ne l'aurait été autrement, et aussi beaucoup plus dangereux qu'il ne l'aurait été.

M. Gleave: Mais, il n'y a pas eu de restrictions d'imposées à cet égard.

Les articles 5 et 6 sont adoptés.

L'article 7: pouvoirs de l'inspecteur.

M. Danforth: Une question. Est-ce que les dispositions de cet article sont les mêmes qu'auparavant? Et sinon, pourquoi a-t-on changé le libellé de cet article?

M. Jefferson: On a fait concorder le texte de cet article avec les autres lois qu'adminis-

[Texte]

ing in the other commodity legislation that the Department administers: the Feeds Act, the Fertilizers Act and the Seeds Act, all of which have been amended since 1939 when the current Pest Control Products Act came into force.

Mr. Williams: I might say that the powers are no broader here than previously; the wording has been amended.

The Chairman: Shall Clause 7 carry?

Mr. Horner: Just one quick question. These inspectors work under the Department of Agriculture?

Mr. Williams: That is correct.

Mr. Horner: Concerning the pesticide residue legislation, the inspectors worked under the Food and Drugs Act, did they not...

Mr. Williams: No.

Mr. Horner: ...or did they work under the Department of Agriculture too?

Mr. Williams: Both.

Mr. Horner: Both?

Mr. Williams: Yes. The requirement for inspectors under the Food and Drugs Act in the pesticide compensation legislation was if the product had been put under detention by them because of residues contained in it.

Clauses 7 and 8 agreed to.

On Clause 9—Seizure.

Mr. Horner: Mr. Chairman, under Clause 9 I would like to deal with the question of seizure and detention and appeal. This Bill is proposing a number of things the old Act did not. First of all—and Mr. Williams can correct me if I am wrong—you are for the first time going to register the plants, the establishments, and if you have any difficulty with the plants—you stated a while ago and you can correct me if I am wrong—you can take away their licences and put them, in fact, out of business.

You also direct the plants on how they shall operate, how they shall prescribe the manufacturing in the plants, you advise them how to package their products, you advise them how to advertise their products and you advise them to some extent on the guarantees of their products. Surely you must believe—and you stated in some respects—that an appeal is very necessary. You also stated that at all times you believed the authority of the Department must go down; that in effect you would hate to see a superior person in the

[Interprétation]

tre notre ministère et qui ont toutes été modifiées depuis 1939.

M. Williams: Mais les pouvoirs ne sont pas plus vastes qu'il ne l'étaient. Les libellés peuvent être différents.

Le président: L'article 7 est-il adopté?

M. Horner: Une question rapide. Ces inspecteurs travaillent pour le ministère de l'Agriculture?

M. Williams: C'est exact.

M. Horner: En vertu de la législation relative aux résidus antiparasitaires, les inspecteurs travaillaient sous l'empire de la *Loi des aliments et drogues*, n'est-ce pas?

M. Williams: Non.

M. Horner: Ou bien, travaillaient-ils pour le ministère de l'Agriculture.

M. Williams: Les deux.

M. Horner: Les deux?

M. Williams: Oui. La *Loi des aliments et drogues* précise que l'inspecteur doit retenir le produit s'il y a décelé des résidus.

Les articles 7 et 8 sont adoptés.

Article 9: saisie.

M. Horner: A l'article 9, monsieur le président, j'aimerais parler de cette question de saisie et de retenue. La nouvelle loi permet plusieurs choses que l'ancienne loi ne permettait pas. M. Williams pourra me corriger si je fais erreur, mais tout d'abord, pour la première fois, on prévoit l'enregistrement des établissements. Et, si vous avez des difficultés, comme vous l'avez dit tout à l'heure, avec l'établissement, vous pouvez leur enlever leur permis et, en fait, les forcer à cesser leur exploitation.

Vous dites aux entreprises comment elles doivent fonctionner, emballer leurs produits, les annoncer et, jusque dans une certaine mesure, vous leur indiquez quelle garantie doit accompagner ce produit. Vous devez certainement croire qu'il est nécessaire que les fabricants puissent interjeter appel. Vous avez également déclaré que vous détesteriez voir une personne haut placée, dans votre ministère, casser une décision d'un inspecteur qui lui est subordonné.

[Text]

Department over-ruling the subordinate inspector. Well, this is the question I am asking.

Mr. Williams: Mr. Chairman, I had not intended to imply that; all I had intended to imply is that I would not like to see a system of appeals built up under which subordinate employees took the position, or that would encourage employees to take the position: "I do not have to look at this matter very hard because the fellow will appeal it automatically and somebody else will decide."

I said I had a philosophical rather than a practising practical concern and quite frankly—and I am speaking very personally here—I would hate to see anything that would have any tendency to cause any of our employees at any level not make as hard a decision, as complete a decision and as valid a decision as it was possible for them to do; not to evade in any way, shape or form their responsibilities. That is all I said.

Mr. Horner: I can quite agree with that position but having said that, Mr. Williams, do you not believe that a right to appeal should be given to the chemical companies? Somebody on the Committee suggested that the chemical companies could live with the government; they were born under the government, in many cases, and are policed by the government so they could live with the government.

However, in living with the government surely under a free society they should have the right to appeal, in view of your statement, too, that it would be very impractical for outside action to be taken against the government, as I understood you. Am I right?

Mr. Williams: Concerning this appeal matter I think my views were that it would be very costly to set up an outside appeal body.

Mr. Horner: I took it to mean you felt it would be very impractical for a concern to take the government to court as is suggested in Clause 2 of this Bill; that it would be very unlikely that the company could win.

Mr. Williams: I do not think I made any such statement.

Mr. Horner: I misunderstood you and I am glad I brought it up.

Mr. Williams: If I did make such a statement I will withdraw it, but I do not think I did.

Mr. Horner: I think I misunderstood you and I am glad we cleared it up. Would you

[Interpretation]

M. Williams: Je n'avais pas l'intention de laisser entendre cela. Tout ce que je voulais dire c'est que je n'aimerais pas voir l'instauration d'un système d'appel qui permettrait aux employés de se dire: «Je n'ai pas besoin d'examiner de trop près ce cas, car on fera appel automatiquement et quelqu'un d'autre aura à décider.»

Et, j'ai dit que j'avais une autre préoccupation. Je n'aimerais pas voir quoi que ce soit qui aurait tendance à porter nos employés à ne pas fouiller la question à fond afin de rendre une décision aussi complète et aussi juste que possible, ou à les porter à ne pas prendre leurs responsabilités. C'est tout ce que j'ai dit.

M. Horner: Oui, mais, ayant dit cela, ne croyez-vous pas que nous devrions accorder le droit d'appel aux fabricants de produits chimiques. Un membre du Comité a dit que les compagnies pouvaient certainement faire bon ménage avec le gouvernement; elles sont nées sous le gouvernement, sont contrôlées par le gouvernement, donc elles peuvent faire bon ménage avec lui. Elles devraient sûrement avoir le droit d'en appeler d'une décision surtout, comme vous l'avez dit, qu'il ne serait pas des plus pratique de prendre des mesures contre le gouvernement.

M. Williams: Pour ce qui est des appels, je crois avoir dit qu'il en coûterait très cher pour créer un organisme externe pour les appels.

M. Horner: Je croyais que vous aviez dit que vous pensiez qu'il ne serait pas pratique pour un fabricant de traîner le gouvernement en cour, qu'il aurait peu de chances d'avoir gain de cause.

M. Williams: Je ne crois pas avoir fait une telle déclaration.

M. Horner: Je vous ai probablement mal compris. Je suis heureux d'avoir relevé ce point.

M. Williams: Si j'ai fait une telle déclaration je la retire. Mais je ne crois pas l'avoir faite.

M. Horner: Je vous ai probablement mal compris et je puis content que nous ayons

[Texte]

object, Mr. Williams, if an amendment were written in to this clause that said something like this:

That the company whose product has been seized or detained be granted the right at any time after the detention to appeal before an independent board consisting of representations from the industry and the Department.

Now, this is really not an outside board; it is just to make certain the industry has representation there.

• 1140

Mr. Williams: I mentioned my concern earlier. I would hate to think of a situation where the Department and its officials had an opportunity of hiding behind a body and saying, "Well, all right, if you do not like the decision of the Department or of a particular official we will convene this board and let them look at it." It seems to me that this would slow down the appeal procedure rather than speed it up.

Mr. Horner: If the industry wanted to get their product on the market and felt the appeal would slow it up they would not take it to the appeal board. That is decision for the industry to make.

Mr. Williams: Yes, I appreciate that, Mr. Horner, but I do feel that there is also a tendency within any administrative body, if a formal appeal procedure is set up, to say, "All right, we will take it to the appeal procedure then." You have that opportunity. Once again, my argument is not an argument of fact, it is an argument of philosophy.

Mr. Horner: Yes, I understand and I do not disagree entirely with your philosophy, recognizing, of course, your position. In looking at it from the other side, the chemical companies objected to the registration of the establishment and so on, but I do not object to that because I believe the chemical industry is a very technical industry and that great harm can be done by it if great care and caution are not exercised at all times. But in saying that and in being fair to the company, I think also that they should have the right to appeal to make certain that the rigid controls under which they have to live are not too restrictive; not too restrictive from a competitive point of view and not too restrictive from the point of view of motivation in carrying on more product research.

[Interprétation]

éclairci ce point. Vous objecteriez-vous, Monsieur Williams, à ce que soit incorporé à ce bill un amendement qui dirait à peu près ceci:

«Que la compagnie dont le produit a été saisi ou retenu ait le droit, à tout moment après la saisie, d'en appeler de la décision auprès d'un tribunal indépendant composé de représentants de l'industrie et du ministère.»

Il ne s'agit pas directement d'un organisme externe. Cet amendement ne veut qu'assurer la présence de représentants de l'industrie au sein de ce tribunal.

M. Williams: J'ai mentionné ma préoccupation plus tôt. Je n'aimerais pas voir une situation où le ministère ou ses fonctionnaires pourraient se cacher derrière un organisme et dire: Très bien, si vous n'aimez pas la décision du ministère ou d'un fonctionnaire particulier, nous allons tout simplement convoquer ce tribunal d'appel et nous le laisserons examiner la question. Il me semble que cela retarderait plutôt que de hâter la procédure d'appel.

M. Horner: Si l'industrie voulait hâter la mise en marché de leurs produits et qu'elle croyait que l'appel la retarderait, elle ne ferait pas appel. C'est la décision que l'industrie doit prendre.

M. Williams: Oui, je comprends, monsieur Horner, mais je crois qu'il y a certainement une tendance à l'intérieur d'un organisme administratif, que s'il y a un tribunal d'appel ou une procédure d'appel, l'on dit tout simplement: «Oui nous en appellerons dans ce cas-là. Vous avez cette chance. Encore une fois, mon argument n'est pas fondé sur les faits mais sur la philosophie.

M. Horner: Oui, je comprends, mais je ne suis pas tout à fait d'accord avec cette philosophie, tout en reconnaissant votre position. Mais d'un autre côté, les fabricants de produits chimiques se sont opposés à l'enregistrement de l'établissement, etc., mais moi je ne m'y oppose pas, car je crois que l'industrie des produits chimiques est une industrie très technique et qu'elle peut produire beaucoup de choses nuisibles si on ne prend pas les mesures les plus prudentes en tout temps. Mais, pour être juste envers la compagnie, je crois qu'elle devrait aussi avoir le droit d'interjeter l'appel, pour être bien sûr que les règlements très stricts auxquels ils sont soumis ne soient pas trop restreignants du point de vue de la concurrence et du point de vue de l'initiative quant aux recherches sur les nouveaux produits.

[Text]

Mr. Williams: Mr. Phillips would like to comment on this but before he does, it is my view that this is a most difficult question. I think we must have action as quickly as possible on these matters. I think that if the industry had been able in any way, shape or form to indicate that there was basis for their concern and had been able to document it, I would be much more concerned about providing a form of appeal against decisions made at lower levels in the Department, and I use the word "lower" advisedly here; not in a derogatory sense, but to mean at earlier stages. As I say, the Act has been in force for a great length of time. I would not want to set up a procedure that could hamper things unless there was a demonstrated need for it.

Mr. Horner: Yes, I agree with you, Mr. Williams, but the point here is that this Bill is, in effect, moving a step further towards regulating and controlling and registering the plant and the establishment.

Mr. Williams: That is correct.

Mr. Horner: The past does not necessarily apply to the future. It does not necessarily. It may well, but not necessarily.

Mr. Williams: Yes, that is right. But this particular Clause 9, in fact, applies only in respect of the detention of a product after it has been manufactured.

The Chairman: Mr. Phillips has a comment.

Mr. Phillips: Mr. Chairman, in this regard it has been indicated that we are going further in this Bill than before. I know Mr. Horner mentioned the relation of the plant rather than of the product, but indeed in recent years the form of legislation dealing with commodities has withdrawn from a previous position and it is much clearer in relation to what can be done. For example, in the current Act—the one which we operate under now—we deal with the inspector:

... may be seized and detained by an inspector at the risk and expense of the owner until full compliance with this Act or regulations is properly effected, and if the owner fails to comply within twenty-one days the pest control product may be confiscated and disposed of as the Minister may direct.

[Interpretation]

M. Williams: M. Phillips voudrait commenter ce sujet, mais avant qu'il ne le fasse j'ai l'impression qu'il s'agit d'une question très difficile. Je crois qu'il faut agir le plus tôt possible dans ces questions. Je crois que si l'industrie avait pu d'une façon ou d'une autre nous indiquer que leurs préoccupations étaient fondées, je serais beaucoup plus préoccupé moi-même de fournir une procédure d'appel contre les décisions prises aux niveaux inférieurs du ministère, et ici je parle de niveaux inférieurs, non pas de façon dérogatoire, mais pour vouloir parler des premières étapes. Comme je l'ai dit, la Loi est en vigueur depuis longtemps. Je ne voudrais pas établir une procédure d'appel qui pourrait nuire à moins que le besoin en soit démontré.

M. Horner: Oui je suis tout à fait d'accord avec vous, monsieur Williams, mais, voici ce bill-ci va un peu plus loin dans la question de réglementation et d'enregistrement de l'établissement.

M. Williams: Oui c'est exact.

M. Horner: Le passé ne s'applique pas nécessairement à l'avenir. Cela pourrait arriver mais pas nécessairement.

M. Williams: Oui, mais l'article 9 en fait ne s'applique qu'à l'égard de la retenue d'un produit une fois fabriqué.

Le président: M. Phillips a une réponse supplémentaire.

M. Phillips: Monsieur le président, à ce sujet, on a indiqué que nous allons plus loin que la dernière fois en enregistrant l'établissement plutôt que le produit. Mais depuis de récentes années, les mesures législatives, quant à l'enregistrement des produits, sont beaucoup plus claires à l'égard de ce qu'on peut faire. Par exemple, dans la loi actuelle, celle qui fait loi à l'heure actuelle, nous parlons d'inspecteur:

... peut être saisi et détenu par un inspecteur aux frais et risques du propriétaire jusqu'à ce que ce dernier se soit pleinement conformé à la présente loi ou aux règlements, et, à défaut par le propriétaire de ce faire dans les vingt et un jours, le produit antiparasitaire peut être confisqué et il peut en être disposé selon que l'ordonne le Ministre.

• 1145

This Bill and other bills passed recently actually inhibit the activity of the inspectors and those administering the law. It states that:

Le présent projet de loi et d'autres bills qui ont été adoptés récemment entravent les activités des inspecteurs et de ceux qui administrent la loi, il déclare:

[Texte]

Any control product seized and detained
...shall not be detained after

If he corrects it in one hour, it must be released. I agree that there is a question of the opinion of an inspector, but the inspector would not stay there very long if he kept it under detention when it was corrected. Indeed it goes on to say, in subclause (2)(b)—and I think of this as a form of appeal:

the owner agrees to dispose of such control product in a manner satisfactory to the Minister...

This, indeed, provides a method for disposing of it if it does not come up to the law in some certain respect. Let us say there were 1,000 cases that were incorrectly labelled and there was some place it could be used for that purpose simply by means of giving that one user an invoice which stated the correct directions. This is a means of allowing its sale without each label being changed and this is spelled out here to be sure that there cannot be this forfeiture in 21 days.

Mr. Horner: You are suggesting, Mr. Phillips, that the Bill, in fact, is more lenient in some respects than the marketing and inspecting and seizure procedure. If that is so, why then did the companies, or the company association, request in their brief last Tuesday that an appeal procedure be given?

Mr. Phillips: Mr. Chairman, I am not certain that I can answer that. I gather that it was answered here earlier; that theirs was a philosophic one; that they just did not think it was good enough and that they would be exposed to decisions of a department.

Mr. Horner: Mr. Chairman, I am going to move an amendment, and I would like some discussion on it, that a subclause (d) be added to Clause 9(2):

that the company whose product has been seized or detained be granted the right at any time after the detention to appeal before an independent board consisting of representation from the industry and the Department of Agriculture.

The Chairman: Could we agree to expedite this, gentlemen, by declining comment and putting the question briefly and directly? Would that be agreed?

[Interprétation]

Un produit antiparasitaire saisi et retenu... ne doit plus être retenu

Si la correction est faite dans une heure, il ne peut plus être retenu je suis d'accord qu'il s'agit de l'avis d'un inspecteur, mais l'inspecteur n'y resterait pas tellement longtemps s'il retenait les produits lorsque la situation avait été corrigée. Et dans le paragraphe (2) b), on continue en disant, et je crois qu'il s'agit ici d'une forme d'appel:

dès que le propriétaire convient de disposer de ce produit antiparasitaire d'une manière satisfaisante pour le Ministre...

Cela effectivement donne un moyen de disposer du produit s'il ne satisfait pas aux conditions et aux exigences de la loi à certains égards. Mettons, par exemple, qu'il y avait 1,000 contenants où l'étiquetage n'était pas bon et que quelque part on pouvait l'utiliser à cette fin tout simplement en donnant à cet usager une facture indiquant les directions corrigées. C'est un moyen de permettre sa vente sans changer chaque étiquette et ici, on insiste sur cette terminologie pour être bien sûr qu'il y aurait cessation à la fin des vingt et un jours.

M. Horner: Vous prétendez, Monsieur Phillips, que le bill est, de fait moins restreignant que la procédure de mise en marché et d'inspection et de saisie. Si c'est vrai alors, pourquoi les compagnies ou l'association des compagnies a-t-elle demandé dans leur mémoire mardi dernier qu'on leur donne une procédure d'appel?

M. Phillips: Je ne suis pas sûr d'être capable de répondre, monsieur le président. Mais j'ai cru comprendre qu'il s'agissait d'une difficulté philosophique plutôt, qu'ils ne croyaient pas que cela était suffisant et qu'ils seraient exposés à la décision d'un ministère.

M. Horner: Monsieur le président, je vais proposer un amendement et j'aimerais bien qu'on en discute, qu'on ajoute à l'article 9 au paragraphe (2) un alinéa d): Que la compagnie dont le produit a été saisi ou retenu ait le droit, à n'importe quel moment après la rétention, d'en appeler auprès d'un tribunal indépendant composé de représentants de l'industrie et du ministère de l'Agriculture.

Le président: Est-ce que nous pourrions être d'accord, messieurs, afin de hâter les choses, de ne pas formuler de commentaires et de poser des questions brèves et directes? D'accord?

Some hon. Members: Agreed.

Des voix: D'accord.

[Text]

Mr. Horner: No, no. How can you put the question directly when the amendment has just been moved? If someone wants to speak to the amendment, he can do so.

The Chairman: That is fine. Gentlemen, we have reached our time of adjournment. I was hoping, of course, to make a little more progress than we have made this morning; it does not appear that we are going to be able to make that kind of progress. I am in the hands of the Committee. Would the Committee be willing to adjourn at 12 o'clock?

Some hon. Members: Agreed.

The Chairman: Are there comments on the amendment? Mr. Peters.

Mr. Peters: Could the amendment be read again, Mr. Chairman, so that we know what it is?

The Chairman: I think, Mr. Horner, that the amendment as presented will require some redrafting.

Mr. Horner: That is up to the Committee. They can move an amendment, they can delete a word, they can change it in any way they like.

• 1150

Mr. Peters: Mr. Chairman, I think we are all in agreement that the witnesses who appeared before us the other day and asked for an appeal procedure had in mind what may happen in the future rather than what has happened under the previous Act. They made a poor case for having an appeal procedure as far as I am concerned, but I still think that they should have one. I am not sure whether my support would be for an administrative or what manner of appeal. I have not disagreement with bringing the industry and the Department into it. Members of the Committee are surely not much interested in setting up a new legal procedure in a very formal way. We did hear that the main difficulty which may arise and which apparently plagues the industry is that there can be a time factor involved which is more probably important than the final disposition that normally takes place. They wanted it and I think there should be a right to an appeal.

Mr. Williams probably has some experience with the appeal procedures that have been used in other acts under the Department of Agriculture. I cannot think of any off-hand, but there have been some *ad hoc* boards called for the subject of appealing decisions,

[Interpretation]

M. Horner: Non, non. Comment pouvez-vous directement demander le vote alors que je viens de proposer l'amendement. Si quelqu'un veut prendre la parole, il peut certainement le faire.

Le président: Très bien. Messieurs, nous en sommes à l'heure de l'ajournement. J'avais espéré évidemment pouvoir progresser un peu plus que nous ne l'avons fait ce matin, mais apparemment, nous ne pourrions pas le faire. Je suis entre les mains des députés. Est-ce que le Comité serait disposé à lever la séance à midi?

Des voix: D'accord.

Le président: Alors, nous avons l'amendement. Y a-t-il des commentaires? Monsieur Peters.

M. Peters: Est-ce qu'on pourrait donner lecture de l'amendement encore une fois, s'il vous plaît, monsieur.

Le président: Je crois, monsieur Horner, que le projet d'amendement tel que vous l'avez présenté nécessiterait une certaine rédaction.

M. Horner: Les membres du Comité peuvent proposer un amendement, ils peuvent supprimer un mot ou deux.

M. Peters: Je crois, monsieur le président, que nous sommes tous d'accord que les témoins qui ont comparu devant nous l'autre jour, en demandant le droit d'appel, avaient en vue, non pas ce qui s'est produit en vertu de l'ancienne loi mais ce qui pourrait se produire à l'avenir. En fait, ils n'ont vraiment pas prouvé qu'un droit d'appel était nécessaire, à mon sens. Mais je crois toujours qu'ils devraient avoir le droit d'appel. Je ne suis pas sûr si je serais en faveur d'un appel administratif ou de tout autre appel. Je n'ai pas d'objection à y faire participer l'industrie et le ministère de l'Agriculture. Je suis sûr que les membres du comité ne seraient pas disposés à établir une nouvelle procédure juridique de façon officielle. Les difficultés qui peuvent se poser et qui préoccupent l'industrie, apparemment, c'est la question de temps en cause, qui est probablement plus importante que la disposition finale qui a lieu. Ils désirent un droit d'appel et j'appuie leur demande.

M. Williams a probablement une certaine expérience des procédures d'appel des autres mesures législatives. Je ne songe à aucune, mais des tribunaux *ad hoc* ont été convoqués pour en appeler des décisions prises en vertu d'autres lois, et il me semble, alors; que si

[Texte]

under other acts, and it seems to me that if we are going to write these changes, there should be a final recourse for the industry to take. I am thinking particularly of radioactive materials where there is going to be a considerable difference of opinion when these become a major factor. There is going to be a philosophical difference of opinion, no doubt, as to what they will do, what the dangers are, and what the aspects are, and I think an appeal procedure would be used in very limited fashion.

Listening to the witnesses, one manufacturer—I do not know whether he is a small manufacturer or a big one—said that in five years he had had only two cases and both of these were their own fault, and that they were very happy to correct the situation. There was no argument about this.

So I do not see it being used very often, and I certainly would support some type of an appeal. This may not be the best one, but I think there should be the right of recourse or redress in this legislation, as, I am sure most of us agree, there should be in all legislation. Therefore, I am prepared to support this amendment, but would certainly like to hear some discussion as to whether or not a better type of an appeal procedure could be implemented.

The Chairman: I think the Chair has been able to reach some agreement with the mover of the amendment Mr. Horner, that under Clause 9, section (2) an additional subclause be added, subclause 6. Subclause 6 to the main clause, correct, which would then read as follows:

That the company whose product has been seized or detained be granted the right at any time after the detention to appeal before an independent board consisting of representation from the industry and the Department of Agriculture.

Are you ready for the question? Mr. Danforth, you have a question?

Mr. Danforth: Yes, Mr. Chairman, I am quite in accord with the intent of the amendment, and I strongly feel, as do other members of the Committee, that there should be granted the right of appeal. However, I am a bit disturbed by some information given to us by Mr. Williams when he deals with the complexity of some of the matters that are involved and could be involved in the settling of a difference of opinion to this degree.

The independent board is satisfactory, as far as I am concerned, but I am a bit doubtful about the limitation to the Department and the industry, because it could be that the

[Interprétation]

nous allons introduire ces changements, l'industrie devrait avoir un recours final. Je songe notamment aux matériaux radioactifs où il y aura certainement des divergences d'opinions quant à leurs effets, à leur nature, les dangers qu'ils présentent, et ainsi de suite.

J'imagine que le droit d'appel ne serait utilisé que de façon très restreinte. Un des fabricants nous a dit, par exemple, que dans l'espace de cinq ans, il n'y a eu que deux cas et qu'ils étaient en faute dans les deux cas. Alors, je crois qu'on ne l'emploierait pas très souvent et qu'une forme d'appel serait souhaitable. Ce n'est peut-être pas la meilleure forme, mais la présente mesure législative devrait renfermer un droit d'appel. Je suis sûr que nous sommes tous d'accord que toute mesure législative devrait prévoir un droit d'appel. Je suis donc prêt à appuyer l'amendement, mais j'aimerais bien entendre des suggestions quant à une meilleure formule d'appel.

Le président: Je crois que nous avons pu en arriver à une certaine entente avec le parrain de l'amendement pour ajouter un alinéa supplémentaire à l'article 9, paragraphe 2; l'alinéa 6, qui se lirait ainsi: «que les compagnies dont le produit a été saisi ou retenu aient le droit, à n'importe quel moment après la rétention, d'en appeler, devant un tribunal indépendant composé des représentants de l'industrie et du ministère de l'Agriculture.»

Êtes-vous prêts à vous prononcer à ce sujet? M. Danforth désire-t-il poser une question?

M. Danforth: Monsieur le président, je suis d'accord avec l'objet de l'amendement et je suis d'avis, comme les autres députés, qu'il faudrait accorder le droit d'appel. Toutefois, certaines choses énoncées par M. Williams, quant à la complexité de la question, m'inquiètent.

Le tribunal indépendant est acceptable, à mon avis, mais, j'ai certains doutes quant à limiter sa composition à l'industrie et au ministère de l'Agriculture, car il se pourrait

[Text]

official witnesses, or the membership of the board, to give an honest evaluation should be comprised of perhaps someone outside of the Department of Agriculture. It could be maybe a member of the Food and Drug Directorate, or some other type of technician who should be placed on the board. I am just wondering, if it could be an independent board comprised of a membership mutually acceptable to both the Department and the industry, if this would not circumvent this problem by having the amendment read in this way, that "the appeal be directed to an independent board, whose membership shall be mutually acceptable to both the Department and the company involved."

• 1155

Mr. Horner: Mr. Chairman, I would accept the proposed changes, or the member can make an amendment to the amendment, if he likes, but if it would speed up the Committee work this morning I would just accept the modification that Mr. Danforth suggested to the amendment, if it is all right with you.

Mr. Whicher: Mr. Chairman, I am in sympathy completely with what has been said over here, but the fact is that the company came here last week and made one of the poorest cases imaginable on where they would need any appeal other than the Department of Agriculture itself. They kicked about the registration of plants. Gentlemen, in any manufacturing industry in Canada today there is a registration of plants, particularly when there is a serious involvement whereby the product concerned may do harm, in this instance to the farmers of Canada. I have been in the milk business for years. Every single milk plant in Canada is registered. Why is it registered? Because if we put out dairy products that are not good, it could poison somebody or do a great deal of harm.

Mr. Horner: Is the product, registered?

Mr. Whicher: Certainly they are registered and inspected at anytime by inspectors coming in.

Mr. Horner: Is butter registered?

Mr. Whicher: Well, I do not know. They are so obvious, I do not know whether butter is registered, I would not say it is, but they come in and test it at all times. The necessity for this was simply not documented last week by the industry. I asked them the question myself: "How many times in the last five years have you had any product red tagged?" "Twice" was the answer. "Did you have any problem with the Department?" "None what-

[Interpretation]

que les témoins officiels ou que le tribunal, afin de donner une évaluation complète—comprenne quelqu'un de l'extérieur du ministère de l'Agriculture. Ça pourrait être quelqu'un de la Direction des aliments et drogues ou un autre technicien. Est-ce que le tribunal indépendant pourrait être composé d'un effectif qui serait acceptable à l'industrie et au ministère? J'ai l'impression que l'on contournerait ainsi le problème si l'appel était envoyé à un tribunal indépendant, dont les membres seraient acceptables à la fois au ministère de l'Agriculture et à la compagnie en cause.

M. Horner: J'accepterais le changement proposé ou le député peut en proposer un amendement de l'amendement s'il le désire. Mais, pour hâter les travaux du comité, j'accepterais simplement la modification proposée par M. Danforth, si vous êtes d'accord.

M. Whicher: Je voudrais dire un mot à ce sujet pour compléter ce qui a été dit. Mais, le fait est que la compagnie a comparu devant nous la semaine dernière et n'a certainement pas démontré qu'un droit d'appel autre qu'auprès du ministère de l'Agriculture est justifié. Elle s'est opposée à l'enregistrement des usines, ce qui existe dans toute industrie de fabrication au Canada, surtout lorsque le produit peut être nuisible, et dans ce cas-ci, aux cultivateurs du Canada. J'exploite une industrie laitière depuis bon nombre d'années, et chaque industrie laitière est enregistrée. Pourquoi? Parce que si nos produits ne sont pas bons, ils pourraient empoisonner quelqu'un et causer beaucoup d'effets néfastes.

M. Horner: Le produit est-il enregistré?

M. Whicher: Oui, enregistré et inspecté à n'importe quel moment par les inspecteurs.

M. Horner: Le beurre également?

M. Whicher: Je ne sais pas si le beurre est enregistré ou non, mais ils viennent certainement en faire l'inspection à n'importe quel moment. La nécessité de ce point n'a tout simplement pas été démontrée la semaine dernière par l'industrie. Je leur ai demandé moi-même combien de fois, depuis cinq ans, ils avaient eu un produit interdit. Ils ont répondu qu'il avait eu deux cas. Lorsque je leur ai demandé s'ils avaient eu des problè-

[Texte]

soever; this was looked after by the Department".

Gentlemen, in every part of the food industry I can think of there is inspection. There is no right of appeal, as the Deputy Minister has said, except to the Department concerned. As far as the milk industry in Ontario is concerned, there is no appeal except to the milk marketing board itself. The liquor license board in the province of Ontario, there is no appeal, except to the license board itself.

Mr. Chairman, the Department of Agriculture is not in the business of putting industry out of business. They are there to help, and if the industry could show a case where they have not been co-operative, I would say: "Let us start up another appeal board". We have got so many boards in Canada now—and particularly one that probably will not be used because in the last five years it would not have been used once.

Therefore, I am opposed to this motion that has been put to us.

The Chairman: Thank you, Mr. Whicher. May I recognize Mr. Williams. I think maybe he has a comment.

Mr. Williams: Mr. Chairman, without wishing to speak to the actual amendment that is before the Committee at the present time, in view of the differences of opinion that appear to exist here and the fact that it does seem to me that what the industry is concerned about is some assurance that review procedure, appeal procedure, whatever one might like to call it, should be available as some sort of a right to them, I was wondering whether the Committee would feel, based on their assessment of the presentation that was made on Tuesday by the industry, that it would be useful if Clause 9 (5) (a) were to be amended possibly along the following lines—I would not want to be held to these words:

The Governor in Council may make regulations

(a) respecting the detention of any control product seized under this section the review procedures available to those who had commodities put under detention and the payment of any, and so on.

• 1200

That is somewhat less than setting up an appeal procedure but it does give them some minimum indication that a review procedure and the regulations governing it can be set up.

[Interprétation]

mes avec le ministère, ils ont répondu que tout a été réglé par le ministère même.

Messieurs, dans toute autre industrie de l'alimentation, il y a inspection. Il n'y a aucun droit d'appel comme le sous-ministre l'a dit, sauf auprès du ministre en cause. En ce qui concerne l'industrie laitière en Ontario, il n'y a pas d'appel, sauf auprès de l'office de commercialisation du lait.

Monsieur le président, le ministère de l'Agriculture n'est pas là pour mettre les industries en faillite. Il est là pour les aider. Si l'industrie avait pu démontrer que le ministère n'a pas collaboré, j'aurais été prêt à établir un nouveau tribunal d'appel. Mais nous en avons tellement déjà au Canada, pourquoi en créer un qui ne serait pas utilisé, car au cours des cinq dernières années il n'aurait pas été employé une seule fois. Par conséquent, je suis opposé à cette motion.

Le président: Merci, monsieur Whicher. Est-ce que je pourrais donner la parole à M. Williams?

M. Williams: Monsieur le président, sans vouloir parler de l'amendement qui nous est présenté je me demande si, en raison des divergences d'opinions qui semblent exister ici, l'industrie semble se soucier d'avoir une certaine assurance qu'il y aura une procédure d'appel. Je me demandais si le comité, se fondant sur son évaluation du mémoire présenté mardi par l'industrie, trouverait utile de modifier l'article 9 (5) a) pour qu'il se lise à peu près ainsi, mais je vous fais remarquer que je ne voudrais être lié à ce texte:

Le gouverneur en conseil peut établir des règlements

a) concernant la rétention de tout produit antiparasitaire saisi en vertu du présent article, les procédures de révision de la cause pour ceux dont les produits ont été retenus, et le paiement etc. etc...

Nous n'établissons pas, de la sorte, d'appel mais cette insertion donne aux fabricants une indication qu'une procédure de révision et les règlements qui régiraient cette procédure pourront être établis.

[Text]

Mr. Danforth: Mr. Chairman, may I speak on this?

The Chairman: I have Mr. Douglas on my list. I also have Mr. Barrett. Mr. Gleave on a point of order.

Mr. Gleave: It is 12 o'clock and it is obvious at least to me, we are not going to resolve this in a few minutes. Would it be better to adjourn and go into it at the next session?

Mr. Southam: Mr. Chairman, just as a matter of comment, a few moments ago disappointment was expressed at the progress we are making. I would like to say in defence of all the Committee members here, and I mean all the members, that I think we have had a very interesting discussion, a very productive one, and I am saying this for the sake of the record.

Mr. Barrett: Mr. Chairman, I think we should leave the hypothetical questions to a hypothetical time and not waste time with these sort of things.

The Chairman: Gentlemen, before we adjourn I do have one matter that has been brought to my attention and that is that it may not be entirely convenient for some members to attend this Committee next week because of an agricultural showmart in Montreal. I am sure the Committee agrees, as we are dealing with legislation, it might not be convenient or possible to set aside our meetings and we would hope that those who wish to attend the agricultural showmart might be able to do so on Wednesday so that our meeting could continue on Tuesday morning in the normal way.

Mr. Peters: Mr. Chairman, was there not a suggestion that the Committee might take the advantage of visiting this agricultural show?

The Chairman: My only information, of course, is that many members wanted to go. Our terms of reference do not include going as a Committee, as I understand it, at the moment. We do have a fairly lengthy list of legislation before us and other responsibilities, and if it is the wish of the Committee we will meet as usual next Tuesday at 9.30 a.m.

Some hon. Members: Agreed.

The Chairman: Gentlemen, the meeting is adjourned at the call of the Chair.

[Interpretation]

M. Danforth: Puis-je parler, monsieur le président?

Le président: J'avais M. Douglas, et j'avais aussi M. Barrett sur ma liste. Monsieur Gleave en appelle au règlement.

M. Gleave: Monsieur le président, il est midi et il me semble que nous ne pourrions pas résoudre ce problème d'ici quelques minutes. Est-ce qu'il ne serait pas préférable de lever la séance et d'en discuter à la prochaine séance.

M. Southam: Tout à l'heure, il a été question du peu de progrès accompli. J'aimerais dire, à la décharge de tous les députés, que notre discussion a été très intéressante, très productive. Je le dis tout simplement pour que ce puisse être consigné au procès-verbal.

M. Barrett: Je crois que nous devrions laisser les questions hypothétiques à un moment hypothétique et ne plus gaspiller le temps du Comité.

Le président: Messieurs, un point m'a été signalé, savoir qu'il ne serait peut-être pas tout à fait opportun pour certains membres du Comité d'assister à une séance, la semaine prochaine, en raison de la tenue du Salon de l'agriculture, à Montréal. Le comité sera peut-être d'accord pour dire, vu que nous étudions un projet de loi, qu'il n'est pas approprié de mettre nos réunions de côté. Ceux qui veulent assister au Salon de l'Agriculture pourraient le faire mercredi pour que nous puissions tenir notre réunion mardi.

Mr. Peters: N'avait-il pas été suggéré que les membres du Comité assistent à cette exposition agricole?

Le président: Le seul renseignement que je possède, c'est que plusieurs membres voulaient y aller. Notre mandat ne prévoit pas une telle visite de notre part, en tant que comité. Nous avons une longue liste de mesures législatives devant nous, et si c'est le désir du Comité, nous allons nous réunir mardi matin, comme d'habitude, à 9 heures 30. D'accord?

Des voix: D'accord.

Le président: La séance est donc levée, messieurs.

Fascicule n° 16, le mardi 4 février 1969,
page 16-3, paragraphe 2, ligne 2:
après «Horner,» insérer «Howard».

REPORT TO THE HOUSE

WEDNESDAY, February 12, 1969.

The Standing Committee on Agriculture has the honour to present its

FOURTH REPORT

Pursuant to its Order of Reference of Tuesday, January 14, 1969, your Committee has considered Bill C-157, the Pest Control Products Act, and has agreed to report it with the following amendment:

In Clause 9, Sub-clause 5, paragraph (a), line 2 thereof, after the word "section", insert a comma and thereafter: "the establishment of procedures for the review of any seizure and detention".

A copy of the Minutes of Proceedings and Evidence relating to this Bill (*Issues No. 14, 15, 16, 17 and 18*) is tabled.

Respectfully submitted,

BRUCE S. BEER,
Chairman.

RAPPORT À LA CHAMBRE

Le MERCREDI 12 février 1969.

Le Comité permanent de l'agriculture a l'honneur de présenter son

QUATRIÈME RAPPORT

Conformément à l'ordre de renvoi du mardi 14 janvier 1969, le Comité a étudié le Bill C-157: Loi sur les produits antiparasitaires, et il est convenu de rapporter ledit bill avec la modification suivante:

A l'alinéa *a*) du paragraphe (5) de l'article 9, insérer, après le mot «article», à la troisième ligne dudit alinéa, une virgule suivie de: «l'établissement d'une procédure de revision de toute saisie et rétention».

Un exemplaire des procès-verbaux et témoignages relatifs à ce bill (*Fascicules n° 14, 15, 16, 17 et 18*) est déposé.

Respectueusement soumis,

Le président,
BRUCE S. BEER.

[Text]

MINUTES OF PROCEEDINGS

TUESDAY, February 11, 1969.
(21)

The Standing Committee on Agriculture met at 9.47 a.m. this day, the Chairman, Mr. Beer, presiding.

Members present: Messrs. Beer, Cobbe, Danforth, Douglas, Foster, Gauthier, Horner, Howard (*Okanagan Boundary*), Korchinski, Lambert (*Bellechasse*), La Salle, Lessard (*Lac-Saint-Jean*), Lind, McKinley, Moore (*Wetaskiwin*), Peters, Pringle, Smith (*Northumberland-Miramichi*), Southam, Thomson (*Battleford-Kindersley*), Turner (*London East*), Whicher, Yanakis—(23).

Witnesses: From the Department of Agriculture: The Honourable H. A. Olson, Minister; Mr. S. B. Williams, Deputy Minister; Mr. C. R. Phillips, Director General of Production and Marketing; Dr. R. J. McClenaghan, Director, Contagious Diseases Division, Health of Animals Branch.

The Committee resumed consideration of Bill C-157, the Pest Control Products Act.

On Clause 9, the Chairman ruled out of order the amendment moved at the previous meeting by Mr. Horner which was as follows:

That the following be added as Subclause (6): The company whose product has been seized or detained be granted the right at any time after the detention to appeal before an independent board consisting of representation from the industry and the Department of Agriculture.

In giving his ruling, the Chairman read aloud Section 54 of the British North America Act, 1867 (As amended).

Mr. Douglas moved an amendment to paragraph 9.(5)(a), inserting after the

[Traduction]

PROCÈS-VERBAUX

MARDI 11 février 1969.
(21)

Le Comité permanent de l'agriculture se réunit ce matin à 9 h. 47, sous la présidence de M. Beer, président.

Présents: MM. Beer, Cobbe, Danforth, Douglas, Foster, Gauthier, Horner, Howard (*Okanagan Boundary*), Korchinski, Lambert (*Bellechasse*), La Salle, Lessard (*Lac-Saint-Jean*), Lind, McKinley, Moore (*Wetaskiwin*), Peters, Pringle, Smith (*Northumberland-Miramichi*), Southam, Thomson (*Battleford-Kindersley*), Turner (*London East*), Whicher, Yanakis—(23).

Témoins: Du ministère de l'Agriculture: L'honorable H. A. Olson, ministre; M. S. B. Williams, sous-ministre; M. C. R. Phillips, directeur général de la Production et des marchés; Dr. R. J. McClenaghan, directeur de la Division des épizooties, Direction de l'hygiène vétérinaire.

Le Comité reprend l'examen du Bill C-157—Loi sur les produits antiparasitaires.

Sur l'article 9, le président déclare irrecevable la modification proposée lors de la séance précédente par M. Horner, à savoir:

Que l'on ajoute la disposition suivante, en tant que paragraphe (6): La société dont le produit a été saisi ou retenu a le droit, à tout moment qui suit la rétention, d'en appeler à un conseil indépendant composé de représentants de l'industrie et du ministère de l'Agriculture.

En faisant part de sa décision, le président lit à haute voix l'article 54 de l'Acte de l'Amérique du Nord britannique de 1867 (modifié).

M. Douglas propose que l'on modifie l'alinéa a) du paragraphe (5) de l'article

word "section" in line 2 thereof, a comma and thereafter the following:

"the establishment of procedures for the review of any seizure and detention".

After some discussion and questioning of witnesses, the motion was carried on a show of hands: YEAS 18, NAYS 0.

Clause 9 as amended was carried.

Clause 10 was carried.

Following questions, Clause 11 was carried as was Clause 12.

Clauses 13 and 14 were carried in their order.

Following brief questioning, Clause 1 was carried.

The title and the bill were carried and it was agreed that the Chairman would report Bill C-157 with amendment.

The Committee resumed consideration of Clause 1 of Bill C-156, An Act to amend the Animal Contagious Diseases Act.

Following questioning of witnesses, Mr. Peters moved an amendment to Clause 1 which the Chairman is to place before the Committee when it is available in writing.

Clause 1 was allowed to stand.

At 11.47 p.m., the Committee adjourned to the call of the Chair.

9 en insérant, après le mot «article», à la troisième ligne dudit alinéa, une virgule suivie de :

«l'établissement d'une procédure de révision de toute saisie et rétention».

Après débat, et les témoins ayant été interrogés, la proposition est adoptée, par un vote à main levée, par 18 voix à 0.

L'article 9 modifié est adopté.

L'article 10 est adopté.

Après quelques questions, l'article 11 est adopté, de même que l'article 12.

Les articles 13 et 14 sont adoptés, dans cet ordre.

Après quelques questions brèves, l'article 1 est adopté.

Le titre et le bill sont adoptés, et il est décidé que le président fera rapport du Bill C-157 avec modification.

Le Comité reprend l'examen de l'article 1 du Bill C-156—Loi modifiant la Loi sur les épizooties.

On interroge les témoins, puis M. Peters propose une modification à l'article 1, que le président soumettra au Comité lorsqu'elle sera disponible par écrit.

L'article 1 est réservé.

A 11 h. 47 du matin, le Comité s'ajourne jusqu'à nouvelle convocation du président.

*Le secrétaire du Comité,
Michael A. Measures
Clerk of the Committee.*

[Texte]

EVIDENCE

(Recorded by Electronic Apparatus)

Tuesday, February 11, 1969

• 0947

The Chairman: Gentlemen, we will come to order and begin our consideration of Bill C-157.

When the Committee last adjourned we were considering Clause 9 and an amendment had been delivered to the Chair. It reads as follows:

That the following be added as subclause (6) under Clause 9:

The company whose product has been seized or detained be granted the right at any time after the detention to appeal before an independent board consisting of representation from the industry and the Department of Agriculture.

Because this amendment was rather far-reaching we sought some additional advice and we are advised by the consultant parliamentary counsel, Dr. Ollivier, that the amendment as drafted is out of order because it involves the expenditure of money.

I can refer the Committee to Beauchesne, 4th Edition, under the British North American Act, Article 54. Does the Committee wish me to read it?

Some hon. Members: Yes.

The Chairman: It reads:

It shall not be lawful for the House of Commons to adopt or pass any Vote, Resolution, Address, or Bill for the Appropriation of any Part of the Public Revenue, or of any Tax or Impost to any Purpose that has not been first recommended to that House by Message of the Governor General in the Session in which such Vote, Resolution, Address, or Bill is proposed.

The Chair, it seems, has no alternative but to declare the amendment out of order.

To accommodate the wishes of the Committee the Department, through the Minister, has done some study and is probably in a position at this time to make a recommendation to the Committee.

[Interprétation]

TÉMOIGNAGES

(Enregistrement électronique)

Le mardi 11 février 1969

Le président: Messieurs, la séance est ouverte. Nous allons commencer notre étude du Bill C-157. Lorsque la séance s'est ajournée, la dernière fois, nous en étions à l'article 9 et l'amendement suivant avait été présenté au président:

Que l'on ajoute ce qui suit au paragraphe 6, article 9: La compagnie dont le produit a été saisi ou retenu a le droit, à n'importe quel moment après la rétention d'interjeter appel auprès d'un conseil indépendant composé de représentants de l'industrie et du ministère de l'Agriculture.

Comme cet amendement était assez important nous avons demandé conseil, et le conseiller parlementaire, M. Ollivier, nous a dit que l'amendement n'est pas recevable parce qu'il comporte des dépenses d'argent. Et, je me rapporte à la quatrième édition de Beauchesne, d'après l'Acte de l'Amérique du Nord Britannique, article 54, voulez-vous que je vous le lise?

Des voix: Oui.

Le président: Voici.

54. Il ne sera pas permis à la Chambre des communes d'adopter une motion, une résolution, une adresse ou un projet de loi proposant d'affecter quelque partie du revenu public, d'une taxe ou d'un impôt à un objet que le Gouverneur général n'aura pas au préalable recommandé par un message à la Chambre au cours de la session pendant laquelle cette motion, cette résolution, cette adresse ou ce projet de loi sera proposé.

Par conséquent, la présidence n'a pas le choix, et doit déclarer l'amendement irrecevable.

Selon le désir du Comité, le ministère et le ministre ont fait quelques recherches et sont peut-être en mesure de faire des recommandations au Comité. Monsieur le ministre.

[Text]

Hon. H. A. Olson (Minister of Agriculture):
Thank you, Mr. Chairman.

We wish to suggest to the Committee the amendment of Clause 9(5)(a) by inserting, between the word "section" in line 20 and the beginning of line 21, the following words:

...the establishment of procedures for the review of any seizure and detention...

And from there it would continue as presently worded.

This is the clause that provides the authority for the Governor in Council to make regulations for the seizure and detention of any product under this act. The insertion of those lines will give authority for the Governor in Council, when recommending the regulations, to take into account the establishment of procedures for the review of any seizure and detention.

Perhaps it would be helpful to the Committee if I were to read the regulations from another act, in this case, the Fertilizer Act, that are, in fact, based on essentially the same kind of authority. Under that Act the detention regulations read as follows:

24. (1) Articles seized pursuant to section 7 of the Act may be detained by an inspector at any place at the risk and expense of the owner thereof by attaching a detention tag to the article or part thereof.

(2) Where articles are detained pursuant to subsection (1) an inspector shall deliver or mail to the owner or person in possession of the articles a notice of detention.

(3) No person shall alter or remove a detention tag referred to in subsection (1) or sell or move any detained article except with the written authority of an inspector.

(4) Where articles are released from detention an inspector shall deliver or mail to the owner or person in possession of the articles a notice of release.

(5) Any articles forfeited under section 7 of the Act may be disposed of in such manner as the Minister directs.

This would give the Department the authority, when recommending to the Governor in Council the regulations for seizure and detention, to take into consideration the representations that have been made by the industry manufacturing these products—some of the practical matters that would be involved if and when any product was seized and detained.

[Interpretation]

L'hon. M. Olson (ministre de l'Agriculture):
Je vous remercie, monsieur le président. Nous aimerions suggérer au Comité de modifier l'article 9, (5) a), en ajoutant ce qui suit à la ligne 22 après le mot «article»:

...L'établissement de procédures pour faire une revue de toute saisie et rétention...

C'est l'article qui autorise le gouverneur en conseil à faire des règlements pour la saisie ou rétention de tout produit antiparasitaire en vertu de cette loi. En ajoutant la phrase que j'ai mentionnée, le gouverneur en conseil serait autorisé à tenir compte, pour la recommandation des règlements, de l'établissement de procédures pour la revue de toute saisie ou rétention.

Le Comité aimerait peut-être que je lui lise les règlements qui sont contenus dans une autre loi, la Loi sur les engrais chimiques, et qui sont fondés sur le même genre d'autorité. Dans cette loi, les règlements sur la rétention se lisent comme il suit:

24. (1) Un inspecteur peut retenir en tout lieu, aux risques et aux frais de leur propriétaire, les articles saisis en vertu de l'article 7 de la Loi, en attachant audit article ou à l'une de ses parties une étiquette de rétention.

(2) Lorsque des articles sont retenus en vertu du paragraphe (1), un inspecteur remettra ou enverra au propriétaire ou à la personne qui était en possession desdits articles un avis de rétention.

(3) Nul ne modifiera ou ne retirera une étiquette de rétention telle que mentionnée au paragraphe (1), ou ne vendra ou ne déplacera un article retenu, sans l'autorisation par écrit d'un inspecteur.

(4) Lorsque les articles seront déchargés de la rétention, un inspecteur remettra ou enverra au propriétaire ou à la personne qui était en possession desdits articles un avis de décharge.

(5) On peut disposer de tout article confisqué en vertu de l'article 7 de la Loi de la manière prescrite par le Ministre.

Cela donnerait au ministère la faculté, au moment de recommander le règlement sur les saisies et retenues au Gouverneur en conseil, de tenir compte des représentations faites par les fabricants de ces produits, soit quelques-unes des dispositions pratiques à considérer lors de la saisie et la rétention d'un produit.

[Texte]

I hope, therefore, Mr. Chairman, that the Committee will be disposed to accept this amendment. We believe it will give us the authority to take these representations from the industry into account in the regulations for the seizure and detention of products.

The Chairman: Thank you, Mr. Olson. I am sure there will be some discussion.

I have Mr. Douglas and Mr. Danforth. I will recognize Mr. Douglas.

Mr. Douglas: I wish to move the amendment as worded by the Minister of Agriculture, Mr. Chairman.

In the main, it will meet the objections that the Committee had to there not being some sort of an appeal available to the owners of these chemicals.

The Chairman: It has been moved by Mr. Douglas that the amendment suggested by the Minister be inserted in Subclause 5 of Clause 9. Mr. Danforth?

Mr. Danforth: Mr. Chairman, I am not quite prepared to accept the ruling of counsel that the amendment was out of order. It did deal with the expenditure of public funds, but the wording of this amendment states that an independent body will be set up, and this could be made up of members of the departments as well as people from outside. Therefore, it is very questionable, in my mind, that it is dealing with funds. Before I support this amendment I would like to have further undertakings from the Minister in this regard. The Regulations say, "The Governor in Council may make...". They do not say "shall make". This makes all the differences in the world in a section such as this.

● 0955

As the Minister has stated, in a review of this Committee's proceedings the Governor in Council may not feel on the basis of the interpretation of these proceedings, that is it expedient or necessary to establish such a regulation; and because it is the feeling of the Committee that in a democratic way a right of appeal should be established I would like some undertaking by the Minister, or by members of the Department, that such a regulation will be incorporated.

I am very well aware that once Parliament deals with this Bill and accepts the principle contained in it we have very little recourse to regulations which are inserted at a later date and are policed by the government representatives.

The only way we can deal with these regulations is to have the matter brought once more before the Committee.

[Interprétation]

J'espère que le comité voudrait bien accepter cette modification. Nous croyons en effet que cela nous donnerait le pouvoir—comme je l'ai déjà dit—de tenir compte dans les règlements des représentations faites par les fabricants.

Le président: La discussion est ouverte. M. Douglas et M. Danforth. Monsieur Douglas le premier.

M. Douglas: Monsieur le président, je voudrais mettre aux voix l'amendement tel qu'exprimé par le ministre de l'Agriculture. On doit cependant prévoir une procédure d'appel pour les fabricants.

Le président: Il est proposé par M. Douglas que l'amendement suggéré par le ministre soit inscrit au paragraphe 5 de l'article 9. Monsieur Danforth?

M. Danforth: Je ne suis pas tout à fait prêt à accepter la décision du Conseil selon laquelle l'amendement est irrecevable s'il est lié aux dépenses publiques, sa lettre établit cependant qu'un organisme indépendant sera créé, pouvant être aussi bien constitué de membres du ministère que de personnalités extérieures. J'ai donc des doutes sur le bien-fondé des objections formulées, et avant de donner mon appui j'aimerais avoir quelques assurances complémentaires de la part du ministre. «Le gouverneur en conseil peut prendre des dispositions», lit-on dans les règlements, qui ne spécifient pas qu'il «doit». Cela fait toute la différence du monde.

Comme l'a dit le ministre lors d'une révision des délibérations du Conseil, le gouverneur en conseil, selon l'interprétation qu'il donne à ses débats, peut ou non établir certains règlements. Et comme le Comité est d'avis que pour agir de façon démocratique, il devrait y avoir un droit d'appel, j'aimerais que le ministre ou les membres de son cabinet nous donnent l'assurance qu'une telle disposition sera incluse dans la loi. Je sais bien en effet que lorsque le Parlement acceptera le principe de ce bill, nous n'aurons presque pas de recours envers les clauses insérées plus tard par les représentants du gouvernement. La seule façon de faire serait d'ouvrir encore une fois le débat devant le Comité. Il est donc très important que le sujet soit entièrement clarifié avant que le Comité ne soit appelé à voter sur l'amendement particulier proposé par le ministre.

[Text]

Therefore, think it is very important that we have this matter entirely clarified before the Committee is asked to vote on the particular amendment proposed by the Minister at this time.

The Chairman: Thank you, Mr. Danforth. Are there further questions?

Mr. Olson, do you have a comment?

Mr. Olson: Mr. Chairman, in reply to Mr. Danforth I would tell him as positively as I can, relative to his apprehension about the word "may", that we intend to make regulations to deal with those things that are mentioned in Subclause (5) of Clause 9.

For example, we fully intend to recommend—in fact, there is no question in my mind at all—that we make regulations about the detention of any controlled product seized, and also, if the amendment is accepted, for the establishment of procedures for the review of any seizure and detention and for regulations on the procedures for the destruction and disposition of any controlled product forfeited under this section.

The Chairman: Mr. Danforth?

Mr. Danforth: Mr. Chairman, I am perfectly prepared to accept the Minister's undertaking in this, but we are well aware that ministers do change from time to time. The Minister has said that the government will. Has the government any objection to accepting an amendment to the effect that the Governor in Council "shall" make regulations?

Mr. Olson: There is a problem here because "shall" make regulations will of course, be mandatory on certain portions of the two paragraphs (a) and (b). The regulations that I have read relative to the Fertilizers Act were of course, on the basis that the Governor in Council "may" make regulations and we could get into having to make regulations there.

Mr. Williams may wish to comment on this, but the word "may" is standard practice so that the regulations can be made—and indeed will be made—within the latitude we need. If it is "shall" there may be dispute on whether or not the regulations do, in fact, cover every single word in the two paragraphs following.

Mr. Korchinski: Mr. Chairman, can we not incorporate Mr. Olson's intention without having it appended to, or amending, paragraph (a), as a separate amendment, so that we can use the word "shall" and not leave it rather doubtful?

[Interpretation]

Le président: Est-ce qu'il y a d'autres questions? Monsieur Olson, avez-vous un commentaire?

M. Olson: En réponse à M. Danforth, je vais lui dire aussi nettement que possible que s'il a des craintes au sujet des termes «peut faire des règlements», nous avons bien l'intention d'établir des règlements sur les questions mentionnées au paragraphe 5 de l'article 9. Par exemple, nous avons fermement l'intention d'établir des règlements au sujet de la rétention de produits saisis d'après la Loi et aussi, si l'amendement est accepté sur l'établissement de procédure de révision de tout produit saisi ou retenu autant qu'au sujet de la procédure de destruction de produits saisis d'après la Loi.

Le président: Monsieur Danforth?

M. Danforth: Je suis tout à fait disposé à accepter la promesse du ministre mais nous savons bien que les ministres changent de temps en temps. Puisque le ministre vient de dire que le gouvernement le fera, est-ce qu'on aurait des objections à accepter une modification à l'effet que le gouverneur en Conseil «devra» établir des règlements?

M. Olson: Il se pose ici un problème du fait que les termes «fera des recommandations» imposant une obligation au sujet de certaines parties des alinéas a) et b); les règlements que je viens de vous lire au sujet des engrais vont dans le même sens. C'est-à-dire que le gouverneur général en Conseil «peut» faire des règlements. M. Williams aurait peut-être un commentaire; le mot «peut» est normalement utilisé, tant et si bien que les règlements peuvent être faits, et le seront, en effet, dans les limites de nos besoins.

M. Korchinski: Monsieur le président, est-ce qu'on ne peut pas faire autrement, adopter un amendement séparé afin que nous puissions utiliser le mot «peut» tout en ne restant pas dans le doute?

[Texte]

The Chairman: The question, Mr. Olson, is whether the word "shall" could apply to paragraph (a) without applying to paragraph (b).

Is that your question, Mr. Korchinski?

Mr. Korchinski: No, that was not my question. I was suggesting that you might have another look and so draft the amendment that the present suggestion that the Governor in Council "may" make regulations would apply as the amendment is now set out but perhaps as a separate and specific subclause (6)?

• 1000

The Chairman: Which amendment is it?

Mr. Korchinski: That the Governor in Council "shall"...

The Chairman: To which amendment do you refer?

Mr. Korchinski: I am referring to the amendment that the Minister has proposed.

The Chairman: Right.

Mr. Korchinski: Perhaps that would solve both problems. The suggestion the Minister makes is perhaps acceptable except for the fact that it leaves a doubt.

Mr. Olson: Mr. Chairman, with great respect, I really do not see any problem, because we have given an undertaking that we intend to make regulations under the authority here respecting seizure and detention. With that undertaking and with all of the precedents, in using the word "may" there, I do not know how we can be any more positive that we are going to make regulations. I do not think that "may" or "shall" makes very much difference there.

The Chairman: Mr. Pringle.

Mr. Pringle: It is surprising what a lawyer can do with such things. Just a small point, Mr. Chairman. Bill No. C-155, Clause 4 reads:

The Governor in Council may make regulations
and in Bill No. C-154, Clause 4 reads:

The Governor in Council may make regulations...
and in this bill, No. C-157, it says in Clause (5):

The Governor in Council may make regulations...

Is there any specific reason why this particular bill should be changed when we have carried the others which say "may make regulations" and which seems to be a wording

[Interprétation]

Le président: Monsieur le ministre, est-ce que le mot «doit» peut s'appliquer à l'alinéa a) sans s'appliquer à l'alinéa b)? Est-ce là votre question, monsieur Korchinski?

Mr. Korchinski: Non, ce n'est pas ma question. Est-ce qu'il n'y a pas une autre manière d'agir? Est-ce qu'on ne peut pas rédiger la modification de façon à ce que la proposition voulant que le gouverneur en conseil «peut» établir des règlements constitue un paragraphe distinct, le paragraphe (6)?

Le président: De quelle modification s'agit-il?

Mr. Korchinski: Que le gouverneur en conseil «doit».

Le président: Quelle modification?

Mr. Korchinski: Celle que le ministre a proposée.

Le président: Bien.

Mr. Korchinski: Peut-être que cela réglerait les deux problèmes à la fois. Je trouve la proposition du ministre acceptable en principe, sauf qu'elle laisse planer un doute.

Mr. Olson: Monsieur le président, je ne pense pas qu'il y ait de problème, en toute déférence. Nous avons l'intention de faire des règlements en ce qui concerne la saisie et la rétention. Étant donné cet engagement et les précédents, même si j'ai employé le mot «peut», je ne vois pas que je puisse affirmer davantage nos intentions. Je ne pense pas qu'il y ait de problème.

Le président: Monsieur Pringle.

Mr. Pringle: Vous seriez surpris de voir ce que peuvent faire les avocats avec ces mots. Le bill C-155, article 4 dit: «Le gouverneur en conseil *peut* faire des règlements». Et dans le bill C-154, article 4, on lit: «Le gouverneur en conseil *peut* faire des règlements». Et dans le bill C-157, on dit: «Le gouverneur en conseil *peut* établir des règlements». Est-ce qu'il y a une raison pour laquelle on devrait modifier ce bill alors que les autres Bills ont été adoptés tels quels. On pourrait utiliser les mêmes expressions plutôt que de faire des difficultés.

[Text]

that is accepted? I think we should carry on with the same wording, rather than confuse the issue.

The Chairman: Mr. Williams has a comment.

Mr. S. B. Williams (Deputy Minister, Department of Agriculture): Mr. Chairman, while I would not wish to give a legal interpretation of this matter, it is my understanding that the word "may" is used because the word "shall" would in fact be no stronger, and might result in an obligation to put in unnecessary regulations on matters that would not really need to be regulated at that time.

In other words, if it were to be "shall" the Governor in Council could, obviously, pass regulations on this subject that in fact were basically harmless regulations in order just to simply comply with it. "May" on the other hand would mean that he would not have to pass regulations, as members have pointed out here, but the Governor in Council would only pass regulations when there was a need and presumably regulations that would be functional regulations. It is my understanding, at least, that "may" is always used and "shall" is never used, the reason being that even if it were "shall" if it was considered desirable to do so, it could be circumvented by the nature of the regulations that would be passed.

The Chairman: Are there other questions?

Mr. Korchinski: My only comment at the moment then is simply to state what I stated when we first started in these Committees, and that is that often when we pass a bill, when we do not have the regulations before us, we really do not know what the effects of such regulations will be. Whether that suggestion was ignored or not, I do not know, but perhaps in the future—I do not know if it would complicate the hearings or whether there would be a delay—it might be helpful in any future consideration, to avoid a situation such as this, if we were to have an idea of what the regulations might be before we proceed with the consideration of the entire bill, particularly where it refers to regulations.

Mr. Olson: Mr. Chairman, I have just read the regulations respecting the Fertilizers Act and this was passed in exactly the same way. Of course, my response to Mr. Korchinski has to be that we need the act passed by Parliament before you set up the administrative regulations. We need that authority to proceed before we do make these regulations to

[Interpretation]

Le président: Monsieur Williams.

M. S. B. Williams (sous-ministre, ministère de l'Agriculture): Monsieur le président, je ne voudrais pas donner une interprétation légale de ces termes. Mais on utilise le mot «peut» parce que le mot «devra» sans être plus fort impliquerait l'obligation de faire des règlements pour des questions qui n'ont pas besoin de règlements à ce moment-là.

En d'autres termes, si on emploie le mot «devra», le gouverneur en conseil pourra faire des règlements qui seraient inoffensifs, simplement pour s'y conformer. D'autre part, si on utilise le mot «peut», il ne sera pas obligé d'établir des règlements, mais le gouverneur en conseil adopterait des règlements lorsque le besoin s'en ferait sentir, donc des règlements pratiques. De la façon dont je vois les choses, c'est que le mot «peut» est toujours utilisé alors qu'on n'emploie jamais «devra» parce que même si on emploie le mot «devra», on pourrait se dérober par la nature des règlements adoptés.

Le président: D'autres questions?

M. Korchinski: Je veux simplement répéter ce que j'ai dit quand le Comité a commencé à siéger. Assez souvent lorsque nous adoptons un projet de loi et que nous n'avons pas les règlements sous les yeux, nous ne savons pas exactement quelles sont les conséquences des règlements en cause. Je ne sais pas si on a tenu compte de cette suggestion. Peut-être que non, je n'en sais rien. Je ne tiens pas à compliquer les choses ou à retarder les séances, mais je crois que ce serait peut-être utile, à l'avenir, d'éviter une telle situation, si nous pouvions autant que possible, avoir une idée de la portée des règlements avant de commencer à étudier un projet de loi, surtout lorsqu'il traite des Règlements.

M. Olson: Monsieur le président, je viens de lire les règlements de la *Loi sur les engrais chimiques* qui a été adoptée exactement de la même façon. Évidemment, ma réponse à M. Korchinski est qu'il faut que la Loi soit adoptée par le Parlement avant qu'on puisse commencer à énoncer les règlements. Il nous faut cette autorité avant de commencer à faire ces

[Texte]

give administrative effect to what Parliament has, in fact, passed. I suppose it has been that way ever since Parliament began functioning.

Mr. Korchinski: That may be so, but the point is this: at least we do not have to accept the regulations, but at least we would have an idea of what may be included in those regulations. We have amended and changed quite a few things over the years, and just because it was done in the past is no reason why we should continue in that in fashion.

• 1005

Mr. Olson: Regulations will be published and hon. members will have an opportunity to see them and if the regulations do not comply with the authority that was given in the act, then of course they can lodge, what I consider to be, a legitimate complaint against that. However, it will be our purpose to make sure that the regulations do give the administrative effect to the authority that was granted by the House of Commons in passing the act.

Mr. Danforth: Mr. Chairman, I fail to see why the government has difficulty in granting the Committee's wish that an appeal procedure be set up, when in Bill No. C-154 we have an entire section dealing with the machinery of appeal. There was no difficulty there nor did the various regulations interfere in any way with the granting of public funds. It was left to the Governor in Council to set up the machinery and there was no problem involved.

Yet, where we have an entire industry involved, it seems that suddenly there is a major problem in setting up machinery for appeal. This is causing me considerable concern at this time as to why it is possible to incorporate it in one bill yet not feasible to establish it in another. If you turn to page 7, Bill No. C-155, you will find an entire section dealing with appeals.

The Chairman: Mr. Douglas you may proceed and then Mr. Williams has a comment.

Mr. Douglas: My comment is this: Mr. Danforth, I think, is presuming to speak for the Committee when he says that the Committee wants to have an appeal board. It is true that there was an amendment proposed, but it has never been voted on. It is not fair for him to say that the Committee has decided it wants an appeal section in there and that the government is trying to turn this down, because in my book we have not yet made any such decision.

[Interprétation]

règlements qui établissent les suites administratives à ce que le Parlement a adopté. C'est ainsi qu'on a toujours procédé depuis la création du Parlement.

M. Korchinski: Oui, mais au moins, nous n'avons pas besoin d'accepter les règlements sans avoir au moins une idée de ce que l'on met dans le règlement. Nous avons amendé et modifié bien des choses au cours des années, et le fait qu'on l'ait fait il y a cent ans ne justifie pas qu'on le fasse aujourd'hui.

M. Olson: Les Règlements seront publiés et les honorables députés pourront les lire, et s'ils ne sont pas conformes à l'autorité donnée par la loi, les députés pourront présenter un grief légitime. Mais notre responsabilité est de voir à ce que les Règlements établissent les suites administratives au pouvoir donné par la Chambre des communes par l'adoption d'une loi.

M. Danforth: Monsieur le président, je ne vois pas pourquoi le gouvernement a des difficultés à réaliser les vœux du Comité qui demande qu'on établisse une procédure d'appel, alors qu'au Bill C-154, il y a tout un article qui traite du mécanisme d'appel. Il n'y avait pas de problème dans ce cas et les règlements n'ont jamais nuit à l'affectation des fonds publics. Le gouverneur en conseil a dû établir le mécanisme et il n'y a jamais eu de problème.

Mais lorsque toute une industrie est en cause, il semble que tout à coup, il y a un problème insurmontable pour établir un mécanisme d'appel. Je m'inquiète beaucoup en ce moment de ce qu'il est possible de l'incorporer dans un projet de loi alors qu'il est impossible de le faire pour un autre? Si vous prenez la page 7 du projet de loi C-155, vous voyez que tout un article traite de la question des appels.

Le président: M. Douglas et ensuite M. Williams.

M. Douglas: J'ai un commentaire à faire. Je pense que M. Danforth a l'impression qu'il parle au nom du Comité lorsqu'il dit que le Comité veut établir un mécanisme d'appels. C'est vrai qu'un amendement a été proposé, mais personne n'a voté. Je pense que ce n'est pas juste de dire que le Comité désire une procédure d'appel et que c'est le gouvernement qui refuse. Nous n'avons jamais pris une pareille décision, d'après mes notes.

[Text]

Mr. Southam: Mr. Chairman, may I speak to that? As far as Mr. Douglas' remarks are concerned, I think the very fact that the Minister and the Chairman of our Committee have come in here this morning ready to compromise on this motion of Mr. Horner in itself designated the fact, without any argument, that we are interested in something along this line, and I think the debate now is as to how these regulations should be set up. I feel that we have this right. After all, I am a little concerned even with the decision made by the law officers of the Crown. I have every respect for Dr. Ollivier and I know, having been around here for some time, that he makes a lot of wise decisions, but I was always under the impression that it was only a private member's bill from the Opposition that would be turned down on the matter of economics.

Here we are, a Committee made up of members of all parties of the House, trying to develop legislation and I think that even if an amendment like this comes from the Opposition, provided it is a worthy one and gets the consensus of the whole Committee, we should have a right to insert these amendments.

The Chairman: Thank you, Mr. Southam. I will recognize one other questioner and then I will call on Mr. Williams for his comment. Mr. Whicher.

Mr. Whicher: The reason that I am against an appeal was stated during our previous discussion on this bill, and that is that there is no need for an appeal board. When the witnesses were before us a week or so ago it was definitely stated by them that there have been only two instances in the last two years where a product had been "red tagged" and they admitted their mistake. There is just no reason why we should have an appeal board, as far as I am concerned.

The Chairman: Thank you, Mr. Whicher. Mr. Williams.

Mr. Williams: Mr. Chairman, I just wish to answer very briefly the question that was raised by Mr. Danforth in respect of why we have an appeal procedure in one case and not in another case. The basic reason why the department presented the legislation to the government in this manner was that in one case—that is to say, the bill dealing with compensation—the appeal is about a matter which one could expect to be of reasonably common knowledge. That is to say, there would be many people with competence to rule on the value of livestock. A formal appeal procedure against registration of a pesticide, I think we have pointed out, would

[Interpretation]

M. Southam: Au sujet de la remarque de M. Douglas, le fait même que le ministre et le président du Comité soient prêts à accepter un compromis sur la motion de M. Horner, montre, sans aucun doute, qu'on s'intéresse à quelque chose dans cet ordre de pensée. Le débat consiste à savoir exactement comment il faut édicter les règlements. Nous avons le droit d'en discuter. Je m'inquiète même un peu de la décision des juristes de la Couronne. Avec tout le respect que j'ai pour M. Ollivier, dont je connais les décisions parfois très sage, j'ai toujours eu l'impression qu'il s'agissait seulement d'un projet de loi d'un député de l'Opposition qui serait rejeté sur des questions d'économique.

Mais nous sommes un Comité composé de tous les partis de la Chambre qui essaie de mettre au point des mesures législatives, et je pense que, même si un amendement comme celui-ci vient de l'Opposition, s'il est valable et accepté par le reste du Comité, il pourrait être reconnu par le Comité.

Le président: Merci, M. Southam. Une autre question avant de passer à M. Williams. M. Whicher.

M. Whicher: La raison pour laquelle je m'oppose à ce droit d'appel, comme je l'ai dit, c'est qu'il n'y a pas lieu d'avoir un appel. Il y a à peu près une semaine, des témoins sont venus témoigner devant nous qu'il n'y avait eu que deux cas en deux ans de rétention d'un produit, encore que, de leur propre aveu, il y avait eu une erreur de leur part. Il n'est pas nécessaire d'avoir une procédure d'appel, à mon avis.

Le président: Merci. Monsieur Williams.

M. Williams: Je voudrais reprendre la question soulevée par M. Danforth, à savoir pourquoi il y a une procédure d'appel dans un cas et pas dans l'autre. La raison fondamentale pour laquelle le ministère a présenté les mesures législatives ainsi au gouvernement est que dans le cas du bill sur l'indemnisation, l'appel vise une question dont le public en général est au courant. Autrement dit, beaucoup de gens par exemple, auraient la compétence voulue pour établir la valeur du bétail. Une procédure d'appel contre l'enregistrement de produits antiparasitaires, comme nous l'avons dit, exigerait l'établissement d'un groupe technique en dehors du

[Texte]

require the establishment of a technical group outside of the Department of Agriculture, the Department of National Health and Welfare, the Department of Forestry and Rural Development and the various other departments that are concerned in this evaluation. It was our feeling that such an arrangement would be not only cumbersome, but costly as well.

● 1010

The applicants have every opportunity to present their entire case to the technical people and it is the technical people who make these judgments as to whether or not there should be registration. They are not administrative judgments in the accepted sense of the word.

Mr. Danforth: May I speak on this statement? I think that we dealt with this before. I do not think it is the intent of the amendment to deal with the registration aspect of this bill. I feel that the compensation and the granting of a licence for a specific chemical product is of too serious a nature for us to deal with the appeal procedures in that regard. I am quite prepared to accept the mechanics of verifying these materials before they are registered, rather than that.

My desire for an appeal is not based on the registration at all, but on the other undertakings of the act where an inspector, if something is not just quite packaged, stored or distributed to his complete satisfaction or if there are other minor infringements of the Act, does have the power to curtail the distribution. These are the sources of contention as far as I am concerned; not the basic registration itself.

The Chairman: Mr. Williams, do you have a comment?

Mr. Williams: No, but I thank Mr. Danforth very much for making that clear. It was my understanding that the original amendment covered all aspects of the Bill and not simply the question of detention because it was related to an earlier position in this Bill. Having said that, the point I wish to emphasize is that we believe that in respect of this detention a formal outside review procedure or appeal procedure would probably lengthen it rather than curtail it; that we have in this an obligation on the inspector to release this product as soon as it conforms to the law.

We have tried to write this into the legislation under Clause 9 (2):

9. (1) Whenever an inspector believes on reasonable grounds that this Act or the regulations have been violated he may

[Interprétation]

ministère de l'Agriculture, du ministère de la Santé et du Bien-être, du ministère des Forêts et du Développement rural, et des autres ministères qui sont intéressés à cette évaluation. Nous avions conclu que cet arrangement serait non seulement lourd mais également coûteux.

Les requérants ont toutes les occasions voulues de présenter leurs instances aux techniciens qui prennent les décisions quant aux enregistrements. Mais ce ne sont pas des décisions d'ordre administratif dans le sens courant du mot.

Mr. Danforth: Je pense que nous avons déjà traité de ce sujet. Je ne crois pas que ce soit dans l'intention de l'amendement de traiter de l'aspect des enregistrements de ce projet de loi. L'indemnisation et l'octroi d'un permis pour un produit chimique sont des questions trop sérieuses pour que nous abordions le problème de la procédure d'appel à leur égard. Je suis prêt à accepter plutôt le mécanisme de vérification de ces produits avant leur enregistrement.

Mon appui du droit d'appel n'est pas basé sur l'enregistrement du tout, mais sur les autres procédures aux termes de loi, par exemple si un inspecteur voit que quelque chose n'est pas emballé, entreposé ou distribué à son entière satisfaction ou s'il y a d'autres légères infractions à la loi, l'inspecteur a le pouvoir d'interdire la distribution; voilà ce qui m'inquiète et pas du tout l'enregistrement de base.

Le président: Monsieur Williams, avez-vous des commentaires?

M. Williams: Non, je remercie M. Danforth d'avoir précisé sa pensée. Je pensais que l'amendement original couvrirait tous les aspects du projet de loi, et non pas seulement la question de rétention, une position à ce sujet ayant déjà été prise un peu plus tôt d'après le texte du projet de loi. Mais je tiens à insister sur un point. Le voici: nous estimons qu'à cet égard, une procédure d'appel ou de révision extérieure allongerait la procédure au lieu de l'empêcher. Nous y voyons donc une obligation pour l'inspecteur de prononcer la main levée sitôt constatée la conformité des produits aux prescriptions légales.

C'est ce que nous avons essayé d'inclure dans le texte de loi à l'article 9 (2):

9. (1) Chaque fois qu'un inspecteur croit, en se fondant sur des motifs raisonnables, qu'il y a eu contravention à la présente

[Text]

seize and detain the control product by means of or in relation to which he reasonably believes the violation was committed.

(2) Any control product seized . . . and so forth under that "shall", you will note; not "may".

. . . shall not be detained after (a) in the opinion of an inspector the provisions of this Act and the regulations have been complied with,

We tried to have the Department of Justice write it so that there would be a legal obligation on the inspector to release this as quickly as possible. We believe that this provision, along with the appeal procedure or the review procedure that has been established if the inspector is not performing in a manner satisfactory to the person who has the commodity under detention, will be more effective and more rapid than an outside appeal procedure.

Mr. Douglas: Could we have the question, Mr. Chairman?

Mr. Danforth: Just a moment, Mr. Chairman. If I may I would like to ask a couple more supplementary questions. I feel this is too important just to call the second question on it.

I am perfectly prepared to accept the explanation given by Mr. Williams, but we still get back to the statement by the Minister—I believe although I am paraphrasing I am stating the intent of the Minister's statement earlier on—when he said that in writing the regulations there is no doubt that the deliberations of the Committee will be taken into consideration; but that to me does not state that we are going to have an undertaking that such a regulation will be incorporated.

This is my problem. I feel that as a Committee we want to be perfectly fair in every respect to both parties affected by this particular Bill, and this is why I am insistent that there be to my satisfaction incorporation of procedures which will make it a fact that a company does have a right to appeal from an arbitrary decision by a single individual regardless of his ability in the acting of his duties. There is always the position of a clash of personalities or some other outside influences and I feel that this is a protection for the inspection staff as well as a protection for the companies involved.

[Interpretation]

loi ou aux règlements, il peut saisir et retenir le produit antiparasitaire lorsqu'il a des raisons de croire que la contravention a été commise au moyen de ce produit ou à son sujet.

(2) Un produit antiparasitaire saisi . . . ainsi de suite jusqu'à «doit» et non pas «peut».

ne doit plus être retenu (a) dès que, de l'avis d'un inspecteur, les dispositions de la présente loi et des règlements ont été observés.

Il y aura de la sorte une obligation légale pour l'inspecteur d'appliquer la main levée aussi rapidement que possible.

Nous estimons que, conjointement à la procédure d'appel ou de révision qui aura été établie, si l'inspecteur n'instrumente pas de manière satisfaisante aux yeux de la personne saisie, cette disposition sera plus efficace et plus rapide que toute procédure d'appel extérieure.

M. Douglas: Puis-je prendre la parole, monsieur le président?

M. Danforth: Un instant, monsieur le président. J'aimerais, si c'est possible, poser une ou deux questions supplémentaires—il me semble que c'est une question trop importante pour qu'on n'y revienne pas—je suis tout à fait disposé à accepter l'explication donnée par M. Williams, mais nous revenons toujours à la déclaration que le ministre a faite, et même si je ne le cite pas mot à mot, je suis certain de traduire sa pensée alors qu'il disait un peu plus tôt que dans l'établissement de ce règlement les délibérations du Comité seront sans aucun doute prises en considération. Toutefois, cela ne nous donne pas, selon moi, l'assurance qu'elles seront incluses.

Voilà mon problème. J'estime que, comme comité, nous voulons être absolument justes à l'égard de toutes les parties en cause dans ce projet de loi. C'est pourquoi j'insiste pour que soient prévus des procédures établissant qu'une compagnie a le droit d'en appeler d'une décision arbitraire prise par un seul individu, quelle que soit sa compétence dans l'exercice de ses fonctions. Car il arrive toujours des conflits de personnalités ou des influences extérieures, et j'estime que c'est là une protection pour le personnel d'inspection aussi bien que pour la compagnie en cause.

[Texte]

● 1015

Although, as has been pointed out, there were only perhaps two instances in the last two years, the complexity of the chemicals is increasing each and every year and we have no guarantee that there might not be 10 instances next year. I firmly believe we are all trying to make as good a bill as possible because it may well be in effect for the next 20 years. I think the onus is on us to make just as good a bill as possible at the Committee stage. I do not want to belabour this, Mr. Chairman, but I feel very strongly about this particular section.

The Chairman: Would some further assurance or reassurance by the Minister be helpful at this particular time?

Mr. Olson: Mr. Chairman, I tried as positively as I could to indicate that we are going to propose regulations for the establishment of procedures for review of any seizure and detention under this Bill. All I could do now is repeat that that is the intention.

The Chairman: Mr. Foster.

Mr. Foster: Mr. Chairman, I think this is a reasonable amendment.

It does not appear that we need an appeal board immediately if there have been only a couple of groups of chemicals which have been red-ticketed. It does not seem to be an immediate problem, but we are writing in the regulations a provision for an appeal board if and when this is needed in the future. I think this is a reasonable amendment and I do not see why we do not consider this question now. We have had a pretty good discussion on it.

M. La Salle: Une question supplémentaire.

Le président: Monsieur La Salle.

M. La Salle: J'ai une question supplémentaire à poser dans le but de me convaincre moi-même. On a dit la semaine dernière que le ministre avait laissé entendre que les compagnies auraient un droit d'appel; si tel est le cas, je voudrais savoir pourquoi le ministre refuse de l'inclure dans le Règlement?

● 1018

Mr. Olson: I do not recall that I said that. I said that the company and anyone else who feels that he is aggrieved by the decision can

[Interprétation]

Bien que, comme on l'a souligné, deux cas seulement se soient présentés pendant les deux dernières années, la complexité des produits chimiques augmente chaque année, et rien ne nous prouve qu'il n'y aura pas dix causes de ce genre l'an prochain. Naturellement, je reconnais que nous essayons d'avoir une loi aussi bonne que possible, étant donné qu'elle pourrait bien rester en vigueur durant les vingt prochaines années. C'est pourquoi il nous incombe la mise au point d'un projet de loi aussi juste que possible au moment de l'étude en comité. Je ne veux pas m'étendre trop longtemps là-dessus, monsieur le président, mais ce point m'importe beaucoup.

Le président: Peut-être que le ministre pourrait donner une nouvelle assurance à ce propos?

M. Olson: Monsieur le président, j'ai essayé autant que possible de montrer que nous allions proposer des règlements visant à l'établissement de procédures de révision de toute saisie ou retenue faite aux termes de la présente loi, et tout ce que je peux faire c'est de répéter que c'est bien là notre intention.

Le président: M. Foster.

M. Foster: Monsieur le président, je pense qu'il s'agit là d'un amendement raisonnable.

Il n'apparaît pas que nous ayons besoin d'une commission d'appel dans l'immédiat, dès lors qu'une ou deux firmes de produits chimiques seulement se sont mérité l'étiquette rouge. Cela ne me semble donc pas un problème immédiat. Nous inscrivons toutefois dans les règlements une clause prévoyant l'instauration d'une commission d'appel au moment où cela s'avérera ultérieurement nécessaire. Je répète que cela me semble là un amendement raisonnable, et je ne vois pas pourquoi on ne l'étudierait pas dès maintenant.

Mr. LaSalle: A supplementary question.

The Chairman: Mr. LaSalle.

Mr. LaSalle: Just a supplementary question to convince myself. I remember last week it was said that the Minister had said that the companies would have a right of appeal. If that is the case, I would like to know why the Minister refuses to include it in the Regulations?

M. Olson: Je ne me rappelle pas l'avoir dit. J'ai dit qu'une compagnie ou quiconque se sentant lésé par la décision prise, peut en

[Text]

appeal to the Minister with respect to anything that any one of the inspectors may do. The amendment suggested by Mr. Danforth does not fit exactly with that. The amendment there calls for the setting up of an independent board and makes it mandatory that this be done, and we are suggesting that we can amend this clause by including the provision for the establishment of procedures for the review of any seizure and detention.

I think the undertaking I gave is all included in the amendment being suggested.

The Chairman: Gentlemen, I do not want to limit discussion. The question has been called. I recognize Mr. Danforth.

Mr. Danforth: Mr. Chairman, I am not going to speak at length on this at this time. I appreciate that the Committee wants to reach a decision, but I would like to make two things clear. First, I have no quarrel with the wording of this amendment as proposed and with its insertion in this particular place. I have no quarrel with this amendment. I am perfectly prepared to accept the intent of that amendment. My only concern is the fact that whether or not the amendment will be carried out, and in what manner it may be carried out are left entirely to the discretion of the Governor in Council. I want to make absolutely clear that I have no quarrel with this whatsoever.

Secondly, what I would like at this time, with your indulgence, Mr. Chairman, is to enquire of the Minister what steps will be necessary and what delay incurred should the Governor in Council, in his discretion by virtue of the word "may", not make such a regulation. What steps would be necessary should it be felt that we need such a regulation in order to see that this shall be done?

• 1020

The Chairman: Mr. Minister?

Mr. Olson: I am advised that this can be done in a very short time, in two or three days, and submitted to the Governor in Council whenever the conditions are such that there need to be changes in the review procedure. But what I pointed out some time ago is that officials of this Department have received, and will receive, further recommendations, if you like, from the industry.

But as far as the practical application of some kind of review procedure is concerned, we want to take that into account as well concerning the products that may be seized and detained.

[Interpretation]

appeler au ministre à l'égard de tout agissement d'un inspecteur. Mais, ce que demande M. Danforth, n'est pas tout à fait conforme à l'amendement que vous avez. Il propose la création d'une commission indépendante et de caractère obligatoire, alors que nous, nous suggérons d'amender l'article en prévoyant le recours à des procédures de révision de toute saisie. J'estime que l'assurance que j'ai donnée à ce propos est entièrement contenue dans l'amendement tel que proposé.

Le président: Messieurs, je ne veux pas limiter le débat. M. Danforth a la parole.

M. Danforth: Monsieur le président, je ne vais pas m'étendre sur cette question. Je comprends que le comité veuille prendre une décision, mais il faut bien éclaircir deux points. Premièrement, je n'ai rien à redire à la phraséologie de l'amendement, tel que proposé, ni à son insertion à cet endroit. Je n'ai pas d'objections, et je suis prêt à en accepter l'intention; mon seul souci est le fait que son application est entièrement laissée à la discrétion du gouverneur en conseil. Je désire qu'il soit bien clair que je n'ai rien à redire moi-même là-dessus.

Mais, pour l'instant, avec votre permission, Monsieur le Président, je voudrais demander au ministre quelles démarches seront nécessaires et quels retards encourus si le gouverneur en conseil, qui a les pouvoirs discrétionnaires en vertu de l'utilisation du mot: «peut», n'adopte pas une telle réglementation? Et est-ce qu'il faudra avoir d'autres règlements pour veiller à ce que cela soit fait?

Le président: M. le ministre?

M. Olson: On peut procéder dans un très bref délai, deux ou trois jours—on peut soumettre un règlement au gouverneur en conseil lorsque les conditions exigent que l'on fasse une modification à la procédure des révisions. Mais ce que j'ai signalé il y a quelque temps, c'est que les hauts fonctionnaires de ce ministère ont reçu et recevront des recommandations de la part de l'industrie. Mais en autant qu'une application pratique d'une procédure de révision est concernée, nous en tiendrons compte tout autant que les produits qui peuvent être saisis et détenus.

[Texte]

Mr. Korchinski: I just want to make this comment, Mr. Chairman. There has been argument presented here that since there were only two cases in the last two years, therefore we do not need this appeal. To argue that way would be to argue against the need for this entire bill.

In every case where the chemical has been "red tagged", they should have the right to be able to have the appeal. This is all I am suggesting. To suggest that we do not have to have an appeal because there were only two cases is no argument at all, because if that is a valid argument, then why are we considering this bill?

Mr. Olson: I do not think that we said that there were only two cases in all of Canada. I was not here when the witness that you are talking about was heré. I think what he was saying was that in his company operations there were only two. I think there were substantially more than that throughout Canada.

I do not know what further I can say, Mr. Chairman. We have given the undertaking that we intend to propose regulations dealing with seizure and detention, and, indeed, for the review of any seizure and detention.

What the other amendment called for was the setting up of a board—an independent board—outside of the technical people who would be involved by this Department and several other Departments who have an interest, and that we are not prepared to accept. But we are prepared to make sure that there is a procedure whereby anyone who feels aggrieved at the decision of one inspector may have that case reviewed by the Minister or the senior officers in the Department.

The Chairman: I recognize Mr. Cobbe.

Mr. Cobbe: Mr. Chairman, there were numerous figures of complaints that had come about but I think the most important thing when the witnesses were here was that they had received 100 per cent co-operation from people in the Department, and that they were

[Interprétation]

M. Korchinski: Simplement un commentaire, monsieur le président. On invoque ici l'argument voulant que seulement deux cas d'appel se sont présentés au cours des deux dernières années, on n'ait pas besoin de tribunal d'appel. A ce moment-là, peut-être qu'on pourrait invoquer le même argument contre tout le projet de loi, si c'est l'argument que vous allez invoquer pour ne pas constituer une commission d'appel. Je vous dirai que ça ne veut pas dire que les choses vont continuer de la même façon, et, l'on s'attend à cela, le projet de loi n'a pas sa raison d'être, on pourrait tout simplement s'en passer.

Si dans chaque cas où un produit chimique a été banni, on pouvait avoir une commission d'appel, ce serait l'essentiel. Insinuer que nous n'avons pas besoin d'avoir un tribunal d'appel parce qu'il y a eu seulement deux causes qui se sont présentées au cours des deux dernières années, n'est pas un bon argument parce qu'à ce moment-là, on a tout simplement qu'à mettre au rancart tout le projet de loi.

M. Olson: Je ne crois pas avoir dit qu'il n'y avait eu que deux causes dans tout le Canada. Je n'étais pas ici lorsque le témoin dont vous parlez a témoigner devant vous. Il a dit que dans sa société, sa compagnie, il y a eu seulement deux causes mais je pense qu'il y en a eu beaucoup plus à travers tout le Canada.

Je ne sais pas ce que je peux ajouter de plus, monsieur le président, nous avons donné l'engagement que nous avions l'intention de proposer les règlements concernant la saisie et la détention et en vérité, visant l'établissement de procédures pour la révision de toute saisie ou détention.

Ce que demandait l'autre amendement, c'était l'établissement d'une commission indépendante extérieure, c'est-à-dire composée de personnes autres que les personnes qui s'occupent de l'aspect technique, qui serait composée de gens qui font partie de ce ministère ou d'autres ministères intéressés et nous ne sommes pas prêts à l'accepter. Nous sommes prêts à veiller à ce qu'il y ait une procédure en vertu de laquelle quiconque se sent lésé par la décision d'un inspecteur peut faire reviser sa cause par le ministre ou par les officiers supérieurs du ministère.

Le président: Monsieur Cobbe.

M. Cobbe: Monsieur le président, plusieurs témoins ont formulé des plaintes mais l'aspect le plus important c'est qu'ils avaient reçu la coopération à 100 p. 100 des membres du ministère et ils étaient très satisfaits des résultats de leur collaboration avec le minis-

[Text]

totally happy with the results that had occurred. And this is why I feel that the board at this time is not necessary.

The Chairman: I think I should, for the benefit of the Committee, make one little clarification, and that is that the reference of the witness a week ago to there being only two cases in two years or five years—whatever the case might have been—had to do with “red tagging”. Now, surely we agreed that the bill does go much further than just dealing with the “red tagging” of a particular chemical. On an occasion it does regulate the manufacture, and so on.

Now, the question was called, are you ready for the question?

Mr. Danforth: One more question, then I will give way to the Committee's wishes. In his explanation of the procedures, should the regulation not meet with the approval of the companies involved and/or the government, the Minister stated that he was advised it is a matter of two or three days.

What I would like to clarify for my own benefit is, when he speaks of two or three days, supposing a representation is made by the industry that the way such a regulation is written, or because such a regulation is omitted, that a particular hardship has occurred. We have been given the information that it is a matter of two or three days for a change of this regulation.

• 1025

My concern is, does it require formal amendment of the bill, or is it a matter of just departmental procedure where such regulation may be changed, and if such, is it submitted solely to the approval of the Governor in Council? I am interested in the actual mechanics involved, because I am interested in the time-factor.

Mr. Olson: What I said, Mr. Chairman, was that it was physically possible to amend regulations within two or three days, that providing that the Department and the Department of Justice, of course, have to be consulted. But it was physically possible, providing the Department and the Department of Justice were convinced that a regulation ought to be changed. That is the two or three day limitation that was involved.

In practical terms I suppose it would take somewhat longer than that for representation

[Interpretation]

rière. C'est pourquoi je pense que dans le moment, il n'est pas nécessaire d'avoir une cour d'appel.

Le président: Dans l'intérêt des membres du Comité, je pourrais peut-être préciser certaines choses. Il y a une semaine, des témoins ont dit que seulement deux causes dans l'espace de deux ans ou cinq ans se sont présentées quant à des réclamations. Ceci avait trait aux étiquettes rouges, mais je pense que le projet de loi va beaucoup plus loin que l'apposition des étiquettes rouges sur certains produits chimiques. On s'occupe aussi des manufacturiers.

Maintenant, êtes-vous prêts à passer à la mise aux voix?

M. Danforth: Encore un commentaire, ensuite je me conformerai au désir du Comité. Dans ses explications, de la procédure, le ministre n'a-t-il pas précisé que le règlement ne devrait pas être approuvé par les compagnies intéressées et ou le gouvernement. Le ministre a dit qu'on lui avait fait savoir que c'était une question de deux ou trois jours.

Alors, je voudrais préciser que pour moi, lorsqu'il parle de deux ou trois jours en supposant que certaines suggestions soient présentées par l'industrie sur le texte de tel règlement ou sur l'omission de tel règlement, qu'un tort précis a été subi. On nous dit alors qu'on peut changer le règlement dans l'espace de deux ou trois jours.

Ce qui m'inquiète, c'est de savoir s'il faut amender officiellement le projet de loi ou s'il s'agit tout simplement de prendre une procédure ministérielle par laquelle on peut changer le règlement. Dans ce dernier cas, est-ce qu'un changement est soumis seulement à l'approbation du gouverneur en conseil? Ce qui m'intéresse, c'est en fait le mécanisme du changement parce que le facteur temps me semble important.

M. Olson: Je vous ai dit que c'était matériellement possible de faire des modifications dans l'espace de deux ou trois jours, ceci à condition que mon ministère et que le ministère de la Justice évidemment soient consultés. J'ai dit que c'était possible à condition que le ministère et le ministère de la Justice soient convaincus qu'un règlement doit être changé. Et c'est pourquoi j'impose la limite de deux ou trois jours.

Maintenant, pratiquement parlant, j' imagine que ce serait beaucoup plus long. Il faut

[Texte]

to be received by the Department from the industry outlining their views on a regulation that is not meeting the requirements, taking into account justice and procedures and that sort of thing. But that two or three days that I am talking about is the actual time-lapse that would be taken from the time that we had written out the new regulation and sent it to the Governor in Council.

Mr. Danforth: But it does require formal action by Parliament, except...

Mr. Olson: No.

Mr. Danforth: This is the point I am getting at.

Mr. Olson: Unless the procedures that you lay out in the Act are so rigid that we do not have the authority to make those changes. Then, of course, it could. If the regulations clause was too rigid and we found that something practical needed to be done but was prohibited under the authority in the regulations clause, then of course we would have to come back to Parliament.

Mr. Danforth: Then, according to your explanation, Mr. Minister, there is the power of the Governor in Council, without a formal application of amendment, to make a change in the regulations as set out. But if the Department is not of the opinion that such a regulation should be changed, even at the insistence of the industry, then under those conditions the only recourse the industry would have would be to Parliament, and a formal amendment would then be undertaken. Am I not correct?

Mr. Olson: No, I do not think that is the only way. I think that the industry could make representation to the Minister and, as quite often happens also, they make representation to a Member of Parliament who takes that to the Minister. That has happened quite a number of times.

The Chairman: Thank you, gentlemen. I will ask the Minister to read the amendment as proposed and then I will ask you to vote on the question. Mr. Minister, would you read the proposed amendment?

Mr. Olson: The amendment that has been moved by Mr. Douglas, I believe, would insert the following words after line 20—between line 20 and line 21—and then the amended paragraph (a) would read as follows:

[Interprétation]

draît attendre les représentations, l'industrie enverrait ces dernières au ministère en exposant ses idées au sujet d'un règlement qui ne se conforme pas aux exigences, tenant compte de la justice, de la procédure, etc. Mais les deux ou trois jours que je mentionne, c'est en fait le délai qu'il faut compter une fois le nouveau règlement rédigé et envoyé au gouverneur en conseil.

M. Danforth: Mais le Parlement doit agir officiellement, sauf...

M. Olson: Non.

M. Danforth: C'est là où je veux en venir.

M. Olson: A moins que les procédures que vous énoncez dans la loi soient tellement rigides que nous n'ayons pas autorité pour faire ces changements. A ce moment-là, oui, c'est bien possible, par exemple si l'article visant les règlements était trop rigide et qu'on s'apercevait qu'il faut faire quelque chose de pratique, mais que les règlements l'interdisent, il faudrait à ce moment-là s'adresser au Parlement.

M. Danforth: Selon votre explication, monsieur le ministre, le gouverneur en conseil, sans demande officielle d'amendement, a le pouvoir de modifier un règlement tel que celui-ci est établi. Mais si le ministère n'est pas d'avis que tel règlement doit être modifié, même si l'industrie insiste, le dernier recours de l'industrie serait de s'adresser au Parlement et de faire adopter un amendement officiel, n'est-ce pas?

M. Olson: Non, je pense que l'industrie pourrait faire des instances auprès du ministre et, comme ça arrive bien souvent, pourrait aussi faire des représentations auprès d'un député qui pourrait lui-même s'adresser à un ministre. C'est arrivé à bien des reprises.

Le président: Merci, Messieurs, je vais demander au ministre de lire l'amendement tel que proposé, ensuite je vous demanderais de passer au vote et de vous prononcer sur la question. Monsieur le ministre, voulez-vous lire l'amendement s'il vous plaît?

M. Olson: L'amendement proposé par M. Douglas, je crois, nous ferait insérer les mots suivants après la ligne 20, entre la ligne 20 et la ligne 21. L'alinéa a) modifié se lirait comme suit:

[Text]

(a) respecting the detention of any control products seized under this section, the establishment of procedures for the review of any seizure and detention and the payment of any reasonable costs incidental to such seizure or detention, and for preserving or safeguarding any control product so detained; and

The new words are: the establishment of procedures for the review of any seizure and detention... The same words as at the end of paragraph (a).

The Chairman: All those in favour of the amendment as presented, please signify? Will you put your hands up and hold them until counted, please. The amendment is accepted unanimously.

Clauses 9 and 10 carried.

On clause 11—Certificate of analyst.

The Chairman: Mr. Danforth, I recognize you now.

Mr. Danforth: Mr. Chairman, I have some concern with respect to Clause 11(1) where it says:

...in the absence of any evidence to the contrary is proof of the statements contained in the certificate without proof of the signature or the official character of the person appearing to have signed the certificate.

I am quite concerned over why it was felt necessary that this be implemented where there has been no challenge of the signature on the certificate or of the character of the person who signed the certificate. It seems to me it is wide open in this regard.

I am perfectly aware that this may subsequently be challenged in court, but I wonder why it was necessary to allow for that leeway in this particular subclause?

Mr. Olson: Mr. Phillips?

The Chairman: Mr. Phillips?

Mr. Phillips: Mr. Chairman, I would first like to check on the question. Is it with regard to the words "official character"?

Mr. Danforth: There does not have to be any proof of the signature on the certificate or any proof of the authority of the person who signed it. The inclusion of this rather amazes me.

[Interpretation]

concernant la rétention de tout produit antiparasitaire saisi en vertu du présent article, l'établissement de procédures pour la révision de toute saisie ou détention et le paiement de tous frais raisonnables afférents à une telle saisie ou rétention et concernant la conservation ou la préservation de tout produit antiparasitaire ainsi retenu; et...

Les nouveaux mots sont: l'établissement de procédures pour la révision de toute saisie ou rétention...

Le président: Ceux qui sont en faveur de l'amendement tel que proposé sont priés de le faire savoir. Voulez-vous lever la main et la tenir en l'air jusqu'à ce qu'on ait fait le compte? L'amendement est accepté à l'unanimité.

L'article 9 est adopté.

L'article 10 est adopté.

Article 11, Certificat d'analyste.

Le président: Monsieur Danforth, je vous cède la parole.

M. Danforth: Monsieur le président, l'article 11 (1) m'inquiète un peu. On y dit:

...en l'absence de toute preuve contraire, fait preuve des déclarations contenues dans le certificat sans qu'il soit nécessaire de faire la preuve de la signature de la personne par laquelle il paraît avoir été signé ni de la qualité officielle de cette personne.

Je me demande pourquoi l'on a estimé nécessaire d'appliquer cette disposition lorsque nul n'a contesté la valeur de la signature apposée au certificat ni la qualité officielle de la personne qui a signé. Il me semble que c'est un peu trop large.

Je me rends parfaitement compte qu'on peut contester de pareilles choses devant les tribunaux, mais pourquoi laisser autant de latitude dans ce paragraphe-là?

M. Olson: Monsieur Phillips?

Le président: Monsieur Phillips?

M. Phillips: Monsieur le président, je voudrais d'abord m'assurer au sujet des mots «qualité officielle».

M. Danforth: Il n'est pas nécessaire de faire la preuve de la signature ou de la qualité ou de la capacité de la personne qui signe le certificat. Cela me surprend plutôt.

[Texte]

Mr. Phillips: If that is the question, Mr. Chairman, it states that this is acceptable in the absence of any evidence to the contrary and therefore if you go back to the appointment provision in the Act you will see that in any case it is incumbent on the defendant to prove that the man was not an official analyst, that he was not qualified or that the Minister had named an analyst who was not qualified. The defendant must prove that there was something wrong with the analyst before the evidence would be accepted in court.

Mr. Olson: You will also note, Mr. Chairman, that under subclause (2) of the bill the analyst may be called before the court to testify. I presume the interrogation in the first instance would be to establish his competence.

Mr. Danforth: This does not completely answer my question, Mr. Chairman. In the event of a legal action or an action against a corporate body, why when such evidence is presented by an analyst—and it is probably done on request—ample proof of the ability of the analyst does not accompany the submission of this evidence, as well as a certificate verifying his signature. You cannot even cash a cheque in a bank without proof of your signature. It says here that unless an injured party takes formal court action, the evidence which is submitted by an analyst is accepted in total without any question. This gives me some concern. As I stated before it seems to be wide open. Why should it be written into the proposed Act in this way? It does not make sense to me.

The Chairman: Mr. Phillips? Mr. Minister?

• 1035

Mr. Olson: Mr. Chairman, Clause 6 states that the Minister may designate any qualified person. It speaks of a "qualified person". Therefore, when we get to the admissibility of evidence—and that is what is being dealt with in Clause 11—it means that a certificate signed by a person who has been designated by the Minister as a qualified person shall be admitted as evidence unless it is challenged. If it is challenged there are procedures in Clause 11(2) for calling that analyst before the court and cross-examining him.

The Chairman: Mr. Lessard?

Mr. Lessard (Lac-Saint-Jean): That is my point, Mr. Chairman. Clause 11(1) contains the words "in the absence of any evidence to the contrary". I think this is the point. If as a

[Interprétation]

M. Phillips: Monsieur le président, si c'est là votre question, on dit que c'est acceptable en l'absence de toute preuve contraire et, par conséquent, c'est à la défense de faire la preuve que la personne n'était pas un analyste qualifié, que le ministre avait nommé un analyste non compétent, si on remonte à l'article de la loi qui traite de la nomination. Il faut que le défendeur prouve que l'analyste n'est pas compétent pour que la preuve soit acceptable en cour.

M. Olson: Au paragraphe 2 du projet de loi, on dit que l'analyste peut être appelé à témoigner devant les tribunaux et l'interrogatoire consisterait en une preuve de sa compétence.

M. Danforth: Cela ne répond pas complètement à ma question, monsieur le président. Il s'agit d'une action intentée contre une société, et je me demande pourquoi, lorsque l'on demande à un analyste de témoigner, son témoignage ne comporte pas une preuve complète de sa compétence et l'attestation de sa signature. On ne peut même pas encaisser un chèque à la banque sans le signer et, à moins que la partie lésée n'intente une action, on accepte d'emblée la compétence de l'analyste. Cela m'inquiète un peu, comme je l'ai déjà dit. La porte me semble grande ouverte. Pourquoi la loi est-elle rédigée en ce sens? Cela n'a aucun sens pour moi.

Le président: Monsieur Phillips? Monsieur le ministre?

M. Olson: Monsieur le président, à l'article 6, on dit que le ministre peut désigner toute personne compétente. Par conséquent, à l'article 11, on parle de l'admissibilité de la preuve. On parle des certificats signés par une personne désignée par le ministre comme personne compétente. On accepte cette preuve à moins qu'elle ne soit mise en doute. Et, à l'article 11 2), on dit qu'on peut exiger la présence d'un analyste pour contre-interrogatoire.

Le président: Monsieur Lessard?

M. Lessard (Lac-Saint-Jean): L'article 11(1) contient les mots «en l'absence de toute preuve contraire». C'est exactement le point important. S'il y a des preuves au sujet de

[Text]

result of the examination of the analyst, there is evidence to the contrary, that evidence will have to be taken into consideration. If there is no evidence and only objections, it will be accepted.

Mr. Danforth: That means he is guilty until he is proven innocent.

Mr. Olson: No, it does not mean that at all; it means the opposite.

The Chairman: Order, please. I recognize Mr. Korchinsky.

Mr. Korchinsky: I wonder if by way of clarification the Minister could indicate who might be chosen in such a case? Where would they get an analysis made? Could you give us an idea what steps the Department would take and who might be relied upon to do it.

The Chairman: Mr. Phillips will answer the question.

Mr. Phillips: Dealing with the analysis, Mr. Chairman, before an action is taken under the current Act there is requirement for analysis by official analysts. It states that the analyst who is designated by the Minister must be qualified. Where people are not employed under the Public Service Employment Act we require a formal designation by the Minister. In certain cases commercial analysts are hired by the Department. In those cases the Minister has to indicate that they are designated for this purpose.

With respect to the earlier point, the situation is that the analyst or the Department, if you will, in presenting the case is innocent of any wrong doing unless they can prove the contrary. In other words, the analyst is qualified and the signature is there. It eliminates frivolous delays in proceedings.

Mr. Korchinsky: This does not necessarily mean that it will be an analyst who is presently employed by any government department?

Mr. Phillips: It could be the Department of Agriculture, some other department or a commercial analyst hired under contract. In the latter case, or in the case of another department, it requires designation by the Minister to show that he had authority to act under this Act in the analysis of pest control products.

[Interpretation]

l'incompétence de l'analyste ou de l'inspecteur, la preuve devrait être prise en considération, mais s'il n'y a pas de preuve et seulement des objections, alors on l'accepterait.

M. Danforth: Cela veut dire que la personne est considérée comme coupable jusqu'à ce qu'on prouve le contraire.

M. Olson: C'est tout le contraire.

Le président: A l'ordre. M. Korchinski.

M. Korchinski: Est-ce que le ministre pourrait nous dire quelles sont les personnes que l'on choisirait. Qui pourrait faire l'analyse. Donnez-nous une idée de ce que fait le ministère en pareil cas.

Le président: Monsieur Phillips va répondre.

M. Phillips: Avant que des procédures soient intentées en vertu de cette loi, une analyse doit être faite par les analystes de l'État. On dit que l'analyste désigné par le ministre doit être compétent et nous exigeons une nomination précise par le ministre pour que les personnes qui travaillent dans la fonction publique soient formellement désignées par le ministre.

Il y a des cas où le ministère engage un analyste privé. Dans ces cas, le ministre doit indiquer que cette personne a été nommée spécialement. Et de fait, voici la situation: l'analyste ou le ministère, lorsqu'il présente son cas, est considéré comme innocent à moins qu'il n'y ait preuve du contraire. En d'autres termes, si l'analyste est compétent et la signature est là, cela empêche des délais inutiles dans la procédure.

M. Korchinski: Cela ne veut pas dire nécessairement que l'analyste doit être une personne qui travaille à la fonction publique?

M. Phillips: Il peut travailler pour le compte du ministère de l'Agriculture, d'autres ministères, ou pour son propre compte. Mais, dans ce dernier cas ou dans le cas d'un analyste d'un autre ministère, il doit être désigné par le ministre, et avoir l'autorité d'agir en vertu de la loi pour faire l'analyse de ces produits anti-parasitaires.

[Texte]

Mr. Howard (Okanagan-Boundary): Mr. Chairman, in this kind of situation this procedure must be either standard or not standard. Could we have some comment on this?

Mr. Olson: I am advised that it is a standard legal requirement.

Mr. Howard (Okanaga-Boundary): This answers the question, does it not?

Mr. Olson: Yes.

Mr. Howard (Okanagan-Boundary): If this procedure works in other situations of this kind, surely it must be satisfactory in this case.

The Chairman: Thank you, Mr. Howard. Mr. Danforth?

• 1040

Mr. Danforth: I am prepared to accept that it is standard procedure, but I believe there is variation in this instance because of the very contention that we have just raised in the Committee over the right to appeal. Unless it is a court action, as set out in subclause (2) of this particular clause, or an appeal set up under a prescribed regulation as indicated by the Minister and where there is an appeal against an inspector or an analyst, the onus is not only on the part of the company to prove that they are the injured party but they must also submit evidence as to the competence of the person involved or, as in subclause (1), accept "without proof of the signature or the official character of the person appearing to have signed the certificate" the entire submission by such a person.

This is what makes me have some reservations about this entire proposition where we have an appeal. In an appeal the company not only has to prove that they are injured but they have to prove the competence or incompetence of the person causing the grievance. I do not think that this is the intention of the bill, I do not think it is the intent of the department or the government, and this is why I question whether there is not some other way that subclause (1) could have been constructed without adding this particular aspect to it.

Mr. Moore (Wetaskiwin): I just want to point out, and I could be wrong, that what subclause (1) actually says is that a certificate is proof of the statements contained in the certificate—nothing else. This statement does not make too much sense to me. I am not a lawyer, but it says a certificate is proof of the statements contained in the certificate. Is this standard procedure?

[Interprétation]

M. Howard (Okanagan Boundary): Cette façon de procéder est-elle normale ou exceptionnelle? Pouvez-vous nous le dire?

M. Olson: C'est une condition ordinaire.

M. Howard (Okanagan Boundary): Cela répond à la question n'est-ce pas?

M. Olson: Oui.

M. Howard (Okanagan Boundary): Cette procédure s'applique dans d'autres situations semblables, et elle sera nécessairement satisfaisante dans le cas présent.

Le président: Monsieur Danforth.

M. Danforth: Dans le cas présent, il y a une variation à cause de l'objection que nous avons soulevé au sujet du droit d'appel, à moins qu'il n'y ait une cause en vertu de l'article 2, concernant un appel interjeté dans les conditions mentionnées par le ministre. Lorsqu'il y a un appel contre la décision d'un analyste ou d'un inspecteur, c'est non seulement à la compagnie qu'il revient de faire la preuve, mais les compagnies doivent prouver la compétence de la personne en cause ou, comme dans le sous-alinéa 1, accepter, sans preuve de signature, la qualité officielle de la personne désignée.

C'est là le point qui m'inquiète un peu dans toute cette proposition. Lorsqu'il y a un appel, la compagnie doit non seulement prouver qu'elle a été lésée mais aussi prouver la compétence ou l'incompétence de l'analyste. Je ne pense pas que ce soit là le but du Bill, ni du ministère, ni du gouvernement; c'est pour cela que je demande s'il n'y aurait pas moyen de rédiger le paragraphe (1) sans y ajouter cet aspect particulier.

M. Moore (Wetaskiwin): Je voudrais simplement faire remarquer que ce que dit en fait le paragraphe (1), c'est que le certificat atteste les déclarations qui y sont contenues, et rien de plus. Je ne comprends pas bien cette déclaration. Je ne suis pas avocat, mais on dit que le certificat constitue une preuve des déclarations qu'il contient. Est-ce la procédure habituelle?

[Text]

Mr. Olson: Remember, what we are talking about here is the admissibility of evidence and that is all.

Mr. Moore (Wetaskiwin): Yes, I realize that.

Mr. Olson: In the Feeds Act, 1960, it says this:

In a prosecution for a violation of this Act, a document purporting to be the certificate of an analyst shall be received in evidence, without proof of the signature of the person by whom it purports to be signed and without proof of his official position.

Now this goes even farther, where it says that we accept this in the absence of any evidence to the contrary.

Mr. Moore (Wetaskiwin): Yes, I accept all that.

Mr. Olson: It does not even say here "under this Act". So it seems to me that it is a standard procedure in so far as the admissibility of evidence is concerned, except that we have gone a little bit farther and said "in the absence of any evidence to the contrary."

Mr. Moore (Wetaskiwin): It just seems strange to me that they would make a statement saying a certificate is proof of the statements contained in the certificate. However, I will drop it.

Mr. Howard (Okanagan Boundary): I think the Minister made the point that I was going to make in respect of that phrase "in the absence of any evidence to the contrary". A defendant in such a situation would have the opportunity of presenting contrary evidence by one or more analysts who had other opinions on the subject. This is not some kind of a vague opinion, this is a matter of chemical analysis. Surely it is much more concrete than weighing somebody's opinion. It seems to me we are making a mountain out of a mole hill here. There is ample protection for somebody appealing against this decision in the phrase "in the absence of evidence to the contrary".

Mr. Olson: Mr. Chairman, I think perhaps we should clear up something in this connection. It seems to me that there is some misunderstanding about Clause 11. We are talking about evidence in a court, and what is involved in Clause 11 has to do with what is admitted as evidence in a court—the certificates and that sort of thing. This does not

[Interpretation]

M. Olson: Souvenez-vous que tout ce dont on veut parler ici, c'est de l'admissibilité des preuves, rien de plus.

M. Moore (Wetaskiwin): Oui, je le sais.

M. Olson: Dans la Loi de 1960, relative aux aliments du bétail, on dit:

Dans des poursuites pour violation de la présente loi, un document donné comme étant le certificat d'un analyste doit être reçu en preuve, sans établissement de la signature de la personne par qui le document est donné comme ayant été signé et sans établissement de son caractère officiel.

Ceci va encore plus loin, puisque l'on dit que l'on accepte le certificat en l'absence de toute preuve contraire.

M. Moore (Wetaskiwin): Oui, j'accepte tout cela.

M. Olson: On ne dit même pas ici «en vertu de la présente loi», donc cela me semble être la façon de procéder ordinaire, en ce qui concerne l'admissibilité des preuves sauf que nous sommes allés un peu plus loin en disant «en l'absence de toute preuve contraire».

M. Moore (Wetaskiwin): Il me semble étrange qu'on dise que le certificat sert de preuve de ce que ce certificat contient, mais je laisse tomber la question.

M. Howard (Okanagan Boundary): Le ministre a fait la réflexion que j'allais faire à l'égard de l'expression: «en l'absence de toute preuve contraire». Le défendeur dans cette situation aurait l'occasion de présenter des preuves contraires par un ou plusieurs analystes qui auraient un autre avis sur la question. Ce n'est pas une opinion vague; il s'agit d'une analyse chimique. Ce n'est pas une chose sur laquelle on puisse exprimer un avis. Il me semble que nous faisons une montagne d'un rien. Il y a suffisamment de protection pour le défendeur qui veut faire appel, dans cette expression «en l'absence de toute preuve contraire».

M. Olson: Monsieur le président, il y a un point à élucider ici. Il me semble que l'on ne comprend pas bien l'article 11. On parle de preuves devant un tribunal, et l'article 11 traite de ce qui est admissible comme preuve devant les tribunaux: certificats, etc. Cela ne concerne pas la preuve ni l'argument qu'on peut avancer ailleurs que devant un tribunal.

[Texte]

refer to argument or evidence that could be advanced other than in court. This is just simply the admissibility of a certificate as evidence in the court.

• 1045

The Chairman: I will recognize Mr. Pringle.

Mr. Pringle: Mr. Chairman, this has been very carefully designed by legal people, and I think it goes further than what we have been saying too. An analyst is engaged to do a job and I presume he would be engaged because he is an analyst. He completes his work and presents his report.

Any change to the Act, as suggested by Mr. Danforth, seems to me would require him not only to make the report but also to supply evidence that he is qualified to make this report. This involves additional cost and additional expense and, not only that, he may have to go to court and fight with a bunch of liars who are trying to do a job for a company over his own abilities. Now he is engaged as an analyst—he is certainly not picked up on the street—he does his job, he presents his report. If the people who are involved are not satisfied let them pay their liars to prove that he is not an analyst. I think it has been carefully designed this way and should be left the way it is.

The Chairman: Mr. Lessard, have you a supplementary?

M. Lessard (Lac-St-Jean) je voudrais faire un commentaire supplémentaire, monsieur le président. On dit, au tout début:

Sous réserve des exceptions du présent article...

et je me réfère au paragraphe (3) où il est bien dit que:

Aucun certificat ne doit être reçu en preuve en conformité du paragraphe (1), à moins que la partie qui a l'intention de le produire n'ait donné, avant le procès, à la partie contre laquelle elle a l'intention de le produire, un avis raisonnable de son intention, accompagné d'une copie du certificat.

Ceci donne le temps à la partie d'étudier ce certificat et de le contester, justement, en l'absence de toute preuve contraire. Justement, ils peuvent faire leur preuve contraire de la validité de ce certificat en s'appuyant sur le paragraphe (3).

[Interprétation]

Il s'agit seulement de l'admissibilité d'un certificat comme preuve devant un tribunal.

Le président: Monsieur Pringle?

M. Pringle: Monsieur le président, cela a été rédigé très soigneusement par des juristes, et va même plus loin que ce que nous avons dit. Un analyste est engagé pour faire un certain travail, et je suppose qu'on l'engage parce que c'est un analyste. Lorsqu'il a fini son travail, il fait son rapport.

Tout changement dans la Loi tel qu'en a proposé M. Danforth, obligerait l'analyste non seulement à faire son rapport, mais aussi à prouver qu'il a la compétence voulue pour faire un tel rapport. Cela entraîne un coût et des dépenses supplémentaires, et, de plus, il peut avoir à aller devant les tribunaux et à se battre avec une bande de menteurs qui essaient de favoriser une société aux dépens de sa compétence comme analyste. On l'a engagé comme analyste—ce n'est certainement pas une personne qu'on a prise dans la rue et il fait son travail et présente son rapport. Si les personnes intéressées ne sont pas satisfaites, qu'elles paient donc leurs menteurs pour prouver qu'il n'est pas un véritable analyste. Je pense que la loi a été rédigée soigneusement et qu'on devrait la laisser telle quelle.

Le président: Monsieur Lessard, avez-vous une question supplémentaire?

Mr. Lessard (Lac-Saint-Jean): I have a supplementary comment, Mr. Chairman. At the very beginning the following is stated:

subject to this section.

I am referring to subsection (3) which states the following:

No certificate shall be received in evidence pursuant to subsection (1) unless the party intending to produce it has, before the trial, given to the party against whom it is intended to be produced reasonable notice of such intention together with a copy of the certificate.

This gives time to the party to study this certificate and challenge it in the absence of any evidence to the contrary. As it is, they may submit evidence to the contrary regarding the validity of this certificate by referring to subsection (3).

[Text]

The Chairman: Thank you, Mr. Lessard. I will recognize Mr. Peters and then Mr. McKinley.

Mr. Pringle: A supplementary on that particular point, Mr. Chairman. There will be cases when the company or the person charged will also be able to hire an analyst and the analyst's report will be brought into court, and the protection of that particular analyst is provided for as well. In other words, I think they are trying to avoid two analysts getting into a legal case. They are trying to keep this between the complainant and the defendant.

The Chairman: Mr. Peters.

Mr. Peters: Mr. Chairman, as far as I am concerned, this is a small bill with not much significance, and I really have not changed my mind. However, I am surprised that the Liberal members particularly have to defend it, whether it is right or wrong, on a matter of principle.

I am particularly interested in the remarks that the Minister made when he referred back to the Feed Grains Act. Now if there was ever an Act that was a bad act he knows that was it. It was partly responsible for the development of the Bill of Rights. It had reached the epitome of what the civil servants could do: they could walk in, they could seize, they could destroy, they could eliminate, they could do everything, and there was absolutely no protection whatsoever. The Minister fought against many of the things in that act because it was the epitome of the Civil Service operating the law.

I am not sure whether or not there should be proof but surely when we hire somebody, no matter who he is, when he signs that certificate should put down his position and rank. I am not expecting that he put the Great Seal of Canada on it or something similar because he may be a hired analyst. I do not see any reason that he should not. Obviously, the reason he should not is so the department can go out and hire somebody else to give an analysis in court that will go against the analysis given the other liar, as Mr. Pringle has said, who was hired on the other side. You do not involve the Department in making the final decision. It is my opinion that this should not go to court. We are pretty stupid if we, as Members of Parliament, are drafting a bill only to set up a legal process involving the court.

[Interpretation]

Le président: Merci, monsieur Lessard. A vous, monsieur Peters. Puis ce sera le tour de M. McKinley.

M. Pringle: Une question supplémentaire, monsieur le président. Il y aura des cas où la société ou la personne accusée pourra aussi engager un analyste, dont le rapport sera produit devant le tribunal; or, la loi protège aussi la compétence de cet analyste. Autrement dit, je pense qu'on essaie d'éviter que deux analystes ne se dressent l'un contre l'autre devant un tribunal. On essaie de limiter l'affaire au plaignant et au défendeur.

Le président: Monsieur Peters.

M. Peters: Monsieur le président, pour moi, ce projet de loi n'a pas grande importance, et je n'ai absolument pas changé d'avis. Toutefois, je m'étonne de ce que les députés libéraux, en particulier, le défendent à tout prix, qu'il soit bon ou non, par principe.

Ce qui m'intéresse, entre autres, ce sont les observations faites par le ministre lorsqu'il a mentionné la Loi sur les aliments du bétail. Si jamais il y a eu une mauvaise loi, c'est bien celle-là. Elle a contribué à amener la Déclaration des droits de l'homme. Elle illustre très bien les pouvoirs exagérés des fonctionnaires, qui pouvaient pénétrer, confisquer, détruire, éliminer, tout faire, sans qu'il y eût aucune protection. Le ministre s'est battu contre bon nombre des dispositions de cette Loi, car elle illustre à merveille le fait que la Fonction publique fait la loi.

Je ne sais pas s'il devrait y avoir une preuve ou non, mais lorsque nous engageons une personne, quelle qu'elle soit, elle doit certainement, lorsqu'elle signe le certificat, donner ses titres de compétence. Il n'est pas nécessaire d'y mettre le Grand Sceau du Canada, mais je ne vois pas pourquoi il ne devrait pas donner ses titres de compétence. La raison en est, évidemment que le ministre peut alors engager un autre analyste pour donner au tribunal une analyse opposée à celle du premier, de l'autre menteur, comme l'a dit M. Pringle, engagé par l'autre partie. Ainsi, le ministère n'a pas à prendre la décision finale. A mon avis, cela ne devrait pas passer devant un tribunal. C'est un peu stupide qu'à titre de députés nous allions rédiger un projet de loi qui a pour seul objet d'établir une façon de procéder qui engage les tribunaux.

[Texte]

• 1050

We should set up a bill in such a way that a decision will be reached outside court in 99 out of 100 cases—there should be that one case where they can go to court. I see no reason for the department not taking the responsibility for the signature on this. This would be normal. The Department has relied on him in the first place; surely they are willing to give some credence to his evidence in court as well—otherwise we should not be using that fellow. I am surprised at some of the Liberals deciding that they have to defend this. It is a small point to me. It does not really matter. I just cannot see why the fellow has not signed it in the first place and why he has not marked down what his job is. I just do not see that.

When I sign a letter I put underneath "The Member of Parliament for Timiskaming." I do not expect that the Member from Chicoutimi is going to have to take responsibility for it until we get it in court. This is just a normal procedure. Frankly, I do not see why it is not here, and I am surprised at the Minister referring back to that other act because that was...

Mr. Olson: I am wondering if you are referring to the same act that I was referring to.

Mr. Peters: The feed grain act?

Mr. Olson: No, that is not the same one.

The Chairman: May I ask the Minister to reply to Mr. Peters' earlier point then.

Mr. Olson: Well, firstly, Mr. Chairman, I do not want to get into details about the act of 1960 or any other year. I think what we are talking about here, and I think we should make this clear, is the admissibility of evidence when a prosecution is under way. I hope that the percentage might even be higher than 99 per cent of settling these things without going to court.

• 1052

This is about the admissibility of evidence when a prosecution is under way, which is stated very, very clearly in Clause 11, subsection (1). There are many, many other sections of this act that deal with finding ways and means of controlling products used for pest control, where you can have a settlement other than going to court. But in the very, very few cases where we do have to go to

[Interprétation]

Le projet de loi devrait être conçu de façon que 99 p. 100 des cas puissent être réglés en dehors des tribunaux. Je ne vois pas pourquoi le ministère ne peut pas assurer la responsabilité de cette signature. Cela serait parfaitement normal. Si le ministère a fait confiance à l'analyste, il n'y a pas de raison qu'il ne croie pas aussi son témoignage devant le tribunal; sinon, il ne devrait pas employer la personne en question. Je m'étonne que certains libéraux se croient obligés de défendre cette mesure. Il me semble que c'est un point de détail, sans importance réelle. Je ne vois vraiment pas pourquoi l'analyste ne peut pas signer tout de suite le certificat et indiquer ses titres de compétence. Je ne comprends pas cela.

Lorsque je signe une lettre, j'indique au-dessous de mon nom «député de Timiskaming». Je ne m'attends pas à ce que le député de Chicoutimi en prenne la responsabilité jusqu'à ce que nous allions devant un tribunal. C'est simplement la façon normale de procéder, et je ne vois pas pourquoi cela n'est pas exposé dans le texte et je suis très surpris que le ministre mentionne cette autre loi, à cause...

M. Olson: Je me demande si vous pensez à la même Loi.

M. Peters: La Loi relative aux aliments du bétail?

M. Olson: Non, ce n'est pas la même.

Le président: Je demanderais à M. Olson de répondre à la première intervention, celle de M. Peters.

M. Olson: D'abord, monsieur le président, je ne veux pas entrer dans les détails, au sujet de la loi de 1960 ou de toute autre année. Ce dont nous parlons ici, et je crois que nous avons à le dire clairement, c'est l'admissibilité de la preuve lorsqu'il y a une cause devant les tribunaux. J'espère que le pourcentage serait même plus que 99 p. 100 des causes qui se règlent hors de cour.

Mais la loi est très claire. L'article 11 (1). Il y a beaucoup d'autres articles de la loi qui traitent des moyens par lesquels on peut contrôler les produits utilisés pour le contrôle des parasites, où on peut régler la question sans aller devant les tribunaux. Mais il y a un très petit nombre de causes où l'on doit plaider et nous avons besoin de règles de procédure devant les tribunaux sur la protection de la

[Text]

court, and where a prosecution has to be taken, then, of course, we need to have some rules for the procedure within that court, too, for the protection of the person aggrieved and for the reasonable and fair procedure in that court.

All that this says is that in the absence of any evidence to the contrary, these certificates will be admitted as evidence in the court. That does not say that the judge has to accept them. He can examine them, and indeed under subsection (2) it says:

The party against whom a certificate of an analyst is produced pursuant to subsection (1) may, with leave of the court, require the attendance of the analyst for the purposes of cross-examination.

It also says under subsection (3) of Clause 11 that the certificate must be given or presented to the party in advance. If you read it, it says:

No certificate shall be received in evidence pursuant to subsection (1) unless the party intending to produce it has, before the trial, given to the party against whom it is intended to be produced reasonable notice of such intention together with a copy of the certificate.

We are not talking in this clause about what we can do to settle disputes outside of court. We are talking about what happens in the very small number of cases, at least hopefully, that ever get to court, as to the admissibility of evidence when you are in a prosecution. That is stated clearly.

So I cannot accept the argument concerning this clause that something needs to be done for setting these things outside of court, because what we are talking about here is the procedure in the court and the admissibility of evidence in that position.

The Chairman: Mr. McKinley?

Mr. McKinley: Mr. Chairman, my thoughts are along the lines of Mr. Peters, and the words of the Minister have amplified them in the last few minutes, namely that it has to go to court. A case has to go to court to give the people against whom the certificate was produced an opportunity to find out the qualifications of the analyst. And, as we all know, and the Minister has stated, probably 99 per cent of these cases will be settled out of court.

[Interpretation]

personne lésée et pour que la procédure soit juste et équitable devant le tribunal.

Tout ce qu'on dit c'est qu'en l'absence de toute preuve contraire, les certificats sont admis comme preuve par le tribunal. Cela ne veut pas dire que le juge peut les accepter. Il peut les examiner et, en fait, l'article (2) dit:

La partie contre laquelle un certificat d'un analyste est produit en conformité du paragraphe (1) peut, avec l'autorisation du tribunal, exiger la présence de l'analyste pour contre-interrogatoire.

Aussi, à l'alinéa 3 de l'article 11, on dit:

Aucun certificat ne doit être reçu en preuve en conformité du paragraphe (1) à moins que la partie qui a l'intention de le produire n'ait donné avant le procès, à la partie contre laquelle elle a l'intention de le produire, un avis raisonnable de son intention, accompagné d'une copie du certificat.

Nous ne parlons pas dans cet article, de ce que nous pouvons faire pour régler les différends hors de cour. Nous parlons de ce qui se produit dans le très petit nombre de cas du moins nous l'espérons, qui se trouvent devant les tribunaux quant à l'admissibilité de la preuve lorsqu'il y a poursuites. Et cela est dit clairement.

Par conséquent, je ne peux pas accepter l'argument, en ce qui concerne cet article, qu'il faut avoir une procédure pour régler ces cas hors de cour, parce que ce dont nous parlons, c'est de la procédure devant les tribunaux et de l'admissibilité de la preuve dans cette position.

Le président: Monsieur McKinley?

M. McKinley: Monsieur le président, ma pensée s'apparente à celle de M. Peters et les propos du ministre l'ont accentués au cours des quelques dernières minutes, à savoir que la cause doit être entendue devant les tribunaux. Une cause doit être entendue devant les tribunaux pour donner à la partie lésée contre laquelle le certificat a été produit l'occasion de s'assurer de la compétence de l'analyste. Et nous savons tous, et le ministre vient de le dire, dans 99 p. 100 des cas, on règlera hors de cour.

[Texte]

• 1055

There is an understandable reason why, because these companies do not want a lot of publicity on some little mistake that they may have made some place along the line. But unless they do go to court, they have no way of finding out the official capacity of the analyst. And I think particularly they should have some statement of the qualification of the analyst along with the certificate.

They should not have to go to court to find this out. I think that is foolish, because you have stated yourself, 99 per cent and probably more of them, will be and are settled out of court. And I think it is to the advantage of everybody, including the government, that they be settled out of court.

Mr. Olson: Mr. Chairman, I am advised that there were 180 cases last year where the analysis indicated that it was not up to what was claimed, all of which were settled out of court. There was one case that was taken to court last year, and that involved false labelling.

Mr. McKinley: Maybe there would be fewer, or there might not even have been one that went to court, if they had, in the original instance, the statement of the qualification of the analyst. Would it not be common sense to do that?

The Chairman: Gentlemen, I think that the questioner would like to have the attention of the Committee, and now I think the Minister would like to make his reply at this time.

Mr. McKinley: I would just ask this question. What is the reason for not wanting to give that?

Mr. Olson: We do. We send them a certificate of the analysis, when it is not up to what is claimed on the package.

An hon. Member: A statement of the qualifications of the analyst. They all know, they all work together.

Mr. Olson: I am advised that they all know who does that. But with great respect, Mr. Chairman, we are not taken up, in Clause 11, with the exhaustive ways that the department goes to in order to settle these things out of court. What we are talking about in this clause, is the admissibility of a certificate of an analysis if it gets to court, and only if it gets to court.

An hon. Member: That is right, I agree with that.

[Interprétation]

Parce que ces compagnies ne veulent pas de publicité sur les petites erreurs qu'elles peuvent avoir faites, quelque part dans la fabrication de leurs produits. Mais, à moins d'aller devant les tribunaux, elles n'ont aucun droit de s'assurer de la capacité de l'analyste. Et je pense qu'ils devraient avoir une déclaration de la compétence de l'analyste avec le certificat.

Parce qu'ils ne devraient pas être obligés d'aller devant les tribunaux pour le savoir. Je trouve cela idiot, parce que, comme vous l'avez dit, dans 99 p. 100 des cas et probablement plus, on règlera hors de cour. Et je crois que c'est à l'avantage du gouvernement, et de tout le monde, de régler ces causes hors de cour.

M. Olson: Monsieur le président, on m'a informé que dans 180 cas, l'année dernière, l'analyse a indiqué que le produit n'était pas tel qu'on l'avait présenté, et que la plupart de ces cas ont été réglés hors de cour. Un seul cas a été contesté l'an dernier, et il s'agissait de fausses étiquettes.

M. McKinley: Il y en aurait peut-être moins ou peut-être qu'il n'y aurait même pas eu celui-là, s'ils avaient eu, en premier lieu, une déclaration concernant la compétence de l'analyste. Cela n'est-il pas sensé?

Le président: Messieurs, je vous demande de porter attention aux questions, et je crois que le ministre veut répondre maintenant.

M. McKinley: Une seule question. Pour quelle raison ne voulez-vous pas donner ce certificat?

M. Olson: Nous leur envoyons le certificat d'analyse, lorsque le produit n'est pas tel que représenté sur le paquet.

Une voix: Une déclaration concernant la compétence de l'analyste, tous le savent. Ils travaillent tous ensemble.

M. Molson: Tout le monde sait qui fait cette analyse. Mais, en toute déférence, monsieur le président, nous ne parlons pas dans l'article 11 de tous les moyens que prend le ministère pour régler ces questions, hors de cour. Nous parlons, dans cette disposition de l'admissibilité du certificat d'analyse, si la cause est devant les tribunaux, et seulement si elle est contestée.

Une voix: C'est exact, je suis d'accord.

[Text]

The Chairman: Mr. Danforth?

Mr. Danforth: Mr. Chairman, why I am so concerned about this particular thing is—and I am perfectly aware of the fact—that this deals with a court action and deals with evidence, and this particular clause deals with the evidence that is on the government or the departmental side. This action has been instituted against a corporation because an inspector has subjected a certain chemical for analysis.

And an analyst has made a decision or made an examination of a particular chemical, and has convinced the government that action should be taken on the basis of his analysis. May I ask this—does the government in entering a case, or creating a detention, does the government itself accept this evidence without proof of the signature of the analyst or being perfectly aware of his qualifications?

Mr. Olson: Clause 6 answers that question Mr. Chairman. The Minister shall or may designate only a qualified person.

Mr. Danforth: That deals with the qualified person. Do they accept the signature as being the signature of the analyst?

Mr. Olson: We certainly have many ways of dealing with fraud. If somebody other than the qualified person signed it, that is fraud.

Mr. Danforth: The department has brought about a certain action against a corporation on the basis of an analysis submitted by an analyst in a written report. And my question is—does the government accept the signature on that without question, and does the government then verify the qualifications of the analyst in making the prosecution or making the determined action against the corporation?

• 1100

Mr. Olson: The minister should, and I would say must, satisfy himself that the person is qualified before he designates him as an analyst.

Mr. Danforth: What I am getting at, Mr. Chairman, is the fact that that proof must be there to satisfy the government. Therefore why is it not appended to the analysis so that it is available at this particular time?

Mr. Olson: There is no question, Mr. Chairman, that that would be taken into account and would be available. What we are talking about is the situation where the admissibility

[Interpretation]

Le président: Monsieur Danforth?

M. Danforth: Monsieur le président, la raison pour laquelle je m'inquiète de cette chose, et j'en suis bien conscient, c'est qu'il s'agit de procédures légales et de preuves, et cette clause traite de la preuve du côté du gouvernement. Cette cause a été intentée contre une corporation parce qu'un analyste a analysé un certain produit chimique.

Et un analyste a pris une décision ou a fait un examen, d'un produit chimique quelconque et a convaincu le ministère que l'on devrait poursuivre la compagnie sur la preuve de son analyse. Puis-je demander ceci? ... lorsque le gouvernement fait une retenue ou entreprend des procédures, est-ce que le gouvernement lui-même accepte cette évidence sans preuve de la signature de l'analyste ou sans preuve de sa compétence?

M. Olson: L'article 6 répond à cette question, monsieur le président. Le Ministre peut désigner toute personne compétente.

M. Danforth: Est-ce qu'on accepte la signature comme étant celle de l'analyste?

M. Olson: Nous avons beaucoup de moyens d'agir s'il s'agit d'une signature frauduleuse.

M. Danforth: Le ministère a intenté des procédures contre une compagnie sur la preuve du rapport écrit de l'analyste. Est-ce que le gouvernement accepte la signature sur ce rapport, sans question? Est-ce que le gouvernement vérifie la compétence de l'analyste avant d'intenter des procédures ou avant de prendre action contre la compagnie?

M. Olson: Le ministre doit être satisfait personnellement que la personne est compétente avant de la nommer comme analyste.

M. Danforth: Là, où je veux en venir, monsieur le président, c'est que cette preuve doit exister à la satisfaction du gouvernement. Pourquoi alors les titres de compétence de l'analyste ne sont-ils pas ajoutés au rapport?

M. Olson: Sans doute, monsieur le président, on en tiendrait compte. Ce dont nous parlons, c'est d'une situation où on peut mettre en doute l'admissibilité de la preuve, en

[Texte]

of evidence may be challenged in the absence of any evidence to the contrary, in order to do away with frivolous delay in court proceedings and that sort of thing.

As I said, with great respect, that is all that Clause 11 deals with.

And furthermore, I have to remind the Committee again, Mr. Chairman, that subsection (2) provides that that person may be called before the court to testify. And included in that testimony at the request of the defendant, certainly the interrogation would deal with his competence, if there was any evidence whatever, as is stated in subsection (1), to the contrary. And, furthermore, section (3) says that that certificate and the name and so on shall be presented to the defendant before the court proceedings. It seems to me that all the necessary procedures are, in fact, provided for a defendant to make his defence if he has any evidence whatever to contradict the validity of the certificate.

The Chairman: Mr. Peters?

Mr. Peters: May I ask a supplementary question? I am unaware of it, but is it the intention of the Department when an appeal is made to this section and when it is put into the Court—

Mr. Olson: There is no appeal.

Mr. Peters: It is an appeal if you put it into the Court. When it goes into the Court is it the desire of the Department in their presentation of evidence not to depend entirely on this as their analytic report, but to be able to put in a supplementary or a secondary analytic report on this particular chemical without totally depending on the original analysis? There must be some reason the Department wants this; maybe we are not getting that.

The Chairman: Mr. Phillips will comment.

Mr. C. R. Phillips (Director-General, Production & Marketing Branch, Department of Agriculture): I think it might be helpful to give a review of what happens in the examination of a product and what we go through in the examination before it ever reaches a state of Court. In the first instance, samples are taken; if the analyst finds something wrong he must analyse at least once more to confirm his results; he has confirmed to his satisfaction the results; the certificate is sent out; the violation is of such nature that it would affect the usefulness of the product; the product is detained; the certificate is

[Interprétation]

l'absence de toute preuve contraire. Cela est pour empêcher des délais inutiles devant les tribunaux.

Et, en toute déférence, je dois vous dire que c'est tout ce à quoi vise l'article 11.

Encore une fois, je voudrais rappeler au Comité que l'article 2 stipule que le tribunal peut exiger la présence de l'analyste pour contre-interrogatoire. Et l'interrogatoire traiterait certainement de la compétence de l'analyste qui avait une preuve quelconque contraire quant à sa compétence, tel que le déclare le paragraphe (1). Et, en outre, l'article (3) dit que le certificat et le nom, etc, sera présenté au défendeur avant le procès. Il me semble que toutes les précautions nécessaires sont prises pour donner la chance au défendeur de prouver sa cause. S'il possède des preuves contre la validité de ce certificat.

Le président: Monsieur Peters?

M. Peters: Une question supplémentaire. Je ne suis pas tellement conscient de la situation mais je veux savoir si le ministère lorsqu'un appel est fait aux termes de cet article...

M. Olson: Ce n'est pas un appel.

M. Peters: C'est un appel si la question est portée devant les tribunaux. Est-ce que le ministère, dans ce cas-là, en exposant sa preuve, a l'intention de faire intervenir des choses nouvelles c'est-à-dire ne pas se baser là-dessus pour son rapport. Est-ce qu'il songe à faire intervenir des rapports analytiques supplémentaires sans se baser entièrement sur l'analyse initiale. Il doit y avoir une raison pour laquelle le gouvernement veut agir de cette façon, il doit y avoir une raison derrière cela que nous ne comprenons pas.

Le président: M. Phillips...

M. C. R. Phillips (Directeur général de la production et des marchés, ministère de l'Agriculture): Je pense qu'il serait utile de rappeler ce qui arrive lorsque l'on examine un produit et ce que l'on fait sous forme d'examen avant d'arriver à l'étape du tribunal.

Premièrement, nous prélevons des échantillons. L'analyste qui trouve qu'il y a quelque chose qui ne va pas, doit faire au moins une nouvelle analyse pour confirmer ses résultats. Supposons qu'il a confirmé à sa satisfaction les résultats; il envoie un certificat; si l'infraction est de telle nature qu'elle pourrait affecter l'utilité du produit, nous détenons le

[Text]

provided to the manufacturer; the manufacturer, if he doubts the ability of the analyst, comes to the Department and says: "I would like a part of your sample"; we provide him with a part of the sample; he tests it; he says: "You are wrong" and comes back; we ask for a part of their sample, we go through a procedure; there is some question about the analytical competence of their analyst; we have referee samples; we ask them to submit samples in exchange—there is a whole series of it to see that people are working on the same basis. Then, after a number of infractions—and only then—is a case presented to Court.

As it is indicated in the section, the certificate of the analyst must be in the hands of the manufacturer quite some time before any Court action. Indeed, there have been months of discussion back and forth with analysts about whether they accept the result produced by an analyst of the Department. This is going on all the time, and it is in that context that it says that when evidence is presented to Court it shall be accepted unless proof is submitted to the contrary, and there is this dialogue that has been going on for months.

• 1105

Mr. Peters: Then they know who the analyst is and his competence in Court.

The Chairman: Gentlemen, shall Clause 11 carry?

Mr. Danforth: I have one more question, Mr. Chairman.

The Chairman: Mr. Danforth?

Mr. Danforth: I would like to put this question to the witnesses this morning. This deals with a court of law, as I understand it, and it says:

Subject to this section, . . .
And goes on stating that:

. . . a certificate of an analyst stating . . .
and it says:

. . . is proof of the statements contained . . .

May I ask this: Will a court of law accept evidence in an action of this type under conditions as prescribed under Clause 1 without proof of a signature or the official character of the person who has signed this certificate? Will a court of law, in fact, accept such evidence as being admissible?

Mr. Olson: What the section says is that this is admissible evidence unless or:

[Interpretation]

produit puis soumettons le certificat au fabricant. Si le fabricant doute des capacités de l'analyste, il s'adresse au ministère et dit qu'il veut avoir une partie de l'échantillon; nous lui en donnons une partie; il fait son examen et nous dit: «Vous avez tort». Il revient; nous lui demandons une partie de son échantillon. Nous doutons de la compétence analytique de leur analyste; nous leur demandons de nous soumettre d'autres échantillons. Il y a toutes une série d'échanges du genre pour nous assurer que tout le monde travaille sur la même base. Puis, après une série d'infractions, et uniquement à ce moment-là, la cause est portée devant un tribunal.

Dans cet article, on précise bien que le certificat de l'analyste doit être entre les mains du fabricant bien avant qu'une poursuite ne soit intentée devant le tribunal. Les échanges durent des mois entre les analystes et les fabricants avant que le fabricant décide qu'il accepte ou non les conclusions de l'analyste du ministère. Et ceci se passe constamment. Voilà pourquoi le texte dit que lorsque la preuve est présentée au tribunal, elle sera acceptée à moins de preuve contraire. Le dialogue dure depuis des mois lorsque la cause arrive devant le tribunal.

M. Peters: Il savent donc qui est l'analyste, quelle est sa compétence.

Le président: L'article 11 est-il adopté?

M. Danforth: Une question, s'il vous plaît, monsieur le président.

Le président: Monsieur Danforth.

M. Danforth: Je voudrais poser cette question aux témoins de ce matin. Il s'agit d'un tribunal judiciaire, si j'ai bien compris. L'article 11 dit:

(1) sous réserve des exceptions du précédent article, un certificat d'un analyste . . .

et l'article poursuit un peu plus loin:

fait preuve des déclarations contenues . . .

Voici la question: Est-ce qu'un tribunal acceptera une preuve dans une poursuite comme celle-ci conformément aux conditions prescrites en conformité de l'article 1, sans preuve de la signature ou du caractère de la personne qui a signé le certificat? Est-ce qu'un tribunal jugera cette preuve admissible?

M. Olson: Ce que l'article dit, c'est que cette preuve est admissible

[Texte]

...in the absence of any evidence to the contrary...

then I presume the Court—and the people presenting themselves at Court, perhaps mostly the lawyers—would, if there was any evidence to the contrary, examine the document and the person signing the document.

Mr. Danforth: My question is based strictly on the legal aspect of it. Is it the opinion of the witnesses this morning that a Court would be prepared to accept as evidence in a case of this kind a document purporting to be a certificate of an analyst without proof of signature on the document or any guide to or description of the official character of the person responsible for this particular document?

Mr. Pringle: In the absence of any evidence to the contrary.

Mr. Danforth: I am just asking a legal question.

Mr. Olson: You are asking me to say what a Court will or will not do. They have quite a lot of power to do that, but what I am saying is that these certificates, unless there is evidence to the contrary, must be accepted by the Court. That is what the clause says.

Mr. Danforth: This is my problem. The bill says this, but I want to know if we have any information under a statute which says that the Court will or must.

Mr. Olson: About all I can answer, Mr. Danforth is that they have in the past.

The Chairman: Shall Clause 11 carry?

Clause 11 agreed to.

On Clause 12—Trial of Offences.

Mr. Danforth: In Clause 12 we are dealing again with the matter of a justice. As was brought up in a former bill that we were asked to consider, is this a Justice of the Peace as designated?

Mr. Phillips: Mr. Chairman, as I recall the explanation given by the legal adviser was that it covers all those in the jurisdiction that are authorized by the statutes of the province. There is an occasion, he suspected, where a province might have in its law—but he was not certain—that a justice could. In general, I believe his answer was no, this type of case would not be heard by a Justice of the Peace.

[Interprétation]

en l'absence de toute preuve contraire

Alors j'imagine que le tribunal et les gens qui se présentent devant le tribunal, surtout les avocats, s'ils possèdent des preuves contraires, étudieront le document et interrogeront la personne qui l'a signé.

M. Danforth: Mais je pense à l'aspect juridique de la question. De l'avis des témoins de ce matin, est-ce qu'un tribunal serait disposé à accepter comme preuve dans une cause comme celle-ci, un document qu'on dit être un certificat d'analyste, sans preuve de la véracité de la signature qui apparaît sur le document et sans aucune description du caractère de la personne qui est responsable du certificat?

M. Pringle: En l'absence de toute preuve contraire.

M. Danforth: Je ne pense qu'à l'aspect juridique.

M. Olson: Vous me demandez de vous dire ce qu'un tribunal fera ou ne fera pas. Ils ont des pouvoirs assez larges. Quant à l'admissibilité de ces certificats, en l'absence de toute preuve contraire, le tribunal doit les accepter. C'est ce que dit l'article.

M. Danforth: C'est justement le problème; c'est ce que le bill déclare, mais je veux savoir s'il existe quelque chose quelque part qui nous dit si le tribunal peut ou doit accepter ce témoignage.

M. Olson: Tout ce que je peux vous dire, monsieur Danforth, c'est que par le passé il l'a accepté.

Le président: L'article 11 est-il adopté?

L'article 11 est adopté.

Article 12: instruction des infractions.

M. Danforth: A l'article 12, encore une fois nous traitons de cette question de juge de paix. On en a parlé dans un autre projet de loi qu'on nous a demandé d'étudier. Est-ce que c'est un juge de paix, lorsqu'on dit «justice» en anglais?

M. Phillips: Si je me rappelle l'explication donnée par le conseiller juridique cet article vise toutes les personnes qui s'occupent de questions juridiques et qui sont autorisées par les lois provinciales à agir. Il est possible, selon le conseiller juridique, qu'une province accorde ce pouvoir au juge de paix. Mais il ne croit pas qu'en général qu'un juge de paix puisse entendre une telle cause.

[Text]

Mr. Williams: I think the point that was made, Mr. Chairman, is that this Clause 12 deals solely with geography, not with the competence of judges at all and that other acts govern that entirely—judges or justices. It does not give them any more competence or any less competence.

Mr. Danforth: Mr. Chairman, I would like just a little further clarification of this when it is stated this deals particularly with geography. It does deal with those under whom this offence may be tried, "heard, tried or determined". Is it not a fact that not only does it deal with the geography, it states who the persons may be that this may be heard under, and under this is a justice as stated in the Bill.

Mr. Olson: Mr. Chairman and Mr. Danforth, we are not dealing with the competence of any person to hear a case. That is dealt with in other statutes. What is being dealt with here, as Mr. Williams has pointed out, is that a case may be heard in another territorial jurisdiction, even though the complaint or information did not arise in that territorial jurisdiction.

That is all that is being dealt with in this clause. We are not trying to define or delineate or in any other way attempt to set down conditions for the competence of anybody hearing the case.

The Chairman: Shall Clause 12 carry?

Clause 12 agreed to.

Mr. Peters: Mr. Chairman, before you call Clause 13, I would like to know what the attitude of the Department is to an amendment I would like to make, either here or in the House, to provide for tabling before the Committee each year on a regular basis, March 31 or whatever it may be, the regulations that are moved to this Bill. I am interested not only in this Bill; I am interested in a number of bills, and I would like to know whether or not this is acceptable to the Department and if not, why not?

My thinking is that all members of Parliament and the general public as well are entitled to ascertain what an Order in Council will be—many of these regulations, I believe, are Orders in Council. Most of us do not read them—we have no reason to read them until a specific problem comes to our attention. As these laws are applied for 20 or 30 years and sometimes more, the regulations often totally change the intent or interpretation of the acts.

[Interpretation]

M. Woolliams: L'article 12 vise seulement la géographie et pas la compétence des juges. D'autres lois établissent s'il doit s'agir de magistrats ou de juges de paix. Cet article ne leur donne ni ne leur enlève quoi que ce soit.

M. Danforth: Je voudrais avoir d'autres précisions. Il n'est question que de géographie, dites-vous. Il n'est pas question de préciser devant qui la plainte peut être «entendue, instruite ou jugée». Mais effectivement, en plus de la question de géographie, cet article ne précise-t-il pas qui peut entendre la détermination de l'action contre la corporation et est-ce qu'on ne dit pas que le juge de paix le peut?

M. Olson: On ne parle pas de la compétence de qui que ce soit à entendre une cause. C'est une question qui est réglée par d'autres mesures législatives. Mais comme l'a dit M. Williams, ici on dit tout simplement qu'une plainte peut être entendue dans un territoire autre que celui dans lequel elle a pu être portée. C'est tout ce dont on parle. Il n'est pas tenté d'y définir ou d'établir les conditions que doit remplir celui qui entendra la cause.

Le président: L'article 12 est-il adopté?

L'article 12 est adopté.

M. Peters: Avant de passer à l'article 13, je veux savoir quelle est l'attitude du ministère à l'égard d'un amendement que je voudrais présenter ici ou à la Chambre.

Cet amendement établirait qu'il faut déposer devant le Comité, tous les ans, d'une façon régulière, par exemple le 31 mars, les règlements que l'on joindra à ce bill. Je ne songe pas uniquement à ce bill, mais à plusieurs.

Je voudrais savoir si, oui ou non, le ministère l'accepterait, sinon pourquoi?

J'estime que tous les députés et le public en général ont le droit de savoir quel sera le décret du conseil. Et j'imagine que toutes ces choses-ci sont des décrets en conseil, certains non, certains oui. Mais on ne lit jamais les décrets en conseil et on n'a pas raison de le faire. Sauf quand un problème est porté à son attention. Étant donné que ces mesures législatives sont en vigueur pendant 20 ou 30 ans, les règlements faussent parfois l'intention ou

[Texte]

A good example of this is the Immigration Act.

It appears that some Immigration officials are interpreting the Act individually and probably do so under an Order in Council or under a departmental directive. I would like to see the regulations tabled.

It might not take the Committee too long to go over them each year, although it might. Some of them are obviously almost legislative in nature and I am wondering what the objections would be to having these tabled. Would the Department be willing to write in a clause to have them tabled annually for the attention of the Committee?

Mr. Olson: Mr. Chairman, I think it would be superfluous because first we are obliged to publish the regulations in the *Canada Gazette*. Then, of course, at that point, whether or not you read the *Canada Gazette* they are public information and anyone, particularly the members of Parliament, can obtain a copy of the regulations at any time. But if your purpose is to call the attention of the members of this Committee annually to what may have been changed in the regulations during that year, the secretary, if so instructed, could obtain a copy of the Order simply to call members' attention to what may have been changed.

However, it seems to me that it would be superfluous to have it mandatory that the regulations be tabled because it would be a matter of tabling public information which had already appeared in the *Canada Gazette*. And the regulations are printed anytime there is an amendment to them.

Mr. Peters: Mr. Chairman, I am aware that the regulations are in the *Canada Gazette*, but being available to the public and being public are two different things. The Committee has not been presented with the regulations applying to the Pest Control Products Act. They were not tabled even for our discussion; yet they do bear on what changes take place.

Mr. Olson: The regulations are not prepared until after the bill is passed.

Mr. Peters: The Pest Control Products Act is the one we are repealing in Clause 13.

Mr. Olson: May I have a copy?

• 1115

Mr. Peters: I think there is some merit in my suggestion. May be other members do not, but it seems to me that if these regulations

[Interprétation]

l'interprétation de la loi. Un bon exemple, en est *La Loi sur l'immigration*.

Il semble que certains fonctionnaires du ministère de l'Immigration interprètent la loi de leur propre façon, et probablement en vertu d'un décret en conseil ou de directives du ministère. J'aimerais qu'on saisisse le comité du règlement.

Ce ne serait pas tellement long de l'étudier chaque année. Certains sont de nature purement législative, je voudrais savoir quelles objections on aurait à ce que ces documents soient déposés devant le Comité. Est-ce que le ministère serait prêt à déposer des règlements chaque année devant le Comité?

M. Olson: Je pense que ce serait superflu, parce que, premièrement nous sommes obligés de publier le Règlement dans la *Gazette*. Ensuite, évidemment que vous lisiez la *Gazette du Canada* ou non, n'importe qui, y compris les députés, peut obtenir le règlement. Mais, si l'objectif est de signaler, sur une base annuelle, aux membres du Comité ce que l'on a pu changer dans le Règlement pendant l'année, à ce moment-là, le secrétaire peut en obtenir un exemplaire et le communiquer aux membres du Comité.

Mais, d'après moi, ce serait superflu d'exiger que l'on dépose les modifications au Règlement, parce que ce serait déposer des documents publics qui ont déjà été publiés dans la *Gazette*. On imprime les règlements modifiés, chaque fois qu'un amendement y est apporté.

M. Peters: Je sais que les règlements paraissent dans la *Gazette*, le fait d'être accessibles au public et d'être publics sont deux choses différentes. Le Comité n'a pas reçu le règlement visant la *Loi sur le contrôle des produits antiparasitaires*, et ils ont une influence sur les changements qui se produisent.

M. Olson: On ne prépare pas les règlements avant que la loi soit adoptée.

M. Peters: Oui, mais la *Loi sur les réglementations de produits antiparasitaires*, c'est la loi qu'on modifie à l'article 13.

M. Olson: Puis-je en avoir un exemplaire?

M. Peters: Je pense que ma proposition est valable. Peut-être que d'autres députés ne sont pas de mon avis, mais si ces règlements

[Text]

were tabled the Committee or the steering committee might be instructed to look at them each year and those considered contentious might be discussed. It seems to me there will be many changes in this legislation before we ever see it again.

Mr. Olson: Well, Mr. Chairman, there is no problem at all. If the Committee's secretary requests a copy of the regulations, they are available any time. They are public information and there is no question at all about your being able to obtain them. However, there is no other act that I know of requiring annual tabling of its regulations, and inasmuch as they are so easily obtainable I see no reason why we need to go through that procedure.

Clauses 13 and 14 agreed to.

On Clause 1—Short Title.

Mr. Danforth: Mr. Chairman, I would like to ask a general question under Clause 1, if I may. It follows along the line of argument of Mr. Peters in dealing with the regulations. It seems to me that this Bill is one in which the regulations are very important, as no doubt they are in most.

What I would like from the able witnesses before us this morning is an indication in some detail of how the mechanics are worked out in drafting the regulations of a bill once it has been passed by Parliament, and in particular a bill such as this which intrudes into the normal workings of an industry or two industries, with the chemical industry and agriculture both involved. I would like for the record this morning an indication of the mechanics of drafting the regulations for such a bill.

Mr. Phillips: Mr. Chairman, the normal procedure is that following the passage of any bill by Parliament, the departmental legal adviser is charged with the responsibility of drafting the regulations.

The Justice Department drafts the bill and the departmental legal adviser drafts the regulations. Suggestions are put to him as to what is required by the department to fulfil the purpose of the bill. He assists them and drafts the regulations. Following this they are examined by the department and sent to the Justice Department, where they are reviewed by the Department in terms of the Department of Justice itself, and in terms of the Privy Council.

[Interpretation]

étaient déposés devant le Comité ou son comité directeur pourrait y jeter un coup d'œil, et lorsqu'il ya des choses contentieuses on pourrait en discuter. Il y aura certainement beaucoup de changements à cette mesure avant qu'elle nous soit présentée de nouveau.

M. Olson: Monsieur le président, il n'y a pas de problème du tout. Si le Comité, par son secrétaire, veut avoir les règlements modifiés, ils sont publiés régulièrement. Il n'y a pas de raison pour que vous ayez des difficultés à les obtenir. Mais, je n'ai jamais entendu parler d'une autre loi où l'on doive déposer annuellement le Règlement, surtout que c'est tellement facile de les obtenir, je ne vois pas pourquoi il faut suivre cette procédure.

Les articles 13 et 14 sont adoptés.

Article 1—*Titre abrégé.*

M. Danforth: Je voudrais poser une question d'ordre général visant l'article 1, s'il m'est permis de le faire.

Je suis l'argument présenté par M. Peters, au sujet des règlements. Il me semble que dans ce projet de loi, comme dans toute loi, les règlements sont très importants.

Je voudrais demander aux témoins s'ils pourraient nous indiquer en détail comment le mécanisme est mis au point lorsque l'on rédige un règlement une fois que le projet de loi est adopté par le Parlement et surtout dans le cas d'un bill comme celui-ci qui empiète sur le fonctionnement normal d'une industrie ou plutôt de deux industries, l'agriculture et les produits chimiques. Je voudrais leur demander de verser au compte rendu comment on procède pour rédiger les règlements pour une telle loi?

M. Phillips: Monsieur le président, la procédure ordinaire est qu'après l'adoption de tout projet de loi par le Parlement, le conseiller juridique du ministère est chargé de rédiger les règlements.

Le ministère de la Justice rédige le projet de loi, et le conseil juridique du ministère rédige les règlements. Des suggestions lui sont présentées par le ministère sur ses exigences en vue de se conformer au projet de loi. Il aide le ministère et rédige les règlements, après quoi ils sont examinés par le ministère et envoyés au ministère de la Justice. Le ministère de la Justice en fait la révision, premièrement, par rapport au ministère de la Justice lui-même et deuxièmement, par rapport au Conseil privé.

[Texte]

The lawyer there must assure himself that the proposed regulations are in line with the Bill of Rights and when he is satisfied that they are so, they are sent back to the department for transmittal by the minister to council with an indication by the Department of Justice that they meet the requirements of the Bill of Rights. An explanation of the whys and wherefores of the regulations is provided to council and if in their judgment it is satisfactory, it is approved and published within two weeks in the *Canada Gazette*.

Mr. Danforth: Thank you, Mr. Chairman. I certainly appreciate your courtesy and the fullness of your explanation. I have a supplementary question, Mr. Chairman. Is there any period or time during the drafting of the regulations in which it is common practice to invite the parties involved to either assess the workability of the regulations or to alleviate in that period any undue hardship that may be foreseen? In other words, is this strictly a departmental procedure, or is there any recourse to the industries involved which is normal during this process?

• 1120

Mr. Phillips: The practice is that following the passage of the bill the public is aware of the authority contained in the bill. The minister, indeed, before he submits matters to council, wants to know the judgment of the public in terms of the regulations. We consult with the farm organizations and with the trade organizations to determine what indeed their views are in respect of them. There is one distinction: we do not send copies of the proposed regulations after they have been drafted to any member of the public until they are approved by council and become

• 1121

law, but the contents, the ideas are discussed and when we submit these to the Minister and to Council we must indicate what the views are.

We quite often indicate that in general the farm organizations favour this, the trade organizations favour this, except that they are not too happy about (a) (b) (c) and (d). In other words, we must bring to the attention of the Minister and Council areas of disagreement as we understand them.

Mr. Danforth: Thank you, Mr. Chairman, I am satisfied.

The Chairman: Shall the short title carry?

Short Title Agreed to.

The Chairman: Shall I report the bill as amended?

[Interprétation]

L'avocat doit s'assurer que les règlements proposés sont conformes à la déclaration des droits de l'homme. Lorsqu'il est satisfait sur ce point, il les renvoie au ministère, et le ministre lui-même les transmet au Conseil, en indiquant que les règlements sont conformes à la déclaration des droits de l'homme. Il explique le pourquoi et le comment des règlements, et si le Conseil en est satisfait, il est approuvé et publié, donc les deux semaines, dans la *Gazette du Canada*.

M. Danforth: Je remercie le témoin de nous avoir donné des explications aussi complètes, et de façon aussi courtoise. J'ai encore une question à poser. Est-ce qu'à un moment, pendant la rédaction des règlements, il est d'usage de demander aux partis en cause d'étudier l'aspect pratique des règlements, et prévoir, par exemple, les difficultés imprévues qui pourraient se présenter? Autrement dit, est-ce simplement une procédure au sein du ministère ou est-ce qu'on a recours aux industries en cause?

M. Phillips: L'usage est qu'après l'adoption du projet de loi, le public sait quels pouvoirs sont donnés en vertu du projet de loi. En vérité, avant de soumettre des questions au Conseil, le ministre tient à savoir ce que le public pense du projet des règlements. Nous consultons les organisations agricoles et commerciales pour savoir exactement ce que ces milieux pensent du Règlement, sauf ce que nous n'envoyons pas d'exemplaires du règlement, une fois rédigé, à aucun membre du public tant que les règlements ne sont pas approuvés par le Conseil et ne deviennent loi.

Mais la teneur et les idées sont discutées et, lorsque nous les soumettons au ministre et au Conseil, nous devons indiquer quelles sont ces opinions.

Très souvent, nous indiquons qu'en général les associations agricoles sont en faveur de telle chose, les associations industrielles sont en faveur de telle chose, à ceci près que A, B, C, D, sont des points qui ne leur conviennent pas. Nous signalons au Conseil et au ministre chaque fois qu'il y a un désaccord, tel que nous le concevons.

M. Danforth: Merci, monsieur le président.

Le président: L'article 1 est-il adopté?

L'article 1 est adopté.

Le président: Dois-je faire rapport du projet de loi tel qu'amendé?

[Text]

Some hon. Members: Agreed.

The Chairman: I would now direct your attention to Bill No. C-156. We were considering Clause 1 and I would direct your attention thereto. Are there any questions?

Mr. Horner: Yes, I would like to ask a question of the Minister or one of the department officials. Has there been a number of complaints about the maximum limit being prescribed on animals?

Mr. Olson: Oh, yes, there have been complaints that the market value has moved up beyond what these maximum values have been.

Mr. Horner: Yes, but if...

Mr. Olson: Pardon me, since the bill was amended the last time.

Mr. Horner: As I understand the bill in Clause 1, the maximum is the amount paid over and above the market value of the animal.

Mr. Olson: It is an amount paid over and above the salvage value of the carcass.

Mr. Horner: Let us suppose the carcass has no value whatsoever; then it is an amount paid...

Mr. Williams: If it has no value...

Mr. Horner: If the animal is condemned?

Mr. Williams: If the animal is condemned the department pays to the owner two sums: the sum up to the maximum allowable plus the best estimated value that that carcass would have had for salvage had it not been condemned.

Mr. Horner: I do not like the interpretation of the word "salvage". I do not see it in the bill. Why do you use that word "salvage"?

Mr. Olson: Mr. Horner, I am not sure that it is in the bill, but why I used the word "salvage" is because the connotation in that word means that you do the best you can.

Mr. Horner: This is the point I am getting at, Mr. Chairman: if you are going to take off the maximum amount and still refer to the value of the carcass as salvage, then in many cases you may not be exceeding the present maximum.

Mr. Olson: That could happen, but we intend to establish those maximums by a

[Interpretation]

Des voix: D'accord.

Le président: D'accord. Merci, messieurs. J'attire maintenant votre attention sur le projet de loi C-156. Nous étudions l'article 1 du bill C-156 et j'attire votre attention. Avez-vous des questions à poser là-dessus? Monsieur Horner.

M. Horner: Il y a eu un grand nombre de plaintes, de réclamations, au sujet de la limite maximum prescrite pour les animaux. Est-ce qu'il y en a eu plusieurs?

M. Olson: Oui, que la valeur sur le marché a dépassé le plafond fixé.

M. Horner: Oui, mais...

M. Olson: Pardon, depuis la dernière modification à la Loi.

M. Horner: Si j'ai bien compris l'article 1, le maximum dépasse la valeur du marché?

M. Olson: C'est le montant payé en surplus de la valeur de la carcasse.

M. Horner: Imaginons que la valeur de la carcasse est nulle, quel sera alors le montant...

M. Williams: Si la valeur est nulle...

M. Horner: Si l'animal est condamné?

M. Williams: Si l'animal est condamné, le ministère paie au propriétaire deux montants: d'abord, la somme jusqu'à concurrence du maximum accordé; deuxièmement, plus la valeur qu'aurait pu avoir la carcasse si elle n'avait pas été condamnée.

M. Horner: Je n'aime pas du tout le mot «salvage». Pourquoi en servez-vous?

M. Olson: Je ne suis pas sûr qu'il soit mentionné dans le projet de loi. Si je m'en sers, c'est parce que ça donne un certain sens à un mot, cela veut dire que vous avez fait tout ce que vous pouviez pour le sauver et vous n'avez pas réussi.

M. Horner: Si vous supprimez le montant maximum et que vous parlez encore de la valeur de l'animal abattu après qu'on ait fait tout le nécessaire, vous ne dépassez pas nécessairement le maximum actuel.

M. Olson: C'est bien possible, mais nous avons l'intention d'établir ces maximums par

[Texte]

different process, by an order-in-council, so that it will be possible to reflect market conditions more rapidly than coming back to Parliament to raise the statutory limits. It is true there may be cases where the maximum is not paid.

• 1125

Mr. Horner: I could think of a case which aroused considerable interest a number of years ago—I notice the bill suggests compensation with regard to horses and cattle—but is there any comparison drawn with regard to sheep or hogs?

Mr. Williams: If I might answer that question, this bill does not cover any diseases at the present moment that are under a regulatory program that would apply to sheep and hogs.

Mr. Horner: Would it not apply to hogs with foot and mouth disease?

Mr. Williams: No, it is covered by an entirely different provision of the bill that requires us in the case of epidemic type diseases, such as foot and mouth, not just to kill animals, or order destroyed animals that have the disease, but to destroy animals that are contacts of the disease, in which case the assessment procedure and the method of payment is completely different. There is no—if you will pardon the word—“salvage value”. These animals are destroyed and buried. In such a case the procedure is that the animals are assessed at market value by a group of three, one representing the Health and Animals Branch, one representing the Livestock Division of the Production and Marketing Branch and one representing basically the farmer through some organization named to represent him, usually it is a breed organization, but it depends a little bit on the type of disease.

Mr. Horner: Is there any mark-up with regard to purebred animals?

Mr. Williams: Yes.

Mr. Olson: If you look about half way down in Clause 1 (b) you will see that purebred and grade animals are mentioned.

Mr. Horner: But you are doing away with the distinguishing difference between purebred and grade animals?

[Interprétation]

un processus différent, par un décret en Conseil, de sorte qu'il serait possible d'exprimer les conditions du marché, la valeur marchande, plus rapidement que si on revient au Parlement pour lui demander de fixer des limites statutaires. Il est vrai que dans certains cas on ne paie pas le maximum.

M. Horner: Je pense à une cause qui a suscité beaucoup d'intérêt il y a quelques années.

Je vois que le bill parle de compensations ou d'indemnités pour les chevaux, pour le bétail. Est-ce qu'il y a quelque chose de comparable lorsqu'il s'agit de moutons ou de porcs?

M. Williams: Le projet de loi ne vise aucune maladie couverte par un règlement qui s'applique aux moutons et aux porcs.

M. Horner: La Loi ne s'appliquerait-elle pas aux porcs victimes de la fièvre aphteuse?

M. Williams: C'est une autre disposition du projet de loi complètement différente qui nous oblige, lorsqu'il y a des maladies de type épidémique, comme par exemple la fièvre aphteuse, à détruire non seulement les animaux atteints par la maladie, mais ceux qui sont en contact avec eux. Dans ce cas, la procédure d'évaluation et la méthode de paiement est complètement différente. Il n'y a pas alors de valeur «salvage». Ces animaux sont abattus et enterrés. Dans un tel cas la procédure est la suivante: les animaux sont évalués à la valeur marchande, par un groupe de trois personnes, un représentant du secteur de la santé des animaux; l'autre, le secteur de la mise en marché; le troisième, représentant une organisation agricole ou un agriculteur. En général, c'est une organisation d'élevage, mais cela dépend un peu de la nature de la maladie.

M. Horner: Est-ce que vous faites quelque chose de particulier dans le cas des animaux pur-sang?

M. Williams: Oui.

M. Olson: Par exemple, si vous prenez l'article 1 (b), au milieu, vous voyez qu'on fait la différence entre des pur-sang et des animaux de sang-mêlé.

M. Horner: Oui, mais vous supprimez la différence de base entre les deux?

[Text]

Mr. Olson: No, there is no intention of that at all. When the Governor in Council prescribes the maximums, there will be a difference.

Mr. Horner: Is the Governor in Council going to prescribe the maximums that will stay in effect for a year or several years?

Mr. Olson: Until such time as market values indicate that they are no longer in line with those values.

Mr. Horner: Why cannot we be told what the Governor in Council's maximums are going to be?

Mr. Williams: Well, I am not sure...

Mr. Horner: If I understood the Minister correctly, the Governor in Council is going to prescribe a set of maximums under this bill. Under the old Act the maximums were stated. If the Governor in Council is bringing in a new bill and they do not feel the old maximums were high enough, I think it is only fair to give the committee some idea as to what the new maximums will be.

Mr. Williams: Mr. Chairman, what the new maximums will be will depend entirely upon the date this bill passes Parliament. If the price of livestock were to go down very sharply—and I think we have talked about a higher one, simply because the market at this time is higher—and heaven forbid that that would happen, it is possible that the maximum might be lowered. I am not suggesting that it is probable at all; quite the opposite. At the present moment we are not in a position to state what figures we would be prepared to recommend to the Governor in Council simply because we do not know what the market situation is liable to be at the time this bill becomes law.

• 1130

Mr. Horner: I think that is about the weakest excuse that I have heard in a long time, because I do not anticipate the market fluctuating that much between now and the time this bill passes. In the old Act, which this section is amending, the market and the maximums are stated. One only has to look at the explanatory notes on the opposite page. I do not see why we in this Committee have to leave everything up to the Governor in Council, and why we cannot recognize that

[Interpretation]

M. Olson: Non, nous n'avons pas l'intention de le faire. Lorsque le gouverneur en conseil prescrira des maximums, la différence apparaîtra.

M. Horner: Est-ce que le gouverneur en conseil prescrira des maximums qui resteront en vigueur pour un an ou pour plusieurs années?

M. Olson: Jusqu'à ce que la valeur marchande indique que ces maximums ne sont plus conformes à ces valeurs marchandes.

M. Horner: Comment va-t-on savoir quels seront les maximums fixés par le gouverneur en conseil?

M. Williams: Je ne comprends pas très bien ce que vous voulez dire.

M. Horner: Si j'ai bien compris, le gouverneur en conseil va prescrire une série de maximums, en vertu de ce projet de loi. D'après l'ancien projet de loi, les maximums étaient énoncés. Si le gouverneur en conseil présente un nouveau projet de loi et estime que les anciens maximums ne sont pas assez élevés, je pense que ce n'est que juste pour le Comité que de lui donner une idée de ce que seront les nouveaux maximums.

M. Williams: Ceci, monsieur le président, dépendra du moment où le bill sera accepté par le Parlement. Si le prix du bétail baisse sérieusement, je pense qu'on avait parlé de prix supérieurs, mais dans le moment la valeur marchande est supérieure, si le prix du bétail descendait beaucoup—et, Dieu nous en préserve—ce serait bien possible que le maximum soit abaissé. Je ne dis pas que c'est probable. Évidemment, c'est probablement le contraire auquel on peut s'attendre. Mais, dans le moment, nous ne sommes pas en mesure de dire quels chiffres nous serions prêts à recommander au gouverneur en conseil, tout simplement parce que nous ne connaissons pas ce que sera la valeur marchande au moment où le projet de loi entrera en vigueur.

M. Horner: Je pense que c'est probablement l'excuse la plus faible que j'aie jamais entendue, parce que je ne m'attends pas à ce que le marché fluctue tellement entre aujourd'hui et le jour de l'adoption du projet de loi. Dans l'ancien projet de loi—le bill que l'on veut modifier par cet article—on énonce quelles sont les valeurs marchandes et quels sont les maximums. Vous n'avez qu'à regarder les notes explicatives à la page opposée. Il n'y a pas de raison pourquoi on ne devrait

[Texte]

the Committee may have some intelligence and may be able to judge whether the proposed maximums are high enough or indeed too low.

Mr. Olson: Mr. Chairman, this Act was amended the last time, I think, in 1958. At that time the amounts were amended to a maximum of \$70 for grade cattle and \$140 for purebreds. It is our opinion that these maximums are out of line with today's values of cattle. If the bill were passed now on today's market values, we would recommend, but we cannot be sure that the Governor in Council is going to pass it.

Therefore, this is a problem. I think we would be prepared to recommend that the maximum compensation for grade cattle be increased to \$120 and the maximum compensation for pure-bred cattle to \$200. Here again, this is only an indication of the thinking of the department in so far as recommendations are concerned.

Mr. Horner: What would be the case with horses? I notice there is a difference here.

Mr. Olson: We would have to consider whether or not to take into account the market changes in the value of horses. They were \$200 for pure-bred animals and \$100 for grade animals. I am not sure that the market value of horses has moved up as much as that for cattle since 1958. I am also advised that we have not paid on horses for five years.

Mr. Pringle: Mr. Chairman, on a supplementary, if I might. Is it not the purpose of the bill to amend the Animal Contagious Diseases Act to provide some flexibility so that we can be more fair to those people who are involved with regard to the compensation for their animals? Attempting today to pin down an amount that we are going to pay seems to me to be a superfluous part of the discussion. It is the flexibility part, the ability to increase the maximums—for the Governor in Council to do this—that is one of the purposes, as I understand it, of the bill, unless I am wrong. Am I right or wrong?

Mr. Olson: You are right.

Mr. Horner: I asked that question and I gathered from the Minister—and I want him to correct me if I misunderstood him—that the Governor in Council would prescribe a

[Interprétation]

pas tout laisser au soin du Comité, et lui laisser le soin de juger si les maximums proposés sont suffisants ou non, plutôt que de laisser cela dans les mains du gouverneur en conseil.

M. Olson: Bien, monsieur le président, je pense que c'est en 1958 qu'on a modifié cette loi pour la dernière fois. A cette époque, on a modifié les maximums jusqu'à \$70 pour les sang-mêlé et \$140, pour les pur-sang. D'après ce qu'on peut voir, aujourd'hui, ces chiffres ne sont pas conformes à la valeur marchande actuelle du bétail. Si le projet de loi était accepté aujourd'hui, et si on fixait les maximums, on pourrait faire des recommandations, mais nous ne sommes pas certains que le gouverneur en conseil l'accepte.

C'est un problème. Mais, je pense que nous serions prêts à recommander que la compensation maximum pour les sang-mêlé soit augmentée jusqu'à \$120 et la compensation ou l'indemnité maximum pour les pur-sang soit augmentée à \$200. Mais ici, encore une fois, et ce n'est qu'une indication, de ce que pense le ministère en termes de recommandations.

M. Horner: Alors, que feriez-vous pour les chevaux? Je pense qu'il y a là une différence.

M. Olson: C'est une chose dont il faudrait tenir compte. Il faudrait étudier sérieusement la question. Maintenant, reste à savoir s'il faut tenir compte des fluctuations des valeurs marchandes des chevaux. Elles étaient fixées à \$200 pour les pur-sang et \$100 pour les sang-mêlé. Je ne suis pas certain que la valeur marchande des chevaux ait augmentée autant par rapport au bétail depuis 1958, mais on nous dit aussi que nous n'avons pas payé d'indemnité pour les chevaux depuis 5 ans.

M. Pringle: N'est-ce pas le but de la Loi de procurer une certaine flexibilité afin d'être plus juste envers les gens qui doivent recevoir une indemnité pour leurs animaux? Il me semble que la discussion est superflue. Ce qu'il faut, c'est de la flexibilité pour permettre au gouverneur en conseil d'augmenter les montants. Ai-je raison?

M. Olson: Oui, vous avez raison.

M. Horner: J'ai posé cette question et j'ai compris, d'après ce que le ministre a dit et il peut me corriger si j'ai mal compris, que le gouverneur en conseil établirait un taux et

[Text]

rate which would then be in effect. It would not be changed from one farmer's case to another or from one month to another.

Mr. Olson: No.

The Chairman: But it might be changed more often than it has been in the past.

Mr. Horner: It might well be changed more often than it has, but...

Mr. Olson: Let us be clear on this thing, that what we are prescribing here is the maximum. It is not mandatory that the maximum be paid in all cases.

Mr. Horner: I understand that. So the flexibility of the bill is not going to be as flexible as the former questioner suggested.

Mr. Olson: It will be far more flexible than not changing it for 11 years.

Mr. Horner: In not changing it for 11 years, I agree it could be far more flexible than that. But to go back to my original premise, surely the Committee should be given some credit for some intelligence and should be given some idea as to what the proposed changes of the Governor in Council would be at this time.

Mr. Olson: I have done that Mr. Horner.

Mr. Horner: You have done that with cattle, and I am leading up to the question with horses.

Mr. Williams: With horses it only applies, Mr. Chairman, to cases for the two diseases, glanders and docerine, and there has not been a case in Canada for five years. So actually, and this may be a delinquency on the part of the Department, we have not given consideration as yet as to what recommended levels we would suggest for horses.

Mr. Horner: It is a small point, but I fail to see how you could come before the Committee without having some idea.

Mr. Olson: We will have a good idea before we recommend it to the Governor in Council, but as has been pointed out, it is not a particularly urgent matter that should have received a lot of consideration up until now, because there have been no payments recently.

Mr. Horner: Foot and mouth was not an urgent matter until the day before it broke in Regina.

[Interpretation]

que ce taux ne serait pas ensuite modifié. Il ne serait pas modifié d'un mois à l'autre.

M. Olson: Non, non.

Le président: Il pourrait être modifié plus souvent qu'il ne l'a été dans le passé.

M. Horner: Très bien, mais...

M. Olson: Soyons clairs là-dessus. Ce que nous prescrivons, c'est le maximum; il n'est pas nécessaire que le maximum soit payé dans tous les cas.

M. Horner: Je comprends. La Loi ne sera pas aussi flexible que l'a suggéré le dernier intervenant.

M. Olson: Elle sera beaucoup plus flexible puisque le taux n'a pas été modifié depuis onze ans.

M. Horner: J'admets, sur ce point, qu'elle peut être beaucoup plus flexible. Les membres du comité, qui possèdent tout de même une certaine intelligence, devraient tout de même pouvoir savoir quels sont les changements que le gouverneur en conseil songe à apporter à ce moment-ci.

M. Olson: Nous vous les avons indiqués.

M. Horner: Vous l'avez fait dans le cas des bestiaux mais pas dans le cas des chevaux. Je voudrais savoir ce qui va arriver au sujet des chevaux.

M. Williams: Pour ce qui est des chevaux seuls deux maladies entrent en ligne de compte et aucune de ces maladies ne nous a été signalée ces cinq dernières années. Peut-être le ministère est-il coupable sur ce point, mais nous n'avons pas encore songé aux montants que nous désirons suggérer dans le cas des chevaux.

M. Horner: C'est un point minime mais je me demande comment vous pouvez vous présenter devant le comité sans avoir une idée de ce que vous allez faire.

M. Olson: Notre idée sera arrêtée avant de faire une recommandation au gouverneur en conseil mais il ne s'agit pas d'une question d'urgence puisqu'aucune indemnité n'a été versée récemment.

M. Horner: Le problème de la fièvre aphteuse n'était pas considéré urgent, non plus, jusqu'à ce que l'épidémie éclate à Regina.

[Texte]

Mr. Olson: Of course if we had dourine or glanders it would become urgent right away too, but we have not had any.

Mr. Horner: That is just how quick it can break out.

The Chairman: Gentlemen, I have on my list Mr. McKinley, Dr. Foster, Mr. Peters. May I recognize Mr. McKinley?

Mr. McKinley: You say, Mr. Minister, that you are going to recommend maximums.

Mr. Olson: Yes.

Mr. McKinley: And the maximum for cattle might be—what did you say?

Mr. Olson: It will be \$120 and \$200 if it is based on today's market values. Those are the figures that we are speaking about now.

Mr. McKinley: That is fine, but what about a pure-bred animal that is worth \$1,000?

Mr. Williams: Mr. Chairman, I endeavoured to answer this earlier. This is a matter that has given us a great deal of concern over the years, and basically the problem is that it is extremely difficult to determine the real value of a pure-bred animal in absolute terms, because there are many things involved.

• 1135

We have in general taken the position that high quality pure-bred animals can be covered by insurance, and that anybody who has animals of this nature normally does have them insured against diseases, including these diseases. It is the view of the Department that this procedure should continue, and there should be responsibility on the part of the owner for these animals where it is extremely difficult to establish value. It includes advertising, it includes many things. It includes speculation in some cases where a person buys a calf and he does not really know what its value is. He is hoping maybe, but there is an element of speculation in there.

We believe it should be covered. This extra value over and above the maximums should be covered by insurance on the part of the farmer himself.

Mr. McKinley: Thank you.

Mr. Moore (Wetaskiwin): My question is supplementary.

The Chairman: I recognize Mr. Moore.

[Interprétation]

M. Olson: Si on nous signalait des cas de dourine ou de morve, la situation deviendrait également urgente.

M. Horner: C'est juste: ces épidémies peuvent se déclarer rapidement.

Le président: M. McKinley, Dr. Foster et M. Peters.

M. McKinley: Vous dites, monsieur le ministre, que vous allez recommander le maximum?

M. Olson: Oui.

M. McKinley: Et quel serait le maximum pour les bestiaux?

M. Olson: \$120 et \$200. Ces chiffres sont basés sur la valeur présente sur le marché. Ce sont les chiffres dont nous parlons présentement.

M. McKinley: Et que faire dans le cas d'un animal pur-sang qui vaut \$1,000?

M. Williams: Monsieur le président, c'est là un problème qui nous inquiète depuis de nombreuses années. Le problème fondamental c'est qu'il est très difficile de déterminer la valeur véritable d'un animal pur-sang, parce qu'il faut tenir compte de plusieurs facteurs. En général, notre attitude c'est que les animaux pur-sang peuvent être assurés et que tous ceux qui ont des animaux pur-sang les assurent contre les maladies y compris ces deux maladies dont nous avons parlé. Le ministère pense que cette situation doit demeurer parce que dans le cas d'animaux pur-sang, il est difficile d'établir la valeur. Il faut tenir compte de la publicité, de la spéculation puisqu'il arrive qu'une personne achète un veau sans connaître exactement sa valeur. Il espère, mais en même temps il spécule. Pour ce qui est de la valeur qui excède le maximum prévu par la loi, le fermier doit se protéger par une assurance.

M. McKinley: Merci.

M. Moore (Wetaskiwin): Ma question est supplémentaire.

Le président: Monsieur Moore.

[Text]

Mr. Moore (Wetaskiwin): I can understand determining the value of beef cattle at \$120 and \$200, whether they be grade or purebred. What about dairy cattle? How do you determine their value?

Dr. R. J. McClenaghan (Director, Contagious Diseases Division, Department of Agriculture): In determining the value both for purebreds and for grades—and I will deal with the grades first—we have to decide on giving points to the type of the animal, conformation, usefulness, and age. And depending upon the age of the animal, its type and conformation, we can assess points. Generally a six-year-old dairy animal would, if it is good type, receive very close to maximum compensation.

If it has not good type, or if it in fact is not at its peak production, that is shortly after freshening, if it is dry, then it would have a lesser value. If the udder was not sound, marks would be taken off. And if out of 100 points the animal came up with 80 points, then it would be 80 per cent off the maximum amount. If it was 70 it would correspondingly be less. The same applies in the case of purebreds, based on pedigree in addition to the same formula used for grades.

The Chairman: Does that answer your question Mr. Moore?

Mr. Moore (Wetaskiwin): Partly, yes, but the area in which the animals are being milked might also have an affect on the value, or at least there is a different value for dairy cows outside Toronto, perhaps, than in central Alberta or central Saskatchewan. Will this be taken into consideration?

Dr. McClenaghan: In the past we have not taken this into consideration.

Mr. Moore (Wetaskiwin): When you speak of a cow that is dry and one that is fresh, a cow that is dry may be only two weeks from freshening. That would increase her value too, would it not? Especially if she were in calf, say to some of the top sires in the world. We have Holsteins that are rated at \$150,000. I know this is a false value, but breeding charges are much heavier. Will this be taken into consideration?

Dr. McClenaghan: I perhaps overlooked to tell you that gestation would be taken into consideration.

Mr. Moore (Wetaskiwin): Yes.

Dr. McClenaghan: A cow that is in advanced stages of gestation. The owner has kept this animal up to the point where he

[Interpretation]

M. Moore (Wetaskiwin): Je puis comprendre qu'on puisse établir la valeur des bœtaux à \$120 et \$200. Mais comment déterminez-vous la valeur des vaches laitières?

M. R. J. McClenaghan (Directeur, Division des maladies contagieuses, Ministère de l'Agriculture): En déterminant la valeur des animaux pur-sang et des animaux de sang mêlé, (je parlerai d'abord d'animaux de sang mêlé) il nous faut attribuer des points pour le genre d'animal en question, sa structure, son utilité, son âge. En général, une vache laitière de six ans, de bon sang, recevra l'indemnité maximum. Ce n'est pas un bon type ou si elle n'est pas au point de production. Si le pis n'est pas productif, on enlève des points et si l'animal a 80 p. 100 des points, alors les producteurs reçoivent 80 p. 100 du maximum et ainsi de suite. La même chose s'applique dans le cas des pur-sang. On évalue l'animal d'après la catégorie et on établit, on se sert de la même formule que pour les animaux de sang mêlé.

Le président: Cela répond-il à votre question, monsieur Moore?

M. Moore (Wetaskiwin): Oui, partiellement. Mais, est-ce que la région n'a pas aussi une influence? Par exemple, les vaches laitières n'ont pas la même valeur à Toronto qu'en Alberta. Est-ce qu'on tient compte aussi de cela?

M. McClenaghan: Non, dans le passé, nous n'avons pas tenu compte de ce facteur.

M. Moore (Wetaskiwin): Lorsque vous parlez de vaches qui ne produisent plus, de vaches qui produisent, peut-être que la vache commence à produire dans deux semaines. Cela augmenterait sa valeur, n'est-ce pas? C'est un veau qui va commencer à produire du lait dans les deux semaines. Est-ce que l'on tient compte aussi de ce facteur?

M. McClenaghan: J'ai peut-être oublié de vous dire que la gestation serait considérée.

M. Moore (Wetaskiwin): Oui.

M. McClenaghan: Une vache en état avancé de gestation. Le propriétaire a conservé cet animal jusqu'au rendement et il recevrait la

[Texte]

would receive returns, and this would be given the same rating as an animal that had recently freshened.

Mr. Moore (Wetaskiwin): Yes, I accept the point.

The Chairman: I recognize Dr. Foster.

Mr. Foster: Mr. Chairman, I would just like to applaud the intent of this bill because I think the amounts that have been paid in the past few years are very inadequate, and I personally would like to see higher limits than what the Minister has suggested. I think that in most areas of this country dairy cows in good condition are running in the \$500 to \$1000 price range, especially for pure-breds. Maybe this is a bit high for grades.

• 1140

It seems to me that we should give consideration to paying the farmer the difference between what he gets for salvage for the animal and the average market price. I think most farmers are pretty reasonable people to deal with, and this would be more acceptable to them.

We are not dealing with a wholesale a tremendous number of animals such as we were when we were eradicating brucellosis and tuberculosis, so we are dealing with the exceptional case, the odd flare-up of brucellosis or tuberculosis in various areas of the country. The amounts may be adequate for commercial needs but I doubt if they would be for dairy animals.

Aside from this, I feel that we should be considering giving some compensation to the farmer for the cost of his disinfection and clean-up program. When I was in practice, the compensation cheque was only for one or two animals and would barely cover the cost of his clean-up and disinfection program. Although it can be argued that the farmer is getting rid of a diseased animal, which is true, he still loses that animal from his herd and he also has the added expense of the disinfection, which is a major project on some farms.

Dr. McClenaghan, roughly how many animals are condemned each year—grades and pure-breds?

Dr. McClenaghan: For both tuberculosis and brucellosis the number of animals condemned would be less than 4,000. Unfortunately, I cannot give you a breakdown here but I could provide this information to the Committee at the next meeting.

[Interprétation]

même considération que pour les vaches qui viennent de commencer à produire.

M. Moore (Wetaskiwin): Oui, j'accepte ce point.

Le président: La parole est à M. Foster.

M. Foster: Monsieur le président, je suis d'accord avec le but du bill parce que les montants payés jusqu'ici n'étaient pas suffisants mais j'aimerais que l'on établisse des limites plus élevées que celles qu'a mentionné le ministre. Je crois que dans plusieurs régions de notre pays, les vaches laitières en bonne condition valent de \$500 à \$1,000, surtout pour les pur-sang. Cela est peut-être un peu trop pour les vaches de sang mêlé.

Mais on devrait songer à donner aux cultivateurs la différence entre le prix qu'ils obtiendraient pour la peau et le prix du marché. Je crois que la plupart des cultivateurs sont raisonnables et qu'ils accepteraient cela. Il ne s'agit pas d'un grand nombre de bestiaux, comme lorsque nous étions en butte à la brucellose et à la tuberculose. Mais nous traitons avec un cultivateur qui a seulement quelques vaches à son compte.

A part cela, je pense que nous devrions payer une certaine indemnité au cultivateur pour défrayer le coût de son programme de désinfection. Lorsque je pratiquais, le montant de l'indemnité pour un ou deux animaux n'était pas suffisant pour défrayer le coût de la désinfection. Et on peut dire que le cultivateur se débarrasse d'un animal malade, mais il perd l'animal et aussi il a des frais pour la désinfection, un projet important sur certaines fermes. D' McClenaghan, environ, quel est le nombre de bestiaux que l'on condamne chaque année, les pur-sang et les animaux de sang mêlé?

M. McClenaghan: Pour la tuberculose et la brucellose, le nombre d'animaux condamnés serait moins de 4,000. Malheureusement, je ne peux pas vous donner les chiffres détaillés, mais je pourrais procurer ces détails au Comité lors de la prochaine réunion.

[Text]

Mr. Horner: Mr. Chairman, I have a supplementary. Is compensation paid for animals condemned for brucellosis?

Dr. McClenaghan: Yes, in the same way as for tuberculosis and John's disease.

Mr. Foster: Of this number, would about a quarter be pure-breds?

Dr. McClenaghan: Less than a quarter. I think it is only about 8 to 10 per cent pure-breds.

The Chairman: I have on my list Mr. Peters and Mr. Moore. Mr. Peters.

Mr. Peters: Mr. Chairman, I have listened with interest to the comments of Mr. Foster, who has a special ability in this field because of his relationship with a number of farmers and obviously it is not oriented to just one area. I have had a number of complaints and certainly in the case of pure-bred cattle the compensation has not been sufficient to be considered compensation. It has been a payment, a subsidy for having disposed of them but it is not compensation. I would like to move that Clause 1 (b) be amended to read: "80 per cent of the replacement value of the animal", instead of "as may be prescribed by the Governor in Council for pure-bred and for grade animals" and that compensation for salvage value as well be left in this clause.

I say 80 per cent, Mr. Chairman, because of what the Minister has said on other occasions. It has not happened to my knowledge, but some people could take advantage of this to dispose of a herd. This is possible, I presume, but not likely. I could see the amount being higher except for the statement the Minister has made on a number of occasions. This may have been the experience of the Department. This would allow, particularly where pure-bred cattle are concerned, for a reasonable replacement and still allow, as the insurance would, for the loss of 20 per cent of the animal and the cost of replacing an animal in a relatively high category.

• 1145

From my experience with my parents' herd I would say that for Holstein pure-bred cattle the average price is about \$475 but some of the cattle are worth \$1,200 to \$1,400. The average price of a pure-bred Holstein would be \$475 and a grade would probably be somewhere over \$350.

The Chairman: Gentlemen, we have reached the hour of adjournment. May I suggest, Mr. Peters, that you prepare your

[Interpretation]

M. Horner: Question supplémentaire, monsieur le président. Est-ce que l'on paie une indemnité pour les animaux condamnés pour la brucellose?

M. McClenaghan: Oui la même chose que pour la tuberculose.

M. Foster: Est-ce qu'environ un quart de ces animaux seraient des pur-sang?

M. McClenaghan: Moins d'un quart de pur-sang. Je pense qu'il s'agit seulement de 8 à 10 p. 100 des pur-sang.

Le président: Sur ma liste, j'ai MM. Peters et Moore. Monsieur Peters.

M. Peters: Je m'intéresse aux commentaires de M. Foster, monsieur le président, parce que l'intervenant est au courant de la question. Pour ma part, je n'ai pas de relation directe avec les producteurs de produits laitiers. Mais j'ai entendu des plaintes, surtout dans le cas des animaux pur-sang, et on a trouvé que l'indemnité n'était pas suffisante. Il ne s'agit pas d'une véritable indemnisation. Je propose que l'article (1) soit modifié dans le paragraphe b), ligne 16: qu'on ajoute «80 pour 100 de la valeur de l'animal» et que l'on enlève les termes: «montant maximum que peut prescrire le gouverneur en conseil» etc.

Je dis 80 p. 100. Il est possible qu'il y ait des abus, que les gens essaient de se débarrasser d'un troupeau. On pourrait emprunter les montants. Mais comme l'a dit le ministre, il y a des gens qui essaient de se débarrasser de certains troupeaux. Il y a eu des cas, le ministère a eu vent de cas semblables. Comme le fait l'assurance, l'indemnisation permet au cultivateur, au producteur, de remplacer les animaux détruits.

D'après mon expérience, d'après les troupeaux de mes parents, le coût de remplacer un animal *Holstein* est de \$475. Certains animaux valaient de \$1,200 à \$1,400. Mais le prix moyen serait d'environ \$475; et pour un animal de sang mêlé, la moyenne serait de \$350 environ.

Le président: Messieurs, c'est le moment de lever la séance. Et monsieur Peters, je vous propose de préparer votre amendement con-

[Texte]

amendment in consultation with the Parliamentary Counsel and bring it in written form to our next meeting which will be on Thursday morning at 9.30. The place will be announced.

Gentlemen, if in the future we do have amendments to present to the Committee it would be helpful if you thought them out in advance and prepared them carefully with the help of the Parliamentary Counsel, Dr. Ollivier.

Gentlemen, the matter of being observers to the Agricultural Congress came up at an earlier meeting. Mr. Minister, would you say a word?

Mr. Olson: I raised the question and the members were going to give some consideration to it. My suggestion was that we would issue an invitation to all members of the Committee to attend as observers and for other reasons, but I do not want to repeat the reasons. If that is agreeable we will issue the invitations.

Some hon. Members: Agreed.

The Chairman: Shall Clause 1 stand?

Some hon. Members: Agreed.

The meeting is adjourned to the call of the Chair.

[Interprétation]

jointement avec le conseiller parlementaire et de nous l'apporter jeudi matin, à 9 heures 30, lors de la prochaine séance. Le lieu de réunion sera annoncé. Messieurs, si à l'avenir vous avez des amendements à présenter au Comité, il serait utile que vous en discutiez d'avance, que vous les prépariez avec la collaboration du conseiller juridique parlementaire, M. Ollivier. Une dernière question, messieurs,—attention s'il-vous-plaît,—au sujet des observateurs au congrès de l'agriculture, a été soulevée lors d'une réunion préalable. Monsieur le ministre.

M. Olson: J'ai dit que nous allions étudier la question. J'ai pensé que l'on pourrait inviter tous les membres du Comité à participer à la réunion à titre d'observateurs. Je ne répéterai pas les raisons, mais si vous êtes d'accord, vous êtes invités à assister à ce Congrès.

Des voix: D'accord.

Le président: L'article 1 est réservé?

Des voix: D'accord.

La séance est levée.

REPORT TO THE HOUSE

THURSDAY, February 13, 1969.

The Standing Committee on Agriculture has the honour to present its

FIFTH REPORT

Pursuant to its Order of Reference of Tuesday, January 14, 1969, your Committee has considered Bill C-156, An Act to amend the Animal Contagious Diseases Act, and has agreed to report it without amendment.

A copy of the Minutes of Proceedings and Evidence relating to this Bill (*Issues Nos. 15, 18 and 19*) is tabled.

Respectfully submitted,

Le président,
BRUCE S. BEER,
Chairman.

RAPPORT À LA CHAMBRE

Le JEUDI 13 février 1969.

Le Comité permanent de l'agriculture a l'honneur de présenter son

CINQUIÈME RAPPORT

Conformément à l'ordre de renvoi du mardi 14 janvier 1969, le Comité a étudié le Bill C-156, Loi modifiant la Loi sur les épizooties, et il est convenu de rapporter ledit bill sans amendement.

Un exemplaire des procès-verbaux et témoignages relatifs à ce bill (*fascicules n° 15, 18 et 19*) est déposé.

Respectueusement soumis,

[Text]

MINUTES OF PROCEEDINGS

THURSDAY, February 13, 1969.
(22)

The Standing Committee on Agriculture met at 9:53 a.m. this day, the Chairman, Mr. Beer, presiding.

Members present: Messrs. Barrett, Beer, Clermont, Cobbe, Danforth, Douglas, Gauthier, Gleave, Horner, Howard (*Okanagan Boundary*), Korchinski, Lambert (*Bellechasse*), Lind, Lessard (*Lac-Saint-Jean*), McKinley, Moore (*Wetaskiwin*), Pringle, Roy (*Laval*), Smith (*Northumberland-Miramichi*), Southam, Thomson (*Battleford-Kindersley*), Whicher—(22).

Also present: Mr. C. Turner, M.P.

Witnesses: From the Department of Agriculture: The Honourable H. A. Olson, Minister; Mr. S. B. Williams, Deputy Minister; and from the Farm Credit Corporation: Mr. G. Owen, Chairman.

The Committee resumed consideration of Clause 1 of Bill C-156, An Act to amend the Animal Contagious Diseases Act.

Following questioning of the Minister and Mr. Williams, Clause 1 was carried.

Clause 2 was carried after some questions.

Clause 3, the title and the bill were carried, and it was agreed that the Chairman would report it without amendment.

The Committee entered upon consideration of Bill C-112, An Act to amend the Farm Machinery Syndicates Credit Act.

Clause 2 was allowed to stand.

On Clause 3, Mr. Douglas moved an amendment:

That clause 3 of Bill C-112, An Act to amend the Farm Machinery Syndicates Credit Act, be amended by adding thereto,

[Traduction]

PROCÈS-VERBAUX

JEUDI 13 février 1969.
(22)

Le Comité permanent de l'agriculture se réunit ce matin à 9 h. 53, sous la présidence de M. Beer, président.

Présents: MM. Barrett, Beer, Clermont, Cobbe, Danforth, Douglas, Gauthier, Gleave, Horner, Howard (*Okanagan Boundary*), Korchinski, Lambert (*Bellechasse*), Lind, Lessard (*Lac-Saint-Jean*), McKinley, Moore (*Wetaskiwin*), Pringle, Roy (*Laval*), Smith (*Northumberland-Miramichi*), Southam, Thomson (*Battleford-Kindersley*), Whicher—(22).

De même que: M. C. Turner, député.

Témoins: Du ministère de l'Agriculture: L'honorable H. A. Olson, ministre; M. S. B. Williams, sous-ministre. *De la Société du crédit agricole:* M. G. Owen, président.

Le Comité reprend l'examen de l'article 1 du Bill C-156—Loi modifiant la Loi sur les épizooties.

Le Ministre et M. Williams sont interrogés, puis l'article 1 est adopté.

L'article 2 est adopté, après quelques questions.

L'article 3, le titre et le bill sont adoptés, et il est convenu que le président fera rapport du bill sans modification.

Le Comité passe à l'examen du Bill C-112—Loi modifiant la Loi sur le crédit accordé aux syndicats de machines agricoles.

L'article 2 est réservé.

Sur l'article 3, M. Douglas propose la modification suivante:

Que l'article 3 du bill C-112, Loi modifiant la Loi sur le crédit accordé aux syndicats de machines agricoles, soit modifié

immediately after section 3 thereof on page 2, the following section:

Agreement
re Indians
on reserves

"3A. (1) With the approval of the Governor in Council, the Corporation may enter into an agreement with the Minister of Indian Affairs and Northern Development

(a) for the purpose of enabling loans to be made under this Act to bands engaged in farming operations on reserves where at least three members of any such band who have attained the age of twenty-one years are engaged in the farming operations of the band and at least two of those members are principally occupied in such farming operations; and
(b) for the purpose of providing such security as the Corporation may require under paragraph (b) of subsection (2) of section 3 in respect of loans made to farm syndicates

(i) that are co-operative farm associations of farming corporations, the members or shareholders of which are Indians on reserves, or

(ii) that are associations referred to in subparagraph

(iii) of paragraph (c) of subsection (1) of section 2, the members of which are Indians on reserves or farming corporations the shareholders of which are Indians on reserves.

Application
of other
provisions
of Act to
bands

(2) Where an agreement has been entered into pursuant to subsection (1), a band referred to in paragraph (a) of that subsection shall be deemed to be a farm syndicate for the purposes of this Act and the pro-

par l'insertion, immédiatement après l'article 3 de la loi, à la page 2, de l'article suivant:

"3A. (1) La Société peut, avec l'approbation du gouverneur en conseil, conclure un accord avec le ministre des Affaires indiennes et du Nord canadien

Accord
au sujet des
Indiens
installés sur
des réserves

a) aux fins de permettre l'octroi de prêts en vertu de la présente loi à des bandes qui s'adonnent à des opérations agricoles sur des réserves lorsqu'au moins trois membres de la bande qui ont atteint l'âge de vingt et un ans s'adonnent aux opérations agricoles de la bande et qu'au moins deux de ces membres ont pour principale occupation ces opérations agricoles; et

b) aux fins de fournir la garantie que la Société peut exiger en vertu de l'alinéa b) du paragraphe (2) de l'article 3 en ce qui concerne les prêts consentis à des syndicats agricoles

(i) qui sont des coopératives agricoles ou des corporations d'agriculture dont les membres ou les actionnaires sont des Indiens installés sur des réserves, ou

(ii) qui sont des associations visées au sous-alinéa

(iii) de l'alinéa c) du paragraphe (1) de l'article 2, dont les membres sont des Indiens installés sur des réserves ou des corporations d'agriculture dont les actionnaires sont des Indiens installés sur des réserves.

(2) Lorsqu'un accord a été conclu en conformité du paragraphe (1), une bande visée à l'alinéa a) de ce paragraphe est considérée comme un syndicat agricole aux fins de la présente loi et les dispositions de la pré-

Application
des autres
dispositions
de la loi à
des bandes

visions of this Act, in so far as practicable, shall apply to all loans made or to be made to that band.

Security
for loans
to bands

(3) Where a loan is made or to be made to a band referred to in paragraph (a) of subsection (1), the loan shall be secured in such manner as may be required by the agreement entered into pursuant to subsection (1).

Maximum
loan to
a band

(4) The total amount outstanding of loans that may be made to any one band under this Act shall not exceed the lesser of one hundred thousand dollars or the amount obtained by multiplying fifteen thousand dollars by the number of members of the band engaged in the farming operations of the band at the time the loan is made, except that where the number of such members principally occupied in the farming operations of the band is equal to or less than the number of such members not principally so occupied, the number of such members not principally so occupied shall be deemed to be one less than the number principally so occupied.

Regulations

(5) With the approval of the Governor in Council, the Corporation may make regulations providing for any matter or thing that it deems necessary in order to make or to facilitate the making of loans under this Act to bands referred to in paragraph (a) of subsection (1).

Definition

(6) For the purposes of this section, the words "Indian", "band" and "reserve" have the meanings assigned to them in the *Indian Act*."

sente loi s'appliquent, autant que possible, à tous les prêts consentis ou devant être consentis à cette bande.

Garantie
des prêts
consentis à
des bandes

(3) Lorsqu'un prêt est consenti ou doit être consenti à une bande visée à l'alinéa a) du paragraphe (1), le prêt doit être garanti de la manière qui peut être prescrite dans l'accord conclu en conformité du paragraphe (1).

Prêt
maximum
à une bande

(4) Le montant global non remboursé des prêts qui peuvent être consentis à une même bande en vertu de la présente loi ne doit dépasser ni cent mille dollars ni le montant obtenu en multipliant quinze mille dollars par le nombre de membres de la bande qui s'adonnent aux opérations agricoles de la bande au moment où le prêt est consenti, mais, lorsque le nombre des membres de la bande qui ont pour principale occupation les opérations agricoles de la bande est égal ou inférieur à celui des membres de la bande pour lesquels c'est une occupation secondaire, le nombre de ces derniers est censé être inférieur d'une unité au nombre des premiers.

Règlements

(5) La Société peut, avec l'approbation du gouverneur en conseil, établir des règlements au sujet de toute question ou chose qu'elle estime nécessaire pour lui permettre de consentir des prêts, en vertu de la présente loi, aux bandes visées à l'alinéa a) du paragraphe (1), ou pour en faciliter l'octroi.

Définition

(6) Aux fins du présent article, les mots «Indien», «bande» et «réserve» ont la signification que leur donne la *Loi sur les Indiens*."

The Minister and Mr. Owen answered questions, and with questioning continuing, Clause 3 was allowed to stand.

At 11: 45 a.m., the Committee adjourned to the call of the Chair.

Le Ministre et M. Owen répondent à des questions, puis, l'interrogatoire se poursuivant, l'article 3 est réservé.

A 11 h. 45 du matin, le Comité s'ajourne jusqu'à nouvelle convocation du président.

*Le secrétaire du Comité,
Michael A. Measures,
Clerk of the Committee.*

[Texte]

EVIDENCE

(Recorded by Electronic Apparatus)

Thursday, February 13, 1969

• 0953

The Chairman: Gentlemen, if we could come to order, I see a quorum. I regret, of course, that we are a little late in starting. I hope that at subsequent meetings we might be able to meet a little more promptly and adjourn promptly, as we have done in the past. You will have noticed that we are under rather attractive observation this morning, although rather critical observation, and I ask the members of the Committee to be particularly attentive about using their microphones, keeping their papers off their microphones and also keeping their earpieces away from their microphones during the hearing.

Gentlemen, when the Committee rose on Tuesday we were considering Clause 1 of Bill C-156. At that particular time we were threatened with an amendment. The mover is not present. Are there any questions or shall Clause 1 carry? Mr. Moore (Wetaskiwin).

Mr. Moore (Wetaskiwin): My questions more or less concern the proposed amendment. I asked a question at the last meeting on the comparative value of dairy and beef cattle. Figures of between \$120 and \$200 were given as payment for a beef animal that had

• 0955

to be disposed of, and I asked about dairy cattle and, if I remember correctly, I did not get an answer on the estimated price that might be paid for a top flight dairy cow, not necessarily a registered one.

Hon. H. A. Olson (Minister of Agriculture): Mr. Chairman, we can give you some of the average compensation that was paid during the years 1960-61 to 1968-69, but the figures that I have before me are not broken down as between beef and dairy animals. Perhaps Mr. Williams would like to reply, if there is a difference there that is used as a guide in establishing the amounts of compensation to be paid.

Mr. S. B. Williams (Deputy Minister, Department of Agriculture): There is no breakdown available as to the average

[Interprétation]

TÉMOIGNAGES

(Enregistrement électronique)

Le jeudi 13 février 1969

Le président: Messieurs, la séance est ouverte. Nous avons quorum. Je regrette que nous commençons si tard. J'espère que pour les réunions futures, nous nous réunirons plus tôt et nous pourrons lever la séance plus tôt, comme par le passé. Vous notez que, ce matin, nous avons des observateurs critiques, mais agréables. Je demanderais aux membres de bien vouloir utiliser leur microphone et ne pas brouiller les papiers près des microphones.

Lorsque le Comité s'est ajourné, nous étions en train d'étudier le Bill C-156, article 1. A ce moment-là, nous étions sous la menace d'un amendement. Le proposeur n'est pas là. L'article 1 est-il adopté? Monsieur Moore (Wetaskiwin).

M. Moore (Wetaskiwin): Cela concerne la modification proposée. J'ai posé une question, lors de la dernière réunion, sur la valeur comparative pour les vaches à lait et les bœufs de boucherie, en ce qui concerne les indemnités pour les animaux abattus. On nous a donné les chiffres de \$120 à \$200 pour des animaux de boucherie. Et, si je me souviens bien je n'ai pas obtenu de réponse concernant la valeur approximative que l'on paierait pour une vache laitière, pas nécessairement une vache pur-sang, mais une vache de bonne qualité.

L'hon. H. A. Olson (ministre de l'Agriculture): Monsieur le président, je pourrais vous donner la moyenne d'indemnité qui a été payée pour les années de 1960-1961, jusqu'à 1968-1969. Je n'ai pas la ventilation des chiffres pour ce qui est de la viande et des vaches laitières, mais M. Williams pourrait vous indiquer quels sont les principes que l'on applique.

M. S. B. Williams (sous-ministre de l'Agriculture): Il n'y a pas de ventilation disponible en ce qui concerne l'indemnité moyenne sur

[Text]

payments on dairy and beef cattle. I think the Committee will appreciate the fact that sometimes it is extremely difficult in certain parts of the country to make a judgment on whether these are beef or dairy animals. As you are well aware, the Dominion Bureau of Statistics has a problem in respect to this and we have followed the policy of not asking our people in the field to identify them by type because there is widely divergent type range as between beef animals and dairy animals.

The maximum amount that will be available under the proposed maximum will be \$200, plus the salvage value of the animal. The historical figures show that the average compensation paid for purebreds in 1968, which is the current fiscal year, was \$133.79, plus the salvage value of the animal. In 1966-67 the figure was \$134.14. In 1964-65 it was \$131.64. The year previous it was \$130.04 and the year before that it was \$129.73. Those are the actual averages for all animals. This includes calves, yearlings, milking cows—it includes everything.

Mr. Moore (Wetaskiwin): Are you speaking of registered animals or eligible ones?

Mr. Williams: Those are purebreds, which we define as registered or eligible for registration in accordance with the pedigree.

Mr. Moore (Wetaskiwin): What would the average figures be for the grades?

Mr. Olson: Mr. Chairman, for 1968-69 it was \$65.49. For 1966-67 it was \$62.91. For the year before, 1964-65, it was \$64.86. For 1962-63 it was \$64.74 and for 1960-61 the average was \$62.98.

Mr. Moore (Wetaskiwin): I have another question in that light. I maintain there is very little difference in value in a top dairy herd between an animal that is registered and one that may not be but might be 10 generations A.I., and there is no difference in appearance, and so on. In this case, though, the maximum would be \$120. Is this correct?

Mr. Olson: We are proposing to recommend to the Governor in Council that the maximum compensation, over and above the salvage value of the carcass, be \$120 for a grade animal.

Mr. Moore (Wetaskiwin): That is the maximum?

Mr. Olson: That is correct.

Mr. Moore (Wetaskiwin): I see. Thank you.

[Interpretation]

les vaches laitières et les bestiaux élevés pour la boucherie. Parfois, il est très difficile de faire une évaluation dans certaines parties du pays, à savoir s'il s'agit de vaches laitières ou d'animaux de boucherie. Le Bureau fédéral de la statistique a un problème à ce sujet, et nous ne demandons pas à nos inspecteurs de nous préciser les types des bestiaux, à cause des grandes différences existant entre les types d'animaux.

Le montant maximum disponible, d'après la proposition, est de \$200 plus la valeur de la carcasse. Les données statistiques indiquent que pour les pur-sang, l'indemnité moyenne payée en 1968, c'est-à-dire l'année financière en cours, est de \$133.79 plus la valeur de la carcasse. En 1969, le chiffre était de \$134.14. En 1964-1965, \$131.64; l'année précédente, \$130.04, et, l'année d'avant, \$129.69. Ce sont les moyennes pour tous les bestiaux, y compris les veaux d'un an, les vaches à lait, etc...

M. Moore (Wetaskiwin): Vous parlez des animaux enregistrés?

M. Williams: Il s'agit d'animaux pur-sang que nous définissons comme animaux susceptibles d'être enregistrés ou déjà enregistrés.

M. Moore (Wetaskiwin): Quelles sont les moyennes pour les bêtes de sang mêlé?

M. Olson: Monsieur le président, pour l'année 1968-1969, \$65.49; pour 1966-1967, \$62.91; l'année précédente, 1964-1965, \$64.86; pour 1962-1963, \$64.74; pour 1960-1961, \$62.98.

M. Moore (Wetaskiwin): Une autre question dans le même sens. Je pense qu'il n'y a pas beaucoup de différence dans un troupeau laitier de première qualité, entre un animal de pure race, et un animal qui ne l'est pas, mais qui descend de 10 générations de qualité A1. Il n'y a pas de différence dans l'apparence, etc. Dans ce cas, cependant, le maximum serait \$120 n'est-ce pas?

M. Olson: Nous proposons de recommander au gouverneur en conseil que l'indemnité maximum, en plus de la valeur de la carcasse, soit de \$120 pour un animal de sang-mêlé.

M. Moore (Wetaskiwin): C'est le maximum, n'est-ce pas?

M. Olson: Oui.

M. Moore (Wetaskiwin): Merci.

[Texte]

The Chairman: Thank you, Mr. Moore. Mr. Thomson.

Mr. Thomson (Battleford-Kindersley): This is in further reference to Mr. Moore's question. For example, I knew a dairy man who paid, I think \$400 for a grade cow and this particular cow died of bloat, or something, and I just wonder if \$200 is a realistic figure for this type of animal. I am not moving the amendment, or anything like that, or arguing in favour of it, I am asking the Minister—particularly in reference to dairy animals—what he would think of, say, a 75 or 80 per cent adjustment figure, or something of this sort. I have had beef animals die on me from lightning, or what have you, and received no recompense for it.

Mr. Olson: If you are referring to this bill, there is no way under it that we could pay for the loss of an animal unless it came under the diseases that are included in the Act.

•1000

Mr. Thomson (Battleford-Kindersley): I am sorry, Mr. Chairman, if I left the wrong impression, but I was using this as an example. This fellow paid \$400 for a cow and it died. It could have died from a contagious disease or they could have required that it be shot for this reason. I am asking what he might think—if it were under contagious diseases—of a 75 or 80 per cent adjustment figure. I am wondering if \$200 is realistic.

Mr. Olson: We think it is realistic. Indeed, the amount of the increase is substantially more; it is whatever the percentage is from \$140 to \$200. I think what we also should take into account is that under this program the Department is trying to help the farmer, and not only by way of paying some compensation for the animals that must be taken out of his herd—in other words, that are reactors to the diseases—but also to eradicate the disease from this herd, and in that respect a great deal of assistance is provided to the farmer other than the compensation that is paid.

Mr. Thomson (Battleford-Kindersley): May I comment further? I do not really complain about the average farmer who perhaps loses a cow or two because of something like this, but I am thinking of the hoof and mouth outbreak in Saskatchewan which...

Mr. Olson: These figures do not apply in that kind of case. We pay full value under an eradication program.

[Interprétation]

Le président: Merci, monsieur Moore. Monsieur Thomson (Battleford-Kindersley).

M. Thomson (Battleford-Kindersley): Simplement dans la suite de la question de M. Moore, je connais un éleveur laitier qui paie \$400, par exemple, pour un animal de qualité et qui est mort de météorisation ou d'une maladie quelconque. Et je me demande vraiment si \$200 est un chiffre réaliste pour ce genre de bête. Je ne propose pas d'amendement ni quelque chose de ce genre-là. Je pose simplement une question au ministre, notamment, pour les bêtes laitières. Que penserait-il, disons, d'une indemnisation de 75 p. 100 ou 80 p. 100. Je connais des cas où il y a eu des bêtes qui ont été tuées par le tonnerre ou l'éclair et il n'y a pas eu d'indemnité.

M. Olson: Si vous parlez de ce projet de loi, il n'y a rien de prévu dans le projet de loi qui permet de rembourser la perte d'une bête, à moins que cela soit couvert par les maladies mentionnées dans la loi.

M. Thomson (Battleford-Kindersley): Je m'excuse, monsieur le président. Je me servais de cet exemple: une vache de \$400 est morte; elle aurait pu mourir d'une maladie infectieuse et avait pu être abattue. Je demandais simplement ce qui se passera dans le cas des maladies contagieuses. Une indemnité couvrant 75 ou 80 p. 100 de la valeur ne serait-elle pas mieux adaptée. Je me demande si une indemnité de \$200 est vraiment réaliste.

M. Olson: Eh bien! je pense que c'est réaliste. En fait, c'est un peu plus même que le chiffre de base de \$140. Ce que nous devons voir, en fait, c'est que le ministère, dans ce programme, cherche à aider l'agriculteur, non seulement en lui payant une indemnité pour un animal qui doit être retiré de son troupeau, autrement dit, un animal qui pourrait être contaminé, mais également le ministère cherche à supprimer la maladie. Et, à cet égard, il y a une aide considérable apportée à l'agriculteur, en dehors de l'indemnité proprement dite qui lui est payée.

M. Thomson (Battleford-Kindersley): Est-ce que je pourrais faire un autre commentaire à ce sujet. Pour le fermier moyen qui perd une vache ou deux par an, disons que ce n'est pas grave, mais pour ceux qui ont connu la fièvre aphteuse en Saskatchewan...

M. Olson: Non, non. Ces chiffres ne s'appliquent pas à ce genre de cas. Dans ces cas-là, nous payons la totalité du prix dans le cadre d'un programme d'éradication.

[Text]

Mr. Thomson (Battleford-Kindersley): Thank you. That is what I really wanted to know.

The Chairman: Mr. Horner.

Mr. Horner: I just wondered why the amount was stipulated in the old Act and in this bill we are told approximately what it is going to be but it is not stipulated. Is there any reason...

Mr. Olson: In Clause 1 of this bill it is provided that it shall be prescribed by the Governor in Council and that is done so that we can presumably move it upwards. Perhaps in some cases it will even be downwards in response to the market value of these animals. If it is fixed by statute, such as is the case in the situation we face today where the maximum has not been changed for 11 years and it is necessary to go back to Parliament with an act which is quite often time-consuming, we think it would be better if we had the flexibility so that we could raise or change the maximum by an order in council.

Mr. Horner: But we have had a series of small acts here, every one of them giving the Governor in Council quite a few rights to set the application as to how those acts are really applied. Every one of them is similar to this, changing the previous act by, in a sense, giving the Governor in Council more power to adjust—as you say, perhaps beneficially—to the conditions of the times. But only time will tell really.

Mr. Olson: Well, I am satisfied that the Governor in Council can make changes more rapidly when there is a need to do so in response to the values that we have to seek in the marketplace.

Mr. Horner: In all fairness to the public at large, do you not think that a percentage could be written in, a percentage on replacement value of even 50 per cent? Many times when an animal suffers from a disease, the salvage value of that animal is not very much. But the replacement value of a healthy animal would be quite a bit more.

Mr. Olson: It raises some very severe administrative problems to establish replacement value, because certainly the farmer who owns the animal is going to have a different

[Interpretation]

M. Thomson (Battleford-Kindersley): Merci, c'est tout ce que je voulais savoir.

Le président: Monsieur Horner.

M. Horner: Je voulais simplement savoir quelle était la raison pour laquelle, dans l'ancienne loi, le montant de l'indemnité était défini, alors que, dans cette loi, on nous dit que ce serait un montant approximatif. Est-ce qu'il y a une raison à cela?

M. Olson: Eh bien! il est prévu dans l'article 1 de la loi que le montant sera défini par le gouverneur en conseil.

Et cela nous permettra de l'augmenter disons vers le haut, mais peut-être aussi, à l'occasion, le faire baisser en fonction de la valeur marchande des animaux. Si c'est fixé par statut, cela nous évitera donc de nous trouver dans une situation comme celle dans laquelle nous nous trouvons actuellement, où le prix n'a pas été modifié depuis 11 ans et où il nous faut revenir devant le Parlement pour pouvoir faire cette modification, ce qui implique beaucoup de travaux et de délais. Il vaudrait mieux qu'il y ait plus de souplesse et que nous puissions élever ou modifier le maximum par arrêté ministériel.

M. Horner: Mais nous avons ici une série de petites lois, et chacune donne au gouverneur en conseil suffisamment de pouvoir pour décider de quelle manière ces lois doivent être appliquées. Chacune de ces lois est semblable à celle-ci; elle modifie la loi précédente en donnant, en un sens, plus de pouvoirs au gouverneur en conseil pour faire des ajustements—peut-être de façon avantageuse, comme vous le dites—en fonction de la situation du moment. Mais on ne le saura vraiment qu'avec le temps.

M. Olson: Pour ma part, je suis convaincu que le gouverneur en conseil pourra faire des modifications beaucoup plus rapidement lorsque cela sera nécessaire pour réagir aux valeurs que nous devons rechercher sur le marché.

M. Horner: En toute justice à l'égard du grand public, ne pensez-vous pas qu'il serait préférable de fixer un pourcentage sur la valeur du remplacement, même de l'ordre de 50 p. 100? Souvent, lorsqu'une bête souffre d'une maladie, la valeur de l'indemnité de récupération de la bête n'est pas énorme. Mais la valeur de remplacement d'une bête en bonne santé serait beaucoup plus élevée.

M. Olson: Cela soulève des problèmes d'administration très compliqués lorsqu'il s'agit de fixer cette valeur de remplacement, car évidemment, l'éleveur qui possède la bête va

[Texte]

idea of what the value is than perhaps if he could have taken that animal and tested its value in the marketplace.

Mr. Horner: Yes, but I differ with you there. At the time of the testing of the animal, it is suffering from a contagious disease. I think that a good grade Holstein milk cow with a production of so many thousand gallons a year can be pretty easily replaced by one of comparable standards, perhaps not quite as good, but in some cases perhaps a little better. The same thing applies with a good beef range cow. I think the value could be easily arrived at.

• 1005

Mr. Olson: There may be some cases, Mr. Horner, where it would not be difficult to establish replacement value on a fair basis, but I suggest to you that if we write it into the act, then it is rigid and it has to be done for all classes of animals, and this would include other situations where it would not be so easy to determine the replacement value.

Mr. Horner: One other question under Clause 1. Have you reached any decision with regards to an upward or a downward movement in the case of horses?

Mr. Olson: There are only two diseases covered in this act and they are dourine and glanders. The last case of dourine was in 1909; the last case of glanders was in 1938. However, some five years ago there was a compensation paid because there were reactors, not necessarily that they had the disease, but reactors—suspicion if you want to call it that. But inasmuch as there does not seem to be, at this time, any practical reason to change it, because it is not being used, we would not recommend that the values be changed, at this time. I think they are at \$100 and \$200 now.

The Chairman: Thank you Mr. Horner. I now recognize Mr. Gauthier.

• 1006½

M. Gauthier: Ma question s'adresse au ministre de l'Agriculture. Vous nous avez dit, tout à l'heure, que vous pensiez suggérer une somme de \$120 pour les vaches laitières pur-sang. Voulez-vous aussi suggérer un montant plus élevé pour les vaches qui ne sont pas pur-sang, ou si la somme va demeurer encore à peu près 50 p. 100 de la somme payée pour les vaches laitières pur-sang?

[Interprétation]

avoir une idée complètement différente de sa valeur qu'il n'en aurait eu s'il avait pu emmener sa bête sur le marché et avait pu en vérifier le prix sur place.

M. Horner: Oui, mais je ne suis pas d'accord avec vous. Au moment où l'animal est mis à l'épreuve, il souffre d'une maladie contagieuse. Je pense qu'une vache laitière Holstein de bonne qualité, qui produit tant de milliers de gallons de lait par an, peut-être facilement remplacée par une vache d'une qualité semblable—peut-être pas aussi bonne, mais parfois aussi un peu meilleure. Il en est de même d'une bonne vache de pâturage libre élevée pour sa viande. Je pense que l'on pourrait facilement obtenir une valeur approximative.

M. Olson: Monsieur Horner, il y a certainement des cas où il ne serait pas difficile de fixer une valeur de remplacement équitable. Mais je dirais que si l'on fixe cela dans la loi, ce sera rigide et il faudra le faire pour toutes les catégories de bêtes; et, à ce moment-là, cela comprendrait également d'autres cas où il ne serait pas aussi facile de déterminer la valeur de remplacement de la bête.

M. Horner: Une autre question au sujet de l'article 1. Est-ce que vous avez pris une décision en ce qui concerne les augmentations ou les diminutions dans le cas des chevaux?

M. Olson: Il n'y a que deux maladies visées par cette loi: la dourine et la morue. Le dernier cas de dourine s'est produit en 1909, et le dernier cas de morue en 1938. Toutefois, il y a cinq ans, on a dû verser des indemnités pour certaines bêtes qui n'étaient pas forcément malades, mais qui avaient réagi positivement aux tests. Mais étant donné qu'il ne semble pas y avoir pour le moment, de raisons pratiques de modifier ces valeurs, puisque l'on ne s'en sent pas, nous ne recommandons pas, à l'heure actuelle, pareille modification. Je crois que le taux actuel est de \$100 et de \$200.

Le président: Merci, monsieur Horner. Je donne la parole à M. Gauthier.

Mr. Gauthier: My question is directed to the Minister of Agriculture. Sir, you told us earlier that you were in favour of suggesting \$120 for pure-bred dairy cows. Do you also want to suggest a higher amount for cross-bred cows, or would this be kept at about the same level of 50 p. 100 of the amount paid for pure-bred dairy cows?

[Text]

Mr. Olson: No, what I suggested was that we were going to recommend to Governor in Council that we change the maximum from \$70 to \$120 for grade animals—those are animals that are not registered or not eligible for registration—and to change the amount from \$140 to \$200 on animals that are either registered or eligible for registration as pure-bred animals.

Mr. Gauthier: Vous dites \$140 à \$200. La carcasse y est elle comprise?

Mr. Olson: No, this is compensation that would be paid, and it would be in addition to the value of the carcass.

Mr. Gauthier: Que suggérez-vous pour les animaux, les vaches laitières qui ne sont pas pur-sang?

Mr. Olson: Cross-bred animals would fall into the category of grade animals. When we talk about pure-bred animals, we are talking about animals, as I said, that are either registered or eligible for registration.

• 1008

Mr. Gauthier: En termes monétaires, qu'est-ce que cela donnerait au cultivateur qui a un troupeau de vaches qui ne sont pas pur-sang?

Mr. Olson: For cross-bred animals it would be \$120 plus the value of the carcass, which is \$50 more than it is now.

The Chairman: I will now recognize Mr. Southam.

Mr. Southam: Thank you, Mr. Chairman. My question is in regard to animals that would be ordered slaughtered due to rabies. Does this legislation cover animals under this circumstance?

Mr. Olson: I will ask Mr. Williams to answer that.

Mr. Williams: Mr. Chairman, there is no program for animals ordered slaughtered due to rabies. In the case of rabies we do not have any method of detecting the disease until it is in the terminal stages and the animal invariably dies, so there is no program of ordering slaughtering. For the ones that are ordered slaughtered, it is possible a very long time in advance, or it may be a very long time in advance, through a blood test or some other type of test, to determine that this animal is going to get the disease or is a carrier of the disease.

These are the diseases that are covered by this part of this act. We are only dealing with

[Interpretation]

Mr. Olson: Non, ce que j'ai proposé, c'est que l'on recommande au gouverneur en conseil de faire passer le maximum de \$78 à \$120 pour les animaux de qualité—c'est-à-dire les animaux qui ne sont pas enregistrés ou ne peuvent pas être enregistrés—et de le faire passer de \$140 à \$200 pour les animaux qui soit sont enregistrés, soit sont admissibles à l'enregistrement comme animaux de race.

Mr. Gauthier: You say from \$140 to \$200. Does that include the carcass?

Mr. Olson: Non, il s'agit d'une indemnité qui serait versée et qui viendrait s'ajouter à la valeur de la carcasse.

Mr. Gauthier: What do you suggest for cross-bred animals and dairy cross-bred cows?

Mr. Olson: Les animaux de race croisée entreraient dans la catégorie des animaux de qualité. Quand nous parlons d'animaux de race, nous voulons parler d'animaux, comme je l'ai dit, qui soient enregistrés ou soient admissibles à l'enregistrement.

Mr. Gauthier: What would it give the farmer in terms of money if he has a herd of cross-bred cows?

Mr. Olson: Pour les animaux de race croisée, ce serait \$120 en plus de la valeur de la carcasse, soit \$50 de plus que maintenant.

Le président: Monsieur Southam, vous avez la parole.

Mr. Southam: Je vous remerci, monsieur le président. Ma question concerne les animaux qui doivent être abattus par suite de la rage. Ce projet de loi prévoit-il une indemnisation pour les animaux atteints de cette maladie?

Mr. Olson: Je vais demander à M. Williams de bien vouloir répondre à cette question.

Mr. Williams: Monsieur le président, il n'y a pas de programme de prévu pour l'abattage des animaux atteints de la rage. Nous n'avons pas de méthode pour détecter la rage tant que la maladie n'a pas atteint le stade final, où l'animal meurt de toute façon, et il n'y a donc pas de programme pour ordonner l'abattage. Dans le cas des animaux que l'on ordonne d'abattre, il est possible de déterminer très longtemps à l'avance, par une analyse du sang ou par quelque autre test, que l'animal va attraper la maladie ou peut éventuellement en être porteur.

Ce sont là les maladies prévues par cette partie de la loi, dont nous n'étudions qu'une

[Texte]

a part of the act. Rabies are covered by a completely different provision, and it is provided by a vote title under which we compensate the owner through the province for part of the cost. They are provincial programs, and they cover animals that have not been ordered slaughtered, but animals that have died from this disease. The arrangements vary somewhat from province to province, and not all the provinces are involved. But animals that die from rabies are not covered under this act at all.

Mr. Southam: I brought up the question, Mr. Chairman, because of an unfortunate circumstance we had several years ago in south-eastern Saskatchewan when rabies were detected. The animals died, the veterinarian sent the head away, an examination was made and it was decided that rabies was the cause of death. Once this happened of course the farmer affected made application for compensation but was told that it was not available. I think the point that you made follows, Mr. Williams, that as this is a provincial-federal program there must be enabling legislation to pay compensation for animals affected by rabies.

Could you tell me whether Saskatchewan is involved in this enabling legislation? How many provinces are affected.

Mr. Williams: At the present time four provinces have a joint program with the federal government and Saskatchewan is one of those provinces. However, I think Saskatchewan just entered the program about a year ago. So the particular animals about which you spoke may not have been covered by it. There may not have been a program at that time.

Mr. Southam: Yes, after investigating it, I understand, that Saskatchewan was not in at that time. Has any thought been given to increasing the compensation in respect of animals affected by rabies under the Animal Contagious Diseases Act, or are they increasing the compensation now because of the increased value of livestock?

Mr. Williams: It is not relevant under this bill in that the payments that we make are paid by a vote title, not by this bill.

Mr. Southam: Is there any thought being given to increasing the compensation due to death through rabies?

Mr. Williams: The arrangements with the four provinces concerned at the present

[Interprétation]

portion. La rage est prévue dans une disposition entièrement différente, sous forme d'un crédit par lequel nous indemnisons le propriétaire, par l'intermédiaire de la province, pour une partie des coûts. Ce sont des programmes provinciaux qui visent les animaux que l'on n'a pas ordonné d'abattre, mais qui sont morts de cette maladie. Les accords varient d'une province à l'autre, et toutes les provinces ne sont pas visées par ce programme. Mais la présente loi ne prévoit absolument pas d'indemnisation pour les animaux qui meurent de la rage.

M. Southam: J'ai soulevé la question, monsieur le président, à cause d'une situation malheureuse dans le sud-ouest de la Saskatchewan, il y a plusieurs années, où on avait décelé de la rage. Les animaux sont morts, la tête a été expédiée par le vétérinaire, on a fait des examens et on a décidé que c'était la rage qui avait causé le décès. Une fois la chose arrivée l'agriculteur a évidemment demandé une indemnité, mais on lui a dit qu'aucune n'était disponible. Je pense, M. Williams, que, en ce qui concerne l'indemnité de la rage, cela confirme ce que vous disiez; c'est-à-dire que c'est un domaine provincial-fédéral où il faut une loi spéciale.

Pourriez-vous me dire si la Saskatchewan est couverte par cette loi? Combien de provinces sont touchées?

M. Williams: Eh bien, actuellement, il y a quatre provinces qui ont un programme conjoint avec le gouvernement fédéral, dont la Saskatchewan. Mais je pense que ce n'est que très récent. Et par conséquent, les animaux particuliers dont vous avez parlés n'étaient peut-être pas encore couverts. Il n'y avait peut-être pas de programme à cet effet à ce moment-là.

M. Southam: Eh bien, oui, après enquête, je comprends que la Saskatchewan ne participait pas à cette époque. Est-ce qu'il y a une possibilité d'augmenter l'indemnité dans le cas des animaux atteints de la rage dans le cadre de la Loi sur les épizooties autrement dit, augmenter l'indemnité en raison de l'accroissement de la valeur marchande des animaux?

M. Williams: Non, ce n'est pas prévu dans le présent bill dans la mesure où les versements que nous faisons sont prévus par un crédit spécial.

M. Southam: Est-ce qu'on a envisagé d'augmenter l'indemnité dans le cadre des décès par suite de rage?

M. Williams: Eh bien, les dispositions prévues avec les quatre provinces intéressées,

[Text]

moment are such that we pay 40 per cent of the value of the animal and the province pays 60 per cent. So there is a sliding scale involved.

Mr. Southam: But apart from that, now that we are considering under this legislation increasing the amount of payment for compensation is any thought being given to increasing it on a comparative basis?

Mr. Williams: It is automatically increased or decreased as the values of animals change. In other words it is similar to the provision we have for such diseases as foot and mouth—the actual market value is involved here.

Mr. Southam: Thank you, Mr. Chairman.

The Chairman: I recognize Mr. Clermont on a supplementary.

• 1013

M. Clermont: Mais M. Williams a spécifié que quatre provinces participaient au programme auquel le préopinant a référé. La province de Québec est-elle une des quatre provinces?

M. Williams: Oui, monsieur.

M. Clermont: Merci.

The Chairman: Thank you, Mr. Clermont. I recognize Mr. Whicher.

Mr. Whicher: Can the farmer not buy insurance in respect of all these diseases?

Mr. Williams: There is generally insurance available against disease but I suspect that it may be more difficult to get coverage on the wasting type diseases about which we are speaking. There is generally coverage available for more terminable or more easily determined diseases and accidents.

For example, I do not believe one could get any insurance against a disease such as mastitis. I do not know that for a fact but there is a bit of a problem when you get into wasting type diseases as opposed to diseases that more or less quickly reach a terminal position and are more easily identified.

Mr. Whicher: Can insurance not be bought against tuberculosis?

Mr. Williams: Yes, I believe so.

Mr. Whicher: I think so too. I realize that it is the wish to give the farmer probably all

[Interpretation]

sons qu'actuellement, du moins, nous payons 40 p. 100 de la valeur de l'animal et la province en paie 60 p. 100; autrement dit, il y a une échelle mobile.

M. Southam: Mais, en dehors de cela, dans la mesure où nous étudions aux termes de la présente loi la possibilité d'augmenter les montants d'indemnité, est-ce qu'on a envisagé de l'augmenter sur une base comparative?

M. Williams: Elle augmente ou diminue au fur et à mesure que la valeur marchande de l'animal varie. Autrement dit, c'est la même chose que ce qui est prévu pour les autres catégories, notamment par exemple, la fièvre aphteuse.

M. Southam: Merci, monsieur le président.

Le président: Monsieur Clermont, une question complémentaire.

Mr. Clermont: But Mr. Williams specified that four provinces participated in the program referred to by the previous speaker. Is the province of Quebec one of those four provinces?

Mr. Williams: Yes, sir.

Mr. Clermont: Thank you.

Le président: Merci, M. Clermont. Monsieur Whicher.

M. Whicher: Dans toutes ces maladies, bien sûr, le fermier peut acheter une assurance, n'est-ce pas?

M. Williams: En général, il y a une assurance mise à la disposition des éleveurs contre les maladies, mais pour certaines des maladies dont nous parlons ici, je pense qu'il est plus difficile d'avoir une assurance. Disons qu'en général les assurances couvrent des maladies ou des accidents qui peuvent se terminer ou être déterminés plus facilement.

Par exemple, il y a des maladies comme la mastite pour laquelle je pense qu'on ne puisse pas obtenir d'assurance. Je ne sais pas de façon certaine, mais je pense qu'il y a un petit problème lorsque l'on tombe dans ces maladies particulièrement dépétissantes par rapport aux maladies qui se terminent plus ou moins rapidement et son plus faciles à repérer.

M. Whicher: Peut-on acheter de l'assurance contre la tuberculose?

M. Williams: Oui, je le crois.

M. Whicher: Je me rends compte qu'il y a risque à donner à l'agriculteur tout ce qu'il

[Texte]

that he can get for these animals but surely, as the farmer is a small businessman, he has to look after himself to some extent. He cannot be looking to the government for everything. That is why I was opposed to the amendment proposed the other day that the government pay 80 per cent of the value of the horse or beef cattle that died. I feel that the farmer too has some responsibility to look after his assets. If he has a \$40,000 barn surely he is not a very good businessman if he only has \$10,000 worth of insurance on it and it happens to burn. I therefore respectfully point out that in my opinion the farmer has an obligation to purchase this insurance and to look after his assets. Thank you.

● 1015

The Chairman: Thank you, Mr. Whicher. I recognize Mr. Moore (Wetaskiwin).

Mr. Moore (Wetaskiwin): Before I ask my question might I comment on this insurance question. I have looked into the matter thoroughly and I find that the premiums are too high for most types of cattle insurance, unless the animal is very valuable.

Under the terms of this proposed act can the Governor in Council, in his discretion, go over the proposed \$120-\$200 in any case?

Mr. Williams: If it was the wish of the government to amend it upwards the order in council would have to be changed.

Mr. Moore (Wetaskiwin): That is right, that is the answer.

Are there any figures available of the number of animals destroyed under this program? If so, this would give us an idea of the effectiveness of the testing program.

Mr. Williams: Mr. Chairman, we have all those figures here but it will take us a minute to answer precisely because of the way the question was asked.

Mr. Moore (Wetaskiwin): That is why I gave the reason for asking the question, Mr. Chairman. I do not need the figures; I just want an idea whether the figures show the benefit of these testing programs.

Mr. Williams: I can demonstrate that quite easily, Mr. Chairman. There has been a very sharp reduction in the number of reactors that have been discovered. Brucellosis is the example I am using here. Back in the late fifties and early sixties the numbers were running at around 30,000 ordered slaughtered and on which compensation was paid, and the

[Interprétation]

peut obtenir pour ses animaux mais ce qu'il y a malgré tout c'est que si l'agriculteur est un petit éleveur, il faut qu'il se débrouille un peu tout seul. Il ne peut pas compter sur le gouvernement pour tout. C'est pourquoi je m'opposais à l'amendement soumis l'autre jour selon lequel le gouvernement devrait payer 80 p. 100 de la valeur du cheval ou du bétail décédé. Je pense que l'éleveur a également quelques responsabilités en la matière. Il doit s'en occuper. S'il a par exemple, une grange de \$40,000 et qu'il n'a que \$10,000 d'assurance et qu'elle brûle, il n'est pas un bon homme d'affaires. Je souligne donc, respectueusement qu'à mon avis, le cultivateur a l'obligation d'acheter cette assurance et de voir à ses affaires. Merci.

Le président: Merci monsieur Whicher. M. Moore.

M. Moore (Wetaskiwin): Avant de poser ma question, puis-je faire un commentaire sur cette question d'assurance. J'ai étudiée la question de très près et je constate que les primes sont trop élevées pour la plupart des assurances. Aux termes du présent projet de loi, est-ce que le gouverneur en conseil, à sa discrétion, peut modifier ces deux montants de \$120 et \$200 dans n'importe quel cas?

M. Williams: Si le gouvernement désire faire monter le chiffre, eh bien, il faudra une modification de l'ordre en conseil.

M. Moore (Wetaskiwin): C'est la réponse exacte. Y a-t-il des chiffres indiquant le nombre de bêtes qui ont été abattues dans le cadre de ce programme? Dans l'affirmative, cela pourrait nous donner une idée de l'efficacité de ce programme de tests.

M. Williams: Monsieur le président nous avons tous ces chiffres ici mais pour vous donner une réponse précise, il va falloir une petite minute pour regarder les chiffres.

M. Moore (Wetaskiwin): Voilà pourquoi je vous ai donné la raison de ma question, monsieur le président, c'est simplement pour avoir une idée en fait, pour savoir si les chiffres montrent quels sont les avantages qu'il y a dans les programmes de test?

M. Williams: Je peux vous le montrer, je pense, monsieur le président, très facilement. Il y a eu une réduction très nette dans le nombre de bêtes réactrices. La brucellose est l'exemple employée ici. Vers la fin des années 1950 et au début des années 1960, les chiffres étaient d'environ 30,000 animaux abattus sur lesquels on a donné des indemnités et le coût

[Text]

cost to the federal government ran in the neighbourhood of \$2.2 million. In the current year of 1968-1969 it is anticipated that 5,000 animals will be identified as reactors and ordered slaughtered at a cost of somewhere around \$400,000.

Mr. Moore (Wetaskiwin): Thank you, Mr. Williams.

Mr. Williams: There has been a marked decrease despite the fact that the program of testing has been just as active in these years. The incidence of the disease has been sharply reduced. At the present time the number of reactors found runs about two-tenths of 1 per cent of the animals tested. Formerly, depending upon the area, it ran well up into the percentages—into full figures.

Mr. Moore (Wetaskiwin): Would calfhood vaccination have quite a bearing on those figures?

Mr. Williams: Calfhood vaccination was introduced when the program reached such a level that it was believed to be under control. At the present time the tendency is away from calfhood vaccination because the incidence of the disease has been reduced to such a level that we believe—we are working with the provinces on this because it is a joint federal-provincial program—that if possible we should eliminate the cost of the calfhood vaccination.

It is also felt that on certain export markets vaccinated are not quite as welcome as are non-vaccinated. I suppose we have moved through three stages: no vaccination but full-scale testing and elimination of the disease; a program continuing the elimination through testing coupled with calfhood vaccination to reduce the incidence of the disease; and now we believe it has reached such a level that we can do away with the calfhood vaccination on a planned basis.

Mr. Moore (Wetaskiwin): Yes, but is it not still practised by law in certain areas?

Mr. Williams: That is correct. We are working with the provinces on this matter and moving out of it on a planned basis, depending upon the incidence of the disease and the incidence of reactors within areas.

Mr. Moore (Wetaskiwin): I live in a free area and have not had a reactor in 30 some years. I agree with that.

[Interpretation]

pour le gouvernement fédéral a été d'environ 2.2 millions de dollars.

Actuellement, c'est-à-dire en 1968-1969, on s'attend à ce que 5,000 bêtes soient identifiées et abattues pour environ \$400,000.

M. Moore (Wetaskiwin): Merci, monsieur Williams.

M. Williams: Donc, il y a eu une diminution marquée du nombre de bêtes qui ont été abattues, en dépit du fait que le programme de tests a été aussi poussé au cours de ces années. L'incidence de la maladie a été grandement réduite. Le nombre de réacteurs décelés atteint environ deux dixièmes p. 100 des animaux testés. Auparavant, selon le district, ce chiffre atteignant dans les pourcentages, les chiffres ronds.

M. Moore (Wetaskiwin): Est-ce que la vaccination des veaux, par exemple, a été importante dans ce programme?

M. Williams: Oui, la vaccination des veaux a été introduite dans ce programme lorsqu'il a atteint un tel niveau qu'on a cru avoir atteint le contrôle. Présentement, on s'éloigne de la vaccination des veaux parce que l'incidence de la maladie a été réduite à un tel point que nous croyons travailler avec les provinces parce que (c'est un projet mixte, fédéral-provincial) nous croyons qu'il est possible d'éliminer le coût de la vaccination des veaux. Ce n'est pas encore le cas actuellement. En ce qui concerne les marchés extérieurs, les vaccins ne sont pas toujours aussi bien acceptés.

Enfin, les bêtes vaccinées ne sont pas toujours aussi bien acceptées que les bêtes non vaccinées. Par conséquent, il nous a fallu nous occuper de l'élimination de la maladie et deuxièmement poursuivre un programme de tests à la suite de l'élimination de la maladie afin de réduire les conséquences de la maladie. Nous pensons que maintenant nous pouvons abandonner le programme de vaccination selon un certain programme.

M. Moore (Wetaskiwin): Mais malgré tout, c'est toujours prévu dans la loi, dans certaines régions.

M. Williams: Oui, c'est exact. Dans certaines régions c'est prévu et nous étudions la question de près. Nous allons évaluer l'incidence de la maladie et l'incidence de ces réacteurs dans la région donnée.

M. Moore (Wetaskiwin): Je demeure dans une région qui n'est pas affectée par cette maladie depuis environ 30 années. Donc je

[Texte]

What percentage of the cost of calfhood vaccination is paid by different parties? I know the very small cost to the owner of the calf.

Mr. Williams: I am afraid that I cannot answer that question in detail. As it is a joint program the cost varies from province to province. Basically, the federal share of it is the provision of the vaccine which is produced in our own laboratories free of charge.

Mr. Moore (Wetaskiwin): That is a good enough answer.

The Chairman: I recognize Mr. Lambert.

M. Lambert (Bellechasse): Merci, monsieur le président. Les observations que je voulais faire ont été traitées par M. Horner et M. Gauthier, les explications données par le ministre ont répondu à mes questions. Alors, je n'en ai pas d'autres pour le moment.

The Chairman: Thank you. Mr. Korchinski?

Mr. Korchinski: Do you hope to save money by this new suggestion here that the amounts he set by Order in Council?

Mr. Olson: No, on the contrary. As far as individual farmers are concerned, we will be paying them more. But of course in line with the answer that was given to Mr. Moore, the number of reactors we find is going down. For example, in brucellosis, starting in the year 1963-64 and taking one year at a time, that year there were 23,800 reactors, down to 20,171 to 12,700 to 7,500 and down to 5,600.

So the numbers are going down substantially. There would perhaps be a saving to the federal treasury because of the numbers being reduced. But by changing this Act and increasing the maximum, there will be a greater payment made to the farmers for the animals that are ordered slaughtered.

Mr. Korchinski: So that you feel in the majority of cases the amount of award would be far greater than the existing one at the moment.

Mr. Olson: Yes, we are moving the maximum for grade animals up from \$70 to \$120—at least I have to qualify that by saying that will be our recommendation to the Governor in Council—and on pure-bred animals from \$140 to \$200.

Mr. Korchinski: Do you not expect that in some cases the awards will be less than the existing old rate?

[Interprétation]

n'ai pas ce problème. Je voulais simplement demander quel est le pourcentage du coût de la vaccination des veaux payé par les différentes parties. Je sais qu'il en coûte peu au cultivateur.

M. Williams: Je ne peux pas vous en parler parce que ça varie d'une province à l'autre mais disons que la part fédérale est de fournir le vaccin gratuitement. Nous le produisons dans nos laboratoires.

M. Moore (Wetaskiwin): Je pense que ça suffit comme réponse.

Le président: La parole est à M. Lambert.

Mr. Lambert (Bellechasse): Thank you, Mr. Chairman. The comments I wanted to make have already been dealt with by Mr. Gauthier and Mr. Horner, and the answers given by the Minister actually answered my questions. Therefore, I have no more questions for the time being.

Le président: Monsieur Korchinski.

M. Korchinski: Espérez-vous économiser de l'argent par votre proposition que le gouverneur en conseil fixe les montants?

M. Olson: Non, au contraire. En ce qui concerne chaque agriculteur, nous allons leur donner davantage. Mais, évidemment, à la lumière des réponses données à M. Moore, le nombre d'animaux ayant une réaction positive aux essais diminue, notamment pour la brucellose, depuis 1963-1964 et chaque année par la suite, il y en avait alors 23,800, puis 20,171 l'année suivante, ensuite 12,700, 7,500 puis 5,600.

Il y a donc eu une diminution très nette au cours des années, ce qui entraîne probablement une économie pour le Trésor national. Mais en modifiant la Loi et en augmentant le montant, on augmentera les primes versées aux agriculteurs pour le bétail abattu.

M. Korchinski: Donc, vous pensez que dans la plupart des cas, le montant des primes sera supérieur au montant des indemnités versées actuellement?

M. Olson: Exactement, nous sommes en train de faire monter le chiffre de \$70 à \$120 pour les animaux de sang mêlé, je dois faire la nuance en disant que c'est ce que nous allons recommander au gouverneur en conseil, et de \$140 et \$200 pour les animaux de race.

M. Korchinski: Est-ce que vous ne croyez pas que dans certains cas, les primes seront inférieures aux primes actuelles?

[Text]

Mr. Olson: Yes, but the maximums will have moved up, and so I think it is fair to say also that there will be many cases, indeed in perhaps most cases, there will be a higher compensation paid per animal to individual farmers.

Mr. Korchinski: The next question that I want to ask is, while it may be advantageous to those who may receive awards in comparison to the old rates, do you not anticipate a greater amount of difficulty with farmers who will begin to compare notes and say that in one case an award was greater than in the other? Do you expect a lot of variation in such awards?

Mr. Olson: Well, that could happen. But we have a fairly stiff program in our way of arriving at these values that are paid in so far as compensation is concerned. There is a grading system that takes into account conformation, age, usefulness, and then a formula on the basis of the points that are scored for each one of these to arrive at the amount of the compensation paid. So I do not think there could be great variations, although there may be some, as you have suggested.

Mr. Korchinski: So that there is some sort of a formula...

Mr. Olson: Oh, yes.

Mr. Korchinski: ... that you will be working on, rather than just perhaps looking at the market values from time to time.

Mr. Olson: The market value would also be involved along with these points.

Mr. Korchinski: That is part of the formula then?

Mr. Olson: Yes.

Mr. Korchinski: In determining the market values, would it be during a period of several months or seasons, or do you expect that you will have to determine the market value at the time of death, or during the period when the animal actually contracted the disease? How would you go about determining the value of this at the time?

Mr. Williams: I am not quite certain, Mr. Korchinski, in the questions you are asking about the market value—when we use the term market value—whether this applies to diseases other than the ones we are considering under this act.

When we pay market value it is normally assessed by a group of three people, one

[Interpretation]

M. Olson: Oui, mais malgré tout, les maximums seront augmentés, donc on peut dire que dans de nombreux cas, et en fait dans la plupart des cas, on versera à l'éleveur une prime plus élevée par tête.

M. Korchinski: Une autre question que je voulais vous poser est que, même s'il est avantageux pour ceux qui reçoivent des indemnités par rapport aux taux antérieurs, est-ce que vous ne croyez pas malgré tout qu'il y aura des difficultés avec les éleveurs qui vont commencer à comparer les décisions et constater que les primes sont plus élevées dans un cas que dans l'autre? Est-ce que vous ne pensez pas qu'il y aura des écarts?

M. Olson: Oui, c'est possible. Mais le programme d'évaluation est très rigide. Il y a un système de classification tenant compte de l'utilité, de l'âge, de la qualité et un coefficient en fonction duquel on fixe le montant à verser. Par conséquent, je ne pense qu'il y ait de grands écarts, bien qu'il y en aura peut-être.

M. Korchinski: Autrement dit, il y a un genre de formule...

M. Olson: Oui.

M. Korchinski: ... que vous allez utiliser. Vous n'allez pas vous contenter de regarder simplement la valeur marchande.

M. Olson: La valeur marchande sera prise en considération également.

M. Korchinski: Elle fait partie de la formule?

M. Olson: Oui.

M. Korchinski: Lorsque vous déterminez la valeur marchande de ces bêtes, est-ce que vous allez nous fonder sur la valeur de plusieurs saisons ou de plusieurs mois ou sur la valeur déterminée au moment du décès de la bête, ou pendant la période où l'animal a contracté la maladie? Comment allez-vous procéder?

M. Williams: Monsieur Korchinski, dans votre question vous parlez de la valeur marchande, vous avez utilisé le terme valeur marchande, et je me demande si cela s'applique à des maladies autres que celles qui tombent sous le coup de la Loi.

Mais lorsque nous payons une valeur marchande, cette valeur est normalement évaluée

[Texte]

representing the producer, one representing the Health of Animals Branch, and one representing the livestock division of our Production and Marketing Branch, who, in fact, determine it and test it against market prices as at the moment. In this maximum figure it is not our intent that this is going to be varied from day to day; it is going to be varied if, as, and when needed.

Mr. Korchinski: Would you just explain "at the moment"? Does that mean at the time of death, or what does it mean?

• 1025

Mr. Williams: No, under the market-value programs associated with diseases such as foot and mouth, hog cholera, and so forth, it would be at the time the animals are slaughtered. Under those, the animals are actually slaughtered under supervision of an inspector from the Health of Animals Branch. So it is at that time.

Under these programs they are ordered slaughtered, and they normally go to some packing house and there is a lapse in time. The market value there in terms of the salvage value is the one, of course, that the farmer gets, in that it is his animal and he sells it to them. But there is some latitude in times of delivery.

Mr. Korchinski: The other question I have relates to the recent outbreak of anaplasmosis in southern Manitoba. Would that type of disease be covered, or would animals who have contracted that disease be covered for compensation?

Mr. Williams: No, not by this portion of the Act, sir. They were covered by the other portion of the Act in that those animals and the contacts were ordered slaughtered by us. And in those cases market value was paid as in the case of foot and mouth disease.

Mr. Korchinski: This may not be important to the bill here, but what is the latest on that disease? Has it been confined and eradicated?

Mr. Williams: It has been confined, and there have been no cases reported of it, or none of our recent tests have shown any suspicious animals. We most sincerely hope that it has been completely eliminated.

Mr. Korchinski: Thank you.

The Chairman: Thank you, Mr. Korchinski. Mr. Clermont, do you have further questions?

[Interprétation]

par un groupe de trois personnes, un représentant de l'éleveur, un représentant de la Direction de l'hygiène vétérinaire et un représentant de la division des bestiaux de la Direction de la production et des marchés, qui détermine la valeur ou la compare aux prix du marché de l'heure. Disons que, en ce qui concerne le maximum, on n'a pas l'intention de le changer d'une journée à l'autre. Il ne variera que si le besoin s'en fait sentir.

M. Korchinski: Lorsque vous dites, de l'heure, vous voulez parler du moment du décès ou quoi?

M. Williams: Non, d'après le programme de la valeur marchande pour les bêtes affectées par la fièvre aphteuse, la peste porcine ou autre, disons que c'est au moment où la bête est abattue. Dans ces cas, les bêtes sont abattues sous la surveillance d'un inspecteur. C'est donc à ce moment-là.

L'ordre de les abattre est donné et on les envoie dans certaines usines de conditionnement et il y a un certain délai. La valeur marchande, en termes de la valeur de récupération, est celle que l'éleveur touche puisque c'est son animal et c'est lui qui le vend. Mais disons qu'il y a une certaine latitude dans les délais de livraison.

M. Korchinski: J'ai une autre question à poser relative à l'épidémie d'anaplasmosé dans le Manitoba. Est-ce que ce genre de maladie tomberait sous le coup de la Loi et que les animaux sont admissibles à une indemnité?

M. Williams: Non, pas dans cette partie de la Loi, ce cas tombe sous l'autre partie de la Loi, c'est-à-dire, il s'agit d'animaux qui ont dû être abattus, à notre demande. La valeur marchande a donc été versée comme dans le cas de la fièvre aphteuse.

M. Korchinski: Cela n'est peut-être pas important dans le cas du projet de loi que nous étudions actuellement, mais quels sont les derniers renseignements au sujet de cette maladie? Est-ce qu'elle a été arrêtée et éliminée?

M. Williams: Bien, elle a été arrêtée et aucun nouveau cas n'a été signalé. Nos derniers essais n'ont signalé aucune bête suspecte. On espère qu'elle est complètement éliminée.

M. Korchinski: Merci.

Le président: Je vous remercie, monsieur. Monsieur Clermont, une autre question? M.

[Text]

I have Mr. Danforth and then Mr. Roy. Mr. Danforth?

[Interpretation]

Danforth, puis M. Roy. Monsieur Danforth.

Mr. Danforth: Thank you, Mr. Chairman. At the last meeting, just as the Committee was about to rise, one of the members proposed an intent to file an amendment and was good enough to place it before the Committee for consideration. Regarding the content of this amendment, it was felt that, first, the departmental officials would have an opportunity to study the intent of the amendment and be able to give the Committee a decision whether or not they would be prepared to entertain an amendment of this nature, and secondly, there would be time between the two meetings for the legal staff to be able to look into the intent and the ramifications of this amendment as to whether or not it could be entertained under the rules.

Without comment on the amendment, I wonder if the Committee might at this time have the conclusions of the officials in these two fields.

The Chairman: I think, Mr. Danforth, that we are probably dealing with something that is somewhat hypothetical because the amendment has not come forward and is not in the hands of the Chair. If the Minister has any comments, I am prepared to...

Mr. Danforth: Mr. Chairman, although the amendment did not come in written form, certainly the intent of the amendment and the question was put for the consideration of the officials in the record of the last proceedings.

The Chairman: I am not sure that your interpretation, Mr. Danforth, is the same as mine. I think that, as Chairman at that time, I suggested that if the member wished to propose an amendment, he consult the Parliamentary Counsel and that the amendment, if it is to be presented, be presented in written form at this meeting. That amendment has not come forward and I am prepared to permit some discussion. But that would be my interpretation of it. Mr. Minister, do you have a comment?

Mr. Olson: Mr. Chairman, without commenting on whether or not that kind of an amendment would be in order—that is something for the law officers and the Committee to decide—we have some reservations about that. But in so far as accepting the amendment, we have to take into account a number of things. Some of that has been explained

M. Danforth: Je vous remercie, monsieur le président. A la dernière réunion juste avant de lever la séance, un député avait demandé de déposer un amendement et il l'a soumis à l'étude du Comité. Si je me souviens bien, monsieur le président, on avait demandé qu'un fonctionnaire du ministère étudie la teneur de cet amendement et nous dise s'ils étaient disposés ou non à accepter un amendement de ce genre et, deuxièmement, qu'il y aurait la possibilité, entre les deux réunions, pour le service juridique d'étudier les répercussions et la portée de cet amendement et déterminer si oui ou non il pourrait être accepté en vertu du Règlement.

Sans vouloir faire de commentaires sur l'amendement lui-même, je voudrais simplement savoir si les fonctionnaires du ministère peuvent présenter le résultat de leurs recherches sur ces deux points?

Le président: Monsieur Danforth, je pense que l'on parle de quelque chose d'hypothétique puisque l'amendement n'a pas, en fait, été remis au président. Si le ministre a des commentaires à faire, nous serions très heureux de l'entendre.

M. Danforth: Monsieur le président, bien que l'amendement n'ait pas été soumis sous une forme écrite, il n'en reste pas moins que la portée de l'amendement et que la question elle-même ont été soumises à l'examen des fonctionnaires du ministère et que cela figure au procès-verbal de la dernière réunion.

Le président: Je ne suis pas certain que mon interprétation, monsieur Danforth, de la situation soit la même. En tant que président, à ce moment-là, j'ai dit que si un membre voulait déposer un amendement, il devrait consulter le conseiller parlementaire et que s'il décide de proposer cet amendement, il devrait le faire sous une forme écrite lors de cette réunion.

Or, cet amendement n'a pas été déposé. Je suis prêt à permettre une discussion, mais voilà comment je vois les choses. Monsieur le ministre.

M. Olson: Monsieur le président, sans vouloir trancher si ce genre d'amendement est recevable ou non, c'est une question que les légistes doivent régler. Mais avant d'accepter l'amendement, je dois dire qu'il faut tenir compte d'un certain nombre de choses. On l'a déjà expliqué plus tôt, notamment cette question de savoir si on est obligé de trouver

[Texte]

earlier in this meeting, in so far as being obliged to arrive at a replacement value and then paying 80 per cent of that.

I explained that in some cases this would be possible but if it was written into the Act, and it was therefore mandatory, there would be cases, a large number of cases, where it would be very, very difficult to arrive at the replacement value of the animal.

In addition to that, however, if we were to accept, for example, 80 per cent of the replacement value as payment under the compensation portion of this Act, then in many cases the farmer would receive more than the value of the animal, because the salvage value of the carcass on many of the animals that would be ordered for slaughter would be far more than 20 per cent of the value. Therefore, if we were required to pay 80 per cent of the replacement value as compensation, plus having a farmer receive salvage value, it would go well above the market value of that animal.

As I have said at the outset, both in this Committee and in the House, we want to help farmers eradicate this disease and to pay some compensation involved in that eradication because of the public good involved in that, but we certainly do not want to have compensation rates that are so high that it is profitable to have these kinds of diseases.

Mr. Danforth: Mr. Chairman, I am prepared to accept the Minister's reasoning on that part of the question I asked and I am prepared to wait until there is someone who is in a position to give us the legal aspect of it. However, this raises a point, Mr. Chairman, that I would like a determination on at the present time.

It was my considered opinion that when a member of the Committee did indicate his concern about an amendment and gave the Committee an opportunity to consider his intent and gave time between meetings for the department involved to give consideration to the intent, and also was courteous enough to give the department an opportunity to refer the content of the amendment to the legal staff for ample consideration, that this was a very sound method of approach to the placing of amendments before the Committee rather than just bringing them in in a written form and the Committee being faced with them without time for such consideration.

My question is this, Mr. Chairman: are we to conclude from the remarks we have received from you that unless a formal amendment is before the Committee in a written form it is hypothetical and not to be

[Interprétation]

une valeur de remplacement dont on verse 80 p. 100.

J'ai dit que cela serait possible dans certains cas, mais que si on l'inscrit dans la loi elle deviendra obligatoire, et, dans certains cas, cela poserait des difficultés pour établir la valeur de remplacement.

En outre, si nous devions accepter, par exemple, 80 p. 100 de la valeur de remplacement comme le montant de l'indemnité versée, dans le cadre de la section de la Loi traitant de l'indemnité, dans bien des cas l'agriculteur recevrait beaucoup plus que la valeur de la bête parce que la valeur de récupération de la carcasse d'un grand nombre de bêtes abattues serait beaucoup plus que 20 p. 100, et par conséquent, si on nous demandait de payer 80 p. 100 de la valeur de remplacement à titre d'indemnité, et que l'éleveur touche en plus la valeur de récupération, cela dépasserait de beaucoup la valeur marchande de la bête.

Comme je l'ai indiqué aussi bien ici qu'à la Chambre, nous voulons aider les éleveurs à faire disparaître la maladie en leur versant des indemnités en vue de l'éradication à cause du bien public qui s'en suit, mais il est clair que nous ne voulons pas avoir des taux d'indemnités si élevés qu'il soit avantageux de perpétuer ces maladies.

M. Danforth: J'accepte les propos du ministre pour ce qui est de cette partie de la question que j'ai posée et je suis prêt à attendre qu'une personne compétente puisse nous renseigner sur son aspect juridique. Mais, il y a un point que je voudrais qu'on précise en ce moment. J'avais pensé que lorsqu'un membre du comité indique son inquiétude au sujet d'un amendement et qu'il donne au comité le temps d'étudier la question et au ministère d'étudier ses intentions, et qu'il a eu la courtoisie de permettre au ministère le temps de renvoyer l'amendement à son service juridique, il me semble que c'est une façon louable de procéder et de proposer des modifications au comité plutôt que de les présenter par écrit et de les proposer au comité sans leur laisser le temps de l'étudier.

Monsieur le président, est-ce que nous devons conclure de vos remarques qu'à moins que le comité ne reçoive la modification par écrit elle est simplement hypothétique et ne sera pas considérée, ou est-ce que le comité est

[Text]

considered, or is this Committee prepared to proceed in the manner established by the member at the last meeting? Personally, I feel that the way in which it was introduced to the Committee was a very sound and businesslike approach. We are going to be dealing with amendments from time to time and perhaps this is the time to determine the method by which we do it.

The Chairman: Mr. Danforth, at our last meeting one of our members proposed an amendment and it was suggested that in order to adopt the most businesslike approach, that if he consulted the parliamentary counsel and if then he decided to bring the amendment before the Committee, he would be at liberty to do so and the Committee would be protected in that he would have received some counsel in preparing the amendment.

Since the member is not here and that amendment has not come forward, then I think we are dealing with something that is really not before the Chair at all. I think, as a matter of custom, it is probably a good procedure to have amendments prepared and to have counsel in preparation of these amendments and to present them to the Committee. I am in the hands of the Committee and I will be guided by your directions.

Are there further comments? I had Mr. Roy on my list, who wished to ask a question or make a comment. Is your question supplementary to the present discussion, Mr. Gleave?

• 1035

Mr. Gleave: I think under the ordinary rules of procedure an amendment can be offered at any time. I would like that to be left clear. If I understood your remarks correctly, I would not like the implication to be left that if a member wanted to make an amendment he had to go and get some advice from someone and then come back and make the amendment. I think an amendment is in order at any time. Am I correct?

The Chairman: The Chair is prepared to receive any amendment at any time in written form. I only suggested that probably for the future this would be a wise precaution against unnecessary or ineffective amendments. The Committee will make the decision. I must recognize Mr. Roy.

• 1034

M. Roy (Laval): Merci, monsieur le président. Pour faire suite à la question de M. Clermont, le sous-ministre a dit que la province de Québec était une des provinces qui

[Interpretation]

prêt à procéder de la façon établie par le député lors de la dernière réunion? Pour ma part, je pense qu'il avait été présenté d'une façon très raisonnable et correcte. Nous aurons à étudier des amendements de temps à autres et c'est peut-être le moment de décider de quelle façon nous allons le faire.

Le président: Monsieur Danforth, lors de notre dernière réunion, l'un d'entre nous a proposé une modification et on avait suggérer que, afin de procéder de la façon la plus correcte, la personne consulte le conseiller juridique parlementaire et que si elle décidait ensuite de présenter l'amendement au comité, il pourrait le faire et que le comité se trouverait protégé au fait que la personne aurait reçu l'avis d'experts pour la rédaction de cette modification.

Comme le député n'est pas ici, et qu'il n'a pas présenté sa modification, nous sommes donc en train d'étudier une question qui n'a même pas été présentée à la présidence. Je crois qu'il est bon de faire préparer l'amendement d'avancer et d'obtenir les conseils d'un conseiller juridique mais je m'en remets à vous et je suivrai la procédure que vous m'indiquerez.

Est-ce que vous avez d'autres remarques? Monsieur Roy (Laval) était sur ma liste. Est-ce qu'il s'agit d'une question supplémentaire, monsieur Gleave?

M. Gleave: D'après la procédure ordinaire, un amendement peut-être proposé à n'importe lequel moment. J'aimerais que cette chose soit tirée au clair. Si j'ai bien compris vos remarques, je n'aimerais pas qu'on laisse les gens sous l'impression que si un député veut proposer une modification, il doit obtenir l'avis de quelqu'un et revenir faire sa proposition au comité.

Le président: Le président est prêt à recevoir n'importe laquelle modification par écrit. C'est une bonne précaution, à mon avis, contre les propositions inefficaces ou inutiles. Le comité prendra la décision. La parole est à monsieur Roy (Laval).

Mr. Roy (Laval): Thank you, Mr. Chairman. In further reference to the question put by Mr. Clermont, the Deputy Minister mentioned that the Province of Quebec was one of

[Texte]

recevaient une participation fédérale. Pour l'information des membres du Comité, est-ce qu'on peut connaître les répartitions, par province, de la part du fédéral dans les cadres du Bill que nous discutons actuellement?

Cette information pourrait être ajoutée au procès-verbal.

Mr. Olson: We could provide you with the information which will precisely answer the question as you have raised it. We have some information as to the areas tested and the approximate numbers of cattle and so on, but we would prefer to provide you with that information so that you will have a precise answer to the question you asked.

Mr. Roy (Laval): Thank you.

The Chairman: Mr. Korchinski?

Mr. Korchinski: I was just going to make a suggestion here in regard to the comments initiated by Mr. Danforth. Might it not be advisable for the Steering Committee to meet at some time, and, if and when you do, to discuss this very problem and perhaps resolve it.

The Chairman: Fine, thank you. I am sure the Steering Committee would be glad to discuss the production of amendments as the situation arises.

Mr. Danforth: Then I am satisfied, Mr. Chairman.

The Chairman: Thank you, gentlemen. That concludes my list of questioners.

Clause 1 agreed to.

On Clause 2—Appeal

The Chairman: Mr. Gleave?

Mr. Gleave: Mr. Chairman and Mr. Minister, in this area of insurance has any thought been given to developing something similar to crop insurance? The speaker over here is quite right when he says that it is extremely difficult and expensive. An example would be the cost of buying insurance to cover cattle in a feed lot: you just forget about it and take your losses. This seems to be the case. Could some type of insurance similar to crop insurance be investigated by the Department which possibly could operate on a provincial basis for different classes of cattle.

It seems to me it might be a more effective and practical way of approaching it than compensation. I expect that the Department of Agriculture does try to do the best job it can in the area of compensation, in protecting farmers against losses which they cannot

[Interprétation]

the provinces which received federal assistance for the information of the members of the Committee, could we know the distribution by provinces, of federal participation within the framework of the Bill under study at the present time? This information could be included in the proceedings.

M. Olson: Nous pourrions vous fournir ce renseignement et répondre précisément à votre question. Nous avons certains renseignements au sujet des régions où l'on a fait des essais, le nombre approximatif de bestiaux, et ainsi de suite. Nous pourrions vous donner les renseignements de façon à répondre à votre question.

M. Roy (Laval): Merci.

Le président: M. Korchinski?

M. Korchinski: Une suggestion au sujet des commentaires de M. Danforth. Je me demande s'il ne serait pas bon que le Comité directeur se réunisse à un moment donné, pour discuter de ce problème et voir quelle serait la solution.

Le président: Merci, je suis certain que le Comité directeur serait heureux de discuter de la question de la préparation des amendements lorsque l'occasion se présentera.

M. Danforth: Je suis donc satisfait.

Le président: Merci. Voilà donc toutes les questions.

L'article 1 est adopté.

Article 2—Appel

Le président: M. Gleave?

M. Gleave: Je me demande, M. le président, M. le ministre, est-ce qu'on a songé, en ce qui concerne l'assurance, à essayer d'établir un système semblable à l'assurance-récolte? Le député a raison de dire qu'il est très difficile et coûteux. Par exemple, le coût de l'assurance lorsqu'il s'agit de bestiaux à l'engrais. La plupart des gens refusent alors de prendre de l'assurance. Je me demande si le ministère ne pourrait pas établir un système d'assurance sur le plan provincial pour les différentes catégories d'animaux.

Il me semble que ce serait une façon plus pratique de régler la question que le système d'indemnités. Le ministère de l'Agriculture fait son possible en ce qui concerne les indemnités et protège le cultivateur contre les pertes qu'il ne peut pas résorber autrement.

[Text]

absorb themselves, but could some investigation be carried out along these lines to see if it is practical or if the farmers or cattlemen would be interested in such an arrangement?

The Chairman: Mr. Williams?

Mr. Williams: Mr. Chairman, the situation with respect to a possible insurance program covering livestock has been studied within the Department and continues to be studied within the Department. I may say that the interest we have received from the country, by and large, falls not so much in the area of feed lots but more in the area of herds of cattle that are being kept for milk purposes

• 1040

and there are many, many difficulties associated with the development of a comprehensive insurance scheme for cattle or for all classes of livestock but it is something that we continue to work at and investigate.

The Chairman: Mr. Danforth?

Mr. Danforth: Mr. Chairman, I have two questions under Clause 2 of this Bill. The first one deals with the matter of an appeal. An appeal may be made when the maximum amount as prescribed has not been paid and an appeal may be made where no compensation at all has been awarded, but I would like to ask why it is not possible to make an appeal when perhaps the maximum has been paid and it is felt by the owner of the animal that the compensation is far from adequate under the terms and provisions of this Bill. It will be possible for the Governor in Council to change the maximum if he sees fit and I am just wondering why it is not possible, then, under the provisions of an appeal, for a claim to be placed regardless of the fact that the maximum has been paid.

Mr. Olson: Mr. Chairman, the simple answer is that he would then be making an appeal against the law of the country; the law will be setting down the maximum and if that has been paid that is as far as you can go.

Mr. Danforth: Then is it not possible to bring a court action in this regard?

Mr. Olson: It is not a right and, of course, it refers to the appeal procedure in subclause (3) of Clause 2, which refers you to the Pesticide Residue Compensation Act in so far as procedure is concerned, and the assessor there to which the appeal would be taken would be a judge of the Exchequer or the superior courts of the provinces.

Mr. Danforth: This brings me to my second question then, Mr. Chairman, over the indica-

[Interpretation]

Est-ce qu'on ne pourrait pas faire une enquête en ce sens et voir si ce serait pratique, et si les éleveurs eux-mêmes sont intéressés à un tel système?

Le président: Monsieur Williams.

M. Williams: Monsieur le président, en ce qui concerne les programmes d'assurance sur les bestiaux la situation a été étudiée au ministère et est toujours à l'étude. L'intérêt manifestés dans le pays, en général, ne concerne pas surtout les bestiaux à l'engrais mais les troupeaux de bétail que l'on élève pour le lait. Il y a beaucoup de difficulté lorsqu'il s'agit d'établir un système d'assurance pour les bestiaux, mais c'est une question que nous étudions, en ce moment.

Le président: Monsieur Danforth?

M. Danforth: J'ai deux questions à poser sur l'article 2, du projet de loi, monsieur le président. La première traite des appels. Un appel peut être interjeté lorsque le montant maximum n'a pas été payé et quand il n'y a eu aucune indemnité. J'aimerais demander pourquoi il n'est pas possible d'interjeter un appel lorsque le maximum a été payé et lorsque le propriétaire de l'animal pense que l'indemnité est loin d'être suffisante, d'après les clauses du bill. Le gouverneur en conseil pourra changer le maximum, s'il juge bon de le faire, et je me demande pourquoi il ne serait pas possible, d'après les dispositions concernant l'appel, de faire une demande en dépit du fait que le maximum a été payé.

M. Olson: Monsieur le président, il s'agirait alors d'un appel contre la Loi du pays. La loi établit le maximum et lorsque le maximum est payé, c'est tout ce qu'on peut faire.

M. Danforth: Ne serait-il pas possible alors d'intenter une action?

M. Olson: Ce n'est pas un droit et, bien entendu, cela touche à la procédure d'appel, à l'article 2(3), qui vous renvoie à la Loi sur l'indemnisation pour dommages causés par les pesticides, pour ce qui est de la procédure; l'évaluateur serait un juge de la Cour de l'Échiquier du Canada ou d'une cour Supérieure de la province.

M. Danforth: Cela m'amène à ma deuxième question. En sus de ce que le ministre a dit,

[Texte]

tion of the Minister, when he speaks of a judge of the superior court if my understanding of law is correct when such an appointment is made the judge does not sit as a judge, he sits as an assessor to make a determination and it is not a court. If this is the case I fail to see why an appeal cannot be made against such a decision or a review in a duly constituted court.

Mr. Olson: Mr. Chairman, I explained that rather carefully in the House of Commons yesterday when the Pesticide Residue Compensation Act was going through.

Mr. Danforth: Mr. Chairman, my question is based on that very explanation.

Mr. Olson: The House decided on that point and that is now the law of the country, or will be after proclamation and the other stages it has to go through.

Mr. Danforth: In that particular bill.

Mr. Olson: Yes, but the procedures for appeal under this Bill are referred to as the provisions in Part 2 of the Pesticide Residue Compensation Act.

Mr. Danforth: Yes, Mr. Chairman, I agree with that, provided these conditions are accepted under this particular Bill by the committee and Parliament. My questions are based under this Bill, Mr. Minister, and not under the one that has been passed in Parliament.

Mr. Olson: Mr. Chairman, my answer has to be that if this Bill is passed by law it will provide for the Governor in Council to set maximums and that will then be, under the law, the maximum compensation that can be paid. To follow the other part of your question forward that an appeal could be made to exceed the amount that is provided here by law would, in fact, be an appeal against the law and, of course, the courts can only, if I understand legal procedures properly, make a decision within the law, not in excess of the law.

Mr. Danforth: Then to get back to the second part of my question, Mr. Chairman, if a judge either of the Supreme Court or of the Superior Court is appointed by government as an assessor or an arbitrator does he, in fact, have the same status as a court? This is the problem that I am finding some difficulty in understanding. If he has the same status, if the judge is sitting as a judge of a court, I

[Interprétation]

lorsqu'il parle d'un juge de la Cour supérieure, si j'ai bien compris la Loi, lorsqu'une nomination de cette sorte a été faite, le juge ne siège pas en qualité de juge. Il siège en tant qu'évaluateur pour faire une évaluation. Il ne s'agit pas d'un tribunal. Et, dans ce cas, je ne vois pas pourquoi on ne peut pas interjeter appel contre cette décision ou demander une revue de la cause dans une cour ordinaire.

M. Olson: J'ai bien expliqué cela à la Chambre des communes, hier, lors de l'étude de la Loi sur l'indemnisation pour dommages causés par les pesticides.

M. Danforth: Monsieur le président, ma question est fondée sur cette explication même.

M. Olson: La Chambre a décidé de ce point et la Loi est promulguée ou le sera bientôt.

M. Danforth: Il s'agit du présent projet de loi.

M. Olson: Oui, mais les procédures d'appel d'après ce bill sont les dispositions de la partie de la Loi sur l'indemnisation pour dommages causés par les pesticides.

M. Danforth: Je suis d'accord avec cela, pourvu que le Comité et le Parlement acceptent ces conditions, en vertu du bill. Mes questions sont fondées sur le bill, monsieur le ministre, et non pas sur la Loi qui a été adoptée par le Parlement.

M. Olson: Voici la seule réponse que je puisse faire. Ce bill, s'il est adopté, stipule que le gouverneur en conseil pourra établir les maximums que l'on peut payer en vertu de la Loi. Lorsque vous demandez si on pourrait interjeter appel pour que le maximum soit augmenté, je dis que c'est un appel contre la Loi. Et si j'ai bien compris la procédure légale, la cour ne peut rendre de décisions que dans le cadre de la Loi et non pas en sus de la Loi.

M. Danforth: Je reviens à la deuxième partie de ma question, monsieur le président. Est-ce qu'un juge, soit de la Cour suprême, soit de la Cour supérieure, nommé par le gouvernement en qualité d'évaluateur ou d'arbitre, a la même qualité qu'un tribunal ordinaire? Si le juge siège en tant que juge d'une cour, je comprends qu'il soit difficile de faire interjeter appel ou de demander une

[Text]

• 1045

can appreciate there might be some difficulty in having an appeal or a review of such a decision, but if he is not a court duly constituted as a court then I fail to see why there cannot be an appeal or a review to a court in this circumstance, and I would like some clarification on this point.

Mr. Olson: I have to go back to the explanation I made in the House yesterday on this particular point and it is that assessors will be appointed from among the judges of the Exchequer Court or the superior court. I think that is clearly understood.

Mr. Danforth: I understand that, yes.

Mr. Olson: I would therefore presume that those assessors will hear the evidence in making their decision and it is clearly set out that that is final, that there will be no further appeal, but I am sure that in hearing the evidence, the assessor or judge, in order to make a proper assessment if you like of the entire case, will set up procedures so that he can hear the evidence or the submissions from both sides.

Mr. Danforth: I am perfectly prepared to accept the Minister's statements in full in this regard and I do not wish to belabour the point. However, we find from time to time arbitrators set up in labour disputes and other appointments made by the government to solve contentions between two aggrieved parties. I am trying to ascertain the status of the mechanics under which an assessor makes his determination. Is it a court or is it not?

Mr. Olson: I do not like to be drawn into questions of legal procedure. I think the question is a proper one but, as we have said, these appeals will be heard by a superior court judge who will be designated an assessor, and whether or not that can be interpreted as a court of law, my opinion is that it is not, except that it is provided for in the statute and on that basis I suppose, at least in a sense, it is.

Mr. Danforth: Mr. Chairman, in view of the fact that this is the second piece of legislation that we have had before this Committee—and perhaps there will be others—which refers to this particular type of appeal and its mechanics, would it be possible for us to have either in a written appendix to the Committee proceedings or by a witness before the Committee an explanation of this so that we, as Committee members, may make a determination on this particular point?

[Interpretation]

révision de la décision. Mais, s'il ne s'agit pas d'un tribunal dûment constitué en tant que tribunal, je ne vois pas pourquoi il ne pourrait pas y avoir un appel ou une révision de la décision, devant une cour. J'aimerais que l'on tire ce point au clair.

M. Olson: Je reviens à l'explication que j'ai donnée à la Chambre, hier, sur ce point en particulier. Les évaluateurs seront choisis parmi les juges de la Cour de l'Échiquier ou de la Cour supérieure. C'est bien clair.

M. Danforth: Je comprends cela.

M. Olson: Et, par conséquent, je présume que ces évaluateurs entendront les témoignages avant de rendre leur décision. Et il est clairement dit qu'il n'y aura pas d'autre appel à partir de ce moment de la décision. Mais la procédure permettra d'entendre les témoignages, afin que le juge, ou l'évaluateur, puisse faire une évaluation efficace de la cause. Il y aura des procédures qui permettront au juge d'entendre les témoignages des deux parties.

M. Danforth: Je suis tout à fait disposé à accepter la déclaration du ministre à ce sujet, et je ne voudrais pas trop insister. Il y a des arbitrages dans les différends du travail et on nomme des arbitres pour régler des différends entre deux parties. Ce que je voudrais savoir, c'est par quel mécanisme un évaluateur fait sa détermination. Est-ce qu'il s'agit d'un tribunal ou non?

M. Olson: Je n'aimerais pas me laisser entraîner dans des considérations juridiques, mais votre question est bien fondée. Ces appels seront entendus devant un juge de la Cour supérieure nommé à titre d'évaluateur et je ne sais pas si l'on peut interpréter cela comme un tribunal, mais, pour ma part, je ne pense pas qu'il en soit ainsi, sauf disposition contraire de la Loi. En un certain sens, c'est un tribunal.

M. Danforth: Monsieur le président, étant donné que c'est la deuxième mesure législative que le Comité étudie—il y en aura peut-être d'autres, plus tard—qui se rapporte à ce type de mécanismes d'appel en particulier, serait-il possible pour nous d'obtenir une explication, soit à titre d'appendice au compte rendu des délibérations du Comité ou d'entendre un témoin qui nous expliquerait ce point, afin qu'en tant que membres du Comité, nous puissions tirer les choses au clair?

[Texte]

I must say that I am concerned about this because if the assessor is not acting—in my opinion—within the confines of a court then I do not feel that we as Committee members, or perhaps as legislators, have the right to incorporate in a statute a regulation that will prohibit one who has a complaint from making an appeal to a court of law.

This is why I am very concerned about this point, Mr. Chairman. I am prepared to waive my question at this time if I can have some assurance that this matter will not be dropped and that we will have either in a written submission by the legal staff or from a witness before this Committee, the actual explanation of the status of the assessor when such a determination is being made. I think I am quite reasonable in this request.

Mr. Olson: It would not be difficult for us to get that explanation for you, but I could refer you to Clause 11 of Bill C-155 and there

• 1050

was a vote on this in the House of Commons. They have made the decision, not us, although perhaps we recommended it to them, that these assessors will be and must be judges, so that is the status they have. Along with the other explanation that you have asked for, we can provide you with some more detailed explanation.

Mr. Danforth: Mr. Chairman, I would feel better about this if I could be sure that we are not taking away any of the rights of a corporation or an individual by the passing of legislation of this type.

Mr. Olson: On the contrary we are not only not—if I may use the double negative—taking away any rights; we are adding substantially to the rights of people who have been aggrieved, because prior to the passage of this act and, indeed, Bill C-155, there was no procedure for appeal at all.

Mr. Danforth: Mr. Chairman, I am prepared to accept that, but adding that perhaps we are not giving enough of the individual's rights back yet.

Clause 2 agreed to.

Clause 3 agreed to.

Title agreed to.

Mr. Danforth: Before the Bill is put in its final stage, have I the assurance of the Chairman and the Minister that the information I requested will be made available to the Committee members?

Mr. Olson: Yes, we will seek it from the Department of Justice.

[Interprétation]

Je dois dire que ce point m'inquiète, parce que, si l'évaluateur n'agit pas, à mon avis, dans le cadre d'un tribunal, par conséquent, je ne pense pas, qu'en tant que législateurs ou membres d'un comité, nous ayons le droit d'incorporer dans un statut, un règlement qui empêcherait une personne qui se sent lésée d'interjeter appel devant un tribunal.

Et c'est la raison pour laquelle ce point m'inquiète tellement, monsieur le président. Je suis disposé à attendre ma réponse si on peut m'assurer qu'on ne laissera pas tomber la question et qu'on aura l'occasion d'entendre un témoin, ou un conseiller juridique, qui nous expliquera le statut de l'évaluateur lorsqu'il donne sa décision. Et je me trouve assez raisonnable en faisant cette demande.

M. Olson: Il ne serait pas difficile pour nous d'obtenir cette explication pour vous, mais je pourrais vous renvoyer à l'article 11 du bill C-155. On a pris le vote à la Chambre des communes sur ce point et la décision a été rendue. Ce n'est pas nous qui avons décidé, bien que nous l'ayons recommandé, que ces évaluateurs seront et devront être des juges. C'est là leur qualité, leur statut. Nous pouvons vous donner une explication plus détaillée.

M. Danforth: Je me sentirais rassuré, monsieur le président, si je pouvais être tranquille et savoir que nous n'enlevons pas des droits à une société ou à un individu en adoptant ce genre de législation.

M. Olson: Au contraire, non seulement nous ne retirons pas de droits, si je peux employer la double négation, mais nous ajoutons substantiellement aux droits des personnes qui se sentent lésées, parce que, avant l'adoption de cette loi ou du Bill C-155, il n'y avait aucune procédure d'appel du tout.

M. Danforth: Monsieur le président, je suis prêt à accepter cela, mais j'ajouterais que nous ne donnons pas encore assez de droits aux individus.

L'article 2 est adopté.

L'article 3 est adopté.

Le titre est adopté.

M. Danforth: Avant de mettre le Bill aux voix, le président et le ministre pourraient-ils m'assurer que les membres du comité auront ces explications?

M. Olson: Oui, nous les aurons du ministère de la Justice.

[Text]

The Chairman: Shall I report the Bill without amendment?

Some hon. Members: Agreed.

The Chairman: Gentlemen, I direct your attention now to Bill C-112. An Act to amend the Farm Machinery Syndicates Credit Act, and particularly to Clause 2. I will recognize questioners. Mr. Danforth and then Mr. Lind.

Mr. Danforth: Mr. Chairman, there are some major changes by the amendments in this bill, and I wonder whether the Minister is prepared to make an introductory statement before I ask my direct questions?

Mr. Olson: Yes. Mr. Chairman, we have sent a message for the Chairman of the Farm Credit Corporation to come as quickly as possible. I would like to say that I would like to ask a member of the Committee to move an amendment under Clause 3 of a substantial nature.

An hon. Member: We are on Clause 2.

Mr. Olson: I realize that we are on Clause 2 at the present time, but I gave an explanation of the intent of this amendment in the House and it provides for the inclusion of the same provisions so that Indians on reservations who are farmers may avail themselves of the provisions of this act.

The Chairman: Gentlemen, may we stand Clause 2 in order that we may proceed with Clause 3 and receive the Minister's suggestion? Is that agreed?

Some hon. Members: Agreed.

Mr. Olson: Mr. Chairman. I also have another problem. I should be at a Cabinet meeting within the next few minutes that started at ten o'clock, and there are a couple of matters I would like to get over there to. As soon as the Deputy Minister and Mr. Owen come back, why you could proceed. If you would like to move to Clause 3 now, to which I think you have agreed, I would be prepared to put these amendments before you, sir.

Mr. Thomson (Battleford-Kindersley): Mr. Chairman, I have a question. Why is this necessary when it is also under a different act? Are we talking about the same thing, or different things, or will anybody explain it?

Mr. Olson: We are now talking about Bill C-112 that deals with amendments to the

[Interpretation]

Le président: Dois-je faire rapport du Bill, sans modification, d'accord.

Des voix: D'accord.

Le président: Messieurs, j'attire votre attention au Bill C-112, «Loi modifiant la Loi sur le crédit accordé aux syndicats de machines agricoles» et en particulier à l'article 2. J'attends vos questions. M. Danforth et ensuite M. Lind.

M. Danforth: Monsieur le président, il y a des modifications majeures dans les amendements à ce Bill et je me demande si le ministre serait prêt à nous faire une déclaration préliminaire avant que je commence à poser mes questions?

M. Olson: Oui monsieur le président. Nous avons envoyé un message pour demander au président de la Corporation du crédit agricole de venir témoigner ici aussitôt que possible. Je demanderais à un membre du comité de proposer une modification de nature importante sous l'article 3.

Une voix: Nous étudions l'article 2.

M. Olson: Je comprends bien que nous étudions en ce moment l'article 2, mais j'ai déjà donné l'explication sur le but de cet amendement à la Chambre et il stipule l'inclusion des mêmes dispositions afin que les Indiens sur les réserves, qui sont des cultivateurs, puissent profiter des dispositions de cette loi.

Le président: Alors, nous allons réserver l'article 2 pour procéder à l'article 3 et recevoir la suggestion du ministre? D'accord?

Des voix: D'accord.

M. Olson: Monsieur le président, il y a aussi un autre problème. Je devrais me rendre à une réunion du Cabinet qui débute à 10 heures d'ici quelques minutes, et il y a quelques points que je voudrais faire valoir là aussi. Dès que le sous-ministre et M. Owen reviendront, vous pourriez, si vous voulez, commencer à étudier l'article 3. Nous nous sommes mis d'accord là-dessus et je voudrais vous soumettre ces modifications.

M. Thomson (Battleford-Kindersley): Monsieur le président, j'ai une question. Pourquoi est-ce que cela est nécessaire, puisqu'il y a aussi une autre loi? Parlons-nous de la même chose, ou de choses différentes? J'aimerais des explications.

M. Olson: Maintenant, nous parlons du Bill C-112, modifications à la Loi sur le crédit

[Texte]

Farm Syndicates Act. Provisions identical to those in this Clause were included in the

• 1055

Farm Credit Act so that Indians who are farmers on reservations may avail themselves of the provisions in the act.

The amendment I am proposing now will be exactly the same as the provision that was passed by the House of Commons to the Farm Credit Act. We are talking about two different acts, but the wording will be the same so that these Indian farmers may make use of the act.

Mr. Thomson (Battleford-Kindersley): My only question is, why was this necessary? I thought it was covered there, or are we talking about a syndicate of Indians that may borrow under the same principle?

Mr. Olson: The reason it is necessary is because it was not in the act before.

Mr. Thomson (Battleford-Kindersley): It was not in the act?

Mr. Olson: That is right.

Mr. Danforth: Mr. Chairman, may I make a suggestion? We understand that the time of the Minister is limited, and since we have just started the contemplation of this bill may I make the suggestion that copies of the proposed amendment be made available and...

Mr. Olson: We have them here in both languages.

Mr. Danforth: . . . that we have an opportunity to look at them, and perhaps we can take action when we return to Clause 3 of the Bill. Then the Minister would be at liberty to attend his other meeting.

Mr. Olson: We are on Clause 3 now. If somebody would like to move these amendments you would have them before you.

Mr. Danforth: I think we would like to have a look at these amendments before we move them.

Mr. Horner: You can move them and then debate them.

Mr. Douglas: I so move.

The Chairman: It has been moved by Mr. Douglas that the amendment as presented by

[Interprétation]

accordé aux syndicats de machines agricoles. Les mêmes dispositions avaient été incluses dans la Loi sur le crédit agricole afin que les Indiens qui sont des cultivateurs et qui habitent dans les réserves puissent profiter des dispositions de la loi. L'amendement que je propose maintenant sera exactement le même que celui qui a été adopté par la Chambre des communes lorsqu'on a adopté la Loi sur le crédit agricole. Nous parlons de deux lois différentes, mais la terminologie sera la même afin que les cultivateurs indiens puissent profiter des dispositions de la loi.

M. Thomson (Battleford-Kindersley): Pour quoi est-ce que cela a été jugé nécessaire? Je croyais que le cas était couvert, ou est-ce que nous parlons d'un syndicat d'Indiens afin qu'ils puissent emprunter de la même façon?

M. Olson: Oui, la raison pour laquelle nous l'avons jugé nécessaire c'est parce que cela ne faisait pas partie de la loi avant.

M. Thomson (Battleford-Kindersley): Ce n'était pas dans la Loi?

M. Olson: C'est exact.

M. Danforth: Monsieur le président j'aurais une proposition à faire. Le ministre n'a pas beaucoup de temps mais, comme nous commençons à étudier ce Bill, je propose que l'on nous donne des copies des amendements proposés...

M. Olson: Nous les avons ici dans les deux langues.

M. Danforth: ... afin que nous ayons le temps de les étudier et que nous puissions poser des questions lorsqu'on étudiera l'article 3 du Bill. Et le ministre, alors, pourrait se rendre à sa réunion.

M. Olson: Nous sommes maintenant à l'article 3. Si quelqu'un veut bien faire la proposition, vous aurez ces amendements en face de vous.

M. Danforth: Nous aimerions étudier ces amendements avant de les adopter.

M. Horner: Vous pouvez les proposer et les discuter ensuite.

M. Douglas: J'en fais la proposition.

Le président: Proposé par M. Douglas, que les modifications telles qu'elles ont été présen-

[Text]

the Minister, Mr. Olson, be accepted by the Committee.

An hon. Member: Without even seeing it.

The Chairman: The question is open.

Mr. Douglas: Do not be ridiculous.

Mr. Danforth: That is just my point.

An hon. Member: I beg your pardon; could the amendment be read?

Mr. Olson: Yes, I can read the amendment, but I will give you copies of it too.

Mr. Horner: Read it please.

Mr. Douglas: Mr. Danforth took the liberty of laughing because I moved it without knowing what the amendment was. My comment was that he was being ridiculous, because I do know what the amendment is.

Mr. Danforth: Have you seen it before?

Mr. Douglas: Yes, it is the same amendment as was in the Farm Credit Act that was discussed in the House.

Mr. Olson: Not only that, but at Second Reading I read it out in detail.

An hon. Member: Let us have a little order here.

The Chairman: May we ask the Minister to read the amendment?

Mr. Olson: The amendment is, Mr. Chairman:

That clause 3 of Bill C-112, An Act to amend the Farm Machinery Syndicates Credit Act, be amended by adding thereto, immediately after section 3 thereof on page 2, the following section:

Agreement re Indians on reserves

"3A. (1) With the approval of the Governor in Council, the Corporation may enter into an agreement with the Minister of Indian Affairs and Northern Development

(a) for the purpose of enabling loans to be made under this Act to bands engaged in farming operations on reserves where at least three members of any such band who have attained the age of twenty-one years are engaged in the farming operations of the band and at least two of those members are principally occupied in such farming operations; and

[Interpretation]

tées par le ministre, M. Olson, soient adoptée par le Comité.

Une voix: Sans même les voir.

Le président: La discussion est ouverte.

M. Douglas: Ne soyez pas ridicule.

M. Danforth: C'est justement là le point que je soulève.

Une voix: Je m'excuse; est-ce que l'amendement pourrait être lu?

M. Olson: Oui, je puis lire l'amendement, mais je vais aussi vous en donner des exemplaires.

M. Horner: Lisez-le, s'il vous plaît.

M. Douglas: M. Danforth a pris la liberté de rire parce que j'ai proposé l'amendement sans savoir ce qu'il était. Mon commentaire c'est qu'il a été ridicule, parce que je *sais* ce que l'amendement contient.

M. Danforth: L'avez-vous déjà vu?

M. Douglas: Oui. C'est le même amendement qui était dans la Loi sur le crédit agricole, et qu'on a discuté à la Chambre.

M. Olson: Pas seulement ça, mais à la deuxième lecture, je l'ai lu en détail.

Une voix: A l'ordre, messieurs.

Le président: Je demande au ministre de lire l'amendement.

M. Olson: Monsieur le président, voici l'amendement:

Que l'article 3 du bill C-112, Loi modifiant la Loi sur le crédit accordé aux syndicats de machines agricoles, soit modifié par l'insertion, immédiatement après l'article 3 de la loi, à la page 2, de l'article suivant:

Accord au sujet des Indiens installés sur des réserves

«3A. (1) La Société peut, avec l'approbation du gouverneur en conseil, conclure un accord avec le ministre des Affaires indiennes et du Nord canadien

a) aux fins de permettre l'octroi de prêts en vertu de la présente loi à des bandes qui s'adonnent à des opérations agricoles sur des réserves lorsqu'au moins trois membres de la bande qui ont atteint l'âge de vingt et un ans s'adonnent aux opérations agricoles de la bande et qu'au moins deux de ces membres ont pour principale occupation ces opérations agricoles; et

[Texte]

(b) for the purpose of providing such security as the Corporation may require under paragraph (b) of subsection (2) of section 3 in respect of loans made to farm syndicates

(i) that are co-operative farm associations or farming corporations; the members or shareholders of which are Indians on reserves, or

(ii) that are associations referred to in subparagraph (iii) of paragraph (c) of subsection (1) of section 2, the members of which are Indians on reserves or farming corporations the shareholders of which are Indians on reserves.

Application of other provisions of Act to bands

(2) Where an agreement has been entered into pursuant to subsection (1), a band referred to in paragraph (a) of that subsection shall be deemed to be a farm syndicate for the purposes of this Act and the provisions of this Act, in so far as practicable, shall apply to all loans made or to be made to that band.

Security for loans to bands.

(3) Where a loan is made or to be made to a band referred to in paragraph (a) of subsection (1), the loan shall be secured in such manner as may be required by the agreement entered into pursuant to subsection (1).

Maximum loan to a band

(4) The total amount outstanding of loans that may be made to any one band under this Act shall not exceed the lesser of one hundred thousand dollars or the amount obtained by multiplying fifteen thousand dollars by the number of members of the band engaged in the farming operations of the band at the time the loan is made, except that where the number of such members principally

• 1100

occupied in the farming operations of the band is equal to or less than the number of such members not principally so occupied, the number of such members not principally so occupied shall be deemed to be one less than the number principally so occupied.

Regulations

(5) With the approval of the Governor in Council, the Corporation may make regulations providing for any matter or

29742-3

[Interprétation]

b) aux fins de fournir la garantie que la Société peut exiger en vertu de l'alinéa b) du paragraphe (2) de l'article 3 en ce qui concerne les prêts consentis à des syndicats agricoles

(i) qui sont des coopératives agricoles ou des corporations d'agriculture dont les membres ou les actionnaires sont des Indiens installés sur des réserves, ou

(ii) qui sont des associations visées au sous-alinéa (iii) de l'alinéa c) du paragraphe (1) de l'article 2, dont les membres sont des Indiens installés sur des réserves ou des corporations d'agriculture dont les actionnaires sont des Indiens installés sur des réserves.

Application des autres dispositions de la loi à des bandes

(2) Lorsqu'un accord a été conclu en conformité du paragraphe (1), une bande visée à l'alinéa a) de ce paragraphe est considérée comme un syndicat agricole aux fins de la présente loi et les dispositions de la présente loi s'appliquent autant que possible, à tous les prêts consentis ou devant être consentis à cette bande.

Garantie des prêts consentis à des bandes

(3) Lorsqu'un prêt est consenti ou doit être consenti à une bande visée à l'alinéa a) du paragraphe (1), le prêt doit être garanti de la manière qui peut être prescrite dans l'accord conclu en conformité du paragraphe (1).

Prêt maximum à une bande

(4) Le montant global non remboursé des prêts qui peuvent être consentis à une même bande en vertu de la présente loi ne doit dépasser ni cent mille dollars ni le montant obtenu en multipliant quinze mille dollars par le nombre de membres de la bande qui s'adonnent aux opérations agricoles de la bande au moment où le prêt est consenti, mais, lorsque le nombre des membres de la bande qui ont pour principale occupation les opérations agricoles de la bande est égal ou inférieur à celui des membres de la bande pour lesquels c'est une occupation secondaire, le nombre de ces derniers est censé être inférieur d'une unité au nombre des premiers.

Règlements

(5) La Société peut, avec l'approbation du gouverneur en conseil établir des règlements au sujet de toute question ou

[Text]

thing that it deems necessary in order to make or to facilitate the making of loans under this Act to bands referred to in paragraph (a) of subsection (1).

Definition

(6) For the purposes of this section, the words "Indian", "band" and "reserve" have the meanings assigned to them in the *Indian Act*."

The Chairman: Thank you, Mr. Olson. Are there questions, gentlemen?

Mr. Danforth: Mr. Chairman, I have two questions that I would like to ask for clarification.

"3A (1) With the approval of the Governor in Council, the Corporation may enter into an agreement with the Minister of Indian Affairs and Northern Development

My understanding of this particular clause is that it is not customary or practical or legal at the present time for Indians on reserves to make direct application to the Minister, and I appreciate the ramifications. But I also understand now that there is a move in some bands towards far more control over their own affairs; in the disbursements of money, the collecting of rents, the making of binding and financial agreements in the rental of lands, the rental of reserves, the rental of hunting preserves and in some bands they are moving into a state of self-administration.

My question to the Minister on this point is this: when and if these bands, or these reservations, do reach the stage where they are controlling their own affairs, will it be necessary, under the terms of this provision, for the Act to be amended before they are able to apply directly for consideration under the Farm Machinery Syndicates Credit Act?

Mr. Olson: We realize, Mr. Chairman, that there are some changes now under consideration, but until those changes are made, so that we can take security in the land or the assets—and I would remind you that buildings are now included under the amendments to the Farm Machinery Syndicates Credit Act—we have to enter into an agreement with the Minister of Indian Affairs and Northern Development because there is no other way that we can take the security either in the land or the buildings to secure

[Interpretation]

chose qu'elle estime nécessaire pour lui permettre de consentir des prêts, en vertu de la présente loi, aux bandes visées à l'alinéa a) du paragraphe (1), ou pour en faciliter l'octroi.

Définition

(6) Aux fins du présent article, les mots «Indien», «bande» et «réserve» ont la signification que leur donne la *Loi sur les Indiens*."

Le président: Je vous remercie, monsieur le ministre.

Y a-t-il des questions? Oui, monsieur Danforth.

M. Danforth: J'ai deux questions que je voudrais poser. J'aimerais avoir des éclaircissements.

3A 1. La Société peut, avec l'approbation du gouverneur en conseil, conclure un accord avec le ministre des Affaires indiennes et du Nord canadien.

Je comprends cet article comme voulant dire qu'il n'est pas d'usage, ni pratique, ni même légal actuellement, que des Indiens des réserves fassent des demandes directement auprès du ministre à ce sujet. Je comprends très bien ce que cela implique. Mais, je crois savoir également que certaines bandes, actuellement, cherchent à avoir un plus grand contrôle de leurs propres affaires à la fois pour les dépenses d'argent et la réception des subventions, la passation d'accords sur la location des terres, la location des réserves, et que certaines bandes en arrivent presque à l'autoadministration.

La question que je voudrais poser au ministre est la suivante: si ces bandes ou ces réserves en arrivent au stade où elles sont en mesure de contrôler leurs propres affaires, est-ce qu'il sera nécessaire, d'après les termes de cette disposition, que la Loi soit amendée avant que ces bandes puissent faire directement des demandes dans le cadre de la Loi sur le crédit accordé aux syndicats de machines agricoles?

M. Olson: Monsieur le président, nous comprenons parfaitement qu'il y a des modifications actuellement à l'étude. Mais, tant que ces modifications n'auront pas été apportées pour que l'on puisse gager la terre ou gager l'actif—parce que vous savez par exemple que les immeubles sont maintenant inclus dans la Loi sur le crédit accordé aux syndicats de machines agricoles—il faudra conclure un accord avec le ministre des Affaires indiennes et du Nord canadien parce que, pour le moment, il n'y a absolument aucune

[Texte]

the loan, which is a requirement for people other than Indians who can in fact give legal security to the Corporation of land and buildings under the Act.

Mr. Danforth: Then, Mr. Chairman, it will not be possible for direct applications to be made, regardless of the status of the particular band, unless this provision shall be amended, should this piece of legislation pass.

Mr. Olson: It may be, but we would first have to see what the changes are if those changes come about, and if there is some way that the farmers on Indian reserves can give sufficient security in land or buildings. But at the present time there is no way that that can be done. Therefore we have to live—I suppose the Department of Agriculture—has to live with the law the way it is until it is changed.

Mr. Danforth: That leads me into my second question, then.

Mr. Olson: There is a point here that has been drawn to my attention. It is that the agreement—we are talking about an agreement between the Farm Credit Corporation and the Minister of Indian Affairs and Northern Development—may include many different arrangements, so that we are directing our attention to this agreement that would give us the security. Therefore if there are some changes that will provide Indian farmers with the right to enter into an agreement with us, that may satisfy the situation for our security requirements.

Mr. Danforth: Then, Mr. Chairman, from the Minister's statement, do we have to accept the fact that although we agree to the terms and provisions of this particular Act, as far as the Indians are concerned, they are subject not only to the regulations as prescribed by this Act but are also subject to its interpretation by another department and must qualify with the regulations as may be prescribed with regards to Indians under the other department as well? Am I correct in this assumption?

Mr. Olson: My answer has to be that we are not amending the Indian Act we are amending the Farm Machinery Syndicates Credit Act.

Mr. Danforth: I appreciate that. But is it not a fact that the Indians are not only subject to the terms of this Act, but to the manner in which the Department of Indian Affairs interprets this Act with regard to Indians,

[Interprétation]

autre manière pour nous d'avoir un gage sur ces Indiens ou ces réserves. C'est une nécessité de prévue.

M. Danforth: Donc, monsieur le président, il ne sera pas possible alors de faire une demande directe, quel que soit le statut de la bande, à moins que cette clause ne soit amendée, si cette Loi est votée?

M. Olson: Oui, c'est possible. Mais, tout d'abord, il faudra que nous voyions quelles sont ces modifications, si ces modifications doivent intervenir et s'il y a un moyen pour l'éleveur, pour l'agriculteur des réserves, de nous donner un certain gage. Mais il n'y a pas d'autres moyens de le faire pour le moment, et le ministère de l'Agriculture doit s'accommoder de la Loi telle qu'elle existe, tant qu'elle n'est pas modifiée.

M. Danforth: Cela m'amène à ma deuxième question.

M. Olson: Il y a également un point sur lequel on vient d'attirer mon attention. C'est que le genre d'accord, le genre de contrat—et c'est de cela dont nous parlons—nous parlons d'un contrat passé entre la Société du crédit agricole et le ministère des Affaires indiennes et du Nord canadien, eh bien, dans ce contrat, il peut y avoir toutes sortes de possibilités de prévues et, par conséquent, nous faisons porter notre attention principalement sur le contrat qui nous donnera un certain gage. Cela permettra donc à l'Indien qui veut passer un contrat avec nous d'apporter les gages nécessaires.

M. Danforth: Eh bien, monsieur le président, d'après la déclaration du ministre, est-ce qu'il faut accepter le fait que, bien que nous soyons d'accord avec les dispositions de la Loi que nous avons sous les yeux, en ce qui concerne les Indiens, ils restent soumis non seulement aux règlements prévus dans la Loi, mais également à l'interprétation qu'un autre ministère doit en faire et, par conséquent, doivent se conformer aux règlements prévus pour l'administration des Indiens dans un autre ministère? C'est bien cela?

M. Olson: Oui. Ce que je veux dire, c'est que ce n'est pas une modification, un amendement à la Loi sur les Indiens, mais c'est une modification à la Loi sur le crédit accordé aux syndicats de machines agricoles.

M. Danforth: J'en suis parfaitement conscient. Mais, n'est-il pas vrai que les Indiens sont soumis non seulement aux conditions de cette Loi, mais également à la manière dont le ministère des Affaires indiennes interprète

[Text]

and that these loans will be made available under regulations as they may prescribe?

Mr. Olson: All we are asking for in this Act is that we have security in either land or buildings; in other words, the assets that are concerned here to secure the loan.

... the Corporation may enter into an agreement with the Minister of Indian Affairs and Northern Development

So far as we are able to determine at this time, this is the only way that we can get the necessary security for the loan.

Mr. Danforth: Is the security provided by the Department of Indian Affairs?

Mr. Olson: I presume that the security, in the first instance—at least under the law that we have at the present time—would be provided by a guarantee by the Minister of Indian Affairs.

Mr. Danforth: My next question is on subclause (4), on which there has been considerable discussion and which I think we should have clarified before this particular amendment is allowed to pass. Under (4) it states directly:

(4) The total amount outstanding of loans that may be made to any one band under this Act shall not exceed ...

Mr. Olson: Yes.

Mr. Danforth: And we have the \$100,000 limit, or the lesser. This does not seem justifiable when we consider that in this country we have such a tremendous variance in the size of the bands that might operate under these terms.

Mr. Olson: Mr. Chairman, I would like to clear this up at once because this was also debated in the House of Commons under the amendments to the FCC. This \$100,000 is the maximum that is available to any organization, be it a syndicate, a corporation, a co-operative or a band. And in this case it is a band. However, the people that make up that band could have several corporations, or syndicates, or co-operatives where the loan is not made direct to the legal entity of the band. All this does is to put the same maximum on a loan to a band as to any other institution. There could be any number of syndicates made up of people within a band that could also apply for an amount up to \$100,000.

So this certainly does not restrict to \$100,000 the amount of money available to all the

[Interpretation]

cette Loi pour les Indiens, conformément aux règlements que ce ministère pourra fixer.

M. Olson: Tout ce que nous demandons dans cette Loi, c'est d'avoir un gage, soit en biens meubles, soit en biens immeubles ou en actif quelconque, afin de gager le prêt. C'est là la seule chose que nous voulons:

... la Société peut conclure un accord avec le ministre des Affaires indiennes et du Nord canadien.

Maintenant, c'est pour nous le seul moyen d'obtenir un gage pour ces prêts.

M. Danforth: Est-ce que le gage est souscrit par le ministère des Affaires indiennes?

M. Olson: Eh bien, actuellement, d'après la Loi, je pense qu'il y aurait une garantie d'apportée par le ministère des Affaires indiennes.

M. Danforth: Mon autre question porte sur le paragraphe (4).

On a beaucoup discuté de la question, et je pense que nous devrions y voir un peu plus clair.

Au paragraphe (4), on dit très clairement que:

le montant global non remboursé des prêts qui peuvent être consentis à une même bande en vertu de la présente Loi ne doit dépasser...

M. Olson: Oui.

M. Danforth: Et, nous avons ensuite la limite de \$100,000.

Il me semble que cela n'est pas justifiable lorsque l'on se rend compte que dans notre pays nous avons une telle différence dans l'importance des bandes.

M. Olson: Monsieur le président, je voudrais vous donner des renseignements là-dessus. On en a discuté à la Chambre des communes. Le montant de \$100,000 est celui qui peut être accordé au maximum, à n'importe quelle organisation, que ce soit un syndicat, une société, une coopérative ou une bande. Et, dans ce cas précis, si un prêt est accordé à la bande, mais que les gens qui représentent cette bande peuvent participer ou appartenir à plusieurs sociétés, comme des coopératives, etc., le prêt n'est pas accordé à la bande elle-même. Autrement dit, on peut leur accorder ce montant en nombre quelconque, à condition qu'il y ait autant de syndicats que de gens auxquels ils appartiennent.

Autrement dit, cela ne limite absolument pas le montant de l'argent qu'on peut accor-

[Texte]

people in that band. What it does is to spell out that the maximum of \$100,000 is there in any one loan whether it is made to a syndicate, or a co-operative or a corporation within the band, or indeed to the band as a legal entity making application for the loan.

Mr. Danforth: I am aware of the argument put forward by the Minister when this was dealt with before, but I am sure the Minister was aware that there was considerable doubt about the intent in the minds of many who have Indians in their ridings.

Now that the Minister has made this explanation for the second time, may I ask why the intent was not spelled out under subclause (4), if it was possible for more than one loan to be made to any one band and, in fact, \$100,000 under the provisions as set out by the Minister was not the limit? Why was the possibility of such an arrangement not detailed under the subclause?

Mr. Olson: I do not follow the question. As far as I can see it states very specifically and categorically in subclause (4) that all that is available to any one band is \$100,000, if the loan is made to the band.

Mr. Danforth: But the Minister has just finished stating, Mr. Chairman, that this is not the total amount of money that can be made available to the Indians on a reservation.

Mr. Douglas: Mr. Chairman, clause 3A (1) (b) (i) makes it quite clear that other groups of individuals can receive loans.

Mr. Horner: I have a supplementary, Mr. Chairman.

The Chairman: Mr. Horner?

Mr. Horner: In the second line of subclause (4), instead of the word "band", would it not be clearer if we used "syndicate"?

The total amount outstanding of loans that may be made to any one...

"syndicate". Why do you have to use the word "band"?

Mr. Olson: What we are trying to do is to improve this from the point of view of the

[Interprétation]

der à une bande. En fait, ce qui est fait, c'est qu'il est indiqué très clairement que le montant maximum de \$100,000 est celui qui est accordé, quelque soit le prêt, que ce soit à un syndicat, à une société, à une bande, etc., quel que soit l'organisme qui en fait la demande.

M. Danforth: Je comprends très bien l'argument avancé par le ministre. Cela a déjà été discuté précédemment. Mais je suis certain que le ministre se rendait bien compte que beaucoup de ceux qui ont des Indiens dans leur circonscription doutaient de la portée de cette Loi.

Maintenant que cette explication nous a été donnée pour la deuxième fois, est-ce que je pourrais alors demander pourquoi cela n'a pas été indiqué clairement dans le paragraphe (4), si c'était là l'intention de la Loi, c'est-à-dire un prêt d'accordé à une seule bande et, en fait \$100,000, d'après les dispositions ministérielles, ce n'est pas là la limite. Pourquoi l'éventualité de cet arrangement n'a-t-elle pas été mentionnée dans le paragraphe?

M. Olson: J'avoue que je ne comprends pas très bien votre question. Au contraire, je vois très clairement, au paragraphe (4), que tout ce que l'on dit, c'est que le montant maximum qui peut être accordé à une seule bande est de \$100,000, si c'est à la bande que l'on fait le prêt.

M. Danforth: Le ministre vient juste de dire, monsieur le président, que ce n'est pas le montant total qui peut être mis à la disposition des Indiens de nos réserves.

M. Douglas: L'article 3A. (1) b) (i) dit très clairement qu'il y a d'autres catégories ou groupes de personnes qui peuvent en bénéficier.

M. Horner: J'ai une question supplémentaire à poser, monsieur le président.

Le président: Monsieur Horner?

M. Horner: Est-ce qu'il ne serait pas préférable d'avoir, à la deuxième ligne du paragraphe (4), le mot «syndicat» au lieu d'avoir le mot «bande»? C'est-à-dire:

Le montant global non remboursé des prêts qui peuvent être consentis à une même...

«syndicat». Pourquoi est-ce que vous avez utilisé le mot «bande»?

M. Olson: Ce que nous cherchons à faire, c'est à améliorer cela du point de vue des

[Text]

Indian farmers. If there is no syndicate or co-operative or other legal entity, then the band may be considered as that entity.

Mr. Horner: The band then makes application the same as a syndicate.

Mr. Olson: Certainly.

Mr. Horner: Well then it is then considered a syndicate for the purpose of this act.

Mr. Olson: It cannot qualify unless it is.

Mr. Horner: That is muddled wording at best.

Mr. Lind: A supplementary, Mr. Chairman. A farming corporation is an incorporated company. What is the minimum and the maximum number of farmers that can join this company?

Mr. Olson: That is under the definition clause. Clause 2 Paragraph (c) Subparagraph (ii) says:

(ii) a farming corporation in which three or more shareholders are engaged in farming, the principal occupation of a majority of whom is farming...

So three is the minimum, but there is no maximum.

Mr. Lind: Thank you very much.

The Chairman: Mr. Horner, were you finished your questioning?

Mr. Horner: No, Mr. Chairman, but I want to deal with another aspect. That is poorly worded, but if the Minister wants to stick with his interpretation, all right. I want to ask a question on liability.

Mr. Danforth: I am not finished yet.

Mr. Horner: I am sorry.

The Chairman: Then we will return to Mr. Danforth.

Mr. Danforth: I am on a supplementary, Mr. Chairman, but I would like to pursue this.

The Minister states that this amendment makes it possible for a bank to enter into an agreement with the department on a farm syndicate loan, and I am quite prepared to accept that. But is it not true that this amendment in itself does not make it possible for other groups of farmers on a reservation or

[Interpretation]

agriculteurs indiens. S'il n'y a ni syndicat, ni coopérative, ni autre organisme légal, la bande peut être considérée comme organisme officiel.

M. Horner: La bande fait alors une demande, comme le ferait un syndicat.

M. Olson: Certainement.

M. Horner: Donc, on considère la bande comme un syndicat, aux fins de la présente loi.

M. Olson: Seulement si elle a été déclarée comme telle.

M. Horner: Je pense que c'est vraiment jouer sur les mots.

M. Lind: Monsieur le président, une question supplémentaire. Une société agricole est une société légalement constituée. Quels sont les nombres minimum et maximum d'agriculteurs qui peuvent entrer dans cette société?

M. Olson: Cela est indiqué dans les définitions. On dit, au sous-alinéa (ii) de l'alinéa c) de l'article 2:

(ii) une corporation d'agriculture dont trois des actionnaires ou plus s'adonnent à l'agriculture, lorsque la principale occupation de la majorité d'entre eux est l'agriculture...

Donc, le nombre minimum est trois, mais il n'y a pas de maximum.

M. Lind: Merci beaucoup.

Le président: Monsieur Horner, est-ce là toutes vos questions?

M. Horner: Non, monsieur le président, je voudrais passer à un autre aspect. Le texte est mauvais, mais si le ministre veut s'en tenir à son interprétation, entendu. J'ai une question à poser au sujet de la responsabilité.

M. Danforth: Je n'ai pas encore fini.

M. Horner: Excusez-moi.

Le président: Dans ce cas, vous avez la parole, monsieur Danforth.

M. Danforth: J'en suis à une question supplémentaire, monsieur le président, mais je voudrais pousser la chose un peu plus loin.

Le Ministre nous dit que cette modification permet à une bande de conclure un accord avec le Ministère pour un prêt de syndicat agricole et j'accepte très bien cette idée. Mais n'est-il pas exact que cette modification, en soi, ne permet pas à d'autres groupes d'agriculteurs d'une réserve ou d'une bande de

[Texte]

within a band to make application for a syndicate loan?

Mr. Olson: No, it does not.

Mr. Danforth: It is not possible then for other farmers.

Mr. Olson: Yes, it is possible. It does not make it impossible. That was the question, as I understood it.

Mr. Danforth: Yes, that is true.

Mr. Minister, since this is an agreement between the Department of Agriculture and the Minister of Indian Affairs and Northern Development and this deals with a band and restricts the loans to a band to \$100,000, how is it possible for other groups of farmers within a band, provided they wish to form a syndicate, to make application?

Mr. Olson: They would make an application as a syndicate or a co-operative or a corporation but not as a band, and we are providing here so that they can make application with the legal entity as the band as well as those other...

Mr. Danforth: May I ask one further question then? If, as stated by the Minister, it is possible for them to make application, how can they provide security?

Mr. Olson: By an agreement entered into between the corporation and the Minister of Indian Affairs and Northern Development.

• 1115

Mr. Danforth: Well is it possible then for a band to make application and obtain a syndicate loan through the Minister of Indian Affairs and Northern Development, giving property as security, and then another syndicate of Indians or a half a dozen syndicates of three or more Indians to make applications for loans using the same property as security?

Mr. Olson: We are not talking about them giving the property as security because I do not think that there is any way, even at the present time, that the Minister of Indian Affairs and Northern Development can give as security the land. We would get an agreement from him which would be tantamount, I think, to a guarantee.

Mr. Danforth: In other words then, the Minister of Indian Affairs and Northern Development gives the guarantee to the department with regard to a band?

[Interprétation]

faire une demande pour un prêt syndical?

M. Olson: Non, en effet.

M. Danforth: Ce n'est donc pas possible pour d'autres agriculteurs.

M. Olson: Si, c'est possible. Cela n'empêche pas que ce soit possible. C'est bien là votre question?

M. Danforth: Oui, c'est cela.

Monsieur le ministre, étant donné que c'est là un accord passé entre le ministère de l'Agriculture et le ministre des Affaires indiennes et du Nord canadien, et que cela concerne une bande et limite le prêt à une bande à \$100,000, comment est-il possible à d'autres groupes d'agriculteurs d'une bande, s'ils veulent se constituer en syndicat, de faire une demande?

M. Olson: Ils feraient une demande en tant que syndicat ou en tant que coopérative ou en tant que société, mais pas en tant que bande. Et il est prévu ici qu'ils puissent faire une demande avec la bande en tant qu'organisme légal aussi bien que les autres...

M. Danforth: Puis-je poser une autre question, dans ce cas?

Si, comme l'a dit le ministre, il leur est possible de faire une demande, comment leur est-il possible de fournir une garantie?

M. Olson: Par un accord conclu entre la société et le ministre des Affaires indiennes et du Nord Canadien.

M. Danforth: Dans ce cas, est-il possible à une bande de faire une demande et d'obtenir un prêt de syndicat, par l'intermédiaire du ministre des Affaires indiennes et du Nord canadien en offrant leurs terres en garantie et à un autre syndicat d'Indiens, ou à une demi-douzaine d'autres syndicats de trois Indiens ou plus, de venir aussi faire une demande de prêt en utilisant les mêmes terres comme garantie?

M. Olson: On n'a jamais dit qu'ils allaient donner leurs terres en garantie, car je ne pense pas que, même actuellement, il y ait un moyen quelconque pour le ministre des Affaires indiennes et du Nord canadien d'offrir la terre en garantie. Nous obtiendrions simplement de lui un accord qui aurait valeur de garantie.

M. Danforth: Autrement dit, c'est le ministre des Affaires indiennes et du Nord canadien qui offre au ministre de l'Agriculture une garantie au nom d'une bande?

[Text]

Mr. Olson: To the corporation, yes.

Mr. Danforth: Then the Minister of Indian Affairs would also be required to give the guarantee of security where each of the syndicates were involved.

Mr. Olson: Yes.

The Chairman: Mr. Danforth, would you be prepared to yield the floor so I may recognize Mr. Horner? I will return to you again.

Mr. Danforth: That is fair enough.

The Chairman: Mr. Horner?

Mr. Horner: Yes, I would like to deal with the question of liability. Suppose, for example, under the Farm Syndicates Act seven members form a syndicate. In signing the liabilities for the \$100,000 loan what amount is each person held liable for?

Mr. Olson: I will ask Mr. Owen to explain.

Mr. G. Owen (Chairman, Farm Credit Corporation): When the syndicate borrows, regardless of the number of persons in it, they are jointly and severally liable for the amount of the loan. I would like to emphasize however that the syndicate itself has assets in the nature of machinery, buildings or whatever else may be purchased by the syndicate with the loan to counterbalance the liability, so that while they are jointly and severally responsible for repayment of the loan they also share jointly and severally in the assets of the syndicate—and these are balancing forces.

Mr. Horner: You do not think that this is too rigid a stipulation, that each member should only be liable for a portion of the loan?

Mr. Owen: This is a matter which has come up on many occasions. If you wish, I can give you a fairly long answer setting forth the various factors that are considered.

First, an essential ingredient for a successful syndicate is a spirit of co-operation and trust by the members. This is supplemented by a written agreement which provides the ways in which individual members can protect themselves against failure or default on the part of other members. Now because they are jointly and severally liable, in the purchase of machinery particularly—because this is something a farmer cannot wait for very

[Interpretation]

M. Olson: Au nom de la société, oui.

M. Danforth: Le ministre des Affaires indiennes doit donc aussi offrir une garantie dans le cas de chacun des syndicats.

M. Olson: C'est cela.

Le président: Monsieur Danforth, voudriez-vous avoir l'obligeance de céder la parole à M. Horner? Nous reviendrons à vous plus tard.

M. Danforth: Avec plaisir.

Le président: Monsieur Horner?

M. Horner: Je voudrais parler de la question de la responsabilité. Supposons, par exemple, qu'en vertu de la Loi sur les syndicats agricoles, sept membres forment un syndicat. Dans la signature des engagements pour le prêt de \$100,000, de quel montant chaque personne est-elle responsable?

M. Olson: Je vais demander à M. Owen de vous expliquer cela.

M. G. Owen (président de la Société du crédit agricole): Lorsque le syndicat fait un emprunt, quel que soit le nombre de personnes qui y participent, elles sont toutes conjointement et solidairement responsables du montant du prêt. J'aimerais vous faire remarquer, toutefois, que le syndicat lui-même a un actif donné, sous forme de machines, de bâtiments, ou de tous autres biens qu'il pourrait acheter avec l'argent du prêt, qui contrebalance donc le passif; ainsi, ces personnes sont conjointement et solidairement responsables du remboursement du prêt, mais ils ont aussi en propriété conjointe et solidaire l'actif de la société et les deux facteurs s'équilibrent.

M. Horner: Ne pensez-vous pas que cette disposition est un peu trop rigide, et que chaque membre devrait seulement être responsable d'une portion du prêt?

M. Owen: Cette question a déjà été soulevée à maintes reprises. Si vous le voulez, je peux vous donner une réponse très longue en vous expliquant les divers facteurs qui entrent en ligne de compte.

Premièrement, un élément essentiel au succès d'un syndicat est l'esprit de collaboration et de confiance mutuelle de ses divers membres. Cela se complète d'un accord écrit qui fixe les modalités selon lesquelles les divers membres peuvent se protéger contre l'échec ou contre les manquements d'autres membres du syndicat. Du fait qu'ils sont conjointement et solidairement responsables, en particulier dans le cas d'achat de machines—car c'est le

[Texte]

long—they all sign the note and we can make a loan to them to buy the machinery without any of the cost, delay or inconvenience required in taking chattel mortgages. As a matter of fact, we generally do not take a chattle mortgage because we have the signatures of a group of farmers.

Second, this joint and several liability enables some established farmers to co-operate with a syndicate, with some young farmer getting established who himself has not the credit rating. They know him and they trust him so they can assist him in that way.

If they were not jointly and severally liable, if each was liable for a particular share of the loan, then in many instances we would have to refuse to lend to a syndicate because of the credit rating or position of one member, and we would have to go to the other fellows and say, "We will not lend to you as a syndicate unless you get rid of this particular neighbour". Now when they are jointly and severally liable they make their own decisions as to who will go in with them on the basis of their knowledge and understanding of that person.

Another real significant thing is that if each was responsible only for his portion of the loan then if one individual failed to meet his obligations and we were required to go in and, say, repossess the machinery, we would jeopardize the operations of all the other farmers. So within the content of the agreement between themselves they have arrangements they can settle with individuals who do not meet their obligations.

● 1120

I might mention one further aspect. Syndicate agreements are very much the same as partnership agreements. Many people say they are in fact legitimate partnership agreements. Now in almost all instances, except where you are dealing with silent partners, by the laws of the provinces members of a partnership are jointly and severally liable for the obligations of the partnership.

Putting all these reasons together, it seems to be a sound lending practice—and this is an essential ingredient. It is not however a particularly strong deterrent as long as the individual members of that syndicate are satisfied to mutually trust one another in their operations. This is necessary, apart from their liability, if they are going to share machinery.

[Interprétation]

genre de choses qu'un agriculteur ne peut se permettre d'attendre trop longtemps—ils signent tous le billet, et nous pouvons leur faire un prêt pour qu'ils achètent leurs machines, sans les frais, les délais et les inconvénients d'une hypothèque sur les biens. En fait, nous ne faisons généralement pas d'hypothèque sur les biens, puisque nous avons la signature du groupe d'agriculteurs.

Deuxièmement, cette responsabilité conjointe et solidaire permet à des agriculteurs établis de collaborer avec un syndicat, avec quelque jeune agriculteur qui s'établit et n'a pas lui-même le crédit nécessaire. Le syndicat les connaît et leur fait confiance, et il peut les aider, par conséquent.

S'ils n'étaient pas conjointement et solidairement responsables, et si chacun n'était responsable que d'une part donnée du prêt, bien souvent, il nous faudrait refuser d'accorder un prêt au syndicat à cause du crédit ou de la situation de l'un de ses membres, et il nous faudrait dire aux autres: «Nous ne ferons pas de prêt à votre syndicat à moins que vous ne vous débarrassiez de telle personne.» Tandis que lorsqu'ils sont conjointement et solidairement responsables, c'est à eux de décider, d'après ce qu'ils savent d'une personne, si elle peut se joindre à eux.

Un autre facteur important, c'est que, si chacun était responsable uniquement de sa portion du prêt, et qu'une personne ne remplisse pas ses engagements et qu'il nous faille, disons, récupérer le matériel, cela compromettrait l'exploitation de tous les autres agriculteurs. Par conséquent, dans le contrat qu'ils ont passé entre eux, ils ont prévu la manière de régler le cas des personnes qui ne remplissent pas leurs engagements.

Je pourrais mentionner un autre point. Les contrats des syndicats sont très semblables aux contrats d'association. Bien des gens disent que ce sont en fait des contrats légitimes d'association. Or, dans presque tous les cas, sauf lorsque l'on traite avec un partenaire invisible, les membres d'une association sont en vertu des lois provinciales, conjointement et solidairement responsables des engagements de cette association.

Notre méthode de prêt semble donc bonne, étant donné tous ces facteurs—qui sont un élément essentiel. Mais ce n'est pas un inconvénient grave, tant que les membres du syndicat sont assurés de la confiance des autres, cela nous permet d'être certains de récupérer le matériel si on en a besoin.

[Text]

Mr. Horner: All right. Accepting your explanation, Mr. Owen, that as long as all are mutually satisfied, is it not a fact that the farm syndicate loan up to this date has been mostly used by family groups, whether cousins, brothers, or relations of one form or another, that they have been the greatest users in the general application of the Farm Machinery Syndicates Credit Act to this date?

Mr. Owen: I would suggest that they do consist of a fair percentage, but there are a great number who are not. We have for example the syndicate with, I think, 86 members who are not related to one another. We have a great number of syndicates where they are not related to one another at all, and are farming actually independently.

Mr. Horner: This act is now going to be changed to allow for improvements to land and to buildings. Am I right? These are two new changes?

Mr. Owen: Yes.

Mr. Horner: In regard to those two major changes in the Farm Machinery Syndicates Credit Act, supposing you had seven members of a syndicate and one defaulted his share, I am certain that the other six, if it was an investment in land, would pick up that share. I am certain they would. Whereas with machinery alone, they would say: "Well the machinery deteriorated so much you can do what you like with it." Do you know what I mean?

Mr. Owen: Yes.

Mr. Horner: There is a different responsibility with regards to land and buildings than there is to machinery. Do you not think there would be a wider application of the act if you would accept the liability broken down into each share. Do you understand what I mean?

Mr. Owen: Yes, I know.

Mr. Horner: I am explaining the point very poorly.

Mr. Owen: You mean if the loan was broken down and a certain portion of the loan allocated to the responsibility of each individual. I must say that while the responsibility of the syndicate to the Farm Credit Corporation is joint and several, the agreement between the members of the syndicate itself does provide this breakdown as to what

[Interpretation]

M. Horner: Eh bien, monsieur Owen, j'accepte vos explications à condition qu'ils soient tous conjointement assurés de la chose. Mais, est-ce qu'il n'est pas vrai que, jusqu'à présent, les prêts ont été surtout utilisés par des groupes familiaux, c'est-à-dire des frères, des cousins ou des parents en quelque sorte et que c'est surtout dû à cela que cette loi survit.

M. Owen: Il y a un grand pourcentage de cas semblables, mais il y a aussi un grand nombre qui n'en font pas partie. Je crois qu'il y a un syndicat qui comporte 86 membres qui n'ont aucun lien de parenté entre-eux et ils agissent d'ailleurs très indépendamment.

M. Horner: Alors, cette loi va être modifiée afin de permettre une amélioration à l'aménagement du terrain, et à l'aménagement des bâtiments.

M. Owen: Oui.

M. Horner: C'est là la modification importante de la loi. En permettant ces deux modifications dans la loi, est-ce que vous ne pensez pas qu'il y aurait une plus grande utilisation, notamment, étant donné la caractère permanent de la loi, par exemple, supposons que vous ayez 7 membres dans un syndicat et qu'un des membres ne puisse pas payer sa part. Je suis certain que les six autres membres si c'était un investissement immobilier, je suis certain que les autres six vont alors acheter sa part. Et, c'est certainement le cas.

M. Owen: Oui.

M. Horner: Alors qu'avec du matériel, étant donné que les machines se détériorent rapidement, il pourrait dire d'en faire ce que vous voulez. Autrement dit, la responsabilité est différente selon qu'il s'agit d'un terrain ou des bâtiments ou des machines. Et, vous ne pensez pas qu'il serait préférable dans la loi de ne tenir compte que de la responsabilité et de séparer selon la part. Je m'exprime mal mais vous me comprenez...

M. Owen: Oui...

M. Horner: Je m'exprime bien mal.

M. Owen: Si le prêt était divisé et que certaines parties du prêt étaient confiées à chaque individu, je dois vous dire que la responsabilité du syndicat devant la Société de crédit agricole est conjointe. Et l'accord est un accord qui prévoit cette répartition pour savoir quelle est la part dont chacun est responsable à l'égard du syndicat.

[Texte]

part each one is responsible for to the syndicate itself.

Mr. Horner: Yes, but they all have to sign the liability for \$100,000.

Mr. Owen: Oh, yes, but they also all have to sign an agreement in which they allocate as between themselves their relative responsibilities. And they also have provisions within their agreement to protect themselves in the event of the default of any one member.

Mr. Horner: Another question. Supposing I want to buy a major piece of land and I want to do a major piece of improvement on that land with buildings and so on, and supposing it is going to take more than \$100,000 to swing this deal, and let us suppose that there were 9 or 10 of us who were interested in this deal, could we then form three syndicates and get \$300,000? We could break down the project into three categories, too, if we wanted to?

• 1125

Mr. Owen: I might mention to begin with that the bill does not provide that a syndicate could buy farm land for farming.

Mr. Horner: Oh, I did not say farming.

Mr. Owen: This is a piece of land on which to erect a building which they can use jointly.

Mr. Horner: I will give you an example. I was thinking of a feed mill, a feed-mixing program. You would have to buy the land, and you would have to build the buildings.

Mr. Owen: That is right, and this would have to be one syndicate that owned and operated it.

Mr. Horner: All right. It would have to be one syndicate that owned the land or owned the feed mill. Then could another syndicate own the trucks that delivered the feed?

Mr. Owen: It is rather difficult to go into all types of...

Mr. Horner: Could another syndicate buy a piece of land and build a feed lot alongside the feed mill?

Mr. Owen: I would say that a syndicate could buy land to establish a feed lot, but the land and buildings become one when they are put together. A syndicate could buy land to

[Interprétation]

M. Horner: Mais, malgré tout, ils doivent tous signer la responsabilité conjointe de \$100,000.

M. Owen: Ah oui, mais ils doivent également signer un contrat de par lequel ils se répartissent entre eux les différentes responsabilités et il est également prévu dans cet accord qu'ils se protègent les uns contre les autres au cas où l'un d'entre eux ne pourrait répondre à ses obligations.

M. Horner: Maintenant, une autre question. Supposons, par exemple, que je veuille acheter un gros terrain et que je veux l'aménager avec des bâtiments, etc., etc., supposons que cela dépasse \$100,000, est-ce que... et supposons que, par exemple, nous soyons 9 au 10 intéressés dans cette transaction. Est-ce que nous pourrions fonder 3 syndicats et obtenir 3 prêts différents et que l'on puisse diviser l'entreprise en 3 catégories?

M. Owen: J'aimerais mentionner que la loi ne prévoit pas que le syndicat puisse se rendre acquéreur de terrains pour l'agriculture.

M. Horner: Oh non, je n'ai pas parlé d'agriculture.

M. Owen: Je parle d'un terrain où doivent être construits des bâtiments utilisés conjointement.

M. Horner: Oh oui, parfaitement, dans mon exemple je pensais par exemple à un moulin à provendes, où à un programme de mélange de provendes. Il faut acheter le terrain et puis il faut construire le bâtiment.

M. Owen: Il devrait y avoir un syndicat qui possède le terrain ou possède le moulin à provendes.

M. Horner: Mais, est-ce qu'un autre syndicat pourrait posséder les camions qui apportent les aliments.

M. Owen: Ce serait difficile...

M. Horner: Est-ce qu'un autre syndicat pourrait, lui, construire un parc à engrais?

M. Owen: Eh bien, je dis qu'un syndicat peut acheter du terrain près du moulin pour y construire un parc d'engraissement. Et puis, le syndicat pourrait acheter du terrain pour

[Text]

build a feed mill and that thing then, when it is built, becomes one unit by one syndicate. Now if some farmers wish to have a syndicate to have a feed lot beside a group of farmers who had a syndicate to have a feed mill, offhand there is nothing in the legislation to prevent it. If it looked to us to be a sound proposition, they could do this.

Mr. Horner: Could a farmer be a member of either or both syndicates?

Mr. Owen: Yes, he could.

Mr. Horner: Or all syndicates?

Mr. Owen: Technically, in so far as the law is concerned.

Mr. Horner: And the same thing would apply with regard to growing vegetables in a vegetable distribution centre, and a vegetable machinery centre.

Mr. Owen: Not to the growing of the vegetables.

Mr. Horner: Well, what I meant was the machinery towards the washing, grading and processing, and harvesting machinery. Yes?

Mr. Owen: Yes.

Mr. Horner: And then you could have another group build the warehouse, the cold storage house.

Mr. Owen: Remember that each syndicate acquires assets.

Mr. Horner: Oh, yes.

Mr. Owen: It must be assets primarily for their own use, not primarily for the use of another group.

Mr. Horner: You could have one syndicate formed to purchase and to operate the harvesting machinery; another syndicate formed to do the warehousing; and another syndicate formed for the distribution of vegetables, the processing, the packaging and so on. Could a person be a member of each one of those syndicates? In fact, could those syndicates consist of the same members?

Mr. Owen: Technically, hypothetically, providing they set themselves up as separate syndicates, there would be nothing to prevent it.

Mr. Horner: Fine.

Mr. Owen: Mind you, in the course of this thing we are going to be looking at this from a point of view of sound lending.

[Interpretation]

construire le parc d'engrais. Cela constitue un seul élément. Maintenant, si certains agriculteurs veulent avoir un syndicat pour avoir un parc d'engrais, et puis un autre pour avoir un moulin à provendes, il n'y a rien, apparemment, dans la loi qui les en empêche, si c'est là une proposition rentable.

M. Horner: Est-ce qu'un agriculteur peut appartenir à l'un ou à l'autre ou aux deux syndicats?

M. Owen: Oui, absolument.

M. Horner: A tout syndicat?

M. Owen: Oui, d'après la loi, oui.

M. Horner: Maintenant, est-ce que cela pourrait s'appliquer à des productions de légumes? Un centre de distribution et de machinerie?

M. Owen: Pas pour la culture des légumes.

M. Horner: Je parle des machines pour le lavage, le calibrage, etc., la moisson, etc., la récolte, etc.

M. Owen: Oui.

M. Horner: Puis vous pouvez avoir un autre groupe qui construira l'entrepôt, l'entrepôt frigorifique.

M. Owen: N'oubliez pas que chaque syndicat acquiert des actifs propres.

M. Horner: Oh oui...

M. Owen: Ces actifs doivent être à leur propre usage, non pour l'usage par un autre groupe.

M. Horner: Vous pouvez donc avoir un syndicat qui est chargé d'acheter le matériel de récolte et puis un autre qui s'occupe du matériel d'entrepôt, puis un autre qui est établi pour la distribution, pour le traitement, etc. Et puis, vous pouvez avoir un membre qui appartient à chacun de ces syndicats. En fait, est-ce que ces syndicats pourraient se composer des mêmes membres?

M. Owen: Théoriquement, il n'y aurait rien qui puisse les en empêcher.

M. Horner: Bien.

M. Owen: N'oubliez pas une chose, c'est que tout est envisagé au point de vue de la rentabilité et de la sécurité du prêt.

[Texte]

Mr. Horner: Oh, yes. I have great confidence and faith in the agricultural industry. I have one further question. Why the age 21 in the act, with regard to a syndicate borrower? I am thinking of a father-son arrangement.

Mr. Owen: In this act?

Mr. Horner: Yes, in this act.

Mr. Owen: Where is it?

Mr. Horner: Right in the amendment. The Minister read it out, and age 21 is in there.

Mr. Owen: In the Indian section.

Mr. Horner: Well, in the Indian section, but I would imagine it would apply in the other sections.

Mr. Owen: I will tell you why. An individual under 21 years of age under provincial law is not able to incur the legal liabilities for which we could collect. Then we come down to the question of mortgaged land and that sort of thing. When you come down to the question of incorporation, this is why it is put in there, so that the shareholder in a corporation will be in the same position as the individual. If an individual under 21 years of age can not borrow, then it seems inconsistent that he should be able to join a corporation and borrow.

Mr. Horner: Yes, but the difference here, Mr. Owen, is that supposing each member signs a full liability before the \$100,000 is borrowed. Then you could well take in a son 18 or 19 years of age who is engaged on the farm. Supposing you had four or five farmers and two of them had sons and they wanted to borrow \$100,000. Supposing the sons were 18 or 19 years of age, would it not be wise—particularly now with the Estate Tax Act being amended in the way it is—to work them in right at the beginning?

• 1130

An hon. Member: They cannot even legally lease land.

Mr. Horner: No, but here is the difference in this particular act, and that is that the members are signing for the total liability. He does not take any real liability, because the others are backing him up and if they do not believe he should be in there, then they do not take him in, as you said in your own words to an explanation of a question earlier.

[Interprétation]

M. Horner: Oh oui, absolument. J'ai parfaitement confiance dans l'industrie agricole, n'oubliez pas cela. Maintenant, il y a une autre question que je voudrais poser. Pourquoi est-ce que vous avez fixé l'âge à 21 ans, dans la loi? Je pense à la question père et fils, des contrats père et fils.

M. Owen: Vous voulez dire dans cette loi?

M. Horner: Oui, dans cette loi.

M. Owen: Où trouvez-vous cela?

M. Horner: C'est dans l'amendement. C'est l'amendement qui nous a été lu par le ministre, il y a un instant, on y indique 21 ans.

M. Owen: Dans la section concernant les Indiens?

M. Horner: Dans la section concernant les Indiens; je pense que cela s'applique aux autres sections également.

M. Owen: Bon, je vais vous dire pourquoi. Les individus de moins de 21 ans, d'après la loi provinciale, ne peuvent pas être légalement responsables devant la loi. Maintenant, si on prend par exemple aux terrains hypothéqués, lorsque l'on arrive à cette question d'enregistrement, par exemple, les actionnaires d'une société se retrouvent dans la même situation que chaque individu. Autrement dit, si un individu qui a moins de 21 ans ne peut faire un emprunt, eh bien, il est parfaitement incompréhensible qu'il puisse s'associer en une société et alors faire un emprunt.

M. Horner: Oui, mais la différence à ce moment-là, monsieur, c'est que, si on suppose que chaque membre signe une responsabilité totale sur les \$100,000 d'emprunt, vous pouvez à ce moment-là prendre un garçon de 18 ou 19 ans qui se consacre à l'agriculture, si vous avez trois ou quatre fermiers, par exemple, et que deux d'entre-eux ont des fils, s'ils veulent emprunter \$100,000, est-ce qu'il ne serait pas sage, si le garçon a 18 ou 19 ans, avec l'amendement de la taxe sur les propriétés, est-ce qu'il ne serait pas bon de l'associer dès le début?

Une voix: Ils ne peuvent même pas louer une terre.

M. Horner: Non, mais voilà la différence avec cette loi. C'est que les membres qui signent, qui souscrivent, ont une responsabilité totale. Le fils ne prend aucune responsabilité parce que les autres l'appuient. Et s'ils ne pensent pas qu'il est capable de faire partie de la société ils ne l'acceptent pas. Vous l'avez dit vous même auparavant.

[Text]

Mr. Owen: The actual practical application of it is that the signature of the son under 21 years of age would have no validity so far as collecting the money is concerned.

Mr. Horner: Yes, but you could collect it from the other members under their liability, under their signatures. In the example I used, you have five people backing that \$100,000.

Mr. Owen: I was under the impression that that was one of the reasons why you objected to joint and several liability in the first place.

Mr. Horner: Why I objected to it?

Mr. Owen: Yes, why you objected to it in the first place.

Mr. Horner: I objected to it because it limits. I would not risk a \$100,000 loan unless I was getting full advantage of the \$100,000.

Mr. Owen: What you are actually doing here is assigning to this individual the right to borrow money and sign an agreement with the full knowledge that he cannot be held liable for it and with the full knowledge that the other members of the syndicate can be held legally liable, and this is an inequitable position between lender and borrower.

Mr. Whicher: The signature would be no good at all. For the term of that contract his signature would be no good—not until the loan was paid off.

Mr. Horner: His signature does not really have to be good because the other people are backing him.

Mr. Whicher: Is it fair that when the man is 40, he is not responsible...

The Chairman: Order, please. It is obvious that we are not going to conclude our considerations. Our time is expiring. I do have other members on my list. It would probably be fair, if you do not mind, Mr. Horner...

Mr. Horner: Just one quick question. How do you get around the application of this Bill towards buildings in the Province of Quebec where it is very difficult to secure the type of chattel mortgages that are necessary?

Mr. Owen: Chattel mortgages?

Mr. Horner: In the Province of Quebec.

Mr. Owen: The laws of the Province of Quebec were amended, I suppose as much as

[Interpretation]

M. Owen: L'application pratique de cela c'est que la signature du fils qui n'a pas 21 ans n'a aucune valeur en ce qui concerne le remboursement de l'argent.

M. Horner: Oui, mais on peut obtenir cet argent des autres membres. D'après l'exemple que j'ai ici, il y a cinq personnes qui souscrivent à cette responsabilité d'un prêt de \$100,000.

M. Owen: J'étais sous l'impression que c'était une des raisons qui vous empêchait de vous rallier.

M. Horner: Pourquoi m'y suis-je opposé?

M. Owen: Oui, vous vous êtes tout de suite opposé.

M. Horner: La raison pour laquelle je m'oppose à cela, c'est qu'on limite ainsi les prêts. Je ne risquerais pas un prêt de \$100,000 à moins que je puisse retirer le plein avantage de ces \$100,000.

M. Owen: De fait, on assigne à cette personne le droit d'emprunter de l'argent, de signer un accord, en pleine connaissance du fait qu'il ne peut pas être tenu responsable et que les autres personnes peuvent être tenues responsables. C'est une position injuste.

M. Whicher: Pour la durée du contrat, la signature ne vaudrait rien même si la personne a quarante ans...

M. Horner: La signature n'a pas besoin d'être honorée, car les autres sont responsables de lui.

M. Whicher: Est-ce juste, lorsqu'un homme, à 40 ans, n'est pas responsable?

Le président: Évidemment, nous n'allons pas conclure notre étude de cette question. Je pense que l'heure avance, il y a d'autres députés qui veulent poser des questions et il serait peut-être juste, si vous n'avez pas d'objections, monsieur Horner...

M. Horner: Une question rapide. Que dire de l'application de cette loi dans la province de Québec où il est très difficile d'obtenir une hypothèque sur biens meubles?

M. Owen: Des hypothèques sur biens meubles.

M. Horner: Dans la province de Québec.

M. Owen: Les lois de la province de Québec ont été modifiées en autant que possible

[Texte]

possible to accommodate our particular program so that we can take pledges on livestock and machinery.

The Chairman: I would like to recognize Mr. Moore, Mr. Thomson, Mr. Gleave and Mr. Korchinski who have not had an opportunity of asking any questions. Will you please try and share the remainder of the time? I recognize Mr. Moore.

Mr. Moore (Wetaskiwin): In the case of Indians forming a syndicate and purchasing land, let us say, on the perimeter of a fixed reservation—land that up until this time had not been part of the reservation—would that land then become part of the reservation?

Mr. Owen: I think here we are coming to part of the Indian Act, but I would suggest that once an Indian moves off the reserve and buys land, he is the same as any other citizen. Our amendment with respect to Indians in this Bill relates purely to those who are farming on the reserve; off the reserve they are the same as everyone else.

Mr. Moore (Wetaskiwin): I realize that, but they can still live on the reserve and buy adjoining land outside of the reservation. This might pose a problem.

Mr. Owen: I suggest that outside the reservation they would be regarded the same as any other land owner.

Mr. Moore (Wetaskiwin): But they do not live outside the reservation. May I ask a further question, then? Suppose there were 300 bonafide farmers in an Indian band—and this is quite possible—would they then be able to form 100 syndicates and each syndicate borrow \$100,000? Perhaps this sounds ridiculous, but in theory could it happen?

Mr. Owen: The first two members in the syndicate could only borrow \$45,000.

Mr. Moore (Wetaskiwin): Oh, yes, I see.

Mr. Owen: But there is no limitation on the number of syndicates which might be formed within the confines of that reserve.

Mr. Douglas: Mr. Chairman, would that not be subject to the approval of the Minister of Indian Affairs?

Mr. Owen: Yes, but it would depend upon the terms of an agreement. We do not visualize the individual guarantee of each loan by the Minister of Indian Affairs, but rather a guarantee of loans in general providing they are made within certain requirements.

[Interprétation]

pour s'accommoder à notre programme afin de pouvoir hypothéquer le bétail et la machinerie agricole.

Le président: Je donne la parole à M. Moore, M. Thompson, M. Gleave et M. Korchinski, qui n'ont pas eu l'occasion de poser des questions. Voulez-vous essayer de vous partager le temps qui reste. M. Moore.

M. Moore (Wetaskiwin): Dans le cas d'Indiens qui forment un syndicat et qui achètent des terres sur le périmètre d'une réserve, des terres qui ne faisaient pas partie de la réserve jusque-là, est-ce que ces terres alors feraient partie de la réserve?

M. Owen: Je pense ici que nous touchons à la Loi sur les Indiens. Mais je pense qu'une fois qu'un Indien quitte la réserve et achète des terres, il est sur le même pied que les autres citoyens. Et la modification se rapporte dans ce Bill, simplement aux Indiens qui pratiquent l'agriculture sur des terres à l'intérieur de la réserve.

M. Moore (Wetaskiwin): Oui, je comprends, mais ils peuvent toujours habiter sur la réserve et acheter des terres hors de la réserve. Cela peut poser des problèmes.

M. Owen: Je trouve que, hors de la réserve, ils sont considérés comme des propriétaires ordinaires.

M. Moore (Wetaskiwin): Mais ils n'habitent pas en dehors de la réserve. Ils habitent à la réserve. Supposons maintenant, qu'il y ait 300 cultivateurs de bonne foi dans une bande, cela est très possible, est-ce qu'ils pourraient former, cent syndicats dont chacun emprunterait \$100,000, cela peut vous sembler ridicule, mais en théorie cela peut se produire?

M. Owen: Les trois premiers membres du syndicat ne peuvent emprunter que \$45,000.

M. Moore (Wetaskiwin): Ah, j'ai bien compris.

M. Owen: Mais il n'y a pas de limites sur le nombre de syndicats qui pourraient être formés dans une réserve en particulier.

M. Douglas: Monsieur le président, ceci ne serait-il pas soumis à l'approbation du ministère des Affaires indiennes?

M. Owen: Cela dépendrait des modalités de l'accord. Nous n'exigeons pas une garantie du ministère des Affaires indiennes pour chaque prêt individuel, mais on demande cette garantie pour les prêts en général, pourvu qu'ils soient conformes à certaines exigences.

• 1135

[Text]

Mr. Moore (Wetaskiwin): Might I ask this, then? If a syndicate—and I am not speaking of Indian farmers in this particular instance—purchases machinery and this machinery naturally deteriorates, does the corporation have any claim on the land on which this machinery is used?

Mr. Owen: By virtue of the note which they signed they become jointly and severally liable for their obligations to the corporation and, as such, we have a claim against any assets they may have as individuals.

Mr. Moore (Wetaskiwin): Yes, I realize that. Supposing these were Indian farmers. There would be a difference. There could be no claim against that land because it is reserve land. Is this correct?

Mr. Owen: That is right.

Mr. Moore (Wetaskiwin): Yes, that is all I wanted to know.

Mr. Owen: The mortgage which we might have against other land, or the claim we might have against other assets, in this instance would be replaced by a guarantee from the Minister of Indian Affairs.

Mr. Southam: I have a supplementary to that, Mr. Chairman, which follows from Mr. Danforth's line of questioning which was followed up by Mr. Moore. In other words, you have stated that theoretically you could have a large number of applications for loans under the farmers' syndicate legislation as far as an Indian reservation was concerned, and the fact that Indians themselves, individually, cannot give that land as collateral, it means that it falls on the Crown, in other words, the Department of Indian Affairs in setting up these agreements; it would fall back then on the federal treasury actually to be collateral for the provision of these loans. If you had an excess you would have to be very careful; in other words, if you had an excess of loans and they went "belly up", it would be quite a drain on the federal coffers through the Department of Indian Affairs. Is that not right?

Mr. Owen: Yes, this is so. I must point out, however, that the bulk of loans made under this particular Bill are for the purchase of machinery. In fact, we could, or the Minister of Indian Affairs could take security against that machinery, as distinct from the land itself. Only certain parts of the loan would be directed towards actual real estate. If this loan went bad and the Minister of Indian Affairs had to make good on his guarantee, then these physical assets would be available

[Interpretation]

M. Moore (Wetaskiwin): Alors, puis-je vous demander si un syndicat, et je ne parle pas des cultivateurs indiens en ce moment, achète de la machinerie qui se détériore naturellement à la longue, est-ce qu'on a des droits sur la terre sur laquelle cette machinerie a été utilisée?

M. Owen: Non, les syndicats deviennent responsables de leurs obligations.

M. Moore (Wetaskiwin): Supposons alors qu'il s'agit de cultivateurs indiens, il y aurait une différence, on ne pourrait pas prendre la terre parce qu'il s'agit d'une réserve, n'est-ce pas?

M. Owen: C'est exact.

M. Moore (Wetaskiwin): C'est tout ce que je veux savoir.

M. Owen: L'hypothèque que nous pourrions avoir sur d'autres terres ou les droits que nous aurions sur d'autres biens seraient garantis par le ministre des Affaires indiennes.

M. Southam: Monsieur, sur ce que viennent de dire M. Moore et M. Danforth, je pense que nous recevrons beaucoup de demandes en vertu de la Loi sur les crédits accordés aux syndicats de machines agricoles pour les Indiens. Alors, le ministère des Affaires indiennes, en établissant ces accords, devra s'en remettre au Trésor public pour sa caution. Cela représenterait un drain assez considérable sur le Trésor public.

M. Owen: C'est vrai. Je vous ferai remarquer cependant que, pour la plus grande partie des prêts, en vertu de ce projet de loi, sont consentis pour l'achat de machinerie et nous pourrions, ou le ministre des Affaires indiennes pourrait prendre des garanties contre cette machine, sans compter la terre elle-même. Si le prêt n'était pas remboursé et si le ministre des Affaires indiennes devait rembourser pour le prêt, alors les biens physiques pourraient être transférés à un autre

[Texte]

for transfer to some other farmer on that reserve, or to another syndicate, or to another group of farmers, to produce the revenue from them, because with every liability there are assets to counteract the liability.

The Chairman: I recognize Mr. Thomson.

Mr. Thomson (Battleford-Kindersley): Mr. Chairman, I do not like to beat a point to death, but I have five Indian reserves in my riding and I am thinking of the terminology referring to "band" and the definition of "Indian". When we discussed the Farm Credit Act, I was concerned enough about this that I looked up the Indian Act and I talked to Len Marchand. The Minister, if you recall, had to repeat over and over just what the intent was of the particular clauses of the Bill; in fact, he brought in an amendment finally. I am concerned here about definitions and terminology. If I have to go out to these reserves and explain the intent of some of these loans, and explain what "band" means and who is going to get it—particularly I think it might refer to farmers who live adjacent to reserves even more than Indians—then I wonder if the Department in drafting these things might not think of another term apart from "band" that means the same thing. It is confusing here; this is what I am referring to.

Mr. Owen: I might say, first, that our own staff will be going on the reserves and explaining in the best way we can, how credit under this Act and the other one can be used by them. You may appreciate that we always could have made loans to Indians under the Farm Machinery Syndicates Credit Act before this amendment came through at all, providing it was for machinery on which we could get a mortgage. We are now going to go in there to explain. Certainly we can make it much easier to understand in our literature.

I would just like to repeat that what we have here is referring only to a provision of a guarantee by the Minister of Indian Affairs so that those Indians who are farming on reserves will be able to borrow in the same way as other people, so that the Minister of Indian Affairs can give us a guarantee in lieu of a mortgage which we would not otherwise be able to obtain.

Mr. Thomson (Battleford-Kindersley): Thank you. Mr. Chairman, I think I understand the intent now and what is involved, but it took

• 1140

me quite a while. I thank the gentleman. I understood him to say that if I have any troubles, he is going to help me.

[Interprétation]

cultivateur ou à un autre groupe de cultivateurs ou à un syndicat qui tirerait un revenu de ces biens, car, dans chaque passif, il y a un actif pour le protéger.

Le président: Monsieur Thompson.

M. Thomson (Battleford-Kindersley): Monsieur le président, je ne veux pas trop insister, mais j'ai cinq réserves indiennes dans mon comté et je m'intéresse à la terminologie, les bandes, les réserves, etc. J'ai parlé au ministre. Je me pose des questions au sujet des définitions. Et si je dois aller dans les réserves et expliquer l'objet de ces prêts, j'aurais peut-être affaire plus aux cultivateurs qui habitent près des réserves qu'aux Indiens eux-mêmes. Je me demande, lorsque le ministre rédigera la loi, s'il ne pourrait pas employer un autre mot que le mot « bande ».

M. Owen: Notre personnel va se rendre sur les réserves, essayer d'expliquer ces choses, au meilleur de notre connaissance, et de faire comprendre aux Indiens comment ils peuvent profiter de ces prêts. Nous aurions pu faire des prêts aux Indiens avant l'adoption de cette loi à condition que ce soit pour des machines sur lesquelles nous aurions pu prendre une hypothèque. Nous pouvons certainement, dans notre documentation, employer des termes beaucoup plus faciles à comprendre.

Mais, je répète que, ce que nous avons devant nous se rapporte seulement à une disposition visant une garantie du ministre des Affaires indiennes afin que les cultivateurs qui habitent dans les réserves puissent emprunter comme tout le monde; et le ministre des Affaires indiennes nous donne une garantie en remplacement d'une hypothèque.

M. Thomson (Battleford-Kindersley): Je comprends ce à quoi on veut en venir, mais j'ai eu de la peine à comprendre, et je remercie le fonctionnaire qui vient de m'assurer qu'il m'aidera, si j'ai besoin de renseignements.

[Text]

Mr. Owen: That depends on the kind of troubles.

Mr. Lind: Mr. Owen, in the process of the syndicate, if they do any building on this property and acquire materials, what guarantee can the suppliers of these materials get from this Indian band syndicate?

Mr. Owen: Do you mean what guarantee can we provide to the suppliers of material that they will be paid?

Mr. Whicher: Mr. Chairman, there is a conflict of interest here. I do not think that question is in order.

Mr. Owen: Is it your wish, Mr. Chairman, that we do not answer?

The Chairman: No, I think the question should be answered.

Mr. Owen: I could say that our primary concern is for the borrower but we have to recognize that in all our operations—not only here, but everywhere—we have to ensure that the funds go in the right direction and are used properly and we, in fact, disburse the funds in payment of suppliers. We do not just hand the money over to the borrower.

Mr. Lind: You take power of attorney and disburse the funds.

Mr. Owen: We would vary it depending upon circumstances. Normally we would get a payment order from the borrower and issue a cheque payable jointly to the borrower and to the supplier.

Mr. Lind: Pardon me, Mr. Chairman. May I follow this one step further? To whom do you mail the cheque? This has also been a problem.

Mr. Owen: When we are dealing through a solicitor, we mail it to the solicitor. In other instances we actually have our local man deliver it to be sure that the transaction takes place at that time. In some cases we would deliver it to the borrower and in some cases to the supplier. All of these things depend upon the circumstances of the individual loan.

Mr. Lind: May I follow that question further, since you brought in the matter of solicitors. We have heard in the House of Commons in the last few days about some rather exorbitant fees that are charged by solicitors in cases. So they receive a set fee through the Farm Credit Corporation?

[Interpretation]

M. Owen: Cela dépend des questions.

M. Lind: Si le syndicat construit des édifices et acquiert des nouvelles machines, quelles garanties offrez-vous aux fournisseurs d'un syndicat de bande indienne?

M. Owen: Vous voulez dire, quelle garantie pouvons-nous fournir aux fournisseurs des matériaux?

M. Wicher: Je ne pense pas que cette question soit recevable. Il y a conflit d'intérêts.

M. Owen: Est-ce votre désir qu'on ne réponde pas à la question, monsieur le président?

Le président: Je crois que l'on devrait répondre à la question.

M. Owen: Notre premier souci est l'emprunteur, mais nous reconnaissons que dans toutes nos opérations, dans toute notre activité, non seulement ici, mais partout, nous devons voir à ce que les fonds soient bien utilisés et nous ne donnons pas l'argent aux emprunteurs, nous payons les fournisseurs.

M. Lind: Vous prenez une procuration et distribuez les fonds?

M. Owen: Cela varie selon les circonstances. Mais normalement, nous obtenons un ordre de payer de l'emprunteur et nous émettons un chèque payable conjointement à l'emprunteur et au fournisseur.

M. Lind: M. le président, à qui adresse-t-on le chèque?

M. Owen: Lorsque nous passons par un avocat, nous l'envoyons à l'avocat, mais si nous avons un représentant local qui s'assure que la transaction se fasse et dans certains cas, nous envoyons la somme à l'emprunteur et dans d'autres cas au fournisseur. Toutes ces choses-là dépendent des circonstances de la transaction.

M. Lind: Puisque vous avez parlé d'avocat, nous avons entendu pendant quelques jours à la Chambre des communes que les avocats sont exorbitants. Reçoivent-ils des honoraires de la Société de crédit agricole.

[Texte]

Mr. Owen: I must point out that part of the legal work with respect to our lending is the responsibility of the borrower, and he engages a solicitor of his choice to do that and it is based on the arrangements between himself and the solicitor. That part of the work which is involved in providing us with a valid mortgage against the property is tabled by us, but we deduct it from the loan to the farmer and we set a fee which is very substantially lower than the normal fee charged for this type of transaction. In this way, by having one solicitor handle a significant amount of the work, we are able to set a fee which is substantially lower than the normal bar tariff and we save that cost to the borrower.

Mr. Lind: Yes. I have one further question on this, Mr. Chairman. Are there not other charges that you allow the solicitor to make because he reduces that fee?

Mr. Owen: Our fee covers his work in placing that mortgage. He must also pay disbursements, such as the cost of registration of documents, and this sort of thing. Aside from the required disbursements and the fee for the work, we allow no other charge as far as our part of the work is concerned. What very often happens is that the farmer will engage the same solicitor to do his part of the work—for example to handle the transaction in the purchase of land—and the solicitor has a separate account for that part of the work which is his responsibility, and these are often confused. I must say, however, that at the moment we are talking about operations under the Farm Credit Act as distinct from Bill C-112.

Mr. Lind: As distinct from Bill C-112.

Mr. Owen: At the moment we have never taken land mortgages under the Farm Machinery Syndicates Credit Act. We may be taking some and we may not. The fact that we are actually lending...

Mr. Lind: You just take the loans under this Act. Is this right?

Mr. Owen: Yes, and sometimes a chattel mortgage.

Mr. Lind: A chattel mortgage. That is a mortgage, is it not? It is registered...

Mr. Owen: Yes, we occasionally take a chattel mortgage, in which case the syndicate just provides us with a certificate from a solicitor of their choice and their arrangements.

[Interprétation]

M. Owen: Je dois vous faire remarquer qu'une partie du travail juridique par rapport à nos prêts est la responsabilité de l'emprunteur, il choisit son propre avocat, il fait ses propres arrangements avec l'avocat. Cette partie du travail qui concerne l'hypothèque est payée par le ministère et nous exigeons des honoraires bien moins élevés que ce que l'on demande normalement pour ce genre de transaction. Nous avons des avocats qui font beaucoup de travail pour nous et par conséquent, leurs honoraires sont de beaucoup inférieurs à ce que l'on demande ordinairement.

M. Lind: Est-ce qu'il n'y a pas d'autres frais qui sont payés à l'avocat étant donné que ce dernier demande des honoraires moins élevés?

M. Owen: L'avocat demande ses honoraires ainsi que les frais qu'il doit engager pour l'enregistrement de l'hypothèque des autres documents. Ce qui se produit souvent, c'est que le cultivateur engage le même avocat pour ses propres besoins, c'est-à-dire pour dresser l'acte d'achat de la terre et pour lequel l'avocat soumet à l'agriculteur une note de frais séparée. On se méprend souvent là-dessus. Nous parlons maintenant de la Loi sur la Société du crédit agricole, et non du projet de loi C-112.

M. Lind: Par opposition au bill C-112.

M. Owen: En ce moment, nous n'avons jamais pris d'hypothèques en vertu de la Loi sur le crédit accordé aux syndicats de machines agricoles. Le fait que nous prêtons actuellement...

M. Lind: Vous ne prêtez qu'en vertu de cette loi-ci, n'est-ce pas?

M. Owen: Oui, et parfois, il s'agit d'une hypothèque sur les biens immobiliers.

M. Lind: Une hypothèque sur les biens immobiliers, c'est une hypothèque, n'est-ce pas?

M. Owen: Oui, nous prenons des hypothèques sur les biens mobiliers et l'emprunteur peut engager son propre avocat.

[Text]

• 1145

Mr. Lind: Do you say the solicitor fees for searches to see that there are no other liens or judgments against this?

Mr. Owen: With respect to machinery?

Mr. Lind: With respect to chattel machinery and...

Mr. Owen: That is entirely an arrangement between the syndicate and their solicitor.

Mr. Lind: It is entirely their own.

Mr. Owen: Yes.

The Chairman: I apologize to the questioners whom I have not been able to recognize. I will keep your names on my list and I will recognize you first at the next meeting of the Committee.

Clause 3 has been stood.

The meeting is adjourned to the call of the Chair.

[Interpretation]

M. Lind: Est-ce que vous faites enquête pour savoir s'il n'y a pas de droit sur ces machineries?

M. Owen: Vis-à-vis de la machinerie?

M. Lind: Vis-à-vis du gage de la machinerie.

M. Owen: Il s'agit là de dispositions prises entre le syndicat et son avocat.

M. Lind: Cela dépend d'eux.

M. Owen: Oui.

Le président: Je m'excuse auprès des membres qui ont voulu poser des questions. Je vous donnerai la parole lors de la prochaine réunion.

L'article 3 est réservé.

La séance est levée.

MINUTES OF PROCEEDINGS

Tuesday, February 18, 1969.
(23)

The Standing Committee on Agriculture met at 9:40 a.m. this day, the Chairman, Mr. Beer, presiding.

Members present: Messrs. Barrett, Beer, Clermont, Cobbe, Danforth, Douglas, Downey, Gleave, Howard (*Okanagan Boundary*), Korchinski, LeBlanc (*Rimouski*), Lessard (*Lac-Saint-Jean*), Moore (*Wetaskiwin*), Muir (*Lisgar*), Peters, Roy (*Laval*), Southam, Stewart (*Okanagan-Kootenay*), Thomson (*Battleford-Kindersley*), Whelan, Whicher, Yanakis—(22).

Appearing: The Honourable H. A. Olson, Minister of Agriculture.

Witness: Mr. G. Owen, Chairman, Farm Credit Corporation.

The Committee resumed consideration of Clause 2 of Bill C-112, An Act to amend the Farm Machinery Syndicates Credit Act.

The Minister and Mr. Owen answered questions, in the course of which the following two documents, each headed "Farm Credit Corporation, Farm Machinery Syndicates Credit Act", were distributed to the members:

General Syndicate Agreement;

Sample Local Syndicate Agreement.

The Committee resumed consideration of Clause 3 and of the motion of amendment thereto moved by Mr. Douglas at the previous meeting.

Mr. Gleave proposed that:

Whereas the amendment would involve the participation of the Indian Affairs Department, the Committee request representatives of the Indian Affairs Department to appear before the Committee.

After some discussion, by agreement the proposal was referred to the Sub-Committee on Agenda and Procedure.

With questioning continuing, Clause 3 and the motion of amendment thereto were allowed to stand.

At 11:49 a.m., the Committee adjourned to the call of the Chair.

*Le secrétaire du Comité,
Michael A. Measures,
Clerk of the Committee.*

PROCÈS-VERBAUX

Mardi 18 février 1969.
(23)

Le Comité permanent de l'agriculture se réunit ce matin à 9 h. 40, sous la présidence de M. Beer, président.

Présents: MM. Barrett, Beer, Clermont, Cobbe, Danforth, Douglas, Downey, Gleave, Howard (*Okanagan Boundary*), Korchinski, LeBlanc (*Rimouski*), Lessard (*Lac-Saint-Jean*), Moore (*Wetaskiwin*), Muir (*Lisgar*), Peters, Roy (*Laval*), Southam, Stewart (*Okanagan-Kootenay*), Thomson (*Battleford-Kindersley*), Whelan, Whicher, Yanakis — (22).

A comparu: L'honorable H. A. Olson, ministre de l'agriculture.

Témoin: M. G. Owen, président de la Société du crédit agricole.

Le Comité reprend l'examen de l'article 2 du Bill C-112—Loi modifiant la Loi sur le crédit accordé aux syndicats de machines agricoles.

Le ministre et M. Owen répondent à des questions, et les deux documents suivants, tous deux intitulés «Société du crédit agricole, Loi sur le crédit accordé aux syndicats de machines agricoles», sont distribués aux membres du Comité:

Convention générale du syndicat;

Modèle de convention particulière.

Le Comité reprend l'étude de l'article 3 et de la modification à cet article proposée par M. Douglas lors de la séance précédente.

M. Gleave propose que:

Attendu que la modification supposerait la participation du ministère des Affaires indiennes, le Comité demande que des représentants du ministère des Affaires indiennes comparaissent devant lui.

Après débat, il est convenu de renvoyer la proposition au sous-comité du programme et de la procédure.

L'interrogatoire se poursuivant, l'article 3 et la modification à cet article proposée sont réservés.

A 11 h. 49 du matin, le Comité s'ajourne jusqu'à nouvelle convocation du président.

[Texte]

EVIDENCE

(Recorded by Electronic Apparatus)

Tuesday, February 18, 1969.

• 0940

The Chairman: Gentlemen, please come to order. I see a quorum.

When we last met we stood Clause 3, Clause 2 also having been stood. Is it the wish of the Committee that we direct our attention to Clause 2 and then resume consideration of Clause 3 after we have completed Clause 2? This is simply for the purpose of proceeding with the Bill in an orderly manner. Is this agreed?

Some hon. Members: Agreed.

Mr. Gleave: We have an amendment before us to Clause 3 and now are we going to proceed with Clause 2. Are you setting the amendment aside also?

The Chairman: The amendment is to Clause 3; Clause 3 has been stood which also stands consideration of the amendment. If the Committee chooses we can consider Clause 2 and deal with the amendment when we come back on Clause 3, which, I hope, will be very shortly. Is this the wish of the Committee?

Some hon. Members: Agreed.

The Chairman: Gentlemen, I direct your attention to Clause 2. When we rose last week I was prepared to recognize Mr. Gleave, Mr. Korchinski and Mr. Douglas, whose questions may apply on Clause 3. Am I correct?

Mr. Gleave: That is right.

The Chairman: I recognize Mr. Danforth, on Clause 2, and he will be followed by Mr. Douglas.

Mr. Danforth: Mr. Chairman, I would like some clarification on Clause 2, especially on (c) (iii) which states:

(iii) an association formed by an agreement in writing, approved by the Corporation, between individuals, farming corporations or any combination thereof . . .

[Interprétation]

TÉMOIGNAGES

(Enregistrement électronique)

Mardi 18 février 1969.

Le président: Messieurs, à l'ordre! Nous avons quorum.

Lors de la dernière réunion, nous avons réservé l'article 3, l'article 2 avait aussi été réservé. Est-ce que le comité désire que nous étudions l'article 2 et ensuite, que nous reprenions l'étude de l'article 3 après que nous aurons terminé l'étude de l'article 2, ceci simplement pour procéder dans l'ordre. Êtes-vous d'accord?

Des voix: D'accord.

M. Gleave: Nous avons un amendement sur l'article 3. Nous avons un amendement au sujet de l'article 3. Alors, mettons-nous aussi l'amendement de côté.

Le président: L'amendement se rapporte à l'article 3. L'article 3 est réservé; donc, nous réservons aussi l'étude de l'amendement. Si le Comité le désire, nous pouvons étudier l'article 2, et étudier la modification lorsque nous reviendrons à l'article 3, c'est-à-dire, je l'espère, sous peu. Est-ce là le désir du Comité?

Des voix: D'accord.

Le président: Messieurs, j'attire votre attention sur l'article 2. Lorsque nous avons levé la séance la semaine dernière, j'allais donner la parole à M. Gleave, puis à M. Korchinski et à M. Douglas, dont les questions portaient peut-être aussi sur l'article 3. Est-ce exact?

M. Gleave: Oui.

Le président: Je donne la parole à M. Danforth, sur l'article 2. Ce sera ensuite le tour de M. Douglas.

M. Danforth: Monsieur le président, j'aimerais que l'on m'explique certains détails de l'article 2, surtout l'alinéa c) (iii):

(iii) une association constituée par un accord écrit, approuvé par la Société, entre des particuliers, des corporations d'agriculture ou un nombre quelconque des uns et des autres, lorsque trois ou plus de ces particuliers ou des actionnaires de ces corporations agricoles s'adonnent à l'agriculture et que la principale occupation de la majorité d'entre eux est l'agriculture.

[Text]

It goes on to describe the qualifications of the individuals.

May I ask whether this is left completely to the discretion of the corporation?

Hon. H. A. Olson (Minister of Agriculture): The purpose of it, Mr. Danforth, is to broaden the legal entity that can be deemed to be an association, or a farm syndicate, so that they do not have to set up special associations or syndicates for the purposes of this act. If they already have an association then that legal entity will be sufficient for the purpose of being interpreted as a farm syndicate, as is pointed out at the top of that paragraph.

Mr. Danforth: I am quite aware of that, Mr. Chairman, but my point is that, under the provisions as set out here there is no basic qualification other than that the principal occupation of the major number of the syndicate be that of farming.

Is it not possible, as this act is now set up, with the amendment designed to broaden the scope of the act, to use the Minister's own words, for an individual, for example—and I am using an exaggerated one—who is perhaps engaged in the brewing industry and has a tremendous amount of capital at his disposal to ally himself with a small farmer, or a small rancher, or a small garden farmer, together with another farmer whose part-time activity is a small feedmill, and by so doing obtain the loans under this syndicate act? Although he, in his principal occupation, is not farming, would not the fact of the two men with whom he has allied himself give this syndicate the classification as a farm?

Mr. Olson: The agreement must be approved by the Farm Credit Corporation. I will ask Mr. Owen to expand on this, but my understanding is that that may be possible but that anyone who is not principally occupied in farming would be a minority shareholder.

The Chairman: Mr. Owen?

Mr. G. Owen (Chairman, Farm Credit Corporation): I would say that that is correct. The majority of the members of the syndicate must be principally occupied in farming. Others may be members of the syndicate, providing they are engaged in farming even though it may not be their principal occupation.

• 0945

One of the purposes of this is that very often the two or three persons principally occupied in farming may ally themselves with a neighbour who has a small farm, one not large enough on which to make a living, and who has some other occupation, but who can become a member of the syndicate along with them

[Interpretation]

on énumère ensuite les conditions que doivent remplir les particuliers.

Est-ce qu'on laisse cela entièrement à la discrétion de la société?

M. Olson (ministre de l'Agriculture): Le but, monsieur Danforth, c'est d'élargir les unités qui peuvent être considérées comme une association ou un syndicat agricole pour qu'elles n'aient pas à établir une association ou un syndicat spécial aux fins de la Loi. Si elles ont déjà une association, alors cette unité sera considérée comme un syndicat agricole, comme on le souligne au début de l'alinéa.

M. Danforth: Je sais cela, monsieur le président, mais je soutiens que les présentes dispositions ne prévoient pas d'autre condition que l'occupation du syndicat, qui doit être principalement l'agriculture.

N'est-il pas possible, d'après la Loi actuelle, et étant donné que la modification doit augmenter la portée de la Loi, pour employer l'expression-même du ministre, qu'une personne qui s'intéresse à l'industrie de la bière et qui aurait beaucoup de capitaux en mains, je prends ici un exemple extrême, ne serait-il pas possible à cette personne de s'associer à un cultivateur, au propriétaire d'un ranch ou à un horticulteur, et à un autre cultivateur dont l'occupation secondaire serait la minoterie, et d'obtenir ainsi les prêts prévus par la Loi. Même si son occupation principale n'est pas l'agriculture son association avec les deux autres ne constituerait-elle pas un syndicat agricole?

M. Olson: L'accord doit être approuvé par la Société du Crédit agricole. Je demanderai à M. Owen de vous donner des détails. Mais il est probable qu'une personne dont l'occupation principale n'est pas l'agriculture sera en minorité dans l'association.

Le président: Monsieur Owen?

M. Owen (Président de la Société du Crédit agricole): C'est exact, à mon avis. La majorité des membres du syndicat doivent s'occuper principalement d'agriculture. Les autres peuvent faire partie du syndicat à condition qu'ils s'occupent d'agriculture, même si ce n'est pas leur occupation principale.

Bien souvent, deux ou trois personnes, dont l'occupation principale est l'agriculture, s'associent à un voisin qui aurait une exploitation trop petite pour être rentable mais qui exercerait une autre profession; ce dernier pourra devenir membre du syndicat et éventuellement utiliser leurs machines pour faire leurs

[Texte]

and can in fact, in some cases, run their machinery for them and at the same time use it on his own farm. This does allow people who are in farming, but not as their principal occupation, to come into the syndicate providing the majority are farmers.

Mr. Moore (Wetaskiwin): May I ask a short supplementary question on that, Mr. Chairman?

The Chairman: Mr. Moore (Wetaskiwin)?

Mr. Moore (Wetaskiwin): Why let these people in at all? I say that for this reason: Suppose a well-to-do businessman wants to enter into this sort of arrangement for income tax purposes. Do you feel that we should have legislation that allows this to happen?

Mr. Owen: I should point out that this is not actually something new introduced by this bill; this provision was in the original Act.

Mr. Moore (Wetaskiwin): I am aware of that; and I did not like it any better then than I do now.

Mr. Owen: Within the operations of the syndicate I do not think they would be able to do very much that would have much effect on their income tax or their estate tax. I think, though, we must recognize that sometimes these fellows who may be businessmen and are farming as well may be very valuable members of the syndicate because of their business ability and the assistance they can give to the other members of the syndicate in setting it up and making sure that it operates on a businesslike basis. They are farming and their support of these men coming in may assist *bona fide* farmers to get the machinery they need under this bill.

Mr. Moore (Wetaskiwin): I agree that this may be so, but the other may also be true. This is what bothers me.

Mr. Owen: So far as we can tell, within the operations of the Act since 1965 there have been no instances, that I am aware of, in which participation by someone not principally occupied in farming has been a significant factor.

Mr. Whicher: I have a supplementary, Mr. Chairman. Would Canada Packers be able to borrow money under this deal?

Mr. Owen: No.

Mr. Whicher: Why not?

Mr. Owen: To begin with, Canada Packers would be neither an individual engaged in farming nor a farming corporation whose principal occupation is farming.

Mr. Whicher: What could happen if they set up a subsidiary for farming?

[Interprétation]

travaux et les siens en même temps cela permet aux gens dont l'agriculture n'est pas la principale occupation de se joindre à un syndicat constitué en majorité d'agriculteurs.

M. Moore (Wetaskiwin): Une brève question supplémentaire, monsieur le président.

Le président: Monsieur Moore (Wetaskiwin)?

M. Moore (Wetaskiwin): Pourquoi admettre ces gens-là? Supposons qu'un homme d'affaires prospère veuille former ce genre d'association pour les fins de l'impôt. La Loi devrait-elle le permettre?

M. Owen: Remarquez que la Loi n'apporte rien de nouveau. Cette disposition figurait dans la Loi originale.

M. Moore (Wetaskiwin): Je le sais; l'ancienne loi ne me plaisait guère plus que la nouvelle.

M. Owen: Je ne pense pas que ces personnes puissent de cette façon alléger leurs impôts sur le revenu ou sur leurs propriétés.

Nous devons reconnaître que parfois les personnes qui sont à la fois commerçants et agriculteurs peuvent être des membres très utiles au syndicat en raison de l'expérience qu'elles ont dans les affaires. Ces gens-là s'occupent d'agriculture et peuvent aider les agriculteurs de profession à obtenir les machines auxquelles ils ont droit en vertu du bill.

M. Moore (Wetaskiwin): Je l'admets, mais l'inverse peut être vrai. C'est ce dont j'ai peur.

M. Owen: Il semble que depuis la mise en vigueur de la Loi, en 1965, il n'y ait pas eu de cas où la participation des personnes dont l'occupation principale n'était pas l'agriculture ait joué de façon déterminante.

M. Whicher: J'ai une question supplémentaire, monsieur le président. Est-ce que *Canada Packers* pourrait emprunter de l'argent d'après la loi?

M. Owen: Non.

M. Whicher: Pourquoi pas?

M. Owen: D'abord, *Canada Packers* n'est ni une personne s'occupant d'agriculture, ni une société agricole pratiquant l'agriculture.

M. Whicher: Et s'ils s'adjoignaient une filiale agricole?

[Text]

Mr. Owen: The costs and trouble of setting up a subsidiary as a farming corporation are such that I do not think they could do it to begin with, to come within the definition of a farming corporation; and it would not be significant enough for them to do it anyway.

The Chairman: I recognize Mr. Gleave, on a supplementary.

Mr. Whelan: I have a correction, on a point of order. He said Canada Packers is not in the farming business. They are in the farming business in York Farms—a large farming business.

Mr. Owen: Excuse me, I did not believe I said that Canada Packers were not in the farming business.

Mr. Whelan: That is what I understood you to say.

Mr. Owen: What I intended to imply was that farming is not the principal occupation of Canada Packers.

The Chairman: Mr. Gleave, on a supplementary, and then I wish to return to the original questioner.

Mr. Gleave: I did not have a supplementary.

The Chairman: I am sorry. Mr. Muir, on a supplementary.

Mr. Muir (Lisgar): Would a feedmill operator who wished to join in a sort of integrated farming venture with a group of farmers who did qualify have to own land, as well?

Mr. Owen: The feedmill operator would have to be engaged in farming himself. There is no requirement that he actually own the land he is farming, but he must be actually engaged in farming himself.

Mr. Muir (Lisgar): Would it be possible for a group of farmers to take in a feedmill operator in this sort of a set up?

Mr. Owen: Providing the feedmill operator is farming.

Mr. Olson: Perhaps paragraph (iii) might solve some of the problems here. It states very clearly:

(iii) an association farmed by an agreement in writing . . .

—and, of course, that agreement has to be

. . . approved by the Corporation, between individuals, farming corporations . . .

● 0950

and then “farming corporations” are defined farther up as:

[Interpretation]

M. Owen: Les frais et les tracasseries ne justifieraient pas l'établissement d'une telle entreprise, s'il faut qu'ils s'en tiennent à la définition d'une société agricole. Cela ne les paierait pas.

Le président: Monsieur Gleave, une question supplémentaire?

M. Whelan: J'invoque le Règlement, j'ai une mise au point à faire. Vous dites que *Canada Packers* n'est pas dans l'agriculture. Elle l'est, à York Farms, et il s'agit d'une grosse exploitation agricole.

M. Owen: Je n'ai pas dit que *Canada Packers* ne s'occupait pas d'agriculture.

M. Whelan: C'est ce que j'ai cru comprendre.

M. Owen: Je voulais dire que l'agriculture n'est pas l'occupation principale de la société *Canada Packers*.

Le président: D'abord, la question supplémentaire de M. Gleave. Ensuite nous reviendrons à l'orateur précédent.

M. Gleave: Je n'ai pas de question supplémentaire.

Le président: Excusez-moi. Monsieur Muir, une question supplémentaire?

M. Muir (Lisgar): Un meunier qui voudrait faire partie d'une exploitation agricole intégrée, avec un groupe d'agriculteurs admissibles, devrait-il également avoir des terres?

M. Owen: Le meunier devrait lui aussi s'occuper d'agriculture. Il n'est pas nécessaire que la terre lui appartienne, mais il doit s'occuper lui-même d'agriculture.

M. Muir (Lisgar): Un groupe de cultivateurs peut-il faire entrer un meunier dans ce genre d'association?

M. Owen: Oui, si le meunier cultive la terre.

M. Olson: L'alinéa (iii) pourrait peut-être résoudre certains problèmes. Il dit clairement:

(iii) une association constituée par accord écrit . . .

évidemment, cet accord doit être . . .

. . . approuvé par la Société, entre des particuliers, des corporations d'agriculture . . .

les sociétés agricoles sont définies un peu plus loin:

[Texte]

“(c) “farm syndicate” means (ii) a farming corporation in which three or more shareholders are engaged in farming, the principal occupation of a majority of whom is farming, . . .

Therefore, no corporations other than farming corporations can be part of the syndicate under this definition.

When we get into feedmills, whether Canada Packers or anyone else, these are not farming corporations that would meet the definition of a farming corporation under the paragraph above.

Mr. Muir (Lisgar): No, but they could get in by paragraph (ii). If they were part of the farming corporation it could be easily done. They could be made part of the farming corporation.

Mr. Olson: They may there, if the shareholders were engaged in farming and the principal occupation of the majority of them was farming, and so on; but this is the only kind of corporation that can be a member of the syndicate under paragraph (iii). Therefore, their interest is quite a lot more diluted in the syndicate that would make application for the loan.

The Chairman: Mr. Danforth, you have a question.

Mr. Danforth: Thank you, Mr. Chairman. The answer I received leads me to believe that my first contention was right, that it is left strictly to the discretion of the Corporation—and I mean the departmental Corporation—whether or not on application the members are approved and qualify.

Mr. Olson: Yes, that is clear, Mr. Danforth, that the agreement of the association must be approved by FCC.

Mr. Danforth: Is it not a fact, then, that the degree of participation so far as the Corporation is concerned is not based on the actual amounts of money, or participation of either or all of the various applicants forming the syndicate, but is based on the qualifications of the syndicate itself?

Mr. Owen: The qualifications of the members of the syndicate.

Mr. Danforth: Yes, but my point, Mr. Chairman, is that so far as the Corporation is concerned, when three individuals have joined themselves by an agreement in writing the Corporation therefore is not directly interested in the participation in the shares of the syndicate. What I am trying to ascertain is whether one of three participants may own 80 per cent of the involved syndicate, with each of the other two being perhaps 10 per cent owners of the syndicate; is this not true?

[Interprétation]

c) «syndicat agricole» désigne

(ii) une corporation d'agriculture dont trois des actionnaires ou plus s'adonnent à l'agriculture, lorsque la principale occupation de la majorité d'entre eux est l'agriculture.

Par conséquent, aucune société, si elle n'est agricole, ne peut faire partie d'un syndicat selon cette définition. Quant aux minoteries, aux sociétés telles que *Canada Packers*, elles ne sont pas des sociétés agricoles au sens où on l'entend à l'alinéa ci-haut.

M. Muir (Lisgar): Non. Mais elles peuvent y adhérer en vertu de l'alinéa (ii). Si elles font partie d'un syndicat agricole, elles peuvent faire partie de cette association.

M. Olson: Elles le peuvent si les actionnaires s'occupent d'agriculture et si la majorité d'entre eux sont agriculteurs; c'est le seul genre de société qui peut faire partie du syndicat, selon l'alinéa (iii). Par conséquent, leur intérêt est quelque peu dilué au sein du syndicat.

Le président: Monsieur Danforth, avez-vous une question?

M. Danforth: Merci, monsieur le président. La réponse que j'ai reçue me porte à croire que ma première affirmation était exacte, qu'on laisse tout cela à la discrétion de la société, je parle de la société de la Couronne qui a approuvé les qualifications des membres du syndicat.

M. Olson: Oui, il est clair, monsieur Danforth, que l'association doit être approuvée par la Société.

M. Danforth: N'est-il pas vrai alors que le degré de participation, en ce qui concerne la société, n'est pas fondé sur les sommes d'argent engagées ou la participation des divers souscripteurs du syndicat, mais sur les qualifications du syndicat lui-même?

M. Owen: Les qualifications des membres du syndicat.

M. Danforth: Ce que je veux dire, monsieur le président, c'est que, pour autant que la Société soit concernée, quand trois personnes s'accordent par écrit, elle n'est dès lors plus directement intéressée à la participation des actionnaires dans le syndicat. Ce que j'essaie d'établir c'est qu'un participant peut détenir 80 p. 100 des actions du syndicat alors que les deux autres détiendraient chacun peut-être 10 p. 100. Est-ce vrai ou non?

[Text]

Mr. Owen: This is theoretically possible. One member could have a very significant interest and the others have relatively minor interests. I would say, however, that if we were dealing with an application from a syndicate where the vast majority of the interest in the operations of the syndicate itself were held by someone whose principal occupation was not farming, we would be unwilling, I think, if such a case should arise, to approve the loan for them.

Mr. Danforth: I have one more question on this, Mr. Chairman, and then I will pass. I am interested in this particular clause which says that as long as it is "approved by the Corporation", this association—in speaking of a syndicate—can be "between individuals, farming corporations or any combination thereof". Is it not true, then, that where you have a farm co-operative—as I understand this—any three or more members of the co-operative may themselves classify as a syndicate, thereby making each a participant, although they are members of a co-operative, as one type of syndicate?

Is it not also true that on the other side of the scale, perhaps as a joint venture, three co-operatives engaged in various aspects of farming may go together and qualify as a syndicate? Therefore, a co-operative can be either an individual or a group in the interpretation of the application for syndicates.

• 0955

Mr. Owen: There is no provision for three co-operative associations to form a syndicate. The co-operative farm association itself may be a syndicate. Clause 2 (c) (iii) to which you are referring provides for an agreement in writing between individuals or farming corporations, but it does not include co-operative associations in that Clause.

Mr. Danforth: A co-operative engaged in the farming business—suppose we have a co-operative of six farmers who are all engaged in the production of tomatoes or sweet corn and market through a common agency and, therefore, they are forming a co-operative. Suppose they want to join with a co-operative of six farmers whose principal production is sweet corn, and there are another six farmers whose total production is, perhaps, asparagus and they wish to purchase land and erect a cold storage plant. Could they not, therefore, be classified as a farm syndicate and meet all the qualifications as set out under the Act?

Mr. Owen: If they were formerly organized as a co-operative, they could be a syndicate as such. If the members as individuals wished to form a syndicate to have cold storage for asparagus, for example, they could do so as a syndicate.

Mr. Danforth: Yes, but I am just not clear about that. I am well aware that perhaps one farmer from

[Interpretation]

M. Owen: C'est théoriquement possible. Un des membres pourrait avoir des intérêts considérables tandis que les autres n'auraient que des parts relativement mineures. Je voudrais cependant ajouter qu'advenant une demande d'un syndicat dont les plus gros intérêts seraient détenus par quelqu'un dont l'occupation première ne serait pas l'agriculture, nous ne serions pas alors disposés à approuver le prêt.

M. Danforth: Une dernière question, monsieur le président. Je m'intéresse à cette clause particulière qui indique que, dès qu'elle est «approuvée par la société», cette association, en parlant du syndicat, peut être faite «entre particuliers, corporations agricoles, ou toute autre combinaison à l'avenant»

N'est-il alors pas vrai que lorsqu'on a une coopérative agricole, trois de ses membres ou plus peuvent se constituer d'eux-mêmes en syndicat et, par conséquent, devenir des participants, bien qu'ils soient membres d'une coopérative? N'est-il pas également vrai que, d'un autre côté, trois coopératives engagées dans des activités agricoles variées peuvent se réunir afin de former un syndicat? Par conséquent, une coopérative peut être envisagée soit sous forme individuelle, soit sous forme de groupe, selon la façon d'interpréter la demande d'organisation syndicale.

M. Owen: Il n'y a pas de dispositions particulières pour la constitution de trois coopératives en syndicat. La coopérative agricole peut être elle-même un syndicat. La clause à laquelle vous vous référez prévoit un accord écrit entre individus ou corporations agricoles, mais ne fait pas mention d'associations entre coopératives.

M. Danforth: Prenons l'exemple d'une coopérative agricole composée, disons, de six cultivateurs qui tous s'adonnent à la production de tomates ou de maïs, et écoulent leurs produits en commun. Ils forment donc une coopérative. Supposons qu'ils veuillent se joindre à une autre coopérative de six cultivateurs dont la production principale serait le maïs, et que six autres agriculteurs qui ne produiraient, par exemple, que des asperges soient désireux d'acquérir un terrain pour y installer un entrepôt frigorifique. Est-ce qu'on ne pourrait alors pas les classer comme syndicat agricole remplissant tout les conditions prévues par la loi?

M. Owen: S'ils étaient précédemment constitués en coopérative, ils peuvent former un syndicat. Si les membres souhaitaient, en tant qu'individus, former un syndicat pour la conservation frigorifique des asperges, par exemple, ils peuvent le faire en tant que syndicat.

M. Danforth: Ce n'est pas clair, à mon avis. Je sais très bien qu'un cultivateur dans chacun des types

[Texte]

each of the types of farming that I have indicated could go together to make the minimum three. My point is: are they not eligible under this Act, as three co-operatives, to form a syndicate?

Mr. Owen: No, three farm associations could not enter into a syndicate agreement in writing and be a syndicate, but the 18 people involved—all of the farmers involved—could enter into a syndicate agreement and borrow.

Mr. Danforth: Which would achieve the same end.

Mr. Owen: It would achieve the same end; that is right.

Mr. Danforth: Thank you, Mr. Chairman.

Mr. Chairman: Thank you, Mr. Danforth. I recognize Mr. Douglas.

Mr. Douglas: I was interested in this question of the age limit of 21. I just wondered if this had, in fact, been a factor in any applications or any refusal of applications. Have you had any applications of people under 21 that you have had to turn down as members of syndicates?

Mr. Owen: Not to my knowledge. It is possible that in dealing with his local officials somebody under 21 asked about borrowing, but not to my knowledge.

Mr. Douglas: Is there any provision for changing the membership of a syndicate? Suppose for instance, there are just three people in the syndicate and one of them dies—what happens?

Mr. Owen: There are arrangements within the general syndicate agreement which the farmers sign—I am just looking for a copy of that agreement. If one member of the syndicate should die, his heirs would have his rights within that syndicate. Now, they could negotiate a settlement with the remaining members of the syndicate or with some other farmer who might come in to take their place. This is all provided for—even a method settling disputes in the event there is a dispute concerning the man's equity in the syndicate.

Mr. Douglas: If a person just wished to leave the syndicate—if for instance, he wanted to quit farming—and he sold his farm or something like that, is there provision for that too?

Mr. Owen: Yes, provided of course, that he can come to terms with the other members of the syndicate, and if he wishes to get off his responsibility on the note he would have to satisfy us that somebody

[Interprétation]

d'agriculture que j'ai mentionnés pourrait s'associer aux autres pour former le minimum requis de trois membres. Mais voilà: peuvent-ils, aux termes de la présente loi, et en tant que trois coopératives, former un syndicat?

M. Owen: Non. Trois associations agricoles ne peuvent pas former un syndicat par accord écrit. Par contre, les 18 personnes en présence, tous les fermiers impliqués, pourraient le faire, puis emprunter.

M. Danforth: Ce qui revient au même.

M. Owen: Le résultat serait le même, c'est exact.

M. Danforth: Merci, monsieur le président.

Le président: Merci, monsieur Danforth. La parole est à M. Douglas.

M. Douglas: A propos de cette question d'âge limite de 21 ans, je suis curieux de savoir si cela a joué un rôle en matière de prêts. Avez-vous jamais reçu des demandes de personnes de moins de 21 ans que vous auriez refusées?

M. Owen: Non, pas à ce que je sache. Il est possible que dans leurs rapports avec des fonctionnaires locaux, des moins de 21 ans aient demandé des prêts; mais pas à ma connaissance.

M. Douglas: Y a-t-il des dispositions de prévues quant au changement de composition des membres d'un syndicat? Advenant le décès d'un des membres d'un syndicat qui n'en comporte que trois. Qu'arrive-t-il?

M. Owen: Il existe des dispositions dans l'accord syndical que signent les agriculteurs. Je suis justement en train d'en chercher la copie. Si l'un des membres d'un syndicat décède, les droits dont il disposait dans ledit syndicat vont à ses héritiers. Cela étant, ces derniers ont la possibilité de conclure un arrangement soit avec les membres restants du syndicat, soit avec tout autre agriculteur intéressé. Tout cela est prévu, même la façon de régler les éventuels litiges portant sur la participation du membre.

M. Douglas: Si un membre veut se retirer du syndicat, s'il veut par exemple abandonner l'agriculture, vendre sa ferme, ou quelque chose de semblable, est-ce que c'est également prévu?

M. Owen: Oui, bien sûr, pourvu qu'il puisse s'entendre avec les autres membres du syndicat et, s'il compte se décharger de ses responsabilités, qu'il nous donne l'assurance que son remplaçant endossera ses

[Text]

else was taking his place and taking over his responsibility, or that there were enough remaining members to satisfy us with respect to the repayment of the balance of the loan.

● 1000

Mr. Douglas: In other words, it could be done if everybody agreed.

Mr. Owen: Oh, yes.

Mr. Douglas: Thank you.

Mr. Southam: Mr. Chairman, may I ask a question supplementary to what was brought up here? Could we, as members of the Committee, have copies of this agreement form just for our own perusal?

Mr. Owen: Yes, I have a number of them here. I would like to mention that there are two forms of agreement. The first is what we call a general syndicate agreement which sets out the details of how they will manage their business generally, how they will get new members and how they will replace members as time goes on. Then there is—and I can give you a sample, but only a sample—a local working agreement that the farmers would make themselves to deal with their own particular aspects of it. I have ample copies here for everyone to be passed around. I am afraid we do not have any copies in French with us but I imagine we could get some sent over to us.

The Chairman: That completes your questioning, Mr. Southam?

Mr. Southam: Yes, it was just a supplementary.

The Chairman: I recognize Mr. Clermont.

● 1001

M. Clermont: Monsieur le président, la loi actuelle oblige chacun des membres d'un syndicat à cultiver indépendamment l'un de l'autre. Les modifications qui sont contenues dans le bill C-112 permettraient à des membres d'un syndicat, même s'ils ne cultivent pas indépendamment, d'obtenir un prêt. Est-ce à dire, monsieur le président que dans un cas où le père et deux de ses fils exploitent une ferme, ils peuvent être considérés comme membres d'un syndicat?

● 1002

Mr. Owen: Yes, this is possible. Originally it was required that they all be farming independently. However, we found that once they started sharing machinery they carried the sharing arrangements into further aspects of their operations to the point that they were not farming independently; therefore, a

[Interpretation]

responsabilités, ou qu'il reste assez de membres pour nous garantir le remboursement du solde du prêt.

M. Douglas: Autrement dit, c'est possible à condition que tout le monde soit d'accord.

M. Owen: Exactement.

M. Douglas: Merci.

M. Southam: Monsieur le président, puis-je poser une question supplémentaire à ce propos? En tant que membres du Comité, pourrions-nous avoir des copies de cette entente?

M. Owen: Oui, j'en ai ici un certain nombre. Je dois vous dire qu'il y a deux types de conventions. D'abord, il y a ce qu'on pourrait appeler un accord syndical général, où l'on expose les détails de la gestion des affaires, la façon de recruter ou de remplacer des membres, etc. Il y a ensuite le contrat local de travail, dont j'ai ici un grand nombre d'exemplaires que je pourrai distribuer à tout le monde. J'ai bien peur que nous n'ayons pas apporté d'exemplaires français. Est-ce qu'on pourrait en faire venir.

Le président: C'est tout, monsieur Southam?

M. Southam: Oui, monsieur.

Le président: M. Clermont a la parole.

Mr. Clermont: Mr. Chairman, the present Act compels each member of a syndicate to form independently of one another. The amendments in Bill C-112 would enable members of syndicates, even if they do not farm independently, to obtain a loan. Does this mean, Mr. Chairman, that in a case where a farm is operated by a farmer and his two sons, they could be considered as members of a syndicate?

M. Owen: Oui, cela est possible. A l'origine, il était nécessaire qu'ils cultivent séparément mais quand on s'est aperçu qu'ils commençaient à partager leurs machines agricoles, ce partage a été beaucoup plus loin dans leur exploitation et on a considéré qu'ils ne faisaient plus de la culture d'une façon indépendante.

[Texte]

father and two sons, providing they are occupied in farming—and the majority of them are principally occupied in farming—could be the members of a syndicate or form a syndicate.

M. Clermont: Monsieur le président, même si le père et ses deux fils ne sont pas légalement associés?

● 1003

Mr. Owen: I am afraid I did not get that last word.

M. Clermont: Voici, monsieur le président, ma question: même si le père et ses deux fils ne sont pas légalement associés.

M. Owen: S'ils signent le contrat. If they sign the agreement required under this clause they can be a syndicate.

Mr. Clermont: Thank you.

The Chairman: Thank you, Mr. Clermont. I will now recognize Mr. Gleave.

Mr. Gleave: Mr. Chairman, what is the purpose of the changes in this Act? In including lands and buildings and other operations what, in the main, are you thinking of? Are you thinking of feed lots? What trend are you anticipating here in the changes to include these other types of operations?

Mr. Olson: Mr. Chairman, Mr. Owen can give details of some of the kinds of applications or of the discussions involved in these applications where we think that the purposes need to be expanded to include these, but this was primarily designed for the purchase of farm machinery under a syndicate for co-operative use. However, there are other types of facilities such as buildings, for example, that can be used beneficially by a group of farmers; in other words, where they do not need separate buildings whether they are small processing plants packaging plants housing for seasonal labour, or a number of other types of buildings that can be more economically and beneficially used by a number of farmers rather than building separately.

● 1005

That is what we had in mind. There is not I suppose, any particular outstanding example, although Mr. Owen may be able to draw some to your attention, but we think that there are many cases where buildings and indeed the machinery that goes into these buildings, as opposed to field farm machinery, could be used beneficially by more than one farmer.

Mr. Owen: I could give some examples. I would suggest that storage for fruit and vegetables and

[Interprétation]

Autrement dit, un père et ses deux fils à condition qu'ils fassent de l'agriculture, la majorité d'entre eux s'occupe d'agriculture, pourraient devenir membres d'un syndicat ou en former un.

Mr. Clermont: Mr. Chairman, even if the father and his two sons are not legally partners?

M. Owen: Je crois que je n'ai pas très bien saisi le dernier mot.

Mr. Clermont: Mr. Chairman, my question is as follows: even if the father and the two sons are not legally partners.

Mr. Owen: If they sign the agreement. Si ils signent le contrat requis en vertu de cet article, ils peuvent être considérés comme un syndicat.

M. Clermont: Merci.

Le président: Merci, monsieur Clermont. Monsieur Gleave.

M. Gleave: Monsieur le président, quel est l'objet des modifications de ce projet de loi? C'est-à-dire en ce qui concerne le terrain, les bâtiments, etc, y compris les pâturages, dans l'ensemble, qu'est-ce que vous envisagez? Tenez-vous compte des pâturages? Quel genre de modifications envisagez-vous pour que les autres types d'exploitation soient introduits?

M. Olson: Monsieur le président, M. Owen peut vous donner quelques renseignements détaillés sur le genre d'application ou de discussion portant sur les opérations qui devraient être incluses. Par exemple, ce projet était surtout prévu pour acheter des machines agricoles pour des entreprises coopératives, mais bien sûr, il y a d'autres types d'installations comme par exemple, des bâtiments ou des immeubles qui peuvent être également utilisés par un groupe d'agriculteurs. Autrement dit, ils n'ont pas besoin de construire des installations séparées, des installations de traitement par exemple, des logements pour la main-d'œuvre saisonnière, etc. Ce que l'on envisage c'est que des bâtiments peuvent être utilement employés par un groupe conjoint d'agriculteurs.

Je ne vois pas d'exemple particulier de la chose mais malgré tout, nous pensons qu'il y a de nombreux cas où les bâtiments, et les machines comprises dans ces bâtiments par opposition aux machines agricoles pourraient être utiles à plus d'un fermier.

M. Owen: Je pourrais vous donner quelques exemples. Par exemple, les entrepôts de produits

[Text]

facilities for washing, grading and packaging products of various kinds are the types of applications for which we have had most requests. There are indications that farmers want this.

Mr. Gleave: Have you had requests from farmers, that you have had to turn down, or have you had representations from farm organizations to expand this so that they could use it in these fields?

Mr. Owen: Yes, we have. For example, we have had a group of potato producers who wished to grade and package their product. They needed a special building for this. While we could provide machinery, we could not provide the plant in which they would do this. We have had egg producers who wished to grade and market their product. There have been groups of farmers who wished to use this legislation to build housing for seasonal labour and provide decent accommodation so that they could get dependable seasonal help. They wanted proper accommodation for them and as each one of them could not do it alone they wanted to build as a group.

Mr. Gleave: The amounts were originally designed for farm machinery and I think the amounts that can be loaned are increased within this proposal. Is this right?

Mr. Olson: No, \$100,000 is still the maximum.

Mr. Gleave: Would this amount be sufficient for a group of farmers looking at a feed lot, say, to carry 500 head of cattle or for a plant? What you are doing here is moving fairly far afield from just a plain old combine. Are your amounts sufficient to encompass these types of projects.

Mr. Olson: Mr. Chairman, we cannot tell at this stage whether or not there will in fact be applications to build some kind of co-operative processing plant that would cost in excess of this amount of money, but I suggest that the \$100,000 will be a big help. If we start to get into amounts substantially beyond that we are moving into another area and there are the facilities of the Industrial Development Bank. I cannot give any assurance that we will never get an application for more than \$100,000, but I can say that there have been applications for this kind of plant that could in fact be financed within the limits that we have now.

[Interpretation]

alimentaires, de légumes, et les installations de lavage, de calibrage et d'emballage de différents produits vraisemblablement pourraient être couverts par ce programme. Il y a un certain nombre de choses qui ont été demandées par des groupes d'agriculteurs afin de pourvoir à des quartiers décentes pour la main-d'œuvre saisonnière.

M. Gleave: Est-ce que vous avez eu des demandes que vous avez dû repousser ou bien est-ce que vous avez cherché à aller plus loin?

M. Owen: Eh bien, oui, nous avons cherché à aller plus loin. Par exemple, nous avons un groupe de producteurs de pommes de terre qui voudraient calibrer, emballer leurs produits, ils ont donc besoin d'un bâtiment spécial pour cela, on ne pouvait pas leur fournir les machines, ni le bâtiment nécessaire. Nous avons eu des producteurs d'œufs qui devaient calibrer leurs produits. Il y avait des groupes d'agriculteurs qui voulaient se servir de cette mesure législative pour construire des bâtiments pour la main-d'œuvre saisonnière, afin qu'elle soit correctement logée. Ils voulaient que leur main-d'œuvre soit de bonne qualité, par conséquent, il fallait qu'elle soit correctement logée, donc ces agriculteurs voulaient la loger dans des bâtiments communs.

M. Gleave: Bon, les montants fixés avaient été prévus au départ uniquement pour des machines agricoles, je pense donc, qu'ils ont été augmentés maintenant, c'est-à-dire, que les sommes de prêts ont été augmentées en fonction des demandes faites.

M. Olson: Non, le maximum est toujours fixé à cent mille dollars.

M. Gleave: Est-ce que ces montants maximums suffiraient pour des groupes d'agriculteurs comme ceux dont nous parlons en ce moment, c'est-à-dire ceux qui gèrent des pâturages ou qui veulent construire des installations de traitement? En fait ce que vous avez imaginez ici, c'est d'aller un peu plus loin, vous ne vous occupez pas simplement des moissonneuses-batteuses ordinaires. Est-ce que les montants sont suffisants pour répondre à ces demandes?

M. Olson: Monsieur le président, on ne peut pas vous dire dès maintenant s'il y aura des demandes concernant la construction d'une usine de traitement, une usine qui coûterait plus cher que cette somme, nous ne pouvons pas le dire, mais déjà cent mille dollars, c'est un bon départ, et si on commence à traiter avec des sommes qui dépassent ce montant, il y aura toujours un recours possible auprès de la Banque de développement industriel. Je ne peux pas vous assurer que nous ne recevrons jamais de demande supérieure à cent mille dollars mais ce que je peux dire, c'est qu'il y a eu des demandes qui ont été faites pour ce genre d'entreprise qui pourrait être, en fait, financée à l'intérieur de ces limites.

[Texte]

Mr. Gleave: I do not know what would come in. I could see it to be fairly large. It seems to me that in a sense here you are turning the vertical integration upside down. That is, you are saying to the farmer that you will lend him money to move in stages past the actual farm operation. I do not know whether that was the intent of those who drew this or simply to give a group of farmers a little further aid to build a few buildings or to candle a few eggs. It depends on what the real objective is here. I do not know and that is what I am asking.

● 1010

Mr. Olson: As has been pointed out the intent was never to cover major processing plants. However, we think the amount of \$100,000 useful in making it as easy as possible for farmers to be competitive in following through.

I do not know whether or not we have turned vertical integration upside down. The whole purpose of the bill is to be as helpful as we can in providing the credit so that farmers can in fact make their operations as profitable and viable as possible.

Mr. Gleave: I would be very pleased to see somebody turn it upside down if the thinking of the department has gone that far. Have the farm organizations made any representations? Have you discussed it with them? You have some of those people on you advisory committee. But have you had any talks in depth with them on this matter?

Mr. Owen: We have not had representations directly from farmers' organizations. But we considered this matter at great length with the advisory committee prior to drafting the amendments to the legislation. And of course many of the members of the Advisory Committee are active members of farmers' organizations.

The Chairman: A supplementary Mr. Muir?

Mr. Muir: I am wondering if, in this type of agreement, a group of farmers who are in the cattle-feeding business could borrow money to put up their own feed mill to supply their operations.

Mr. Olson: The answer is yes. They would have to meet the conditions that are laid out, such as their principal occupation being farming, and they must have the agreement approved, and so on.

Mr. Muir (Lisgar): I understand. If they do not have a joint operation but are feeding cattle separately, could they do it?

[Interprétation]

M. Gleave: En fait, je ne sais pas ce qui risque de se passer, je pense que c'est suffisant, car, en fait, vous retournez l'intégration verticale à l'envers dans un certain sens, autrement dit, vous dites à un fermier que vous allez lui prêter de l'argent pour dépasser le stade de l'exploitation agricole pure, je ne sais pas si c'est ce que voulaient les auteurs de cette loi ou s'ils voulaient donner aux agriculteurs, à un groupe d'agriculteurs, la possibilité d'augmenter le potentiel de leur entreprise. On ne sait donc pas du tout quel est l'objectif réel que l'on recherche. Et je ne sais absolument pas ce que l'on veut, c'est pourquoi je vous demande des éclaircissements.

M. Olson: Eh bien, la portée de la loi a déjà été indiquée. Il ne s'agissait jamais de couvrir les dépenses de construction de grosses entreprises, malgré tout, il a été indiqué que cela pourrait servir, c'est-à-dire ce montant de cent mille dollars pourrait être utilisé pour permettre aux agriculteurs de rester compétitifs.

Je ne sais pas si on peut dire que c'est une intégration verticale renversé, je ne le sais pas, mais disons que nous avons cherché à être aussi utile que possible en fournissant aux fermiers le crédit dont ils pourraient avoir besoin pour que leurs exploitations soient aussi rentables que possible.

M. Gleave: Je serais très heureux qu'on la mette à l'envers si l'étude du ministère en est rendue à ce point. Est-ce que les organisations agricoles ont déjà soumis des demandes auprès du ministère? Est-ce que vous avez déjà reçu des demandes de leur part? Vous avez entendu leur point de vue, mais avez-vous discuté de la question à fond?

M. Owen: Nous n'avons pas reçu de demandes officielles de la part des organisations agricoles, mais nous avons beaucoup étudié la question au sein du comité consultatif avant que les amendements de la Loi ne soient rédigés. Et plusieurs des membres du conseil consultatif sont membres actifs d'organisations agricoles.

Le président: Monsieur Muir?

M. Muir (Lisgar): Je me demande si, dans ce genre de contrat, un groupe d'agriculteurs qui font de l'engraissement de bétail peuvent obtenir des prêts pour établir leur propre meunerie afin de pourvoir leurs exploitations.

M. Olson: Oui. Bien sûr, il faudra qu'ils répondent aux conditions stipulées c'est-à-dire que l'agriculture doit constituer leur principale activité, et recevoir l'autorisation.

M. Muir (Lisgar): Oui, je comprends très bien. Dans le cas où ils n'ont pas l'exploitation conjointe parce qu'ils nourrissent le bétail séparément, est-ce qu'ils pourraient en bénéficier.

[Text]

Mr. Olson: Yes, of course.

Mr. Muir (Lisgar): They could if they formed a corporation?

Mr. Olson: They would have to enter into some kind of co-operative, corporation or syndicate so that the legal entity is set out, and then meet the conditions of being principally occupied in farming. If they were using a feed mill for crushing, grinding, mixing, blending, or whatever else they needed for their operations, there would be no disqualification simply because they were feeding their animals separately.

Mr. Muir (Lisgar): The reason I ask this is because I think you will probably be getting an application from people I know who are interested in this type of thing.

Mr. Olson: Yes.

The Chairman: I recognize Mr. Korchinski.

Mr. Korchinski: Is there a certain type of book that you insist the farmer or the syndicate keep? Is there uniformity in the types of books that syndicates must keep? Or can individual syndicates keep their own kind?

Mr. Owen: Each individual syndicate keeps its own books of accounts. We do require them to have books of accounts, and to keep the financial affairs of the syndicate separate from the financial affairs of the individual members. But we do not impose a standard form of bookkeeping on syndicates.

Mr. Korchinski: Do you check into these books? Does the Corporation check these books? Do you only glance through them, or do you audit them in any way?

Mr. Owen: No, we do not audit them. We can look into them if we wish, but generally we try to keep as much as possible out of the affairs of the syndicate. I would say that if we are having a little difficulty with respect to payments, we are more likely to look at them than otherwise.

Mr. Korchinski: If a syndicate formed of three members found that one of their members was for example somewhat reckless with machinery, or if for some other reason they decided that they would rather not have him in the syndicate, or if, for example, he did not want to contribute his share of the payments for one reason or another, can the syndicate be broken up without having to pay off the loan?

• 1015

Mr. Owen: Do you have a copy of the General Syndicate Agreement?

[Interpretation]

M. Olson: Absolument.

M. Muir (Lisgar): Est-ce qu'ils le peuvent s'ils constituent une société?

M. Olson: De toute façon il faudra qu'ils constituent un genre de société, de syndicats ou de coopératives et créer une entité légale et ensuite remplir la condition de s'adonner principalement à l'agriculture. Ils peuvent se grouper pour le concassage, le malaxage, la moulure, etc, mais ils seront toujours admissibles s'ils alimentent leur bétail séparément.

M. Muir (Lisgar): La raison pour laquelle je pose cette question c'est que vous allez probablement recevoir des demandes de la part des intéressés.

M. Olson: Oui.

Le président: Monsieur Korchinski.

M. Korchinski: Monsieur le président, je me demande si vous imposez un système uniforme de comptabilité aux syndicats? Est-ce qu'ils doivent tous tenir les mêmes livres ou bien est-ce que chacun peut adapter la comptabilité de son choix?

M. Owen: Chacun a son propre système. Nous demandons qu'ils tiennent des livres et que les affaires financières des syndicats soient indiquées séparément. Mais nous ne cherchons pas à imposer une formule uniforme de comptabilité.

M. Korchinski: Mais malgré tout, est-ce que vous jetez un coup d'oeil, de temps en temps, dans ces livres? Est-ce que la corporation elle-même y jette un coup d'oeil? Est-ce que vous les vérifiez, ou est-ce que vous y jetez simplement un coup d'oeil?

M. Owen: Non, nous ne les vérifions pas. On peut y jeter un coup d'oeil si on veut, mais en général, nous cherchons à ne pas nous mêler des affaires d'un syndicat. Mais si nous avons une difficulté de paiements nous serons davantage portés à y jeter un coup d'oeil.

M. Korchinski: Maintenant, si un syndicat de trois membres constate qu'un des membres est un peu imprudent avec les machines, par exemple, et par conséquent, les autres décident de l'exclure du syndicat, ou si, par exemple, pour une raison ou pour une autre, il ne veut pas verser ses paiements est-ce que le syndicat peut se dissoudre sans rembourser le prêt?

M. Owen: Est-ce que vous avez un exemplaire du contrat.

[Texte]

Mr. Korchinski: Yes, I have.

Mr. Owen: If you look at the top of the second page, you will find the ways in which the remaining members of the syndicate can arrange to settle the difficulties of any member who does not live up to his performance under the agreement.

Mr. Korchinski: In fact there is a provision that if the original syndicate was formed with three members, it can be carried on with two members? I am sorry I did not read this.

Mr. Owen: I am not sure what would happen if we had to get down to two members. I would suggest that, in order to be effective, the syndicate might be better to have one man move out and somebody else move in. I am not quite sure—and this is a thing that has never arisen—what our legal position would be if the membership in the syndicate decreased below three, because that is the minimum required under the legislation.

I think in administering any type of loan or any type of agreement, we have to make our decision at that time based on the most logical thing to do. If they had to move one member out and there were only two left we would just make an agreement with those two people, and require them to carry on their obligations and use the assets.

Mr. Korchinski: Well, for example, if one member died, then you would be forced into the position where you had only two members.

Mr. Owen: That is right, except that his heirs would also have his interest in that syndicate, an interest in his estate.

Mr. Korchinski: There would be continuity in the syndicate in the event that one died. The two others would simply assume the responsibility for repayment and it would carry on.

Mr. Owen: They of course have to make an arrangement with the heirs of the person who died because they have an interest, a legal and valid equity in that syndicate. Therefore, the remaining members would have to either take in the son of the man who died, or make an arrangement with the estate with respect to the equity of the estate.

Mr. Korchinski: Well, if the estate has to be dispersed, naturally the heirs would have some equity in whatever enterprise was left. Would the syndicate go on further and perhaps provide a loan in order that the deceased member's estate might be cleared away, and so on? Would the Corporation enter into some arrangement like that?

Mr. Owen: We could not make any loan to the remaining members of the syndicate to pay out the

[Interprétation]

M. Korchinski: Oui.

M. Owen: Au haut de la page 2, vous pouvez voir que lorsqu'un membre ne remplit pas ses obligations, il est prévu que les autres membres peuvent régler cette affaire.

M. Korchinski: Donc il est prévu que si le syndicat est composé de trois membres, il peut survivre s'il n'en reste que deux. Je m'excuse, je n'avais pas remarqué ce point.

M. Owen: Je ne suis pas certain de ce qui se passerait s'il ne reste que deux membres. Je pense que, pour que le syndicat soit plus efficace, il serait préférable de remplacer la personne en question par quelqu'un d'autre. Je ne sais pas exactement, c'est une chose qui ne s'est jamais produite, je ne sais pas ce que serait notre position juridique s'il y avait moins de trois membres, parce que la Loi prévoit un minimum.

Je pense que pour gérer un prêt ou un contrat, il faut prendre une décision, la plus logique possible, selon la situation. S'il fallait chasser un membre et n'en conserver que deux, nous passerions un contrat avec ces deux personnes et les obligerions à remplir leurs obligations et à exploiter leurs biens.

M. Korchinski: Si, par exemple, un membre meurt, vous vous trouveriez dans une situation où il n'y en aura plus que deux.

M. Owen: C'est exact, sauf que ses héritiers pourraient avoir un intérêt en jeu.

M. Korchinski: Il y aurait donc une continuité dans le syndicat. Les deux autres membres prendraient sur eux les remboursements et le syndicat subsisterait.

M. Owen: De toute façon, il faudrait qu'ils s'entendent avec les héritiers du défunt car, aux yeux de la Loi, ils ont une part du capital du syndicat. Par conséquent, les autres membres doivent, soit accepter parmi eux le fils du défunt, soit conclure une entente avec les héritiers au sujet de leur part de capital.

M. Korchinski: Mais si les biens doivent être dispersés, les héritiers ont naturellement droit à une part du capital. Est-ce qu'à ce moment-là, le syndicat ira plus loin et fournira un prêt pour que les héritiers puissent reprendre leur part? Est-ce que la corporation interviendrait alors?

M. Owen: Nous ne pourrions pas accorder de prêts aux autres membres pour rembourser les héritiers. Ils

[Text]

[Interpretation]

heirs. The remaining members would have to make an arrangement with the heirs themselves to buy out that estate.

devront s'entendre avec les héritiers directement pour racheter cette part.

Mr. Korchinski: Under the syndicates bill you would not be able to, but would they then be permitted to go to the Farm Credit Corporation, omitting the farm syndicate, for assistance in making the financial arrangements that way?

M. Korchinski: Autrement dit, vous ne pourriez pas le faire d'après la loi, mais est-ce qu'ils auraient alors la possibilité de s'adresser à la Société de crédit agricole?

Mr. Owen: I think they could very well bring in another farmer. They might very well bring in another farmer to take over the assets of that particular deceased member. I suppose under certain circumstances he remaining members might join with some other farmer and form a new syndicate agreement to purchase the assets of the old syndicate that is being disbanded.

M. Owen: Je pense qu'ils pourraient facilement faire entrer un autre cultivateur qui prendrait à sa charge l'actif du défunt, je pense que dans certains cas les autres membres pourraient s'associer avec un autre cultivateur pour former un nouveau syndicat afin d'acheter les avoirs de l'ancien syndicat.

Mr. Korchinski: But after the syndicate has been in operation a few years and let us say that the deceased member had \$15,000 worth of assets in it, how does a new member come in with \$15,000 in order to catch up to where these people have just left off?

M. Korchinski: Mais si le syndicat fonctionne depuis plusieurs années et que le défunt dispose d'un actif de \$15,000, comment un nouveau membre peut-il arriver avec \$15,000 et se mettre à la hauteur des autres?

Mr. Whicher: They sign a cheque.

M. Whicher: Ils font un chèque.

Mr. Barrett: You could loan the money.

M. Barrett: Vous pourriez prêter de l'argent.

Mr. Korchinski: I wish I had it.

M. Korshinski: Si je l'avais.

Mr. Owen: After the syndicate has existed for a number of years and the deceased member had an equity of \$15,000, it is quite likely that by that time our loan would have been paid off.

M. Owen: Si le syndicat fonctionne depuis plusieurs années et le défunt a un capital de \$15,000 il est évident qu'à ce moment-là notre prêt aura été remboursé.

● 1010

Mr. Korchinski: Well let us say \$10,000.

M. Korchinski: Disons \$10,000 alors.

Mr. Owen: These farmers have the right and the opportunity to settle their own affairs. If they wish to bring in another farmer, I think he would have to make his own financial arrangements to put in his share of the equity of this syndicate.

M. Owen: Les cultivateurs peuvent s'entendre entre eux. S'ils veulent faire entrer un autre cultivateur, il devra prendre des dispositions pour participer au capital du syndicat.

Mr. Korchinski: Well, failing this, would that member's estate be tied up until such time as they brought in somebody else? If they paid off all indebtedness, if they made their annual payments, you would not have any claim on them. If they refused to take in somebody else, would that mean that a deceased members estate would be tied up until this thing is finally paid off?

M. Korchinski: Mais si ce n'est pas le cas, est-ce que l'actif du défunt est retenu jusqu'à l'arrivée d'un autre membre? Même s'ils ont payé leurs dettes et qu'ils ont fait leurs paiements annuels vous n'auriez aucun recours contre eux. S'ils refusaient de faire venir quelqu'un d'autre, cela voudrait-il dire que la part du défunt serait bloquée jusqu'à ce que quelqu'un d'autre vienne.

Mr. Owen: The deceased member's heirs would have an interest in the property owned jointly by the syndicate and to the extent that an estate has to be settled, that is one of the things they would have to settle just the same as any other assets the deceased member might have had.

M. Owen: Les héritiers du défunt auraient un intérêt dans les biens appartenant conjointement au syndicat, et ce serait là une affaire qu'ils devraient régler, comme ce serait le cas pour n'importe quel autre actif.

Mr. Korchinski: No further questions.

M. Korchinski: Je n'ai plus de questions à poser.

[Texte]

The Chairman: Thank you, Mr. Korchinski. I want to draw to the attention of the members of the Committee that conversation during the hearing makes it difficult because this conversation is recorded on tape too. It does make it difficult for the typists later to separate the questioner and the witnesses from the other conversations that may be going on. I recognize Mr. Whelan.

Mr. Whelan: First of all, I have not studied the Bill in great detail, but can a member of Parliament be a member of a syndicate and borrow money under this?

Mr. Barrett: It is a bad risk.

Mr. Owen: In so far as the Farm Machinery Syndicates Credit Act is concerned, there is nothing which prohibits a member of Parliament being a member. However, I question whether the House of Commons Act or the Canada Elections Act would allow him to be a member of Parliament afterwards.

Mr. Barrett: I would also question the fellow who asked the question.

Mr. Whelan: I think it is right in some act. Is it not in the Farm Credit Act that a Queen's representative may not borrow money?

Mr. Owen: No, it is not in the Farm Credit Act. This is in the act dealing with the election of members to Parliament and their authority to make contracts with a government agency during the time they are members.

Mr. Whelan: That covers every loan agency that the Crown may have; is that not right?

Mr. Owen: Yes, it covers all government agencies.

Mr. Whelan: It is illegal for a representative of the Queen to enter into a contract with the Queen; I think that is the way it is worded.

Mr. Owen: I think it is a lot more complex than that; I have read it just recently.

Mr. Whelan: That is just in ordinary layman's terminology, not in legal garbage.

The Chairman: What is your question, Mr. Whelan?

Mr. Whelan: If you had an operation that required the borrowing of \$300,000 and you had three different parcels of land and three different syndicates formed that were perhaps ten feet apart, but you had a gate between, one plant did one operation and the

[Interprétation]

Le président: Merci, monsieur Korchinski. Je voudrais attirer l'attention des membres du Comité sur le fait que les conversations privées pendant les débats posent des difficultés parce qu'il y a un enregistrement et que par conséquent, il est très difficile, notamment pour les interprètes, de faire la distinction entre les conversations privées et les conversations officielles. Je donne la parole à M. Whelan.

M. Whelan: Tout d'abord, je dois dire que je n'ai pas encore étudié le projet de loi en détail, mais est-ce qu'un député peut faire partie d'un syndicat et emprunter de l'argent à ce titre?

M. Barrett: C'est plutôt risqué.

M. Owen: Eh bien, en ce qui concerne la Loi sur le crédit accordé aux syndicats de machines agricoles, rien n'empêche un député de faire partie d'un syndicat. Cependant, je doute que la Loi sur la Chambre des communes ou la Loi électorale du Canada permettent à la personne en question de rester député après.

M. Barrett: Je doute aussi du type qui a posé la question.

M. Whelan: Je pense qu'il est indiqué dans la *Loi sur le crédit agricole* qu'un député ne peut pas emprunter d'argent.

M. Owen: Non, ce n'est pas dans la *Loi sur le crédit agricole*. Il s'agit de la loi portant sur l'élection des députés et leur pouvoir de passer des contrats avec une agence du gouvernement lorsqu'ils sont députés.

M. Whelan: C'est valable pour n'importe quelle agence de prêt du gouvernement?

M. Owen: Oui.

M. Whelan: Il est illégal, pour un représentant de la reine, de passer un contrat avec la reine.

M. Owen: Je pense que c'est beaucoup plus complexe que cela. Je l'ai lu tout récemment.

M. Whelan: Je m'excuse mais je parle en profane et je n'utilise pas le jargon juridique de rigueur.

Le président: Quelle est votre question, monsieur Whelan?

M. Whelan: Si, par exemple, une exploitation a besoin de \$300,000 de prêt, et que vous avez trois différentes parcelles de terrain et trois syndicats différents, mais séparés par une grille, et qu'il y a une exploitation qui fait tel travail, un syndicat qui en fait

[Text]

[Interpretation]

other syndicate borrowed \$100,000 to do the other operation—you could have a whole chain reaction. If they are all farmers and want to go into—as I think was mentioned here—the processing or the cold storage business, there would be nothing to stop that, would there?

un autre, et emprunte \$100,000, rien n'empêche la réaction en chaîne, n'est-ce pas?

Mr. Owen: No, provided the assets of each syndicate were clearly distinguishable from the assets of the other. In other words, we would not wish to have loans where there was confusion with respect to the security for each of the loans.

M. Owen: Non, bien sûr, à condition que l'actif de chacun de ces syndicats se distingue clairement de celui de l'autre syndicat. Autrement dit, on ne voudrait pas que l'on accorde des prêts alors qu'on ne sait pas très bien quel peut être le gage de chacun de ces prêts.

Mr. Whelan: Are there provisions in the Bill that say that you have the right to distinguish between these assets?

M. Whelan: Est-ce qu'il est prévu dans la loi que vous avez le droit de faire une distinction entre ces différents actifs?

Mr. Owen: No, not in that terminology. There is a provision in the Bill for us to lend to a syndicate up to 80 per cent of the purchase price of assets, and that would be to that syndicate. Now, as a matter of lending principle, we would not turn around and lend another group money on the same specific security because it just does not work.

M. Owen: Eh bien, pas dans ce sens-là. Disons simplement qu'il est prévu que nous pouvons accorder un prêt jusqu'à 80 p. 100 des biens du syndicat. On ne pourrait pas alors se tourner vers l'autre syndicat et faire le même prêt sur le même gage.

Mr. Whelan: No, I understand that. That is all.

M. Whelan: Je comprends. C'est tout.

Mr. Korchinski: Could I just follow that up with a supplementary? Do you in the corporation not take in all the security that the person has? I understand that you take in just about everything in order to give anybody a loan at all, so how would anybody have other security?

M. Korchinski: Est-ce que je peux reprendre votre question à ce sujet précisément? Est-ce que, dans la société, vous ne prenez pas tous les gages que la personne possède? Je croyais savoir que vous gagiez absolument tout. Alors, comment peut-il y avoir d'autres biens puisque vous les gagez tous?

● 1025

An hon Member: That is a good one.

Une voix: Bonne question.

Mr. Owen: I must point out here that we are dealing with the Farm Machinery Syndicates Credit Act as distinct from the Farm Credit Act. I would like to say that even under the Farm Credit Act we take only that security which we think we require, and we often leave out part of the farmer's assets from our security. In this instance very often we do not take any security other than the note itself. In other words, we do not always take a chattel mortgage on the chattels. If three or four farmers are buying one machine and they have all signed the note, then we would go ahead in many instances and not even take a mortgage against the chattels.

M. Owen: N'oubliez pas une chose, c'est que, ici, nous parlons de la *Loi sur le crédit accordé aux syndicats de machines* qui est différente de la *Loi sur le crédit agricole*. Je voudrais préciser que même dans la *Loi sur le crédit agricole* nous n'utilisons que ce dont nous avons besoin.

Dans ce cas-ci, nous ne prenons aucun autre gage que le contrat lui-même. Autrement dit, il n'y a pas toujours une hypothèque. S'il y a trois ou quatre agriculteurs qui achètent une machine et qui signent la facture, eh bien, on va aller plus loin et on ne va même pas prendre d'hypothèque.

Mr. Korchinski: Suppose the syndicate wanted to take the maximum amount available under the syndicate loan, in terms of dollars how much security would you require?

M. Korchinski: Supposons que ce syndicat voudrait alors tirer le maximum du prêt qu'ils peuvent obtenir; en dollars, disons, quel serait le chiffre maximum que vous voudriez avoir comme gage?

Mr. Owen: Well, let us say we had four farmers who were buying a machine that cost \$15,000 or \$20,000 and they had good businesses and good credit ratings. I suggest that what we would do would be to take

M. Owen: Disons que si quatre agriculteurs achètent une machine de \$15,000 ou de \$20,000 et qu'ils ont une exploitation qui marche bien, s'ils ont une bonne solvabilité, eh bien, ce que nous ferions alors, ce serait

[Texte]

their signatures on the agreement and their signatures on a note, and no security on the assets at all.

Now, if those same four farmers happened to have relatively poorer credit ratings and they were in less solid financial positions, then we might take a chattel mortgage against that machinery. If it were a large loan in relation to the assets of the individual farmers, then we would protect ourselves with a chattel mortgage.

These decisions we have to make vary from one syndicate to another depending upon the credit rating and the soundness of the syndicate itself.

Mr. Korchinski: Then in no case is anyone refused a loan simply because his assets are too great?

Mr. Owen: Not under the Farm Machinery Syndicates Credit Act.

Mr. Korchinski: But under the Farm Credit Act he may be.

Mr. Owen: Under the Farm Credit Act that is true. If a farmer is already well established we may decline to make a loan to him because he already has a good sound economic unit.

The Chairman: Gentlemen, this supplementary situation can be abused. I have been waiting to recognize Mr. Thomson and I think I must recognize Mr. Thomson.

Mr. Thomson (Battleford-Kindersley): Mr. Chairman, I am glad the Minister is here because the question I have relates more to the policy of the government in respect of this and I want to use an illustration. In Saskatchewan, under both the previous and present administrations, the production of hogs has been encouraged. In terms of the Farm Machinery Syndicates Credit Act, does the present federal government single out any particular activity—it could be potato growing and I mentioned hogs—and say, this would be good for the economy; we will lend money to help farmers grow potatoes or process potatoes, or some product like this?

Is there any, if you will, policy pressure to encourage a particular industry? In my own view if there were any policy pressure I think they might produce hogs in Saskatchewan, but over the whole country do you use any policy pressure to encourage any particular phase of the industry?

Mr. Olson: Mr. Chairman, under this bill we do not separate commodities or particular types of production for encouragement in certain areas. The Farm Credit Corporation look at the proposition that is being made in so far as the purchase of equipment,

[Interprétation]

prendre leurs signatures sur le contrat, puis une signature sur la facture mais aucune garantie.

Si, par contre, on a des petits agriculteurs qui ont une moins bonne solvabilité, qui sont dans une situation financière moins bonne, eh bien, à ce moment-là on prendra peut-être une certaine hypothèque, un gage sur les machines. Si c'était un emprunt beaucoup plus important, alors peut-être prendrions-nous une hypothèque sur les bâtiments.

Voilà, disons, une situation qui fait que nous déciderions en fonction de la situation, en fonction de la solvabilité des syndicats eux-mêmes.

M. Korchinski: Jamais on ne refuse un emprunt à quelqu'un parce qu'il a un actif trop grand?

M. Owen: Pas dans le cadre de la *Loi sur le crédit accordé aux syndicats* de machines agricoles.

M. Korchinski: Dans le cadre de la *Loi sur le crédit agricole*.

M. Owen: Oui. Si un agriculteur est déjà bien installé, nous pouvons alors refuser de lui accorder un prêt, parce qu'il a déjà une position économique saine.

Le président: Je pense qu'on risque d'abuser un petit peu des questions complémentaires. Je dois donner la parole à M. Thomson.

M. Thomson (Battleford-Kindersley): Monsieur le président, je suis heureux que le ministre soit parmi nous, parce que la question que j'ai à lui poser porte beaucoup plus sur la politique du gouvernement à ce sujet. Je voudrais utiliser un exemple. En Saskatchewan, à la fois avec l'ancien gouvernement et le gouvernement actuel, on a encouragé la production de porcs. Dans le cadre de la *Loi sur le crédit accordé aux syndicats de machines*, est-ce que le gouvernement fédéral actuel, —j'ai parlé d'éleveurs de porcs— parle des producteurs de pommes de terre; est-ce qu'on indique clairement que l'on pourrait aider des producteurs de pommes de terre ou d'autres produits de ce genre si cela peut aider l'économie, autrement dit, est-ce qu'il y a des pressions de nature telle que l'on cherche à favoriser la production d'un produit donné?

D'après moi, s'il y avait des pressions d'exercées dans un sens ou dans l'autre, je pense qu'en Saskatchewan on favoriserait la production, l'élevage des porcs. Mais à l'échelon national, à l'échelon du pays, est-ce que vous exercez des pressions pour encourager un secteur de l'industrie plutôt qu'un autre?

M. Olson: Monsieur le président, pas dans le cadre de ce projet de loi. Nous ne faisons pas la distinction entre les différents types de production que l'on pourrait encourager dans certaines régions plutôt que dans d'autres.

[Text]

buildings or whatever is contained in the program presented to the Farm Credit Corporation is concerned when there is an application for this credit.

I think your question relates to some federal government policies administered by a different department where, under ARDA for example, there has been some financial assistance granted to encourage certain types of production in certain areas because it is the opinion that it would be of economic advantage to do so. I would not like to get into that discussion here, so I could say to you that each one of these applications is considered on its merit and the conditions that are, in fact, in that area. It is not a promotion type of thing as far as this Bill is concerned.

Mr. Thomson (Battleford-Kindersley): Thank you; that is what I wanted to know.

The Chairman: Thank you, Mr. Thomson I recognize Mr. Peters.

Mr. Peters: I just want to raise this point: Is it the intention of the farm machinery syndicates to continue to ask for—you mentioned this when Mr. Korchinski asked a question about the putting up of chattel mortgages—is it still the intention to have each of the individuals in the syndicate personally liable for the total of the syndicate loan?

Mr. Owen: Yes.

Mr. Peters: Well, it would be rather ridiculous if you used the example of \$15,000 and there were three people in it. This would amount to \$45,000 as surety on a \$15,000 loan. It would be unreasonable to ask for a chattel mortgage as well.

Mr. Owen: It depends upon the credit standing of the various members of the syndicate as to whether or not this would be excessive or not.

Mr. Peters: Well, it just seems to me to be, as far as the act is concerned a very satisfactory and foolproof guarantee. It is probably a very detrimental guarantee to the establishment of syndicates, because if I went in with two other farmers who were better equipped than I, and better financially off than I, I would be in a very good position to take advantage of them. They, on the other hand, would be very doubtful about going into a syndicate with a partner, particularly a young farmer who was new in the business, or who was in it a relatively short time, who would not have the money, the farm machinery and other things necessary for his operation. So he would be pretty close to the margin all the time.

Is this not considerable limitation? A chattel mortgage would provide the syndicate with their guarantee without this restriction.

[Interpretation]

La Société du crédit agricole étudie les propositions qui lui sont faites pour l'achat de machines, de bâtiments, et cela est indiqué clairement dans le programme de la Société lorsqu'on lui fait une demande de prêt.

Votre question soulève un point. En effet, les politiques du gouvernement sont administrées par différents organismes. Par exemple, l'ARDA relève d'un certain ministère qui peut estimer qu'il est préférable de développer telle culture plutôt que telle autre. Je ne voudrais pas entrer dans les détails ici, mais, simplement, ce que je pourrais vous dire, c'est que chacune de ces demandes est étudiée sur la base de sa valeur et sur les conditions qui prévalent dans une région donnée. Ce n'est pas une question d'encouragement, mais plutôt de conditions.

M. Thomson (Battleford-Kindersley): Je vous remercie. C'est tout ce que je voulais savoir.

Le président: Je vous remercie, monsieur Thomson. Je donne la parole à M. Peters.

M. Peters: Un seul point que je voudrais soulever. Dans le cas d'un syndicat de machines agricoles tel que vous l'avez mentionné lorsque monsieur Korchinski a posé une question au sujet des hypothèques sur les bâtiments, est-ce que vous avez toujours l'intention d'obtenir que les membres soient responsables pour le montant total du prêt?

M. Owen: Oui.

M. Peters: Ce serait le comble du ridicule si on s'en tenait à l'exemple de \$15,000 et qu'il y aurait 3 membres dans le syndicat. Cela ferait une garantie de \$45,000 pour un prêt de \$15,000. Ça ne serait vraiment pas raisonnable.

M. Owen: Cela dépend de la solvabilité des divers membres du syndicat, pour décider si cela est excessif ou non.

M. Peters: Cela me semble satisfaisant. C'est une garantie à toute épreuve d'après la Loi mais c'est peut-être un empêchement à l'établissement d'un syndicat. Si le ministère a deux autres cultivateurs qui sont mieux placés que moi, je serais très bien placé pour profiter d'eux. D'autre part, eux de leur côté, auraient des doutes au sujet d'une association avec un partenaire et surtout un jeune cultivateur qui débute et qui n'aurait pas les sommes nécessaires pour investir dans l'achat de machineries indispensables à son entreprise et qui opérerait toujours à peu près à la limite de son crédit. Une hypothèque sur les bâtiments donnerait les garanties suffisantes à la société, et sans cette restriction.

Il me semble que cette Loi vise particulièrement à aider les anciens amis du ministre de l'Agriculture et qui sont tous très riches. Mais si on applique cette loi

[Texte]

It would seem to me that this act was designed specifically for the friends of the previous Minister of Agriculture, and they were all very wealthy people, and it did not apply. But if it is going to apply now, you are going to have to take into consideration people who are close to the margin. And in my experience most small farmers are in that category, where probably a guarantee of the chattel would be more advantageous than this type of blanket guarantee.

There is technically \$45,000 put up if three people are in the syndicate and that seems to me to be pretty hard. Certainly the bank would know about this, and that would limit any borrowing that the person could do against his credit rating, as long as this was outstanding. I am sure this is a registered note, and certainly the Farm Credit Corporation would not want to be making another guarantee of \$15,000 and making another one to someone else, as individuals. So it seems to me we are asking again for a guarantee that is going to make it very difficult for newly developing farmers to borrow under this basis.

Mr. Owen: I would like to get one thing clear. You mentioned \$45,000 for these three members. You are assuming here that they have a maximum load of \$45,000.

Mr. Peters: No, a maximum load of \$15,000.

Mr. Owen: I see. They have a loan of \$15,000, with the three signatures on it.

Mr. Peters: Yes.

Mr. Owen: All we could recover, of course, is \$15,000.

Mr. Peters: That is right.

Mr. Owen: But they are all responsible for it, yes.

Mr. Peters: So you have tied up \$45,000 worth of credit.

Mr. Owen: No, not really.

Mr. Olson: We do not tie up any more credit than we extend.

• 1035

Mr. Peters: Well, if I sign a note for my \$15,000, then I have a \$15,000 note due under certain circumstances. My partner B has a \$15,000 note due under certain circumstances. Partner C has a note for \$15,000 due under certain circumstances. Now it is not all due, I grant you, and it can never all be called \$45,000. That is also true. But as far as my credit rating is concerned, I gave a note for \$15,000 that is

[Interprétation]

maintenant, il va falloir tenir compte des personnes dont l'entreprise est près de la limite et des petits cultivateurs. Je pense qu'une hypothèque sur les bâtiments serait plus satisfaisante.

Il me semble qu'une garantie de \$45,000 pour un engagement de \$15,000, serait excessive. Les banques seraient au courant de cet engagement et cela limiterait le crédit de l'emprunteur individuel. Je suis sûr qu'il s'agit là de billets à ordre enregistrés et la Société du crédit agricole ne voudrait certainement pas consentir à émettre un autre certificat de \$15,000 à chacun des membres du syndicat. Il me semble que si nous demandons encore une garantie, cela va rendre très difficile les emprunts pour les nouveaux cultivateurs.

M. Owen: Vous avez mentionné \$45,000 pour les trois membres. Vous présumez qu'il s'agit d'un prêt maximum de \$45,000?

M. Peters: Non, je parle d'un emprunt de \$15,000 avec les trois signatures.

M. Owen: Ils ont emprunté \$15,000, et ont signé conjointement tous les trois?

M. Peters: Oui.

M. Owen: Tous ce que nous pouvons recouvrer, c'est \$15,000.

M. Peters: Vous avez raison.

M. Owen: Mais ils sont tous responsables pour ces \$15,000.

M. Peters: Par conséquent, vous engagez \$45,000 de crédit?

M. Owen: Non, pas vraiment.

M. Olson: Non, pas vraiment, nous ne bloquons pas plus de crédit que nous n'en offrons.

M. Peters: Si je signe un billet pour mon \$15,000, alors j'ai donc un billet de \$15,000 dû dans certaines circonstances. Mon partenaire b) a aussi un billet échu dans certaines circonstances et la même chose pour c). J'admets que tout cela n'est pas dû et ne sera jamais remboursable à \$45,000. En tant que mon état de crédit, ma solvabilité, j'ai un billet de \$15,000 ainsi que mes deux amis et nous avons \$45,000 de crédit

[Text]

payable under these circumstances, and so have my two friends. We have \$45,000 credit tied up for a \$15,000 loan, and that is a very large guarantee.

Mr. Howard (Okanagan Boundary): They are joint and severally liable, that is true.

Mr. Peters: That is right, And because, in the legal terms, we are joint and severally liable, we have \$45,000 credit tied up here.

Mr. Whicher: In reverse, Mr. Chairman, assets of \$15,000 for the machine, if it is a machine, because if the two go broke, the other man gets the machine.

Mr. Owen: I wonder if you would like me to restate the reasons for this particular clause?

Mr. Downey: On a point of order, Mr. Chairman. would this not be more appropriate if it were discussed under the jointly and severally clause, under Clause 3?

The Chairman: Mr. Peters passes so I will now recognize Mr. Muir.

Mr. Muir (Lisgar): Mr. Chairman, I would like to pose a question to Mr. Owen. Supposing the syndicate runs into temporary financial trouble, because of crop loss or even inability to sell its produce, is there any provision for deferment of principal and/or interest payments? I am thinking particularly of the very serious economic situation that the farmers of the west are in at present.

Mr. Owen: We have the facilities within the legislation. Inherent in any credit operation is the right to have accounts in arrears, and if a farmer is in a serious situation for reasons beyond his control and we are relatively satisfied that they are doing their best, then we would naturally carry the account in arrears. There is no formal method of deferment. We accept that we cannot expect them to pay, and we wait for it.

Mr. Muir (Lisgar): That leads me to my next question. Supposing one member of the syndicate was able to meet the syndicate's obligation to the Corporation, because he was more fortunate than the other members of the syndicate, would he be financially responsible not only for his own, but for his partner's obligation as well?

Mr. Owen: We look at the state of the syndicate as a whole, and the failure of one individual to pay his share is a matter which the members resolve among themselves in accordance with the terms of their agreement.

[Interpretation]

attaché pour un emprunt de \$15,000 et c'est une garantie assez substantielle, très substantielle même.

M. Howard (Okanagan-Boundary): Ils sont tous individuellement et collectivement responsables, c'est vrai.

M. Peters: C'est vrai. Et selon la loi, nous sommes individuellement et conjointement responsables pour un montant global de \$45,000.

M. Whicher: Par contre, si deux des cultivateurs font faillite, le troisième obtient la machinerie.

M. Owen: Voulez-vous que je vous répète les raisons qui ont motivé cet article?

M. Downey: Est-ce qu'on ne serait pas mieux avisé de discuter de cette question à l'article 3?

Le président: Monsieur Muir (*Lisgar*).

M. Muir (Lisgar): Monsieur le président, j'aurais une question à poser à M. Owen. Supposons que le syndicat soit en difficulté temporaire à cause de mauvaises récoltes ou de difficultés dues à l'écoulement des produits. Je pense à une situation économique et difficile comme celle que rencontrent les cultivateurs de l'Ouest. Quelles sont les facilités offertes par la Société?

M. Owen: Toute opération de crédit comporte des dispositions inhérentes à la Loi, le droit d'avoir des comptes en retard. Si le cultivateur est en difficulté pour des raisons indépendantes de sa volonté, et si nous sommes relativement satisfaits de constater que ce cultivateur fait de son mieux, naturellement, nous attendrions, nous tiendrions son compte en suspens. Il n'y a pas de méthode officielle concernant le différé, mais nous acceptons le fait qu'il ne peut pas payer et nous attendons qu'il puisse le faire.

Mr. Muir (Lisgar): Cela me mène à poser la question suivante. Supposons qu'un des membres du syndicat peut rencontrer ses obligations envers la Société parce qu'il est plus fortuné que les autres membres du syndicat, est-ce qu'il serait responsable financièrement non seulement pour sa propre participation mais aussi pour celle de ses partenaires?

M. Owen: Nous considérons le syndicat comme un tout et lorsqu'un individu ne paie pas sa part, c'est une question que le syndicat doit régler entre ses membres d'après leur entente.

[Texte]

Mr. Muir (Lisgar): In other words, this means that the syndicate would have to adjust its financial difficulties among its own members?

Mr. Owen: That is right.

Mr. Muir (Lisgar): And one farmer would be stuck with the obligations of the whole syndicate in one particular year, when he may be in the position of being able to meet the obligation. But this would not exactly be the right thing for him to have to do, either.

Mr. Owen: Under those circumstances, the chances are that the syndicate would make a part payment on their annual instalment, and have us carry the balance over to the next year.

Mr. Muir (Lisgar): This one man who could afford it would make his payment as a part payment for the whole syndicate and the other part would be deferred?

Mr. Owen: That could be arranged. These are all figures that we negotiate back and forth with farmers or syndicates, depending upon the circumstances.

Mr. Olson: To be fair and just.

● 1039

M. Clermont: Monsieur le président, j'invoque le Règlement. L'article donne la définition d'un syndicat. Depuis quelques minutes, on s'éloigne de l'article 2. Les questions posées par le préopinant n'ont aucun rapport à l'article 2; lorsque j'avais la parole tout à l'heure, j'aurais pu moi aussi, poser des questions sur le Bill en général. Je demanderais à la présidence de limiter les questions à l'article 2 qui donne une définition d'un syndicat.

The Chairman: Thank you, Mr. Clermont. Your point is well taken. I will now recognize Mr. Whelan.

● 1040

Mr. Whelan: I just want to ask one question, Mr. Chairman. I agree, first of all, with what Mr. Clermont has said. It seems to me you are not paying any attention to Clause 2 at all; you are all over every clause.

The Chairman: Would you ask your question, please.

Mr. Whelan: I proposed to ask—and this has nothing to do with Clause 2...

The Chairman: Order. If it has nothing to do with Clause 2 it is out of order.

I will recognize Mr. Danforth.

[Interprétation]

M. Muir (Lisgar): En d'autres termes, cela signifie que le syndicat devrait adopter des méthodes d'ajustement entre ses membres.

M. Owen: C'est ça.

M. Muir (Lisgar): Et il peut arriver qu'un cultivateur soit obligé de rembourser pour tout le syndicat. Lorsque les autres membres au cours d'une année particulière ne peuvent pas rencontrer leurs obligations lui, serait responsable; cela ne serait pas tout à fait juste.

M. Owen: Dans ces circonstances, il y a des chances que le syndicat fasse un paiement partiel sur les sommes dues annuellement et nous attendrions à l'année suivante pour percevoir le solde.

M. Muir (Lisgar): Le cultivateur qui en a les moyens fera donc son paiement, ce dernier sera considéré comme un paiement partiel pour le compte du syndicat, et l'autre partie en serait différée?

M. Owen: On peut faire des arrangements. Ce sont des chose que nous négocions avec les syndicats d'après les circonstances.

M. Olson: Pour être exact.

Mr. Clermont: Mr. Chairman, on a question of order. The clause gives the definition of a syndicate and I think that we have been straying away from clause 2. The questions put by the previous speaker do not apply to clause 2. When I had my turn to ask questions a while ago, I also could have asked questions on the bill in general. I would ask the Chairman to limit the questions to clause 2 which gives the definition of a syndicate.

Le président: Merci monsieur Clermont. J'ai bien pris note de votre point de vue. Monsieur Whelan.

M. Whelan: Une question, monsieur le président. Je suis d'accord avec ce que vient de dire M. Clermont. Il me semble cependant que vous ne vous occupez pas du tout de l'article 2; les questions s'appliquent au projet de loi en général.

Le président: Voulez-vous poser votre question, s'il vous plaît?

M. Whelan: Je voudrais simplement vous demander et cela n'a rien à voir avec l'article 2...

Le président: Si cela ne s'applique pas à l'article 2, votre question n'est pas recevable. Monsieur Danforth.

[Text]

Mr. Whelan: I am glad to see you are down to the facts.

Mr. Danforth: Mr. Chairman, in (c) (iii) of Clause 2 it states:

2. (iii) an association formed by an agreement in writing, approved by the Corporation,

We have ascertained from the testimony this morning that the Corporation does make a determination on the qualifications of each of the individuals, the association, or the co-operative. This is based, as I understand it, on two basic premises: (1) that the individuals are actually engaged in farming, or the majority are engaged in farming, and, (2) the financial stability of the individuals making the application.

From time to time this morning we have heard reference to the credit rating of the various individuals. Can we have some understanding of the method by which a credit rating is ascertained in order to know whether a member is eligible to be a member of a syndicate? Does the Department make its own credit survey? Is it a matter of an applicant making his financial statement? Or is it a combination of these, before the Corporation determines whether or not a member is indeed eligible to be a member of a syndicate?

Mr. Whelan: Mr. Chairman, may I ask to what part of paragraph 2 that refers?

With all respect, Mr. Danforth, I do not see how that question relates to anything contained in paragraph 2, with which we are dealing.

Mr. Danforth: Mr. Chairman; it states:

an association formed by an agreement in writing, approved by the Corporation.

The Corporation approves the criteria, or the qualification, of each of the basic members of the syndicate; and, naturally, there are two criteria: (1) whether or not he is indeed a *bona fide* farmer; and, (2) whether or not he has the necessary credit to become a member of a syndicate. This is the basis of my question under (c) (iii) of Clause 2.

The Chairman: Your right to feel the question is upheld.

Mr. Owen: Under this section we determine the eligibility of the individual members purely on the basis of whether they are engaged in agriculture and whether the majority are principally engaged in agriculture. Therefore, their credit rating does not determine whether or not they are eligible to be members of the syndicate.

[Interpretation]

M. Whelan: Je suis heureux de vous voir venir aux faits.

M. Danforth: Monsieur le président, d'après l'article 2(c) (iii) . . .

Une association constituée par accord écrit, approuvé par la Société . . .

Et, nous avons conclu d'après le témoignage de ce matin que la Société s'assure des qualifications de chacun des membres, de la coopérative ou de l'association.

Si j'ai bien compris, cela est fondé sur les deux hypothèses fondamentales suivantes: Tout d'abord, il doit s'agir de personnes engagées dans l'agriculture et dont la principale occupation de la majorité d'entre eux doit être l'agriculture; et deuxièmement de la stabilité financière des personnes faisant la demande.

De temps en temps, ce matin, on a parlé de l'établissement de la solvabilité de divers individus. Pourrions-nous savoir quelle est la méthode par laquelle on s'assure de la solvabilité d'une personne aux fins de s'assurer de son aptitude à devenir membre d'un syndicat. Est-ce que le ministère fait sa propre enquête? Est-ce que le demandeur doit présenter un état de ses comptes ou doit-on présenter une combinaison des deux avant que la Société approuve ou non l'élection d'un membre au sein du syndicat?

M. Whelan: A quelle partie de l'article 2 est-ce que cette question s'applique? En toute déférence, monsieur Danforth, je ne vois pas comment vous pouvez poser cette question vis-à-vis de l'article 2?

M. Danforth: On dit:

Une association constituée par accord écrit, approuvé par la Société . . .

La Société donne son approbation sur les critères ou sur les qualifications, sur chacun des membres fondateurs du syndicat. Il y a deux critères. Est-ce qu'il s'agit véritablement d'un cultivateur, et deuxièmement, a-t-il la solvabilité nécessaire pour devenir membre d'un syndicat? Et c'est sur cela que je fonde ma question, sur la partie c) (iii) de l'article 2.

Le président: Votre question est valable.

M. Owen: D'après cet article, nous déterminons l'éligibilité de la personne, simplement sur le fait qu'il s'adonne à l'agriculture ou que la principale occupation de la majorité d'entre eux est l'agriculture.

[Texte]

Credit rating enters into it when we decide whether or not we are going to make a loan to the syndicate, and at that stage we make the same type of credit check as does any other lender relative to loans. We find out something about their assets, their liabilities and their income, and how they have handled other obligations they have had in the past.

The Chairman: Thank you, Mr. Danforth. I recognize Mr. Howard.

Mr. Howard (Okanagan Boundary): In view of the fact that the ghost of Mr. Beauchesne is sitting in at our meeting this morning I will wait until we get to Clause 4.

The Chairman: Mr. Southam?

Mr. Southam: Mr. Chairman, my question is actually supplementary to the topic introduced by Mr. Muir a few moments ago. It deals with the repayment of these loans under trying circumstances. I wish to put my question to the Minister. This may relate to policy, but Mr. Muir brought up the point that we are suffering this year in Western Canada from a very unfortunate and abnormal situation in not having markets for dry grain, and the matter of wet grain. Has the government given any consideration to the creation of a general moratorium on the repayment of loans under this or similar legislation?

● 1045

Mr. Olson: Mr. Chairman, that relates to Clause 4, subsection (1) and I would not like to reply to it now. I would, however, draw to Mr. Southam's attention the fact that I have answered that precise question at least five times in the House of Commons during the fall session.

Mr. Southam: I thought it was relative to what Mr. Muir had to say when he and Mr. Owen were discussing it.

Clause 2 agreed to.

On clause 3—*Loans to farm syndicates*.

The Chairman: Shall Clause 3 carry?

Some hon. Members: No.

The Chairman: I had Mr. Gleave, Mr. Korchinski and Mr. Douglas on my list as those who wished to ask questions on Clause 3.

Mr. Gleave: Mr. Chairman, we were on the amendment of Clause 3 and I take it we still are?

The Chairman: That is right.

[Interprétation]

La solvabilité entre alors en jeu lorsque nous décidons si nous allons consentir un prêt au syndicat. Et, nous faisons le même genre d'enquête que tout prêteur fait lorsqu'il s'agit de consentir un prêt, nous nous informons au sujet des biens, des capitaux et des autres obligations du futur emprunteur et de la façon dont ils ont rempli leurs précédentes obligations.

Le président: Monsieur Howard (*Okanagan-Boundary*).

M. Howard (Okanagan-Boundary): Vu que le fantôme de M. Beauchesne préside à nos assemblées, ce matin, j'attendrai pour poser mes questions le moment où nous traiterons de l'article 4.

Le président: Monsieur Southam.

M. Southam: Je reviens à ce qu'a dit M. Muir au sujet du remboursement des prêts dans des circonstances difficiles. Je voudrais poser cette question au ministre parce que je pense que c'est peut-être une question de principe.

Vu que dans l'Ouest du Canada, nous avons une situation anormale, très difficile, parce que nous n'avons pas de marché pour notre blé humide et notre blé sec, est-ce qu'il y a des conditions, est-ce qu'il y a des dispositions dans ce bill pour un moratoire général pour le remboursement des prêts en vertu de cette Loi ou d'une Loi semblable.

M. Olson: Monsieur le président, cela est mentionné à l'article 4, paragraphe (1). Par conséquent, je ne peux pas répondre maintenant, mais j'attire l'attention de M. Southam sur le fait que j'ai répondu à cette question définitivement au moins cinq fois à la Chambre des communes.

M. Southam: Je pensais que cela se rapportait à la discussion entre M. Muir et M. Owen.

L'article 2 est adopté.

Article 3 — Prêts aux syndicats agricoles.

Le président: L'article 3 est-il adopté?

Des voix: Non.

Le président: J'ai une liste de personnes qui veulent poser des questions au sujet de l'article 3. MM. Gleave, Korchinski et Douglas.

M. Gleave: Monsieur le président, au sujet de l'article 3, nous parlions de la modification . . .

Le président: C'est juste.

[Text]

Mr. Gleave: The amendment deals with the matter of lending money on Indian reserves and to Indian bands. It says:

3A. (1) With the approval of the Governor in Council, the Corporation may enter into an agreement with the Minister of Indian Affairs and Northern Development

and so on. Would one need to enter into an agreement with the Department of Indian Affairs to lend money on machinery?

Mr. Olson: Mr. Chairman, we have to have an agreement with the Minister of Indian Affairs and Northern Development, as is pointed out in subsection (1) (a) of Clause 3. For that we have the kind of security that we need relative thereto, and my understanding is that it includes machinery as well as buildings, and that sort of thing. Because as I am sure you are aware, there are limitations on the security that can be taken on any assets that are within the boundaries of an Indian reservation.

Mr. Gleave: Could we have a representative of the Department of Indian Affairs and Northern Development come before this Committee so that we could find out what role they are prepared to play, how they see this dovetailing and what their approach is to this?

In this matter there will have to be arrangements with the Department of Indian Affairs and Northern Development and their attitude, or what they envisage as the amount of participation of Indians, either individually or collectively, is going to be a very important part of this operation.

It is going to affect two things. It is going to affect the safety of the money of the Corporation, and it is also going to affect how much money these people can get and the manner in which they can use it.

This is an altogether new area. I do not disagree with the amendment to any great degree, but I do want to know how it is going to work and what approach the Department of Indian Affairs and Northern Development is going to take. If the Minister, or the Committee, is agreeable to that, that is fine; if not, then I would make a motion that they do appear.

Mr. Olson: Mr. Chairman, perhaps Mr. Gleave would take into consideration what he is really asking. What we are doing by this amendment to Clause 3 is to provide authority for the Corporation to make the provisions of this Act available to Indians who are farmers on reservations.

• 1050

This amendment does not in any way attempt to spell out the policies or the programs of the Department of Indian Affairs and Northern Development. It would mean a very long and involved discussion to go

[Interpretation]

M. Gleave: ... et, je pense qu'elle est toujours à l'ordre du jour. La modification traite des prêts aux réserves indiennes et aux bandes indiennes. J'ai une ou deux questions à poser à ce sujet. La première se rapporte à ce qui suit:

Avec l'approbation du gouverneur en conseil, la Société peut conclure un accord avec le ministre des Affaires indiennes et du Nord canadien, etc.

Eh bien, est-ce qu'un accord est nécessaire avec le ministère des Affaires indiennes pour consentir des prêts pour des machines agricoles?

M. Olson: Monsieur le président, il nous faut l'accord du ministre des Affaires indiennes, comme on l'a fait remarquer au paragraphe (1) de 3 a), afin que nous ayions la garantie nécessaire à ce sujet. Et, si j'ai bien compris, cela comprend aussi la machinerie aussi bien que les bâtiments et autres... Vous n'ignorez pas qu'il nous faut des garanties pour tout ce qui concerne les biens qui se trouvent dans les limites des réserves indiennes.

M. Gleave: Est-ce qu'un représentant du ministère des Affaires indiennes pourrait venir témoigner devant le Comité et nous dire quel est le rôle de ce ministère et pour nous assurer, et pour voir comment ils peuvent accomplir cette coordination et quelle est leur attitude à ce sujet?

Dans cette affaire, il va falloir passer des accords avec le ministère des Affaires indiennes et du Nord canadien et l'attitude ou les idées du ministère au sujet de l'étendue de la participation des Indiens, soit individuellement, soit collectivement, aura un rôle très important à jouer dans cette opération. Ceci affectera deux choses: la sécurité des sommes empruntées de la Société et les sommes d'argent que peuvent obtenir ces personnes et la façon dont elles peuvent l'utiliser.

C'est un domaine tout à fait nouveau, je ne suis pas contre cette modification, mais j'aimerais savoir comment elle va s'appliquer et j'aimerais savoir quelle sera l'attitude du ministère des Affaires indiennes et du Nord canadien. Et, si le ministre et le Comité sont d'accord, pour les convoquer, j'en serais heureux; s'ils ne sont pas d'accord je déposerai alors une motion pour qu'on les convoque.

M. Olson: Est-ce que M. Gleave voudrait bien se souvenir, en demandant cela, de ceci. Ce que nous faisons par cette modification à la Loi, c'est de permettre à la Société d'offrir ce genre de services aux Indiens en conformité de la ligne de conduite du ministère des Affaires indiennes et du Nord canadien.

Nous en avons discuté avec le ministère des Affaires indiennes et il me semble, de la façon dont M. Gleave pose sa question, qu'il désire une étude approfondie de la ligne de conduite adoptée par le ministère des

[Texte]

into the details of the programs that the Department of Indian Affairs may have, and these should properly be raised in that Department and in the appropriate Committee of the House of Commons. All we are doing by this amendment to the Act is to provide the authority to the Corporation to get into and offer this service to the Indians, in keeping with Indian Affairs policy. Obviously we have had discussions with the Department of Indian Affairs but it seems to me, Mr. Chairman, from the way the question was put, that Mr. Gleave is asking for a detailed examination and determination of what Indian Affairs policy may be. We do not think that that is the function of the Department of Agriculture. Our function and that of the Corporation is to have the Act amended so that whatever the policy of the other members of the House of Commons in determining the policy of the Indian Affairs Department it will be as applicable to Indians on reserves.

Mr. Gleave: The fact of the matter is that you are bringing within the scope of this Act the whole matter of the operation of the Farm Credit Corporation Act and the participation of the Department of Indian Affairs and of Indians, and I would submit within the scope of the inquiry of this Committee because we are here to see how this Act operates and to see that it operates well. That is why I think this should be done. Therefore, I will move that whereas this amendment would involve the participation of the Indian Affairs Department be it resolved that we request representatives of the Indian Affairs Department to appear before this Committee. I will so move, Mr. Chairman.

The Chairman: Mr. Whicher.

Mr. Whicher: Mr. Chairman, I just wanted to speak to the motion. I disagree that we should have the Department of Indian Affairs here at all. The only possible reason that we could have them here would be this: to ask them if they will endorse for the Indians or not. That is the only reason that we could possibly wish to have them here. We simply cannot get into an intricate examination of the policy of the Department of Indian Affairs in this particular Committee. Unfortunately under the laws of Canada today, the only way in which we can get money from an Indian on a reservation is by an endorsement by somebody, either Indian Affairs or somebody else. We cannot take a mortgage on the land, and if the Indian went and sold the equipment we could not do anything about it because you cannot sue him when he is a member of that reservation.

Therefore, the only way the Department of Agriculture or this organization could give them money is by an endorsement by somebody. And the appropriate person, of course, is the Minister of Indian Affairs. So

[Interprétation]

Affaires indiennes. Ce n'est pas le rôle du ministère de l'Agriculture. Notre rôle et celui de la Société est de modifier la Loi afin que, quelle que soit la politique du ministère des Affaires indiennes, la présente loi s'applique aux Indiens dans les réserves.

M. Gleave: Le fait est que lorsqu'on inclut dans la Loi l'administration de la *Loi sur la Société du crédit agricole* et la participation du ministère des Affaires indiennes et des Indiens eux-mêmes, cela intéresse le Comité parce que notre rôle est de voir à ce que cette loi soit bien administrée. C'est pourquoi je pense que nous devons faire cela. Par conséquent, je propose, puisque cet amendement implique la participation du ministère des Affaires indiennes, qu'il soit résolu que nous demandions aux représentants du ministère des Affaires indiennes de comparaître devant le Comité. J'en fais la proposition, monsieur le président.

Le président: Monsieur Whicher.

M. Whicher: Je ne suis pas d'accord que nous devrions convoquer les représentants du ministère des Affaires indiennes et du Nord canadien. La seule raison de les inviter serait de leur demander s'ils approuvent au nom des Indiens ou non. Nous ne pouvons pas entreprendre une étude approfondie de la politique du ministère des Affaires indiennes au cours des réunions de ce Comité. Au Canada, en ce moment, la seule façon dont nous pouvons obtenir de l'argent d'un Indien qui habite une réserve, est de faire endosser cette dette par le ministère des Affaires indiennes ou un autre. On ne peut pas prendre leurs terres en hypothèques, et s'il vend le matériel fourni, on ne peut pas le poursuivre s'il fait partie d'une réserve. Par conséquent, la seule façon dont les Indiens peuvent emprunter de l'argent du ministère de l'Agriculture ou de la Société est d'obtenir l'endossement de quelqu'un, et notamment, du ministre des Affaires indiennes.

Par conséquent, la seule question que nous pouvons poser au ministère des Affaires indiennes, est: s'ils sont prêts à endosser ces dettes. Sinon, on ne peut pas leur prêter de l'argent d'après les présentes lois du Canada.

[Text]

I would suggest, with all due respect to the hon. member who put forward the motion, that the only question is: will they endorse or will they not endorse? Obviously if they will not endorse, at the moment under the laws of Canada no money can be loaned to them.

The Chairman: Mr. Whelan, on the motion.

Mr. Gleave: Mr. Chairman, may I speak. . .

The Chairman: I think you did speak to the motion, Mr. Gleave. I recognize. . .

Mr. Gleave: Mr. Chairman, if I may have the privilege I would like to answer some of the questions which Mr. Whicher has quite properly raised.

The Chairman: I think that is appropriate. I will recognize you in a minute. I will recognize Mr. Whelan, then the Minister, and then you.

Mr. Whelan: Mr. Chairman, this may have been asked and answered already. Have there been discussions by Mr. Owen, the Chairman of the Corporation, the Minister of Agriculture and the people in Indian Affairs with the Indian people themselves?

• 1055

Mr. Olson: Yes, there have been discussions.

Mr. Whelan: I would like to know what their reaction was.

Mr. Owen: I could give some elaboration on this. You will appreciate that a similar clause was included in Bill C-110, which has now been enacted. As a result, since that time we have been holding discussions regularly with the Department of Indian Affairs developing the form of guarantee which we will obtain, with the basic intent that we should be lending under the same conditions as we would lend to any other farmers with the exception of a guarantee from the Minister instead of a mortgage. Once we have come to an arrangement with respect to the legal terminology that has to be used in the guarantee and how it will work, we are then holding a meeting jointly with representatives of Indians themselves to discuss the actual operations, our operations, as they take place on reserves. I might mention that it was at the request of the Department of Indian Affairs that this clause was included in Bill C-110 and in Bill C-112.

The Chairman: Mr. Minister, did you wish to speak?

Mr. Olson: I would like to say a word or two but perhaps there are some others yet.

[Interpretation]

Le président: Je pense que vous avez demandé la parole sur cette motion, monsieur Whelan.

M. Gleave: Monsieur le président, puis-je parler . . .

Le président: Je crois que vous avez déjà parlé au sujet de cette motion, monsieur Gleave. Je donne la parole . . .

M. Gleave: Monsieur le président, j'aimerais répondre à quelques-unes des questions soulevées à bon droit par M. Whicher.

Le président: C'est tout à fait dans l'ordre et je vous donnerai la parole lorsque M. Whelan et le ministre auront terminé. Monsieur Whelan.

M. Whelan: Monsieur le président, cette question a peut-être déjà été posée et on y a peut-être répondu. Est-ce que le président de la Société est entré en pourparlers avec le ministre des Affaires indiennes et ses fonctionnaires et avec les Indiens eux-mêmes?

M. Olson: Oui, il y a eu des pourparlers.

M. Whelan: J'aimerais savoir quelle a été la réaction.

M. Owen: Je pourrais vous donner des détails. Vous devez comprendre qu'une disposition semblable fait partie du Bill C-110 qui vient d'être adopté. Depuis ce temps-là, nous avons eu des pourparlers fréquents avec le ministère des Affaires indiennes pour établir le genre de garantie que nous pouvons exiger, avec l'idée en tête qu'on voudrait prêter aux Indiens de la même façon que l'on prête aux autres cultivateurs, sauf que, dans le cas des Indiens, au lieu d'une hypothèque, on aurait la garantie du ministère des Affaires indiennes. Lorsqu'on se sera entendu sur la terminologie juridique de la garantie, et son application, nous aurons des discussions avec les représentants des Indiens pour étudier l'application de la loi en ce qui concerne les réserves. C'est à la demande du ministère des Affaires indiennes que cette disposition a été incorporée dans les Bills C-110 et C-112.

Le président: Monsieur le ministre, est-ce que vous avez quelque chose à dire?

M. Olson: Oui, j'aurais quelques mots à dire mais peut-être que d'autres voudraient intervenir.

[Texte]

Mr. Gleave: The fact is that these are the very questions and Mr. Whicher quite clearly stated them. These are the very questions that we should have answered here: the manner in which these loans can be made as far as the Department of Indian Affairs are concerned; the approach which they are going to take; the amount of liability which they think can be assumed in various circumstances; the methods of assessment of—how shall I say—the reliability or viability of various bands and individuals; and the type of security that is going to be taken.

We are entering into a new field here, and there were circumstances described in the debate in the House by the member for Regina East, I think, of delays and so on in the Indian people getting money, which simply did not permit them to operate effectively.

There has been a fair amount of mistrust of our operations among these people up until now; not of the operations of this particular Corporation because it has not been involved, but a mistrust of the Department of Indian Affairs and the way it works. You can take the statement of Allan Clark, the Associate Executive Director of the Indian - Eskimos Association of Ontario, who states in the *Globe and Mail* that Indians are frustrated at every turn and that the Department of Indian Affairs and Northern Development is a totally inadequate, bureaucratic instrument.

I want to know how they are going to dovetail in and I want to know how far they are going to go. I want to know if they are going to be more flexible and more effective than they have been until now. This amendment has been brought in, shall we say, rather hastily to deal with a situation which we saw should be dealt with under this Act. I quite agree with the mover but let us have the representatives of the Department of Indian Affairs here to tell us how this can work, the manner in which it will work, and then they can follow through.

The Chairman: Thank you, Mr. Gleave. Mr. Danforth.

• 1100

Mr. Danforth: Mr. Chairman, I am quite in sympathy with the intent that Mr. Gleave is showing in requesting that this further witness be provided for the Committee, but may I suggest for the consideration of all members present that this is a matter that might perhaps be settled by the Steering Committee, of which Mr. Gleave is a member. We may have other requests for witnesses in the consideration of this particular Bill and maybe we can stand the amendment until we have had time to deliberate on it.

Then discussion of the various amendments as they come up or motions of this type will not interfere with the proceedings of the Committee. Perhaps when we run into something like this we can stand it and

[Interprétation]

M. Gleave: Voici. Les questions que M. Whicher a soulevées sont justement celles auxquelles nous voulons des réponses, soit la façon dont ces prêts seraient consentis en ce qui concerne le ministère des Affaires indiennes; leur façon de procéder; quelles responsabilités ils peuvent assumer dans diverses circonstances; la méthode d'évaluation de la solvabilité ou de la confiance qu'inspirent la bande et ses membres; les mesures de sécurité qui seront prises.

Il s'agit d'un nouveau domaine, et certaines circonstances ont été décrites à la Chambre, par le député de Régina-Est qui a mentionné des délais, dans les prêts aux Indiens qui empêchent d'exploiter efficacement.

Il y a un manque de confiance de la part des Indiens envers notre façon d'agir, non pas en ce qui concerne l'application de ce Bill, parce qu'il n'est pas encore entré en vigueur, mais envers le ministère des Affaires indiennes et la façon dont le ministère fonctionne. Et si l'on s'en remet à M. Allan Clark, le directeur exécutif adjoint de l'*Indian-Eskimos Association of Ontario*, qui a dit dans le *Globe and Mail* que les Indiens se sentent frustrés de toute part et que le ministère des Affaires indiennes et du développement du Nord canadien est une institution bureaucratique tout à fait inefficace.

J'aimerais savoir comment ils vont s'associer et jusqu'où ils iront, s'ils seront plus flexibles et plus efficaces qu'ils ne l'ont été jusqu'ici. Cette modification a été proposée un peu à la course, pour résoudre une situation qui tombe sous le coup de la Loi. Je suis tout à fait d'accord avec cette modification, mais j'aimerais que les représentants du ministère des Affaires indiennes viennent nous dire comment elle peut s'appliquer, la façon dont on peut l'appliquer, et ainsi de suite.

Le président: Merci monsieur Gleave. Monsieur Danforth.

M. Danforth: Je suis tout à fait d'accord avec ce que dit M. Gleave, mais j'aimerais demander à tous les députés présents si ce n'est pas une question qu'on pourrait soumettre au Comité directeur dont M. Gleave fait partie. Nous aurons peut-être d'autres demandes pour faire venir des témoins au cours de l'étude de ce projet de loi. Nous pourrions réserver la modification jusqu'à ce que nous ayons le temps d'y penser.

La discussion des motions de ce genre à mesure qu'elles sont présentées ne nuirait pas au travail du Comité. Je propose que nous réservions ces amendements jusqu'à ce que le comité directeur ait rendu sa

[Text]

leave it to the discretion of the Steering Committee to make a determination on it. I am sure this would meet with Mr. Gleave's approval, and it would not preclude us carrying on today, rather than getting into the machinery of a debate on a particular motion.

The Chairman: Mr. Gleave, would you be prepared to withdraw the motion providing the Steering Committee could meet and consider it?

Mr. Gleave: Yes, I think that is a reasonable approach. The Steering Committee could look at it and, as Mr. Danforth says, there may be other considerations, and other people who would want to look at it.

The Chairman: Thank you. Your motion is withdrawn. I recognize Mr. Korchinski.

Mr. Gleave: I do not know if it is withdrawn, but the motion can stand and await a decision of the Steering Committee. Is that acceptable, Mr. Chairman?

The Chairman: I think it would be better to withdraw it and then, after the Steering Committee meets, you may wish to present a new motion or this same motion. I think when we start standing motions we are getting into a difficult area. Since you are agreeable to withdrawing it, you may have the opportunity of presenting a new motion or the same motion at a later time.

Mr. Muir (Lisgar): Could this be done under another clause?

Mr. Whicher: It can be done anytime.

Mr. Peters: Mr. Chairman, on a point of order. If it is withdrawn and this clause is passed, it obviously cannot be re-introduced.

The Chairman: No, that will be before the Committee. In other words, I have a number of members who wish to speak on this particular clause and on the amendment in particular. If we could hear those questioners, then the Committee will decide whether the clause should stand until another meeting or what the action of the Committee will be.

Mr. Gleave: Well, I think you could decide that now, Mr. Chairman. It was your request that the matter stand until such time as the Steering Committee had a look at it. Now, if you permit this clause to be moved and carried . . .

The Chairman: I have not asked that.

Mr. Gleave: No, but are you going to?

An hon. Member: He cannot ask that until you withdraw your motion.

[Interpretation]

décision. Je pense que cela pourrait satisfaire M. Gleave et cela ne nous empêcherait pas de continuer notre travail plutôt que d'entrer dans un débat sur une motion en particulier.

Le président: Monsieur Gleave, est-ce que vous êtes d'accord pour retirer votre motion pour que le comité directeur l'étudie?

M. Gleave: Oui, je pense que c'est une méthode très valable. Le comité directeur pourrait étudier la question et, comme le suggère M. Danforth, d'autres personnes pourraient vouloir l'étudier également.

Le président: Donc, la motion est retirée. M. Korchinski a la parole.

M. Gleave: Peut-être pas retirée, mais réservée en attendant la décision du comité directeur. Est-ce que vous êtes d'accord, monsieur le président?

Le président: Je pense qu'il serait préférable de la retirer. Lorsque le comité directeur se sera réuni, vous voudrez peut-être déposer cette même motion, une nouvelle fois, ou en déposer une autre. Je crois que si nous commençons à réserver des motions, nous risquons de nous créer des problèmes. Puisque vous acceptez de la retirer, vous pourriez la soumettre plus tard, ou en soumettre une autre.

M. Muir (Lisgar): Est-ce qu'elle peut l'être lors de l'étude de n'importe quel article?

M. Whicher: A n'importe quel moment.

M. Peters: Monsieur le président, si la motion est retirée et que l'article est approuvé, la motion ne pourra plus être soumise.

Le président: Non. Un certain nombre de membres veulent prendre la parole sur cet article et sur l'amendement lui-même. Écoutons ce qu'ils ont à dire, puis le Comité décidera si la motion doit être réservée jusqu'à la prochaine séance ou quelle doit être l'attitude du Comité.

M. Gleave: Je crois que vous pourriez décider dès maintenant, monsieur le président. C'est vous qui avez demandé que la question soit réservée jusqu'à ce que le comité directeur puisse étudier la chose. Si vous permettez que l'article soit soumis et adopté . . .

Le président: Je n'ai pas demandé cela.

M. Gleave: Est-ce que vous allez le faire?

Une voix: Il ne peut le faire tant que la motion n'est pas retirée.

[Texte]

The Chairman: I should assure you that I will not ask the Committee to approve Clause 3 until after that opportunity has been provided.

Mr. Gleave: Thank you.

The Chairman: Now, I want to recognize Mr. Korchinski for general questioning of the witnesses.

Mr. Korchinski: I have several questions I want to ask which might properly be asked at the time a member of the Indian Affairs Committee is here. I have other questions, but I will await the disposal of that motion later on.

I want to ask several other questions. I have a question in regard to what seems to be some gobbledegook on page 2, subclause (4). Perhaps the wording has some significance. It reads:

...the number of such members not principally so occupied, the number of such members not principally so occupied shall be deemed to be one less than the number principally so occupied.

I am wondering what the significance of that is. Why is it necessary to have fewer members not participating? Will somebody explain that?

The Chairman: Mr. Owen?

Mr. Owen: I would agree with you in so far as the wording is concerned. It is really intended to accomplish a particular purpose.

● 1105

A normal syndicate, that is, a syndicate which is not on a reserve, must be composed of persons all of whom are engaged in farming and the majority of whom have farming as their principal occupation. Now, when we come to deal with an Indian band, there will obviously be some persons in the band who are not engaged in farming.

There may be others who are engaged in farming but it is not their principal occupation and these, amongst them, may constitute the majority; so the majority of the members of the band would not be principally occupied in farming. In this clause we are trying to set the maximum amount that we can lend to a syndicate or to a band.

Now, for a normal syndicate off a reserve, it is the number of members of the syndicate multiplied by \$15,000 up to a maximum of \$100,000, but in those numbers the majority must be principally occupied in farming. So in calculating the maximum amount which we may lend to a band, we take the number of members of the band who are principally engaged in farming, and we can add to it others who are engaged in farming but for whom farming is not their principal occupation, up to the amount where there is one less than the other. So, in setting the limit and determining

[Interprétation]

Le président: Je veux assurer le Comité que je ne lui demanderai pas d'approuver l'article 3 tant que cette occasion n'aurait pas été donnée.

M. Gleave: Merci.

Le président: Maintenant, M. Korchinski a une question d'ordre général à poser.

M. Korchinski: Je désire poser un certain nombre de questions mais il serait préférable que je les pose en présence d'un membre du Comité des affaires indiennes. J'ai également d'autres questions. L'une porte sur ce qui me semble être du jargon administratif, au paragraphe 4, à la page 2. Le texte veut peut-être dire quelque chose. Il y est dit que:

Le nombre de membres qui n'ont pas pour principale occupation l'agriculture doit être inférieur de un à ceux dont c'est la principale occupation.

Je me demande ce que tout ceci veut dire. Pourquoi est-il nécessaire que moins de membres n'y participent pas? Quelqu'un peut-il m'expliquer?

Le président: Monsieur Owen? M. Owen:

M. Owen: Je suis parfaitement d'accord avec vous au sujet du texte. Ce que l'on veut, c'est atteindre un but bien précis. Un syndicat normal, c'est-à-dire un syndicat qui n'est pas sur une réserve, doit se composer de personnes qui toutes s'occupent d'agriculture et dont la majorité d'entre elles s'occupe principalement d'agriculture. Dans le cas des bandes indiennes, il y a évidemment des personnes qui ne font pas d'agriculture.

Il y en aura peut-être d'autres qui font de l'agriculture mais dont ce n'est pas la principale occupation et qui peuvent représenter la majorité. Autrement dit, la majorité des membres de la bande ne s'occuperait pas principalement d'agriculture. Dans cet article-ci, ce que nous cherchons à faire c'est de fixer un maximum que l'on peut prêter à un syndicat ou à une bande.

Lorsque vous avez un syndicat hors d'une réserve, le maximum s'obtient en multipliant le nombre de membres du syndicat par \$15,000 jusqu'à concurrence de \$100,000. Mais, il faut que la majorité d'entre eux s'occupe principalement d'agriculture. Donc, lorsque nous calculons ce montant qui peut être prêté, nous calculons le nombre de membres de la bande dont la principale occupation est l'agriculture et nous pouvons y ajouter d'autres membres qui s'occupent d'agriculture mais dont ce n'est pas la principale occupation, jusqu'à ce que le nombre de personnes de ce deuxième groupe soit inférieur de 1 à celui du premier groupe. Donc nous nous basons sur le nombre de gens qui s'occupent principalement d'agriculture, en ajoutant un nombre plus petit d'autres gens qui peuvent

[Text]

the number, we are basing it on the number principally occupied in farming plus some lesser number who may be engaged in farming.

Now, my explanation is probably just as much gobbledegook as the clause itself, but that is what we are trying to do. We are really trying to make this setting of the maximum be precisely on the same basis as for other syndicates.

Mr. Korchinski: This goes right back to what we were discussing the other day, that is, the wording of this amendment and the selection of the word "band". I think it is entirely wrong and it tends to confuse the whole issue here. This is typical of the confusion that is going to result among the members of the Indian bands. Here we are using the word "band" when really the word has several meanings. At the same time, it is quite obvious that those who are charged with the responsibility of interpreting this are going to have difficulties. I do not know why we could not have used another word than "band".

Mr. Whicher: That is the legal term.

Mr. Korchinski: I understand. That is the explanation that was given for this.

Mr. Whicher: Put the word "municipality" in there and you would get the same thing.

Mr. Korchinski: That is the point. This tends to confuse the thing, because every Indian knows the meaning of the word "band", but how does he interpret the band, in the case of the farm syndicate, to mean something different than a band? This is how confusing it is to me, at least.

Mr. Owen: I do not see why he need confuse it. In effect, we can have on the reserves, syndicates made up of groups of Indians who are farming, or the band itself can be called a syndicate if the band is farming.

Mr. Korchinski: If the entire band is farming. But here you are using such phrases as "there will be fewer members principally or more members principally occupied in agriculture than not occupied", simply because you are trying to overcome this difficulty created by the word "band". I wonder whether it might not be advisable to have another look at that clause. I imagine you have looked at it long and hard, but maybe one more look might just produce something that will not cause confusion later on, not only within the Department or the Corporation, but within the Department of Indian Affairs as well. I am at a loss here.

Mr. Owen: Well, I suppose it is because we recognize these words here as being purely designed to set the

[Interpretation]

également s'occuper d'agriculture. Mon explication est peut-être aussi compliquée que le texte lui-même, mais c'est tout ce que je pouvais vous dire. Ce que nous voulons, c'est que le maximum soit fixé sur la même base que dans le cas des autres syndicats.

M. Korchinski: Alors, là nous en revenons à ce que nous disions l'autre jour, c'est-à-dire, dans le libellé de cet amendement et dans le choix du mot «bande». Je pense que c'est là une erreur et que ça complique les choses. Cela est caractéristique de la confusion qui risque de résulter de ce texte, chez les bandes indiennes elles-mêmes. Nous utilisons le mot «bande» alors qu'il a plusieurs sens. Il est évident que ceux qui sont chargés d'interpréter ce texte vont avoir des difficultés. Personnellement, je ne vois vraiment pas pourquoi on ne pourrait pas utiliser un autre terme que «bande».

M. Whicher: C'est un terme juridique.

M. Korchinski: Oui, je comprends très bien. C'est l'explication qu'on nous a déjà donnée.

M. Whicher: Mettez le mot «municipalité» et vous aurez exactement la même situation.

M. Korchinski: Cela n'a pour résultat que de compliquer les choses parce que chaque Indien connaît le sens du mot «bande» mais comment va-t-il l'interpréter ici, pour lui donner un sens autre que celui de bande? C'est très confus pour moi, en tout cas.

M. Owen: Je ne vois pas pourquoi il y aurait confusion. Il est possible, sur les réserves, d'avoir des syndicats formés d'Indiens qui s'occupent d'agriculture ou bien la bande elle-même peut s'appeler syndicat, si elle fait de l'agriculture.

M. Korchinski: Si c'est l'ensemble de la bande qui fait de l'agriculture, d'accord. Mais, ici vous utilisez des expressions comme celle-ci: «Il y aura moins de membres ou plus de membres dont la principale occupation est l'agriculture que de membres dont ce n'est pas la principale occupation», simplement parce que vous essayez de surmonter les difficultés que pose le mot bande. Alors, je me demande s'il ne serait pas souhaitable de revoir cet article. Je suis persuadé que vous l'avez étudié de très près, mais malgré tout, si vous vouliez l'étudier encore une fois, je me demande si ça ne permettrait pas de supprimer ces difficultés qui risquent de surgir non seulement au ministère et à la Société mais également au ministère des Affaires indiennes.

M. Owen: Je suppose que c'est parce que nous considérons que ces termes n'ont pour but que de

[Texte]

maximum amount we can lend to a band, and it seems to us that even though the wording looks to be pretty roundabout, the meaning to us is quite clear and quite straightforward and we have no difficulty interpreting it. This wording is purely to set the maximum amount a band may borrow.

● 1110

Mr. Korchinski: In this case when you use the word "band", are you referring to \$100,000 loaned to a group that are located in a certain bloc of land, or are you referring to one syndicate?

Mr. Owen: We are referring to the band itself as defined in the Indian Act.

Mr. Korchinski: Was there not an explanation given to us the other day that there could be more than \$100,000, in effect, loaned to a band? Each band, in effect, is regarded as a syndicate for the purposes of this.

Mr. Olson: It may be loaned to farmers who are in the band, but not to the band itself, the legal entity of the band. This is in here for the purpose of being helpful, so that if there is no other legal arrangement, either corporation, co-operative, or other, the band itself can in fact be the legal entity that can borrow the money. There is a maximum the same as any other loan, but there could be other organizations, syndicates, farm corporations, co-operatives, or an agreement between individuals, that would make up a syndicate, that could also borrow. We are just talking about the band when the band itself, in its own name, makes the loan.

Mr. Korchinski: Say, for example, the Cote Reserve is entitled to \$100,000.

Mr. Olson: A maximum of \$100,000.

Mr. Korchinski: That is if the band itself makes a loan, in the case where they farm together as a band. Now, if there are individuals within that reserve, could they get another loan, apart from this \$100,000?

Mr. Olson: Yes, if they formed themselves into a syndicate which had another agreement that was attached to the Minister of Indian Affairs for his agreement, that would be acceptable for another loan.

Mr. Gleave: Could I ask a supplementary, Mr. Chairman. The Minister has explained this before and I appreciate this, but one thing that has eluded me is this. The band as such has committed the resources of the band and it would be the total resources to the tune of x amount. It might be \$50,000 or \$100,000. How then are other individual groups in that band going to commit their resources again? The whole thing is held as a whole. How do you get around this?

[Interprétation]

fixer le montant maximum qui peut être prêté à une bande et même si le texte semble être un petit peu vague, pour nous, il s'agit de quelque chose de très clair, et nous n'avons aucune difficulté à l'interpréter et ce texte-ci n'a pour but que de fixer le maximum qu'une bande peut emprunter.

M. Korchinski: Lorsque vous parlez de bande, parlez-vous de personnes qui se trouvent dans une même bande ou bien d'un syndicat?

M. Owen: Nous parlons de bande, de la bande telle qu'elle est définie dans la Loi sur les Indiens.

M. Korchinski: Est-ce qu'on ne nous a pas dit l'autre jour qu'il pourrait y avoir plus de \$100,000, en fait, qui soient prêtés à une bande. De fait, chaque bande est considérée comme un syndicat.

M. Olson: Ça peut être prêté à des agriculteurs qui sont dans la bande mais pas à la bande elle-même, pas à la bande en tant qu'entité légale. Le seul but de ce texte, c'est de faciliter les choses, de sorte que s'il n'existe aucune société ou coopérative, par exemple, la bande elle-même peut emprunter l'argent. Et là, le maximum est le même que pour n'importe quel autre prêt. D'autres organismes, syndicats, sociétés, coopératives ou des individus qui ont conclu une entente peuvent former un syndicat et emprunter. Nous ne parlons ici que de la bande lorsqu'elle emprunte en son nom propre.

M. Korchinski: Supposons que la réserve Cote a droit à \$100,000.

M. Olson: A un maximum de \$100,000.

M. Korchinski: Si c'est la bande elle-même qui fait l'emprunt, dans le cas où l'exploitation agricole se fait par la bande en commun. Mais s'il y a des agriculteurs individuels dans la réserve, pourraient-ils obtenir un autre prêt, en plus de ces \$100,000?

M. Olson: Oui, s'ils se constituent eux-mêmes en un syndicat qui ait une autre entente avec le ministre des Affaires indiennes, ils peuvent obtenir un autre prêt.

M. Gleave: Monsieur le président, j'ai une question supplémentaire à poser. Le ministre nous a déjà expliqué cela et j'ai bien saisi, mais il y a une chose que je ne comprends pas. La bande en tant que telle a engagé les ressources de cette bande, et il s'agirait des ressources totales jusqu'à un montant X . Supposons que ce montant soit de \$50,000 ou de \$100,000. Comment d'autres groupes individuels de cette bande peuvent-ils alors engager leurs ressources à nouveau? L'ensemble des ressources est engagé. Comment évitez-vous cet écueil?

[Text]

Mr. Olson: There are two answers to that question. One is that I cannot possibly envisage any case where the band could commit the total resources of the Indian reservation, because of course they cannot do it. But the other point is that we start off in this clause, with 3A. (1), subclause (1), that we may enter into and indeed we must enter into an agreement with the Minister of Indian Affairs and Northern Development, as a substitute if you like or in lieu of the other kinds of security that we can take from people who can in fact give security on land and that sort of thing, land or anything else for that matter.

There are two matters here. This would be on agreement with the Minister of Indian Affairs and Northern Development that would be tantamount to a guarantee. So there is no problem in my mind as far as the Corporation is concerned. If we get the agreements from the Minister of Indian Affairs to make these loans, it is not a case of having more than one entity on the reservation committing the same assets.

Mr. Gleave: A supplementary to that, if I may pursue it. It seems to me—and this is one reason I wanted the Department of Indian Affairs and Northern Development to come before this Committee, because some of these points should be cleared up—if the administrator on the reserve says to the Farm Credit Corporation that they will pledge what is on this reserve, it is the earning power of the reserve that is being pledged.

Mr. Olson: They do not pledge the reserve.

Mr. Gleave: No, I know they do not pledge a reserve because they cannot.

Mr. Olson: That is right.

Mr. Gleave: But they pledge the earning power.

Mr. Whicher: No. They pledge an endorsement by the Department of Indian Affairs.

● 1115

Mr. Gleave: All right, but I do not care whether it is an Indian reserve, or a farm, or what ever it is. What you are really working on in the final analysis is the earning power. That is what the Chairman of the Farm Credit Corporation and his people are interested in, in every case, the earning power of the unit they are dealing with. I think the Chairman would agree with me. No one ever wants the assets. The Farm Credit Corporation never wants the assets: they want the earning power.

Mr. Olson: I think, Mr. Gleave has just raised the best possible argument for not calling someone from the Department of Indian Affairs to this Committee to

[Interpretation]

M. Olson: Il y a deux réponses à cela. Tout d'abord, on ne peut pas envisager de cas où la bande engagerait la totalité des ressources de la réserve indienne, car cela lui est impossible. D'autre part, nous commençons dans cet article par 3 A) (1), où il est dit que nous pouvons, et même devons, passer un accord avec le ministre des Affaires indiennes et du Nord canadien, à la place des autres genres de garanties que nous pouvons obtenir des gens qui peuvent en fait donner une garantie sur leur terre ou autre.

Il y a là deux points. Cela se ferait en accord avec le ministre des Affaires indiennes et du Nord canadien, ce qui équivaldrait à une garantie. Il n'y a donc à mon avis aucune difficulté du point de vue de la Société. Si nous obtenons l'accord du ministre des Affaires indiennes pour que ces prêts soient accordés, il n'est plus question que plus d'un groupe de la réserve engage les mêmes ressources.

M. Gleave: Une question supplémentaire, si je peux poursuivre. Il me semble, (et c'est pour cette raison entre autres, que j'aurais voulu que des représentants du ministère des Affaires indiennes et du Nord canadien viennent témoigner ici, car nous devrions avoir des éclaircissements sur certains de ces points) il me semble, dis-je, que si l'administrateur de la réserve dit à la Société du crédit agricole qu'il va engager ce qui est sur la réserve, ce sont les gains possibles de la réserve qu'il engage.

M. Olson: Il n'engage pas la réserve.

M. Gleave: Non, je sais bien qu'il n'engage pas la réserve, car il ne peut pas le faire.

M. Olson: C'est exact.

M. Gleave: Mais il engage les gains possibles.

M. Whicher: Non. Il engage une garantie du ministère des Affaires indiennes.

M. Gleave: Entendu, mais peu m'importe s'il s'agit d'une réserve indienne, d'une entreprise agricole ou de quoi que ce soit. Ce dont on s'occupe vraiment, en fin de compte, c'est des gains possibles. C'est là ce que le président de la Société du crédit agricole et ses fonctionnaires cherchent à savoir dans chaque cas: ce que sont les possibilités de gain du groupe en cause. Je pense que le président serait bien de mon avis. Ce n'est pas l'actif dont on s'occupe. Ce n'est pas ce que cherche la Société du crédit agricole: elle veut connaître les possibilités de gain.

M. Olson: Je pense que M. Gleave vient de donner le meilleur argument que l'on puisse avancer pour ne pas demander à quelqu'un du ministère des Affaires

[Texte]

settle all these details of what kind of an agreement they are going to get into with us. All that this bill is asking is that we have the authority to make the loans if we get an agreement with the Minister of Indian Affairs. And surely that is for the Department of Indian Affairs, the Committee on Indian affairs, to settle, namely what Indian policy is, so that they can give the agreement or the various kinds of agreements that we would need for security.

The Chairman: I want to recognize Mr. Barrett.

Mr. Korchinski: Mr Chairman, I had not quite completed some of the questions I had in mind.

The Chairman: Would you permit a supplementary?

Mr. Korchinski: Well, sure.

Mr. Whelan: Mr. Chairman, will you permit a point of order. I am a little confused. You already stood this amendment, yet you go on discussing it right and left. What did you stand?

The Chairman: I beg you pardon, Mr. Whelan, we stood or withdrew the motion. We are now considering the amendment which was before the Committee last week. It is still before the Committee. Mr. Barrett.

Mr. Barrett: As a point of interest, how many, or would there be an educated guess of how many Indians there are in this country who are bona fide farmers? Is there such an answer? There do not happen to be any in my riding. I am just wondering—this is a point of interest?

Mr. Olson: Mr. Chairman, there are quite a number, but I do not think we have any statistics with us that would give an indication of how many Indians there are who are principally occupied in farming.

Mr. Owen: I might say there are a significant number of acres of land on Indian reserves that are being farmed. There is some uncertainty as to how many are being farmed by who, and who holds title to them, so that the statistics would be rather difficult to compile. But one of the things that would be done in the course of lending is to try to regulate the security of tenure for the operators. That is under the other Act, the farm credit act, of course, to ensure that the borrower has security of tenure on this land that he is farming, and that it is enough to have the earning power to pay us back.

Mr. Chairman, I wonder if I might say something which I think might solve some of the misunderstanding with respect to this lending to a band.

[Interprétation]

indiennes de comparaître devant le Comité pour décider de tous ces détails sur le genre de contrat qu'ils doivent passer avec nous. Tout ce que demande le bill, c'est de nous donner la possibilité d'accorder le prêt si le ministère des Affaires indiennes est d'accord. Assurément, c'est au ministère des Affaires indiennes, au Comité des affaires indiennes de décider de ce qu'est la politique indienne, afin précisément de pouvoir donner l'accord ou les divers genres d'accords dont nous aurions besoin comme garantie.

Le Président: Je donne la parole à M. Barrett.

M. Korchinski: Monsieur le président, je n'avais pas terminé les questions que je voulais poser.

Le Président: Permettriez-vous une question supplémentaire?

M. Korchinski: Oui, bien sûr.

M. Whelan: Permettez-moi un rappel au Règlement. Je ne comprends pas très bien. Vous avez déjà réservé cette modification et vous continuez à la discuter à qui mieux mieux. Qu'est-ce que vous avez réservé, alors?

Le président: Excusez-moi, monsieur Whelan, c'est la motion que nous avons réservée ou retirée. Maintenant, nous étudions la modification proposée au Comité la semaine dernière, et dont nous sommes toujours saisis. Monsieur Barrett.

M. Barrett: Par pure curiosité, combien y a-t-il d'Indiens dans ce pays à votre avis, qui soient des agriculteurs à proprement parler? Il n'y en a pas dans ma circonscription. Je me pose la question, par curiosité.

M. Olson: Il y en a un assez grand nombre, monsieur le président, mais je ne pense pas que nous ayons ici de données statistiques officielles qui puissent nous indiquer le nombre d'Indiens qui s'occupent principalement d'agriculture.

M. Owen: Il y a un grand nombre d'acres de terrain cultivées dans les réserves indiennes. On ne sait pas exactement qui cultive quoi, et qui en est le propriétaire, et par conséquent, il est assez difficile de rassembler des données statistiques.

Mais lorsque nous faisons un prêt, il y a une chose que nous cherchons à faire, c'est de réglementer la garantie de bail pour les exploitants. Cela se fait en vertu de l'autre loi, de la Loi sur le crédit agricole, évidemment, pour nous assurer que l'emprunteur a une garantie de bail sur la terre qu'il exploite, et qu'elle est suffisante pour qu'il ait les possibilités de gain nécessaires pour vous rembourser.

Monsieur le président, je voudrais peut-être ajouter quelque chose qui, peut-être, permettra d'éclaircir certains points en ce qui concerne les prêts aux bandes.

[Text]

The Chairman: If you can, I think you should have the opportunity.

Mr. Owen: I would like to say that the loan to the band itself is made when the band itself is conducting farming operations, and that loan is based on the farming operations of the band. This is quite distinct from those farming operations that may be carried on by individual members of the band in their own right. And this is why there are provisions for lending directly to the band, because in some cases the bands carry out the operation themselves through the band council.

If you would like to get an understanding of this wording on the second page of the amendment to Clause 2, I could give you an example. Let us say that there is a band of 10 members, and of these 10 members there are three who are principally occupied in farming, and seven who may be engaged in farming with other occupations as well, or not engaged in farming at all. But there are three of the 10 who are engaged in farming. In using this formula, as outlined in Subclause (4), we find that there are three principally occupied in farming and as long as there are at least two who are engaged in farming, we can add those two and the number then is five and we can multiply that by \$15,000 and that means that the maximum loan to than band could be \$75,000.

Mr. Williams: But even if the seven were all engaged in farming, but not principally, you could not go up to a total of \$100,000. The maximum still would be five under this section, in order to conform with the other part of the law that in fact says that the majority must have as a principal occupation, farming.

● 1120

The Chairman: We return to you, Mr. Korchinski.

Mr. Korchinski: Well, you will be charged with the responsibility of working that one out.

I want to ask what the Department's attitude is going to be in regard to payments. If, for example, you find that the payment cannot be made in one particular year, is the Department, or the Corporation, then going to turn to the Indian Affairs Department and say, "You have got to make your payments this year". Or are they going to be allowed the same latitude as others who are in default, for one reason or another, in the course of one year?

Mr. Owen: It would be our intention to deal with borrowers from an Indian reserve with respect to repayments precisely the same way as we would with any syndicate anywhere. The only difference is that if

[Interpretation]

Le président: Si vous pouvez le faire, allez-y je vous en prie.

M. Olson: Je voudrais vous dire que le prêt à la bande elle-même est accordé lorsque la bande elle-même s'occupe d'agriculture, et que ce prêt dépend de l'exploitation agricole de la bande. Cela est entièrement distinct des activités agricoles auxquelles peuvent se livrer, de leur propre chef, des membres individuels de la bande. C'est pour cette raison qu'il est prévu de prêter directement à la bande, car, dans certains cas, c'est la bande qui se livre elle-même à l'exploitation, par l'entremise du conseil de la bande.

Si vous voulez comprendre un peu mieux l'énoncé, à la page 2, de la modification à l'article 2, je vais vous donner un exemple. Supposons qu'il y ait une bande de 10 membres, et que, de ces 10 membres, il y en ait trois qui s'occupent principalement d'agriculture, et sept qui s'occupent d'agriculture mais aient aussi d'autres occupations, ou qui ne s'occupent pas du tout d'agriculture. Donc, il y en a trois sur les dix qui s'occupent d'agriculture. Avec la formule que nous avons, celle qui est donnée au paragraphe (4), nous voyons qu'il y a trois personnes qui s'occupent principalement d'agriculture, et, tant qu'il y en a au moins deux qui se livrent à l'agriculture, on peut ajouter deux au nombre précédent, ce qui donne un total de cinq; nous pouvons multiplier cela par \$15,000, ce qui fait que le montant maximum qui puisse être prêté à cette bande est de \$75,000.

M. Williams: Mais même si tous les sept s'occupaient d'agriculture, mais sans s'en occuper principalement, on ne pourrait pas arriver à un total de \$100,000. Le maximum serait tout de même cinq personnes en vertu de cet article, pour se conformer à l'autre partie de la loi, qui dit en fait que la majorité doit s'occuper d'agriculture principalement.

Le président: Monsieur Korchinski, si vous voulez reprendre la parole.

M. Korchinski: Eh bien, c'est vous qui serez chargé de tirer les choses au clair.

Je voudrais savoir quelle sera l'attitude du ministère en ce qui concerne les versements. Si, par exemple, vous constatez que l'on ne peut pas effectuer les versements dans une année donnée, est-ce que le ministère, ou la Société va se tourner vers le ministère des Affaires indiennes et dire: "Il vous faut faire les versements cette année". Ou bien, va-t-on leur donner la même latitude qu'aux autres personnes dont les versements sont en faute, pour une raison ou une autre, au cours d'une année?

M. Owen: Disons que nous allons procéder avec les Indiens des réserves, en ce qui concerne le remboursement des prêts, de la même manière qu'avec n'importe quel autre syndicat. La seule différence, c'est

[Texte]

we did get to the point where we wished to foreclose on some assets, in place of doing this we depend upon this guarantee from the Minister of Indian Affairs. But as far as the normal handling of collections is concerned it would be just the same as we would deal with any other department or any other syndicate.

Mr. Korchinski: Then the only time that the Department of Indian Affairs and Northern Development would have to guarantee it is at the time you are foreclosing. In other words, suppose there were a couple of years of arrears and suddenly the Corporation says, we have to have some payment here. Do they turn to the Department of Indian Affairs even though they may have another 10 years to run in the course of their agreement?

Mr. Owen: If the situation were such that with any other syndicate we would start foreclosure action, in this case we would go to the Minister of Indian Affairs and Northern Development.

Mr. Korchinski: In the event that there is a dissolution or an imminent foreclosure, who gets the prior claim on any of these assets? Does the Corporation get it or any other creditors that may be standing in line?

For example, if you put up a building and that building happens to have additions and alterations to it over the years, there may be other creditors; or the setup looks like a productive one so he is advanced a certain amount of credit. If the credit builds up and at the same time payments are not made to the Corporation, who has prior claim at the time of disposal of the property? Does the Farm Credit Corporation get first claim, or do the other creditors?

Mr. Owen: Could you tell me whether you are referring to property on the reserves, or property ...

Mr. Korchinski: For whatever reasons the syndicate may be set up. There may be various reasons why the syndicate is formed.

Mr. Olson: Mr. Chairman, if you are referring specifically to this Clause 3 (a), I cannot think of any situation where anyone else could get security in the assets on the reservation other than by agreement with the Minister of Indian Affairs and Northern Development. There is no way for anyone to have prior or any other kind of claim on those assets.

Mr. Korchinski: In the case of machinery suppose somebody had advanced a certain amount of repairs for the machinery.

Mr. Whicher: You cannot do it.

Mr. Korchinski: This is the question I am raising. If, for example, it is a tractor—a Caterpillar, if you

[Interprétation]

que, si nous en arrivions au point de vouloir saisir certaines possessions, au lieu de cela, nous nous fierions à la garantie du ministre des Affaires indiennes. Mais en ce qui concerne le traitement normal des perceptions, on agirait comme avec n'importe quel autre ministère ou syndicat.

M. Korchinski: Par conséquent, le seul temps où le ministère des Affaires indiennes et du Nord canadien devrait donner leur garantie, c'est au moment de la forclusion. Autrement dit, si la Société voulait les forcer à rembourser deux années d'arriérés par exemple, s'adressent-ils au ministère des Affaires indiennes même s'il y a encore dix ans avant la fin de leur contrat?

M. Owen: Si la situation était la même que pour n'importe quel autre syndicat, on devrait commencer la forclusion et on se tournerait à ce moment-là vers le ministère des Affaires indiennes et du Nord canadien.

M. Korchinski: Maintenant, s'il y a une dissolution ou une forclusion imminente, qui alors touche d'abord sa part des actifs saisis? Est-ce que c'est la Société ou quelque autre créancier en ligne?

Par exemple, vous construisez un bâtiment et le bâtiment doit être agrandi et modifié au cours des années, il y a peut-être d'autres créanciers; ou l'affaire semble marcher très bien et on lui accorde un certain crédit. Si le crédit est accordé et alors les versements ne sont pas faits à la Société, alors qui a le premier droit lorsque la propriété est vendue? Est-ce que c'est la Société du crédit agricole ou qui d'autre?

M. Owen: Pourriez-vous me dire si vous parlez alors de biens dans les réserves ou de biens. . .

M. Korchinski: Quelle que soit la raison de l'établissement du syndicat. Il peut y avoir plusieurs raisons.

M. Olson: Monsieur le président, si vous faites allusion principalement à cet article 3 a), je n'envisage aucune situation où ce soit quelqu'un d'autre qui obtiendrait la garantie des actifs de la réserve en dehors d'un accord passé avec le ministère des Affaires indiennes et du Nord canadien parce que personne ne peut le faire, que ce soit maintenant, après ou pour n'importe quelle autre situation.

M. Korchinski: Non, mais supposons, par exemple, qu'il s'agisse de machines et qu'une personne ait avancé des frais pour les réparations des machines.

M. Whicher: Vous ne pouvez pas le faire.

M. Korchinski: Voilà la question que je soulève. S'il s'agit, par exemple, d'un tracteur, d'un caterpillar,

[Text]

like—and there were several thousand dollars worth of repairs on it, and over the years everything was going fine and payments were made, but then all suddenly everything fell apart. What happens then? Who gets prior claim?

Mr. Whicher: Anyone who sells under those conditions will be out of business very shortly, I will tell you that.

Mr. Olson: Mr. Chairman, we are having a great deal of difficulty here because I think Mr. Korchinski is confusing rights and claims and that sort of thing, in so far as security is concerned, to Indians and to other situations. No one can have a claim of any kind against assets on an Indian reserve unless they have it with an agreement with the Minister of Indian Affairs and Northern Development. They are not attachable, whether you sold repairs or anything else.

Mr. Korchinski: The Corporation has a claim on this property.

Mr. Olson: No, we do not. We will not have any kind of claim on the property on the reservation, and that is why in Clause 3 we have said:

● 1125

...the Corporation may enter into an agreement with the Minister of Indian Affairs and Northern Development

That is our security—not the claim on the land or the buildings or anything else.

Mr. Whicher: Or the machinery.

The Chairman: I recognize Mr. Douglas, then Mr. Downey and Mr. Moore?

Mr. Douglas: My question, Mr. Chairman, was on Clause 3, but it is not necessarily on this amendment. I do not think we are restricted to the amendment, are we?

The Chairman: No, we are not restricted.

Mr. Douglas: The only question I wanted to ask was about the definition of farm machinery and the limitation which says that it shall be primarily used for farm operations. It is subclause (1) of Clause 3:

for use primarily by the syndicate or its members in their farming operations.

I am thinking of such things as grain dryers which may be used more for custom work than for the syndicate's own operations. Do you have any difficulties in here in defining farm machinery, or primarily for farms?

[Interpretation]

disons, et qu'il y ait plusieurs milliers de dollars de réparation, et qu'avec les ans, tout va bien, tout est remboursé automatiquement, puis brusquement ça ne va pas et la machine tombe en morceaux? Alors qu'est-ce qui se passe? Qui a le premier droit?

M. Whicher: Eh bien, si c'est le cas, à ce moment-là l'agriculteur va faire faillite très vite.

M. Olson: En fait, monsieur le président, on a beaucoup de difficultés parce que je pense que M. Korchinski est en train de mêler les choses. Il est en train de mélanger les droits et les réclamations, etc., en ce qui concerne la garantie, à l'égard des Indiens et dans d'autres cas. En fait, personne peut demander ou revendiquer quoi que ce soit dans les actifs d'une réserve indienne à moins que ce soit fait avec l'accord du ministre des Affaires indiennes et du Nord canadien. Ce ne sont pas des choses qui sont saisissables, que vous vendiez des réparations ou autre chose.

M. Korchinski: La Société de crédit agricole a une réclamation contre ces biens.

M. Olson: Non, absolument pas. Nous n'avons pas le droit de faire une revendication des biens d'une réserve et c'est pour cette raison que nous avons dit à l'article 3:

...la société peut passer un accord avec le ministre des Affaires indiennes et du Nord canadien.

C'est notre garantie, pas un droit sur les terrains ou bâtiments ou toute autre chose.

M. Whicher: Ou les machines.

Le président: La parole est à M. Douglas, ensuite à MM. Downey et Moore.

M. Douglas: Monsieur le président, ma question portait sur l'article 3 mais ce n'est pas nécessairement sur l'amendement. Est-ce que nous sommes limités à discuter de l'amendement ou quoi?

Le président: Non, pas spécialement.

M. Douglas: La seule question que je voulais poser concernait la définition des machines agricoles et de la limite qui dit qu'elles devraient surtout servir aux travaux agricoles. C'est au paragraphe 1 de l'article 3:

lorsque ces machines ou ces terrains doivent servir principalement aux opérations d'agriculture du syndicat ou de ses membres.

Je pense à des séchoirs, notamment, qui peuvent être utilisés à forfait plutôt qu'aux travaux du syndicat. Est-ce que vous avez des difficultés à définir les machines agricoles, ou principalement aux opérations d'agriculture?

[Texte]

Mr. Owen: This does not cause us any great deal of difficulty. We have a definition in our regulations.

"Farm machinery" means machinery, implements or equipment of any kind used in the development or operation of a farm and suitable for use on a cooperative basis by members of a farm machinery syndicate.

We have this limitation in the clause that this equipment must be for use primarily by the syndicate or its members, but this does not prohibit in any way their going farther and doing custom work with it. However you can appreciate that particularly when we get into buildings, and this sort of thing, we would not be wishing to lend to a syndicate to go into a generally broad field of handling the products of all their neighbours. It is really designed primarily for farmers to get together with respect either to operating machinery or marketing their product.

Mr. Douglas: You might be called on to make some judgments on this aspect from time to time.

Mr. Owen: Yes.

Mr. Olson: I think it should be pointed out here, Mr. Chairman, that we would not like to have the rules so strict that the syndicate or its members would be in violation of the act or of the agreement if they used a piece of equipment for custom purposes or for some purpose other than strictly farming, but it is to be used primarily for that purpose before the loan is made.

The Chairman: Mr. Downey?

Mr. Downey: Mr. Chairman, it would seem to me that cattle, livestock and poultry possibly should be included in this with farm machinery because, after all, when you look at them in the light of modern farm business a cow, a sheep or anything of this nature is simply a converter of crude protein—grass or hay—to meat.

We have, I believe, a machine and a process developed that can convert soybean meal to a substitute for meat. We have a machine or an animal—I am not sure which—that the former Minister of Agriculture, I believe, developed that they call a Hayes Converter that he claims will give a ratio of eight pounds of crude protein to four pounds of meat or refined edible protein, and it would seem to me that this should be part of this clause 3.

I suppose you could say that to some extent we can buy livestock under the Farm Improvement Loans Act, but we are limited there. A syndicate might be

[Interprétation]

M. Owen: En fait, cela ne pose pas de difficultés particulières. Nous avons une définition dans nos règlements

«Machines agricoles» signifie la machinerie, les instruments aratoires ou l'équipement de tout genre utilisés dans la mise en valeur ou l'exploitation d'une ferme et qui est approprié à l'usage en commun par les membres d'un syndicat de machines agricoles.

Alors nous avons prévu une limite disant que le syndicat et ses membres doivent en être les principaux utilisateurs, mais cela ne veut pas dire que l'on ne puisse pas aller plus loin et qu'ils ne puissent pas faire des travaux sur commande. N'oubliez pas une chose, cependant, c'est que lorsqu'on entre dans des questions de construction de bâtiments de ce genre nous ne voudrions prêter à un syndicat pour qu'il s'agrandisse et s'occupe des produits de ses voisins. Il s'agit plutôt de voir les agriculteurs se grouper pour utiliser les machines en commun ou mettre leurs produits sur le marché.

M. Douglas: Vous allez peut-être devoir prendre des décisions à ce sujet. On va peut-être vous demander d'évaluer la situation à l'occasion.

M. Owen: Oh oui.

M. Olson: Monsieur le président. Je ne voudrais pas que l'on croie que le règlement soit si strict ou que le syndicat ou ses membres enfreindraient la loi ou l'accord s'ils utilisaient ce matériel pour des travaux à la tâche ou pour d'autres choses que l'agriculture. Disons que ça doit servir surtout à cette fin et surtout avant que le prêt ne soit accordé.

Le président: Monsieur Downey?

M. Downey: Maintenant, monsieur le président, il me semble que le bétail ou les volailles devraient également être associés à ce genre d'opération parce qu'après tout, quand on voit la chose à la lumière de la situation des entreprises agricoles modernes, eh bien, un mouton, une vache ou un animal de ce genre est malgré tout un élément transformateur de protéines brutes en viande.

Je pense que nous avons construit une machine qui peut transformer de la farine de soja en un produit de remplacement de la viande. Nous avons une machine ou un animal, je ne sais plus très bien, que l'ancien ministre de l'Agriculture a mis au point qu'on appelle le convertisseur Hays qui va donner un rapport de huit livres de protéines brutes pour quatre livres de viande ou de protéines comestibles et, par conséquent, je pense que cela devrait être prévu à l'article 3 de la Loi.

Bien sûr, vous pourrez dire que nous pouvons acheter des animaux en vertu de la loi sur les prêts destinés aux améliorations agricoles, mais malgré tout

[Text]

starting a feed lot operation or something of that nature and I suggest definitely they should be included here.

• 1130

Mr. Olson: Mr. Chairman, as has been pointed out there are at least two other acts, the Farm Improvement Loans Act and the Farm Credit Act, where livestock may be part of the assets that are purchased under those two Acts. This Bill is designed for making credit available for joint use or co-operative use of machinery and equipment, and the only animal I can think of that would be jointly used perhaps would be a herd sire, but it seems to me that this would be going quite a long way beyond the purposes of this particular Bill in providing for joint purchase of animals.

They may be partnerships and that sort of thing, but it is not designed for that exclusively. It is designed for partnerships and syndicates to buy equipment and buildings that are going to be used jointly in their operations, and I think the provisions of the Farm Improvement Loans Act and the Farm Credit Act are sufficient, along with all of the other credit facilities, such as they are, for the purchase of other animals which, by and large, are the full property of the individual farmer purchasing them.

Mr. Downey: I do not see why it would be necessary to limit the act in this manner. Actually it would not detract from the act if livestock were included in it, and certainly there is nothing left in the act to indicate it would necessarily need to be machinery because it is now called the Farm Syndicates Credit Act as opposed to the former Farm Machinery Syndicates Credit Act.

Mr. Olson: I can see really no purpose in joint ownership of livestock except in the one case that I mentioned. My friend is aware, Mr. Chairman, that there is \$15,000 available to each member or to each farmer to purchase livestock in his own right.

Mr. Downey: I can visualize a syndicate being formed under this bill to form a feed lot or something of this nature and they might want to go into equipment or into livestock along with this. I do not see the necessity of limiting it to this one aspect.

Mr. Olson: There is no problem about a syndicate using this act to build the facilities of a feed lot but, as I pointed out, when there is already provision under the Farm Improvement Loans Act I do not see any useful purpose in extending it to the joint ownership of livestock, notwithstanding that the facilities for that feed lot may be purchased under the provisions of this act.

[Interpretation]

il y a une limite. Un syndicat qui commencerait, par exemple, à faire de l'engraissement de bétail, devrait figurer dans cette Loi.

M. Olson: Eh bien, monsieur le président, comme il a déjà été indiqué, il y a au moins deux autres lois, la Loi sur les prêts destinés aux améliorations agricoles et la Loi sur le crédit agricole qui permettent que le bétail soit compris dans les biens achetés en vertu de ces lois. Maintenant, le projet de loi actuel est prévu pour offrir des prêts en vue de l'utilisation conjointe des coopératives de machines et les seuls animaux que je pourrais envisager comme utilisés conjointement, ce serait un taureau, qui en quelque sorte, servirait conjointement à une association. Mais ce n'est pas à cela que l'on pensait.

Il est simplement prévu pour que les syndicats des associations achètent des bâtiments qu'ils vont utiliser conjointement dans leur exploitation et je pense que les deux lois, la Loi sur les prêts destinés aux améliorations agricoles et la Loi sur le crédit agricole suffisent, pour certaines formes de prêts concernant évidemment les animaux qui dans l'ensemble représentent les seuls biens du cultivateur qui fait l'achat.

M. Downey: Je ne vois pas pourquoi il serait nécessaire de limiter l'application de la loi de cette façon. Cela ne lui nuirait pas actuellement si le bétail y était inclus, et il n'y a sûrement rien dans l'interprétation de la loi qui indique qu'il devrait s'agir nécessairement de machineries, étant donné qu'on l'appelle maintenant «*Loi sur le crédit aux syndicats agricoles*», par opposé à l'ancienne, «*Loi sur le crédit accordé aux syndicats de machines agricoles*».

M. Olson: Je ne vois vraiment pas d'avantage à la propriété conjointe de bétail, sauf dans le cas que j'ai cité. Vous savez qu'un montant de \$15,000 est disponible pour chaque membre ou cultivateur aux fins d'achat de bétail.

M. Downey: On peut imaginer un syndicat constitué d'après cette loi pour former un parc d'engraissement, par exemple, et dont les membres voudraient par la suite se mécaniser ou s'occuper d'élevage. Je ne crois pas nécessaire de limiter la loi à cet aspect de la question.

M. Olson: Il n'y a pas de problème dans le cas d'un syndicat usant de cette prérogative pour aménager un parc d'engraissement, mais, comme je l'ai signalé, alors qu'il existe déjà une disposition semblable dans la *Loi sur les prêts d'améliorations agricoles*, je ne vois aucun motif de l'étendre à la propriété conjointe du bétail, en dépit du fait que les aménagements de ce parc d'engraissement peuvent être effectués en vertu des dispositions de la présente loi.

[Texte]

Mr. Downey: But if a group were to go together and form a syndicate then they could not actually borrow under the Farm Improvement Loans Act as part of the syndicate, so this would not necessarily help them.

Mr. Olson: They can borrow separately under the Farm Improvement Loans Act and they can borrow just as much.

Mr. Downey: But then the cattle would be a separate entity belonging to each individual and they could not operate as a syndicate in this case.

Mr. Olson: They can make whatever arrangement between themselves that they wish to make. The main principle that is involved here is this. I can see no useful purpose in joint ownership of livestock. The purpose of this is for joint ownership and joint responsibility for the credit in building facilities that are used co-operatively.

Mr. Downey: I think we are unnecessarily complicating the situation by not letting people who would form a syndicate of this nature go ahead and use the funds up to the \$100,000 in the best way that they see fit. They should not be confined to using the funds just for equipment or just for buildings. If they have \$25,000, let us say, on their \$100,000 loan, why should they not be able to go ahead as a syndicate and use this for the purchase of livestock.

• 1135

Mr. Olson: That is an opinion.

The Chairman: I recognize Mr. Moore (Wetaskiwin)?

Mr. Moore (Westakiwin): My question has already been answered, Mr. Chairman.

The Chairman: Mr. Whelan?

Mr. Whelan: I want to ask a question on Clause 3 (2) (b) which reads as follows:

such other security as the Corporation may require.

I believe Mr. Owen said that this differed from the Farm Credit Corporation that you did not care how wealthy a group was that borrowed money. As I understand the principle of the Farm Credit Corporation Act, you are not suppose to loan anybody any money unless there is a need. However, you seem to follow a different principle in respects of this act?

Mr. Owen: There are different implications here. Here a group of farmers are getting together to share in the use of something. Now the fact that one of these farmers may be fairly well established actually

[Interprétation]

M. Downey: Pourtant, si un groupe formait un syndicat, il ne pourrait pas emprunter actuellement sous couvert de la *Loi sur les prêts destinés aux améliorations agricoles* en tant que syndicat, ce qui fait que cela ne l'aiderait pas nécessairement.

M. Olson: Ils peuvent emprunter séparément et tout autant au titre de la *Loi sur l'aménagement rural*.

M. Downey: Mais alors le bétail constituerait une entité séparée, appartenant à chaque individu, et ils ne pourraient agir dans ce cas comme syndicat.

M. Olson: Ils peuvent prendre entre eux tous les arrangements souhaitables; il n'en reste pas moins que je ne vois pas d'avantage à la propriété conjointe du bétail. Le but en est la responsabilité conjointe en matière de crédit dans la construction d'aménagements à usage coopératif.

M. Downey: Je crois que nous compliquons la situation sans nécessité en ne laissant pas les gens désireux de se syndiquer de la sorte d'aller de l'avant, en ne permettant pas aux associés d'utiliser leurs \$100,000, au meilleur de leurs projets. S'il leur reste, par exemple, \$25,000, sur leur emprunt de \$100,000, pourquoi ne pourraient-ils pas utiliser cet argent pour l'achat de bestiaux?

M. Olson: C'est une opinion . . .

Le président: Monsieur Moore (Wetaskiwin).

M. Moore (Wetaskiwin): On a déjà répondu à ma question, monsieur le président.

Le président: Monsieur Whelan?

M. Whelan: Je voudrais poser une question relativement à l'article 3 (2) (b) qui se lit comme suit:

«...toute autre garantie que la Société peut exiger»

M. Owen a dit, je crois, que la différence avec la Société de crédit agricole est que vous ne vous souciez pas de l'actif du groupe emprunteur, la loi supposant qu'on n'effectue pas de prêts à moins d'un besoin précis. Cependant, vous semblez suivre un principe différent eu égard à l'actuel projet de loi.

M. Owen: Il y a ici d'autres implications. Prenons un groupe de cultivateurs qui s'associent pour utiliser conjointement un matériel. Dans le cas où l'un des partenaires est très bien établi, il peut aider à la bonne

[Text]

can add strength to the syndicate itself, it might add strength to the management of the affairs of the syndicate, and we should not then limit that syndicate by depriving other members of the opportunity of associating with them. In making loans under the Farm Credit Act, for the purchase of land we must remember that land is a limited resource, that there is just so much land and that if we lent large amounts of funds to those who already have large amounts of land so that they could compete with other people who needed the land to have an adequate operation we would have an impact on the land market. But in this kind of thing we are not likely to have any such impact at all, and if three, four or five farmers wish to get together it would seem inappropriate to the man who happens to be well off and a competent manager, to say "You have to move out of that group."

Mr. Whelan: I can understand that. However, if I remember correctly when this was first put into force the idea was to give the smaller farmer the right to form a syndicate so he could compete with the vertical integrator or the large, large operator. It seems to me that under this there would be nothing wrong if four or five very large operators wanted to borrow this money and form a syndicate. You would not be able to refuse them a loan under this act, you would have to go along with it whether they were all very well off or whether just one of them was well off.

Mr. Owen: There is nothing in this act which says that we can decline to lend under those circumstances but experience indicates that the kind of people you are talking about wish to have sufficient independent control of their assets and not many of them will form a syndicate. The real value here is that they are giving up some of their independent ownership in order to get the economies of scale and savings of operations, and this willingness to give up independent ownership and independent control is more likely to appear in those people who need to in order to improve their income.

The Chairman: Gentlemen, shall Clause 3 stand?

Mr. Danforth: I have further questions on Clause 3 itself but I would first like to put some questions on the amendment moved by the Minister.

Could someone explain to me the difference between a tribe and a band. I find some difficulty in determining the basic difference. I am not dealing with the terms as prescribed by the Indian Act specifically, I am dealing with the corporation's contemplation of this.

Mr. Olson: Mr. Chairman, my understanding is that "band" is the legal word used, and that is why it is in this act.

[Interpretation]

marche du syndicat, et je ne vois pas pourquoi nous limiterions les prêts à cause de cela. En accordant des prêts d'après la Loi du crédit agricole pour l'achat de terres, nous devons nous rappeler que celles-ci ne sont pas inépuisables. Si nous prêtons d'importantes sommes à ceux qui possèdent déjà d'importantes terres, ils seront amenés à entrer en concurrence avec d'autres cherchant à s'établir, ce qui aurait une incidence sur le marché. Toutefois, cela n'arrivera pas dans le type de transaction que nous discutons présentement. Si trois ou quatre agriculteurs veulent s'associer, il semblerait injustifié de demander à celui qui se révèle être bien en fonds en même temps que dirigeant avisé de se retirer du groupe.

M. Whelan: Si je me souviens bien pourtant, lors de la première mise en application de cette loi, l'idée était de donner aux petits cultivateurs le droit de former des syndicats afin qu'ils puissent faire concurrence aux grandes entreprises. Il me semble qu'il n'y aurait pas de mal à permettre à quelques grands cultivateurs d'emprunter de l'argent, et de se syndiquer. En vertu de ce texte, il faudrait certainement leur consentir des prêts qu'ils soient tous à l'aise ou non.

M. Owen: Il n'y a rien dans ce règlement qui s'y oppose; l'expérience montre cependant que la catégorie de personnes dont vous parlez veulent avoir un contrôle assez indépendant de leurs avoirs, et peu d'entre eux sont désireux de se syndiquer. Les emprunteurs renoncent partiellement à leur propre contrôle pour obtenir un prêt, et cette propension à abandonner le contrôle indépendant de l'entreprise est davantage le fait de ceux qui ont besoin d'améliorer leurs revenus.

Le président: Vous avez des questions, monsieur Danforth?

M. Danforth: J'ai des questions à poser sur l'article 3 mais j'aimerais aussi revenir sur l'amendement proposé par le ministre. J'aimerais que l'on me donne des explications sur la différence entre une tribu et une bande d'Indiens. J'aimerais savoir quelle est la différence fondamentale. Je ne parle pas des termes précis utilisés dans la Loi sur les Indiens, mais de leur application sociétaire.

M. Olson: M. le président, d'après ce que j'ai compris, le mot «bande» est le terme juridique que l'on emploie, et c'est pour cela qu'il est inscrit dans la Loi.

[Texte]

● 1140

[Interprétation]

Mr. Danforth: Are band and tribe synonymous, sir.

M. Danforth: Est-ce que «bande» et «tribu» sont synonymes?

Mr. Olson: No.

M. Olson: Non.

Mr. Danforth: This is what I am asking.

M. Danforth: C'est pourquoi je pose ma question.

Mr. Olson: I understand that a tribe could include more than one band. There could be different locations and different reservations but it would still be part of the tribe.

M. Olson: Une tribu peut comprendre plus d'une bande. Il peut y avoir des réserves différentes, mais faisant partie d'une même tribu.

Mr. Danforth: I thank you.

Under the terms of this amendment which deals with Indian bands, their loans and applications for them, are the prescribed maximums as set out in the amendment in addition to any loans that may be held by the individuals under the farm improvement loan and the Farm Credit Corporation loan?

M. Danforth: Merci. D'après les dispositions de cet amendement au sujet des bandes indiennes et les prêts les concernant, est-ce que les maximums tels que définis d'après l'amendement viennent s'ajouter à tous les autres prêts contractés par les individus en vertu des autres lois sur le crédit agricole?

Mr. Owen: Yes, they are quite separate maximums.

M. Owen: Oui, ce sont des maximums tout à fait distincts.

Mr. Danforth: In other words, if an individual or a group of individuals make application under a syndicate loan and have borrowed up to the maximum under the farm improvement loan and the Farm Credit Corporation loan this has no bearing on the limits prescribed under the farm syndicate loan.

M. Danforth: Par conséquent, si un individu, ou un groupe d'individus font une demande de prêt à titre syndical, alors qu'ils ont déjà emprunté au maximum de par la Loi sur les prêts d'améliorations agricoles, cela ne jouerait pas quant aux limites imposées aux prêts syndicaux?

Mr. Owen: Well it does not have a bearing on the legal limit; it might have a very significant bearing on the amount we would be willing to lend. In other words, before we would make a loan we would have full details of the assets, the liabilities and the earning power. The fact that they had significant other liabilities has a very definite effect on our decision but it does not effect their technical legal eligibility.

M. Owen: Cela aurait certainement une influence sur le montant que nous sommes prêts à consentir. Avant de consentir un prêt, nous devrions avoir un rapport complet sur l'actif, le passif et les revenus. Cela a une grande influence sur notre décision, mais n'affecte pas l'admissibilité au point de vue technique et légal.

Mr. Danforth: In other words, it is left completely to the discretion of the corporate officers who are, in fact, checking out the financial stability of the syndicate members?

M. Danforth: En d'autres termes, on laisse cela complètement à la juridiction des fonctionnaires de la Société qui s'informent sur la stabilité financière des membres du syndicat?

Mr. Owen: Yes, this is so. Of course this is so in any lending. Even under the Farm Credit Act itself we might lend up to \$40,000 but that does not say that we always will.

M. Owen: Oui, c'est juste, mais cela est le cas pour n'importe quel prêt. Nous pouvons faire des prêts jusqu'à \$40,000, en vertu de la Loi sur le crédit agricole. Mais cela ne veut pas dire que nous le ferons tout le temps.

Mr. Danforth: This is what I am trying to tie in under Clause 3 and under the amendment itself. There is then no differentiation in the amount that may be borrowed by Indians and Indian bands and other farmers or farm syndicates?

M. Danforth: C'est ce que nous essayons de rattacher à l'article 3 et à l'amendement lui-même. Par conséquent, il n'y a pas de différence, de distinction entre les montants que peuvent emprunter les Indiens et les bandes indiennes, et les autres cultivateurs ou syndicats agricoles.

Mr. Owen: That is right, no difference.

M. Owen: Vous avez raison, il n'y a pas de différence.

[Text]

Mr. Danforth: Provided it is in agreement with the Department of Indian Affairs and Northern Development?

Mr. Owen: Yes.

Mr. Danforth: My other question, Mr. Chairman, is on the amendment itself. It states under 3A.

(1) with the approval of the Governor in Council, the Corporation may enter into an agreement with the Minister of Indian Affairs and Northern Development

Is it within the purview of the Minister of Indian Affairs and Northern Development to further modify the terms of this specific agreement? If I may rephrase my question for clarification, Mr. Chairman, under the terms of this particular act this amendment prescribes the regulations under which the Corporation may lend money to Indian bands or syndicates formed by Indians themselves. Is it not true that the Indians are subjected to further regulations? Since there is a two-party agreement between two departments is it not possible that the Minister of Indian Affairs and Northern Development, through his department, may prescribe different regulations under which Indians may borrow money?

● 1145

Mr. Owen: The agreement with respect to the circumstances under which we may lend and the circumstances under which the Minister will guarantee our loans is being worked out, and we will be in consultation with the officials of the Corporation and the officials of the Indian Affairs branch. Now that agreement of course will provide that from time to time it may be amended, as is the case with any agreement, but it will set out in broad terms the circumstances under which the Minister will guarantee loans.

Mr. Danforth: I can appreciate circumstances which may make this possible and practical, but, actually the regulations under which Indians in an Indian band or on a reservation may borrow money may not be as prescribed under this particular amendment but, rather, as a result of an arbitrary agreement between the two departments.

Mr. Olson: Mr. Chairman, I do not think that is correct. The agreement that is referred to, in the first part of this clause does not spell out the terms and conditions of that agreement because that, of course, has to be worked out, as Mr. Owen has pointed out, between the two departments. But the agreement, if this becomes legislation, will certainly have to be such that one can work with the other. These are the terms and conditions if we get an agreement in so far as the security is concerned. Now what the Minister of Indian Affairs or the Department of Indian Affairs

[Interpretation]

M. Danforth: A condition que l'on ait l'approbation du ministère des Affaires indiennes et du Nord canadien?

M. Owen: Oui.

M. Danforth: J'ai une autre question à poser sur l'amendement. L'article 3A dit:

(1) Avec l'approbation du gouverneur en conseil, la Société peut conclure un accord avec le ministre des Affaires indiennes et du Nord canadien.

Est-ce que le ministre des Affaires indiennes et du Nord canadien a l'autorisation ou le pouvoir de modifier de nouveau les dispositions de cet accord en particulier. Je pose ma question d'une autre façon, pour plus de clarté. D'après les dispositions de cette loi, cette modification prévoit des règlements d'après lesquels la Société peut prêter de l'argent aux bandes indiennes ou à des syndicats formés par les Indiens eux-mêmes. N'est-il pas vrai que les Indiens sont sujets à d'autres règlements? Parce qu'il s'agit d'un accord entre deux ministères, n'est-il pas possible que le ministre des Affaires indiennes et du Nord canadien fasse des règlements différents d'après lesquels les Indiens peuvent emprunter de l'argent?

M. Owen: L'accord, en ce qui concerne les circonstances dans lesquelles nous pouvons faire des prêts et les circonstances dans lesquelles le ministre donnera des garanties est établi après consultation entre les fonctionnaires de la Société et les fonctionnaires du ministère des Affaires indiennes et du Nord canadien. Bien entendu, cet accord peut être modifié de temps en temps comme tout autre accord. Mais cet accord établira en termes généraux les circonstances dans lesquelles le ministre pourra garantir les prêts.

M. Danforth: Je reconnais qu'il y a des circonstances qui peuvent rendre cela possible et pratique, mais de fait, les règlements d'après lesquels les Indiens qui font partie d'une bande ou habitent dans une réserve peuvent emprunter de l'argent ne sont pas tels que prescrits dans cet amendement, mais sont plutôt le résultat d'un accord arbitraire négocié entre deux ministères.

M. Olson: Monsieur le président, je ne pense pas que l'on ait raison de dire cela. L'accord dont on parle dans la première partie de cet article n'établit pas les termes et les conditions de cet accord, parce que cela doit être décidé entre les deux ministères, comme l'a dit M. Owen. Mais l'accord, si la loi est adoptée, devra être tel que les deux ministères pourront travailler ensemble. Ce sont là les conditions, si on peut obtenir un accord au sujet de la sécurité, de la garantie. Ce que le ministre, ou le ministère des Affaires indiennes et du Nord canadien, voudra inclure dans cet

[Texte]

want to put into that agreement in so far as terms and conditions are concerned between the Minister and the band of course is not for us to decide—it is up to the Indian Affairs department to make that decision—but after we have that agreement then we have spelled out in the subsequent clauses the manner in which we will deal with the Indian bands, after we have the agreement for security, and hopefully that will be as nearly as is possible the same basis for Indians as other people.

Mr. Danforth: Mr. Chairman, I will conclude this in about one minute. Based on what the Minister has stated, is it not a fact that in the practical application of this particular amendment and the legislation set out before us we are by this amendment trying to put the Indian farmer on the same status as every other farmer in Canada?

Mr. Olson: Right.

Mr. Danforth: But is it not a practical fact that although the maximum loan for example under this particular act is set at \$100,000 maximum, because of guidelines laid down by the Minister of Indian Affairs in some instances there would be a maximum of only \$60,000 to Indian bands who would apparently have the same qualifications as other farmers who would be eligible, as a syndicate, for \$100,000?

Mr. Olson: The rules and regulations, as we see them within this act, will not lower our limit, but we do not make any pretence at setting up the rules and regulations within the Indian Affairs department.

The Chairman: Thank you, gentlemen. We have reached the hour of adjournment.

Clause 3 stood.

The Chairman: I would ask the members of the Steering Committee to wait a few minutes for a consultation.

The meeting is adjourned to the call of the Chair.

[Interprétation]

accord en ce qui concerne les conditions est une chose qui sera décidée entre le ministre et les bandes d'Indiens. Nous n'avons pas à décider les choses qui concernent le ministère des Affaires indiennes et du Nord canadien. Mais lorsque nous aurons obtenu cet accord, nous établirons la façon dont nous traiterons avec les bandes indiennes, après que nous aurons obtenu l'accord au sujet des garanties, et nous espérons que cela sera fait de la même façon pour les Indiens que pour les autres citoyens.

M. Danforth: Je termine dans une minute, monsieur le président. D'après ce que le ministre a dit, n'est-il pas vrai que, dans l'application de cette modification et de la législation que nous sommes en train d'étudier, nous essayons de placer le cultivateur indien sur le même pied que tous les autres cultivateurs canadiens?

M. Olson: En effet.

M. Danforth: N'est-il pas vrai en pratique que, bien que le prêt maximum, d'après cette Loi, atteigne \$100,000 à cause des directives établies par le ministre des Affaires indiennes et du Nord canadien, il pourra parfois s'élever à un maximum de \$60,000 seulement pour les bandes indiennes qui auront apparemment les mêmes qualités, les mêmes qualifications que d'autres fermiers qui pourraient obtenir \$100,000?

M. Olson: Les règlements ne feront pas baisser notre limite, mais nous ne prétendons pas établir de règlements pour le ministère des Affaires indiennes et du Nord canadien.

Le président: Merci, messieurs. C'est le moment de lever la séance.

L'article 3 est réservé

Le président: Je demanderais aux membres du comité directeur de demeurer ici quelques minutes. La séance est levée jusqu'à nouvelle convocation du président.

REPORT TO THE HOUSE

Friday, February 21, 1969.

The Standing Committee on Agriculture has the honour to present its

SIXTH REPORT

Pursuant to its order of Reference of Wednesday, January 15, 1969, your Committee has considered Bill C-112. An Act to amend the Farm Machinery Syndicates Credit Act, and has agreed to report it with the following amendment:

To Clause 3, immediately after section 3 thereof on page 2, add the following section:

“3A. (1) With the approval of the Governor in Council, the Corporation may enter into an agreement with the Minister of Indian Affairs and Northern Development

- (a) for the purpose of enabling loans to be made under this Act to bands engaged in farming operations on reserves where at least three members of any such band who have attained the age of twenty-one years are engaged in the farming operations of the band and at least two of those members are principally occupied in such farming operations; and
- (b) for the purpose of providing such security as the Corporation may require under paragraph (b) of subsection (2) of section 3 in respect of loans made to farm syndicates
 - (i) that are co-operative farm associations or farming corporations, the members or shareholders of which are Indians on reserves, or
 - (ii) that are associations referred to in subparagraph (iii) of paragraph (c) of subsection (1) of section 2, the members of which are Indians on reserves or farming corporations the shareholders of which are Indians on reserves.

(2) Where an agreement has been entered into pursuant to subsection (1), a band referred to in paragraph (a) of that subsection shall be deemed to be a farm syndicate for the purposes of this Act and the provisions of this Act, in so far as practicable, shall apply to all loans made or to be made to that band.

(3) Where a loan is made or to be made to a band referred to in paragraph (a) of subsection (1), the

RAPPORT À LA CHAMBRE

Le vendredi 21 février 1969

Le Comité permanent de l'agriculture a l'honneur de présenter son

SIXIÈME RAPPORT

Conformément à l'ordre de renvoi du mercredi 15 janvier 1969, le Comité a étudié le Bill C-112, Loi modifiant la Loi sur le crédit accordé aux syndicats de machines agricoles, et est convenu d'en faire rapport avec la modification suivante:

A l'article 3 du bill, immédiatement après l'article 3 de la loi, à la page 2, ajouter l'article suivant:

«3A. (1) La Société peut, avec l'approbation du gouverneur en conseil, conclure en accord avec le ministre des Affaires indiennes et du Nord canadien

- a) aux fins de permettre l'octroi de prêts en vertu de la présente loi à des bandes qui s'adonnent à des opérations agricoles sur des réserves lorsqu'au moins trois membres de la bande qui ont atteint l'âge de vingt et un ans s'adonnent aux opérations agricoles de la bande et qu'au moins deux de ces membres ont pour principale occupation ces opérations agricoles; et
- b) aux fins de fournir la garantie que la Société peut exiger en vertu de l'alinéa b) du paragraphe (2) de l'article 3 en ce qui concerne les prêts consentis à des syndicats agricoles
 - (i) qui sont des coopératives agricoles ou des corporations d'agriculture dont les membres ou les actionnaires sont des Indiens installés sur des réserves, ou
 - (ii) qui sont des associations visées au sous-alinéa (iii) de l'alinéa c) du paragraphe (1) de l'article 2, dont les membres sont des Indiens installés sur des réserves ou des corporations d'agriculture dont les actionnaires sont des Indiens installés sur des réserves.

(2) Lorsqu'un accord a été conclu en conformité du paragraphe (1), une bande visée à l'alinéa a) de ce paragraphe est considérée comme un syndicat agricole aux fins de la présente loi et les dispositions de la présente loi s'appliquent, autant que possible, à tous les prêts consentis ou devant être consentis à cette bande.

(3) Lorsqu'un prêt est consenti ou doit être consenti à une bande visée à l'alinéa a) du para-

loan shall be secured in such manner as may be required by the agreement entered into pursuant to subsection (1).

(4) The total amount outstanding of loans that may be made to any one band under this Act shall not exceed the lesser of one hundred thousand dollars or the amount obtained by multiplying fifteen thousand dollars by the number of members of the band engaged in the farming operations of the band at the time the loan is made, except that where the number of such members principally occupied in the farming operations of the band is equal to or less than the number of such members not principally so occupied, the number of such members not principally so occupied shall be deemed to be one less than the number principally so occupied.

(5) With the approval of the Governor in Council, the Corporation may make regulations providing for any matter or thing that it deems necessary in order to make or to facilitate the making of loans under this Act to bands referred to in paragraph (a) of subsection (1).

(6) For the purposes of this section, the words "Indian", "band" and "reserve" have the meanings assigned to them in the *Indian Act*."

A copy of the Minutes of Proceedings and Evidence relating to this Bill (*Issues Nos. 19, 20 and 21*) is tabled.

Respectfully submitted,

Le président,
BRUCE S. BEER,
Chairman.

phe (1), le prêt doit être garanti de la manière qui peut être prescrite dans l'accord conclu en conformité du paragraphe (1).

(4) Le montant global non remboursé des prêts qui peuvent être consentis à une même bande en vertu de la présente loi ne doit dépasser ni cent mille dollars ni le montant obtenu en multipliant quinze mille dollars par le nombre de membres de la bande qui s'adonnent aux opérations agricoles de la bande au moment où le prêt est consenti, mais, lorsque le nombre des membres de la bande qui ont pour principale occupation les opérations agricoles de la bande est égal ou inférieur à celui des membres de la bande pour lesquels c'est une occupation secondaire, le nombre de ces derniers est censé être inférieur d'une unité au nombre des premiers.

(5) La Société peut, avec l'approbation du gouverneur en conseil, établir des règlements au sujet de toute question ou chose qu'elle estime nécessaire pour lui permettre de consentir des prêts, en vertu de la présente loi, aux bandes visées à l'alinéa a) du paragraphe (1), ou pour en faciliter l'octroi.

(6) Aux fins du présent article, les mots «Indien», «bande» et «réserve» ont la signification que leur donne la *Loi sur les Indiens*.»

Un exemplaire des procès-verbaux et témoignages relatifs à ce bill (*fascicules nos 19, 20 et 21*) est déposé.

Respectueusement soumis,

[Text]

MINUTES OF PROCEEDINGS

Thursday, February 20, 1969.
(24)

The Standing Committee on Agriculture met at 9:43 a.m. this day, the Chairman, Mr. Beer, presiding.

Members present: Messrs. Barrett, Beer, Cobbe, Cyr, Danforth, Douglas, Downey, Foster, Gauthier, Gleave, Howard (*Okanagan Boundary*), Korchinski, Lambert (*Bellechasse*), Leblanc (*Rismouski*), Lessard (*Lac-Saint-Jean*), Lind, Moore (*Wetaskiwin*), Muir (*Lisgar*), Southam, Stewart (*Okanagan-Kootenay*), Thomson (*Battleford-Kindersley*), Whicher—(22).

Witnesses: From the Department of Indian Affairs and Northern Development: Mr. J. B. Bergevin, Assistant Deputy Minister Economic Development; Mr. J. W. Churchman, Director, Operations Branch; *and from the Farm Credit Corporation:* Mr. G. Owen, Chairman.

The Committee resumed consideration of Bill C-112, An Act to amend the Farm Machinery Syndicates Credit Act, Clause 3, and the amendment moved thereto.

The Chairman presented the Second Report of the Subcommittee on Agenda and Procedure, as follows:

Your Subcommittee met last Tuesday afternoon to consider the matter referred to it by this main Committee at the meeting that morning.

The Subcommittee recommends that, on the matter of the amendment moved by Mr. Douglas to Clause 3 of Bill C-112, the main Committee hear at the meeting this morning representatives of the Department of Indian Affairs and Northern Development, together with representatives of the Department of Agriculture and the Farm Credit Corporation, with questioning of them to be relevant to the amendment moved.

On motion of Mr. Danforth,

Resolved,—That the Subcommittee's report be adopted.

The Chairman introduced the witnesses and they were questioned.

The amendment was carried and Clause 3 as amended was carried.

On Clause 4, there were some questions.

[Traduction]

PROCÈS-VERBAUX

Jeudi 20 février 1969.
(24)

Le Comité permanent de l'agriculture se réunit ce matin à 9 h. 43, sous la présidence de M. Beer, président.

Présents: MM. Barrett, Beer, Cobbe, Cyr, Danforth, Douglas, Downey, Foster, Gauthier, Gleave, Howard (*Okanagan Boundary*), Korchinski, Lambert (*Bellechasse*), LeBlanc (*Rimouski*), Lessard (*Lac-Saint-Jean*), Lind, Moore (*Wetaskiwin*), Muir (*Lisgar*), Southam, Stewart (*Okanagan-Kootenay*), Thomson (*Battleford-Kindersley*), Whicher—(22).

Témoins: Du ministère des Affaires indiennes et du Nord canadien: M. J. B. Bergevin, sous-ministre adjoint, Développement économique; M. J. W. Churchman, chef de la Direction de l'exploitation. *De la Société du crédit agricole:* M. G. Owen, président.

Le Comité reprend l'examen du Bill C-112—Loi modifiant la Loi sur le crédit accordé aux syndicats de machines agricoles—à l'article 3, ainsi que la modification proposée à cet article.

Le président présente le second rapport du sous-comité du programme et de la procédure, à savoir:

Le sous-comité s'est réuni jeudi dernier, dans l'après-midi, pour examiner la question que lui avait renvoyée le Comité lors de la séance de ce matin-là.

Le sous-comité recommande que, relativement à la modification à l'article 3 du Bill C-112 proposée par M. Douglas, le Comité reçoive, lors de la séance de ce matin, les témoignages des représentants du ministère des Affaires indiennes et du Nord canadien, ainsi que ceux des représentants du ministère de l'Agriculture et de la Société du crédit agricole, et questionne ces témoins sur des sujets relatifs à la modification proposée.

Sur la proposition de M. Danforth,

Il est résolu—Que le rapport du sous-comité soit adopté.

Le président présente les témoins, qui répondent ensuite à des questions.

La modification est adoptée, et l'article 3 modifié est adopté.

Sur l'article 4, on pose quelques questions.

Clauses 4, 5, 6 and 1 were carried, as were the title and the bill as amended.

It was agreed that the Chairman would report Bill C-112 with amendment.

At 11:54 a.m., the Committee adjourned to the call of the Chair.

Les articles 4, 5, 6 et 1 sont adoptés, ainsi que le titre et le bill modifié.

Il est convenu que le président fera rapport du Bill C-112 avec modification.

A 11 h. 54, le Comité s'ajourne jusqu'à nouvelle convocation du président.

*Le secrétaire du Comité,
Michael A. Measures,
Clerk of the Committee.*

[Texte]

EVIDENCE

(Recorded by Electronic Apparatus)

Thursday, February 20, 1969

The Chairman: Gentlemen, I see a quorum.

We will resume consideration of Bill No. C-112, an act to amend the Farm Machinery Syndicates Credit Act, Clause 3, an amendment moved thereto. Gentlemen I now present the Second Report of the Subcommittee on Agenda and Procedure.

(See Minutes of Proceedings)

The Chairman: Is it agreed that this Report be adopted?

Some hon. Members: Agreed.

● 0945

The Chairman: I have the pleasure to introduce to the Committee this morning some familiar faces and some new faces. We are pleased, of course, to have the Assistant Deputy Minister, Mr. Jarvis, with us this morning from the Department of Agriculture. We are happy of course to have Mr. Bergevin, the Assistant Deputy Minister, Department of Indian Affairs and Northern Development and Mr. Churchman, also from the Department of Indian Affairs and Northern Development.

Gentlemen, the meeting is now open for questioning. I would ask that you confine your questions to the amendment.

Before we proceed with that I want to interject one other bit of business. Last week we offered to the members of the Committee the general syndicate agreement and also a sample of the local syndicate agreement. These were not available in French last Tuesday morning. They are available in French this morning and will be made available to any member who would like to have them.

I am informed that Dr. Aquino, Director General, World Food Program, will be in Ottawa on March 3 and 4. The question has been raised whether the Committee might like to have the opportunity of having Dr. Aquino here for the purpose of directing the Committee and of being available for questions. This raises the matter of a provision whereby we can invite him. I am informed that the Estimates will be before the Committee at that time and we could hear Dr. Aquino on Item 1 or the Estimates.

[Interprétation]

TÉMOIGNAGES

(Enregistrement électronique)

Le jeudi 20 février 1969

Le président: Messieurs, je vois que nous avons le quorum. Nous allons donc reprendre l'étude du projet de loi C-112, loi visant à modifier la Loi sur le crédit accordé aux syndicats d'équipement agricole, Article 3. Il y a un amendement qui a été proposé. Messieurs, je vais vous présenter maintenant le deuxième rapport du sous-comité du programme et de la procédure.

(Voir procès-verbaux)

Le président: Êtes-vous d'accord pour adopter ce rapport?

Des voix: D'accord.

Le président: J'ai le plaisir maintenant de vous présenter ce matin des visages familiers et quelques visages nouveaux. Nous avons le plaisir d'avoir parmi nous le sous-ministre adjoint, M. Jarvis, du ministère de l'Agriculture, nous avons également M. Bergevin qui est le sous-ministre adjoint du ministère des Affaires indiennes et du Développement du Nord canadien et M. Churchman, qui est également du ministère des Affaires indiennes et du Développement du Nord canadien.

Messieurs, maintenant, vous pouvez poser vos questions. Je vous prierais de limiter vos questions à l'amendement qui a été proposé.

Avant d'aller plus loin, je voudrais vous dire une chose; la semaine dernière, nous avons proposé aux membres du comité une convention syndicale générale, et un modèle de convention syndicale locale. Hier matin nous n'avions pas la copie française, nous l'avons maintenant et ceux qui veulent, peuvent se la procurer immédiatement.

Messieurs, on m'a dit que le docteur Aquino qui est le directeur général de l'Association mondiale pour l'alimentation sera à Ottawa les 3 et 4 mars. On a soulevé la question, à savoir si le docteur Aquino devait venir ici, d'une part, pour prendre la parole devant le Comité, d'autre part, pour répondre à des questions. La question donc se pose, il faudrait que l'on prévoie une invitation pour le docteur Aquino. Je crois savoir qu'à ce moment-là on étudiera les prévisions budgétaires et on pourra entendre le docteur Aquino sur l'article 1 des prévisions budgétaires.

[Text]

Is it the wish of the Committee that we invite him to appear on the morning of Tuesday, March 4?

Some hon. Members: Agreed.

Mr. Danforth: Mr. Chairman, if I may make a suggestion, for the benefit of the members of the Committee perhaps the clerk, when he sends out the notices for this meeting, could provide a short synopsis of the background of the speaker so that we can be quite familiar with it?

The Chairman: That could be done, I am sure. Thank you, gentlemen.

I recognize Mr. Gleave.

Mr. Gleave: Mr. Chairman, as the member of the Committee who requested that the department appear before the Committee, I express my appreciation to them for being so ready to come before us and discuss this very important new step. Mr. Bergevin, what would be your objectives, working under this Act? Is it going to be feasible to work with the Farm Credit Corporation along this line?

Mr. J.B. Bergevin (Assistant Deputy Minister, Economic Development, Department of Indian Affairs and Northern Development): First Mr. Chairman, with your permission I will sometimes ask Mr. Churchman to help me out on this. I am a new appointee and have not reached a level yet where I can look like a civil servant who knows everything.

● 0950

I understand that before I arrived the department tried to have the Indians recognized as having the same treatment as non-Indians relative to the Farm Credit Act and that it went out of its way to get this. We, candidly never thought of this Bill as being really connected with it, but we certainly do believe that Indians should be given the same treatment as non-Indians.

As a matter of fact, statistics that we prepared yesterday show that we have over 2 million acres of potential arable acreage that could be used. This means, in effect, that the estimated cost of fully developing Indian agricultural land is of the order of magnitude of \$202 million, so that we have quite an active program to carry out. The probable sources for financing the development of the agricultural land on the reserves would be that ARDA would perhaps contribute \$40 million; that loans from the Farm Credit Corporation and other credit agencies would

[Interpretation]

Est-ce que le Comité est donc d'accord pour que nous invitions le docteur Aquino à se présenter en matinée, le mardi 4 mars?

Des voix: D'accord.

M. Danforth: Monsieur le président, puis-je faire une suggestion, au bénéfice des membres du Comité, que peut-être le secrétaire devrait nous fournir, lorsqu'il envoie une convocation pour ces réunions, en même temps un petit rapport sur les réunions pour que nous sachions de quoi il va s'agir?

Le président: Cela peut se faire, j'en suis sûr. Merci messieurs.

M. Gleave a la parole.

M. Gleave: Monsieur le président, en tant que membre du comité, qui ait demandé que le ministère des Affaires indiennes fasse connaître son opinion, je suis très heureux de voir les représentants de ce ministère devant nous ce matin. C'est là quelque chose d'effectivement très important.

Monsieur Bergevin, quel serait l'objectif recherché dans le cadre de cette loi. Est-ce que vous pensez que ce sera quelque chose de réalisable que de travailler en coopération avec la Société du crédit agricole selon cette ligne d'action?

M. J. B. Bergevin (sous-ministre adjoint, Expansion économique, ministère des Affaires indiennes et du Nord canadien): Avec votre permission, monsieur le président, tout d'abord, je vous demanderai parfois de me permettre de demander à M. Churchman de m'aider. Je viens d'être nommé à mon poste, par conséquent, je n'ai pas encore atteint le stade où l'on peut croire que, étant fonctionnaire, je sais tout.

J'ai cru comprendre, avant d'y venir, que le ministère cherchait à faire reconnaître les Indiens, c'est-à-dire à les faire traiter comme des gens qui ne sont pas des Indiens aux termes de la Loi sur le crédit agricole. Mais, ingénument, nous n'avons pas pensé à ce projet de loi proprement dit. Malgré tout, nous pensons que les Indiens devraient bénéficier du même traitement que ceux qui ne sont pas Indiens.

D'ailleurs, nous avons préparé hier, des statistiques qui nous ont permis de voir que nous avons plus de 2 millions d'acres de terre arable en puissance qui pourrait être cultivée. Ce qui veut dire qu'en fait le coût estimatif d'aménagement des terres serait de l'ordre de \$202,000,000 et par conséquent, il y a là un programme très important qui devrait être réalisé.

Maintenant, les sources possibles, de financement de l'aménagement des terres agricoles sur les réserves indiennes pourraient être réparties de façon suivante: ARDA, 40 millions de dollars, puis des emprunts de la Société du crédit agricole et d'autres agences de crédit

[Texte]

assist us with \$80 million; and that these would be grants to the extent of something like \$82 million. I am sure the members will appreciate, of course, that these are approximations.

The department is very much interested in developing the agricultural land on the reserves, but we fully realize that that will not take care of the employment of all the Indian population. Surprisingly enough, this would result in only about 27 per cent of the Indian population living on reserves profiting by it. Perhaps you would like to add something, Mr. Churchman?

The Chairman: Mr. Churchman, with a supplementary comment.

Mr. J.W. Churchman (Director, Operations Branch, Department of Indian Affairs and Northern Development): That 27 per cent, relates to Indians living on reserves which have agricultural potential, Mr. Bergevin. I did not mean to indicate that it was 27 per cent of all the Indian population. It is 27 per cent of the Indians living on reserves which have agricultural potential. That is a little different. To be a little more specific perhaps, it means that this program of \$200 million, if it were carried out, would make about 20,000 people self-supporting through agriculture.

Mr. Gleave: What I was particularly interested in was what method of taking security you are going to work out, and how much freedom of operation the individual farmer on the reserves is going to have.

I realize progress is going to be pretty slow. I looked at the statistics at the last census. I do not suppose it is too accurate, but it showed only 407 native Indians as making their total living from farming in the Province of Saskatchewan out of a total male population of 15,548. Therefore, I do not foresee great floods of money going out on this project to start with. It is perhaps fortunate that it is going to start slowly, because we may be able to do something pretty constructive as we go along.

What method of security are you thinking of using and, having taken the security, can you give the Indian operator, or operators, enough elbow room to become operators in their own right without being hampered any more than the ordinary farmer in his day-to-day operations once he gets credit?

● 0955

The Chairman: Mr. Churchman?

Mr. Churchman: Mr. Chairman and gentlemen, the Department of Indian Affairs will guarantee the loan that is made under this Act. If it is machinery that is being purchased our Minister will take a chattel mort-

[Interprétation]

pourraient nous fournir 80 millions de dollars, puis il y aurait des subventions de 82 millions de dollars. Vous vous rendez compte que ce sont là des chiffres estimatifs.

Le ministère s'intéresse beaucoup à l'aménagement des terres agricoles dans les réserves, mais nous comprenons parfaitement que cela ne pourra pas absorber tout le chômage indien. À notre grande surprise, seulement 27 p. 100 de la population indienne des réserves profiterait de cette mesure.

M. Churchman voudrait peut-être ajouter quelque chose?

Le président: Monsieur Churchman a des commentaires supplémentaires.

M. J. W. Churchman (Directeur de l'exploitation, Ministère des Affaires indiennes et du Nord canadien): Maintenant, en ce qui concerne votre 27 p. 100, il s'agit là de 27 p. 100 des Indiens sur les réserves qui ont des possibilités agricoles, monsieur Bergevin, je ne voulais pas indiquer que c'était 27 p. 100 de l'ensemble de la population indienne. Il s'agit de 27 p. 100 des Indiens qui vivent sur des réserves et qui ont des possibilités agricoles. C'est donc différent.

Pour être plus précis, cela voudrait dire en fait que ce programme de 200 millions de dollars, s'il était appliqué, permettrait à 20,000 personnes d'être financièrement autonomes.

M. Gleave: Ce qui m'intéressait, en particulier, c'était la méthode de garantie entendez-vous suivre et de quel degré de liberté chaque ferme de la réserve va pouvoir bénéficier?

Je crois que cela va être assez lent. J'ai regardé les statistiques du dernier recensement et je ne pense pas que ce soit très précis, mais cela montre que seulement 407 Indiens de la province de la Saskatchewan vivent de l'agriculture sur une population totale de 15,548. Par conséquent, je pense qu'il faudra mettre beaucoup d'argent dans ce projet. En fait, c'est peut-être fortuné que cela commence lentement, peut-être qu'on pourra par la suite accéder à quelque chose de constructif à l'avenir.

Quel genre de garantie entendez-vous prendre, et une fois que vous avez cette garantie, est-ce que vous pouvez donner à l'exploitant indien suffisamment de possibilité, de liberté, pour qu'il puisse devenir exploitant autonome sans être gêné autrement, disons, que l'est un exploitant ordinaire dans ses exploitations quotidiennes?

Le président: Monsieur Churchman.

M. Churchman: Monsieur le président et messieurs, le ministère des Affaires indiennes va garantir le prêt accordé d'après la loi. Puis le ministère prendra une hypothèque sur le matériel si ce sont des machines,

[Text]

gage on it, and this will be done exactly as it is when a purchase is made by a person other than an Indian. He will be treated in exactly the same manner.

We will put no restrictions on the amount of money an Indian, or a syndicate of Indians, might borrow. It will be applied in the same way as it is to anyone else, as limited by this Act. In other words, it is not our intention further to restrict the amount because of the guarantee of the Minister.

Mr. Gleave: Mr. Chairman, Indians have complained to me that they are more closely controlled in their operations than is the ordinary farmer. Although I can perhaps accept that it may have been necessary, are you expecting, by this approach, to get away from the paternalistic approach? Having taken the standard chattel mortgage, as you might take one on my farm or that of anybody else, are you going to say to the individual, "All right, now; go ahead and run it and make it pay if you can"?

Mr. Churchman: That is correct. Our intention is, of course, to have advice available for him, where we can arrange it, through the local agricultural representative service or through our own service. We have some agricultural specialists on staff in the regions. These will be available. We also hope that where an Indian farmer, or a syndicate in this particular instance, feels that more help is needed in the way of managerial and farming advice this could be made available either through the service I have mentioned or through the Farm Credit Corporation acquiring this through their staff and that we would assist in the cost of providing it.

Mr. Gleave: Jointly with the Farm Credit Corporation would you consider establishing, even one or two supervisory persons—that might be enough at the start—who were specially oriented and trained to the circumstances in which you are going to work here?

Mr. G. Owen (Chairman, Farm Credit Corporation): I might answer some aspects of this question for Mr. Gleave. When we are in a position to lend, under the provisions of the Farm Credit Act, or this particular Act, on Indian reserves we would be selecting those persons within our staff whom we believe to be most competent to give the kind of advice that may be needed and who are working in areas immediately adjacent, or close, to the reserves.

We expect them to become as familiar as possible with the circumstances on the reserve and with the people who will be farming there and to give them as much advice and assistance as possible. In other words, we will have members of our staff who will specialize. They will have other roles to serve, as well, but they

• 1000

will be directing special attention to the provisions of this particular section.

[Interpretation]

etc. Et cela se passera de la même manière que pour n'importe quelle autre hypothèque, pour n'importe quelle autre affaire avec un non-Indien.

Nous n'allons apporter aucune restriction aux sommes d'argent qu'un Indien ou qu'un syndicat d'Indiens pourra emprunter. Cela est la même chose que pour quiconque est reconnu dans la loi. Autrement dit, nous n'allons pas dépasser le montant prévu du fait de la garantie du ministre.

M. Gleave: Monsieur le président, j'ai entendu des Indiens se plaindre du fait qu'ils étaient limités dans l'exploitation de leurs fermes beaucoup plus qu'un individu ordinaire. Moi je suis agriculteur, je n'aimerais pas que l'on parle d'agriculteur ordinaire. Mais, est-ce que vous pensez que vous allez pouvoir vous écarter de cette attitude, disons, paternaliste? Une fois que vous allez placer cette hypothèque, alors vous allez dire à l'individu: «bon, eh bien maintenant allez-y, travaillez et payez si vous pouvez?»

M. Churchman: Oui, c'est exact. Ce que nous voulons c'est que nous allons mettre à sa disposition des conseils par l'entreprise du représentant agricole local ou par nos propres services. Nous avons des experts, des spécialistes agricoles sur place qui seront disponibles.

Nous espérons également que lorsqu'un cultivateur indien ou qu'un syndicat de cultivateurs indiens a besoin d'aide du point de vue de conseils, de direction, de gestion, eh bien, ces conseils lui seront accordés, soit par les organismes dont j'ai parlé, soit par la Société du crédit agricole qui a du personnel prévu à cet effet et qui assumerait les coûts.

M. Gleave: Est-ce que vous considérez établir, conjointement avec la Société du crédit agricole, un ou deux postes de surveillance, disons, deux pour commencer, qui seraient particulièrement qualifiés pour ce genre de conseils?

M. G. Owen (président, Société du crédit agricole): Pour répondre à une partie de votre question, monsieur Gleave, disons que lorsque nous sommes en mesure d'accorder un prêt à des Indiens dans le cadre de cette loi-ci ou de la Loi sur le crédit agricole, eh bien nous pourrions alors choisir des gens parmi notre personnel qui, d'après nous, sont les plus compétents pour accorder ces conseils et qui travaillent dans des régions très voisines des réserves, ou immédiatement adjacentes.

Nous espérons qu'ils pourront être directement en contact avec les cultivateurs des réserves afin de leur donner autant d'aide et de conseils que possible. Autrement dit, il y aura des membres de notre personnel qui seront spécialisés. Ils auront également bien sûr d'autres tâches dont ils vont s'occuper, mais, disons,

qu'ils vont surtout s'intéresser à cet aspect de la question.

[Texte]

Mr. Bergevin: May I add a comment, Mr. Chairman?

The Chairman: Yes, Mr. Bergevin.

Mr. Bergevin: I believe that by setting at the Farm Credit Corporation and the Farm Machinery Syndicates Act we are opening the doors for Indians to come into the agricultural field. Those who will come in at first, I would say, if I may so express myself, will be like big leaguers—people who, for the first time, will be able to get into big farming.

The Department, with our limited funds, was not in a position to help them out very much, and I am sure the Committee realizes that in the past history of Indian affairs, as far as farming was concerned, we were really dealing with the small farmers. The Farm Credit Corporation, I may say, deals with the cream of farmers in Canada but here it is sometimes not all compliments. I think you are highly conservative in your approach, so it does not help us very much. I am sure the farmers are accepted according to the Farm Credit Corporation's regulations and requirements to qualify and the Department will not have to lead the Indian farmers by the hand because they already are quite prepared to do this kind of business.

Mr. Gleave: The Minister of Agriculture is not here, but nonetheless he is the person to whom the Corporation answers, and would it not be advisable to at least have one person from an Indian band on the advisory committee to the Farm Credit Corporation? I know from my own observation that there are some Indians who have developed very successful farming techniques. Would it not be advisable to have someone like that on the advisory committee to the Farm Credit Corporation so that the Corporation will have both sides of the picture? Perhaps Mr. Owen could answer that.

Mr. G. Owen: I would first have to qualify my remarks by saying that membership in the advisory committee is a matter within the prerogative of the Minister.

Mr. Gleave: Right.

Mr. Owen: That is why I would not be able to speak for him in this respect. I would like to say, however, that the situation with respect to farming on Indian reserves, as you know, varies a good deal from place to place within the country and we first propose, in conjunction with the Department of Indian Affairs and Northern Development, to deal as closely as possible with representatives of the Indians within individual areas to the extent, I would hope—if we can make satisfactory arrangements—of having an Indian farmer as a member of the appeal board which would sit to discuss our loans and our decisions on loans so that he would be able to bring to us the views which they have with respect to their farming operations.

[Interprétation]

M. Bergevin: Monsieur le président, est-ce que je peux poser une question?

Le président: Oui, monsieur Bergevin.

M. Bergevin: Je pense qu'en établissant la Société du crédit agricole et la Loi sur le crédit accordé aux syndicats de machines agricoles, on ouvre la porte de l'agriculture aux Indiens. Les gens qui vont arriver les premiers sont des gens qui, pour la première fois, pourront s'occuper de grandes exploitations agricoles.

Le ministère, en raison de son budget limité, n'était pas en mesure de les aider tellement, et je suis certain que les membres du Comité vont comprendre que par le passé, nous nous occupions surtout des petits exploitants agricoles. La Société du crédit agricole s'occupe, si je puis dire, de la crème des fermiers au Canada. Je crois que vous êtes très conservateurs dans votre façon d'étudier la question et ça ne nous aide pas tellement. Je suis certain que les fermiers sont acceptés d'après les normes établies par la Société du crédit agricole et que le ministère n'aura pas à mener les agriculteurs indiens par le bout du nez puisqu'ils sont prêts à se lancer dans ce domaine.

M. Gleave: Le ministre de l'Agriculture n'est pas ici mais c'est à lui que répond la Société. Ne serait-il pas souhaitable qu'au moins un membre d'une bande indienne fasse partie du conseil consultatif de la Société de crédit agricole? D'après mes propres observations, je sais que certains Indiens ont mis au point des techniques d'agriculture qui ont fort bien réussi. Et je me demande si ce ne serait pas une bonne idée d'avoir quelqu'un comme eux, au sein du conseil consultatif de la Société du crédit agricole, afin que cette Société ait les deux côtés de la médaille. M. Owen pourrait peut-être répondre.

M. Owen: Tout d'abord, je dois vous faire remarquer que ces nominations dépendent du ministre.

M. Gleave: D'accord.

M. Owen: C'est pourquoi je ne puis parler en son nom. Toutefois, je vous dirai que, quant à l'exploitation agricole dans les réserves indiennes, les situations sont différentes suivant les endroits du pays. De concert avec le ministère des Affaires indiennes et du Nord canadien nous nous proposons de collaborer d'aussi près que possible avec les représentants des Indiens dans chaque région. Nous espérons qu'un agriculteur indien puisse siéger comme membre d'un tribunal d'appel pour discuter de nos décisions sur les prêts de sorte qu'il puisse nous fournir le point de vue des Indiens, quant à leurs méthodes d'exploitation agricole.

[Text]

I would also like to comment a little further on Mr. Bergevin's recent remarks. In general the farms that we deal with in Canada are not significantly larger than the statistical average, so we do not lend to the very large ones because of the regulations under the other Act. Under this one, of course, we can lend to any size. However, a great number of those that we lend to are farmers who are in actual need of significant ex-

● 1005

pansion in order to make a viable enterprise, and I would visualize under this proposed Act as well as the other one encountering the same sort of situation with respect to Indians on reserves where they have a significant expansion to make. I know you will appreciate that we have a supervision program for many of our borrowers.

The intensity of our supervision over borrowers depends entirely upon the circumstances of the individual borrower. Some require more than others, and therefore we would hope to use specifically the same approach in order to give the extent of advice and counsel that may be needed with respect to each individual syndicate or each individual farmer who may be borrowing from us.

Mr. Gleave: I just have one final question and I thank you for your patience, Mr. Chairman. Does the Department of Indian Affairs and Northern Development have any figures on the level of income that individual operators on the reserve have been able to achieve? Have you kept any records to indicate the level of income which they have achieved from their farming operations, or have you never separated it out?

Mr. Bergevin: I am afraid we never did. I am sure we could arrive at some figures if we dug into the records, but unfortunately we just do not have any this morning.

Mr. Gleave: I would think, if I may say so, that if we are going to go to work on it this is some of the first information we should start to gather.

The Chairman: Thank you, Mr. Gleave. A supplementary, Mr. Lambert (Bellechasse).

M. Lambert (Bellechasse): Pourrait-on savoir à quel genre d'exploitation agricole les Indiens s'adonnent? Est-ce la culture de céréales? Est-ce l'élevage?

Mr. Churchman: It probably varies, depending on the part of the country. In British Columbia and parts of Alberta they go heavily to ranching, to cattle raising. In Saskatchewan and parts of Alberta and parts of Manitoba it is primarily grain farming. In Ontario it is mixed farming, some grain and some cattle and in the Maritimes there is very little agriculture at all as far as Indians are concerned. Quebec has very, very little agriculture.

[Interpretation]

Maintenant, j'ai quelques commentaires supplémentaires à ajouter aux dernières remarques de M. Bergevin. Les exploitations agricoles avec lesquelles nous traitons généralement, au Canada, ne sont pas beaucoup plus grandes que la moyenne statistique des exploitations. Lorsqu'elles sont très grandes, nous ne faisons pas de prêts, ceci en conformité de l'ancienne Loi. Avec celle-ci, les dimensions ne comptent pas.

Mais la plupart de celles auxquelles nous consentons des prêts, sont des exploitations agricoles qui ont vraiment besoin d'expansion pour pouvoir réussir. Je crois, dans le cas de ce projet de loi comme le cas de l'ancienne loi, que la même situation se présentera au sujet des Indiens, là où l'expansion nécessaire est d'importance. Vous comprendrez que nous avons un programme de surveillance ou de contrôle pour plusieurs de nos emprunteurs.

L'importance de cette surveillance dépend de la situation de chaque emprunteur. Certains ont besoin de plus de surveillance que d'autres. Nous avons l'intention d'utiliser la même méthode pour donner les conseils nécessaires à chaque syndicat particulier ou à chaque agriculteur qui emprunte de nous.

M. Gleave: Encore une dernière question, et je vous remercie de votre patience, monsieur le président. Je voudrais savoir si le ministère des Affaires indiennes pourrait nous citer des chiffres sur le niveau de revenu des exploitants indiens sur les réserves. Avez-vous des dossiers qui indiquent le niveau du revenu atteint grâce à leurs exploitations agricoles, ou bien, n'avez-vous jamais extrait ces chiffres-là?

M. Bergevin: Je suis certain que nous pouvons arriver à des chiffres, si nous voulons fouiller les rapports mais je n'ai ici aucun détail à ce sujet.

M. Gleave: Si vous me permettez de le signaler, je vous dirai que si nous voulons nous attaquer à ce problème, ce sont là des renseignements qu'il nous faudra obtenir, dès le départ.

Le président: Une question supplémentaire. Monsieur Lambert (Bellechasse).

Mr. Lambert (Bellechasse): Could we find out what kind of farming operations the Indians pursue? Do they grow cereals? Or do they raise cattle?

M. Churchman: Le tout varie probablement selon la région du pays. En Colombie-britannique et dans certaines parties de l'Alberta, il y a beaucoup d'élevage de bétail. En Saskatchewan et dans certaines parties de l'Alberta et du Manitoba, c'est surtout la culture des céréales. En Ontario, il y a un peu de culture de céréales et un peu d'élevage. Et dans les Maritimes il y a très peu d'agriculture, chez les Indiens. Au Québec, il y en a très peu, également.

[Texte]

The Chairman: Thank you, Mr. Churchman and Mr. Lambert. I recognize Mr. Danforth.

Mr. Danforth: Mr. Chairman, after listening to Mr. Owen, I am interested in learning the mechanics where we have two departments involved. We are quite familiar with the methods by which applications are made by farmers outside the reservations. May I ask in the case of Indians on reservations whether the applications will be made directly to the farm syndicate loan board or will they be made through the Department of Indian Affairs and Northern Development and then through that agency to the farm syndicate board?

Mr. Owen: Although our agreement with the Minister of Indian Affairs has, of course, not been completed because we cannot do so until after the bill is passed, we would certainly anticipate that the applications would be made to a representative of the Corporation, the credit adviser of the Corporation. In fact, it is a requirement of the Farm Credit Act that applications are made in this way, so we are quite certain that this would be the way that the farmer on the reserve would apply in order that he would be in a similar situation to any other farmer.

The only distinction I would make here is that we are likely to assign particular credit advisers who are closely located to the reserves and who have a chance to specialize in this particular type of lending.

● 1010

Mr. Danforth: It is my understanding then that when applications are made by Indian farmers they shall be made in the same manner as others, but perhaps these applications would be referred by the Corporation to the Department of Indian Affairs and Northern Development for approval or consideration before a final determination is made.

Mr. Owen: I do not think this would be so. The decision with respect to whether or not we would make a loan would be with the Corporation. The agreement with the Minister of Indian Affairs would provide for an over-all guarantee on those loans which we would make, using the criteria that we would normally use for making loans.

There could be circumstances after a loan had been approved where arrangements with respect to security of tenure of the land they were going to operate, and that sort of thing, would be resolved within the procedures of the Department of Indian Affairs and Northern Development. Insofar as assessing the repayment capacity, which is a primary consideration in making any loan, the purposes for which the money would be used and the amount which we felt these people could borrow and satisfactorily repay would, I anticipate, be the decision, as far as the individual loan is concerned, of the Corporation.

[Interprétation]

Le président: Merci monsieur Churchman. Merci, monsieur Lambert. Je donne la parole à M. Danforth.

M. Danforth: J'aimerais savoir, monsieur le président, ce qui se produit là où deux ministères entrent en cause. Nous savons ce qui se produit lorsqu'une demande est faite par des agriculteurs qui n'habitent pas une réserve. Puis-je savoir, lorsqu'il s'agit d'Indiens vivant dans des réserves, si la demande doit être adressée directement à la Caisse des prêts aux syndicats de machines agricoles ou si elle doit être adressée au ministère des Affaires indiennes et du Nord Canadien qui l'acheminera, lui, vers la Caisse?

M. Owen: Bien que l'entente avec le ministère des Affaires indiennes ne soit finale, puisqu'il nous faut attendre après l'adoption du bill, nous nous attendons certes à ce que la demande soit adressée à un représentant de la Société, son conseiller en matière de crédit. La *Loi sur le crédit agricole* stipule que la demande soit présentée de cette façon. Je suis certain que c'est ainsi que les agriculteurs dans les réserves devront présenter leurs demandes, pour être dans une situation analogue à celle des autres fermiers.

La seule différence c'est que nous nommerons probablement des conseillers spéciaux en crédit qui sont placés près des réserves et qui tenteront de se spécialiser dans ce genre de prêts.

M. Danforth: Dois-je comprendre que lorsque les demandes sont faites par les agriculteurs indiens, elles doivent être faites comme les autres, mais qu'elles pourraient être déferées par la Société au ministère des Affaires indiennes et du Nord canadien qui approuvera ou étudiera la demande avant que l'on prenne une décision définitive.

M. Owen: Je ne crois pas que les choses se passeront ainsi. La décision de faire un prêt ou non relève de la Société. L'entente avec le ministère des Affaires indiennes permettra de fournir une garantie générale sur les prêts que nous accorderons, conformément aux critères que nous utilisons habituellement avant de consentir un prêt.

Il peut arriver après qu'un prêt aura été consenti que les conditions relatives au respect de l'entente au sujet du terrain en question soient réglées selon le processus établi au ministère des Affaires indiennes et du Nord canadien. Pour ce qui est de la capacité de remboursement, la considération primordiale au moment d'accorder un prêt, la façon dont l'argent sera utilisé, et la somme qu'on estime qu'ils peuvent emprunter et rembourser, constituent la décision à prendre pour les prêts aux particuliers en ce qui concerne la Société.

[Text]

Mr. Danforth: Mr. Chairman, may I pursue this further? Perhaps I have entirely the wrong conception of the manner in which the two Departments are involved.

Would it be fair to say that perhaps the responsibility of the Department of Indian Affairs and Northern Development regarding Corporation and syndicate loans would be comparable to the part played by the government in respect of farm improvement loans where the government is acting merely as a backer? In other words, the Department of Indian Affairs and Northern Development would be backing a project rather than an individual loan.

Mr. Owen: I would think basically this would be a very good analogy. There are some differences. Because of the differences with respect to tenure of land and methods of security there may have to be some different procedural arrangements, but basically this would be the approach. We would be expected to use our customary judgment in the making of loans but would have this guarantee, in the same way as the government guarantees farm improvement loans, through banks who are required to use their judgment in the normal way in making loans.

Mr. Danforth: Thank you. If I may change my line of questioning for a moment, I was very interested in the statement that it would perhaps require an estimated amount of \$200 million to develop the farm lands available to Indian farmers. I think the figure given for the estimated amount of land would perhaps be two million or plus. What is the consideration in the development of this land? Does this development have to deal with underdrainage, clearing of scrub bush or what? Can we have some idea just what is contemplated. The word "develop" is very general in nature.

Mr. Churchman: Well, it varies across the country, sir. For instance, in the interlake region of Manitoba and in parts of northern Alberta, the Saddle Lake area, it is primarily clearing and breaking. As a matter of fact we have quite a program going on this winter. Winter is a good time to clear the brush and then we can break it in the spring. But it does vary considerably across the country.

● 1015

One thing I might mention here, Mr. Chairman, is the fact that there are approximately 1,100,000 acres of Indian land presently in agriculture and only 289,000 or just less than 300,000 acres of that land is farmed by Indians. The rest of it is leased out to non-Indian farmers. Now part of the process that will take place through making both the Farm Credit Act and the Farm Machinery Syndicates Credit Act applicable to provide funds, is that more Indians will be able to take over land which is presently under lease. I might mention too that these leases are short term leases. We have very few, if any, agricultural leases to a

[Interpretation]

M. Danforth: Monsieur le président, je vais aller un peu plus loin. Je comprends peut-être très mal la façon dont les deux ministères sont impliqués. Est-ce qu'il serait juste de dire que la responsabilité du ministère des Affaires indiennes et du Nord canadien vis-à-vis des prêts à la Société et aux syndicats serait peut-être comparable au rôle joué par l'État dans le cadre des prêts aux améliorations agricoles, ou il ne sert que de garantie. Autrement dit, le ministère des Affaires indiennes et du Nord canadien appuierait un projet plutôt qu'un prêt à un particulier.

M. Owen: Je pense que l'analogie est excellente. Il y a certaines différences cependant à cause du système de propriété foncière et des méthodes de sécurité où la procédure sera différente. Mais ce serait notre façon de base de procéder. Nous devons nous servir de notre bon jugement habituel avant de consentir un prêt mais il y aurait cette garantie, tout comme la garantie que l'État accorde dans le cas des prêts aux améliorations agricoles aux banques qui doivent se servir de leur jugement comme pour des prêts ordinaires.

M. Danforth: Si je peux maintenant changer de sujet, j'ai été très intéressé par la déclaration selon laquelle on aurait besoin de quelque \$200 millions pour aménager les superficies agricoles offertes aux Indiens. Je crois que le chiffre donné pour la superficie serait de 2 millions et plus. Je voudrais savoir quelles sont les considérations en jeu pour la mise en valeur de ces terres. Est-ce que le projet comporte des travaux d'écoulement ou de déboisement ou qu'est-ce qu'on entend exactement par «mise en valeur»? C'est assez vague.

M. Churchman: Tout dépend dans quelle partie du pays vous vous trouvez, monsieur. Par exemple, dans la région entre les lacs du Manitoba, et dans certaines parties du nord de l'Alberta, la région de Saddle Lake, par exemple, il s'agit surtout du déboisement et de défrichement. Nous y avons entrepris tout un projet cet hiver, car c'est le bon moment d'enlever les broussailles pour défricher au printemps. Tout dépend de quelle partie du pays.

Une chose que je voudrais mentionner, monsieur le président, c'est qu'il y a environ 1,100,000 acres de terres indiennes qui sont exploitées dans le moment; 289,000, ou un peu moins de 300,000 acres sont exploitées par les Indiens et le reste est affermé à des non-Indiens. Maintenant, lorsque vous vous adoptez ces deux Lois en vue de fournir des fonds aux Indiens, vous permettrez à plus d'Indiens d'exploiter les terres qui sont présentement affermees. Et je vous signale que les baux sont des baux à court terme. Il y a très peu de baux de plus de cinq ans aux non-Indiens, et dès que le bail est terminé, les Indiens pourront re-

[Texte]

non-Indian of over five years, so as the lease expires then the Indian people themselves can start farming the land. This is part of the program of getting the Indians to do the farming themselves rather than to lease it out to non-Indian farmers.

Mr. Danforth: This brings up an interesting question, Mr. Chairman. May I ask what the status is of a farmer or group of farmers who are presently under lease farming reservation land with regard to borrowing money under a syndicate loan? Have they been subject to any different regulations than those prescribed in the original act?

Mr. Owen: You are referring to farmers from off the reserves—

Mr. Danforth: Yes.

Mr. Owen: — who are leasing land on the reserves?

Mr. Danforth: Yes, the major portion of the land they are working being reserve land.

Mr. Owen: This is a sticky one. I do not know of any instance where we have had people farming off the reserve borrowing money in order to farm on the reserve. Under our normal lending program we would be lending funds required purely for the development of the land off the reserves.

Mr. Danforth: That is under the—

Mr. Owen: Under the present system. Under this clause here the only thing changing is that we are allowed to lend to Indians on reserves. It does not allow us to lend to non-Indians who are farming on reserves.

Mr. Danforth: But I can see some difficulty in the procurement of security where you have a syndicate. I am aware of such a syndicate farming 2,000 or 3,000 acres of reserve Indian land as a sole operation.

Mr. Owen: These are non-Indians?

Mr. Danforth: Non-Indians.

Mr. Owen: Well I would suggest that we would adopt the stand, unless they had other security that they could offer to us, that they would not be in a position to borrow for that purpose. After all, in the making of any loan—I mean a standard loan to a non-Indian—credit judgment relates to the earning power and to the assets of the borrower. While this is a hypothetical case and I would have to examine it to

[Interprétation]

prendre en main les terres. Cela fait partie du programme en vue d'encourager les Indiens à exploiter eux-mêmes les terres au lieu de les affermer à des non-Indiens.

M. Danforth: Monsieur le président, ceci soulève une question très intéressante. Est-ce que je pourrais savoir quel est le statut de l'agriculteur ou des groupes d'agriculteurs qui exploitent, en ce moment, les terres des réserves en vertu d'un bail, vis-à-vis des prêts consentis aux termes de la *Loi sur le crédit agricole*? Je voudrais savoir si les règlements qui s'appliquent à eux sont différents des règlements prescrits par la Loi initiale?

M. Owen: Vous parlez des cultivateurs qui n'habitent pas les réserves . . .

M. Danforth: Oui.

M. Owen: . . . et qui louent des terres sur les réserves?

M. Danforth: La majeure partie des terres qu'ils exploitent sont des terres de la réserve.

M. Owen: Eh bien, vous risquez de me coincer là. Je ne connais pas de cas où des Indiens cultivateurs qui ne sont pas de la réserve empruntent de l'argent pour pouvoir exploiter sur les réserves. Selon notre programme habituel, nous prêtons les fonds nécessaires afin de mettre en valeur les terres qui ne sont pas des réserves.

M. Danforth: C'est en vertu de . . .

M. Owen: . . . du système actuel. En vertu des présentes dispositions, le seul changement c'est qu'on peut faire des prêts aux Indiens sur les réserves. Elles ne nous permettent pas de faire des prêts aux non-Indiens qui exploitent sur les réserves.

M. Danforth: J'ai l'impression que cela soulève certaines difficultés pour la garantie lorsqu'il s'agit d'un syndicat. Et je connais un syndicat dont la seule activité est d'exploiter 2,000 ou 3,000 acres de terres sur les réserves.

M. Owen: Ce sont des non-Indiens?

M. Danforth: Des non-Indiens, en effet.

M. Owen: Alors, la position que nous adoptions, à moins qu'ils puissent nous offrir d'autres garanties, serait de leur refuser un emprunt à cette fin. Après tout, lorsque l'on consent un prêt à un non-Indien, la décision prise tient compte du revenu et de l'actif de l'emprunteur. Bien que ce soit un cas hypothétique, il faudrait vraiment que je l'étudie pour vous donner une réponse définitive. Mais si leur seul revenu provient des

[Text]

say anything definite, I would suggest that if their sole earning power was on the reserve then we would not be willing to lend under the act too.

Mr. Danforth: I have one more question, Mr. Chairman, and then I will pass for now. Since I think it can be determined by our questioning that applications for loans from Indians on the reserves and from bands will be directed to the Corporation in the normal fashion, it must be quite apparent to everyone present that the financial stability and the credit rating of bands, as with other Canadians, will differ greatly from reservation to reservation and from band to band.

How is this determination of credit stability and the sense of responsibility to be determined by the Corporation? Is consultation foreseen with the Department of Indian Affairs and Northern Development who would be in a prime position, I would imagine, to assess the normal credit rating as between different reserves and areas, and will this be a factor in the determination of the Corporation?

● 1020

Mr. Owen: In our assessment of credit worthiness we really go to every source where we can find good information. I would suspect that in dealing with a particular band we would certainly be discussing this matter with officials of the Department of Indian Affairs and Northern Development. In dealing with particular farmers on a particular reserve we would be discussing the matter, I am sure, not only with representatives of the Department of Indian Affairs but possibly with leading members of the band. You know, we have the same difficulty with people who are not on reserves, and over the years we have developed the technique of exploring every possible avenue of information where there is an area of doubt in order to resolve it as equitably as possible.

Mr. Whicher: Mr. Chairman, I have a supplementary on that.

The Chairman: Mr. Whicher.

Mr. Whicher: I wanted to ask a question of the Department. In the event of a loan to a single Indian being endorsed by yourselves and that Indian going broke, where does the money that you pay come from? You are going to have to pay the Farm Credit Corporation if he goes broke. Where does the money come from?

Mr. Bergevin: We have not resolved yet, first, how the Minister is going to protect himself by getting, you know, hold of the guarantee he is putting forward. We have not resolved them. There are many legal problems. We were with the legal department yesterday and we will have to go to Justice. Right now

[Interpretation]

réserves, nous ne sommes pas prêts à prêter en vertu de la Loi.

M. Danforth: Monsieur le président, j'ai encore une question. Je passerai ensuite la parole à d'autres. Je pense qu'on peut déterminer, à la suite de notre interrogatoire, que les demandes, de prêts de la part des Indiens sur les réserves et des bandes seront envoyées à la Société de la façon habituelle. Il doit être évident pour toutes les personnes ici présentes que la stabilité financière et la solvabilité des bandes et d'autres Canadiens varient beaucoup d'une réserve à l'autre et d'une bande à l'autre. Comment la Société va-t-elle déterminer la stabilité du crédit et le sentiment de responsabilité? Est-ce qu'on prévoit qu'il y aura des consultations avec le ministère des Affaires indiennes et du Nord canadien qui sera évidemment le mieux placé pour évaluer les capacités d'emprunts de différentes réserves et régions. Est-ce que ce sera un facteur dans la décision de la Société?

M. Owen: Lorsque nous évaluerons les capacités de l'emprunteur, nous nous adressons à toutes les sources qui peuvent nous fournir de bons renseignements. Lorsque nous traitons avec une bande en particulier, nous allons certainement en discuter avec les fonctionnaires du ministère des Affaires indiennes et du Nord canadien. Lorsque nous traitons avec les agriculteurs sur une réserve donnée, nous discuterons certainement la question, non seulement avec les représentants du ministère des Affaires indiennes et du Nord canadien, mais aussi avec les chefs de la bande. Vous comprenez, nous avons le même problème avec les gens qui ne sont pas dans les réserves et, de temps à autre, nous avons dû utiliser tous les moyens d'information lorsqu'il y a le moindre doute, afin de décider le plus équitablement possible.

M. Whicher: Puis-je ajouter une question supplémentaire?

Le président: Monsieur Whicher.

M. Whicher: Je demande au ministère si, dans le cas d'un prêt à un Indien en particulier garanti par le ministère que l'Indien fait faillite, d'où vient l'argent que vous devez verser? Vous devrez rembourser la Société du crédit agricole s'il n'a plus d'argent. D'où vient cet argent?

M. Bergevin: C'est une question que nous n'avons pas résolue. Le ministère va d'abord se protéger lorsqu'il fournit une garantie. Vous comprenez, nous avons toutes sortes de difficultés juridiques. Nous avons discuté de la question, hier, avec notre conseiller juridique, mais il nous faudra consulter le ministère de

[Texte]

I cannot answer your question directly or precisely, but we have funds, revolving funds, that perhaps could be used for that.

The Chairman: Mr. Churchman, do you have a supplementary comment?

Mr. Churchman: I think there are probably two places it could come from: from our own revolving fund or out of our general fund. It is a very difficult thing to estimate how much money you should put in a pot to take care of any, let us say, defalcation.

Mr. Bergevin: We feel confident, though, that if it has met the standards of the Farm Credit Corporation we already have pretty good protection, because they know their business and there is already good protection there.

Mr. Whicher: There is the odd bad Indian, you know, just the same as there is the odd bad white man.

Mr. Bergevin: Yes, that is right.

Mr. Whicher: And the only thing is that I do not think it should come out of the band funds.

Mr. Bergevin: Oh, no, definitely not. It would not.

The Chairman: Thank you, Mr. Whicher. I now recognize Mr. Thomson.

Mr. Thomson (Battleford-Kindersley): Part of what I had in mind has been answered, Mr. Chairman, but the questions I have relate somewhat to what has just been said in reply to a question by Mr. Whicher.

I have five reserves in my riding and there is some farming done by Indians there while some of the land is farmed by white men. But there is better land lying idle on the Red Pheasant Reserve and it is in the same state of nature as it was when Poundmaker was there. This is better land than I am farming and is lying idle and some of these Indians would like to farm it.

According to an answer just given, the standards of the Farm Credit Corporation have to be met if they are going to approve this. From what I have seen of very few Indians whom I know on five reserves—they are going to call it five for a loan—I think that if this is the attitude taken the Act is going to be pretty meaningless to most of the Indians in my riding.

To get back to the basic question, I wondered how much initiative the Indian Affairs Department was going to take in developing or using the loan. If, for example, some Indians want to farm the land on the reserve, the first thing they are going to have to have is a cat to clear the brush, and this would be a logical reason for borrowing money under the Farm Machinery Syndicates Credit Act. But if you are going to expect them to be cream of the crop, as one of the

[Interprétation]

la Justice. Je ne puis répondre avec précision à votre question, mais nous avons des fonds qui pourraient être utilisés à cette fin.

Le président: Monsieur Churchman a peut-être quelque chose à ajouter?

M. Churchman: Je crois qu'il y a probablement deux sources différentes d'où cet argent pourrait provenir. Il est assez difficile d'évaluer combien il faudrait prévoir à cette fin.

M. Bergevin: Toutefois, nous sommes convaincus que, si les normes de la Société ont pu être respectées, il existe déjà une très bonne protection puisqu'ils connaissent certainement ce qu'ils ont à faire.

M. Whicher: Vous savez, il y a des méchants chez les Indiens aussi, tout comme chez les Blancs.

M. Bergevin: Oui, c'est exact.

M. Whicher: Oui, mais je ne pense pas que ce soit dans le fonds de la bande qu'il faille puiser.

M. Bergevin: Mais non, pas du tout.

Le président: Merci monsieur Whicher. Monsieur Thomson a la parole.

M. Thomson (Battleford-Kindersley): La question à laquelle je pensais n'est plus nécessaire, monsieur le président. Mais, j'ai d'autres questions qui s'apparentent à celles de M. Whicher.

J'ai 5 réserves dans ma circonscription et ce que je dis je le dis simplement d'après ce que j'ai vu là. Certains Indiens s'adonnent à l'agriculture, mais il y a une partie de l'exploitation agricole qui est faite par des Blancs. Pendant ce temps de meilleures terres demeurent inutilisées dans la réserve Red Pheasant. Elles sont dans le même état qu'au temps de Poundmaker. Ces terres sont meilleures que la mienne et elles demeurent inutilisées mais certains de ces Indiens voudraient les exploiter.

Si je m'en tiens à la réponse qu'on vient de donner, les normes de la Société devront être respectées. Si je me fie à ce que j'ai vu et si c'est l'attitude qu'on doit adopter, cette loi sera à peu près inutile pour la plupart des Indiens de ma circonscription.

Dans quelle mesure est-ce que le ministère des Affaires indiennes a l'intention de se servir du prêt pour l'exploitation, pour la mise en valeur. Par exemple, si les Indiens veulent exploiter les terres des réserves, il leur faudra d'abord un tracteur pour débroussailler, ce qui est une bonne raison pour emprunter de l'argent, aux termes de la *Loi sur le crédit accordé aux syndicats de machines agricoles*. Mais, si vous pensez que ça va être la crème que vous allez avoir, comme vous

[Text]

gentlemen described it, and know management techniques at the level that would qualify them under the Farm Credit Act, I can see very, very few using it.

● 1025

Now a suggestion, or question, if you like. I think that the Department of Indian Affairs and Northern Development should be prepared to take some risk in developing this. I would be very unhappy if they were to insist on the same qualifications. I think only a handful of Indians will ever be able to use this for a long long time if this is the case. This is a question, comment or statement, if you like.

Mr. Churchman: Mr. Chairman, I agree with the member. We are quite cognizant of this. I think I am aware of the area which you are speaking of, sir. We would not want the impression left that the only assistance to Indians in agriculture comes from the Farm Credit Act or the Farm Machinery Syndicates Credit Act. We do have programs in the Department itself to help Indians get established. We work very closely with the ARDA program. In fact Saskatchewan is one of the provinces where a considerable amount of ARDA funds are made available.

Incidentally they are all federal funds that are spent on Indian reserves through the ARDA program. The province does not put in any money. They may put in some administrative assistance, but they do not put in any dollars. This is used to break land, to help Indians get started to buy machinery. From time to time we assist in the purchase of machinery. We have a small loans fund of our own and we also have provision whereby through appropriation we can buy machinery which can be loaned or rented to them to get started.

The Chairman: Mr. Owen will make a supplementary comment.

Mr. Thomson (Battleford-Kindersley): I do not think the gentleman has answered my question.

The Chairman: Will you give Mr. Owen a chance? He may answer it more fully.

Mr. Owen: I think your prime concern is that the standards established by the Corporation for what we might call a viable unit would be such that there would be only a limited percentage of the farmers on the reserves in your area who would be able to qualify. I would like to emphasize that in assessing a loan, or making a judgment in respect of it, we are primarily concerned with the revenue producing possibility.

When we are dealing with farmers off reserves we have to recognize that one of their very significant costs and one of their first charges against income is the purchase of land. Therefore to make a viable unit they must have very large sums of money invested in

[Interpretation]

l'avez dit, des gens qui vont connaître des techniques d'administration d'une façon qui les rendront acceptables, d'après les normes de la *Loi du crédit agricole*, ils seront peu nombreux qui y auront recours.

Je crois que le ministère des Affaires indiennes et du Nord Canadien devrait être prêt à prendre certains risques. Je trouve que ce serait extrêmement dommage que d'exiger les mêmes qualifications. Seuls quelques Indiens pourront bénéficier de cette loi, si tel est le cas. Ce qui est précède est une question, un commentaire, une déclaration, comme vous voudrez.

M. Churchman: Je suis d'accord. Nous sommes parfaitement au courant de cette situation, nous y avons pensé. Je pense que je sais très bien de quelle région vous parlez, monsieur. Nous ne voulons pas laisser l'impression que la seule assistance disponible aux Indiens, dans le domaine de l'agriculture, vient de la *Loi du crédit agricole* ou de la *Loi sur le crédit accordé aux syndicats de machines agricoles*. D'autres programmes existent qui peuvent aider les Indiens à s'établir. Et nous travaillons en étroite collaboration avec le programme ARDA. La Saskatchewan est une des provinces où beaucoup de fonds de l'ARDA sont disponibles.

Ce sont tous des fonds fédéraux qui sont dépensés sur les réserves, grâce au programme ARDA. La province n'investit pas elle-même. Elle peut accorder une aide administrative, mais elle n'a pas à déboursier d'argent. Cet argent permet de défricher et aide les Indiens à acheter la machinerie nécessaire. De temps à autres, nous les aidons à acheter de la machinerie. Nous avons un fonds minime pour des prêts et nous pouvons également acheter de la machinerie que nous pouvons leur prêter ou leur louer.

Le président: Monsieur Owen désire faire des commentaires supplémentaires.

M. Thomson (Battleford-Kindersley): Je pense qu'il n'a pas répondu à ma question.

Le président: Donnez-lui une chance.

M. Owen: Je pense que ce qui vous inquiète, surtout, ce sont les normes fixées par la Société. Vous avez l'impression qu'il y aurait simplement un pourcentage très faible des Indiens qui pourrait satisfaire aux exigences. Lorsque nous accordons un prêt ou que nous rendons une décision à ce sujet, il faut tenir compte des possibilités de revenu.

Lorsque nous traitons avec des agriculteurs qui n'habitent pas dans les réserves, il faut reconnaître que l'une des dépenses les plus importantes, le premier déboursé à soustraire de leur revenu c'est l'achat de la terre. Il faut donc qu'ils aient investi beaucoup

[Texte]

land. The situation is somewhat different on a reserve and therefore a smaller loan will be able to go a much greater distance in establishing viability or a viable enterprise. You would not need as large a gross income or net income as you would off reserve, because you would not have that very high capital charge hanging over you.

I would anticipate, therefore, that the viability of a farm on a reserve—the ability of the farmer to make a reasonable livelihood for himself and his family—would involve considerations somewhat different than those off reserves and in terms of gross income would be referring somewhat lesser enterprises.

The Chairman: Does that answer your question, Mr. Thomson?

Mr. Thomson (Battleford-Kindersley): Yes, in part, thank you.

Mr. Chairman, I realize that we want to restrict our questions more or less to the particular Bill, but in reference to what you have said, sir, to get some of this land ready for production from raw bush would probably cost \$35 or \$40 an acre in some cases. It still amounts to a fairly considerable sum, you realize, to put it in an actual revenue producing position.

I am still quite concerned, in the light of this bill only, for the moment, about just what position the Indian Affairs Department is going to take. Is the Department going to leave an Indian in the position where he takes the initiative; he approaches the farm loan board and is already, in effect, part way up the ladder before he can get a loan? Or will the Indian Affairs Department use this act as part of their total program to assist Indians in getting started in agriculture? In effect, does the initiative all have to come from the Indian people themselves, or are you in the Department going to take some initiative and say: "Look you can do this or you can do that under the Farm Machinery Syndicates Credit Act." Are you giving the leadership or are you going to leave it to them?

● 1030

Mr. Churchman: Well we will be working very closely with the Farm Syndicates people and with the Indian people in Applying this act to them. I am trying to remember.

I am sorry I do not have the figures here of the amounts of money. But if my memory serves me right, there is about \$2 million in our budget for the coming year that will be spent in bringing land into production on Indian Reserves, without charge to the Indian people. So that if it costs \$35, as it does in many instances, to clear and break land, we do this, and there is no charge made to the individual or to the

[Interprétation]

d'argent dans cette terre. La situation est quelque peu différente dans une réserve et, en conséquence, un prêt moins important pourra quand même permettre l'établissement d'une entreprise qui a des chances de réussir.

Vous n'avez pas besoin d'un revenu brut ou d'un revenu net aussi important qu'à l'extérieur de la réserve parce que vous n'avez pas un investissement initial aussi considérable.

Je crois donc que les chances de succès d'une ferme dans une réserve, ou la possibilité pour le fermier de bien faire vivre sa famille, sont différentes de ces fermes de l'extérieur des réserves. Leur revenu brut s'apparenterait à celui des entreprises moins importantes.

Le président: Cela répond à votre question?

M. Thomson (Battleford-Kindersley): Plus ou moins, oui, je vous remercie. Je réalise que nos questions ne devraient porter que sur ce projet de loi, monsieur le président. Mais pour revenir à ce que vous avez dit, il pourrait en coûter \$35 ou \$40 l'acre pour rendre ces terres productives. Vous admettez que c'est une somme assez importante à déboursier uniquement pour que la terre soit en mesure de produire.

Je m'inquiète toujours de savoir comment le ministère des Affaires indiennes va procéder. Est-ce qu'il va laisser l'Indien prendre l'initiative, s'adresser à la Société de crédit agricole et faire 2 ou 3 pas dans l'échelle avant d'obtenir les crédits? Ou est-ce que le ministère des Affaires indiennes va se servir de cette loi dans le cadre d'un programme d'ensemble, pour aider les Indiens à se lancer dans une entreprise agricole? Est-ce que les initiatives doivent venir entièrement des Indiens ou est-ce que vous, comme ministère, allez prendre certaines initiatives et dire: «Voici ce que vous pouvez faire aux termes de la Loi sur le crédit accordé aux syndicats de machines agricoles»? Est-ce que je peux savoir si vous allez prendre les devants ou bien si vous allez les laisser faire?

M. Churchman: Eh bien, nous allons travailler étroitement avec les responsables des syndicats de machines agricoles et avec les Indiens dans l'application de cette loi à leurs besoins.

Je regrette de ne pas avoir ici des chiffres précis concernant les sommes allouées. Mais si je me souviens bien, environ 2 millions de dollars seront consacrés cette année à la mise en valeur des terres dans les réserves, sans qu'il n'en coûte rien aux Indiens. Donc, si le défrichement des terres revient, comme c'est souvent le cas, à \$35, les particuliers et les bandes n'ont rien à payer, à moins, bien sûr, que la bande ne

[Text]

band for it, unless of course the band is in a position to contribute to the cost of the operation, and some bands are. There are some bands, in Alberta for instance, that have fairly large band funds, and they are able to contribute. Sometimes they will put in 50 per cent or whatever we work out with them.

I am trying to recall the number of acres. I had not anticipated this type of question, or else I would have brought these figures along.

I mentioned earlier that land was being cleared in northern Alberta, and in the inter-lake region in Manitoba this winter. This is being done at departmental expense, not at the expense of the Indians. It will not be a charge against them for repayment. Is this what you were getting at?

Mr. Thomson (Battleford-Kindersley): I can see I have not made myself clear, Mr. Chairman, by using the breaking of land as an example.

The Chairman: Mr. Thomson, would you permit Mr. Owen to make a comment?

Mr. Owen: I think part of the subject you are really getting at is whether we are going to leave this as a matter for the Indians to find out about, or whether we are going to actually do something to let them know about it.

Mr. Thomson (Battleford-Kindersley): You have it right there.

Mr. Owen: We will be getting in touch with the Indian Affairs people, and it is our intent, where there is an indication of reasonable agricultural potential on a reserve, to have our local man go to that reserve, become familiar with the kind of farming that is going on, with the circumstances of the reserve, and do everything within his power to assist the people on the reserve to know first what we can do, and secondly what we cannot do, so that they will have an understanding of our program.

And it is our intent to arrange continuous consultation with them on these kinds of problem, so that we can be sure they are just as well informed, if not better informed, about our facilities as any other farmer in Canada.

Mr. Thomson (Battleford-Kindersley): Thank you, Mr. Chairman. In the light of this, would the Indian Affairs people care to comment?

Mr. Bergevin: For us, the fact that the Indian farmers would be allowed to use Farm Credit Corporation funds and Farm Syndicates credit funds is quite welcome. But it is, so far, only one other source of supply to help the Indians.

[Interpretation]

soit en mesure de participer aux coûts des travaux. Certaines bandes le peuvent. En Alberta, par exemple, il y en a qui ont des fonds assez importants et qui peuvent contribuer. Parfois les bandes assument 50 p. 100 des frais, ou bien une part dont nous convenons.

Mais je cherchais à me souvenir du nombre d'acres — en l'occurrence, je n'ai pas les chiffres sous les yeux, mais je vous ai dit qu'on défricherait des terres dans la région interlake au Manitoba, dans le nord de l'Alberta, en plein hiver, cet hiver. Et cela a été fait aux frais du Ministère et non pas aux frais des Indiens. C'est bien ce que vous vouliez dire?

M. Thomson (Battleford-Kindersley): Je ne me suis pas expliqué clairement, monsieur le président, lorsque j'ai parlé de défrichage.

Le président: Monsieur Thomson, est-ce que M. Owen pourrait poser une question complémentaire?

M. Owen: Je pense que la question que vous posiez était de savoir si nous allons laisser le soin aux Indiens de s'en occuper ou si nous allons faire quelque chose pour les mettre au courant.

M. Thomson (Battleford-Kindersley): Voilà exactement ma question.

M. Owen: Je peux vous dire que, en coopération avec le ministère des Affaires indiennes, nous allons chaque fois qu'apparaît une possibilité d'aménagement agricole dans une réserve, nous allons sur place nous familiariser avec le type d'agriculture qu'on y pratique, afin de connaître la réserve, et faire tout ce qui est possible pour aider les gens de la réserve. D'une part, savoir ce que nous pouvons faire, et d'autre part, ce que nous ne pouvons pas faire.

Nous avons d'ailleurs l'intention d'entretenir des consultations permanentes avec eux sur ces problèmes afin qu'ils soient informés aussi bien informés sinon mieux, de nos services que tout autre cultivateur au Canada.

M. Thomson (Battleford-Kindersley): Merci, monsieur le président. Je me demande si les gens des Affaires Indiennes voudraient ajouter quelque chose à ce que vous venez de dire?

M. Bergevin: Le fait que les Indiens soient autorisés à utiliser les crédits de la Société de crédit agricole et autres crédits, est une chose que nous accueillons avec bienveillance. Mais pour nous, ce n'est qu'une autre possibilité d'aider les Indiens.

[Texte]

We will keep on working with them, trying to adapt or to get the funds that they need to get going on various projects. We call on the Farm Credit Corporation for certain funds. We call on ARDA, and we call on ADA for industrial purposes. We call on any other program that goes on, and we try to get the Indians to make use of these funds. We come up sometimes with supplementary funds to make it workable at their level.

This is just one other source that we would use to help the Indians. It would not affect, I think, a very large part of our agricultural activities with the Indians.

● 1035

Mr. Churchman: Just to add to that, insofar as getting the information into the hands of the Indians, we have a little paper we call *Indian News* which we publish once a month. It is addressed to the home of every Indian in Canada. If any of them are not getting it, it is because we do not have their address; it was changed or something. But when this act is passed, and we assume it will be, there will be a notice in that paper bringing to the attention of all Indian people, particularly the farm people, that this is available.

We will also pass the information out to all our staff who are in the field, the community development people, the superintendents the agents and so on, to make the information available to them. I am sorry if I did not catch your question, about what you were getting at.

Mr. Thomson (Battleford-Kindersley): I can see I did not explain it properly. Thank you.

The Chairman: Thank you, Mr. Thomson. I recognize Mr. Moore (Wetaskiwin).

Mr. Moore (Wetaskiwin): Mr. Chairman, I was going to bring up the question of land leasing by Indians, and it has been pretty well covered by Mr. Churchman and Mr. Owen. But I would like to comment that band council policy—I am speaking of a reservation with which I am familiar—is against Indians leasing land. They want to get the farming on their own.

I would like to ask if Indian farmers taking advantage of this Farm Syndicates Credit loan, would be prevented from leasing land to white farmers?

The Chairman: Would Indians be prevented from leasing land to farmers who are not Indians?

Mr. Moore (Wetaskiwin): Yes. If they were involved in a syndicate.

[Interprétation]

Nous allons continuer d'œuvrer avec eux pour leur fournir les fonds dont ils ont besoin pour toutes sortes de projets. Autrement dit, nous ferons appel à la Société de crédit agricole pour certains fonds, et à l'ARDA ou à l'ADA pour les projets industriels. Nous ferons appel à tous les programmes de ce genre pour permettre aux Indiens de bénéficier des crédits et ce qui nous permet parfois d'avoir des crédits supplémentaires pour rendre leurs exploitations rentables.

C'est une des sources que nous utiliserions pour leur aider mais je ne pense pas qu'elles toucheraient une grande partie des activités agricoles avec les Indiens.

M. Churchman: Je pourrais ajouter également, en ce qui concerne la transmission des renseignements aux Indiens, nous avons une publication mensuelle qu'on appelle *Les nouvelles indiennes*, et qui est envoyée à chaque Indien du Canada. Si certains ne la reçoivent pas, c'est qu'on n'est pas au courant de leur changement d'adresse. Quand la Loi sera votée, et supposant qu'elle le soit, il sera indiqué dans ce journal à l'attention des Indiens, et particulièrement des cultivateurs.

Nous indiquerons également un certain nombre de renseignements aux responsables sur place, les animateurs ruraux, les surintendants, les agents et ainsi de suite pour qu'ils puissent les transmettre aux Indiens. Je m'excuse si je n'ai pas bien compris votre question.

M. Thomson (Battleford-Kindersley): Je m'aperçois, que je n'avais pas posé ma question clairement. Merci.

Le président: Je vous remercie, Monsieur Thomson. M. Moore.

M. Moore (Wetaskiwin): Monsieur le président, je voulais moi-même soulever la question des affermages de la part des Indiens. Mais, M. Churchman et M. Owen en ont très bien parlé. Mais je voudrais ajouter qu'en dépit du fait que la politique du conseil de bande, et je parle d'une réserve que je connais personnellement, s'oppose aux affermages par les Indiens. C'est-à-dire qu'ils veulent exploiter les terres eux-mêmes.

Je voudrais savoir si, dans le cas où les Indiens profitent de ces prêts, est-ce qu'on leur interdira d'affermier leurs terres aux Blancs?

Le président: Est-ce que les Indiens se verraient interdire d'affermier leurs terres aux agriculteurs qui ne sont pas Indiens?

M. Moore (Wetaskiwin): Oui, s'ils font partie d'un syndicat.

[Text]

Mr. Bergevin: I know the policy of the Department is that the Indian band does what it wants with its land. I think this is the basic policy of the Department. So if they want to lease the land to non-Indians, we will go along with it. They make their own policy.

Mr. Moore (Westaskiwin): Would you or Mr. Owen have any idea of the percentage of returns on investment for farmers in Canada, the Canadian average?

Mr. Owen: My guess is that it would be completely irrelevant to agriculture because so much of our agricultural resources in Canada are underemployed. There is great variation between the current and various kinds of farming, not only between different farmers on the same land, but also in different regions. The kinds of enterprise differ so much that the average really would not mean very much.

Mr. Moore (Wetaskiwin): I realize that very well.

Mr. Barrett: Hearing all I have heard, I am surprised that anyone, Indians or otherwise would want to be a farmer. Things are so tragic, dreadful, horrible, particularly out West.

The Chairman: Gentlemen, shall we return to Mr. Moore (Wetaskiwin).

Mr. Moore (Wetaskiwin): I will pass.

The Chairman: I recognize Mr. Downey.

Mr. Downey: On the number of Indian farmers in to Canada I see it is only apparently 1,392, according to the figures from the Dominion Bureau of Statistics.

Mr. Barrett: That is only in Saskatchewan?

Mr. Downey: No, this is in all of Canada. I think the figure for Saskatchewan is 407.

Considering the number of farmers we have at present, does the Department think that there will be enough who actually want to farm to justify the \$200 million that you are considering putting into the program?

● 1040

Mr. Churchman: I might say, Mr. Chairman, that there is definitely a growing interest, a developing interest on the part of the Indians to do their own farming. We expect that there will be more Indians wanting to farm than there is land available for them to farm. This has been the problem among the white population, and I do not think that it will be any different for the Indian population. Some of our studies indicate that in the West a person needs about

[Interpretation]

M. Bergevin: La politique du ministère est que la bande indienne en fait ce qu'elle veut. Autrement dit, s'ils veulent affermer leurs terres à des non-Indiens, c'est à eux de décider.

M. Moore (Wetaskiwin): Est-ce que vous ou M. Owen avez une idée du pourcentage de recettes sur les investissements des agriculteurs canadiens? La moyenne canadienne?

M. Owen: J'imagine que cette moyenne n'a rien à voir avec l'agriculture puisqu'une très grande partie des ressources agricoles sont sous-employées. Il y a de grandes différences selon le type d'exploitation et selon le cultivateur sur une terre donnée et entre les différentes régions. Il y a tellement de différentes activités agricoles que la moyenne ne voudrait pas dire grand-chose.

M. Moore (Wetaskiwin): Je comprends parfaitement.

M. Barrett: Je suis très surpris après avoir entendu tout ce qu'on vient de dire... qu'une personne, qu'elle soit indienne ou autre veuille encore devenir agriculteur. Leur situation est tellement grave, et tragique surtout dans l'Ouest!

Le président: Messieurs, est-ce qu'on peut en revenir à la question de M. Moore?

M. Moore (Wetaskiwin): Je cède mon tour.

Le président: Monsieur Downey.

M. Downey: Je vois d'après les chiffres du B.F.S. qu'il y a 1,392 agriculteurs indiens dans tout le Canada.

M. Barrett: N'est-ce pas le chiffre pour la Saskatchewan?

M. Downey: Non. Tout le Canada. Je pense que pour la Saskatchewan c'est 407. Vu le nombre d'agriculteurs que nous avons actuellement, est-ce que vous pensez qu'il y en a suffisamment qui voudront faire de l'agriculture pour justifier les \$200 millions que vous envisagez d'investir dans ce programme?

M. Churchman: Monsieur le président, je dois dire que les Indiens sont de plus en plus attirés vers l'agriculture. Nous croyons qu'il y aura plus d'Indiens qui s'intéresseront à l'agriculture quand il y aura plus de terres agricoles à leur disposition. Ce fut le même problème pour les blancs autrefois.

Certaines études ont indiqué qu'il faut 500 acres de terres dans l'Ouest pour qu'une exploitation soit ren-

[Texte]

500 acres to have a viable farm. As I indicated earlier, only 27 per cent of the reserve population could be supported on those reserves where there is farming potential. Only a small part of the Indian population can be supported by the agricultural aspect. I think it will be the other way around. There will be more people wanting to farm than there is land available.

The Chairman: Gentlemen, I think we are digressing from the amendment before the Committee, and I would direct your attention to the copies which were provided for you, the amendment to Clause 3.

Mr. Downey: I have another question, Mr. Chairman. Mr. Churchman and Mr. Owen were speaking of special services that were available to bands for technological help. Are not the ordinary channels of information available to them, such as the local District Agriculturists? Are not all these channels open to them and being used by them presently?

Mr. Churchman: Yes, they are available to them but sometimes they are not in sufficient quantity. An agricultural representative's first responsibility in a province is not to the Indians, but to the white farmers in the area in which he works. If he is overloaded with the number he has, then the Indians are going to come off second best.

Some of the provinces, particularly in the west, have become very interested in the Indian agricultural program, or problems, and they are making their agricultural representatives available. One province particularly has assigned one man in the northern part of the province to work specifically on Indian reserves.

We are working with the provinces and the agricultural departments in provinces to extend this kind of service more and more. As Mr. Bergevin said earlier, we would like Indians to get their services from the same source as other people, and we do not want to provide special services, that is, services which are designed particularly for Indians, if they can be obtained from the same place as other people get them.

Mr. Downey: Am I to understand, then, that the number of Indians trying to make use of these services is overloading them presently and this is why special assistance is needed; is this correct?

Mr. Churchman: Yes, plus the fact that in the past the provinces have not made this service available. It has only been in the last year or two that the provinces have recognized any responsibility here or taken any real interest; but this is growing, we are happy to say. So any service that has been available in the past has been provided by us, because nobody else provided it.

[Interprétation]

table. Comme je l'ai indiqué, seulement 27 p. 100 de la population des réserves pourraient vivre des exploitations rentables sur les réserves. C'est donc une très faible partie de la population qui peut vivre de cette activité. Je pense que ce sera le contraire. Il y aura beaucoup plus de gens qui voudront faire de l'agriculture qu'il y aura de terres disponibles.

Le président: Nous nous éloignons du sujet. Je voudrais attirer votre attention sur les documents qui ont été distribués, soit l'amendement proposé à l'article 3 du projet de loi.

M. Downey: J'ai une autre question, monsieur le président. M. Churchman et M. Owen ont parlé de services spéciaux qui étaient mis à la disposition des bandes pour l'aide technologique. Les voies normales d'information, les Agronomes de district par exemple, ne leur sont-elles pas ouvertes? Ne les utilisent-ils pas actuellement?

M. Churchman: Oui, ces moyens sont à leur disposition mais disons, pas en quantité suffisante. La première responsabilité d'un représentant agricole n'est pas envers les indiens, mais envers les agriculteurs blancs de la région où il travaille. Il a trop de travail les indiens vont donc venir en deuxième position.

Dans l'Ouest on s'est beaucoup intéressé au problème de l'agriculture indienne et on nomme de plus en plus de représentants agricoles. Une province, notamment, a affecté quelqu'un au nord de la province, pour travailler spécialement avec les réserves indiennes.

Afin que ce genre de service soit de plus en plus étendu nous travaillons avec les provinces et les ministères de l'agriculture. Comme M. Bergevin l'a dit précédemment nous voudrions que les Indiens obtiennent les mêmes services que les autres et de la même source que les autres. Nous ne voulons pas fournir des services spéciaux, c'est-à-dire des services prévus uniquement pour les Indiens, s'ils peuvent bénéficier des mêmes sources que les autres.

M. Downey: Donc, je commence à comprendre que le nombre d'Indiens voulant utiliser ces services est trop élevé, ce qui surcharge les services et nécessite une aide spéciale; est-ce exact?

M. Churchman: Oui, c'est exact, mais disons qu'en plus ces services n'étaient même pas à leur disposition auparavant. Ce n'est que depuis l'année dernière, ou la précédente que les provinces ont reconnu qu'elles avaient là quelques responsabilités et qu'elles s'y sont intéressées et, nous sommes heureux de le dire, c'est un secteur qui ne cesse de se développer. Tous les services qui étaient offerts auparavant, l'étaient par nous parce qu'il n'y avait personne d'autre pour les fournir.

[Text]

Mr. Downey: In a sense, as the other gentlemen have brought out, we have one government agency guaranteeing another government agency under this Farm Machinery Syndicates Credit Act, and the Indian Affairs Branch then has the ordinary chattel mortgage arrangement with the Indians themselves. In actual application, do you feel personally that you are developing their initiative to the full? Are they taking the full responsibility in this regard? Perhaps you have some figures on the claims you have under these chattel mortgages?

● 1045

Mr. Churchman: The only thing I could refer to, Mr. Chairman, is our own revolving fund loan and the repayment. Our experience on the revolving fund loan is that many of the small loans made in the past have been bad loans and we have had problems with repayment. However, since we got approval to make larger loans, in other words, to give a man enough money to get an operation going on a viable basis, then the repayment has been good, and very, very few of the larger loans of \$10,000 and up have gone sour on us; but with a lot of the smaller loans in the region of \$200 or so, the borrowers have never been able to get going.

Mr. Downey: On the aspect of encouraging responsibility, do you feel it would encourage this if the band funds were made available for guarantees? Do you think this would make the Indians encourage responsibility amongst themselves to any greater extent?

Mr. Churchman: To some extent it would, and in a number of cases they do. I know of some bands in Alberta who have a line of credit at the bank in the \$100,000 figure, and this is guaranteed by the band. It is not guaranteed by us. It is a line of credit that they can work on.

The problem that we run into is that so many bands have no funds. There is about \$30 million in band funds across Canada and that is divided between 2,200 bands, and the majority of it is in the hands of just a few bands, and there are hundreds and hundreds of bands that do not have \$5 in their band fund. So you see these bands could not guarantee anything, and this is the sort of problem that you run into.

Then, of course, the Indian land cannot be mortgaged so we have to work out some form of a guarantee, and we are trying to work it out so that the Indian does have something to lose. I think this is what you are concerned about: if he has a loan and he has nothing to lose, then so what?

[Interpretation]

M. Downey: En un sens, comme d'autres l'ont déjà dit, il y a une agence du gouvernement qui en garantit une autre, en vertu de cette loi sur le crédit accordé aux syndicats d'équipement agricole et les Affaires indiennes ont les mêmes accords sur les hypothèques, sur les biens mobiliers avec les Indiens.

En pratique, est-ce que vous pensez personnellement que vous leur donnez la possibilité de se développer pleinement? Est-ce qu'ils assument toutes les responsabilités à cet égard? Peut-être vous avez d'ailleurs des chiffres à nous donner sur le nombre de réclamations que vous avez eues en vertu de ces hypothèques immobilières?

M. Churchman: La seule chose dont je pourrais parler, Monsieur le président, c'est notre fonds de roulement de prêt et les remboursements. Disons qu'un bon nombre de petits prêts faits dans le passé ont été de mauvais prêts et que nous avons eu des problèmes de remboursement. Mais depuis que nous avons eu l'autorisation d'augmenter les prêts, c'est-à-dire de leur donner suffisamment d'argent pour qu'ils puissent faire marcher leur exploitation sur une base viable et bien les remboursements ont été meilleurs et nous avons eu très peu de prêts de \$10,000 ou plus qui n'ont pas été remboursés. Mais avec les petits prêts de l'ordre de \$200 nous avons toujours eu des problèmes.

M. Downey: Autrement dit, le fait d'encourager les responsabilités, vous mène à penser que ça encouragerait cela. Si les bandes pouvaient garantir leurs fonds, vous pensez que ça permettrait d'encourager les indiens à prendre leurs responsabilités?

M. Churchman: Oui, dans une certaine mesure et d'ailleurs c'est ce qu'ils font dans beaucoup de cas. Je pense à des bandes de l'Alberta qui ont un crédit bancaire de l'ordre de \$100,000, garanti par la bande. C'est un crédit qui leur permet de travailler.

Le problème que nous rencontrons, c'est que beaucoup de bandes n'ont pas d'argent. Il y a environ \$30,000,000 de fonds pour toutes les bandes du Canada et cela pour 2,200 bandes, et encore l'argent est-il entre les mains de quelques bandes, et des centaines et des centaines n'ont pas \$5 au fonds de la bande. Vous voyez donc que ces bandes ne pouvaient rien garantir et voilà le genre de situation dans laquelle nous nous trouvons.

Bien sûr, on ne peut pas hypothéquer la terre de la réserve, par conséquent, il faut trouver une autre forme de garantie et nous cherchons à mettre quelque chose sur pied pour que l'Indien ait quelque chose à perdre. C'est ce qui vous intéresse particulièrement. Évidemment s'il obtient un prêt et qu'il n'y a rien à perdre, et bien, pourquoi s'inquiéter?

[Texte]

We have to work within the terms of our act, and we have the legal people working on it now, to try and work it out so that although the Minister guarantees the loan to the lender, we will have release through the Indian so that he will lose something if he does not pay. If this is considered to be incentive, then that is—

Mr. Downey: Where band funds are available, do you not think that it would be a good idea to use this as a guarantee, if this could be set up, for the individual on these individual chattel mortgages?

Mr. Churchman: Yes, but you run into problems here because of the amount of band funds, as I mentioned earlier, and the calls upon the band funds. Unfortunately, at the present time, if band funds are used as a guarantee, then that amount of money has to be frozen and it cannot be used for anything else. So that, if a band has only a small amount of money and a couple of Indians want loans up to \$30,000 or \$40,000, then they freeze their money; they cannot use it for anything else. So you get into these complications. It is not just a straightforward, simple thing. We say, "Well, put up your band funds". With a band that has several million dollars in its fund, and we have one or two that have, it is not much of a problem. Then again, you run into the situation, if you guarantee it for one, why should you not guarantee it for the other.

Mr. Downey: Thank you.

The Chairman: Thank you, Mr. Downey. Mr. Lambert wants to ask a single supplementary.

M. Lambert (Bellechasse): Monsieur le président, y aurait-il possibilité de savoir quels seront les revenus possibles de ces bandes? Sur quoi vous basez-vous pour établir leur capacité de remboursement des prêts qui leur sont consentis. Quelles sont vos prévisions de ce côté, puisque, en somme vous avez certainement étudié cet aspect de la question?

M. Bergevin: Monsieur le président, le ministère par l'intermédiaire de son fonds de rotation de prêts, a fait des prêts pour des fins agricoles. Mais si je vous donne les montants, vous allez réaliser vite que nous ne sommes pas dans le domaine de la "grosse" agriculture. En effet, en décembre 1968 le fond indiquait que seulement 2.6 millions de dollars avaient été prêtés pour des fins agricoles, et ceci dans 1,300 transactions. C'est donc dire environ \$2,000 par transaction. Ce n'est vraiment qu'une aide. Le fermier indien a seulement subsisté à certains de ses besoins.

En autant que la Société de crédit agricole est concernée, elle ne fait pas la même sorte de prêts. Elle prête des montants beaucoup plus élevés et à de vrais fermiers professionnels.

Le ministère a été principalement engagé dans une opération agricole sur une petite échelle, pour aider le fermier. Il n'avait pas assez d'argent pour s'y lancer à

[Interprétation]

Donc ce que nous cherchons à faire dans le cadre de la Loi avec l'appui des légistes c'est que bien que le ministre garantisse le prêt auprès du prêteur, il y ait une clause liant les indiens et qui leur fait perdre quelque chose si le prêt n'est pas remboursé. Voilà un aspect de la question.

M. Downey: Lorsqu'il y a des fonds propres à la bande, vous ne pensez pas qu'il serait bon de s'en servir comme garantie, si c'était possible pour des hypothèques immobilières individuelles.

M. Churchman: Mais oui, mais là vous avez un problème parce que, comme je l'ai indiqué, il y a peu d'argent dans les fonds des bandes.

Ce qui se passe, c'est que si ces sommes sont mises sous garantie, elles sont alors inemployables pour autre chose. Si une bande a peu d'argent et que quelques Indiens veulent emprunter \$30,000 ou \$40,000, tout l'argent de la bande est rendu inemployable. Ce n'est pas simple. Si vous garantissez pour un, il faut garantir pour un autre même si leurs revenus sont différents.

M. Downey: Merci.

Le président: Merci M. Downey monsieur Lambert vous voulez poser une question supplémentaire.

Mr. Lambert (Bellechasse): Mr. Chairman, would it be possible to know what will be the possible revenues for these bands. On what do you base yourself to establish their loan reimbursement capabilities. What do you foresee with respect to this, seeing as you have studied that aspect of the question?

Mr. Bergevin: Mr. Chairman, the Department through its loan revolving fund has made loans for agricultural purposes. But if I give you the amounts, you will soon realize that we are not in the field of large scale agriculture. As a matter of fact, in December 1968, only \$2.6 million had been loaned for agriculture out of this fund, and this represented 1,300 transactions. That means only about \$2000 per transaction. In other words, it is just assistance. The Indian farmer has merely been able to meet some of his needs.

As to the Farm Credit Corporation, it does not grant the same type of loans. It loans much higher amounts to genuinely professional farmers.

The Department has been mainly engaged in a small scale agricultural operation to assist farmers. It did not have enough money to engage in this field more fully.

[Text]

fond de train. L'adoption des deux lois que vous étudiez présentement va sûrement aider à régler la situation. Je ne sais pas monsieur, si j'ai répondu à votre question. Il ne faut pas oublier l'ordre de grandeur.

M. Lambert (Bellechasse): Mais la loi à l'étude présentement prévoit des prêts pour l'achat de machinerie. Or on sait que la machinerie ne dure pas éternellement. Je voudrais savoir s'il y a des possibilités de remboursement de telle sorte que les Indiens puissent rencontrer leurs obligations? Advenant le cas où vous prêtez 10,000 à une bande, des remboursements annuels devront être payés, ils ne passeront pas à côté de la loi ces gens-là. Alors sur quoi vous basez-vous pour savoir si réellement ils auront des revenus suffisants pour rencontrer leurs obligations. C'est bien beau que le ministère des Affaires indiennes offre des garanties à la Société du crédit agricole mais indirectement, c'est vous, c'est moi, c'est tout le monde, qui payons.

M. Bergevin: Monsieur le président, chaque cas est étudié séparément. Si une opération est jugée rentable, nous prêtons l'argent. Ce n'est qu'exceptionnellement que nous allons engager des fonds dans une entreprise non-rentable.

M. Lambert: Est-ce que vous prévoyez . . .

The Chairman: Thank you, Mr. Lambert. I think we must return to our list of questioners. I have permitted the supplementary and I have you on my list for later on. I must recognize Mr. Cobbe, Mr. Lind, Mr. Muir, Mr. Howard, Mr. Southam, Mr. Lambert and Mr. Korchinski. I now recognize Mr. Cobbe.

Mr. Cobbe: Thank you, Mr. Chairman. I would like to direct my question to the gentlemen from the Department of Indian Affairs and Northern Development as I think this Bill deals specifically with syndicates and the land basically belongs to the bands. As we hope to encourage more Indian people to participate in farming, could you tell me how you propose to divide the amount of land that these individual syndicates are going to be able to farm to make it an economical unit?

Mr. Churchman: Mr. Chairman, this is the responsibility of the bands. The band, through its elected chief and council, are the people who make the allocations of land to the individuals in the band. They are the ones that have to make this decision, not us.

Mr. Owen: I have a supplementary comment. Under this Bill we do not lend money for land for agricultural production. Funds for agricultural production . . .

The Chairman: Gentlemen, there is too much conversation. In order to hear the witness, will you please devote your attention to him?

[Interpretation]

The adoption of the two bills you are considering at present will certainly help solve the situation. I do not know, sir, if I answered your question. We must keep in mind the matter of size.

Mr. Lambert (Bellechasse): But the bill we are studying at present makes provision for loans to buy machinery. Now, we know that machinery will not last forever. I would like to know if there exist reimbursement possibilities that could help Indians meet their obligations? I mean are they capable of reimbursing. Suppose you loan \$10,000 to a band, they will have to make yearly reimbursements. The Act will also apply to those people. On what basis do you establish whether they will really have sufficient income to meet their obligations? It is all good and well for the Department of Indian Affairs and Northern Development to offer guarantees to the Farm Credit Corporation, but indirectly it is you, it is I, it is everyone who pays.

Mr. Bergevin: Mr. Chairman, every case is studied separately. If we see that an operation is profitable, then we loan the money. It is only under exceptional circumstances that we shall commit funds when the operation is not profitable.

Mr. Lambert: Do you expect . . .

Le président: Merci, monsieur Lambert. Je pense qu'il nous faut revenir à la liste de ceux qui veulent poser des questions. J'ai autorisé la question supplémentaire, et je vous ai sur ma liste pour plus tard. Je dois donner la parole à M. Cobbe, à M. Lind, à M. Muir, à M. Howard, à M. Southam, à M. Lambert et à M. Korchinski. M. Cobbe a la parole pour le moment.

M. Cobbe: Je vous remercie, monsieur le président. J'aimerais poser ma question aux représentants du ministère des Affaires indiennes et du Nord canadien, car j'estime que ce bill porte surtout sur les syndicats, et que les terres appartiennent surtout aux bandes. Étant donné que nous espérons encourager de plus en plus d'Indiens à participer à l'agriculture, est-ce que vous pourriez nous dire comment vous envisagez de répartir les terres que chaque syndicat va pouvoir cultiver pour être un groupe rentable?

M. Churchman: Monsieur le président, c'est à la bande d'en décider. Il y a un chef et un conseil de la bande et ce sont ces gens-là qui répartissent les terres entre les divers membres de la bande. C'est à eux de prendre la décision, pas à nous.

M. Owen: Une observation complémentaire. D'après ce projet de loi, nous ne prêtons pas d'argent pour les terres à des fins de production agricole. Les fonds pour la production agricole . . .

Le président: Messieurs, il y a beaucoup trop de conversation. Pour entendre le témoin, voudriez-vous bien lui donner votre attention?

[Texte]

[Interprétation]

● 1055

Mr. Owen: ... on farms are lent under the provisions of the Farm Credit Act. Under this Bill the land involved is the land required as a site for a building to instal equipment for the washing, grading, packaging or other work that has to be done with products. It really is a site for a building to be used in common. It is not related to loans for actual agricultural production, so your question really relates to Bill No. C-110 which was approved on November 14.

Mr. Cobbe: Mr. Chairman, not really, because if they are going to provide facilities such as buildings, the only way they are going to be able to pay it back is to be able to be assured that they are going to have enough land so that they can produce enough to pay the loan back.

Mr. Owen: Yes; excuse me, I thought you were referring to the land that was involved in this particular Bill.

Mr. Cobbe: No.

Mr. Owen: Certainly the assessment of the repayment capacity of a syndicate, whether it be on a reserve or anywhere else, must be related directly to the amount of revenue that those individual members of the syndicate can generate from their own production.

Mr. Cobbe: Right. Now, when we discussed this before there really was not much of a problem, or we thought there was not much of a problem, in the band's borrowing money because they had the total area of land to deal with, but now I think our concern is with individual syndicates within the band. How are they assured that they are going to have enough land for individual syndicates?

An hon. Member: There are no syndicates.

Mr. Cobbe: Basically, then, if there are not any syndicates within the band, we really do not have a problem in discussing this portion of it.

Mr. Owen: Before we would make a loan to a syndicate we would ensure, through discussion and consultation with Indian Affairs, that the individual members of the syndicate had adequate security of tenure on an adequate amount of land to develop an adequate product to make it worth while having this particular building or site.

Mr. Cobbe: But this is not the responsibility of Indian Affairs; it is the responsibility of the band as suggested before.

M. Owen: Les fonds pour la production agricole dans les exploitations sont prêtés en vertu de la Loi sur le crédit agricole. Aux termes de ce Bill, la terre en cause est la terre nécessaire pour la construction d'un bâtiment où on logerait le matériel voulu pour le nettoyage, la classification, l'emballage et les autres travaux à exécuter pour les produits. Il s'agit en fait d'un emplacement pour la construction d'un édifice qui sera utilisé en commun. Cela n'a rien à voir avec les prêts accordés pour la production agricole même. Autrement dit, votre question se rattache au Bill C-110, qui a été approuvé le 14 novembre.

M. Cobbe: Monsieur le président, je ne suis pas tout à fait d'accord, car s'il leur faut fournir des installations telles que des bâtiments, le seul moyen pour eux de rembourser l'emprunt est de s'assurer qu'ils ont suffisamment de terres pour produire suffisamment pour pouvoir rembourser.

M. Owen: Oui, excusez-moi, je pensais que vous vouliez parler des terres en cause dans ce Bill particulier.

M. Cobbe: Non.

M. Owen: Certainement, l'évaluation des possibilités de remboursement d'un syndicat, que ce soit un syndicat d'une réserve ou d'ailleurs, doit être directement liée au montant des revenus que les membres du syndicat peuvent retirer de leur propre exploitation.

M. Cobbe: C'est exact. Lorsque nous avons étudié la question précédemment, il semblait qu'il n'y eût pas beaucoup de difficultés à ce que la bande emprunte de l'argent, car elle disposait de la totalité des terrains, mais je pense que maintenant, nous nous soucions des syndicats individuels à l'intérieur de la bande. Comment peut-on être certain qu'ils vont avoir suffisamment de terres pour les syndicats individuels?

Une voix: Il n'y a pas de syndicats.

M. Cobbe: Eh bien, s'il n'y a pas de syndicats à l'intérieur de la bande, il n'y a pas de problème dans cette partie du Bill.

M. Owen: Avant de faire un prêt à un syndicat, nous nous assurerions, par des discussions et des consultations avec les Affaires indiennes, que les membres individuels du syndicat ont une garantie suffisante de bail sur des terres suffisamment importantes pour que l'on y produise assez pour justifier la construction du bâtiment ou des installations.

M. Cobbe: Mais ce n'est pas là le rôle du ministère des Affaires indiennes, comme on l'a déjà dit, mais des bandes elles-mêmes.

[Text]

Mr. Owen: Then the individual syndicate that is borrowing must make arrangements through their band and subsequently, I understand, through the Department of Indian Affairs and Northern Development, with respect to the allocation of a security of tenure on the land in order to be able to qualify for the loan. In other words, the loan would be conditional, just the same as any other loan to a non-Indian. We make a loan conditional upon his getting security of tenure or ownership of enough land to pay it back.

Mr. Cobbe: Fine. It was only a problem that I see here, that individual syndicates within a band are quite possibly not going to be able to use this because of the lack of opportunity to acquire enough property from the band, and this is the problem I see within the Indian Affairs itself.

Mr. Bergevin: Of course, if the band comes up and suggests that a syndicate have so much of an area, if that area is found to be not economically viable, then we will not go for it. Is that what you mean?

Mr. Cobbe: Well it is the dividing of the reservation land amongst them.

Mr. Bergevin: That is their problem.

Mr. Churchman: This is a problem and various bands have real problems in arriving at this decision.

The Chairman: Thank you, Mr. Cobbe. Mr. Lind?

Mr. Lind: Further to the questions of Mr. Cobbe, I will direct this question to Mr. Churchman. In the Indian communities in my area, it is my understanding that this land is held not in deed but a type of ownership within the band by individuals. Is this not true in, say, the Caradoc agency area?

Mr. Churchman: It varies, Mr. Chairman, across the country. Different bands have different conditions and they have different ways and methods of handling it. What the gentleman says is correct. What could be done in these cases is that if the locatee, as we call him, or the person to whom the land has been allocated by the band, does not wish to farm it and another Indian does, there is nothing to prevent him from making a lease arrangement with that other Indian who owns the land. It is not owning in fee simple as we understand it, but he can make this kind of arrangement with him to get the use of the land the same as you or I might lease some land to someone else.

[Interpretation]

M. Owen: Puis chaque syndicat qui emprunte doit prendre des dispositions par l'intermédiaire de la bande, puis du ministère des Affaires indiennes et du Nord canadien, si j'ai bien compris, en ce qui concerne la répartition d'une garantie de bail sur ses terres, pour pouvoir obtenir un prêt. Autrement dit, le prêt se ferait à certaines conditions, comme n'importe quel autre prêt accordé à des non-Indiens. Nous n'accordons un prêt que si la personne obtient une garantie de bail ou de propriété sur des terres assez importantes pour qu'elles lui permettent de vous rembourser.

M. Cobbe: Bien. Le seul problème que je vois, c'est qu'il y aura des cas où les divers syndicats d'une même bande ne pourront se prévaloir de cette clause parce qu'ils ne pourront pas obtenir suffisamment de terres de la bande; c'est là que je vois un problème dans les Affaires indiennes mêmes.

M. Bergevin: Bien sûr, si la bande propose à un syndicat de prendre des terres dans une zone donnée, et que nous trouvions que cette zone n'est pas rentable, nous n'accorderons pas de prêt. Est-ce là ce que vous voulez dire?

M. Cobbe: Il s'agit de la répartition des terres de la bande entre ses divers éléments.

M. Bergevin: Cela, c'est leur problème.

M. Churchill: C'est certainement un problème, et certaines bandes ont beaucoup de difficulté à prendre une décision à ce sujet.

Le président: Je vous remercie, monsieur Cobbe. Monsieur Lind?

M. Lind: Cela fait suite aux questions de M. Cobbe, et je vais m'adresser à M. Churchman. Dans les collectivités indiennes de ma région, d'après ce que j'ai compris, la terre n'est pas détenue par contrat, mais par une sorte de propriété à l'intérieur de la bande par des particuliers. N'en est-il pas de même de la région qui dépend de l'agence de Canadoc, disons?

M. Churchman: Cela varie, monsieur le président, d'un bout à l'autre du pays. La situation n'est pas la même dans les différentes bandes, et elles ont différentes façons de procéder. Ce que dit monsieur est exact. Ce qui peut se produire, c'est que si le locataire, comme nous l'appelons, c'est-à-dire la personne à laquelle la bande a attribué la terre, ne veut pas faire d'agriculture, mais qu'un autre Indien veuille le faire, rien n'empêche cette personne de louer la terre à un autre Indien qui en est propriétaire. Il ne s'agit pas de propriété au sens où nous le comprenons, mais ce genre d'entente est possible.

[Texte]

Mr. Lind: Mr. Chairman, in these Indian communities in our area we have several very successful Indian farmers who are carrying on quite extensive operations and who need expansion; they need new equipment in order to meet competition and get their production costs down so that they can sell and make a net return on their investment.

The thing that concerns me when we go into this, Mr. Chairman, is who is going to allot his money? They are very successful Indian farmers, and who is going to be responsible? Is it the agents from the Farm Credit Corporation, or who?

Mr. Owen: It would be the representatives of the Farm Credit Corporation who would accept the application or request for credit; who would analyse and assess the merits of the application and make an offer of loan, or approve a loan, we might make it conditional depending on the circumstances, conditional upon certain adjustments in the rights of tenure of land by the applicants, but we as lenders would be the persons who would be determining how much we could lend to an individual applicant, whether it be a syndicate or the band itself or any other entity under this Bill.

Mr. Lind: I realize, Mr. Owen, that you have two good agents in my riding, but they have been rather careful, shall we say, when dealing with the Whites, in taking mostly A-1 risks. When you come to this other risk where they are dealing with the band and they are dealing with individuals with whom they have not had any experience, are they going to be more rigid or are they going to take a more lenient outlook?

Mr. Owen: We rather feel that we exercise reasonable and equitable judgment wherever we can in all circumstances. I would suggest that the fact that in the fiscal year ending last March we had lent \$263 million in the course of the year would indicate that we are not just restricting our operations to the cream of the crop.

We are endeavouring to ensure that our loans go to help rather than to hurt individuals, that loans go to people who in effect will be able to pay them back and therefore not jeopardize what they already have. I know that many people have the impression that they are relatively rigid with respect to loans. I suggest that part of the reason for this is that they hear only from those who are turned down, those who are unable to get loans, and that they only hear one side of the story.

If the whole circumstances were exposed, we might find that we have made 10,000 loans in a year and turned down maybe 1,500. We hear only from those 1,500 and we only hear one side of the story. I think that under this type of program we certainly can exercise flexible and reasonable judgments, but we have to be sure that in making a loan we are not putting the

[Interprétation]

M. Lind: Monsieur le président, dans les communautés indiennes de notre région, il y a des agriculteurs indiens très habiles qui ont des exploitations très grandes et qui ont besoin de machines nouvelles pour pouvoir soutenir la concurrence et abaisser leurs prix, afin de pouvoir vendre et avoir un profit net sur leur placement.

Mais ce qui m'inquiète lorsque nous abordons cette question, monsieur le président, c'est de savoir qui va répartir les fonds. Ce sont des agriculteurs indiens qui réussissent fort bien. Qui va être chargé de la répartition? La Société du crédit agricole?

M. Owen: Ce serait les représentants de la Société du crédit agricole qui recevraient les demandes de prêt. Ils évalueraient les mérites de la demande et ils étudieraient ce prêt et fixeraient peut-être certaines conditions à l'octroi du prêt, c'est-à-dire que le candidat, selon les circonstances, devrait effectuer certaines modifications au droit de jouissance, mais nous, en tant que prêteurs pouvons décider du montant du prêt, que ce soit à un Indien, à une bande ou à n'importe quelle autre personne, aux termes du présent bill.

M. Lind: Outre cela, monsieur le président, je me rends compte que, mais ils ont été disons plutôt prudents lorsqu'il s'agit des Blancs, ne prenant que des risques de première classe. Lorsque vous prenez le risque supplémentaire, c'est-à-dire de traiter avec les bandes ou des gens en particulier avec lesquels ils n'ont jamais eu affaire, est-ce qu'ils vont être plus rigides ou au contraire plus souples?

M. Owen: Nous trouvons que nous exerçons un jugement équitable et juste dans toutes les circonstances. Je suggérerais que le fait que durant l'année financière close le dernier mots, nous avons prêté 263 millions de dollars au cours de l'année indique que nous ne limitons pas notre aide à la crème.

Nous cherchons à ce que nos prêts aident plutôt que gênent les individus, et nous le faisons à des gens qui pourront rembourser, par conséquent qui ne mettraient pas en danger ce qui nous appartient déjà. Beaucoup de gens pensent qu'on est très rigides en ce qui concerne les prêts. Je pense, en fait, que cela est dû en partie au fait que l'on n'entend parler que des refus de prêts, c'est-à-dire des cas où un prêt est refusé. Donc, on n'entend qu'une partie de l'histoire.

Mais si on révélait l'autre aspect de la question, on s'apercevrait peut-être que 10,000 prêts ont été accordés dans l'année, mais il n'y en a eu que 1,500 qui ont été refusés, mais on n'entendra parler que de ces 1,500. Je pense qu'avec un programme comme celui-ci, nous pouvons certainement exercer un jugement raisonnable assez souple, et nous devons être certains lorsque nous accordons un prêt que nous ne

[Text]

borrower behind the eight ball; that we are putting him in a position where he has a reasonable opportunity to meet his obligations and protect his estate.

Mr. Lind: Mr. Chairman, through you to Mr. Owen, I think your figures from the Farm Credit Corporation bear out that you have only been skimming off the cream of the crop because, if I remember correctly, there were only about a dozen farms that you had to reclaim in the last year. Out of the number of loans, out of about \$263 million, you say, this indicates to me that your policy with regard to lending to farmers is that you are only skimming the cream and you are not taking any of the risk.

• 1105

Mr. Owen: I would not mind mentioning that we are now, I presume, discussing the Farm Credit Act?

Mr. Lind: I am just coming back to a point that you brought up. I am just answering your point, Mr. Owen.

Mr. Owen: If we are skimming off the cream of the crop, the cream goes very deep in Canadian agriculture. Between ourselves and provincial agencies we have mortgages on more than 100,000 farms in Canada today. We ourselves have about 68,000 mortgages. Now surely it should not be one of our aspirations to foreclose on this large number of farms each year. Since the Corporation has been operating its annual volume has increased sixfold and the price of land has been rising regularly. When a farmer gets into difficulty with respect to payment, rather than for us to foreclose it, knowing that we are not as likely to get as reasonable a price for the farm as he would if he sold it as an individual, that farmer who is in difficulty will sell the farm himself and have somebody else take over the loan and pay us off.

And I am sure you realize that aside from those whom we foreclose—and when we foreclose we recognize that what we have done is to lend money to a man who could not pay us back and to have taken his home and property away from him—that aside from these there are a great number of others who come into difficulty from time to time and who have to sell out and leave their property, but they sell it directly on their own. And I would suggest that the average size of the farms on which we are lending in Canada today is not greater than the average size of farms in Canada. If part of the objective of the program is to introduce viability into agriculture, then we are working in that direction.

Mr. Lind: Mr. Chairman, this is getting a little off the subject. I want to get back to the fact that these same agents who have been dealing with the White farmer now have to deal with the Indian farmer in his community.

[Interpretation]

faisons pas de tort à l'emprunteur; que nous le mettons dans une position où il a des occasions raisonnables de remplir ses obligations et de protéger sa propriété.

M. Lind: Monsieur le président, par votre intermédiaire, je voudrais poser une question à M. Owen. Je crois que les chiffres de la Société du crédit agricole prouvent que vous n'avez pris que la crème et il me semble que oui, car si je me rappelle bien vous n'aviez qu'une douzaine d'exploitations agricoles que vous avez eu à aider avec des prêts. Sur 263 millions, comme vous dites, je pense que cela indique pour moi que vous ne faites que la crème et que vous ne prenez aucun risque.

M. Owen: Je dois signaler que dans le moment nous étudions la Loi sur le crédit agricole.

M. Lind: Non, je reviens au point que vous aviez soulevé vous-même. Je ne fais que répondre à votre argument.

M. Owen: Alors, si c'est la crème, la crème n'est pas sur le dessus seulement, elle va assez loin. Entre nous et d'autres agences de prêts provinciales, nous avons 100,000 hypothèques sur des fermes. Nous en avons nous-mêmes 68,000. Nous n'allons pas alors saisir toutes ces fermes. Depuis que la Société exploite ses opérations, elle a multiplié par six ses activités et le prix des terres augmente régulièrement. Lorsqu'un exploitant agricole a des difficultés quant à ses versements, au lieu de saisir, sachant que le prix que nous pourrions obtenir ne sera pas aussi raisonnable que celui qu'il peut obtenir, en tant que particulier, si l'exploitant agricole particulier a de la difficulté, il peut vendre et laisser quelqu'un d'autre nous rembourser l'emprunt.

Je suis certain que vous comprenez qu'à part ceux que nous saisissons, il y a des gens à qui l'on peut enlever ces biens, mais à part ces cas-là, il y a des gens qui ont des difficultés de temps à autre et qui sont obligés de vendre leur exploitation et de partir et ils vendent directement à l'acheteur eux-mêmes. La superficie moyenne des fermes sur lesquelles nous faisons des prêts aujourd'hui n'est pas plus grande que la superficie moyenne des fermes canadiennes en général.

M. Lind: Monsieur le président, on s'écarte un peu du sujet. Voici à quoi je veux revenir. Ces mêmes agents qui s'occupent des Blancs, des exploitants agricoles blancs, doivent maintenant traiter avec les exploitants agricoles indiens dans leur collectivité.

[Texte]

Now, how viable are they going to consider our Indians? This is what concerns me. We have to give them a little latitude here; some of them need quite a bit of coaching and guidance when they embark on these extended programs, which I hope they do. Granted that most of your agents are qualified agriculturalists or agronomists, how much help are your farm credit men going to give to the Department of Indian Affairs in coaching these Indians along this line?

Mr. Owen: We have under our normal program a program of supervision and advisory services to a significant percentage of our borrowers. The intensification of the service to an individual depends on his needs and we will certainly do everything we can to assist those who need our assistance here. I would like to go back to something I said earlier—that the capital cost for an Indian farmer to establish a viable business, and therefore the obligations that he will have to carry, would likely be very significantly less than for a man off a reserve who has to buy \$75,000 or \$100,000 worth of land. Therefore we do believe that we can establish viable and developing enterprises with very significantly less capital investment, and therefore on a somewhat smaller business base than otherwise.

Mr. Lind: I cannot understand that because here we are dealing with the Bill to amend the Farm Machinery Syndicates Credit Act. Are we considering that the value of this land, because it happens to be in an Indian community, is not as valuable for production purposes as the White community land maybe a mile away?

• 1110

Mr. Owen: If we are talking about the Farm Machinery Syndicates Credit Act, the only land we are referring to here is for sites for buildings.

Mr. Lind: Yes, that is what I say. You are getting off onto the cost of the land. The farm machinery costs the native Indian just as much as it does the White farmer, does it not? Or can he buy it for less?

Mr. Owen: I think possibly you may have missed the point that I was trying to make. As I understood your question, you were asking if we were going to be lending only to the cream of the crop, and if we were going to be more flexible with respect to lending to Indians. What I was endeavouring to indicate was that the net income to a farm business on a reserve does not have a charge against it for large amounts of capital for land and therefore the repayment ability would be better in relation to the size of the enterprise, and therefore we would expect to be able to make loans under circumstances where the total enterprise of the individual would not be as great as it might otherwise be.

[Interprétation]

Comment est-ce qu'ils vont pouvoir s'arranger avec les Indiens? Quel va être leur degré d'efficacité? Après tout, il leur faut un peu de latitude. Il faut bien entrer en contact avec les Indiens, il faut une certaine orientation avant de se lancer dans des programmes extensibles. J'espère qu'ils vont le faire et bien sûr la plupart de vos agents sont des agronomes qualifiés, et je voudrais savoir combien de conseils, de directions, d'orientations les gens de la Société du crédit agricole vont donner aux gens du ministère des Affaires indiennes quand ils vont traiter avec les Indiens?

M. Owen: Nous avons des services de surveillance et de conseil aux termes de notre nouveau programme qui servent un assez fort pourcentage de nos emprunteurs. On peut faire ce genre de contrôle, mais ça dépend des besoins de l'individu en cause, et nous ferons certainement tout en notre pouvoir pour aider les gens qui ont besoin de notre aide, de notre assistance ici. Je reviens à ce que j'ai dit plus tôt. Le coût d'investissement pour permettre à un Indien de se lancer dans une entreprise rentable est beaucoup moins grand que dans le cas de quelqu'un qui n'habite pas sur une réserve et qui doit acheter pour 75 à 150 mille dollars de terre avant. Nous croyons que nous pouvons établir des entreprises qui réussiront avec des frais initiaux beaucoup moins considérables sur une plus petite base qu'autrement.

M. Lind: Je ne peux pas comprendre votre argument parce qu'ici nous avons une loi qui vise à modifier la Loi sur les prêts aux syndicats de machines agricoles. Peut-être que vous voulez dire que la terre, par exemple, qui se trouve dans les réserves n'a pas autant de valeur que celle qui est à l'extérieur.

M. Owen: Je signale que si nous parlons de la Loi sur le crédit accordé aux syndicats de machines agricoles, les seuls terrains dont nous parlons ici sont des emplacements pour la construction.

M. Lind: Oui, mais vous avez le prix de la terre. La machine agricole coûte aussi cher aux Indiens qu'elle coûte à l'exploitant blanc, n'est-ce pas, ou est-ce que l'Indien a un meilleur prix?

M. Owen: Je pense que vous n'avez pas très bien compris mon raisonnement. Si j'ai bien compris votre question, vous me demandiez si nous prêtions seulement à la crème et si nous avions l'intention d'être un peu plus souples dans nos prêts aux Indiens. Ce que j'essayais de vous faire comprendre c'est que le revenu net d'une entreprise agricole sur une réserve n'est pas grevé de grosses dépenses pour l'achat des terres. Par conséquent, il faut tenir compte de l'envergure de l'entreprise. Nous voulons pouvoir faire des prêts dans cette circonstance d'après lesquels le total de l'entreprise ne coûtera pas aussi cher.

[Text]

Mr. Lind: Providing that all things are equal, that he has the same right to get drainage to the land so that he can get the production up and clear the land, that he has equally as good land to operate on, then I think it applies.

What we are concerned about here is that the Indian farmers in these communities become established on very viable units and that they can borrow this money and produce and have a net return at the end of the year. What I am concerned with is the fact that if your agent has the guarantee of the Department of Indian Affairs, then he does not have to be as rigid as he is with the white farmer.

Mr. Owen: I am not going to disagree with you except that we are expected to take the normal precautions of a lender in making loans in order to have a guarantee.

The Chairman: Gentlemen, I do not want to limit discussion. I think we have pursued this point reasonably well, if you are satisfied Mr. Lind.

Mr. Lind: I am not satisfied yet. I do not know if I ever will be, because I think the Farm Credit Corporation is too rigid in its rules.

Mr. Whicher: Mr. Chairman, may I respectfully point out that if we do not hurry we will all be like that old fellow in the picture over there on the wall.

Mr. Lind: Mr. Chairman, may I bring up a point here right now, that we should limit the witnesses to so much time each day for their period of questioning on this Committee, so that everybody can have a turn.

The Chairman: Do you mean witnesses or members?

Mr. Lind: Members should be limited to the amount of time that they can question the witness.

The Chairman: This is true. There are members, of course, who may not wish to question the witnesses at all and I endeavour, in so far as it is humanly possible to recognize all members in proper order, to be as lenient as possible and yet still maintain some kind of law and order. I realize there may be times when we might be tempted to consider time limits. I think we will avoid it if at all possible. I will make my remarks as brief as possible.

Mr. Lind: I feel in this case, Mr. Chairman, that I have not consumed too much of the Committee time and there are some areas on which I would like to further question, but I will forego that. I think in the

[Interpretation]

M. Lind: Mais s'il a le droit d'avoir des travaux de canalisation, de faire faire du défrichement. Sa terre devrait être aussi bonne. Et à ce moment-là, vous avez les autres.

Mais, ici, voici ce qui me préoccupe. Ces exploitants agricoles indiens, dans les collectivités, peuvent s'établir sur des terres assez fertiles, assez bonnes. S'ils peuvent emprunter ces fonds et produire, à la fin de l'année, naturellement ils peuvent subvenir à leurs besoins et à ceux de leur femme et de leurs enfants. Mais voici ce qui m'inquiète: si votre agent a la garantie du ministère des Affaires indiennes, à ce moment-là, il n'a pas besoin d'être aussi strict qu'il l'est avec l'exploitant blanc.

M. Owen: Naturellement, je ne peux pas dire que je ne suis pas d'accord avec vous, mais il faut prendre les précautions ordinaires d'un prêteur lorsqu'on consent un prêt, pour avoir une garantie.

Le président: Messieurs, je ne veux pas limiter notre discussion, mais je pense que nous avons assez bien discuté de cette question-là. Avez-vous terminé vos questions?

M. Lind: Je ne suis pas encore satisfait. Mais je crois que je ne le serai probablement jamais. Je trouve que la Société du crédit agricole est trop rigide, a des règlements trop stricts.

M. Whicher: Si nous ne nous dépêchons pas, nous allons tous finir comme le bonhomme sur le mur, là.

M. Lind: Monsieur le président, permettez-moi de présenter un argument, ici. Je pense que les témoins devraient être limités, tous les jours, dans leurs réponses aux questions des députés.

Le président: Parlez-vous des députés ou des témoins?

M. Lind: Je pense que les députés devraient avoir un temps de parole donné, chacun à leur tour, pour avoir la chance de parler.

Le président: Il y a des députés qui peuvent ne pas avoir du tout envie de poser des questions aux témoins, et, à titre de président, j'essaie d'être juste et de donner la parole à chaque député dans l'ordre qui convient, et d'être aussi souple, de faire les choses à l'amiable autant que possible, tout en maintenant un peu d'ordre. Je comprends que, dans certains cas, il y a des délais qu'on peut considérer. Autant que possible je tâcherai d'être bref.

M. Lind: Dans ce cas-là, monsieur le président, il y a certains sujets que je voudrais encore aborder. Je ne voudrais pas non plus prendre le temps du Comité. Je pense que, si possible, il faudrait accorder à chaque

[Texte]

interests of all that we should have a round of questioning giving either 10 or 15 minutes to each witness, and then go to the next witness and then let the previous one come back on the second round.

The Chairman: I presume you mean "member" instead of "witness"?

Mr. Lind: Yes, I am sorry.

● 1115

Mr. Douglas: Mr. Chairman, could I ask a supplementary?

The Chairman: A single supplementary, yes.

Mr. Douglas: It is not really a question. It would be a question if the Ministers were here. I do not think it would be proper to address it in the form of a question to the witnesses this morning, but I feel this way myself, and I think we can sense from this meeting that the people present and probably the people of Canada would not object to the departments concerned being more lenient or more liberal, if you will, with regard to lending to Indian farmers because of the fact that at least some of the departments have Indian Affairs resources behind them. I hope if there is any difference under either the Farm Credit Act or the Farm Machinery Syndicates Credit Act, that they will tend to lend to Indian farmers where they might not lend to white farmers under similar conditions.

The Chairman: I think Mr. Owen presented this very clearly. I am not sure that he would want to use the word "lenient"—being more lenient with Indians—but I think he has established the point that the criteria that may be used in assessing the viability on a reservation for an Indian applicant might be somewhat different than the criteria used in assessing the viability off the reservation. Is this not correct Mr. Owen?

Mr. Owen: Yes, that is correct.

The Chairman: I recognize Mr. Muir.

Mr. Muir (Lisgar): My first question, Mr. Chairman, is to Mr. Bergevin on a matter of clarification. Correct me if I am wrong, but I think you said that 27 per cent of the male adult Indian population living on arable land was now engaged in farming. Is that correct? I just want to clarify this.

Mr. Bergevin: This was corrected later by Mr. Churchman.

[Interprétation]

témoin 10 ou 15 minutes et ensuite passer au suivant. Après quoi on reviendrait sur chaque sujet.

Le président: Quand vous dites «témoin», vous voulez dire «député», n'est-ce pas?

M. Lind: Oui.

M. Douglas: Puis-je poser une question supplémentaire, monsieur le président?

Le président: Une seule question supplémentaire, oui.

M. Douglas: Ce n'est pas une question, en fait. Ce serait une question si le ministre était là. Je pense que ce serait inopportun de les poser sous forme de questions aux témoins que nous avons ce matin. Mais je vous dis simplement mon impression. Je pense qu'on peut croire que les députés qui sont ici sont d'accord avec moi. Je pense que la population canadienne ne s'oppose pas du tout à ce que les ministères en cause soient plus libéraux, ou plus souples, ou plus indulgents, lorsqu'ils font des prêts aux Indiens. Justement parce que, du moins, une part des ressources du ministère des Affaires indiennes est consacrée à leur assistance.

Par conséquent, si la Société du crédit agricole et les syndicats agricoles établissent une certaine distinction, on peut être tenté parfois de donner plus aux Indiens qu'aux Blancs.

Le président: Je ne sais pas si M. Owen serait d'accord avec l'expression «indulgent», mais je pense qu'il accepterait parfaitement l'établissement de certains critères, par exemple, sur les réserves, un Blanc ou un Indien peuvent être jugés différemment. Est-ce que c'est exact, monsieur Owen?

M. Owen: C'est exact.

Le président: Je donne la parole à M. Muir.

M. Muir (Lisgar): Monsieur le président, ma première question s'adresse à M. Bergevin. Je veux simplement obtenir des éclaircissements. Je vous prie de me corriger si je me trompe, mais j'ai l'impression que l'on a dit que 27 p. 100 de la population indienne adulte, mâle, qui habite sur les terres arables ne faisait pas de l'exploitation agricole, ne s'engageait pas dans des activités agricoles.

M. Bergevin: M. Churchman m'a corrigé après.

[Text]

Mr. Muir (Lisgar): You have no percentage, then, of the Indians engaged in farming at present on arable land.

Mr. Churchman: No, we do not have the figures with us.

Mr. Bergevin: This is clarified at 27 per cent.

Mr. Churchman: If all the arable land on Indian reserves was brought into production, 27 per cent of the population, no matter whether it is male or not, on those reserves would be involved and make their living out of agriculture.

Mr. Muir (Lisgar): My next question is to you Mr. Churchman: perhaps you will remember that some years ago—and I do not know whether it was a general policy—several of the Indian agents were removed; I do not know whether they all were removed or not. The Indian agent at that time on the small reserves supervised the operation of the Indians' farming, such as soil preparation, seeding, harvesting, and even selling the crop. After his removal, with the exception of some very outstanding Indian farmers who remained in farming, the rest of the Indians had nowhere to go; they quit farming.

The result was that the great majority of these people on the reserves were left with little or nothing to do, and I think we have seen a deterioration in the Indians' attitude since that time. As a matter of fact, that is when the leasing of land to non-Indian farmers started to be of some importance as far as the Indian reserves were concerned. Is it the hope of the Department of Indian Affairs that this situation will be reversed and that the Indians will be encouraged to again farm their reserves and, if so, what about the leases that are now in force with the non-Indian farmers?

I was told yesterday that one lease of a non-Indian having a great percentage of the reserve, where he went in with a bulldozer and took the trees and everything off, runs until 1977. Can these leases be terminated within a reasonable time? With most rental agreements, if one gives notice in the fall, the lease is terminated in the spring. Is this type of lease made with the non-Indian farmers?

● 1120

Mr. Churchman: Mr. Chairman, there are very few leases now that run 10 years. As I said earlier, five years is pretty well the limit. I do not know this specific case, but we have others like it, and where a lease is longer than five years, it is because the lessee is breaking the land. He is starting off with raw land, clearing it, breaking it and bringing it into production, and in return for this he probably gets the first two

[Interpretation]

M. Muir (Lisgar): Alors vous n'avez pas le pourcentage des Indiens qui font de l'exploitation agricole sur les terres arables?

M. Churchman: Non, nous n'avons pas les chiffres.

M. Bergevin: Et c'est 27 p. 100.

M. Churchman: Si toutes les terres arables des réserves indiennes étaient cultivées, 27 p. 100 de la population, mâle ou femelle, de toute façon ça n'a pas d'importance, mais 27 p. 100 de la population des réserves s'engagerait dans des activités agricoles et vivrait de l'agriculture.

M. Muir (Lisgar): Ma question suivante s'adresse à vous, monsieur Churchman. Il y a quelques années, je ne sais pas très bien, c'était une politique d'entente. Mais je sais que certains des Indiens ont été déplacés. Un agent des Indiens, à ce moment-là, qui s'occupait des petites réserves, a surveillé les activités agricoles des Indiens, par exemple, la préparation du sol, et les différentes opérations qui entrent dans une exploitation agricole ordinaire jusqu'à la récolte. Il s'occupait des Indiens qui restaient sur la terre et qui faisaient de l'exploitation agricole. Ceux qui ont été déplacés ont dû partir et faire autre chose.

Ca veut dire que la majorité des gens qui habitaient sur les réserves n'avaient à peu près plus rien à faire. Et je pense que, depuis ce moment-là, les Indiens ont une attitude de moins en moins bonne. Je pense que la location de terrains à des non-Indiens a commencé à prendre une certaine importance sur cela, du point de vue des réserves indiennes. Maintenant, le ministère des Affaires indiennes espère pouvoir changer le cours des événements et permettre de nouveau aux Indiens de travailler leur terre. Et si c'est le cas, qu'arrivera-t-il aux ententes, aux baux qui ont été consentis à des non-Indiens, dans le moment?

Hier, j'ai appris que quelqu'un a décidé d'aller sur une réserve. Il s'est rendu avec un bulldozer pour jeter les arbres par terre et défricher les terres. Son bail se termine en 1977, et je voudrais savoir s'il y a quelque chose, quelque condition de ces contrats qui dit qu'on peut y mettre fin, dans un délai donné. Par exemple, d'après certains accords, si vous donnez avis à l'automne de vos intentions, au printemps vous pouvez rompre ou cesser votre engagement. Est-ce qu'il y a des dispositions du même genre avec les non-Indiens?

M. Churchman: Il y a très peu de baux de dix ans. En général, c'est surtout des baux de cinq ans que nous avons. Je ne sais pas ce qui arrive pour un syndicat, mais je sais que lorsqu'un bail dépasse cinq ans, c'est parce que le locataire défriche. Il commence une terre vierge et il défriche et il laboure et la fait produire. Par conséquent, il perd la récolte des deux premières années. Ça dépend des endroits, évidem-

[Texte]

years crop or something of that nature. It varies from lease to lease. This could account for the longer lease.

Insofar as breaking a lease is concerned, there is no clause in the lease that says it can be terminated just because the Indian wishes to terminate it. I suppose the other way, if the lessee himself no longer wishes it, there is no problem; but if the lessor, which is the Indian, wishes to break it, then he has to have good reason to do it. We have had cases.

There was a case in the West where the Indians felt that the lessees were not living up to their contracts; that they were not performing in accordance with the lease. They called the lessees in and they had a good discussion with them. It ended up with most of them writing a quit claim to their leases and it stopped them.

My point is that these matters have to be negotiated; there is no clause in the lease that says that we can break it or that the Indian can break it just because he wishes to.

Mr. Muir (Lisgar): I wanted to bring this particular matter to your attention because it is alleged that the lease is signed by the former chief, apparently without the consent of the band council, and that the lease runs until 1977. Whether or not there is any truth in it I would like your Department to investigate it.

Mr. Churchman: If you will give me the particulars I will be glad to look into it. However, I should say, for your information, that no lease written or signed by an Indian is valid.

Mr. Muir (Lisgar): Is the lease not made by the band? Who makes the lease?

Mr. Churchman: The lease has to be written in the name of the Queen.

Mr. Muir (Lisgar): This, obviously, is wrong information.

Mr. Churchman: You may have an "out" there; but we enter into leases on behalf of the Indian people at their request. Usually—in fact, in nearly all instances—it is band land with a band resolution, that is, a resolution passed by the chief and council requesting us to do it. But it has to have the signature of the Minister or his representative.

Mr. Muir (Lisgar): In dealing with the band if you get a letter from the chief that this is okay you are prepared to make the lease? Is that right? Or do you have to have the council sign the letter, too?

Mr. Churchman: It has to be a band council resolution.

Mr. Muir (Lisgar): It has to be a band council resolution.

[Interprétation]

ment, et ça dépend des baux, mais ça peut expliquer une durée plus longue.

Mais, pour ce qui est de mettre fin à un contrat du genre, il n'y a aucune disposition qui dit qu'on va y mettre fin, parce que les indiens le veulent. Je suppose que si le locataire lui-même ne veut plus l'avoir, naturellement on rend la terre à l'Indien. Si l'Indien veut mettre fin à un contrat qu'il a, il faut qu'il ait de bonnes raisons.

Des cas intéressants se sont présentés, par exemple, dans l'Ouest, il est arrivé que les indiens trouvent que les locataires ne respectaient pas leur engagement et ne se comportaient pas conformément aux exigences du bail. Alors, ils ont fait venir les locataires, ils ont eu une bonne discussion avec eux. Finalement ce qui est arrivé, c'est qu'ils ont ajouté une clause de rupture de bail et que ça les a arrêtés. Ce que je veux dire, c'est que cela doit être négocié, il n'y a aucune clause dans le bail qui dit que nous pouvons le rompre ou que l'indien peut le rompre sans raison.

M. Muir (Lisgar): Je voulais vous poser cette question car on dit que le bail est signé par l'ancien chef, apparemment sans le consentement du conseil de bande et le bail dure jusqu'en 1977. Je ne sais pas si c'est vrai ou non mais j'aimerais que votre ministère se renseigne.

M. Churchman: Si vous voulez me donner des détails, nous le ferons certainement. Mais je voudrais cependant ajouter pour votre gouverne qu'aucun bail signé par un indien n'est valide.

M. Muir (Lisgar): Mais si ce n'est pas la bande qui rédige le bail, qui est-ce?

M. Churchman: Le bail doit être rédigé au nom de la Reine.

M. Muir (Lisgar): Alors, j'ai de mauvais renseignements.

M. Churchman: Peut-être mais nous ne signons des contrats au nom des indiens que sur leur demande. Il s'agit habituellement des terres de la bande il faut alors avoir une résolution du conseil de bande et du chef le demandant. Il doit porter la signature du ministre ou de son représentant.

M. Muir (Lisgar): En traitant avec la bande, si vous recevez une lettre du chef disant que c'est d'accord, vous êtes prêts à préparer le contrat, n'est-ce pas? Ou est-ce que le conseil doit également signer la lettre?

M. Churchman: Il faut que ce soit une résolution du conseil de bande.

M. Muir (Lisgar): Il faut que ce soit une résolution du conseil de bande.

[Text]

Mr. Churchman: That is the policy.

Mr. Muir (Lisgar): You said that in some cases where the bands have a considerable amount of money you may ask them to put up part of their funds as a guarantee. Would you not consider this to be, in effect, asking the bands to guarantee the integrity of, say, three of their people?

Mr. Churchman: I suppose this could be it.

Mr. Muir (Lisgar): Suppose they do not want to do it. Are you not going to give these three people the loan?

Mr. Whicher: The band does not guarantee under this Act.

Mr. Muir (Lisgar): He guarantees if he puts up part of—

Mr. Whicher: Not under this Act.

Mr. Churchman: The band is not involved under this Act.

Mr. Muir (Lisgar): You are not asking for a guarantee under this Act?

Mr. Churchman: Not from the band, no.

Mr. Muir (Lisgar): That is fine. Is there any possibility of the Department itself appointing responsible Indians as agents of the Department to deal in a supervisory way with Indian bands? I am talking about really responsible Indians, particularly, with whom, perhaps, the band would rather deal. One reads about the bands wondering why more Indians are not being brought into the picture. Is it the hope of the Department that in the future you will be using more of them to deal with their own people?

● 1125

Mr. Churchman: Yes, not only are we endeavouring, wherever we can, to get on our staff Indians in administrative capacities to deal with Indians, but our whole program is directed toward having the Indians administer their own affairs, so that we will not be there. We will be in the background, if needed, in an advisory capacity, but the Indian band—the chief and the council—will have to do their own administration.

There are some problems under the present Indian Act. We mentioned the one relative to land a moment ago. They cannot lease their land; that is, an Indian, or a chief, or a band, cannot enter into a lease with anyone. The Act says that the Minister must do it. We are hoping that under the new Act this will be changed and that they will become responsible entities and will lease their own land. The whole program is pointed in this direction.

[Interpretation]

M. Churchman: C'est notre politique.

M. Muir (Lisgar): Vous avez dit que dans certains cas où les bandes ont beaucoup d'argent, vous pouvez leur demander de mettre une partie de leurs fonds en garantie. Est-ce que vous pensez qu'en fait, cela revient à demander à la bande de garantir l'intégrité de disons, trois de ses membres?

M. Churchman: C'est bien possible.

M. Muir (Lisgar): Supposons qu'ils ne veulent pas le faire, si ces trois personnes demandent un prêt, est-ce que vous allez leur accorder?

M. Whicher: Aux termes de cette Loi la bande ne garantit pas.

M. Muir (Lisgar): Elle garantit si elle met une partie de...

M. Whicher: Pas aux termes de la Loi.

M. Churchman: Aux termes de cette Loi, la bande n'est pas engagée.

M. Muir (Lisgar): Aux termes de la présente loi vous ne demandez pas de garantie?

M. Churchman: Pas de la bande, non.

M. Muir (Lisgar): Parfait est-ce que ce serait possible qu'au sein du ministère lui-même, vous nommiez des indiens responsables, agents du ministère, pour traiter avec les bandes indiennes avec un certain pouvoir? Je parle d'indiens responsables avec qui peut-être, la bande préférerait traiter. Je sais qu'on lit beaucoup de choses à ce sujet, les bandes se demandent pourquoi ils ne sont pas plus impliqués dans ces questions-là. Est-ce que le ministère espère qu'à l'avenir, il pourrait se servir de plus en plus des indiens pour traiter avec les leurs.

M. Churchman: Oui. Nous essayons d'avoir des indiens au sein du ministère qui aient des capacités administratives pour traiter avec les indiens. Mais notre programme vise à aider les indiens à arriver finalement à s'administrer eux-mêmes. Nous, nous serions simplement à leur disposition à titre de consultants. Le chef et les conseils de bande feraient eux-mêmes leur propre administration.

L'actuelle Loi sur les indiens nous pose des problèmes. Nous avons mentionné tout à l'heure le problème des terres. Par exemple, ils ne peuvent pas louer leurs terres. Un indien, un chef, une bande ne peut pas contracter de bail avec qui que ce soit. La Loi exige que ce soit le ministre qui le fasse. Nous espérons qu'avec la nouvelle loi, la situation va changer, que les indiens vont devenir des entités responsables qui pourront louer leurs terres. Tout le programme vise à cela.

[Texte]

Mr. Muir (Lisgar): Thank you, Mr. Chairman.

The Chairman: Thank you, Mr. Muir. I recognize Mr. Southam.

Mr. Southam: Some of the information I was going to seek from our witnesses has already been broached by Mr. Muir, but the information put at our disposal this morning indicates that a high percentage of the land suitable for agricultural purposes on Indian reservations is presently being farmed by whites. Could you give us a rough percentage of what that proportion is, Mr. Churchman?

Mr. Churchman: It is about one to three; for every acre that an Indian farmer is farming approximately three are being farmed by non-Indians.

Mr. Southam: I presume, Mr. Churchman, that the white farmers are farming these reservations under lease with the Queen; is that correct?

Mr. Churchman: That is right.

Mr. Southam: This raises the problem which, I think, has been touched on by Mr. Muir. Now that we are developing this legislation to include the Indian farmers and their economy I feel that there is going to be a sort of surge forward. I am in agreement with the principle that is being laid down here, and I can see many of the problems that have been raised and discussed by other members of the committee. What are we going to do about the problem of phasing out the white farmers who are there under lease? How is the Department going to approach this with the white farmers in order to make this land available? You can understand that under this type of legislation the Indians are now possibly going to be anxious to get in and start farming this land that the white farmers have already opened up.

Mr. Churchman: This is something that the Indians themselves have pretty well taken care of. The experience we have had on the Prairies is that Indians are developing a real interest in farming. In their band councils and discussions they are saying, "We want to farm", and as a lease comes up for renewal, or is about to expire, they start preparing to take it over. This is brought to our attention, or the chief and council themselves may do it and tell the lessee "Okay; as of next year, when your lease expires, that is it".

Mr. Southam: What is the average tenure of these leases, roughly?

Mr. Churchman: Five years.

Mr. Southam: Therefore in a matter of about five years they could be all phased out, providing the Indians want to occupy that land; is that so?

[Interprétation]

M. Muir (Lisgar): Merci monsieur le président.

Le président: Merci M. Muir, je donne la parole à M. Southam.

M. Southam: Certains renseignements que j'allais demander à nos témoins ont déjà été obtenus par M. Muir mais les renseignements que nous avons à notre disposition nous montrent qu'un fort pourcentage des terres de la réserve qui sont propres à l'agriculture sont exploitées par des blancs. Pouvez-vous, M. Churchman, nous en donner en gros le pourcentage?

M. Churchman: La proportion est d'environ 1 à 3; c'est-à-dire que pour chaque acre exploité par un indien, vous avez 3 acres qui sont exploités par des non-indiens.

M. Southam: Je suppose, M. Churchman, que ces agriculteurs blancs ont des bails avec la Couronne est-ce exact?

M. Churchman: C'est cela, oui.

M. Southam: Oui, ceci nous ramène à un point qui a été effleuré par M. Muir. Maintenant que nous mettons au point cette législation qui permettra aux indiens de mettre en valeur leur propre économie je pense qu'il va y avoir un grand pas en avant. Je vois tous les problèmes qu'il faut discuter à la suite des questions posées par les autres membres du comité. Comment allons-nous résoudre le problème de l'éviction progressive des agriculteurs blancs qui ont des baux? Comment le ministère va-t-il procéder avec les agriculteurs blancs pour libérer la terre, parce que si je comprends bien, les indiens vont, avec cette nouvelle mesure législative, vouloir faire eux-mêmes l'exploitation des terres commencée par les blancs.

M. Churchman: C'est quelque chose que les Indiens ont bien pris en mains. Dans les prairies, les Indiens ont commencé à s'intéresser énormément à l'agriculture. Dans leurs conseils de bande et leurs discussions ils disent: «Nous voulons faire la culture». Autrement dit, au moment où le temps est venu de renouveler un bail ou lorsqu'un bail arrive presque à terme, les indiens se préparent tout simplement à reprendre la terre. On nous le signale, parfois les chefs et les conseils eux-mêmes le font, ils peuvent tout simplement s'adresser aux locataires et leur dire: «lorsque votre contrat sera terminé l'année prochaine, c'est fini.»

M. Southam: Quelle est la durée moyenne de ces baux en gros?

M. Churchman: Cinq ans.

M. Southam: Cela veut dire que d'ici cinq ans, on peut s'attendre à ce qu'ils soient tous éliminés si les Indiens veulent occuper les terres, n'est-ce-pas?

[Text]

Mr. Churchman: They could, but I do not think the possibilities of this happening on all of them are too great. A lot of them will be, but many Indians, I suppose, are like some of the rest of us—they have the land but they do not wish to farm it themselves.

Mr. Southam: This brings up another question, Mr. Churchman, relative to the White Bear Reservation which is in my area. I have been on it many times. I understand—and I did not realize this until the drought year of 1961—that certain white farmers in the adjacent area have long-term, 99-year leases to go on to the reservations for haying purposes. Altercations developed there in 1961 because some of the Indians who had livestock wished, because of the serious drought, to hay this land themselves, and yet the farmers wanted to reserve the right to come in and hay on these 99-year leases. What happened about that?

● 1130

I know it created a certain amount of illwill in that area at that time. It will not happen every year, but this particular year it created a very serious situation.

Mr. Churchman: I am not aware of the fact that there are 99-year leases, sir. I will look into it. Did you say it was White Bear?

Mr. Southam: White Bear Indian Reservation, near Carlyle, Saskatchewan.

Mr. Churchman: I will check and let you know. I know the area.

Mr. Southam: I liked the comments that were brought up by my friend, Mr. Douglas, this morning and Mr. Thomson here with respect to the application of this legislation. I think we are going to have a problem so far as the collateral and financing of these loans is concerned and I want to support their suggestion that we will have to take a very flexible attitude to set up these viable operations for Indians, for the first while at least.

As Mr. Muir pointed out here, there will have to be a lot of supervision in the establishment of these, and this will work in with Mr. Owen, too—between his department and the Department of Indian Affairs to make this whole program work. That is all, Mr. Chairman.

The Chairman: I was prepared to recognize Mr. Lambert but I understand his question has been answered and he withdraws. Mr. Korchinski, I believe you have withdrawn your question?

Mr. Korchinski: I was going to withdraw my question if it meant that we were going beyond the time, but I would like to ask one short question, because many of my questions have been answered, in part anyway.

[Interpretation]

M. Churchman: C'est possible mais je pence que les risques ne sont pas si grands. Cela va arriver, oui, mais dans certains cas les Indiens, comme nous, ont la terre mais ne veulent pas la cultiver eux-mêmes.

M. Southam: Cela me mène à une autre question M. Churchman, concernant la réserve de White Bear qui est dans ma région et où je suis allé souvent. Je comprends (et je ne l'avais pas réalisé avant la sécheresse de 1961) que les agriculteurs blancs de la région ont des bails de 99 ans les autorisant à couper du foin sur la réserve. Il y eut des altercations avec les Indiens qui avaient du bétail et voulaient en raison de la sécheresse reprendre leur foin et les agriculteurs voulaient que soient honorés leurs baux de 99 ans. Qu'advient-il de ces cas? Il ne se produisent que dans des cas exceptionnels, mais ils sont sérieux.

M. Churchman: Je ne connaissais pas ces baux de 99 ans, je vais étudier la question. Vous avez dit White Bear?

M. Southam: Réserve indienne de White Bear, près de Carlyle, Saskatchewan.

M. Churchman: Je vérifierai et je vous ferai savoir. Je connais la région.

M. Southam: M. Douglas et M. Thomson (Battleford-Kindersley) ont soulevés des points qui m'ont intéressé au sujet de l'application de cette mesure. J'ai l'impression que nous allons avoir des difficultés pour les collatéraux et le financement de ces prêts. J'appuie leurs suggestions. En effet, je trouve que nous devons adopter une attitude très souple pour établir ces institutions valables pour les Indiens, au moins au début.

Et, comme M. Muir l'a dit ce matin, il faudra beaucoup de contrôle dans leur établissement. Je suis certain que les deux ministères vont collaborer pour mener à bonne fin ce programme. Merci.

Le président: Merci, monsieur Southam.

J'allais céder la parole à M. Lambert, mais, je crois comprendre qu'on a déjà répondu à sa question. Monsieur Korchinski, vous avez retiré votre question?

M. Korchinski: J'allais la retirer, mais j'aurais quand même une courte question à poser, car la plupart de mes questions ont été répondues en partie.

[Texte]

One thing disturbs me and is not too clear. In a case where the Farm Credit Corporation is quite willing to grant a loan, is it almost automatic with the Department of Indian Affairs that they proceed?

Mr. Bergevin: Yes.

Mr. Korchinski: You do not visualize any cases where you would say, "Just a minute here; I think we have to hold back".

Mr. Churchman: We have complete faith in the Corporation's ability.

Mr. Korchinski: That is all I have to say.

The Chairman: Mr. Gleave, did you have a question?

Mr. Gleave: Just a brief one. In a case, Mr. Churchman and Mr. Bergevin, where you make a loan to a band I suppose you pledge, to an extent, the band resources. Will you then have enough flexibility? Suppose two or three other residents on the reserve say, "We also want to take out a loan jointly". Let us take a hypothetical situation; you have made a loan to the band as such to develop the land on that reserve, and perhaps three or four people want to develop a hog operation, or something of this nature. Will you have enough flexibility to do both?

Mr. Bergevin: I believe any proposal coming from the band or from a group of Indians in a reservation for a specific project—for example, the one you used there—will be looked at on its own merits. We look to see if it is economically viable. I do not think the department has any interest in making, and it would not be in the interest of the Indians to make, grants or loans on things which are not economically viable. We are not helping the situation any; we are just displacing trouble, I think.

Of course, whenever the Farm Credit Corporation comes up with specific recommendations for a loan, it is automatic for us; it will be all right. However, whenever they come up with another proposition, such as your example which, of course, is absolutely not acceptable by the Farm Credit Corporation, we are going to have a close look at it too. We want to help the Indians with economically viable projects.

But we have perhaps, let us say, easier standards and more flexible standards than—

Mr. Gleave: But the fact that a loan has been made to the band as such will not preclude separate loans to Indians?

Mr. Bergevin: No, definitely not. Each case will be looked at on its own merits.

[Interprétation]

Une chose qui m'ennuie et qui n'est pas très claire, c'est que lorsque la Société de crédit agricole semble très disposée à accorder un prêt, le ministère des Affaires indiennes l'accepte presque automatiquement, n'est-ce pas?

M. Bergevin: Oui.

M. Korchinski: Et, il n'arrive pas de cas où vous contesteriez?

M. Churchman: Non, nous avons foi dans la compétence de la Société de crédit agricole.

M. Korchinski: Merci, c'est tout ce que j'avais à dire.

Le président: Monsieur Gleave, est-ce que vous avez une question à poser?

M. Gleave: Monsieur Churchman ou Bergevin, lorsque vous faites un prêt à une bande, je pense que vous engagez les ressources de la bande, mais est-ce que vous aurez suffisamment de souplesse? Supposons que 2 ou 3 autres résidents de la réserve disent qu'ils voudraient obtenir un emprunt conjointement. C'est un cas hypothétique. Alors que vous faites un emprunt à l'ensemble de la bande pour aménager les terres de la réserve, et que trois ou quatre d'entre eux veulent faire de l'élevage de porcs ou quelque chose de semblable. Est-ce que vous aurez suffisamment de souplesse pour satisfaire les deux à la fois?

M. Bergevin: Je pense que toute proposition faite par la bande ou par un groupe d'Indiens d'une réserve, en vue d'un projet déterminé, sera étudiée en fonction de ses mérites et de sa rentabilité.

Je ne pense pas que le ministère ait intérêt et à accorder, ni les Indiens à obtenir des emprunts pour des choses qui ne sont pas rentables. Cela n'améliore pas la situation. On ne fait que changer le mal de place.

Lorsque la Société recommandera un prêt ce sera automatique de notre part. Mais, lorsqu'il présenterons une autre proposition, comme votre exemple, qui n'est absolument pas acceptable aux yeux de la Société de crédit agricole, nous allons l'étudier soigneusement. Nous voulons aider les Indiens, mais pour des projets rentables.

Mais peut-être que nous avons des normes moins sévères et plus souples que...

M. Gleave: Mais le fait que le prêt ait été accordé à la bande en tant que telle n'empêchera pas d'accorder des prêts à des Indiens en particulier.

M. Bergevin: Non, non, chaque cas sera étudié séparément.

[Text]

The Chairman: Thank you, Mr. Gleave. I recognize Mr. Danforth.

Mr. Danforth: Mr. Chairman, I have two short questions. One I think I should direct to Mr. Owen, and perhaps it is one that only the Minister could answer, but Mr. Owen might have some definite knowledge of it.

● 1135

When this change in the policy was broached, were the terms or conditions as prescribed here talked over, or negotiated, or made available to the various Indian bands concerned or to the Department of Indian Affairs and Northern Development for consultation?

Mr. Owen: You are referring to the terms of the amendment?

Mr. Danforth: Yes.

Mr. Owen: The matter of the amendment was discussed with representatives of the Department of Indian Affairs. The terms and conditions on which loans are to be made have not yet been discussed—the terms of this amendment—with representatives of Indians, because this is really only an enabling amendment. . .

Mr. Danforth: I appreciate that.

Mr. Owen: . . . which permits a guarantee. The actual making of loans or the procedures and ways in which we will go about dealing with Indians on reserves will be considered with them and, in fact, we will be arranging for consultations with them. Once we have this background authority we will be able to do something.

Mr. Danforth: Mr. Chairman, the desirability and the purpose behind this particular amendment must have been based on either some specific negotiation through the Department of Indian Affairs by the Indians themselves to procure this legislation—it must have been broached on that—or perhaps it may have been caused by Indians requesting this type of loan and finding that they did not, under the former Act, come under the regulations. What was the basis of this?

Mr. Owen: This arose, really, as a result of a somewhat similar provision in the Farm Credit Act. Now, the provision in the Farm Credit Act resulted from discussions over quite a long period of years—requests, considerations as to how adequate farm mortgage credit facilities could be made available to any of the farmers on reserves—and many of the requests and suggestions that this ought to be done came from Indian persons. I suggest possibly the gentlemen from Indian Affairs might wish to corroborate, disagree with me or enlarge.

[Interpretation]

Le président: Merci, Monsieur Gleave, Monsieur Danforth à la parole.

M. Danforth: Monsieur le président, deux questions très brèves. D'une part, j'aimerais en poser une à M. Owen: peut-être que seul le ministre pourrait y répondre, mais peut-être que M. Owen connaît quelque chose à ce sujet.

Lorsque ce changement de politique a été envisagé, est-ce que les conditions prescrites ici ont été discutées ou communiquées aux bandes intéressées ou au ministère des Affaires indiennes?

M. Owen: Est-ce que vous parlez des conditions de l'amendement?

M. Danforth: Oui.

M. Owen: La question de l'amendement a été discutée avec les représentants du ministère des Affaires indiennes. Les conditions et les termes des prêts n'ont pas encore été discutés, avec les représentants des Indiens parce que, en fait, il s'agit simplement d'un amendement qui va habiliter l'organisme. . .

M. Danforth: C'est ce que je voulais savoir.

M. Owen: . . . à offrir des garanties. Les prêts eux-mêmes et les procédures seront étudiées avec les Indiens, et en fait, on prévoit des consultations. Lorsque nous serons investis de cette autorité, nous pourrions faire quelque chose.

M. Danforth: Monsieur le président, l'opportunité et le but de cet amendement sont certainement le fruit de négociations, au sein du ministère des Affaires indiennes, par les Indiens qui voulaient une loi de ce genre. C'est peut-être dû aux Indiens qui ont fait une demande de prêt qui se sont aperçus que, en vertu de l'ancienne Loi, ils n'étaient pas admissibles.

M. Owen: En fait, la question est venue d'une disposition semblable de la *Loi sur le crédit agricole*, qui avait découlé de discussions étendues sur plusieurs années, quant aux possibilités de mettre sur pied un système de prêts hypothécaires aux agriculteurs des réserves, et un grand nombre des demandes venaient des Indiens eux-mêmes.

Est-ce que le fonctionnaire des Affaires indiennes est d'accord avec moi?

[Texte]

Mr. Churchman: That is correct. We had some individual cases of people who tried to get loans, not only from the Farm Credit Corporation but from banks and other lending institutions. They could not get them because they could not give them mortgage security. This, of course, has been brought to our attention over the years. One of the matters that is being discussed in the consultation meetings that are at present being held with Indians across the country in relation to the Indian Act itself is the matter of credit, so there is this kind of discussion going on.

Apropos what Mr. Owen said, the next step after the legislation comes into effect—I think the Farm Credit Corporation legislation is already passed; we are now working with the Corporation—will be the process of trying to set up what you might call consultation meetings with representatives of the Indians who are actually farmers to discuss with them the terms of the agreement we will be entering into with the Farm Credit Corporation.

Mr. Danforth: This is the information I was seeking, Mr. Chairman. I have one more question; it is based on the intent of the amendment itself and the practical application of it.

There is no question in anyone's mind that the principle of this particular amendment is to place the Indian farmer in the same category as the white farmer. Is it not a fact that once this amendment is approved the white farmer becomes the second class citizen?

Mr. Churchman: It is his turn, maybe.

Mr. Danforth: I am not going to argue that point.

Mr. Churchman: I said "maybe".

● 1140

Mr. Danforth: Is it not really a fact that it puts the white farmer in the position, when he borrows money under the Farm Syndicates Credit for the purposes as set out in this Act, that if the syndicate becomes delinquent, the ultimate result could be, as I think Mr. Lind was pointing out earlier, the disposal of his property to make settlement under the provisions of the loan?

Since the credit is really backed by the Department of Indian Affairs and Northern Development where the Indians are concerned, if there is any outstanding obligation it is backed by the Department of National Revenue of the Government of Canada.

Mr. Bergevin: Mr. Chairman, as I said previously, we have not settled all the legal issues that this will involve the Department in. But I think the way it will go is that the farmer will obtain from the band a certificate of possession, and after that he will make the lease with the Minister. The Department will have

[Interprétation]

M. Churchman: C'est exact. Nous en avons eu des exemples de gens qui ont voulu obtenir des prêts, non seulement de la Société du crédit agricole, mais même des banques et d'autres institutions de crédit. Mais ce n'était pas possible parce qu'ils ne pouvaient pas offrir de garanties hypothécaires. Ces situations ont été portées à notre attention, et il y a eu des consultations avec les Indiens dans tout le pays dans le cadre de la *Loi sur les Indiens*, quant à la question du crédit. Il y a donc des discussions.

Au sujet de ce qu'a dit M. Owen, je pense qu'après que la loi sera votée—je crois que c'est déjà fait dans le cas de la *Société de crédit agricole*, avec laquelle nous travaillons, nous allons chercher à avoir des consultations avec des agriculteurs indiens afin de discuter avec eux les termes de l'accord, qu'ils passeront avec la Société du crédit agricole.

M. Danforth: C'est le genre de renseignements que je voulais, monsieur le président. Une autre question sur la portée de l'amendement et de son application pratique.

Il ne fait aucun doute pour personne que le principe de cet amendement est de mettre le cultivateur indien dans la même catégorie que les autres. Mais, est-ce qu'il n'est pas exact que, si cet amendement est adopté, le cultivateur blanc deviendra un citoyen de deuxième ordre?

M. Churchman: C'est peut-être son tour de l'être.

M. Danforth: Ce n'est pas à moi de le dire.

M. Churchman: J'ai dit «peut-être».

M. Danforth: Mais, n'est-il pas exact que cela place le cultivateur blanc, lorsqu'il va faire un emprunt, en vertu du Crédit aux syndicats agricoles, dans une situation telle que si le syndicat s'aperçoit qu'il y a contentieux, et bien le résultat pourrait être, comme l'a dit M. Lind précédemment, la saisie de sa propriété conformément aux dispositions du prêt.

Alors que dans le cas des indiens dont le crédit, en fait, garanti par le ministère des Affaires indiennes, s'il y a encore un contentieux, il sera payé par le ministère du Revenu national du gouvernement du Canada.

M. Bergevin: Comme j'ai dit précédemment, monsieur le président, nous n'avons pas encore réglé tous les aspects juridiques de la question. Je pense que le fermier obtiendra de la bande un certificat de possession, après quoi il ira signer le bail avec le ministre. Les conditions du bail seront discutées entre le

[Text]

to discuss the terms of this lease between the farmer and the Indian band, and put some conditions in the lease that the Indian band would accept. Then if he defaults, perhaps the band will be in a position to cancel its certificate of possession, and we would put somebody else in to keep it going. Otherwise I do not think we would be legally in a position to seize. It is very difficult, but this is not the final answer. These are avenues we are looking at.

Mr. Danforth: But with Indians it would be ultimately the same as with other farmers. I am satisfied, Mr. Chairman.

The Chairman: Thank you Mr. Danforth. Thank you gentlemen. That concludes my list of questions.

Mr. Whicher: May I say one word, Mr. Chairman. I agree completely of course with people who stress to the farm people and also the Department of Indian Affairs that we must be somewhat lenient with Indians to get them started. But on the other hand I want to give a word of caution. I know many of these fellows, and it grieves me when I see the Department of Indian Affairs giving them houses when they are supposed to finance the houses and are asked to return \$20 a month. I know dozens of cases where they have not paid back one nickle.

It is a great thing to lend them the money, but one thing they have to realize is that it has to be paid back. I have been involved in business for a long time and I think that you do not do a person a favour when you lend him money that he has no chance of paying back. Although I agree that we have to be somewhat more lenient to get them started, give them the opportunity and the advice, nevertheless the loan still has to be paid back. When the Department of Indian Affairs and the Farm Credit Corporation drill this into them, I think you will be doing them a favour, but not by giving them the money and letting them get away with it.

The Chairman: Thank you, Mr. Whicher. Gentlemen that concludes my list of questions. Shall the amendment carry?

Amendment agreed to.

Clause 3 as amended agreed to.

On Clause 4

Mr. Danforth: Mr. Chairman, I think there are some question on Clause 4.

Under Clause 4 I have questions on the terms of the loan. Under the clause, Mr. Chairman, 15 years is stipulated, and I have heard 7 years and 5 years put forward. Is this left entirely to the discretion of the Corporation, or is this a matter of prescription under the law?

Mr. Owen: The prescription under the bill sets the maximum time. In our negotiations, depending on the

[Interpretation]

ministère, le cultivateur et la bande indienne. S'il y a défaut, la bande pourra peut-être annuler son certificat de possession, et nous mettrons quelqu'un à la place pour le continuer. Autrement, je ne pense pas que nous serions dans une position légale pour saisir. C'est difficile, mais ce n'est pas la réponse finale, nous cherchons encore.

M. Danforth: Mais les Indiens sont des fermiers comme les autres. Merci, monsieur le président.

Le président: Je vous remercie, messieurs, ceci termine notre liste d'orateurs.

M. Whicher: Puis-je dire un mot, monsieur le président; je suis parfaitement d'accord avec les gens qui disent qu'il faut être assez souple à l'égard des indiens pour leur permettre de démarrer; je voudrais malgré tout dire quelques mots de prudence, je connais ces gars-là et je suis déçu de voir ce qu'a fait le ministère des Affaires indiennes, par exemple. Il leur a été donné des maisons, qu'ils sont supposés payer à raison de \$20 par mois. Je connais des douzaines de cas où pas un centime n'a été payé.

Autrement dit, ce que je veux dire, Monsieur le président, c'est une chose que de leur prêter de l'argent, mais d'autre part c'est tout autre chose que de leur faire comprendre qu'il faut le rembourser. J'ai été en affaires longtemps et je sais que ce n'est pas faire une faveur à quelqu'un que de lui prêter de l'argent qu'il ne pourra pas rembourser. Je ne veux pas dire qu'il ne faut pas leur donner la possibilité de démarrer; donnons-leur l'occasion et les conseils mais de toute façon exigeons qu'ils remboursent. Si on commence à leur faire comprendre cela, on leur rendra un service.

Le président: Merci, monsieur Whicher. Messieurs nous avons donc fini les questions pour ça maintenant.

L'amendement est adopté.

Article 3 tel qu'amendé, adopté.

L'article 4.

M. Danforth: Monsieur le président, j'ai une question à poser sur l'article 4. Il est dit dans cet article que la période est de 15 ans et on a mentionné 7 ans et 5 ans. Est-ce laissé à la discrétion de la Société ou précisé par la Loi?

M. Owen: La durée fixée par la Loi est la durée maximale; il y aura des variantes en fonction des

[Texte]

nature and type and purpose of the loan, we may limit that time. This sets the maximum, and within our judgment we may work below the maximum.

Mr. Danforth: Therefore you have discretionary powers within the gamut set out in the Act?

Mr. Owen: Yes.

Mr. Danforth: And it is possible, when loans are made, to prepay, but not possible to be delinquent?

Mr. Owen: When the loans are made they can be prepaid. Sometimes they are delinquent and we go after them. Depending on their circumstances, we carry some that are delinquent. But they have the right to prepay without notice at any time.

• 1145

Mr. Danforth: Speaking of the delinquency, Mr. Chairman, and this is important whether it be a white farmer or an Indian farmer, is there a discretion left in the hands of the Minister or the Department where there is delinquency? Even in the best of credit risks, there are circumstances which almost make it impossible to make certain payments at prescribed times. Would consideration be given to exceed the maximum as set out in the terms of repayment?

Mr. Owen: There is no provision to do so at the time of the making of the loan. Once the loan has been made and circumstances arise, we have the power to make arrangements, to grant extensions of time and revise or amend or renegotiate any mortgage or other agreement.

Mr. Danforth: We are dealing with the syndicate agreement only, and I will confine my question to the syndicate. Have there been instances in which requests have been made for extensions?

Mr. Owen: I am not aware of any instance of a request for an extension. I am aware of instances where requests have been made for deferment of an instalment, in other words a request to pay not now but next spring. But I am not aware of any instances where we actually extended the repayment period beyond, say, seven years.

Mr. Danforth: Mr. Owen, is it fair to say that the syndicate bill has perhaps not been in operation long enough for people to reach the limit of the period that is prescribed?

Mr. Owen: This is possible, because it has been on the go for only four years. On the other hand, so far we have been lending only on machinery, and in most instances machinery ought to be paid up within less than seven years. We would take quite a long look at

[Interprétation]

conditions particulières du prêt. Comme on dit il s'agit là d'un maximum et à notre avis nous pouvons jouer en deçà du maximum.

M. Danforth: Autrement dit, vous avez des pouvoirs discrétionnaires en vertu de la Loi même.

M. Owen: Oui.

M. Danforth: Et il est, par conséquent, possible lorsque des prêts sont accordés, de les rembourser d'avance, mais non pas de s'esquiver?

M. Owen: Oui, ils peuvent être remboursés par anticipation. Lorsque les emprunteurs cherchent à s'esquiver on y voit. Selon les circonstances, on peut leur permettre d'être en retard dans leurs paiements. Ils ont le droit de rembourser par anticipation à n'importe quel moment.

M. Danforth: Au sujet des paiements en retard, monsieur le président, c'est certainement une question très importante que ce soit pour un blanc ou un Indien; le ministre ou le ministère dispose-t-il de pouvoirs lorsqu'il y a un non-paiement? Même dans les meilleures conditions de crédit, il y a toujours des circonstances qui empêchent de faire les versements à temps. Est-ce qu'on envisage la possibilité d'accorder un délai aux termes du contrat?

M. Owen: Cela n'est pas prévu au moment d'accorder le prêt. Mais si lorsque le prêt a été accordé, le cas se présente, nous pouvons modifier les conditions, accorder des délais, réviser, amender ou renégocier les hypothèques ou tout autre contrat.

M. Danforth: Nous ne parlons que de l'entente sur les syndicats; je vais restreindre ma question aux syndicats. Est-ce qu'il y a eu des circonstances où l'on a présenté des demandes d'extension?

M. Owen: Je ne connais pas de cas de ce genre, c'est-à-dire de demandes d'extension. Je connais des cas où on a demandé de retarder un versement, une demande de payer le printemps suivant. Mais je ne connais pas de cas où on ait accordé un délai au delà de la période de sept ans.

M. Danforth: Est-ce qu'il serait juste de dire, monsieur Owen, que le projet de loi sur les syndicats n'est peut-être pas en vigueur depuis suffisamment de temps pour qu'on ait dépassé la période prescrite.

M. Owen: C'est possible, car il y a seulement quatre ans que cela est en vigueur. Mais jusqu'à présent, nous n'avons fait de prêts que pour les machines, et, le plus souvent, les machines devraient être remboursées dans les sept ans. Par conséquent, on ferait très attention si

[Text]

somebody who wanted to take eight or nine years to pay for a tractor.

Mr. Danforth: May I be permitted one more question, Mr. Chairman. I know that the Act gives power to the Corporation to demand such security as it deems necessary. May I ask if there is any other yardstick used, other than the actual credit rating of the individual. For example, if a syndicate is borrowing 50 per cent of the total price of the equipment, surely there would not be the same considerations for backing and guarantee as far as property is concerned as there would be where the syndicate was putting in perhaps only 20 per cent of its own funds and leaving 80 per cent liability with the Corporation. What consideration is given in that regard?

Mr. Owen: This certainly would influence our decision as to how much security we might require. For example, in dealing with machinery, unless there was a particularly poor credit rating for the syndicate as a whole, we would not even take a mortgage against the machinery; we would simply take the signatures on the loan.

Mr. Danforth: I know this is a concern of individuals contemplating a loan because although they wish to buy new equipment, very often they are very loath to tie and entail in any way the properties they have. When it is found necessary, since the power is granted in this Act to demand such other security as may be deemed necessary, what circumstances would be involved for other than the machinery or the building? Would this type of chattel mortgage be all that was absolutely necessary?

Mr. Owen: To date we have never required anything beyond the signature and the chattel mortgage on the machinery. It could be possible that some circumstances might arise, particularly when we are dealing with incorporated bodies, in which we would obtain the personal signatures of the individuals, which would be additional security. In certain cases we require public liability insurance for a machine which might be used on the highways, and this sort of thing. These are the kinds of securities I mean. We have never taken a mortgage against a man's land for the purchase of machinery under this bill.

● 1150

The Chairman: Thank you, Mr. Danforth. Mr. Lambert.

M. Lambert (Bellechase): Monsieur le président, dans le cas des syndicats de machines agricoles, je suppose le fait, par exemple, de trois producteurs qui s'associent pour acheter de la machinerie, ce sont des producteurs de pommes de terre, et on sait que depuis trois ans environ, ce marché n'est pas excessivement bon. Vient un moment où ils ne sont pas en mesure de rencontrer leurs obligations, qu'arrive-t-il à ce moment-là?

[Interpretation]

quelqu'un demandait douze, huit ou neuf ans pour rembourser un tracteur.

M. Danforth: Une dernière question, monsieur le président, si vous me le permettez. Je sais que la Loi donne à la Société pouvoir d'exiger les garanties qu'elle estime nécessaires. Est-ce que l'on utilise d'autres critères que la cote de solvabilité de la personne en cause? Supposons qu'un syndicat emprunte 50 p. 100 du prix total du matériel qu'il achète. On ne va certainement pas demander les mêmes conditions de garantie, en ce qui concerne les biens disponibles, que si le syndicat payait seulement 20 p. 100 lui-même et laissait les 80 p. 100 complémentaires au soin de la Société. Quelle attitude adopte-t-on dans ces cas-là?

M. Owen: Cela influencerait certainement sur votre décision pour ce qui est des garanties que nous demanderions. Par exemple, en ce qui concerne les machines, nous n'imposerions même pas une hypothèque, à moins que l'ensemble du syndicat n'ait une cote de solvabilité particulièrement mauvaise; nous demanderions seulement des signatures sur le prêt.

M. Danforth: Je sais que c'est ce qui inquiète les gens qui envisagent de faire un emprunt. Bien qu'ils veuillent acheter de nouvelles machines, ils hésitent toujours à mettre leurs biens en gage. Lorsque l'on estime nécessaire de demander des garanties supplémentaires, puisque cette Loi l'autorise, de quoi s'agit-il, en dehors des machines et des bâtiments? Est-ce que seul ce genre d'hypothèque sur les biens est absolument nécessaire?

M. Owen: Jusqu'à présent, nous n'avons jamais rien demandé d'autre qu'une signature et une hypothèque sur les machines. Il se pourrait que dans certains cas, en particulier lorsque nous avons affaire à des sociétés, nous demandions la signature personnelle de tous les membres, ce qui constituerait une garantie supplémentaire. Dans certains cas, nous demandons une assurance tous risques, en cas d'accidents sur les routes, etc. Voilà le genre de garantie supplémentaire que nous demandons, mais on n'a jamais demandé de garantie sur le terrain de l'individu.

Le président: Merci, monsieur Danforth. Monsieur Lambert.

M. Lambert (Bellechase): Mr. Chairman, is the case of Farm Machinery Syndicates, let us suppose, for instance, that three farmers get together to purchase machinery. They are potato growers, and we know that for the past three years the market for potatoes has been a very good one. There comes a time when they are not in a position to meet their obligation. What will happen then?

[Texte]

La Société poursuit-elle, procède-t-elle à une vente forcée de la machinerie et ensuite a-t-elle encore un recours contre ces gens qui se sont associés?

Mr. Owen: The situation would depend entirely upon the merits of the individual syndicate in the way they had been handling their obligations, in the way they had been handling our equipment and in the way they were carrying on their operations.

If we decided that we could no longer carry the account in arrears and had to take some action to realize the return of our funds, we would have two openings and we could take one or both of them.

We could take action to repossess the machinery involved and sell it or to require the syndicate members to sell it, or we could take action by getting a judgment against the individuals who signed the note and register that judgment against the property which they may own. Or, we could take both actions; it would all depend on the individual case which action we think would be the most expeditious and the most reasonable as between ourselves and the creditor.

M. Lambert (Bellechasse): Une question supplémentaire, monsieur le président. Y aurait-il possibilité à ce moment-là, étant donné que la situation est un peu difficile, que les intéressés puissent renégocier avec la Société pour avoir une extension afin de leur permettre d'espérer en une année meilleure, l'année suivante, par exemple?

M. Owen: Oui, c'est possible s'ils peuvent conclure un arrangement raisonnable et nous assurer qu'ils peuvent respecter les nouveaux arrangements qu'ils ont faits.

M. Lambert (Bellechasse): Est-ce que cela s'est déjà présenté?

M. Owen: Oui.

M. Lambert (Bellechasse): Merci.

The Chairman: Thank you, Mr. Lambert.

Clauses 4 to 6 inclusive agreed to.

Clause 1 agreed to

Title agreed to.

The Chairman: Shall I report the bill as amended?

Some hon. Members: Agreed.

The Chairman: Thank you, gentlemen. That concludes our consideration of Bill C-112. The meeting this afternoon will be cancelled. You will be advised of subsequent meetings and this meeting is adjourned to the call of the Chair. Thank you very much.

[Interprétation]

Will the Corporation undertake procedures, force the sale of the machinery, and then does it still have any further claim against the people concerned who became associated?

M. Owen: La situation dépendra absolument des qualités, des mérites du syndicat, de la manière dont ce syndicat a répondu à ses obligations, de la manière dont il a traité les machines lorsque l'exploitation marchait.

Si nous décidons qu'on ne peut pas poursuivre des arrérages de ce genre et qu'il faut entreprendre une action pour pouvoir obtenir le remboursement de nos fonds, nous avons deux possibilités. On peut prendre l'une ou l'autre ou les deux.

On peut d'une part lancer une action pour rentrer en possession des machines intéressées et les vendre, ou bien exiger que les membres du syndicat les vendent et nous les retransmettent, ou bien on peut obtenir un jugement en justice contre les individus qui ont signé le papier, et on utilise ce papier contre les biens qu'ils peuvent posséder ou bien on fait l'un et l'autre. En fait, cela dépend absolument du cas particulier, de la mesure la plus rapide et la plus raisonnable, selon nous.

Mr. Lambert (Bellechasse): A supplementary, Mr. Chairman. Would it be possible in this case, since the situation is somewhat difficult, that the people concerned can renegotiate with the Corporations to have an extension, hoping that the next year will be better, for instance?

Mr. Owen: Yes, that is possible if they can give us a reasonable arrangement and if they can give us the assurance that they will be able to meet the new arrangements that they have made.

Mr. Lambert (Bellechasse): Has this happened already?

Mr. Owen: Yes, it has.

Mr. Lambert (Bellechasse): Thank you.

Le président: Merci monsieur Lambert.

Les articles 4 à 6 inclusivement sont adoptés.

L'article 1 est adopté.

Le titre est adopté.

Le président: Dois-je soumettre le projet de loi tel qu'il est amendé?

Des voix: D'accord.

Le président: Messieurs, je vous remercie; nous avons terminé l'étude du projet de loi C-112. La réunion de cet après-midi est annulée; vous serez avisés des réunions ultérieures. La séance est levée, jusqu'à nouvelle convocation du président. Merci beaucoup.

MINUTES OF PROCEEDINGS

TUESDAY, March 4, 1969.
(25)

The Standing Committee on Agriculture met at 9:44 a.m. this day, the Chairman, Mr. Beer, presiding.

Members present: Messrs. Beer, Clermont, Côté (*Richelieu*), Danforth, Douglas (*Assiniboia*), Foster, Gleave, Horner, Howard (*Okanagan Boundary*), Lambert (*Bellechasse*), Lessard (*Lac-Saint-Jean*), Lind, McKinley, Moore (*Wetaskiwin*), Muir (*Lisgar*), Peters, Pringle, Roy (*Laval*), Southam, Stewart (*Okanagan-Kootenay*), Whicher.—(21)

Appearing: The Honourable H. A. Olson, Minister of Agriculture.

Witnesses: From the World Food Program: Mr. Francisco Aquino, Executive Director; Mr. Thomas C. M. Robinson, Director, Office of Director, Program Operations Division; *and from the Department of Agriculture:* Mr. S. B. Williams, Deputy Minister; Mr. Frank Shefrin, Director, Marketing and Trade Services, Economics Branch.

The Committee entered upon consideration of Item 1 of the 1969-70 Estimates relating to the Department of Agriculture.

The Minister introduced the witnesses from the World Food Program and the Departmental officials present, following which he gave a brief summary statement on the Program.

It was agreed that Mr. Roy (*Laval*) would meet with the Subcommittee on Agenda and Procedure regarding the Annual Meeting of the Canadian Horticultural Council.

Mr. Aquino gave a statement on the World Food Program, following which he, Mr. Robinson, Mr. Williams and the Minister answered questions.

[Traduction]

PROCÈS-VERBAUX

Le MARDI 4 mars 1969.
(25)

Le Comité permanent de l'agriculture se réunit ce matin à 9 h. 44, sous la présidence de M. Beer, président.

Présents: MM. Beer, Clermont, Côté (*Richelieu*), Danforth, Douglas (*Assiniboia*), Foster, Gleave, Horner, Howard (*Okanagan Boundary*), Lambert (*Bellechasse*), Lessard (*Lac-Saint-Jean*), Lind, McKinley, Moore (*Wetaskiwin*), Muir (*Lisgar*), Peters, Pringle, Roy (*Laval*), Southam, Stewart (*Okanagan-Kootenay*), Whicher.—(21).

A comparu: L'honorable H. A. Olson, ministre de l'Agriculture.

Témoins: Du Programme alimentaire mondial: M. Francisco Aquino, administrateur, et M. Thomas C. M. Robinson, directeur, Bureau du directeur, Division des opérations du programme; *et du ministère de l'Agriculture:* M. S. B. Williams, sous-ministre, et M. Frank Shefrin, directeur, Division des services des marchés, Direction de l'économie.

Le Comité passe à l'examen du crédit 1 des prévisions budgétaires du ministère de l'Agriculture pour l'année 1969-1970.

Le Ministre présente les témoins du Programme alimentaire mondial et les représentants du Ministère, puis il fait un bref exposé relatif au Programme.

Il est convenu que M. Roy (*Laval*) assistera à une réunion du sous-comité du programme et de la procédure relative à la réunion annuelle du Conseil canadien de l'horticulture.

M. Aquino fait une déclaration relative au Programme alimentaire mondial, puis il répond, ainsi que M. Robinson, que M. Williams et que le Ministre, à des questions.

It was agreed that documents regarding Canadian Participation in World Food Program Projects, referred to by Mr. Williams, would be distributed to Committee members.

Messrs. Robinson, Aquino, and Shefrin answered further questions.

On behalf of the Committee, the Chairman thanked Messrs. Aquino and Robinson for their attendance.

Item 1 was allowed to stand.

At 11:54 a.m., the Committee adjourned to the call of the Chair.

Il est convenu que les documents concernant la participation du Canada aux programmes du Programme alimentaire mondial, dont a parlé M. Williams, seront distribués aux membres du Comité.

MM. Robinson, Aquino et Shefrin répondent à d'autres questions.

Au nom du Comité, le président remercie MM. Aquino et Robinson d'avoir bien voulu venir témoigner devant le Comité.

L'article 1 est réservé.

A 11 h. 54 du matin, le Comité s'ajourne jusqu'à nouvelle convocation du président.

Le secrétaire du Comité,
Michael A. Measures
Clerk of the Committee.

[Texte]

EVIDENCE

(Recorded by Electronic Apparatus)

Tuesday, March 4, 1969.

The Chairman: We are assembled to consider the estimates of the Canada Department of Agriculture. I refer you to Vote 1.

Mr. Roy (Laval): Mr. Chairman, on a point of order. The matter I would like to bring up at this point is, I think, important for all the members of the Standing Committee on Agriculture.

Last week I attended the annual meeting of the Canadian Agriculture Council as a member of one association which is called "Les Jardiniers Maraîchers de Montréal". I have some information here about this annual meeting and I also have their brief containing last year's resolution for the Minister of Agriculture.

I think it would be a very good thing if all the members of the Agriculture Committee attended this kind of meeting, because there is considerable information about vegetables, egg rates, marketing problems, and the import and export situation. I do not know if it is the wish of the Committee, but perhaps next year we might attend this annual meeting to meet farmers and gardeners from all across the country and to exchange some opinions as members of this Standing Committee.

The Chairman: May I make a suggestion to the Committee that we invite you to come to a meeting of the steering committee and bring the brief in order that we might study the advisability of accepting such an invitation. Does this meet with the approval of the Committee?

Some hon. Members: Agreed.

Mr. Roy (Laval): Shall I give you the brief here?

The Chairman: No, we would like you to come to the steering committee and explain

[Interprétation]

TÉMOIGNAGES

[Enregistrement électronique]

Le mardi 4 mars 1969

Le président: Messieurs, nous sommes en nombre. Je vous souhaite la bienvenue après une semaine de détente. Evidemment, nous sommes ici pour étudier les prévisions budgétaires du ministère fédéral de l'Agriculture. Et au poste no 1...

M. Roy (Laval): J'en appelle au Règlement. Je ne sais pas si je devrais mentionner ce point à l'heure actuelle, mais j'ai l'impression que c'est très important pour tous les membres du Comité permanent de l'agriculture.

La semaine dernière, j'ai assisté à la réunion annuelle du Conseil agricole canadien à titre de membre d'une des associations qui s'appelle «les Jardiniers maraîchers de Montréal». Je ne sais pas si vous avez reçu une invitation aux fins que le président ou les membres de ce Comité s'y rendent, mais j'ai pu obtenir beaucoup de renseignements lors de cette réunion annuelle. J'ai ici leur mémoire comprenant les résolutions de l'an dernier. Je crois donc que ce serait une bonne chose si les membres du Comité permanent de l'agriculture assistaient à ce genre de réunions, car il y a beaucoup de données au sujet des jardins maraîchers: les prix des œufs, des légumes, les problèmes de mise en marché, la situation des exportations, des importations, etc... Je ne sais pas si le Comité le désire, mais l'an prochain, nous pourrions peut-être assister à cette réunion annuelle afin de convaincre plusieurs personnes, plusieurs jardiniers maraîchers à travers le pays que ce serait une bonne chose de faire un échange de renseignements avec les membres du Comité.

Le président: Est-ce que je puis suggérer au Comité directeur de vous inviter à assister à une de ses réunions, et d'y apporter le mémoire afin que nous puissions étudier la possibilité d'accepter une telle invitation. D'accord?

Des voix: D'accord.

M. Roy (Laval): Dois-je vous remettre ce rapport?

Le président: Non. Nous voudrions que vous assistiez à la réunion du comité direc-

[Text]

it, and then the steering committee will be in a position to make a recommendation to the general committee.

Gentlemen, we are particularly honoured this morning to have some very special guests as was agreed to at an earlier meeting. I am going to ask our Minister, Mr. Olson, to introduce our special guests this morning.

Hon. Horace Andrew Olson (Minister of Agriculture): Mr. Chairman, gentlemen, I take a great deal of pleasure this morning in introducing to the Committee the Executive Director of the World Food Program, Mr. Francisco Aquino, who is on my immediate right, and Mr. Thomas Robinson, Director of the Program Operations Division of The World Food Program, who is sitting next to Mr. Aquino. These gentlemen have kindly agreed to appear before the Committee so that you may have the opportunity to clarify any questions concerning multilateral food aid in general and the operations of the World Food Program in particular.

I may also take this opportunity, Mr. Chairman, to introduce the other officials who are here with us this morning. You know, of course, Mr. Williams, the Deputy Minister; Dr. Poirier, from the Department; Mr. Shefrin, Mr. Grier, and Mr. Costley. We will have this opportunity of discussing in the first instance the World Food Program after which, of course, I am prepared to make an opening statement on the estimates for the ensuing year.

As you know, the World Food Program is a joint UN-FAO agency established in 1962 to be responsible for distributing multilateral food aid. The food aid is contributed voluntarily and it is used both to promote economic development and to meet emergency food requirements in developing countries. There have been three WFP pledging conferences covering contributions up to the end of 1970. Total regular pledges since 1963, made by nearly 90 countries including many of the developing nations, amount to \$395 million U.S. in food, cash and services.

Canada's contribution over this period amounts to \$54 million in food and cash, with commodity donations accounting for slightly more than 75 per cent. Canada was one of the original proponents of the World Food Program and I think we can be justifiably proud that since 1963 Canada's contribution to WFP resources amounts to about 15 per cent of the total, and that figure is second only to that of the United States.

The multilateral program has enabled Canada to contribute food aid to more than 120 WFP projects in 52 countries. Food sup-

[Interpretation]

teur. Le sous-comité directeur pourrait alors formuler une recommandation au Comité.

Messieurs, nous avons l'honneur ce matin, d'avoir des invités très spéciaux, tel que nous l'avons convenu à une réunion précédente. Je vais demander à notre ministre, M. Olson, de nous présenter les invités. Monsieur Olson.

L'hon. M. Olson (ministre de l'Agriculture): Monsieur le président, messieurs, j'ai le grand plaisir ce matin, de présenter aux membres du Comité, le directeur général du programme alimentaire mondial, M. Francisco Aquino, à ma droite, et M. Thomas C. M. Robinson, directeur du bureau de la Division des opérations du programme, qui est à sa droite. Ces messieurs ont consenti à comparaître devant nous afin que nous puissions nous renseigner envers toutes les questions au sujet des programmes mondiaux, d'aide alimentaire et tout particulièrement, du Programme alimentaire mondial.

Je pourrais peut-être aussi vous présenter les autres fonctionnaires ici présents. Évidemment, vous reconnaissez le sous-ministre, M. Williams, le docteur Poirier, du ministère, M. Frank Shefrin, et messieurs Grier et Costley. Nous aurons l'occasion de discuter tout d'abord du Programme alimentaire mondial, et ensuite, je serais disposé à vous faire un exposé préliminaire au sujet des prévisions budgétaires pour l'année à venir. Comme vous le savez, le Programme alimentaire mondial est un programme conjoint entre les Nations Unies et la FAO établi en 1962 pour la distribution multilatérale d'aide alimentaire gratuite utilisée pour enrayer la famine et pour aider à alimenter les pays en voie de développement. Il y a eu trois conférences plénières au sujet des contributions jusqu'à la fin de 1970. Jusqu'en 1963, les contributions de près de 90 pays, y compris plusieurs pays en voie de développement, se sont chiffrées à 395 millions de dollars américains en aliments, en dons et en services.

Et la contribution du Canada au cours de cette période s'est chiffrée à 54 millions de dollars en aliments et en argent, les dons en nature entrant pour plus de 75 pour 100 de ce montant. Le Canada a été l'un des pays membres fondateurs de ce programme alimentaire mondial. Depuis 1963, nous pouvons être fiers du support donné par le Canada qui a été d'environ 15 p. 100 du total de l'aide. Ce chiffre prend la deuxième place, derrière celui des États-Unis.

Ce programme a permis au Canada de contribuer à plus de 120 projets du programme alimentaire mondial dans 52 pays. Les pro-

[Texte]

plied by Canada includes such things as skim milk, whole milk powder, butter, butter oil, cheese, evaporated milk, oats, wheat, wheat floor, egg powder, peas, beans and canned and dried fish. Wheat and wheat flour make up about 66 per cent of this basket and dairy products about 27 per cent of the total.

Mr. Chairman, with those very brief introductory remarks, perhaps you would like to call on Mr. Aquino, the Executive Director, for some comments.

The Chairman: I am sure the Committee would be pleased to have an opening statement by Mr. Aquino, after which he will make himself available for questions from members of the Committee.

Mr. Francisco Aquino (Executive Director, World Food Program): Mr. Chairman, I feel very honoured to be here today and I am grateful to you and to the hon. members of your Committee for this opportunity of discussing briefly the World Food Program with a group that shares heavily in the responsibility for the agricultural policy of this great nation. I am also very grateful, of course, for this lovely spring weather that you have also arranged for us during our stay.

If I am not mistaken, sir, this is the first time that the Executive Director of the World Food Program has appeared before a Canadian Parliamentary Committee and, having been a Minister of Agriculture myself, I can fully understand the importance and the significance of this occasion.

The UN World Food Program was experimental until 1965. Since then it has been given life by its parent bodies for as long as member countries consider multi-lateral food aid useful and feasible.

As you are aware, our organization uses food surpluses for economic and social development projects in the less developed countries and for relieving human suffering during natural or man-made catastrophes. The emphasis is on always leaving an improvement of a permanent character after the food has been consumed—a road, a dam, an irrigation canal, a new agricultural settlement, a forest, a milk production centre, a water-trough for a village, improved sanitary and living conditions in the poorest sections of the large cities, a school building or a group of better fed healthier, happier and better educated children. When providing assistance for emergencies of a recurring nature, such as

[Interprétation]

duits fournis par le Canada comportent du lait en poudre, du lait écrémé, du beurre, de l'huile, du blé, de l'avoine, de la farine de blé, de la poudre d'œuf, des pois, des haricots ainsi que du poisson salé ou en boîte. Le blé et la farine comptent pour environ 66 p. 100 de notre contribution, et les produits laitiers, pour 27 p. 100. Monsieur le président, après ces observations préliminaires très brèves, peut-être aimeriez-vous demander à M. Aquino, administrateur du programme, de faire une déclaration.

Le président: Je suis sûr que les membres du comité seraient très heureux que M. Aquino fasse une déclaration préliminaire. Il répondra ensuite aux questions.

M. Francisco Aquino (administrateur du programme alimentaire mondial): Monsieur le président, j'apprécie beaucoup d'avoir l'honneur d'être parmi vous ce matin. Je vous suis reconnaissant, ainsi qu'aux membres de votre comité, de cette occasion que vous me donnez de m'entretenir brièvement du Programme alimentaire mondial avec un groupe comme le vôtre, qui est largement responsable de la politique agricole de ce grand pays. Je vous suis aussi très reconnaissant, bien sûr, d'avoir commandé, pour notre séjour, ce merveilleux temps printanier.

Si je ne m'abuse, monsieur, c'est la première fois que l'administrateur du Programme alimentaire mondial comparait devant un comité parlementaire du Canada, et, ayant moi-même été ministre de l'Agriculture dans mon pays, je comprends pleinement l'importance de cette occasion.

Le programme alimentaire mondial des Nations-Unies en était encore, jusqu'en 1965, au stade expérimental. Mais depuis, les organismes mères de cette agence lui ont donné vie pour aussi longtemps que les États membres considéreront l'aide alimentaire multilatérale comme utile et possible.

Comme vous le savez, notre organisme emploie les excédents de données alimentaires pour appuyer des programmes d'expansion économique et sociale dans les pays en voie de développement, et pour soulager la misère humaine lors des catastrophes naturelles ou dues à l'homme. Nous insistons beaucoup sur des améliorations de caractère permanent, une fois que les aliments ont été consommés: une route, un barrage, un canal d'irrigation, une nouvelle exploitation agricole, une forêt, un centre de production laitière, un abreuvoir pour un village, de meilleures conditions sanitaires dans les sections pauvres des grandes villes, une école, ou peut-être un groupe d'enfants mieux nourris, en meilleure santé,

[Text]

drought or flood, WFP tries to do it through work programs that will help prevent or diminish in future the damaging effects of such natural calamities.

Most of our direct feeding projects, particularly those for mothers and preschool children, bear a very important element of nutritional education. With few exceptions, food is provided as part of wages as an incentive to participate in an activity or in an effort by the community. Thus practically all our food is distributed in the form of individual or family rations to be consumed directly by the recipients.

Total resources at the disposal of WFP since the inception of the program are \$447 million. These resources have been provided in the form of voluntary contributions by member governments. As an average, roughly two-thirds of them represent actual food commodities and the remaining one-third has been given to us in the form of services and cash to move the food and to administer the program. Being a multilateral effort by many nations, the WFP food basket contains a rather wide range of products. We have been fortunate enough up to now so that, broadly speaking, an adequate balance has been kept in our supplies of grain, protein foods and fat.

● 0955

Naturally most of our resources come from the highly developed countries. However, the developing nations also participate as donors. They have provided certain commodities such as tea, coffee, sugar and a little bit of rice which products it would be impossible for us to get from the developed countries. The total amount of their contribution is approximately \$5 million per year.

Some European countries which are parties to the Food Aid Convention have decided to use the World Food Program as an agent to discharge their obligations under the Convention, totally or in part. We are very honoured by this trust and hope that in the future other countries will decide to follow the same line. You will have noticed that my figures on resources do not tally with those given by the

[Interpretation]

plus heureux et plus instruits. Lorsqu'il accorde de l'aide dans des situations d'urgence qui se reproduisent souvent, telles que la sécheresse ou les inondations, le programme alimentaire mondial essaie de le faire au moyen de programmes de travaux qui aideront à éliminer ou à réduire, à l'avenir, les effets nuisibles de ces catastrophes naturelles.

La plupart de nos programmes directs d'alimentation, en particulier ceux qui sont destinés aux mères et aux enfants d'âge préscolaire renferment un élément important d'éducation en matière alimentaire. A quelques rares exceptions près, nous donnons la nourriture comme partie du salaire pour encourager les gens à participer à quelque activité ou à un effort collectif. Ainsi, à peu de choses près, la totalité de nos aliments est distribuée sous forme de rations individuelles ou familiales et consommée directement par les bénéficiaires.

Depuis le début du programme, les ressources mises à la disposition du programme alimentaire mondial ont totalisé 447 millions de dollars. Elles nous sont venues sous forme de contributions bénévoles de la part des États membres. En moyenne, environ les deux tiers de ces ressources ont consisté en denrées alimentaires, et l'autre tiers nous a été donné sous forme de services ou en espèces, pour transporter les denrées et pour administrer le programme. Étant donné qu'il s'agit d'un effort multilatéral de la part de plusieurs pays, le panier d'alimentation du programme alimentaire mondial contient une vaste gamme de denrées. Jusqu'à présent, nous avons eu beaucoup de chance, car nous avons pu, dans l'ensemble, maintenir l'équilibre entre nos approvisionnements en protéines, en céréales et en graisses.

Évidemment, la plupart de nos ressources nous viennent des pays très développés, mais les pays en voie d'expansion y contribuent aussi en nous fournissant certaines denrées comme du thé, du café, du sucre et un peu de riz, produits qu'il nous serait impossible d'obtenir des pays développés. Le total de l'apport des pays en voie de développement atteint environ 5 millions de dollars par an.

Certains pays européens signataires de la Convention d'aide alimentaire ont décidé de s'acquitter de leurs obligations en vertu de la Convention par l'intermédiaire du programme alimentaire mondial, en tout ou en partie. Nous sommes très honorés de cette confiance, et nous espérons qu'à l'avenir, d'autres pays décideront d'en faire autant. Vous aurez remarqué que les chiffres que j'ai donnés sur les ressources ne correspondent pas à ceux

[Texte]

Minister of Agriculture, but the fact is that I have added these contributions of the Food Aid Convention to the figures that the Minister provided for you.

The World Food Program has committed commodities, services and cash for a total of \$465 million in 330 projects for social and economic development in 75 countries. Also the World Food Program has conducted 77 emergency operations to alleviate human suffering in 50 countries for a total value of \$61 million. The figures that I have given you cover the period from the beginning of the Program until February 28 of the current year. You will have noticed that commitments for development projects, plus emergencies add up to a larger sum than resources actually available. The explanation is that all commitments extending beyond December 31, 1970 have been made subject to the availability of resources.

Total disbursements, which represent the actual delivery of the commodities, are now up to \$185 million. After a slow start in the earlier years of the program, disbursements are picking up and, according to our projections, the end-of-year carryover resources will for the first time in our short history be smaller than the previous year carrying at the end of 1970.

Canada has always been a firm supporter of the World Food Program. At present your country is our second largest contributor, providing 10 per cent of our regular resources. I sincerely hope that your interest will continue and will increase with the growth of the Program. In the first years of WFP Canada provided us with about \$1.8 million worth of commodities and cash per year. This contribution increased to \$9.3 million per year from 1966 to 1968 and it is now \$10 million for each of the years 1969 and 1970. The Canadian contributions for the first and second pledging periods of WFP that cover until the end of December 1968 have been completely disbursed. For the present pledging period we have called forward the first cash installment and we are earmarking commodities in order to be prepared for the time when they will become available after the beginning of the Canadian fiscal year.

Canada has provided, as the Minister explained, a rather wide range of commodi-

[Interprétation]

qu'à donné le ministre de l'Agriculture. Le fait est que j'ai ajouté les contributions faites en vertu de la Convention d'aide alimentaire aux chiffres donnés par le Ministre.

Le programme alimentaire mondial a engagé des denrées, des services et de l'argent, totalisant 465 millions de dollars, dans 330 programmes d'expansion économique et sociale dans 75 pays. Le programme a aussi dirigé 77 programmes d'urgence pour alléger la souffrance humaine dans 50 pays différents, pour un total de 61 millions de dollars. Les chiffres que je vous ai donnés correspondent à la période allant du début du Programme jusqu'au 28 février de l'année en cours. Vous aurez remarqué que les engagements pour les programmes d'expansion et pour les situations d'urgence atteignent au total un chiffre plus élevé que les ressources dont nous disposons à l'heure actuelle. La raison en est que tous les engagements se prolongeant au delà du 1^{er} décembre 1970 ont été pris sous réserve de la disponibilité des ressources.

Les dépenses totales à ce jour, qui correspondent à la livraison, même des denrées, se chiffrent maintenant à 185 millions de dollars. Après un début lent lors des premières années du programme, les dépenses augmentent sans cesse, et, d'après nos projections, le report des ressources d'une année à l'autre sera, à la fin de 1970, pour la première fois dans notre courte histoire, moins élevé que l'année précédente.

Le Canada a toujours appuyé de façon importante le Programme alimentaire mondial. À l'heure actuelle, votre pays, en fournissant 10 p. 100 de nos ressources régulières, se classe au deuxième rang de nos participants. J'espère sincèrement que vous continuerez à manifester le même intérêt et que vous pourrez augmenter votre apport au fur et à mesure de l'expansion du Programme. Au cours des premières années du Programme, le Canada nous donnait environ 1.8 million de dollars par an en denrées et en espèces. Cette contribution est passée à 9.3 millions par an de 1966 à 1968, et elle se chiffre maintenant à 10 millions de dollars pour chacune des années 1969 à 1970. La contribution canadienne pour la première et pour la deuxième période d'engagement du programme alimentaire mondial, qui portent jusqu'à la fin de décembre 1968, a été entièrement dépensée. Pour la période d'engagement en cours, nous avons déjà demandé le premier versement en espèces, et nous sommes en train d'affecter les denrées afin d'être prêts lorsqu'elles seront mises à notre disposition, après le début de l'année financière au Canada.

Comme l'a dit le Ministre, le Canada a fourni toute une gamme de denrées—blé,

[Text]

ties that include wheat, flour, oats, baled products of many kinds, fish and egg powder. We have used them both for emergencies and for economic and social development projects in 52 countries from Latin America to the Far East.

Our largest utilization of Canadian wheat has been in an afforestation project in Algeria. We have also used large quantities of flour and dairy products in school-feeding programs. If the members of the Committee are interested, Mr. Thomas Robinson, Head of the Operations Division of WFP, could later on give further details about the destination and the use made of the Canadian commodities.

I would only like to add here that in going through the World Food Program donors do not lose their identity. Apart from the fact that we keep detailed accounts and that the commodities bear clear markings of their origin, we make it a point to request recipient governments to publicize the origin of the contributions included in each shipment.

In our opinion the task of the World Food Program is going to stay with us for years to come. In spite of the great strides that have been made in the effort to increase the production of food grains in the famine-prone regions of the world, the problem of hunger has not been solved yet by a long shot. Besides food aid, as part of total economic and social development aid, has a special and important role to play in the years ahead.

It is especially adapted for use in slow-maturing projects of a labour-intensive character for which developing countries do not like to go into heavy debt in foreign currency, but which are absolutely essential as infrastructure for economic development. These projects have also a salutary effect on the employment problem of the developing countries, induce a great measure of self-help and force the recipient governments to organize themselves for the effective utilisation of WFP resources. I thank you, Mr. Chairman.

The Chairman: Thank you, Mr. Aquino. I am sure you will have observed that your remarks have been of special interest to the members of the Committee. They now welcome the opportunity to direct some questions to you and I will recognize Mr. Danforth.

Mr. Horner: Before Mr. Danforth puts his question, Mr. Chairman, could we not hear from Mr. Robinson a little more detail of who the recipients are, not only of the Canadian produce but of the World Food Program? Who

[Interpretation]

farine, avoine, toutes sortes de marchandises en balles, poisson, et œufs en poudre. Elles ont servi dans les situations d'urgence et dans les programmes d'expansion économique et sociale dans 52 pays, de l'Amérique latine jusqu'en extrême Orient.

Le blé canadien a surtout servi dans un programme de reboisement en Algérie. Nous avons aussi employé de grandes quantités de farine et de produits laitiers pour les programmes d'alimentation dans les écoles. Si les membres du comité sont intéressés, M. Thomas Robinson, qui est chef de la Division des opérations du programme, pourra, un peu plus tard, vous donner plus de détails concernant la destination et l'utilisation des produits de base envoyés par le Canada.

J'aimerais ajouter ici qu'en examinant le Programme alimentaire mondial, les donneurs ne perdent pas leur identité. Nous gardons des comptes et l'origine des produits est bien indiquée, et de plus, nous demandons aux pays récipiendaires de faire de la publicité quant à l'origine des contributions qui composent chaque expédition.

A mon avis, la tâche du Programme alimentaire mondial s'échelonnera sur bien des années. Malgré les progrès énormes qui ont été accomplis dans la production des céréales dans les régions du monde où règne la famine, le problème de la faim n'a pas encore été résout, loin de là. En plus, l'aide alimentaire, dans le cadre de l'aide au développement économique et social, a un rôle important à jouer dans les années à venir.

Elle s'adapte particulièrement aux programmes à forte utilisation de main-d'œuvre qui viennent à maturité très lentement et auxquels les pays en voie de développement ne veulent pas consacrer leurs devises étrangères, et qui, néanmoins, sont absolument essentiels à l'infrastructure du développement économique. Ces projets ont aussi un effet salutaire sur le problème de l'emploi dans les pays en voie de développement, encouragent les gens à faire un effort, et forcent les gouvernements à s'organiser pour l'utilisation efficace des ressources qui sont mises à leur disposition. Merci.

Le président: Merci, monsieur Aquino. Je suis sûr que vous avez constaté que vos remarques ont particulièrement intéressé les membres du Comité. Ils vont probablement vous poser des questions. Je donne la parole d'abord à M. Danforth.

M. Horner: Avant de poser des questions, est-ce que M. Robinson pourrait nous donner un peu plus de détails concernant les récipiendaires, pas seulement des produits canadiens, mais du programme en général. Quels

[Texte]

are the greatest users and what areas of the world are receiving most of the food?

Mr. Muir (Lisgar): Mr. Chairman, if I may add a supplementary to that, I wonder whether Mr. Robinson would tell us something about the difficulties of distribution and how this is handled in the various countries?

Mr. Thomas C. M. Robinson (Director, Office of Director, Program Operations Division, World Food Program): First, where does the food, not just from Canada but from all donors, go? About 45 per cent of it has gone to the near East, an area stretching from Morocco on the west to Turkey and Iraq on the east.

The reasons for this are first of all, this is a food and cereal deficit area on the whole. It is an area of a good deal of unemployment and it is an area where governments were very quick to see the advantages to them of using food aid. It is also an area where most governments are fairly well organized; that is, they have administration to administer food aid and finally, during the last year and a half, there has been an extra fillip so far as the World Food Program is concerned in that a number of those governments cut off diplomatic relations with the United States after the May, 1967 war with Israel.

As a result, a few projects which had been financed by U.S. title to and operated by voluntary agencies were taken over by the World Food Program, and in addition new projects which might have been bilateral projects had diplomatic relations existed were presented to us instead.

The second largest area of concentration is in the Far East, primarily India, Ceylon, the Republic of China and Korea. More recently we have had projects started in Pakistan—rather large projects. We have two big projects just starting in Malaysia. We have had a number of emergency operations in Indonesia, but no projects as yet.

• 1005

In Africa we are operating in a large number of countries but the total volume of food moving is rather small, because with the exception of Nigeria the African countries are small. They also have on the whole very weak administrations and they also have extreme difficulty in raising the necessary money to pay for freight, storage and so forth. Therefore, although we have a lot of projects in Africa south of the Sahara most of them are very small.

[Interprétation]

sont les plus grands utilisateurs, dans quelles régions du monde envoie-t-on la majorité de ces produits alimentaires?

M. Muir (Lisgar): Est-ce que M. Robinson pourrait également nous dire quelque chose sur les difficultés de distribution et comment cela se fait dans les différents pays?

M. Thomas C. M. Robinson (directeur, Bureau du directeur, Division des opérations du programme): Premièrement, où vont les produits alimentaires? Environ 45 p. 100 vont au Moyen-Orient, du Maroc à l'ouest jusqu'à la Turquie et l'Irak, à l'est.

La raison en est principalement que c'est une région où il y a pénurie d'aliments et de céréales. Il y a beaucoup de chômage dans cette région et les gouvernements ont rapidement constaté qu'il serait avantageux pour eux d'accepter cette aide alimentaire. Les gouvernements sont assez bien organisés dans cette région et ils disposent de la structure pour assurer la distribution. Et finalement, depuis un an et demi, il y a en un item spécial vers le Programme alimentaire mondial car bon nombre de ces gouvernements ont rompu les relations diplomatiques avec les États-Unis après la guerre avec Israël.

Par conséquent, un certain nombre de projets qui avaient été financés par les États-Unis et gérés par des organisations bénévoles ont été pris en main par le Programme d'alimentation mondial, et de plus, de nouveaux projets, qui auraient pu être des projets bilatéraux dans une situation diplomatique normale, nous ont été présentés à la place.

Une deuxième concentration existe en Extrême-Orient, c'est-à-dire, l'Inde, le Ceylan, la République de Chine et la Corée. Plus récemment, nous avons entrepris des projets considérables au Pakistan, deux projets en Malaisie, nous avons eu des opérations de secours en Indonésie, mais pas de projet encore.

En Afrique, nous travaillons dans un très grand nombre de pays, mais le volume total de produits alimentaires distribué est assez faible, car, à l'exception du Nigéria, les pays africains sont assez petits. Et ils ont aussi une administration très faible et de grandes difficultés à obtenir les fonds nécessaires pour payer l'entreposage. Bien que nous ayons de nombreux projets dans les pays africains au sud du Sahara, la quantité d'aide est peu importante.

[Text]

So far as Nigeria is concerned, we have made available through the International Committee of the Red Cross a little over \$3.5 million worth of food, starting only in November of last year when the Government of Nigeria finally asked for food. This has consisted of 1,500 tons of stock fish from Norway and 1,250 tons of corn meal from the United States. The stock fish has arrived; the corn meal has been held up by the waterside workers strike in the U.S.

Finally, in Latin America we have what would appear to be a proportionately smaller number of projects than the area could use. There have been several reasons for this. In the first place in a good many Latin American countries—and I think Mr. Aquino can vouch for this much better than I—there has been a reluctance to admit that there was any food problem. As a result there has been a tendency for us to get special feeding projects—human investment projects, school feeding and so forth, maternal and child care feeding projects—rather than economic development projects in this particular area.

Now, the second question is, what are the problems? The first problem is one of administration and finance in the recipient country. It is not enough for them to need food. They have to be able to handle the food. They have to have a civil service which can organize a project. They have to have enough budgetary resources to pay for local transportation and storage.

They have to have enough trained people to keep accounts, because all of our food goes out under project agreements. We enter into a contract with the government and the government is the executive agent as far as the project is concerned. They have to report to us every three months on stocks, distribution, receipts and so forth and we find that in some countries it is very hard to scrape together enough people who can even keep simple stock records. So absorptive capacity in the administrative sense is probably our greatest single difficulty.

In addition, of course, most of our foods are in some degree perishable and in most countries there has been a great number of problems about how to store foods. There is a tendency to put foods in warehouses that are not physically secure resulting in pilferage, that are not rodent-proof, that are not screened resulting in insect damage; to put them against walls which results in absorption of moisture; to put them on the floor instead of having them up on dunnage.

We have had a constant struggle in every country where we start a project in getting

[Interpretation]

Au Nigéria, par l'intermédiaire de la Croix Rouge internationale, nous avons envoyé pour \$3 millions et demi de produits alimentaires depuis novembre dernier lorsque le gouvernement du Nigéria, nous a demandé de l'aide. Il s'agit de 1,500 tonnes de poisson séché de la Norvège, 200 tonnes de farine de maïs des États-Unis. Le poisson a été livré, tandis que la farine tarde à cause des grèves des ports aux États-Unis.

Ensuite, nous avons l'Amérique latine, où vous aurez peut-être l'impression que le nombre de projets est peu élevé par rapport aux besoins de la région. La raison en est, et je crois que M. Aquino pourrait expliquer beaucoup mieux, que ces pays ne veulent pas admettre qu'il y a une pénurie alimentaire. Donc, nous avons dû entreprendre surtout des programmes alimentaires spéciaux, comme des programmes d'alimentation scolaire, des projets d'alimentation de mères avec leurs bébés, et ainsi de suite, plutôt que des projets de développement économique dans cette région.

Le premier problème qui se pose est un problème d'administration et de financement dans le pays récipiendaire. Il ne suffit pas que ces pays aient besoin de produits alimentaires, il leur faut une administration publique qui puisse organiser le projet. Il leur faut suffisamment de ressources budgétaires pour defrayer le transport local et l'entreposage.

Il leur faut suffisamment de personnel qualifié pour tenir des comptes parce que tous nos produits sont fournis dans le cadre d'accords. Nous avons un accord avec le gouvernement qui est notre agent pour ce projet. Il doit faire rapport environ tous les trois mois sur les stocks, la distribution, les réceptions, et ainsi de suite. Nous avons constaté dans certains pays qu'il est extrêmement difficile d'obtenir un nombre suffisant de personnes qualifiées pour tenir compte des stocks. L'administration présente donc la difficulté la plus importante que nous rencontrons.

En plus de cela, la plupart de nos produits sont des denrées périssables, et dans beaucoup de pays, il y a des problèmes d'entreposage. Souvent on les met dans des entrepôts où ils risquent d'être volés, qui ne sont pas protégés contre les insectes qui y font des dégâts, on les place contre des murs où ils absorbent de l'humidité, on les met par terre au lieu de les mettre au grenier.

Nous avons eu beaucoup de difficultés à faire adapter des méthodes d'entreposage adé-

[Texte]

proper storage practices. We have made a terrific amount of progress, however. In order to help governments perform their responsibilities, we assign to the office of the UNDP resident representative who is the representative of the World Food Program, what we call project officers. They are his staff aides for World Food Program affairs, and although they have no executive powers—they cannot tell anybody to do anything—they can advise them that they should do thus and so.

Most of these men have had food handling backgrounds in the past and the largest single source has been the voluntary agencies such as CARE, World Council of Churches, Catholic Relief Service, and so forth, and ex-colonial services, particularly the British and the Belgian. In order to make sure that they have the background to give proper advice we have been utilizing the Tropical Stored Products Centre of the Ministry of Overseas Development in the United Kingdom to run a six weeks training course on food storage and handling problems. We run four courses a year. We run eight project officers through every course, so in most countries where we are operating we have an adviser who can help the government discharge its responsibilities but he cannot do the job himself; he has to have local counterparts who are responsible.

• 1010

There are other problems, of course, in synchronizing receipts of commodities from a number of different countries because a project with, we will say, eight food items may be drawing supplies from as many as five different countries. We try to ship only three months supply at a time so that storage periods will not be too long. Something like the longshoremens' strike in the United States is a major catastrophe as far as we are concerned because, although other commodities drawn from Canada or northwestern Europe come through on schedule, the corn or the sorghum coming from the United States has been held up now in many cases for as long as six months. We have our problems as well as there being problems in the recipient countries.

Mr. Horner: I have just one supplementary question then, Mr. Robinson. How does a country go about applying to your World Food Program for some food?

Mr. Robinson: We have sent out to all of our resident representatives a pro forma, sample applications. The government comes to the resident representative and says, "We want to build 50 miles of roads connecting

[Interprétation]

quats. Nous avons fait beaucoup de progrès dans ce domaine, cependant. Pour aider les gouvernements à assumer leurs responsabilités, nous avons envoyé des fonctionnaires auprès du représentant résident du PNUD, pour s'occuper des affaires du programme. Ils n'ont pas de pouvoirs exécutifs, mais ils peuvent conseiller les gens sur la façon de procéder.

La plupart de ces gens ont de l'expérience dans le domaine de la distribution alimentaire et ils proviennent surtout d'organisations bénévoles comme CARE et le Conseil mondial des Églises, et des anciens services coloniaux britanniques et Belges. Afin de nous assurer que ces gens ont l'expérience nécessaire, nous avons un centre au Royaume-Uni où nous donnons un cours de formation de six semaines sur l'entreposage et la distribution des produits alimentaires, quatre fois par année, avec huit participants chaque fois. Donc, dans la plupart des pays où nous fonctionnons, nous avons un conseiller qui peut aider le gouvernement à assumer ses responsabilités. Il ne peut pas faire le travail lui-même, il faut qu'il ait un homologue dans le pays en question.

Il y a d'autres problèmes, comme la synchronisation des arrivages en provenance de différents pays, par exemple, un projet composé de huit produits peut recevoir des approvisionnements de cinq pays différents. Nous essayons d'expédier des provisions pour trois mois à la fois afin d'éviter des périodes d'entreposage trop longues. Et une chose, comme la grève des débardeurs aux États-Unis, pose de graves problèmes parce que les produits alimentaires de l'Europe ou du Canada arrivent à temps, tandis que le maïs ou le sorgho qui devaient venir des États-Unis sont retardés, dans certains cas, jusqu'à six mois. Donc, nous avons nos problèmes en plus des problèmes des pays récipiendaires.

M. Horner: Une question supplémentaire. Comment est-ce qu'un pays demande de l'aide à votre organisation?

M. Robinson: Nous avons envoyé à chaque représentant local une formule type de demande. Le gouvernement s'adresse à chaque représentant local et dit: «Nous voulons construire 50 milles de routes reliant les vil-

[Text]

villages with main highways, and so forth. We think, since we are going to build the roads by hand, that this is the place we could use food". The resident representative, or our project officer, sits down with the appropriate government authorities and helps them write up a project proposal, and it comes into WFP Headquarters.

If it is a road building project we refer it for technical advice to the United Nations agency responsible for road building. If it is an agricultural settlement scheme to settle people in, let us say, Tanzania on previously virgin land, we will refer the request to FAO. If it is a school feeding project we refer it to UNESCO. We have no technical expertise in the World Food Program.

After these agencies have given it approval we get down to brass tacks to see if we can get the food required, and enter into an agreement with the government.

Mr. Horner: I ask that question, Mr. Chairman, to clarify the point I am trying to make. For example, the breakaway state of Biafra could not apply to the World Food Program because it is not a recognized state or country, as such?

Mr. Robinson: Yes; our regulations say that governments which are members of the United Nations or members, or associate members of FAO can participate.

Mr. Aquino: Mr. Chairman, I just want to add one comment. In our assistance to Nigeria we made sure that our supplies would go to both of the contending factions.

The Chairman: Mr. Muir has a question.

Mr. Muir (Lisgar): Mr. Robinson, do you give advice to donor countries on proper packaging and processing?

Mr. Robinson: Yes, we do; not only on packaging a simple thing such as wheat flour, for which there is a large variety of packaging, but also on packaging such things as dried skim milk and canned cheese, and so forth. There have been a number of changes in packs as a result of our intervention.

We have discovered, for instance, that it is foolish to supply cheese to most of the countries where we are operating unless it is tinned. This drives up the cost, but the higher cost pays in the long run, because we were having intolerable losses on cheese which was merely wrapped in pliofilm.

Again, we depend upon the tropical stored products centre which has packaging experts who advise on what packs should be, and

[Interpretation]

lages aux grandes routes. Et comme nous allons les construire à la main, peut-être que ce serait l'endroit où on pourrait avoir des produits alimentaires». Alors, l'agent du programme aide ces personnes à faire ces demandes.

On envoie des demandes d'aide technique aux Nations unies qui est l'organisme responsable pour la construction des routes. S'il s'agissait, par exemple, d'un autre programme dans le domaine agricole, on aurait demandé à la FAO et si c'est un programme en ce qui concerne l'éducation, on s'adresserait à l'UNESCO, etc.

Ensuite, on essaie de voir si on peut obtenir les produits alimentaires requis.

M. Horner: J'ai posé cette question, monsieur le président, pour essayer de comprendre la situation. Par exemple, l'État du Biafra ne peut pas faire une demande à ce programme, parce que ce n'est pas un État reconnu comme tel.

M. Robinson: Il faut que ce soit des gouvernements membres des Nations unies ou des membres associés de la FAO.

M. Aquino: Monsieur le président, j'aimerais faire une remarque. Dans notre aide au Nigéria, nous nous sommes assurés que l'aide que nous avons envoyée, aille aux deux parties.

Le président: M. Muir a une question.

M. Muir (Lisgar): Monsieur Robinson, est-ce que vous aidez les pays à faire l'emballage et le traitement des produits nécessaires?

M. Robinson: Oui, non seulement pour des choses aussi simples que la farine de blé, mais pour le lait en poudre, le fromage en boîte. Il y a eu pas mal de changements dans ce domaine, quant à notre intervention.

Ça ne sert à rien d'envoyer du fromage aux pays où nous fonctionnons, à moins qu'il ne soit mis en boîte. Ceci élève les coûts, mais cela est rentable à la fin, parce qu'autrement il y a des pertes absolument incroyables, si le fromage était simplement enveloppé dans le pliofilm. Nous dépendons de ce centre de productions tropicales qui peut aider les organismes à faire les emballages requis.

[Texte]

they go back to the manufacturers on request and help them redesign their packs.

The Chairman: Gentlemen, I have a list of members who wish to ask questions. To press supplementaries is to impose on the good nature of those who have indicated that they wish to ask questions. I would ask the indulgence of the Committee, and I will recognize Mr. Danforth.

Mr. Gleave: I have a question for clarification purposes. One of the gentlemen said they were assured that supplies to Nigeria flowed to both countries. How do they know this?

Mr. Aquino: We ensured this by having the agreement of the Government of Nigeria that this would be so and by channelling our resources through the ICRC, which was already working on both sides of the conflict.

Mr. Danforth: Mr. Chairman, as was explained, this program is gaining in magnitude and it is easily understandable how we could, through the years, gain greater momentum and thus a greater influence in the basic economies of the countries involved.

As it is, to this degree, quite a major influence, or could be, may I ask how it is determined what will be the various areas to be implicated? I fully understand when you talk of an area such as the Middle East, where there is high unemployment, but there must be an over-all governing factor to determine the influence on the world economy and normal trade patterns.

May I ask, first, how a determination is made on the over-all implementation of the project?

• 1015

My second question was going to be on how we determine aid for the various countries. This has already been answered, so I will go on to the next part of my question.

How is it determined what project will be incorporated into a specific country? Owing to inexperience, or lack of research, the project submitted by a developing country may, if implemented, throw the country further into imbalance rather than be of direct aid. I doubt that aid would be refused because of this, but might it be recommended in a different way? May we have some explanation of the basic mechanics involved?

Mr. Aquino: Thank you, Mr. Chairman.

Your first question was on what criteria we have followed in distributing our resources over a wide area represented by the developing nation. Up to the present time, the

[Interprétation]

Le président: Messieurs, j'ai une liste de députés qui voudraient prendre la parole. Je crois qu'il va falloir demander que l'on procède aux questions sans trop de délai. La parole est à M. Danforth.

M. Gleave: J'ai une question. Quelqu'un a dit que vous étiez sûrs que les approvisionnements au Nigéria, sont dirigés sur les deux parties du pays? Comment le savez-vous?

M. Aquino: Nous sommes sûrs de cela, parce que nous avons l'accord du gouvernement du Nigéria, que tel serait le cas, et en envoyant aussi nos ressources par l'intermédiaire de la Croix Rouge, du Comité international de la Croix Rouge.

M. Danforth: Monsieur le président, tel qu'expliqué, ce programme devient de plus en plus important, lorsqu'on prend au fur et à mesure des années, ce programme prend un élan plus important et exerce une influence plus grande dans l'économie de base des pays impliqués.

Étant donné que ce programme a une influence majeure, on pourrait en avoir une, comment est-ce qu'on décide quant aux différentes régions impliquées? Bien sûr, je comprends lorsque vous parlez d'une région comme le Moyen-Orient, où il y a un taux élevé de chômage, mais, il doit y avoir un facteur général qui permet de décider de l'influence sur l'économie mondiale et les structures des échanges. Et j'aimerais savoir comment on décide la mise en vigueur du programme d'une façon globale?

Ma deuxième question porte sur la façon dont on déterminait l'aide aux différents pays. Ma deuxième question a déjà trouvé sa réponse. Maintenant, comment est-ce qu'on décide qu'un projet sera incorporé dans un pays particulier? Est-ce que, pour cause de manque d'expérience ou de recherches, les projets soumis par un pays en voie de développement peuvent déséquilibrer plus le pays plutôt que l'aider. Peut-être que dans ce cas-là, on ne refuserait pas de donner de l'aide, mais on voudrait le faire sur une autre base. Peut-être que vous pourriez nous dire quelque chose sur ces procédés?

M. Aquino: Merci, monsieur le président. Sur la première question: quels critères nous avons suivis pour la distribution de nos ressources dans la vaste région représentée par les pays en voie de développement? Jusqu'à

[Text]

resources of the program and the demand for them have been more or less in balance. Under these conditions the main guiding factor for us has been those countries where good projects could be discovered and assisted.

If, in future, as now appears will be the case, we should get demands that are beyond the resources of the program we will have to introduce other criteria. Probably we would want to implement only those projects that have a maximum effect in the economic development of a country, and would have to reject a number of other projects.

On the other question, which is very much linked with this one, of how we determine priorities within a country, I must say that we have been using, in every case, the services of the United Nations in New York to study, in the face of any request made to WFP, the development program of the country in question to see whether the priority for the project presented to us has already been considered within the development plan and what kind of priority it has. Only those projects that really have a priority within the already established plan would receive assistance from WFP. This would prevent imbalances such as you suggest could appear once in a while.

Mr. Danforth: I have one supplementary, Mr. Chairman, and then I will pass to allow others to ask questions. This is a matter which is, I think, of direct concern to many economists in programs such as this, and no doubt it has been studied to great depth, but because agriculture is, in most instances, the primary industry by which the economy is started and generated in developing countries, what position are we going to be in when countries such as Canada and the United States are developing a superabundance of particular projects, yet, in the main, in the developing countries, these are the very products that are being encouraged and there is a tremendous development, to the degree that in some instances importing countries become exporting countries? Is there going to be any emphasis, as was brought out, on transportation and distribution rather than on primary development?

Basically, I am asking what efforts are being considered to move from abundance to lack of abundance rather than to develop an increase of ever greater abundance with, in some instances, the waste and destruction of foods that are so badly needed?

[Interpretation]

présent, les ressources du programme et les demandes faites à ces ressources ont été plus ou moins équilibrées. Le facteur plus important, en ce qui nous concerne, c'est qu'il faut trouver les pays où il y a la meilleure structure qui permet une bonne distribution des produits.

Si, à l'avenir, comme cela semble être le cas, nous devons avoir des demandes qui sont au-delà des ressources du programme, alors, il nous faudra introduire d'autres critères. Probablement, nous voudrions mettre en vigueur que les projets qui ont l'effet maximal sur le développement économique du pays. Et il nous faudra rejeter un certain nombre d'autres projets.

D'autre part, la question qui se relie très étroitement à cette question de savoir comment on détermine les priorités dans un pays, je dois vous dire que nous avons, dans chaque cas, utilisé les services des Nations unies à New York pour faire des études sur toutes les demandes qui sont faites au programme alimentaire mondial. L'on utilise le programme de développement du pays, dans son ensemble, pour voir si la priorité du projet n'a pas déjà été prise en considération dans le cadre des programmes d'aide. Dans ce cas-là, s'il y a déjà une priorité dans ce domaine, on ne fournirait pas l'aide pour le projet. Et ceci évite le déséquilibre.

M. Danforth: Question complémentaire, monsieur le président, et ensuite je passerai la parole à d'autres. Il y a quelque chose qui préoccupe beaucoup d'économistes, en ce qui concerne les programmes de ce genre, et sans aucun doute ceci a été étudié d'une façon approfondie, mais étant donné que l'agriculture est une industrie primaire dans ces pays où on commence à peine le développement industriel, dans quelle situation allons-nous nous trouver, quand certains pays comme les États-Unis et le Canada, où nous développons des projets extrêmement importants... Et ce sont ces mêmes produits que l'on encourage, c'est le développement de ces mêmes produits que l'on encourage dans ces pays. Est-ce qu'il n'y a pas un danger que ces pays importateurs deviennent un jour des pays exportateurs? Est-ce que l'on met vraiment l'accent sur les questions de transport et de distribution plutôt que sur le développement primaire? Ma question est la suivante: quels sont les efforts qui sont faits ou envisagés pour passer de l'abondance à l'absence d'abondance ou pour accroître l'abondance dans certains cas et faire du gaspillage de produits alimentaires dans d'autres cas?

[Interprétation]

Le président: Monsieur Aquino?

Mr. Aquino: I will try my best, Mr. Chairman. This is a very tough question, but really, as I pointed out in my introductory remarks, I believe the program of hunger as such is a long way from being solved. I doubt that certain of the large developing countries that are engaged in very important programs of becoming less dependent on imports of food, will carry these programs to the point where they will be in a position to economically compete for products that are already produced in the developing world.

But in any case, in the effort of freeing the world from hunger as the United Nations have seen it, the effort of the World Food Program has always been to increase the food production in these poorer countries so that they will become less dependent on imports, and really on eggs which is what they have been getting mostly. My personal impression is that in spite of the most highly publicized developments in countries such as India and Pakistan, those countries are a long way from actually solving their problems.

To begin with, when you speak to these people about the food problem they always think in terms of grain only, and the problem is more of a balanced diet than really just producing enough food grains to feed themselves. But, even apart from that, the level of income in these countries is such that you will always have for many years to come great pockets of population that will be under-privileged with regard to food.

I answer the question in these very broad terms. I do not know whether I am missing the point. Maybe Mr. Robinson would like to add something.

The Chairman: Mr. Robinson?

Mr. Robinson: I am not sure, Mr. Chairman, that I understood all the implications of the question. I would like to say that in addition to financing the agricultural projects, we are financing infrastructure projects, the building of roads for instance, and the building and restoration of railway lines.

I think we are having some influence on food storage through the experience gained by local people in handling our stores. We have helped arrange in West Africa one course in food storage run by FAO for the nationals of the countries in the area, because the same problems we have in storing food are exactly the problems they have in storing their own home-produced food. So I think we are having a little spin-off effect on reducing food wastage.

29808—2½

M. Aquino: Je ferai de mon mieux, monsieur le président. C'est une question très complexe. Comme je l'ai fait remarquer dans mes remarques, je pense que ce programme contre la famine est loin d'être terminé. Je pense que certains des grands pays en voie de développement qui s'embarquent dans un programme important afin de devenir moins complexe. Comme je l'ai fait remarquer dans dépendants des produits d'importation poursuivront ces programmes jusqu'à ce qu'ils puissent concurrencer ces produits déjà produits ailleurs.

Quoi qu'il en soit, dans cet effort tenté pour libérer le monde de la faim tel qu'envisagé par les Nations-Unies, le but a toujours été d'augmenter la production alimentaire dans les pays plus pauvres afin qu'ils aient moins à dépendre des importations, principalement l'importation des œufs. Mon impression personnelle c'est que malgré ces développements dont on a fait état et qui se sont produits en Inde et au Pakistan, ces pays sont bien loin d'avoir réglé leurs problèmes. Si vous parlez à ces gens de problèmes alimentaires, ils pensent automatiquement au grain, alors que le problème consiste plutôt à préparer une diète équilibrée. D'autre part, le niveau du revenu dans ces pays est tel qu'il se trouvera, pour plusieurs années encore, des secteurs de la population qui seront sous-privilegiés par rapport à la nourriture. J'ai répondu en termes très vagues et j'ignore si j'ai répondu à la question. Monsieur Robinson voudrait peut-être ajouter quelque chose.

Le président: Monsieur Robinson?

M. Robinson: Je ne suis pas sûr d'avoir tout compris ce qu'a dit le député. En plus du financement des projets agricoles nous finançons également la construction de routes et la construction et la restauration de voies ferrées.

Je crois que nous avons une certaine influence sur l'entreposage de produits alimentaires grâce à l'expérience acquise par certaines personnes du milieu qui s'occupent de nos entrepôts. Nous avons aidé à l'organisation, en Afrique occidentale, d'un cours sur l'entreposage de la nourriture à l'intention des habitants de ces pays parce que les problèmes d'entreposage sont les mêmes pour ces gens en ce qui concerne leurs propres produits. Nous aidons ainsi à réduire le gaspillage alimentaire.

[Text]

The problem of the efficient marketing of foods, however, is much broader than we can cope with. We can make a little contribution on storage, a little contribution on roads. But the organization of extension services, marketing co-ops and so forth, is something that FAO is much more concerned with than we are.

One final thing. I think we have to realize that in populous countries like India, import requirements, although they look very large to exporting countries, are only marginal. India's grain production in 1968 was something like 96 million tons, which is about $3\frac{1}{2}$ billion bushels, and small swings in production can produce terrific swings in import requirements. Even if people in southern Asia and Africa are satisfying their caloric requirements, to say nothing of their protein and fat requirements, their nutritional deficits are much bigger than the surpluses in North America, Western Europe and Australia.

I realize that there is the potential problem you mentioned. Some countries such as Mexico have switched to an export basis. The Philippines, who were on a slight export basis for rice last year, think they will be on a deficit again next year because they have had very severe floods in central Luzon.

So an increasing number of countries will move to an export basis. Kenya, for instance, has so moved in the case of corn. But their problem is that their corn is so high-priced they cannot compete on international markets. It is not a very efficient production as yet. This is something we will have to watch year by year, and we of course do not supply any food stuffs which a country has in surplus.

We have two projects in Mexico but we are not supplying any corn or any wheat to them. We are supplying dairy products, fish, cheese and canned meat. I do not know if this is a complete answer to your question or not.

Mr. Danforth: Maybe I can rephrase it.

The Chairman: Mr. Williams has a supplementary comment.

Mr. Williams: I just thought this might be helpful in respect to Mr. Danforth's question, Mr. Chairman.

As Mr. Olson pointed out, Canada to date has participated in some 120 World Food Program projects. Of those, 40 were concerned with agriculture; 26 were concerned with what are called human resources, which are largely educational project; 21 were infrastructure projects, things such as housing, water supplies, road, railway repairs and things of that nature; four were concerned with industry and minerals; and 29 were

[Interpretation]

Le problème de la mise en marché efficace des produits est plus vaste que ce que nous pouvons faire en ce domaine. Nous pouvons aider à l'entreposage, à la construction de routes, mais le problème des autres services, telle la mise en marché, dépend davantage de l'organisme central.

Je crois, enfin, qu'il nous faut réaliser que pour les pays peuplés comme l'Inde les importations, même si elles semblent importantes pour les exportateurs, sont en fait minimes. En d'autres mots, la production de céréales de l'Inde en 1968 s'établissait aux environs de 96 millions de tonnes, ce qui représente environ trois milliards et demi de boisseaux. Une légère modification de la production peut entraîner des changements radicaux dans l'importation. Même si les populations de l'Asie méridionale et de l'Afrique peuvent satisfaire leurs besoins en calories, leurs besoins sont beaucoup plus importants que les surplus enregistrés en Amérique du Nord, en Europe occidentale et en Australie.

J'admets que peut survenir ce problème que vous avez mentionné. Certains pays, tels le Mexique, exportent. Les Philippines, qui avaient réussi à exporter du riz, devront peut-être importer, l'an prochain. Donc un nombre croissant de pays vont passer à l'exportation. C'est le cas du Kenya, en ce qui concerne le maïs, mais le prix est tellement élevé qu'ils ne peuvent pas entrer en concurrence sur le marché mondial. Cette production n'est pas des plus efficace pour l'instant. Il faudra surveiller la situation de près d'année en année. Évidemment nous n'envoyons pas à un pays des produits qu'il a en assez grande quantité.

Nous n'expédions pas de blé ou de maïs au Mexique, mais des produits laitiers, du poisson, du fromage et des viandes en conserve.

J'ignore si ce que j'ai dit répond à votre question.

M. Danforth: Je pourrais la formuler autrement.

Le président: Monsieur Williams désire ajouter quelque chose.

M. Williams: Voici qui pourrait peut-être être utile par rapport à la question de M. Danforth. Le Canada, comme l'a dit M. Olson, a contribué à 120 projets: de ce nombre, 40 touchaient l'agriculture; 26, les ressources humaines, où il s'agit surtout de projets d'éducation; 21 étaient des projets d'infrastructure, le logement, l'eau, les routes, etc; 4 autres touchaient l'industrie et les minéraux et 29 étaient des projets d'urgence. Donc une grande partie de l'aide canadienne portait sur autre chose que l'encouragement ou le développement de l'agriculture.

[Texte]

emergency. So a very significant portion of the Canadian aid at least is going to other than the stimulation of agriculture, to the sort of thing that you were speaking about, Mr. Danforth, the distribution systems and things of that nature.

Mr. Danforth: Perhaps I can phrase my question a little differently, Mr. Chairman, to elicit more information. I am well aware that our visitors this morning are well versed in this economic field and this is why I am posing these questions.

I think many of us are concerned over the implications of programs such as this. We certainly support them and see the absolute need for such programs. But is there an overall study and control? For example, it has been illustrated that some countries, although receiving help in agricultural production, and I will speak on agriculture, are not in an exporting position and perhaps will not be for a number of years. But the fact still remains that once they get into bulk production, whether they export or not, they contribute part of the normal yearly market of a commodity.

In other words, if a country that has never produced produces 3 million tons, that is 3 million tons added to the world supply. It could conceivably be under a program such as illustrated to us this morning where particular grains are encouraged in developing countries, and we find ourselves in a world-wide surplus supply, and it makes it economically unfeasible to produce these grains perhaps in countries that have used it as a basic economic prop through the years. Is there an over-all consideration of this problem? Or, are we just going to go along and encourage production wherever it is felt that on a country-basis it is needed, until someday we suddenly find out that we have x million tons of grain with nowhere to go and no idea what to do with it?

The Chairman: Mr. Robinson?

Mr. Robinson: As I understand the question, you are not concerned so much about the possible displacement of markets right now while the projects are going on. You are interested in a country's long-time production target which it may be helped to reach by food aid as well as other types of aid. I suppose the most ambitious project for looking at this particular problem is FAO's indicative world plan which is now in preparation and which sets up, under certain stated assumptions, what the probable production of major crops, not only food crops but industrial crops as well, would be in 1975, 1985, and so

[Interprétation]

M. Danforth: Je reposerai ma question d'une façon différente afin d'obtenir plus de renseignements. Je sais que nos visiteurs de ce matin sont au courant des questions économiques.

Je pense que beaucoup d'entre nous sont surtout préoccupés des incidences que peuvent avoir des programmes tels que ceux-ci. Bien sûr nous les appuyons, nous en voyons les besoins essentiels. Mais est-ce qu'il y a une étude globale de la situation, un contrôle? Ainsi, on nous a montré que certains pays, bien qu'ils reçoivent de l'aide en agriculture, ne sont pas en position d'exporter et ne le seront probablement pas avant plusieurs années. Mais le fait reste que dès qu'ils en arrivent à la production massive, même s'ils n'exportent pas, ils contribuent à la production d'une partie du marché annuel normal d'un produit.

Si un pays n'a jamais fourni un produit donné et s'il en produit 3 millions de tonnes, cette quantité s'ajoute à ce qui est produit ailleurs. Cette situation pourrait résulter de la mise en œuvre d'un programme comme ceux dont on vient de nous parler. Il pourrait en résulter un surplus à l'échelle mondiale ce qui rendrait économiquement irréalisable la production de ces céréales dans des pays qui l'avaient utilisée comme stimulant économique au cours des années. Est-ce que l'on tient compte de ces aspects du problème? Ou est-ce qu'on va de l'avant et qu'on en encourage la production dans les pays qui en ont besoin, jusqu'au jour où on réalise qu'il y a un surplus de plusieurs millions de tonnes de céréales et qu'on ne sait plus qu'en faire?

Le président: Monsieur Robinson?

M. Robinson: Si j'ai bien compris la question, vous ne vous préoccupez pas tellement du déplacement du marché à l'heure actuelle. Ce qui vous intéresse ce sont les objectifs de production à long terme de certains pays qui atteindront peut-être ces objectifs grâce à l'aide qui leur aura été fournie. Je suppose que le projet le plus ambitieux en ce domaine est celui par lequel on tente présentement d'établir quelle sera la production totale de tel ou tel item en 1975, 1985, et plus tard encore, quelle sera la demande dans ces pays et quelles seront les tendances commerciales à ce moment-là.

[Text]

forth, what the probable demand within those countries will be, and what the probable trade patterns will be.

This is not published yet on a world-wide basis. They have I believe brought out some of the regional studies, and certainly we will have to take into account these projections which governments will look at during the FAO conferences next autumn, for instance, in deciding which projects we should finance. So far, I think we should confess, this has not been regarded as a very immediate problem in the selection of projects for WFP financing.

The Chairman: Mr. Howard?

Mr. Howard (Okanagan-Boundary): If there is any source of revenue from these commodities that are shipped into countries I wonder if there is not some distance between giving them away free and charging the full price. Some of these countries might possibly be able to pay some of the costs—not that I am concerned over recovering money for Canada for our products, but I wonder whether revenue from this source could be used to extend the program and make it somewhat self-supporting eventually?

The Chairman: Mr. Aquino?

Mr. Aquino: Thank you. Up to now, sir, we have been very careful about sales of foods that have been given to us for the program. Only about 2 per cent of the products that are for human consumption have been sold in the open market. This is so because of our continuous concern about market displacement as of now, and also because the question of additionality is very important to us. In other words, we try to make sure that whatever food we provide will be consumed over and above the amount of food that is available to the people for consumption.

I must say we have never thought of the program in the way the hon. member presents it, that we could become self-sufficient at any time and that we should have larger elements of sales in our program.

Mr. Robinson: May I elaborate on that just a little? I think what you are suggesting is that we use a technique something like the title technique the U.S. used under P.O. 480, at least in the earlier years. Our intergovernmental committee decided against it very early in the peace.

[Interpretation]

Les résultats, pour l'ensemble du globe, n'ont pas encore été rendus publics. Mais je crois qu'on a publié les résultats de certaines études régionales, résultats que les gouvernements seront appelés à étudier l'automne prochain, avant de décider du financement de tel ou tel produit. Jusqu'à présent, je l'avoue, nous n'avons pas considéré cela comme étant un problème grave dans la sélection des programmes à faire financer par le Programme alimentaire mondial.

Le président: Monsieur Howard?

M. Howard (Okanagan-Boundary): S'il y a une source de revenus dans les produits qui sont expédiés vers les pays, je me demande s'il n'y a pas tout de même un grand pas entre les donner gratuitement et les vendre au prix plein. Certains de ces pays pourraient sans doute payer une partie des coûts. Ce n'est pas que je me soucie de récupérer de l'argent pour les produits que donne le Canada, mais je me demande si l'on ne pourrait pas utiliser les recettes provenant de cette source pour étendre le Programme et lui permettre, à la longue, de se suffire à lui-même.

Le président: Monsieur Aquino?

M. Aquino: Merci. Jusqu'à présent, monsieur, nous avons été très prudents en ce qui concerne la vente des produits que l'on nous donnait pour le Programme. Environ 2 p. 100 seulement des denrées destinées à la consommation humaine ont été vendues sur le marché ouvert. La raison en est notre préoccupation constante, jusqu'à présent, à l'égard du déplacement des marchés, ainsi que l'importance pour nous de la question du supplément. En d'autres termes, nous essayons de nous assurer que la nourriture que nous fournissons sera consommée en plus de celle dont disposent les gens.

Je dois dire que nous n'avons jamais envisagé le programme de la façon dont le présente le député, à savoir, que le programme pourrait en arriver à se suffire à lui-même et que nous devrions faire davantage la place à l'élément vente.

M. Robinson: Est-ce que je pourrais donner d'autres détails à cet égard? Ce que vous proposez, je crois, c'est que nous employions une technique comme la technique du titre—P.O. 480—qu'avaient employée les États-Unis au cours des premières années. Notre comité intergouvernemental avait décidé dès le début

[Texte]

Actually, there is only one transfer of resources if you send food to a country and acquire local currency in return. The local currency is not a real resource at all. It is a claim against the resources of the country concerned and, therefore, it gives you some leverage in deciding what they will finance with their local currency.

Now, on a very small scale this has been done without the World Food Program taking title to the local currency. For instance, a typical livestock project such as some of our dairy schemes in India involves a supply of two different types of commodities. It involves a supply of dried skim milk and perhaps butter oil for the reconstitution of milk or for the toning of local milk; that is, buffalo milk with 6 per cent or 7 per cent butterfat can be mixed with reconstituted skim milk to produce a standard product of 2 per cent or 3.5 per cent fat. This is sold on the market and the local currency generated is used to further the purposes of the project.

Similarly, sorghum or corn may be sold to the dairymen at reduced prices. It may be mixed with cotton seed cake and other things and the resulting blended product sold at prices well below market level to start with, increasing to market levels at the end of the project, the purpose being to encourage the use of concentrates in dairying and to develop a market for locally-produced maize and sorghum.

So wherever sales made by the project with the proceeds controlled by the project are possible, those proceeds are used to further the purposes of the project by developing an extension service, by building storage facilities, the whole complex that will go into encouraging more grain production, the feeding of more grain to livestock, the extension of dairy facilities, and so forth. In no case does the World Food Program control the use of the proceeds except as their use is specified in the agreement. I hope this is an answer to your question, sir.

Mr. Howard (Okanagan Boundary): I think this is very interesting and I think it has one other value, which is that in addition to the extensions of the service as you have suggested that are available by getting some revenue from it, one of the problems in relief projects of this kind throughout the world seems to be the resentment the free distribution of products generates in the recipient.

[Interprétation]

de ne pas l'employer. En fait, il n'y a qu'un seul transfert de ressources, si vous envoyez des aliments à un pays et que vous demandiez des devises locales en échange. Ces devises ne constituent absolument pas une ressource réelle. Elles donnent seulement un certain pouvoir sur les ressources du pays en cause, et permettent donc, jusqu'à un certain point, de décider ce que l'on va financer avec ces devises locales.

A une très petite échelle, cela s'est fait, sans que le programme alimentaire mondial acquit un pouvoir sur les devises locales. Par exemple, certains de nos programmes laitiers en Inde consistent dans la fourniture de deux denrées: du lait écrémé en poudre, et peut-être de l'huile de beurre, pour reconstituer le lait ou pour renforcer le lait local—c'est-à-dire qu'en mélangeant du lait de buffle avec 6 p. 100 de graisse de beurre et du lait écrémé reconstitué, on obtient du lait normal contenant 2 p. 100 ou 3.5 p. 100 de matières grasses. On vend ce produit sur le marché, et les devises locales que l'on en retire servent à poursuivre les objectifs du programme.

De même, on peut vendre du sorgho ou du maïs à pris réduit aux producteurs laitiers. Ils peuvent le mélanger à des tourteaux de graines de coton et à d'autres produits, et revendre le produit qui en résulte à un prix bien inférieur au prix des marchés au tout début, mais qui finit par atteindre le prix des marchés en fin de compte. Le but de la chose est d'encourager l'emploi de concentrés dans l'industrie laitière et de créer un marché pour le maïs et le sorgho produits sur place. Ainsi, chaque fois que l'on peut vendre des produits dans le cadre du programme et que le programme peut disposer des recettes, ces recettes sont employées pour poursuivre les objectifs du programme, en mettant sur pied un service d'extension, en construisant des entrepôts, et encourageant l'accroissement de la production de céréales, la meilleure alimentation du bétail, l'augmentation des installations de laiterie, et ainsi de suite. En aucun cas le Programme alimentaire mondial ne contrôle-t-il l'utilisation des recettes, sauf aux fins précisées dans l'accord. J'espère que cela répond à votre question, monsieur.

M. Howard (Okanagan Boundary): Tout cela est très intéressant, et je crois que cela a aussi une autre valeur: on peut étendre les services, comme vous l'avez dit, en obtenant des recettes dans le cadre du programme; mais, de plus, l'un des problèmes que posent justement les programmes d'aide de ce genre dans n'importe quel pays au monde c'est le ressentiment que fait naître chez le bénéficiaire la distribution gratuite des produits.

[Text]

The slogan "Yankee go home" is well known and heard most often in countries where the Americans have been most generous with their support. I wonder if perhaps there is not a lesson for us all in this, that if we ask for something in return—it may only be a token—it preserves the self-respect of the person who is being given these services.

Mr. Aquino: Mr. Chairman, in effect we are asking for something in return in most cases and this is labour or an effort by the people actually participating. But apart from that, I think the multinational character of the program presents a lot of this and also the fact that we make sure these projects we help to finance with the aid of our food are always projects that are highly needed in the country and have gone through the process of planning by the authorities, so they do represent a national effort rather than something that is being more or less imposed from outside. I do not know whether Mr. Robinson will add any more to what I have said.

The Chairman: Mr. Robinson, will you comment?

Mr. Robinson: The places where our experience has met the danger that you have mentioned, I think, is in cases where foods that have been requested for projects have not been the foods normally produced in the area, where for instance people have been used to eating only a soft, uncured cheese start getting a cheddar type cheese, something that is unfamiliar, and it does not particularly appeal to them.

They know it is worth a lot of money and their gratitude in those cases knows considerable bounds, shall we say. There is a terrific tendency to divert to commercial markets, so we are much more careful now than we were in 1963 in supplying only foods, with a few exceptions I will mention, that are customary foods, that they know how to use, that they regard as the sort of foods that they should be eating. There is not much point in developing tastes which they can never afford once the project stops.

The exceptions to this rule are primarily the use of dairy products, because in large areas where cattle are not kept they are not used to drinking milk and yet the protein deficiencies in children from the age of weaning up to six or seven are the most serious

[Interpretation]

Le slogan «les Yankees, chez eux» est bien connu, et on l'entend le plus souvent dans les pays où les Américains ont été le plus généreux. Je me demande si nous n'avons pas tous une leçon à tirer de cela: si nous demandons quelque chose en retour même si ce n'est que symbolique—cela préservera l'amour-propre de la personne à qui nous rendons ces services.

M. Aquino: En fait, monsieur le président, nous demandons quelque chose en retour dans la plupart des cas, et il s'agit généralement de la main-d'œuvre ou d'un effort de la part de ceux qui participent. A part cela, toutefois, je crois que le caractère multinational du Programme élimine beaucoup de cela; le fait aussi que nous nous assurons que les programmes que nous aidons à financer en fournissant des denrées soient toujours des programmes dont le pays ait vraiment besoin et qui aient été mis au point par les autorités, de sorte qu'ils représentent un effort national plutôt que quelque chose de plus ou moins imposé de l'extérieur.

Je ne sais si M. Robinson va vouloir ajouter quoi que ce soit.

Le président: Monsieur Robinson, avez-vous des observations à faire?

M. Robinson: Je crois que les seuls endroits où nous soyons heurtés au danger dont vous avez parlé sont ceux où les aliments demandés pour les programmes n'étaient pas ceux que l'on produit normalement dans la région: par exemple, là où les gens étaient habitués à ne manger qu'un fromage mou et non traité et commencent à obtenir un fromage du type cheddar qui ne leur plaît pas particulièrement.

Ils savent que cela vaut énormément d'argent, et leur reconnaissance connaît alors des limites considérables, pour ainsi dire. Il y a une tendance très forte à se tourner vers les marchés commerciaux, et nous faisons beaucoup plus attention que nous ne le faisons en 1963, à ne leur donner—sauf dans les quelques exceptions que je vais mentionner—que les denrées dont ils ont l'habitude, qu'ils savent comment utiliser, et qu'ils considèrent comme étant le genre de nourriture qu'ils devraient manger. Cela ne donne absolument rien de leur faire acquérir des goûts qu'ils ne pourront jamais satisfaire une fois que le programme prendra fin.

Les exceptions à cette règle consistent, avant tout, dans l'usage de produits laitiers, car, dans les grandes régions où l'on n'a pas de bétail, les gens n'ont pas l'habitude de boire du lait, alors que les déficiences alimentaires les plus graves consistent justement

[Texte]

nutritional deficiencies. Therefore, despite the fact that they are not used to drinking milk, we put milk in virtually every child-feeding project and we find that it goes, and there has not been any stigma attached to accepting it.

The Chairman: Mr. Aquino?

M. Aquino: Mr. Chairman, apart from that, as I suggested in my introductory remarks, most of these projects for the children and mothers bear a very important element of nutritional education. We do not conduct this nutritional education ourselves, but we make it a point for the government to commit itself to use its own facilities for this program. This, I think, is a very important element for you to consider because it actually changes food habits of the younger generation.

Mr. Howard (Okanagan Boundary): I have just one more question. I wonder whether there is any place in the program for private enterprise activity, primarily in the distribution field. I have talked to people who have been involved in this work and they find it very difficult to comprehend the low level of technical ability in many of these countries in distribution that was mentioned earlier, the problems of storage and handling. Yet in this country we have food wholesalers and processors who are so expert in this that the problems would be nothing to them.

Is there any possibility of suggesting distribution opportunities for free enterprise companies who would go in with the idea that they could make a buck, but also help the countries that are concerned by showing them the new methods and using their knowledge, experience and capital to improve these distribution problems?

The Chairman: Mr. Robinson?

Mr. Robinson: It is very hard to build the use of private food distribution channels into a project for which the government itself is responsible. I should say there has been one attempt to develop an infant food industry in one African country—a project using dried skim milk, peanut meal and sorghum. This was a private company. It did not work very well, their market research was apparently not adequate.

This has been the only attempt made at a project involving a private corporation in the

[Interprétation]

dans le manque de protéines chez les enfants de l'âge du sevrage jusqu'à l'âge de six ou sept ans. Donc, même si les gens n'ont pas l'habitude de boire du lait, nous incluons le lait dans presque tous les programmes d'alimentation destinés aux enfants, et nous constatons que cela réussit et que nul ne se reproche d'avoir accepté ce produit.

Le président: Monsieur Aquino?

M. Aquino: Monsieur le président, en outre, comme je l'ai dit dans mes observations préliminaires, la plupart des programmes destinés aux mères et aux enfants, comportent un élément très important d'éducation alimentaire. Nous ne dispensons pas de programme d'éducation alimentaire nous-mêmes, mais nous nous assurons que le gouvernement du pays s'engage à utiliser ses propres services pour un programme de ce genre. Je crois que c'est là un élément très important dont il faut tenir compte, car cela modifie réellement les habitudes alimentaires de la jeune génération.

M. Howard (Okanagan-Boundary): Une dernière question. Je me demande s'il y a place, dans le programme, pour l'activité de l'entreprise privée, surtout dans le domaine de la distribution. J'ai parlé à certaines personnes qui se sont occupées de ce genre de travail, et qui ont du mal à comprendre le peu de compétence technique que l'on a dans bon nombre de ces pays en ce qui concerne la distribution, les problèmes d'entreposage et de manutention. Pourtant, nous avons au Canada des vendeurs de gros et des distributeurs qui sont si experts en la matière que ces problèmes ne seraient rien pour eux.

Serait-il donc possible de proposer des occasions de distribution pour l'entreprise privée, qui irait dans ces pays en comptant faire un petit profit, mais aussi dans l'intention d'aider les pays en cause en leur montrant les nouvelles méthodes et en les faisant bénéficier de ses connaissances, de son expérience et de ses capitaux pour essayer de résoudre ces problèmes de distribution?

Le président: Monsieur Robinson?

M. Robinson: C'est très difficile d'édifier un réseau de distribution privé dont le gouvernement lui-même serait responsable. Je devrais peut-être dire qu'on a déjà tenté de développer une industrie de la diététique infantile dans un pays africain, qui utilisait du lait écrémé en poudre, des arachides et du sorgho. Il s'agissait d'une entreprise privée, mais cela n'a pas marché très bien. L'étude du marché n'ayant pas été suffisamment préparée.

C'est la seule tentative toutefois qui a été faite dans un projet du Programme alimen-

[Text]

distribution of a WFP-financed project. There is, as you probably know, an FAO industry advisory group which is attempting to encourage corporations in the food and related industries to establish plants in developing countries.

We have someone sitting in on all their meetings at FAO headquarters so we know what they are doing. So far this has not resulted in any projects financed primarily by an international corporation and with WFP participation. It may at some time in the future.

Mr. Whicher: I think we would accept that India is one of the hungriest countries in the world. Could you tell us what happens when this food is delivered to India? You mentioned there is no cost other than possible labour cost involved. Could you give us the process of how that food, once it lands from Canada into India, is given away? As far as we are concerned it is free of charge if it gets into some hungry stomach free of charge. We hear stories of a certain amount of black market going on with some of this food. I would like to know that it gets into a hungry Indian's stomach. Could you tell us how this is done.

The Chairman: Mr. Aquino.

Mr. Aquino: Sir, I will let Mr. Robinson answer the supplementary question, but I want to address myself to the last question of the honourable member in this sense. In several countries of the underdeveloped world, facilities for storage and distribution of food have been established by government price stabilization agencies, and we are trying very hard now to use these agencies and their facilities for the storage and distribution of WEP food in bulk to the different projects that we may have in a particular country.

This is the case in Turkey for grains now. They are well established and we are very happy with the relations that we have with the central marketing organization. The same thing is being organized in Colombia, and we have also just received a request from India itself to handle our total supplies through the Indian food corporation in order to be able to make more efficient distribution of the food and also to save any losses.

The Chairman: Mr. Robinson, on the supplementary question.

Mr. Robinson: To use a typical works project, we could talk about the Rajasthan canal project in India, for instance, which is the building of both major canals and feeder ca-

[Interpretation]

taire mondial impliquant une société privée. Comme vous le savez, il y a un Conseil consultatif de la FAO qui encourage l'entreprise privée à établir des usines dans divers pays en voie de développement.

Nous avons un représentant qui assiste à toutes les réunions au siège social de la FAO afin que nous soyons au courant de ce qui se fait. Jusqu'à maintenant aucun projet financé principalement par des sociétés privées internationales, avec l'aide de la FAO, n'a abouti. Mais cela pourrait se produire dans l'avenir.

M. Whicher: Je crois que nous pourrions peut-être dire que l'Inde est peut-être l'un des pays les plus affamés au monde. Pourriez-vous nous dire ce qui se passe lorsqu'on distribue cette nourriture en Inde. Vous avez dit qu'il n'y a pas de frais en cause, sauf la main-d'œuvre, pourriez-vous nous dire ce qui se passe avec ces aliments une fois qu'ils ont quitté le Canada et qu'ils sont distribués en Inde? Sont-ils donnés gratuitement aux affamés?

Nous avons entendu dire parfois qu'il y a un marché noir touchant une certaine quantité de cette nourriture; j'aimerais bien être sûr que cela est donné vraiment aux Indiens affamés. Pourriez-vous nous expliquer le processus?

Le président: Monsieur Aquino?

M. Aquino: Oui, je vais demander à M. Robinson de répondre à cette question supplémentaire, mais je voudrais auparavant répondre à la dernière question en disant que, dans plusieurs pays en voie de développement, les installations pour la distribution et l'emménagement des aliments ont été établies par des agences pour la stabilisation des prix.

Nous essayons de coopérer avec ces agences et nous utilisons leurs installations pour la distribution en vrac des aliments pour les projets que nous aurions dans ces divers pays.

C'est le cas à l'heure actuelle en Turquie pour les céréales. Il y a une institution bien établie et nous sommes très heureux de cette mise en marché. La même chose a été établie en Colombie, et nous avons aussi reçu une demande de l'Inde pour que tous nos approvisionnements passent par la Corporation alimentaire de l'Inde, afin de pouvoir rendre plus efficace la distribution des aliments et aussi pour éviter les pertes.

Le président: Monsieur Robinson, sur la question supplémentaire maintenant?

M. Robinson: Pour employer l'exemple typique d'un projet de travaux publics, par exemple dans l'Inde, la construction des canaux principaux et adjacents du Rajasthan

[Texte]

nals in the Rajasthan desert of Western India. The food, whatever it may be, is unloaded at Bombay and at that point we turn title to it over to the Government of India. Then it is railed as close to the project site as possible; it is trucked to storage centres in the project site. All the workers on the project, who receive rations not only for themselves but for their dependents, have a ration card and they pick up their food every two weeks.

● 1045

An hon. Member: Do they pay for it?

Mr. Robinson: No, they do not pay for it. Their work is performed in return for about half the going wage plus food. This, of course, is a remote area—there are no big cities around—and they need the food, so the problems of diversion, since the foods given to them are very simple foods that they are accustomed to, are negligible. I am not saying that we never have any diversion. Our project officers keep a very constant lookout and I should say also that the embassies of donor countries are also on the alert for any food-stuffs that may show up in the shops.

We had a recent example, for instance, in the Republic of China, where some canned fish which was still in the original cases showed up in a market. As soon as we heard about it, the representative asked for an explanation and he was told that in this particular project in the eastern part of the country, worked primarily by unskilled labourers, they were using some contractors and that the contractor has apparently turned over food to some of his unskilled workers and that they, not understanding the rules and having worked for the food, figured it was theirs to do with as they pleased.

This is not a satisfactory explanation because the rations are not such that there would be unbroken cases. Obviously the contractor, or someone else, without distributing the food to the workers, had sold it back into the market. They fired that contractor and we think that we will not have that particular problem in that particular area again.

The Chairman: Mr. Aquino.

Mr. Aquino: I just wanted to add, sir, that in the case of the Republic of China the embarrassment this situation caused the government was very great and they took immediate action to correct it. They now have supervision that will avoid a repetition of the case, although it was a small amount of food that was discovered in the market.

The Chairman: Thank you. Mr. Pringle?

[Interprétation]

dans le désert de l'Ouest de l'Inde. Nous livrons la nourriture à Bombay où nous la remettons aux mains du gouvernement de l'Inde. Tous ceux qui travaillent au projet reçoivent des rations non seulement pour eux mais aussi pour les personnes qui sont à leur charge. Ils ont une carte de rationnement et ils vont chercher leur nourriture à toutes les deux semaines.

Une voix: Est-ce qu'ils la paient?

M. Robinson: Non, en fait, ils travaillent et, en retour, pour la moitié de leur salaire, ils sont payés et, ensuite, ils ont leur nourriture. Évidemment, il s'agit d'un site éloigné, il n'y a pas de ville, et ils ont donc besoin de nourriture et, par conséquent, les aliments qu'ils reçoivent sont très simples et nous n'avons presque pas de vols. Je ne dis jamais qu'il n'y a jamais de vols, mais je devrais aussi ajouter que les ambassades des pays qui font les dons essayent de surveiller les denrées qui pourraient surgir dans les magasins.

Par exemple, dans la République de Chine, il y a eu des boîtes de poisson, dans les caisses originales, qui ont été mises en vente dans les magasins. Au moment que nous avons entendu parler de l'affaire, nous avons demandé une explication. On nous a dit que, dans cette partie du pays, qu'il y avait surtout des manœuvres non spécialisés, qu'on avait employé certains contracteurs qui, apparemment, auraient donné la nourriture en question à leurs employés et que les employés, ne connaissant pas du tout les règlements, auraient décidé qu'ils pouvaient en faire ce que bon leur semblerait. Ce n'était pas une explication valable puisque les caisses n'étaient pas ouvertes. Évidemment, l'entrepreneur avait tout simplement vendu la nourriture. Par conséquent, nous avons limogé l'entrepreneur et nous n'aurons plus de problèmes de ce genre dans cette région particulière.

Le président: Monsieur Aquino?

M. Aquino: Je voulais tout simplement ajouter, monsieur, que, dans le cas de la République de la Chine, l'embarras causé au gouvernement par cette situation a été très grand et que le gouvernement a pris des mesures immédiatement pour corriger la situation. On a maintenant une surveillance qui éliminera que cela se répète.

Le président: Merci. Monsieur Pringle?

[Text]

Mr. Pringle: Mr. Chairman, thank you. Most of my questions have been answered in the various discussions. I would like to say, though, that this is a most enlightening discussion this morning and I for one profess some ignorance with regard to the work that has been done by the World Food projects. I think that we look at the world food supply as being one of the major problems with regard to society today.

Our country is in continual surplus in agricultural products, and some other countries are in continual surplus in agricultural products. Could you enlighten us as to the process of procurement in the countries of oversupply? With the experience you have had until the present time do you envision a time when we might be able to establish economically sound bases for world distribution by extending the programs and expanding the programs which you are suggesting—where we might be able to work out a program which would be economically sound and yet would dispose of surpluses in one area and provide for the deficiencies in other areas?

Mr. Robinson: If I may reply to the first part of the question, sir, as far as procurement is concerned, pledges are made in two different ways. Some countries, particularly those making smaller pledges, will pledge only one commodity. Some, like Canada and the United States, give us a rather wide range of choice. The United States says, "All of the following commodities which are available, under title too, you can take in any proportion you like." Canada normally gives us some guidelines. Canada may say, "We would like you to take 40 per cent of the commodity pledge in the form of cereal products, 40 per cent in the form of dairy products, and 20 per cent in the form of fish".

These pledges are held at our disposal by the donor government until we call for them, and the procedure goes like this.

• 1050

First of all, we have a project which needs, we will say, 10,000 tons of flour. We ask the Canadian Embassy in Rome to ask the government here, "Would you be able to supply 10,000 tons of flour to this particular project? We will need 2,000 tons this year and 2,000 tons next year", and so forth. And the government says, "Yes, we can supply."

Then when we need it we ask the Embassy to send a telex here asking for it to be shipped. We specify the place it is to be shipped to and so forth. We do no buying

[Interpretation]

M. Pringle: Merci, monsieur le président. La plupart de mes questions ont trouvé réponse au cours de la discussion, mais je voudrais dire toutefois que la discussion a été excellente ce matin; j'ai trouvé que c'était une mine de renseignements. Honnêtement, j'étais plutôt ignorant de ce qui se faisait par le truchement du Programme alimentaire mondial, et je crois que nous considérons l'approvisionnement ou l'alimentation du monde aujourd'hui comme étant l'un des problèmes de l'humanité.

Notre pays est un pays de production excédentaire et d'autres ont toujours une production excédentaire, alors que d'autres n'en ont pas suffisamment. Et, alors, est-ce que vous pourriez me dire quel est le procédé que l'on suit dans les pays où il y a une production excédentaire? Et, est-ce que vous croyez que le moment viendra où nous pourrions établir les bases économiques saines pour la distribution à travers le monde en étendant les programmes, en les élargissant, ou nous pourrions peut-être avoir un programme qui serait viable et sain du point de vue économique, tout en distribuant les excédents dans une région et répondant aux lacunes dans d'autres régions?

M. Robinson: Si je peux répondre à la première partie de votre question, les dons sont faits de deux façons: Certains pays redonnent qu'une sorte de denrée, d'autres comme le Canada et les États-Unis, par exemple, nous donnent toute une gamme de produits. Le Canada normalement nous donne des lignes directives. On peut nous dire, par exemple: Prenez 40 p. 100 de notre engagement sous forme de céréales, 40 p. 100 sous forme de produits laitiers et 20 p. 100 sous forme de poisson.

Maintenant, ces dons sont mis à notre disposition par pays donateur jusqu'à ce que nous le demandions, et voici la procédure utilisée: tout d'abord, nous avons un projet, mettons, qui aurait besoin de 10,000 tonnes de farine; nous demandons donc à l'ambassadeur du Canada à Rome de faire des représentations

au gouvernement afin de savoir s'il pourrait nous donner 10,000 tonnes de farine pour un projet de ce genre; nous aurions besoin de 2,000 tonnes cette année, 2,000 tonnes l'an prochain, etc. Le gouvernement nous donne son assentiment.

Et, lorsque nous avons besoin de cette denrée, nous demandons à l'ambassade de télégraphier au Canada pour demander l'expédition, en leur spécifiant l'endroit où la

[Texte]

ourselves except in very rare cases. The occasions when we buy are, first of all, if we have an emergency which is so acute and all our supplies are so distant either in point of distance or in point of time that they cannot arrive until after people would have died, in which case we may use part of our cash to buy in a coast source. For instance, for a land-locked country like Botswana where there is now an emergency operation going and expanding rapidly because of a protracted drought, we are buying some maize meal locally. It is maize meal milled in Botswana from South African maize, because anywhere else we get cornmeal it takes months and months to get there.

Another case where we purchase is where we have lost a cargo because a ship has sunk. We had a partial cargo of Canadian flour which ran on a reef just outside of Madagascar on its way to Taiwan and the ship was a complete loss. We recovered from the insurance company and we are now in the process of buying flour in replacement from Canadian millers. We are spending the money here as a commercial purchase, but this is an exceptional thing. Normally procurement is a responsibility of the government itself and we take delivery from the donor government at an export port, which means, of course, that the Canadian pledge is drawn on primarily between the months of April and November, except for shipments on the west coast.

Mr. Pringle: Another point that I am concerned about, Mr. Chairman, is that food habits are fairly well entrenched in most areas. In other words, people are used to eating food and are used to, I would imagine, eating the food which they produce themselves; this is normal. We have heard some complaints that where food has been supplied to people who are not used to this type of food there is some difficulty there. We even had a problem the other day from Newfoundland where the people were complaining about the CNR's supplying them on their train with food they were not accustomed to eating. And this is in our own country.

Mr. Gleave: They should be happy to have a train in Newfoundland.

Mr. Pringle: How do you go about convincing people in these areas to eat the food that is surplus in other areas? And in supplying this food free, is there any danger of upsetting their own local economy with regard to the supply of their own food? How do you handle this situation?

[Interprétation]

livraison doit avoir lieu. Nous n'achetons pas nous-mêmes, sauf dans de très rares cas. Par exemple, s'il y a une situation d'urgence, qui est tellement aiguë et que tous nos approvisionnements sont trop éloignés, soit en distance soit en temps, qu'on ne pourrait les obtenir qu'après la mort des personnes alors dans cette circonstance-là, nous pourrions peut-être employer notre argent pour acheter auprès des fournisseurs de la côte. Dans un pays tel que le Botswana, où une opération d'urgence se poursuit à l'heure actuelle, à cause de la sécheresse, nous avons obtenu du maïs localement. C'est du maïs en provenance d'Afrique du Sud mais mouler au Botswana. Si nous devions l'acheter ailleurs, nous ne pourrions pas l'obtenir avant des mois.

Un autre cas où nous devons acheter, par exemple, c'est lorsque l'on a perdu notre cargaison parce que le navire a sombré sur des récifs près de Formose. Nous avons recouvré notre perte de l'assurance et nous sommes en train d'acheter de la farine canadienne. Nous faisons là, un achat commercial, mais ce cas est exceptionnel. Normalement c'est la responsabilité du gouvernement lui-même de nous fournir des dons et nous en prenons livraison à un port d'expédition. En d'autres termes, l'engagement du Canada est honoré entre mai et novembre, sauf en ce qui concerne les livraisons sur la côte Ouest.

M. Pringle: Un autre point qui m'intéresse, monsieur le président, est que les habitudes alimentaires sont plutôt piétinées dans certaines régions. En d'autres mots les gens sont habitués à telle ou telle genre de nourriture et sont plutôt intéressés à manger la nourriture qu'ils produisent eux-mêmes n'est-ce pas? Nous avons entendu certaines plaintes au sujet de produits qui avaient été donnés à des gens qui n'étaient pas habitués à ce genre de nourriture. L'autre jour à Terre-Neuve, même, nous avons eu un problème, les gens nous disaient que le National Canadien dans leur propre train, leur servait la nourriture à laquelle ils n'étaient pas habitués et ceci arrive dans notre propre pays.

M. Gleave: Ils devaient être heureux d'avoir un train à Terre-Neuve!

M. Pringle: Et alors comment arrivez-vous à convaincre les gens de ces régions de manger de la nourriture qui est excédentaire dans d'autres régions. Quand vous donnez ces produits gratuitement est-ce qu'il n'y a pas danger de déséquilibrer l'économie d'un pays si les habitants acceptent ces excédents? Comment arrivez-vous à régler cette situation?

[Text]

Mr. Aquino: Sir, we have tried, particularly in recent years, to avoid supplying foods that are not the normal diet of the people concerned and we are supplying either the same products that they have been used to eating or those that are so close that they can be accepted without much problem. But as we explained earlier, we are also providing some foreign foods to the younger groups, particularly in schools, and to the children between weaning age and the age of seven, in the hope that their feeding habits will change.

For this we are using to a great extent, particularly in the more developed countries of our recipient groups, the services of the nutrition institutes or authorities of the country. Therefore there is an element of nutritional education together with the actual feeding of the groups in order that they may learn how to cook the food and to eat it. On many occasions we have learned that the refusal of our food is based only on the fact that they do not know how to prepare the food as a wholesome dish.

• 1055

The Chairman: Mr. Robinson; did you wish to comment?

Mr. Robinson: I might give an extremely interesting recent example of introducing an entirely unfamiliar food and how it was gone about.

Northern Norway is almost completely dependent on the production of stock fish, that is, an unsalted dried fish. Their big market for stock fish has been Nigeria but their market in Nigeria was cut off by the war. Therefore they had large surpluses of stock fish which they had to move. An entire set of communities were dependent entirely on stock fish. In Northern Africa there has never been any market for stock fish. People were used to eating a few fresh fish and a little salt fish, but no stock fish.

Stock fish is very, very hard and it requires considerable soaking. Since it was unfamiliar and since this was very important to the Norwegian government and to the stock fish association, they devoted a lot of manpower to it. They took a market promotion man, they hired a couple of chefs from Oslo hotels, they got a couple of storage men from the stock fish association who were familiar with the storage of stock fish and they sent a team into every province where stock fish was going to be used. When they started in they said: "Do not touch the fish until we get

[Interpretation]

M. Aquino: Nous avons essayé surtout au cours des dernières années, d'éviter l'approvisionnement d'aliments qui ne font pas partie du régime alimentaire normal des gens en cause. Et nous donnons, soit les produits auxquels ils sont habitués soit des produits qui leur ressemblent tellement qu'ils peuvent être acceptés sans beaucoup de difficultés. Comme nous l'avons expliqué plus tôt, nous essaierons aussi l'approvisionnement d'aliments de provenance étrangère aux groupes plus jeunes, surtout aux enfants, du sevrage jusqu'à l'âge de 7 ans, en espérant ainsi que leurs habitudes alimentaires changeront.

A ces fins, tout particulièrement dans les pays plus développés de notre groupe de pays récipiendaires, nous employons amplement les services des instituts en alimentation et en diététique. Par conséquent, on procède à l'éducation des groupes en même temps que leur alimentation. Il faut qu'ils apprennent à faire la cuisson de cette nourriture et à la manger. Dans plusieurs cas, nous avons appris que le refus de nos aliments était uniquement le fait qu'on ne savait pas comment les faire cuire.

Le président: Monsieur Robinson, avez-vous un commentaire?

M. Robinson: Je pourrais peut-être vous donner un exemple très intéressant sur cette question de l'introduction d'un produit par famille.

Le nord de la Norvège, par exemple, dont l'économie dépend presque entièrement de la production de poisson séché, avait un marché considérable en Nigéria pour leurs poissons, mais leur marché a été coupé par la guerre du Nigéria. Par conséquent la Norvège se trouvait aux prises avec des surplus considérables dans le nord de l'Afrique, il n'y a jamais eu de demandes pour le poisson séché, on utilise du poisson frais et un peu de poisson salé.

Le poisson séché est très très dur et il faut, évidemment, le faire tremper très longtemps. Le gouvernement norvégien a donc engagé quelques chefs cuisiniers des hôtels d'Oslo, et a envoyé une équipe dans chaque province où on devait employer le poisson. Ces experts ont alors dit: «N'employez pas le poisson avant qu'on vous montre comment procéder» car il faut le faire tremper pendant 24 heures, mais après cela, on peut l'employer comme n'importe quel autre poisson, n'importe quelle viande que l'on mélange avec des céréales. Et ensuite, on a fait appel aux directeurs d'éco-

[Texte]

there; we will show you how to do it, because it has to be soaked for about 24 hours—soaked once.” And from that point on it can be handled like any other fish or any meat in local dishes which involve the mixing of meat and fish with cereals.

Then they called in the headmasters of the schools and fed them the stock fish using Algerian dishes and got their agreement that this was pretty good. Then they went out to the individual schools and taught the cooks of the individual schools how to use it. They started in the eastern end of the country and they worked their way west. They were still at it when we left Rome. There were 500 tons of stock fish involved in this first shipment and it was pretty important not only to us, because we do not want to have 400 tons of stock fish wasted or turned down because people do not know how to cook it, but it was also extremely important to the Norwegians because if this had not gone, we would not have drawn any more stock fish from them for Algeria and they would have had no prospect of ever developing a commercial market for stock fish in Algeria, which they want to do.

This is an extreme example of a donor government putting a lot of manpower into an effort. Normally, as Mr. Aquino says, it is the nutritional arm of the local government, plus the FAO nutritionist in the country, plus perhaps some UNICEF and WHO workers who offer the advice. But if it is important enough, we can get help from donor countries.

Mr. Pringle: I think that is an excellent idea. To me that promotional scheme is one of the highlights of the discussion this morning and I would hope that our Department of Agriculture will take note of that. Perhaps we can talk some of these people into using wheat in a certain way which they are not able to do at the present time. I just have one more question and then I am through.

My previous question was possibly not very well phrased so I will ask: if economically possible, do you feel that all of Canada's surplus food could be used in other parts of the world—if it were economically possible to do it? In other words, would all of our products be acceptable somewhere else in the world where there are serious deficiencies at the present time?

The Chairman: Mr. Robinson.

Mr. Robinson: We have never had any problem with the acceptability of any Canadi-

[Interprétation]

les pour déguster le poisson cuit à l'algérienne, ils l'ont trouvé délicieux.

Par après, les experts ont répété l'expérience dans toutes les écoles de l'Algérie. Ils ont commencé à l'est en se dirigeant vers l'ouest, ils étaient toujours en train de poursuivre l'expérience quand nous avons quitté Rome. Le premier envoi comprenait 500 tonnes de poisson et c'était important non seulement pour nous, car nous ne voulons pas voir gaspiller 400 tonnes de poisson vu que les gens ne savent pas comment le faire cuire et cela était très important pour les Norvégiens aussi, car si on ne l'avait pas fait, la Norvège ne nous aurait jamais fourni d'autres poissons pour l'Algérie et n'aurait jamais eu l'occasion d'ouvrir un nouveau marché pour son poisson séché.

Voilà un exemple où le pays donateur consacre beaucoup de temps et de main-d'œuvre pour un véritable effort. Normalement, comme l'a dit M. Aquino, ce sont les diététiciens du pays que l'on aide et le personnel de la FAO et éventuellement celui de l'UNICEF et de l'OMS qui leur montrent comment employer le produit. Mais si l'affaire est d'importance, nous pouvons faire appel au pays en cause.

M. Pringle: J'ai l'impression que cette partie de la discussion est très importante et j'espère que notre propre ministère de l'Agriculture en tiendra compte, car il y aurait moyen justement d'apprendre aux pays que l'on aide à utiliser le blé d'une manière nouvelle. J'ai une toute dernière question.

Ma première question n'était peut-être pas formulée comme il le faut, mais permettez-moi de dire ceci. Si c'était économiquement faisable, croyez-vous que tous les excédents alimentaires du Canada pourraient être employés dans les autres parties du monde? En d'autres termes, si c'était économiquement possible est-ce que tous nos produits pourraient être acceptables ailleurs dans le monde, là où il y a des lacunes criantes à l'heure actuelle?

Le président: Monsieur Robinson.

M. Robinson: Nous n'avons jamais eu de problème quant à l'acceptation de n'importe

[Text]

an products given to us so far and there has been a very broad spectrum of 10 different products. There are some areas in the world where no product they are getting from Canada now would take the place of the staple food. There is no Canadian product which is acceptable in countries where people eat only rice as their major source of energy. We have tried using a bulgar wheat from the U.S., for instance, which can be prepared in the same way; it does not look the same, it does not taste the same and the degree of acceptability is not terribly high. So I would say there are some areas where the total diet could not be supplied from Canadian pledges.

The same thing is true in parts of Africa, for instance, where the major source of energy is a root crop, a yam or a potato; or in parts of the South Pacific where it is taro. There are places where people just are not used to eating wheat and where it is awfully hard to get them to eat wheat.

But in general all the products that Canada has in surplus are acceptable in a very wide range of countries. Some products which you very generously give to us despite the fact that you do not want to get rid of them very badly, for instance beans, are probably the cheapest source of protein and we have received more beans from Canada than anywhere else. We can use all the beans that we can possibly get anywhere. We realize they are not much of a problem for you, but they are very welcome to us.

● 1100

Mr. Aquino: I would like to add something, if I may, Mr. Chairman. The World Food Program could certainly use larger quantities of Canadian products.

When we go to the next meeting of our IGC, Intergovernmental Committee, we will present them with projects that have been approved under the authority given to the Executive Director, or which are placed before them for their consideration, for a total value of about \$180 million which have already been made this year, so the rate at which the demand is growing in the developing countries for WFP assistance is increasing very rapidly. The countries are learning how to use food efficiently for their development projects. Not only that, they are now presenting us with much larger projects than at the beginning.

Of course, the big question of equating worldwide supply and demand which, as I

[Interpretation]

quel produit canadien jusqu'à présent. Il y a eu une très vaste gamme, dix produits en tout. Il y a des parties du monde où les produits canadiens ne sont pas envoyés à l'heure actuelle. Il n'y a pas de produits canadiens qui seraient acceptables dans un pays où les gens ne mangent que du riz, par exemple. Nous avons essayé l'orge bulgare des États-Unis qui lui ressemble un peu, mais l'acceptation n'est pas tellement élevée non plus. Ainsi je dirais qu'il y a des endroits où le régime alimentaire ne peut être autre chose que le riz, qui ne peuvent être aidés totalement avec des dons canadiens.

La même chose se produit en Afrique là où la source nutritive principale est la racine des ignames, ou dans les parties du Pacifique sud où on ne mange que le taro.

Mais, en général, tous les produits que le Canada produit de façon excédentaire sont acceptables dans plusieurs pays. Certains produits que vous nous offrez de façon très généreuse, malgré le fait que vous ne voulez pas vous en défaire à tout prix, les fèves, par exemple, sont peut-être la source de protéines le meilleur marché et nous avons obtenu plus de fèves du Canada que de partout ailleurs et nous pourrions employer toutes les fèves que nous aurons. Ce n'est pas un problème pour vous mais nous les accueillerons avec plaisir.

M. Aquino: J'aimerais ajouter quelque chose si vous me le permettez, monsieur le président. Le programme alimentaire mondial pourrait certainement utiliser de plus grandes quantités de produits canadiens.

Lorsque nous irons à la prochaine réunion de notre Comité intergouvernemental, nous allons présenter des projets qui ont été approuvés sous l'autorité du directeur exécutif ou qu'on leur demande d'approuver pour un montant global d'environ 180 millions de dollars qui ont déjà été exécutés cette année, de sorte que le taux où la demande s'accroît dans les pays en voie de développement pour l'aide du programme alimentaire mondial est extrêmement rapide. Les pays apprennent à utiliser l'alimentation efficacement pour leur projet de développement. Non seulement cela, mais ils nous présentent des projets beaucoup plus importants qu'au début.

Bien sûr, la grosse question de faire un équilibre entre la demande et l'offre sur une

[Texte]

understand it is the particular point of your question, is a bigger issue. I would say that in the short run there is certainly a demand for all the food that Canada can produce in the countries of the developing area.

However, this demand may not be effective because the countries cannot obtain the foreign exchange to purchase all these quantities of food from you, but certainly in the medium term, if they continue to grow from an economic standpoint, there should be a chance for large amounts to be sold in commercial transactions and, of course, in the immediate run I would say WFP can certainly use considerably greater amounts of Canadian food in our program.

Mr. Muir (Lisgar): Mr. Chairman, I have a supplementary to this which I would like to put now. As a matter of fact, it has been answered as far as the World Food Program is concerned but I would like to ask Mr. Williams if the Department of Agriculture has any educational program on the changing eating habits of the people to whom we are shipping, such as took place during the American occupation of Japan when there was quite a change from their dietary habit of eating rice to cereal products.

Mr. Williams: No, the Department of Agriculture has no direct promotional programs aimed at changing food habits in other countries.

Mr. Muir (Lisgar): Do you not think it would be a good idea if, together with our wheat, we sent a baker along to show them how to make our bread?

Mr. Williams: We provide a great deal of technical service, as opposed to promotional service, to countries. Under our Board of Grain Commissioners we have people who go to these countries to give them information how best to use our wheat.

For example, in Japan they make a very special type of loaf that has a crust on four sides. It is baked in a closed container, it is square and they take the crust off before they serve it. They need particular characteristics in the flour and in the recipe, I suppose you might call it, for the production of the type of loaf that suits their needs. We have people who visit these countries and work with the people to assist them in the best use of our Canadian products, but they are not promotional programs aimed at the consumers.

[Interprétation]

base mondiale, qui est la question que vous allez poser, si j'ai bien compris, c'est un problème bien plus important. Je dirais, qu'à court terme, il y a une demande pour tous les produits que le Canada peut produire dans les pays des régions en voie de développement.

Néanmoins, cette demande peut ne pas être effective parce que ces pays ne pourraient pas obtenir le change étranger pour acheter tous ces produits de vous, mais à moyen terme, s'ils continuent à s'accroître du point de vue économique, il devrait y avoir des possibilités que des quantités plus importantes puissent être vendues commercialement et je dirais que, pour l'instant, le programme alimentaire mondial pourrait certainement utiliser des quantités plus importantes de produits canadiens dans les programmes.

M. Muir (Lisgar): Monsieur le président, j'ai une question supplémentaire que je voulais poser maintenant. Au fait, elle a déjà été répondue en ce qui concerne le programme alimentaire mondial, mais j'aimerais demander à M. Williams si le ministère de l'Agriculture a des programmes éducatifs concernant la modification des habitudes alimentaires dans ces pays où l'on envoie de la nourriture? Par exemple, au Japon, pendant l'occupation américaine, il y a eu une grande modification dans le régime des Japonais, soit du riz aux céréales.

M. Williams: Non, le ministère de l'Agriculture n'a pas de programmes destinés à changer les habitudes alimentaires dans d'autres pays.

M. Muir (Lisgar): Pensez-vous que ce serait une bonne chose si, avec le blé, on leur envoyait un boulanger qui leur enseignerait comment faire du pain.

M. Williams: Nous avons des gens qui se rendent dans les pays et qui apprennent aux gens comment utiliser le blé pour faire des pains.

Par exemple, au Japon, ils font un type de pain particulier avec de la croûte des quatre côtés. Il est cuit dans un récipient clos, il est carré et on enlève la croûte avant de le servir. La farine doit avoir des caractéristiques particulières. Il faut une recette, si l'on veut, spéciale pour produire le genre de pain qui répond à leurs besoins. Donc, nous avons des gens qui visitent ces pays, qui travaillent avec les gens sur place, pour les aider à mieux utiliser les produits canadiens. Mais ce ne sont pas des programmes de promotion

[Text]

They are aimed at the users at the commercial level.

Mr. Muir (Lisgar): In other words, Canada to some extent does have a promotional service but you do not call it a promotional service.

Mr. Williams: We do not call it a promotional service, we call it a technical assistance service. However, I suppose it could also be called a promotional service.

• 1105

Mr. Muir (Lisgar): You can get packages of bread mix which come in about this size and they make a beautiful loaf of bread. I have often wondered if it would not be a good idea if Canada did a little more of this sort of thing. It is flour shipped in small bags.

The Chairman: Mr. Robinson has a comment.

Mr. Robinson: I wonder if I might expand a little bit on the answer to Mr. Pringle's question and go back a little bit in history. When we first began we had to start our projects from scratch, and it takes about a year from the time a country makes a proposal until we actually start shipping food. Therefore during 1963 to 1965, and to a lesser extent in 1966, not only Canada but all our other donors were telling us, "Why do you not call for our stuff? It is here waiting for you. We are paying storage on it. Why do you not take it?" We have now passed that stage.

During 1969 and 1970, even if we did not approve any projects at all, we could still place the \$15 million worth of Canadian products in projects that we have already approved, that are already running, to which forward commitments have been made. We picked up every bit of Canadian food from the 1966-68 pledge by the end of 1968, and as soon as the new fiscal year starts we will start drawing this year's \$7.5 million worth of food. If your question was, as I think it may have been, what if Canada were to pledge not \$10 million or \$7.5 million worth of food a year, but if it were \$15 million, \$30 million or \$45 million worth of food a year could the World Food Program use it effectively in projects? If that was the sense of your question, I think the answer is yes.

The Chairman: This is promotion! I will now recognize Mr. Douglas.

Mr. Douglas: This new International Grains Agreement, which I believe became operative last July 1, included some arrangements for

[Interpretation]

destinés aux consommateurs, mais aux usagers commerciaux.

M. Muir (Lisgar): En d'autres mots, le Canada a un service de promotion dans une certaine mesure, mais vous ne l'appellez pas un programme de promotion.

M. Williams: Nous appelons cela de l'assistance technique, mais si vous voulez, on peut appeler cela de la promotion.

M. Muir (Lisgar): On peut obtenir des emballages de mélange à pain d'à peu près la même grosseur et faire des pains très beaux, et ce serait une bonne chose si le Canada faisait quelque chose de ce genre. C'est de la farine expédiée dans des petits sacs.

Le président: M. Robinson a un commentaire.

M. Robinson: Est-ce que je peux développer un peu la réponse de M. Pringle? Lorsque nous avons commencé nous avons dû commencer à rien et il faut à peu près un an entre la proposition du pays jusqu'au moment où l'alimentation arrive. Donc, de 1963 à 1965, et moins en 1966 beaucoup de pays, comme le Canada, nous ont dit: «Mais pourquoi ne faites-vous pas appel à nous? Le matériel est là. Il vous attend, nous en payons l'entreposage. Pourquoi ne le prendre?» Nous avons dépassé ce stade.

En 1969 et 1970, même si nous n'avons pas approuvé de projets, nous pouvions quand même placer les 15 millions de dollars de produits canadiens dans des projets qui sont déjà approuvés, qui fonctionnent déjà, auxquels on a déjà fait des promesses. Nous avons utilisé tous les produits canadiens qui avaient été promis pour 1966-1968 à la fin de 1968, et dès le début de la nouvelle année financière, nous commencerons à toucher les \$7,500,000 d'aliments de la présente année. Si votre question demandait, et je crois qu'elle le faisait, si le Canada, au lieu de promettre \$10,000,000 ou \$7,500,000 d'aliments par année, en promettait plutôt 15, 30 ou 45 millions de dollars par année, est-ce que le programme alimentaire mondial pourrait s'en servir effectivement dans ses projets? Si c'était votre question, je crois que la réponse est oui.

Le président: C'est de la promotion! La parole est à M. Douglas.

M. Douglas: Ce nouvel Accord international sur les céréales qui, je crois, est entré en vigueur le 1^{er} juillet dernier, comportait des

[Texte]

food aid. Are those arrangements integrated with your organization?

Mr. Aquino: Mr. Chairman, as I pointed out in my introductory remarks, some of the European countries—and I am particularly referring now to Scandinavia, Switzerland and the U.K.—have found it appropriate to use the World Food Program as a channel for discharging their obligations under the Food Aid Convention of the International Grains Agreement. We are very proud of this trust and we are carrying it out to the best of our ability.

I hope they will be satisfied with the service we are providing. Certainly up to now the amount that we have received under the Food Aid Convention—which is, of course, additional to what these countries have pledged in the regular WFP pledges—is only a total, if my memory does not fail me, of about 160,000 tons.

Mr. Douglas: For this year.

Mr. Aquino: For this year, yes, but other countries will probably also join. Germany has expressed some interest in handling about 50,000 tons of their contribution through the World Food Program. I hope that other countries will also see fit to use the World Food Program services. I think this will be particularly important for those countries that are worried about others using these FAC donations for promotion of further commercial sales of their own.

Mr. Douglas: Thank you. You have answered that question very satisfactorily. I am pleased to learn that these commitments under the International Grains Agreement are over and above other commitments to world food aid.

Another thing that occurred to me—and I had it written down before it came up in one of the reports—particularly has to do with the problem of rats in India. From time to time we have seen this publicized quite widely. It appeared just recently again in the daily newspapers, and although I forget what the figures were a shockingly high percentage of the grain that goes to India—it may be grain that is produced there, for all I know—is lost to the terrific population of rats that they have in India, and that they do not try to do anything about. Are you taking any steps to try to persuade them to control the rats? I know you are trying to teach them

[Interprétation]

dispositions concernant l'aide alimentaire. Ces dispositions sont-elles comprises dans votre organisation?

M. Aquino: Monsieur le président, comme je l'ai indiqué dans mes remarques d'introduction, certains des pays européens, je me réfère surtout aux pays scandinaves, à la Suisse et au Royaume-Uni, ont trouvé approprié de se servir de ce programme alimentaire mondial pour remplir leurs responsabilités dans le cadre de la convention sur l'aide alimentaire de l'Accord international sur les céréales, nous sommes fiers de cette confiance et nous nous efforçons de répondre à leurs besoins.

J'espère qu'ils seront satisfaits des services que nous fournissons. Jusqu'à présent, la quantité que nous avons reçue dans le cadre de la Convention sur l'aide alimentaire qui est, bien entendu, en plus de ce que ces pays ont promis en vertu du Programme alimentaire mondial, n'est qu'un total qui représente environ 160,000 tonnes pour cette année, si je ne me trompe.

M. Douglas: Pour cette année.

M. Aquino: Oui, pour cette année. D'autres pays, probablement, vont se joindre. L'Allemagne a exprimé son intérêt et fournirait peut-être 50,000 tonnes de sa contribution dans le cadre du PAM. D'autres pays le feront éventuellement. Ceci est important surtout pour les pays qui sont préoccupés par le fait que certains pourraient se servir de ce programme pour faire de la vente commerciale.

M. Douglas: Merci. Votre réponse me satisfait. Il me fait plaisir d'apprendre que ces engagements en vertu de l'Accord international sur les céréales sont de beaucoup plus considérables que d'autres engagements pour l'aide alimentaire mondiale.

J'ai pensé à une autre chose, et je l'avais écrite avant qu'elle apparaisse dans les rapports, concerne surtout les rats en Inde. De temps en temps, nous avons vu de la publicité très répandue à ce sujet. On en a vu très récemment dans les journaux quotidiens, et bien que j'oublie les chiffres, un pourcentage extrêmement élevé de céréales qui est envoyé en Inde (il se peut que des céréales soient récoltées en Inde, pour ce que j'en sais) est perdu à cette énorme population de rats qu'ils ont en Inde et qu'ils ne font rien pour s'en débarrasser. Prenez-vous des dispositions pour essayer de le convaincre de contrôler les rats? Je sais que vous essayez de leur appren-

[Text]

how to store the grain so the rats will not affect it.

• 1110

Mr. Aquino: Mr. Chairman, we are not trying to persuade them to kill the rats. We are trying to teach them how to prevent the rats from getting to the food. I do not know if you want to add anything, Mr. Robinson, but as far as WFP resources going into India are concerned, we take very good care that the rats do not get at it.

Mr. Douglas: I think most Canadian people are completely in favour of this food aid program and would like to see it multiplied as quickly as possible, but this sort of thing that you read in the paper is a bit discouraging to people who are willing to provide food.

Another thing is that when you were discussing the distribution of this food aid you mentioned that some countries are much more able to take care of it than others. The thought occurred to me that probably the ones who are most able to take care of the storage and the distribution, and the record-keeping and so on, are maybe not the ones who need the food the worst. Are you considering any assistance towards developing internal capabilities in this regard?

Mr. Robinson: Yes, sir, this is a constant process.

To take one of the worst examples, a country like Basuto, the former Botswana, which has almost no university graduates and very few secondary school graduates, when we started there our program was a shambles. Nobody knew how to keep stock records, nobody knew much about food storage, and we complained bitterly and threatened to cut off the food. As a result the Prime Minister assigned an expatriate civil servant who was a very good colonial service officer, and made him responsible for all food aid coming into the country, not only World Food Program aid, but also aid from Catholic relief services. And he is training local people to take his place. We also assigned as project officer an accountant who set up systems of stock records, and things have improved greatly. Now, losses are very small.

The diversions which had occurred for political reasons have stopped because they could be identified, and a man who was a cabinet member and was handling a fair share of the food no longer has anything to do with our food because the Prime Minister took it away from him. We have started in just

[Interpretation]

dre comment entreposer les céréales à l'épreuve des rats.

M. Aquino: Non, monsieur le président, nous n'essayons pas de les convaincre de tuer les rats. Nous essayons de leur montrer comment empêcher les rats d'atteindre les aliments. Je ne sais pas si vous voulez ajouter quelque chose, monsieur Robinson, en ce qui concerne les ressources du Programme alimentaire mondial qui vont en Inde, mais nous nous assurons que les rats n'y touchent pas.

M. Douglas: Je crois que la plupart des Canadiens sont très favorables à ce programme d'aide alimentaire et voudraient qu'il se développe au maximum, mais ce genre de choses que vous voyez dans les journaux nous décourageant quelque peu.

Vous avez mentionné aussi le problème dans certains pays, lorsque l'on parlait de la distribution des produits alimentaires, vous dites que des pays sont plus en mesure de s'en occuper que d'autres. Il m'est venu à l'esprit que ceux qui sont le plus en mesure de s'occuper de l'entreposage et de la distribution ne sont peut-être pas ceux qui ont le plus besoin des produits alimentaires. Est-ce que vous songez à les aider à parfaire leurs connaissances en ce domaine?

M. Robinson: Oui, c'est un processus constant.

Prenons un cas extrême, Lesotho, l'ancien Basutoland, un pays qui ne compte à peu près pas de diplômés universitaires et très peu de diplômés d'écoles secondaires. La situation y était déplorable lorsque notre programme a été sur pied en ce pays. Personne ne savait prendre l'inventaire et tous ignoraient à peu près tout ce qui regarde l'entreposage des aliments. Il nous a fallu menacer d'interrompre notre aide. Le premier ministre du pays a alors confié à un ancien officier du service colonial la responsabilité de toute la nourriture qui entrait dans le pays. Il entraîne présentement des gens du pays qui lui succéderont un jour. Le projet est dirigé par un comptable qui a établi diverses méthodes de contrôle de la marchandise en entreposage, ce qui a permis d'améliorer la situation. Les pertes sont maintenant minimes.

Les détournements effectués pour des raisons politiques n'existent plus parce que leurs auteurs peuvent être identifiés. Un certain membre du cabinet, qui était responsable d'une part importante de ce programme, s'est vu retirer cette responsabilité par le premier ministre. Nos débuts, en certains endroits ont

[Texte]

about as bad places as you can think of, and local people are being trained to take over. If they are not then we have to stop operating, because there is no point in pouring food down a rat hole.

Mr. Aquino: Mr. Chairman, may I just add a little information regarding total losses to the World Food Program, which is also pertinent to this question in which members may be interested. If my memory does not fail me, Mr. Robinson, I think that this year total losses amount to about $1\frac{1}{2}$ per cent of our deliveries, and these include losses in transit.

Mr. Robinson: They include losses in transit. They include what we have to call losses due to shrinkage of grain due to dehydration. They include some highly fictitious losses. For instance, on wheat going from the Port of Karachi to Afghanistan, the weighing system in Karachi is such that we are unable to get a tare weight on individual freight cars. They use the standard tare, and this standard tare weight of course is highly inaccurate because many of the freight wagons are old. They have had enough wear that they are considerably wider than a standard wagon. So the weights that we show are somewhat fictitious weights due to errors in weighing, shall we say, and all those are included in the loss figure which Mr. Aquino mentions.

Mr. Douglas: Thank you. One more question, Mr. Chairman. Mention was made of the FAO projections or forecasts for some 10, 15, or 20 years in the future. I wonder if these figures could be made available to members of this Committee, when they are available?

The Chairman: Yes. And thank you, Mr. Douglas. Gentlemen time is getting on and I know from the spirited discussion that there is considerable interest. It would be of some interest to the members to know the order in which I propose to recognize you. On my list I have Mr. Lind, Mr. Horner, Mr. Muir, Mr. Southam, Mr. Roy, Mr. Whicher, and Mr. Gleave. I recognize Mr. Lind.

• 1115

Mr. Lind: Thank you, Mr. Chairman. Coming back to the programs in India and Pakistan, we often hear the statement that more than 20 per cent of their food is wasted through lack of facilities to store and refrigerate this food properly. What happens when food is transported across the country to its destination, and how do we handle it from the time it lands in the country? Is it the

[Interprétation]

été aussi pénibles que vous pouvez les imaginer mais des gens du pays pourront bientôt diriger le tout. S'ils ne peuvent y arriver, nous devons arrêter nos expéditions en cet endroit parce qu'il est ridicule de verser nos produits dans un trou sans fond.

M. Aquino: J'aimerais ajouter quelques détails au sujet des pertes encourues par le Programme alimentaire mondial, ce qui pourrait intéresser les membres du Comité. Si je ne me trompe, les pertes totales pour cette année représentent $1\frac{1}{2}$ p. 100 de nos activités y compris les pertes en transit.

M. Robinson: Ce chiffre tient compte des pertes encourues durant le transport, des pertes dues à la déshydratation et de certaines pertes plutôt fictives. Ainsi, pour le blé qui va de Karachi à l'Afghanistan, le système de pesée, à Karachi, est tel qu'il est impossible d'obtenir avec précision le poids à vide de chaque wagon. Ils utilisent la tare normale ce qui entraîne des inexactitudes parce que plusieurs des wagons sont vieux. Ils sont tellement vieux qu'ils ont été déformés par l'usage et contiennent davantage. De sorte que le poids donné n'est pas exact. Tout ceci est inclus dans le chiffre cité par M. Aquino.

M. Douglas: Vous avez mentionné les prévisions de la F.A.O. pour les 10 ou 20 prochaines années. Est-ce que ces chiffres pourraient être mis à la disposition des députés qui sont membres de ce Comité lorsqu'ils seront disponibles?

Le président: Oui, monsieur Douglas. Messieurs, le temps passe et je sais que vous vous intéressez beaucoup à cette question. Je vais vous donner la liste des orateurs telle que je l'ai établie: messieurs Lind, Horner, Muir, Southam, Roy, Whicher et Gleave.

M. Lind: Merci monsieur le président. Pour en revenir aux programmes d'aide à l'Inde et au Pakistan, on nous dit souvent que 20 p. 100 de leurs produits alimentaires sont gaspillés à cause du manque d'installation pour entreposer ces aliments correctement. Que se passe-t-il lorsque les aliments sont transportés à travers le pays? Comment est-ce que nous procédons dès le moment où les produits sont

[Text]

Government of India that looks after it? How are we sure of the loss through tare, as you call it, in transportation? What assurance have we, as Mr. Whicher asked, that this food is reaching the hungry people, the people who really need it and are starving in the area?

The Chairman: Mr. Robinson?

Mr. Robinson: First of all, as I said, we enter into a fairly tight agreement with the government on how the food is going to be distributed. We have right of access to all books of record. We have assigned to India, three project officers. We have an American, a Belgian, and a young Englishman working as project officers who spend their full time visiting projects, visiting ports, to make sure that the unloading is done properly, that slings are used in place of ropes, that goods that should be on pellets are on pellets in place of being in slings, and so forth. We turn over title to the food at the port, and from that point on, it is the government's responsibility. But we have the right to monitor it every step of the way.

Then every step of the way the transfer of the food has to be documented. In other words, when the food leaves the port, railway weighbills are issued for the quantity of food which leaves. When it arrives at a storage centre for a project, the railroad picks up a receipt for the amount actually received there.

The bi-weekly distributions have to be accounted for. The stocks at the end of a quarter have to be the residual of beginning stocks, plus receipts minus disbursements, minus reported losses if any, if there are losses. If for instance, there is a heavy rain-storm and the roof leaks and we lose half a dozen sacks of flour, that has to be reported. They have to get a local health authority to certify that it is unfit for human consumption. If it is still suitable for animal feed, it is diverted and sold for that purpose. We have a right to follow this every step of the way.

You are quite right in saying that we can never be sure to what the losses are due where uniform freight wagon weights are being used. We cannot be sure what is the cause of the difference between the recorded weight when it leaves Karachi and the actual weight when it arrives at some place where they do weigh individual wagons on scales. We cannot be sure that that difference is due to the fact that they used standard wagon

[Interpretation]

débarqués? Est-ce que c'est le gouvernement de l'Inde qui s'en occupe? Comment sommes-nous sûrs que des pertes en transport ne sont pas plus importantes que ce que vous avez indiqué? Comment savons-nous que ces aliments arrivent aux gens qui meurent de faim?

Le président: Monsieur Robinson?

M. Robinson: En premier lieu, comme je vous l'ai dit, nous avons un accord très serré avec le gouvernement quant à la distribution des produits. Nous avons droit d'accès à tous les livres. Nous avons trois agents de projet en Inde, un Américain, un Belge, un jeune Anglais qui passent tout leur temps à visiter des projets, à visiter les ports, pour s'assurer que le déchargement se fait correctement, que l'on utilise des courroies plutôt que des cordes, etc. Nous transférons la propriété sur les produits dès leur arrivée au port, après quoi, la responsabilité en revient au gouvernement. Mais nous avons droit de regard jusqu'à ce qu'ils atteignent leur destination.

Tout le long du parcours, les produits sont surveillés. Lorsqu'ils quittent le port, des formules de connaissance indiquent l'importance de la cargaison. A l'entrepôt, la compagnie de chemin de fer qui a effectué la livraison obtient un reçu pour ce qu'elle a livré.

Toutes les distributions bi-hebdomadaires doivent être enregistrées. A la fin du trimestre, les stocks en main doivent égalier les stocks originaux, plus ce qui a été reçu, moins ce qui a été livré, et moins les pertes, s'il y en a eu. Par exemple, s'il pleut abondamment, que la toiture d'un entrepôt coule et que nous perdons une demi-douzaine de sacs de farine, il faut enregistrer cette perte. Un officier des services locaux de santé examine la farine et doit certifier qu'elle est impropre à la consommation humaine. Si elle peut être utile pour nourrir les animaux, elle est utilisée à cette fin. Nous avons droit de regard sur toute cette procédure.

Vous avez raison d'affirmer qu'il est impossible de déterminer les causes de ces pertes là où on indique que tous les wagons ont un poids uniforme. Nous ignorons les raisons qui existent entre le poids enregistré, au départ, à Karachi, et le poids enregistré à destination, lorsqu'à ce dernier endroit tous les wagons sont pesés individuellement. Nous ne pouvons être sûrs que la différence vient de ce qu'un poids identique a été indiqué pour

[Texte]

weights because we do know the people crawl under freight wagons at sidings when the train is standing still and bore holes in the bottom of cars, and tap sacks and so forth. We know that there are losses; we do not know how much. We do not know how much is errors in weighing and how much is actual losses. But this very small percentage figure of losses which our reports from the projects indicate includes both types of things.

Mr. Lind: Much of the food that we have sent to India in the past has been wheat products and probably skim milk. But about two years ago, and you touched upon this Mr. Robinson, we had a surplus of beans in the area that I come from in Southwestern Ontario. How do we educate the Indian people or the people wherever we are sending these surpluses, how to acquire the habit of eating beans rather than wheat products or some other product?

Mr. Aquino: Mr. Chairman, beans happen to be one of the food products that have the widest distribution in the world, and in many of the underdeveloped countries beans actually represent one of the main sources of protein. So it is not so difficult to teach them how to use beans. They may not be entirely familiar with the special variety, because beans have a very wide geographic distribution and also a great tendency to mutate into many varieties. But essentially they are the same product. So we do not find it very difficult to use Canadian produce in our projects.

• 1120

Mr. Lind: One other short question, Mr. Chairman. Do you use any agencies or religious organizations to distribute this food other than the governments of the countries?

Mr. Robinson: The agreements all have to be with governments. But in school distribution, in Basuto, for instance, which I mentioned a while ago, where we have school feeding projects, the schools are in the following categories: there are state schools; there are Roman Catholic schools; there are Church of England schools; and there are schools run by a French protestant group.

These groups are agents of the government and the reports of the individual schools go to the WFP food co-ordinator in Maseru. So a government is free to utilize not only religious groups, but other groups such as CARE, or in the case of the Nigerian emergency ICRC, as agents. But we cannot respond to

[Interprétation]

chaque wagon parce que nous savons que certains gens percent des trous sous les wagons pour en retirer une partie du contenu. Nous savons qu'il y a des pertes, mais nous en ignorons l'importance exacte. Nous ignorons quelle est la proportion pour les erreurs de pesée et pour les pertes réelles, mais les chiffres cités incluent ces deux aspects.

M. Lind: La plupart des denrées expédiées en Inde, par le passé, étaient du blé et du lait écrémé. Il y a environ deux ans, il y a eu un surplus de fèves dans la région d'où je viens, le sud-ouest ontarien. Comment pouvons-nous montrer à la population de l'Inde, ou celle de tout autre pays, où nous expédions ces produits, à acquérir l'habitude de manger des fèves au lieu des autres produits?

M. Aquino: Les fèves sont l'un des produits alimentaires qui ont la plus large distribution au monde. Dans plusieurs pays en voie de développement, les fèves représentent la source principale de protéines. Il n'est donc vraiment pas très difficile de leur enseigner comment les utiliser. Ils ne connaissent peut-être pas les variétés particulières qui existent au Canada, parce qu'il en existe diverses variétés de par le monde. Il s'agit essentiellement du même produit, de sorte que nous ne trouvons pas très difficile d'utiliser les produits canadiens.

M. Lind: Est-ce que vous utilisez des agences ou des organismes religieux pour distribuer cette nourriture, ou traitez-vous uniquement avec le gouvernement des pays concernés?

M. Robinson: Toutes les ententes sont conclues avec les gouvernements. Mais lorsqu'il s'agit de distribuer la nourriture dans les écoles du Basutoland, par exemple, que j'ai mentionnées tout à l'heure, nous avons des programmes d'alimentation à l'école. Il y a quatre types d'écoles: des écoles d'État, des écoles catholiques, des écoles protestantes anglicanes, et des écoles gérées par un groupe protestant français.

Ces groupes sont des agents du gouvernement et les rapports des écoles parviennent au coordinateur du PAM à Maseru. Donc le gouvernement peut utiliser les groupes religieux ou les autres, tels que CARE, ou dans le cas de la Nigeria le CICR, comme agents. Mais nous ne pouvons pas répondre à une

[Text]

requests from a church group. The requests have to come from the government.

Mr. Lind: Thank you, Mr. Chairman.

Mr. Horner: Mr. Aquino and Mr. Robinson, to go back to the Nigerian problem and the cornmeal which is not being shipped because of the longshoremen's strike on the United States East coast. Have you made any attempts to substitute that cornmeal? Have you asked any of the donor countries, that could supply a similar product? For example, Canada markets a lot of corn, perhaps not as good a quality as American corn. Perhaps some of the Ontario members would say better corn. Have you made any effort to get the product from another donor country?

Mr. Robinson: The United States is so far the only donor country that has indicated any readiness to supply corn. Canada has never told us that it can supply corn. I would be very happy if this were the case, and I assure you that we will call on Canada for corn if it can be supplied. But it has never been included in the list of products which Canada said it can supply.

Mr. Horner: I think that right now when you have a particular problem, the whole world, and particularly Canadians, are concerned about the starvation problem in Nigeria and Biafra, and here you have the product that is desirable and it cannot be supplied. Have you made any effort to see whether or not another product—and I suppose I could use ground wheat as an example; we have lots of dried wheat in Western Canada and I want you to be aware of that—have you made any attempt to see whether any other suitable product could be supplied?

Mr. Robinson: Mr. Chairman, we have taken our lead from the ICRC which is getting food from a wide variety of sources. They need food not only in January and February and March but they are going to need food in April, May and June, and so forth. We have kept in touch with them, telling how we thought the longshoremen's strike was going, and they have not indicated that their need was urgent enough for us to cancel this order to the United States, and try to supply something else from somewhere else. This is not an area where wheat would be acceptable, we are told by the Red Cross, and they did not need it desperately. This is not going into the Biafran-controlled areas. This is going to the federally-controlled areas and they do have access to grain supplies in other

[Interpretation]

demande qui serait formulée par un groupe religieux. Les demandes doivent émaner du gouvernement.

M. Lind: Merci monsieur le Président.

M. Horner: M. Aquino et M. Robinson, pour revenir au problème de la Nigéria et de la farine de maïs qui n'a pas été envoyée à cause de la grève des dockers de la côte est des États-Unis. Est-ce que vous avez essayé de remplacer cette farine de maïs? Avez-vous demandé à d'autres pays s'ils pouvaient fournir des produits similaires? Le Canada, par exemple, a pas mal de maïs, peut-être pas aussi bon que le maïs américain. Peut-être meilleur diront les membres de l'Ontario. Avez-vous essayé d'obtenir les produits d'un autre pays donneur?

M. Robinson: Les États-Unis, jusqu'à présent, était le seul pays qui était prêt à fournir du maïs. Le Canada ne nous a jamais fait savoir qu'il pouvait fournir du maïs. Je serais très heureux si tel était le cas, et certainement nous demanderions alors au Canada de nous en fournir. Mais le Canada n'a jamais indiqué le maïs sur la liste des produits qu'il pouvait donner.

M. Horner: Vous avez-là un problème particulier, le monde entier, et les Canadiens en particulier, se préoccupent du problème de la famine au Biafra et au Nigéria. Voilà le produit souhaitable, et on ne peut pas l'envoyer. Avez-vous essayé de voir si un autre produit, par exemple de la farine de blé, pouvait être substitué à la farine, de maïs? Nous avons beaucoup de blé sec, dans l'Ouest du Canada. Est-ce qu'il n'y a pas un autre produit qui pourrait remplacer la farine de maïs?

M. Robinson: Nous prenions nos directives du Comité international de la Croix-Rouge qui reçoit des aliments de différents pays. Ils ont besoin de produits alimentaires constamment. Nous sommes restés en contact avec eux à propos de cette question de la grève des dockers au États-Unis, mais ils ne nous ont pas dit que leurs besoins étaient assez urgents pour devoir annuler cette commande aux États-Unis et essayer de trouver autre chose ailleurs. D'après la Croix Rouge, ce n'est pas une zone où l'on peut fournir de la farine de blé et d'autre part, les besoins n'étaient pas extrêmement urgents. Ils n'allaient pas à la partie contrôlée par le Biafra. Ils allaient à la partie fédérale et eux ont accès à d'autres sources de grains. C'est pourquoi nous n'avons envisagé aucun remplacement.

[Texte]

parts of Nigeria. So we have not tried to replace this.

Mr. Horner: I have a question on another line. You suggested that most of the recipients were between Morocco and, I think you used the term, the near-East area, all the way down to Turkey. Would the refugees living on the Gaza strip, although they do not constitute a country or a state, be receiving help from the WFP?

Mr. Robinson: This matter came before the IGC three years ago, I believe. Mr. Shefrin can check me on the exact date. We had a request from UNWRA for food to supplement its budget. As you know, UNWRA depends upon voluntary contributions from governments. Our regulations say that we can respond only to requests from governments. For obvious political reasons none of the host governments, that is the UAR or Jordan or Syria or Lebanon, was willing to make a request for food. Our members took the position, which I think, personally, was a valid one, that we would be going sort of through the back door if they had decided what they wished to give to UNWRA directly. If we took their contributions to us, and turned them over to supplement their contributions to others, this would be in effect violating the directives we had from our donors. Therefore we did not do it.

• 1125

After the May war we supplied for eight months large quantities of food to the UAR, to Jordan, and to Syria. After eight months we stopped because the Director-General of FAO, who controls emergency food allocations, said, "An emergency of this sort just cannot go on forever". As you may recall, he and the Secretary-General of the UN made a special appeal for food for refugees from the Palestinian war. So we are not supplying relief food to any of these countries now for refugees.

Mr. Horner: I find it rather inhumane to say, "We will feed you for eight months and from there on we cannot carry it on forever". Surely these people are as worthy of food as anybody else in that near-East area.

Mr. Robinson: Perhaps I should say that a good many of the refugees are receiving food through projects. For instance, in Jordan the work projects are employing a great many people who had lived on the West Bank and

[Interprétation]

M. Horner: Vous avez dit que le plus grand nombre de récipiendaires se situent entre la Maroc et ce que vous avez appelé je crois la Proche-Orient, jusqu'à la Turquie. Est-ce que les gens qui vivent dans la bande de Gaza mais qui ne représentent pas un pays ou un état, est-ce que ces gens, ces réfugiés, reçoivent de l'aide du Programme alimentaire mondial?

M. Robinson: Cette question a été posée à la CIG il y a trois ans je crois, M. Shefrin pourrait me dire la date exacte. L'Office de secours et de travaux de l'ONU nous a demandé des aliments pour l'aider. Comme vous le savez cet organisme dépend des contributions volontaires des gouvernements. Nos statuts nous disent que nous ne devons répondre qu'aux demandes provenant des gouvernements. Et pour des raisons évidentes, aucun des pays arabes qui accueillaient ces réfugiés la Jordanie, le Liban, etc. n'a voulu prendre l'initiative de faire une demande. Nos membres ont donc décidé, et personnellement je les approuve, qu'il n'était pas possible de donner directement à l'Office de secours de l'ONU. Nous aurions en le faisant violé les directives de nos contributeurs.

Mais après la guerre du mois de mai, nous avons, pendant huit mois, envoyé des quantités importantes de nourriture à la République arabe unie, à la Jordanie et à la Syrie. Nous arrêterent après huit mois parce que le Directeur général de l'OAA nous a dit: «Une situation d'urgence ne peut pas durer si longtemps.» Comme vous vous en rappelez peut-être, le secrétaire général des Nations Unies et lui ont fait une demande particulière pour que l'on puisse envoyer des aliments aux réfugiés de guerre palestiniens. Donc actuellement nous ne fournissons aucune aide à ces pays et aux réfugiés.

M. Horner: Je trouve que c'est peu humain de dire: «On va vous nourrir pendant huit mois,» et ensuite dire, «on ne peut plus continuer». Ces gens méritent d'être aidés autant que n'importe qui au Proche-Orient.

M. Robinson: Je devrai ajouter qu'un grand nombre des réfugiés reçoivent de l'aide d'autres organismes. En Jordanie par exemple, les projets de travaux emploient un bon nombre de réfugiés de la rive Est du Jourdain. Je ne

[Text]

who went to the East Bank after the war. I am not saying that none of them are receiving WFP food. But the position is that the Director-General has at his disposal only \$10 million worth of food and cash and services a year for emergencies, and he feels that if he were to tie it up in long-time feeding operations—no one knows when this near-East emergency is going to end—this would preempt all the food that he has available to him and he would not be able to respond to requests from other countries where there are sharp catastrophes which require feeding for three or four months. This was a decision which was placed before the IGC and which, I believe, the IGC concurred in.

Mr. Horner: I have one further question to clear up in my own mind. Mr. Aquino, in your talk you suggested, I think, that the WFP has grown to about \$185 million worth. Would this be in each year?

Mr. Aquino: No, sir. This is the total disbursement of the program since inception.

Mr. Horner: Yes, I was not sure of that. Could you give the Committee some idea of what your yearly turnover in dollars would be?

Mr. Aquino: If my memory does not fail me, we would be disbursing this year about \$90 million worth of products and services, and for the year 1970 about \$150 million. Our rate of disbursement is increasing very rapidly.

Mr. Horner: Could one draw any conclusion that there is more and more starvation in the world, or is it just that you are getting the food out to more and more people?

Mr. Aquino: What is happening is that we now have a large number of projects that are operational and that are really being supplied with food. That was not the situation in the beginning. As you can well see, the development of the capability to handle food and to develop these projects takes a little time, and we take about 12 months from the actual request until the project is approved and food is delivered, and from then on the project builds up little by little. In some cases now we are finding that projects, where experience has been gained in the country, are demanding our products much faster than originally.

Mr. Horner: I have just one more question. To go back to the Gaza strip area, supposing the United Nations requested food from your program for this area, could you then...?

[Interpretation]

dis pas que personne ne reçoit l'aide, du PAM. Mais la situation est celle-ci: le directeur général a à sa disposition seulement 10 millions de dollars en nourriture, en espèces et en services pour les situations urgentes d'une année. Et si l'on devait avec cela maintenir des opérations à long terme, car personne ne sait quand est-ce que la crise du Moyen Orient va se terminer, nous épuiserions les ressources qui sont à notre disposition et nous ne pourrions pas faire face aux besoins d'autres pays lorsque se produisent des catastrophes très graves nécessitant une aide temporaire. C'est la situation devant laquelle nous nous sommes trouvés lors de la demande de la CIG.

Mr. Horner: J'ai une autre question; Monsieur Aquino, vous avez laissé entendre que le PAM était maintenant de 185 millions. Est-ce par an?

Mr. Aquino: Non. Ceci représente les dépenses totales depuis le début du Programme.

Mr. Horner: Oui, je n'étais pas sûr. Pourriez-vous donner à ce Comité une idée de votre budget annuel?

Mr. Aquino: Si je ne me trompe, nous débourserez cette année quelque 90 millions de dollars de produits et services, et pour 1970, quelque 150 millions. Notre taux de déboursement s'accroît extrêmement vite.

Mr. Horner: Est-ce qu'on doit en tirer la conclusion qu'il y a de plus en plus de gens qui meurent de faim ou est-ce que votre programme devient plus efficace?

Mr. Aquino: Non, c'est qu'il y a maintenant un grand nombre de projets qui sont opérationnels et qui reçoivent de l'aide alimentaire. Ce n'était pas le cas au début. Comme vous le voyez, le développement des possibilités de distribution de nourriture et la mise en œuvre des projets, prend un certain temps. Il faut en général douze mois à partir du moment où la demande est faite jusqu'au moment où le programme est opérationnel. Dans certains cas, quand on a déjà travaillé dans le pays, le stade opérationnel est atteint beaucoup plus rapidement.

Mr. Horner: Pour en revenir à la bande de Gaza, est-ce que par l'intermédiaire des Nations Unies, si cette organisation demandait des produits alimentaires pour cette ré-

[Texte]

You could not. I see Mr. Robinson shaking his head.

Mr. Robinson: We are bound by regulations to accept requests only from member governments. There is nothing to stop the countries from asking, but of course the Gaza strip is now under Israeli control, so there you have an added problem. Probably these people are getting supplies from the occupying forces of Israel, we hope.

• 1130

Mr. Horner: I realize that there are several agencies, and UNWRA and the rest are helping. But forgive me for my concern for 2 million refugees. When you are talking about a world food program, I want to see how broad an application the program has, and whether or not it actually gets to those areas which are considered a blight on the civilized world of today.

Mr. Aquino: You are entirely right, sir. I took over the program, as you know, only in August of last year, but my concern with the Biafran situation was very great and I was getting desperate and thinking that it was impossible just because of regulations not to go to the needy people.

I was really prepared in November of last year to go to IGC with a request to change the regulations and to make me able to go with the authority of the Director General of FAO and the Secretary General of the United Nations and with all the consultations that they may wish to impose on these cases to be able to use the services of internationally recognized agencies that may be operating in an area where a calamity of this sort has occurred.

The Swiss came to the rescue and arranged things in such a way that actually we could receive requests from Nigeria to supply food to both sides and this was the end of the case, but in future there may be reasons for reconsidering the regulations and making it possible for the World Food Program to act through recognized agents in cases such as these.

Mr. Horner: You have thought of this same problem I have suggested and you think, then, that regulations could be too rigid in the distribution of food under this programme—that they “could” be. I am not saying they are or they have been, but they could in the years ahead be too rigid in the distribution of food through your program.

[Interprétation]

gion, est-ce que vous pourriez en donner? Je vois que M. Robinson fait signe que non.

M. Robinson: Nous sommes tenus par les règlements à n'accepter que les demandes émanant de gouvernements membres. Rien n'empêche les pays de demander. Mais la bande de Gaza, bien sûr, est sous le contrôle d'Israël maintenant. Vous avez là un autre problème, nous espérons que ces gens reçoivent des produits des forces d'occupation israéliennes.

M. Horner: Je comprends qu'il y ait de nombreux organismes d'aide, et vous m'excuserez si je me préoccupe tant de 2 millions de réfugiés, mais quand vous parlez d'un programme mondial, je me demande jusqu'à quel point votre programme est vraiment universel et s'il arrive à pénétrer ces endroits qui sont la honte d'un monde civilisé.

M. Aquino: Vous avez raison, monsieur. Comme vous le savez, j'ai été nommé directeur du programme seulement au mois d'août, l'an dernier, mais j'étais très préoccupé par la situation du Biafra, et, je me désespérais de penser que de simples règlements faisaient qu'il était impossible de parvenir aux personnes démunies.

J'étais tout de même prêt, en novembre de l'an dernier, à demander un changement des règlements pour me permettre de partir, avec l'autorisation du Directeur général de la FAO, et du Secrétaire général de l'ONU, et après toutes les consultations qu'ils pourraient vouloir exiger pour ces cas, afin de pouvoir utiliser les services d'organismes internationaux reconnus qui pourraient œuvrer dans une région où une calamité de cette nature se produit.

Les Suisses sont venus à la rescousse et arrangèrent les choses de façon à nous permettre de recevoir effectivement des demandes de la part du Nigéria de fournir des aliments aux deux côtés. C'est donc de cette façon que l'affaire s'est close, mais il se peut qu'il y ait à l'avenir des raisons de réviser les règlements afin que le Programme alimentaire mondial puisse agir par l'intermédiaire d'organismes reconnus, dans des cas semblables à celui-ci.

M. Horner: Vous avez songé au même problème que j'ai soulevé, et vous pensez donc que les règlements pourraient peut-être être trop rigides pour ce qui est de la distribution des aliments, en vertu du programme. J'ai dit qu'ils «pourraient» l'être. Je ne dis pas qu'ils le sont ou qu'ils l'ont été, mais il pourraient, dans les années à venir, être trop rigides pour

[Text]

Dr. Aquino: In this sense, yes, that we could not approach a situation like you have described for refugees, for instance. These are mostly man-made calamities and if one or two international agencies could be recognized as possible agents I think that a system may be devised which, under all kinds of conditions, we could use in certain instances to get to the needy people.

Mr. Horner: We have just established a regional director for Canada who has no regulations placed in his way at all in bringing up those under-developed regions in our country to what we would call national standards. There are no regulations tying his hands and why should we tie your hands because you are distributing food? He is just going to develop regions.

The Chairman: Thank you, Mr. Horner. I recognize Mr. Muir.

Mr. Muir (Lisgar): I just want to pursue this promotional idea that I was speaking about with Mr. Williams, and I am very pleased to see that the Minister is here because I want him to take this into consideration, too. In 1970 we are going to be spending several million dollars promoting Canada in Osaka, Japan and I would hope and believe that the Department of Agriculture will have quite a good display.

I wonder if it would not be a good idea to promote some of the foodstuffs that we are shipping across the Pacific. I am thinking about our cereal grains; I can even think about the cream from Quebec or the apples from, I was going to say Ontario, but I believe the British Columbia apples are better; then there are the cherries and so on. I am thinking of having cooks there who will bake pies and bread and promote the cereal grains we use for these products. It will make a wonderful display in the agricultural area of the Exposition.

[Interpretation]

la distribution des aliments par le moyen de votre programme.

M. Aquino: Oui, dans ce sens, oui. Nous ne serions pas en mesure de faire face à une situation comme celle que vous avez décrite, pour ce qui est des réfugiés par exemple. Ce sont surtout des calamités fabriquées par l'homme et si un ou deux organismes internationaux pouvaient être reconnus à titre d'agents éventuels, je crois que l'on pourrait concevoir un système que nous pourrions utiliser dans toutes sortes de conditions, et, dans certains cas, pour rejoindre les personnes dans l'indigence.

M. Horner: Nous venons tout juste de nommer un directeur régional pour le Canada qui n'a pas de règlements pour le gêner en aucune façon dans la valorisation des régions sous-développées de notre pays à des normes que nous pourrions appeler nationales. Aucun règlement ne lui lie les mains et pourquoi lierait-on les mains de quelqu'un qui distribue des aliments? Il n'est chargé que de développer des régions.

Le président: Merci monsieur Horner. Je passe la parole à M. Muir (Lisgar).

M. Muir (Lisgar): Je voudrais continuer à parler un peu de cette idée de promotion que j'avais discutée au préalable, avec M. Williams. Je suis très heureux de voir que le ministre est ici, car je veux qu'il prenne cela en considération lui aussi.

En 1970, nous aurons à dépenser plusieurs millions de dollars pour la promotion du Canada au Japon, à Osaka. J'espère et j'ose croire que le ministère de l'Agriculture y fera très bonne figure.

Je me demande, alors, si cela ne serait pas une bonne chose d'essayer de promouvoir quelques-uns des aliments que nous expédions l'autre côté du Pacifique. Je songe, par exemple, aux céréales, aux grains et même je mentionnerais la crème du Québec, les pommes, j'allais dire de l'Ontario—mais je crois que les pommes qui viennent de la Colombie-Britannique sont meilleures—ensuite les cerises et ainsi de suite. Je songe aussi à avoir des chefs cuisiniers qui pourraient faire du pain, des tartes et ainsi promouvoir les céréales et les grains que nous employons pour ces denrées. Ce serait une excellente présentation dans le secteur agricole de l'exposition.

● 1135

The Chairman: Thank you, Mr. Muir.

Mr. Olson: I could make a comment on this, but I am sure that Mr. Muir would agree

Le président: Merci, monsieur Muir.

M. Olson: Je pourrais faire une remarque à ce sujet, mais je suis sûr que M. Muir (Lis-

[Texte]

with me that this is a very much different area from the kind of programs that are envisaged and, in fact, undertaken under the World Food Program. What you are talking about, I think, is a commercial promotion, but I would not like to take up the time now of discussing that. I think it is quite a long way from the subject matter that we are discussing with Dr. Aquino and Mr. Robinson.

Mr. Muir (Lisgar): No, but this came up in the discussion of the promotion of various foods and the changing diets of people in other countries, and if we are going to assist other people we have to change their diets if we are going to give them food that they are not used to eating.

The Chairman: Mr. Muir, would you agree that we could discuss this under Item 1?

Mr. Muir (Lisgar): Very well.

The Chairman: Then we will not be usurping Dr. Aquino's time because we want to avail ourselves of every minute of it while he is here. Have you completed your question?

Mr. Muir (Lisgar): I am quite agreeable to this. I hope the Minister keeps this in mind because I would like to question him again.

The Chairman: Thank you. I recognize Mr. Roy.

Mr. Roy (Laval): Thank you, Mr. Chairman. I am going to be very brief and will make one observation and, after that, just one short question. I am very happy to realize that the Canadian government has increased their share in 1966 from \$1.8 million to close to \$10 million in 1967. I am very happy to see that and I think that all the members of the Standing Committee on Agriculture are also happy about the Canadian government's share.

An hon. Member: It is a great government.

Mr. Roy (Laval): It is a good government. Could we check the number of projects you mentioned at the beginning? You have 45 in agriculture and 26 projects in the education. Is it the technical program to produce, let us say, agricultural products or is it some other education that you have in your program? You mentioned 26 projects for education.

[Interprétation]

gar) conviendra avec moi que c'est dans un tout autre secteur que les programmes du genre de ceux que nous envisageons et, en fait, qui sont entrepris grâce au programme alimentaire mondial. Ce dont vous parlez, c'est la promotion commerciale alors que je n'aimerais pas prendre le temps à l'heure actuelle pour discuter de cet aspect et qui est plutôt éloigné du sujet que nous discutons ce matin, avec M. Aquino et M. Robinson.

Mr. Muir (Lisgar): Non mais cela a été mentionné au cours de la discussion sur la promotion des divers aliments, là où les régimes alimentaires des gens changent, dans les pays en voie de développement. Si nous voulons aider ces gens, il faut changer leur régime alimentaire si nous devons leur donner des aliments auxquels ils ne sont pas habitués.

Le président: Monsieur Muir, seriez-vous d'accord que nous discutons de cela en vertu de l'article 1?

M. Muir (Lisgar): Très bien.

Le président: De cette façon nous ne ferons pas perdre le temps du D^r Aquino dont nous voulons profiter de chaque minute pendant qu'il est ici. Avez-vous terminé votre question?

Mr. Muir (Lisgar): Je veux bien, mais j'espère que le ministre s'en souviendra. Je lui en reparlerai plus tard.

Le président: La parole est à M. Roy (Laval).

Mr. Roy (Laval): Merci, monsieur le président, je serai bref. Une seule observation et ensuite une brève question.

Je suis très heureux de voir et de constater que le gouvernement du Canada a porté son apport à 1.8 million en 1966 à tout près de 10 millions en 1967. Je suis très heureux de ce fait et je suis sûr que les membres du Comité permanent de l'agriculture sont aussi très heureux de cet apport du Canada.

Une voix: Bon gouvernement, oui.

M. Roy (Laval): Bon gouvernement, oui. Mais, je me demandais si nous pourrions vérifier le nombre des projets que vous avez mentionnés au début? Vous en avez 45 en agriculture et 26 dans le domaine de l'éducation. Est-ce qu'il s'agit du programme technique dans le but de produire, par exemple, des produits agricoles ou s'agit-il d'une autre forme d'éducation inscrite à votre programme?

[Text]

The Chairman: Mr. Robinson, I believe you are prepared to answer this?

Mr. Robinson: As I recall, we have one farmers' training project in Turkey where the government brings farmers into camps for a few weeks, teaches them techniques that they have not been using and lets them go home to spread the techniques. There are a few technical schools for training people in the maintenance and repair of farm machinery and so forth. We also have several young farmers' projects in African countries where they take boys in their teens, just out of secondary school, and put them on training farms for a year and then send them out to new settlements.

So, a minority of the educational projects are directed at increasing agricultural production. The bulk of them, however, are straightforward elementary school feeding projects, high school feeding projects, university or teachers' college feeding projects, plus a few projects for the feeding of pregnant women, nursing mothers and pre-school children. We think, however, that in countries where they are making a terrific effort to increase literacy that anything that results in more people having completed elementary school, for instance, will have an indirect effect on agriculture because it will make extension work much simpler if people can read.

Mr. Roy (Laval): Is it possible, Mr. Chairman, that we are not involved in each project—for example, the project you mentioned at the beginning?

Mr. Robinson: Mr. Chairman, I have that here in so far as the Canadian food is concerned: I have such a table in front of me. If it is of interest to members we could easily have it distributed. It is by countries and by projects.

Mr. Horner: Make it an appendix to today's proceedings.

Mr. Robinson: This only involves Canadian agricultural commodities and services, not the wider range of which Dr. Aquino was speaking.

Mr. Olson: Before you agree, though, that it should be an appendix, I remind you that it is a pretty long list and it will take up several

[Interpretation]

Le président: Monsieur Robinson, je crois que vous êtes en mesure de répondre à cette question. Vous avez mentionné 26 projets d'éducation.

M. Robinson: Si je me souviens bien, nous avons un programme de formation agricole en Turquie, là où le gouvernement amène les fermiers dans des camps pendant quelques semaines et leur enseigne des techniques qu'ils n'avaient jamais employées. Les fermiers retournent chez eux pour diffuser ces nouvelles techniques. Il y a quelques écoles techniques aussi où l'on forme les gens pour l'entretien et la réparation des machines agricoles. Nous avons aussi plusieurs projets destinés aux jeunes agriculteurs de pays d'Afrique, où nous prenons des jeunes adolescents au moment où ils quittent l'école secondaire et les plaçons dans des fermes-écoles pendant un an pour ensuite les envoyer sur de nouvelles terres.

Et par conséquent, nous avons un certain nombre de projets minoritaires qui ont pour but d'augmenter la production agricole. Mais la plupart sont cependant des écoles élémentaires où les élèves sont nourris, des écoles secondaires, des universités ou des écoles normales où les étudiants sont nourris, ajoutant à cela quelques projets pour l'alimentation des femmes enceintes, des femmes qui allaitent et des enfants d'âge pré-scolaire. Dans les pays où on fait un effort pour éliminer l'analphabétisme, nous croyons que toute initiative qui a pour résultat d'augmenter le nombre des personnes ayant terminé l'école élémentaire, par exemple, aura un effet indirect sur l'agriculture parce qu'il rendra le perfectionnement beaucoup plus simple si les gens savent lire.

M. Roy (Laval): Serait-il possible, monsieur le président, que nous ne soyons pas engagé dans chacun des projets, par exemple, le projet que vous avez mentionné au début?

M. Robinson: Monsieur le président, j'ai cela ici, en ce qui concerne les aliments canadiens; j'ai ce tableau sous les yeux. Si les membres s'y intéressent, nous pourrions peut-être le distribuer. C'est classé par pays et par projets.

M. Horner: Mettez-le en appendice aux délibérations d'aujourd'hui.

M. Robinson: Mais cela n'a trait qu'aux aménagements et aux services agricoles du Canada, non pas à l'échelle plus vaste dont parlait le docteur Aquino.

M. Olson: Avant que vous ne consentiez à le mettre en appendice, je vous rappelle toutefois qu'il s'agit d'une liste assez longue qui

[Texte]

pages. We will distribute it to the Committee. It would be a little cheaper, that is all, but whatever you like.

The Chairman: Gentlemen, is it the wish of the Committee that this information be distributed to members of the Committee?

• 1140

An hon. Member: Yes, agreed.

The Chairman: Agreed.

Mr. Roy (Laval): I have only one more question, Mr. Chairman. How do the freight costs compare to the real value of goods in this program?

Mr. Robinson: Over-all the freight is costing something under 20 per cent of the value of the commodities. Now this depends a lot on the product, on the method of shipment and on the length of the trip.

Let us suppose we are shipping wheat into Nepal, our freight cost will run pretty close to the f.o.b. value of the wheat. If we are sending cornmeal into Lesotho it may be more than the cost of the corn or the cornmeal at a gulf port. If, however, we are sending Canadian cheese the percentage may be as low as seven per cent. We will say we are sending cheese only to Jamaica. Also, if we are able to send wheat or any other product on a chartered vessel in place of sending it on liner terms we can save a lot of money. For instance, we are just lifting a cargo of 10,000 tons of wheat from Sweden to Turkey, and we were able to get a rate of less than \$8 a ton, whereas if we were sending it on liner terms it would be costing us somewhere around \$20 a ton from Swedish ports to Istanbul.

So it varies from product to product, it varies with the length of voyage but, over-all, it is running in the vicinity of 20 per cent of the food cost at the export port of the donor country.

Mr. Aquino: May I make just one more comment, Mr. Chairman, on this. There are some cases of landlocked countries where neighbouring countries which are also underdeveloped are giving, as part of their pledge transportation services. This is particularly true in the case of India and Nepal. The Indians have been helping us to get the products from Calcutta into Nepal. Now, this of course very much relieves the need for dollar expenditure and foreign exchange expenditure in transportation. It is an added

[Interprétation]

prendra plusieurs pages. Nous allons vous en distribuer des copies, ce qui coûterait un peu moins cher, mais à vous de décider.

Le président: Est-ce que les membres du Comité veulent que ces renseignements soient donnés aux membres du Comité?

Une voix: D'accord.

Le président: Adopté.

M. Roy (Laval): Une dernière question, monsieur le président. Comment le coût du fret se compare-t-il avec la valeur véritable des denrées dans ce programme?

M. Robinson: Globalement, le fret coûte légèrement moins de 20 pour 100 de la valeur de la marchandise. Cela dépend beaucoup de la méthode d'expédition et de la distance en cause.

Par exemple, si nous expédions du blé au Népal, le coût du fait sera très proche de la valeur du blé franco à bord. Si nous envoyons de la farine du maïs au Lesotho, cela peut coûter plus que le maïs ou la farine de maïs à un port de golfe. Si, toutefois, nous envoyons du fromage canadien, nous pourrions en arriver à un pourcentage aussi bas que 7 p. 100. Il faut dire que nous n'envoyons du fromage qu'à la Jamaïque. De plus, si nous pouvons expédier du blé ou tout autre produit par navire nolisé plutôt que par paquebot, nous pouvons économiser beaucoup d'argent. Par exemple, nous avons une cargaison de blé à livrer de Suède en Turquie, et nous avons pu obtenir un taux de moins de \$8 par tonne, tandis que si nous devions l'expédier par navire ordinaire, cela nous coûterait environ \$20 par tonne entre les ports suédois et Istanbul.

Cela varie donc selon les produits et selon la distance à couvrir, mais, l'un dans l'autre, le coût de l'expédition correspond à environ 20 p. 100 du coût des denrées au port d'exportation du pays donateur.

M. Aquino: Permettez-moi encore une observation à ce sujet, monsieur le président. Il y a aussi des pays sans ouverture sur la mer, et où les pays voisins, qui sont aussi en voie de développement, favorisent des services de transport comme partie de leur engagement. Cela s'applique tout particulièrement au cas de l'Inde et du Népal. L'Inde nous aide à transporter les produits de Calcutta jusqu'au Népal. Bien sûr, cela réduit beaucoup le besoin de dépenses en dollars et en devises étrangères aux fins du transport, Cela aug-

[Text]

form of collaboration by the developing countries themselves and a way of using the contribution of India.

Mr. Roy (Laval): I have one more question. I notice here the figure of 66 per cent on wheat and 20 per cent on dairy products. As you know, Canada can produce more and more milk. Is it your intention to require more milk by-products?

Mr. Robinson: I think all we can say is that we are very much in the hands of the Canadian government. We accept what they give us. We put on a little pressure if we need more of one thing and less of another, but we are really in the hands of our donors.

Mr. Frank Shefrin (Director, Marketing and Trade Services, Economics Branch, Department of Agriculture): May I intervene, just to make sure that we are not completely wrong on this. In some instances, other countries put on tremendous pressure and sometimes we are asked to be a little tolerant. But we have been putting on continuous pressure and have had co-operation in this connection. I am sorry to intervene, but I just wanted to make sure there is a balance on that. Thank you.

The Chairman: The comment by Mr. Shefrin is well received. Thank you, Mr. Shefrin.

I apologize to Mr. Southam because I overlooked his name in his proper turn. I recognize you now.

Mr. Southam: Thank you, Mr. Chairman. According to the schedule allotted to us, we are running short of time. You will be happy to know that three out of the four questions I had listed have already been answered.

I would like to associate myself with the remarks made by Mr. Pringle and yourself earlier, Mr. Chairman. As a Committee member I have been very pleased to see Dr. Aquino, Mr. Robinson and his associates here this morning. We have had a very comprehensive and enlightening discussion on this World Food plan.

I think Dr. Aquino touched on one of my questions earlier in his remarks. At the present time we have enough "have" nations that are ready and able to supply for the "have-nots" but do you visualize in the not too distant future reaching a point where the food demand from the "have-nots" will be greater than you can supply? Has this problem arisen and, if so, what steps are you taking to over-

[Interpretation]

mente la collaboration des pays en voie de développement et permet d'utiliser la contribution de l'Inde.

M. Roy (Laval): J'ai encore une question. Je vois ici des chiffres de 66 p. 100 pour le blé et de 20 p. 100 pour les produits laitiers. Comme vous le savez, le Canada peut produire de plus en plus de lait. Avez-vous l'intention de demander davantage de sous-produits du lait?

M. Robinson: Nous sommes entièrement entre les mains du gouvernement du Canada. Nous acceptons ce qu'on nous donne. Évidemment, nous insistons un peu si nous avons besoin de plus de ceci ou de moins de cela, mais nous sommes entièrement entre les mains des donateurs.

M. Frank Shefrin (directeur de la Division des services des marchés, Direction de l'économie, ministère de l'Agriculture): Permettez-moi d'intervenir, pour m'assurer que nous n'avons pas entièrement tort à cet égard. Dans certains cas, d'autres pays exercent une pression très forte, et on nous demande parfois d'être tolérants. Mais nous avons exercé une pression constante et nous avons reçu la collaboration nécessaire à cet égard. Je m'excuse d'être intervenu, mais je voulais m'assurer qu'il y a un équilibre à ce sujet. Merci.

Le président: L'observation de M. Shefrin est reçue. Merci, monsieur Shefrin. Excusez-moi, monsieur Southam, d'avoir fait sauter votre tour. Je vous donne maintenant la parole.

M. Southam: Merci, monsieur le président. D'après l'horaire prévu, il ne nous reste plus beaucoup de temps. Vous serez heureux d'apprendre que trois des quatre questions que j'avais à poser ont déjà reçu une réponse. Je voudrais, toutefois, m'associer aux observations faites tout à l'heure par M. Pringle et par vous-même, monsieur le président. À titre de membre du Comité, je suis très heureux de la présence de M. Aquino, de M. Robinson et de leurs associés ce matin. Nous avons eu un entretien très complet et très instructif au sujet du Programme alimentaire mondial.

Je crois que M. Aquino a plus ou moins abordé, tout à l'heure, le sujet de ma question. À l'heure actuelle, il y a suffisamment de pays riches qui veulent et puissent approvisionner les pays pauvres; mais pensez-vous qu'à un moment donné, et dans pas très longtemps, nous en arriverons à une situation où les pays pauvres demanderont plus de nourriture que l'on ne peut leur en fournir? Le

[Texte]

come this as far as bringing pressure on the donor countries is concerned?

Mr. Aquino: Mr. Chairman, if my memory does not fail me, total foods moving in the form of donations or on concessional terms between the "haves" and the "have-nots" amounts to about \$1.5 billion to \$1.6 billion per year, and we are moving only a very small fraction of this amount. So that there certainly would be room for increasing our participation in this if the countries see fit to give to us. Apart from this, I would say that this condition, as pointed out earlier in the discussions, would probably continue for several years to come. I do not know whether my answer satisfies the hon. Member.

Mr. Southam: Thank you. The situation today is realized to a much greater extent through the medium of television. As they say, a picture is worth a thousand words. The "have-not" nations, looking through the window of television, realize how much better the "have" countries are living and this has created discontent in their own countries and a basis for a certain amount of revolutionary action. It is through the distribution of food to the "have-nots" that we as Members of Parliament in a "have" country can help to relieve these problems. It is just six years since the inception of this program.

I might mention for the record, too, that I am glad to be a member of the country that was so closely associated with the development of this idea in the first place. I am very pleased with the progress that is being made, and I am sure that this is the sentiment of all members here.

Some hon. Members: Hear, hear.

The Chairman: Thank you, Mr. Southam. I recognize Mr. Whicher.

Mr. Whicher: May I ask one follow-up question in respect of what Mr. Southam just mentioned.

We all agree that this is a great program, but what about your research? What about 10 years from now when the population of India may increase by a third? Are they going to starve over there, or are we going to be able to look after them? After all, the embarrassment of those people in having no food is greater but, nevertheless, our embarrassment in having too much is also very great. Half our time in Parliament is taken up discussing the fact that we have too much food of one description or another. Are we going to be

[Interprétation]

problème s'est-il déjà posé et, dans l'affirmative, quelles mesures prenez-vous pour exercer une pression sur les pays donateurs?

M. Aquino: Si je me souviens bien, monsieur le président, les aliments expédiés vers les pays pauvres par les pays riches, sous forme de dons ou de concession, totalisent une valeur de 1.5 ou 1.6 milliards de dollars par an, et nous ne nous occupons que d'une très petite partie de ce total. Par conséquent, il y aurait certainement moyen d'augmenter notre participation si les pays voulaient bien nous en charger. A part cela, je dirais que cette situation, comme on l'a dit auparavant au cours des délibérations, se continuera probablement pendant plusieurs années encore. Je ne sais pas si ma réponse est satisfaisante ou non pour l'honorable député.

M. Southam: Merci. On se rend beaucoup mieux compte de la situation, de nos jours, grâce à la télévision. Comme le veut l'adage, un tableau vaut tous les discours. Les pays défavorisés se rendent compte, au moyen de la télévision, que les pays riches vivent beaucoup mieux qu'eux, et cela fait naître chez eux un certain mécontentement et les fondements d'une certaine action révolutionnaire. C'est en distribuant des aliments aux pays défavorisés que nous, députés d'un pays riche, pourrions aider à soulager ces problèmes. Il y a six ans à peine que ce programme a été mis sur pied.

Je pourrais ajouter que je suis heureux d'appartenir au pays qui a été associé si étroitement à la conception même du programme. Je suis enchanté des progrès accomplis, et je suis certain que tous les membres du Comité sont du même avis.

Des voix: Bravo.

Le président: Merci, monsieur Southam. Monsieur Whicher, vous avez la parole.

M. Whicher: J'aimerais poser une question qui fait suite à ce que vient de dire M. Southam.

Nous nous accordons tous pour dire que ce programme est merveilleux, mais que faites-vous des recherches? Que va-t-il se passer dans dix ans, lorsque la population de l'Inde aura peut-être augmenté du tiers? Est-ce que les gens là-bas vont mourir de faim, ou est-ce que nous pourrions nous occuper d'eux? Après tout, l'embarras de ces gens qui n'ont pas de nourriture est beaucoup plus grand, mais il n'empêche que notre embarras parce que nous avons une production excédentaire, est grand lui aussi. Nous passons à peu près la

[Text]

able to distribute this food across the world? Looking at it from a political point of view—and you do not have to comment on this—considering the fact that Canada is the most sparsely populated country in the world, the second largest in the world with only 21 million people, would it not be better to bring a whole lot more people over here to help us eat up the food that we now have, thus helping to relieve the hunger of the people over there?

The Chairman: Do you wish to comment?

Mr. Aquino: Yes, I have a comment. We are only a very small organization, Mr. Chairman. Actually, we are administrators of the program that you have entrusted us with. Actually we have only 65 professionals in the World Food Program handling this operation, which you have now seen is increasing rather rapidly. We watch very carefully the developing food situation in the world. We depend very much on the FAO and other UN agencies that do research for us.

But recently there has been a change in the wind. The Intergovernmental Committee of the World Food Program has now been entrusted with the study of a resolution passed by the United Nations General Assembly in the fall of last year, called the Resolution on Multilateral Food Aid, and now we will begin to go into these problems in more detail because we have now the task of producing some recommendations for the future to our parent bodies, the U.N. Economic and Social Council and the Council of FAO. Although, as I say, we have been watching the situation rather carefully and depending on these other organizations, we now will be more closely involved in studying the problem of food supplies in the world and population growth.

• 1150

Mr. Whicher: If I may interrupt you for a minute, what are you going to do 10 years from now, and I am speaking roughly, when the population of India is one-third greater—not you as an organization but as one of the organizations who helps supply food for the world?

Mr. Aquino: Well, we hope that through the efforts of India itself the situation will

[Interpretation]

moitié de notre temps au Parlement à discuter du fait que nous avons des excédents dans telle ou telle denrée. Allons-nous pouvoir distribuer toute cette nourriture à travers le monde? Du point de vue politique—et je ne vous demande pas de faire d'observations à ce sujet—étant donné que le Canada a la densité de population la plus faible du monde, avec 21 millions d'habitants alors qu'il est le second pays du monde pour la superficie, ne vaudrait-il pas mieux faire venir beaucoup plus de gens ici pour nous aider à manger ces excédents de nourriture, ce qui permettrait en même temps de soulager en partie la faim dans le monde?

Le président: Avez-vous des observations à faire?

M. Aquino: Un seul commentaire. Notre organisme est très petit, monsieur le président. En fait, nous sommes les administrateurs du programme que vous nous avez confié. Il n'y a que 65 personnes qui travaillent à cette opération qui prend rapidement de l'ampleur. Comme vous venez de le signaler. Nous surveillons très attentivement la situation alimentaire dans le monde. Nous devons compter énormément sur la FAO et sur les autres organismes de l'ONU pour effectuer des recherches pour nous.

Récemment, nous voyons un changement. Le Comité intergouvernemental du Programme alimentaire mondial s'est maintenant vu confier une résolution adoptée par l'Assemblée générale des Nations Unies, à l'automne de l'an dernier, qui s'appelle, «Résolution sur l'aide multilatérale en alimentation.» Et maintenant, nous allons pouvoir aborder ces problèmes en plus de détails, car la tâche de présenter des recommandations pour l'avenir, à la FAO et au Conseil économique et social de l'ONU, nous incombe. Bien que nous surveillions de près la situation et que nous dépendions de ces organismes, nous pourrions travailler davantage à l'étude des problèmes d'alimentation dans le monde et de l'accroissement démographique.

M. Whicher: Qu'allez-vous faire dans dix ans, lorsque la population de l'Inde aura augmenté du tiers, pas en tant qu'organisme unique, mais comme l'un des organismes qui aident à alimenter le monde?

M. Aquino: Nous espérons que grâce aux efforts de l'Inde même, la situation s'amélio-

[Texte]

have been improved in India 10 years from now rather than depleted further. My impression is that through what they call the miracle varieties of wheat and also the extension of irrigation in that country—they are almost entirely dependent on the monsoon rains for their agricultural production—they will be able to produce additional food in the near future. I do not say that this will happen next year or the following year, but certainly five or ten years from now India should be capable of feeding her increasing numbers in a better way than she is doing now.

I understand they are drilling about 50,000 wells per year in the areas where they cannot use the rivers and they are now also making greater advances in the utilization of the ground water resources of that large country.

Mr. Whicher: Mr. Chairman, I just have one more question. Would you say that when the world is double the present population, that all things being equal—with the planning, and so forth—there will be less starvation than there is at the present time?

Mr. Aquino: I sincerely hope so.

The Chairman: Mr. Robinson on a supplementary.

Mr. Robinson: I do not mean to sound irresponsible but I want to point out, as Mr. Aquino did, that we are just one program working in this whole field. It is nice to try to look ten years ahead but we do not actually operate on ten-year projections. We make no commitments for more than five years and governments, who are our masters, make pledges for only two years at a time, and they never make them more than three years in advance of a pledging conference.

In other words, the next pledging conference will be in January of 1970, at which time governments will decide what resources we should have in the years 1971 and 1972. I agree with you completely that the long range outlook is extremely important, but as far as our operations are concerned we do what governments enable us to do only for about three years at a time.

The Chairman: Gentlemen, I regret that I still have two or three names on my list, but we have reached our adjournment hour. I am sure, Mr. Aquino and Mr. Robinson, that the spirited questioning has been gratifying to you, as your presence has been gratifying to the Committee, and we thank you most sin-

[Interprétation]

rera d'ici dix ans: J'ai l'impression que, grâce aux soi-disant variétés miraculeuses du blé, ainsi qu'à l'extension de l'irrigation dans ce pays où on compte entièrement sur la pluie pour la production agricole, on pourra produire des quantités supplémentaires de produits alimentaires d'ici quelques années. Je ne dis pas que cela se produira l'an prochain, ou l'année après, mais certainement dans cinq ou dix ans, l'Inde devrait être en mesure d'alimenter sa population croissante de façon plus efficace qu'elle ne le fait à l'heure actuelle.

Je crois comprendre qu'on creuse environ 50,000 puits par année dans les régions où on ne peut pas utiliser les rivières et qu'on fait des progrès considérables dans l'utilisation des nappes d'eau souterraines de cet immense pays.

M. Whicher: Monsieur le président, une dernière question. Diriez-vous que lorsque le monde aura atteint le double de la population actuelle, toutes proportions gardées à l'aide de la planification, et autres moyens, qu'il y aura moins de famine qu'il y en a à l'heure actuelle?

M. Aquino: Je l'espère sincèrement.

Le président: M. Robinson aurait un commentaire à ajouter.

M. Robinson: Je ne veux pas paraître irresponsable, mais je voudrais tout simplement vous dire, monsieur, que nous n'avons qu'un seul programme dans ce domaine. C'est beau de prévoir dix ans à l'avance, mais, à l'heure actuelle, nous n'avons pas de projets qui s'étendent sur une période de dix ans. Nous ne prenons pas d'engagements qui dépassent les cinq ans et les gouvernements qui nous dirigent, ne s'engagent que pour deux ans à la fois. Jamais plus de trois ans lors d'une conférence.

Autrement dit, quand la prochaine conférence aura lieu en janvier 1970, à ce moment-là, les gouvernements décideront quelles ressources nous devrions avoir en 1971 et 1972. Mais je suis tout à fait d'accord que les perspectives à long terme sont extrêmement importantes. En ce qui concerne nos opérations, nous faisons ce que les gouvernements nous permettent de faire et seulement pour une période de trois ans à l'avance.

Le président: Messieurs, je regrette d'avoir encore deux ou trois noms sur ma liste, mais nous en sommes arrivés à l'heure d'ajournement.

Je suis sûr, monsieur Aquino et monsieur Robinson, que ces questions pleines d'à-propos vous ont plu. Nous vous remercions beau-

[Text]

cerely for coming to our meeting this morning and for the very informative answers which you have given to the questions asked.

Mr. Pringle: Mr. Chairman, I wonder if at this time I might take the liberty of making a suggestion. Although you have already thanked these gentlemen, I feel I would have the support of the entire Committee if I were permitted to express a special vote of thanks from the Committee to these learned gentlemen for appearing here this morning. I find this has been one of the most exhilarating and interesting discussions that we have had with respect to agriculture and food generally in the world.

The Chairman: I am sure there is general agreement.

Clause 1 agreed to.

The Chairman: Gentlemen, there will be a meeting of the steering committee in my office at room 247 in the West Block at 3.30.

The meeting is adjourned to the call of the Chair.

[Interpretation]

coup d'être venu à notre comité ce matin et de nous avoir donné des réponses aussi précises.

M. Pringle: Monsieur le président, me permettez-vous de remercier ces messieurs au nom du Comité. Je voudrais exprimer toute ma reconnaissance à ces messieurs qui sont venus ce matin. A mon avis, cette discussion a été la plus intéressante et la plus animée parmi celles que nous avons eues portant sur l'agriculture et l'alimentation dans le monde entier.

Le président: Je suis sûr que tous partagent le même avis.

L'article 1 est adopté.

Le président: Messieurs, il y aura une réunion du sous-comité directeur à mon bureau, 247, Édifice de l'Ouest, à 3 h. 30.

La séance est levée.

REPORT TO THE HOUSE

FRIDAY, March 7, 1969.

The Standing Committee on Agriculture has the honour to present its

SEVENTH REPORT

Your Committee recommends that it be authorized to travel from place to place in western Canada, from the 9th April, 1969, to the 20th April, 1969, that its principal purpose shall be to examine the circumstances of the grain industry as it exists in that area, and that the necessary staff do accompany the Committee.

Respectfully submitted,

Le président,
BRUCE S. BEER,
Chairman.

NOTE: Concurred in Monday, March 10, 1969.

RAPPORT À LA CHAMBRE

Le VENDREDI 7 mars 1969.

Le Comité permanent de l'agriculture a l'honneur de présenter son

SEPTIÈME RAPPORT

Le Comité recommande que permission lui soit accordée de se déplacer à travers l'Ouest du Canada, du 9 avril au 20 avril 1969, afin d'étudier principalement la situation actuelle de l'industrie céréalière dans cette région, et que le personnel nécessaire accompagne le Comité.

Respectueusement soumis,

NOTE: Agréé le lundi 10 mars 1969.

[Text]

MINUTES OF PROCEEDINGS

THURSDAY, March 6, 1969
(26)

The Standing Committee on Agriculture met at 9.42 a.m. this day, the Chairman, Mr. Beer, presiding.

Members present: Messrs. Barrett, Beer, Burton, Cobbe, Côté (*Richelieu*), Cyr, Danforth, Douglas (*Assiniboia*), Foster, Gauthier, Gleave, Horner, Howard (*Okanagan Boundary*), Korchinski, Lambert (*Bellechasse*), La Salle, Lessard (*Lac-Saint-Jean*), Lind, McKinley, Moore (*Wetaskiwin*), Muir (*Lisgar*), Peters, Pringle, Roy (*Laval*), Southam, Stewart (*Okanagan-Kootenay*), Whicher, Yanakis—(28).

Also present: Messrs. LeBlanc (*Rimouski*), and Benjamin, M.P.'s.

Appearing: The Honourable H. A. Olson, Minister of Agriculture.

Witness: Mr. S. B. Williams, Deputy Minister of Agriculture.

The Committee resumed consideration of Item 1 of the 1969-70 Estimates relating to the Department of Agriculture.

The Chairman presented the Third Report of the Subcommittee on Agenda and Procedure, as follows:

The National Farmers Union is in Ottawa today to meet with the Minister of Agriculture and the Canadian Dairy Commission and has asked to meet with the Committee to discuss the matter of corn markets and prices in Canada relative to the U.S.A. import situation.

Your Subcommittee recommends that the National Farmers Union be heard starting at 10.30 a.m. this morning if representatives are available.

[Traduction]

PROCÈS-VERBAUX

Le JEUDI 6 mars 1969.
(26)

Le Comité permanent de l'agriculture se réunit ce matin à 9 h. 42, sous la présidence de M. Beer.

Présents: MM. Barrett, Beer, Burton, Cobbe, Côté (*Richelieu*), Cyr, Danforth, Douglas (*Assiniboia*), Foster, Gauthier, Gleave, Horner, Howard (*Okanagan Boundary*), Korchinski, Lambert (*Bellechasse*), La Salle, Lessard, (*Lac-Saint-Jean*), Lind, McKinley, Moore (*Wetaskiwin*), Muir (*Lisgar*), Peters, Pringle, Roy (*Laval*), Southam, Stewart (*Okanagan-Kootenay*), Whicher, Yanakis—(28).

De même que: MM. LeBlanc (*Rimouski*) et Benjamin, députés.

A comparu: L'honorable H. A. Olson, ministre de l'Agriculture.

Témoin: M. S. B. Williams, sous-ministre de l'Agriculture.

Le Comité reprend l'examen du crédit 1 des prévisions budgétaires du ministère de l'Agriculture pour l'année 1969-1970.

Le président présente le troisième rapport du sous-comité du programme et de la procédure, à savoir:

La *National Farmers Union* est à Ottawa aujourd'hui pour s'y entretenir avec le ministre de l'Agriculture et avec le Commission canadienne du lait, et elle a demandé à comparaître devant le Comité afin d'examiner avec lui la question des marchés et des prix du maïs au Canada dans le contexte de la situation de l'importation des États-Unis.

Le sous-comité recommande que la *National Farmers Union* soit autorisée à comparaître ce matin à partir de 10 h. 30, si ses représentants sont disponibles.

On motion of Mr. Pringle,

Resolved,—That the Subcommittee's report be adopted.

Mr. Gleave moved, That this Committee ask leave of the House to travel from place to place in Western Canada from the 14th of April, 1969, to the 20th of April 1969.

And further, that it's principal purpose shall be to examine the circumstances of the grain industry as it exists in that area, and that the necessary staff accompany the Committee.

It was agreed to defer consideration of the motion, until approximately 10.30 a.m. this day.

The Minister gave an opening statement of Item 1, and was questioned.

At 10.30 a.m., the Chairman placed the motion before the Committee.

Following discussion, by agreement, the word "14th" in the motion was changed to "9th".

The motion was carried on a show of hands: YEAS 23, NAYS 4.

Mr. Pringle moved, That the Subcommittee of the Standing Committee on Agriculture take immediate steps to plan a trip into Eastern Canada at a date considered acceptable to representatives of eastern farmers.

The motion was carried on a show of hands: YEAS 21, NAYS nil.

Item 1 was allowed to stand.

At 11.35 a.m., the Committee adjourned to the call of the Chair.

Sur la proposition de M. Pringle,

Il est décidé—Que le rapport du sous-comité soit adopté.

M. Gleave propose—Que le Comité demande à la Chambre permission de se déplacer à travers l'Ouest du Canada du 14 avril 1969 au 20 avril 1969.

Et, de plus, que l'objet principal du Comité soit d'examiner la situation de l'industrie céréalière de cette région, et que le personnel nécessaire accompagne le Comité.

Il est décidé de remettre à 10 h. 30 environ ce matin l'examen de la proposition.

Le Ministre fait une déclaration préliminaire relative au crédit 1, et répond à des questions.

A 10 h. 30, le président met la proposition en délibération.

Après débat, on convient de remplacer le chiffre «14», dans la proposition, par le chiffre «9».

La proposition est adoptée, par un vote à main levée, par 23 voix à 4.

M. Pringle propose—Que le sous-comité du Comité permanent de l'Agriculture prenne immédiatement des mesures en vue d'organiser un voyage dans l'Est du Canada à une date qui soit acceptable pour les représentants des agriculteurs de l'Est.

La proposition est adoptée par un vote à main levée (21-0).

Le crédit 1 est réservé.

A 11 h. 35 du matin, le Comité s'ajourne jusqu'à nouvelle convocation du président.

*Le secrétaire du Comité,
Michael A. Measures,
Clerk of the Committee.*

EVIDENCE

(Recorded by Electronic Apparatus)

Thursday, March 6, 1969

• 0941

The Chairman: Gentlemen, we have a quorum this morning. We will resume consideration of Item 1 of the 1969-70 Estimates relating to the Department of Agriculture.

I have the honour to present the Third Report of the Subcommittee on Agenda and Procedure, which is as follows:

(See minutes of Proceedings)

Will someone move the adoption of this Report?

Mr. Pringle: I so move.

Mr. Gleave: Mr. Chairman, no mention was made in the report that was just presented of the request by the Saskatchewan Wheat Pool that this Committee travel to the West. As it was not mentioned, I would like to bring it to the attention of the Standing Committee. The request from the Saskatchewan Wheat Pool was received by this Committee on January 14 and we have had some discussions on this matter in the Steering Committee. There have also been further requests by the Saskatchewan Wheat Pool and there is a very considerable amount of expectation out there, rightly or wrongly, that...

The Honourable H. A. Olson (Minister of Agriculture): Mr. Chairman, I wonder if I may interrupt to say something, and I will take the responsibility for it. I asked the Chairman if you could have a discussion about this and it appears that it may take a little time to go over all of the details. I really have to be at a Cabinet meeting at 10 o'clock and I would prefer if you could have that discussion at the end of the meeting today rather than now.

Mr. Gleave: I beg your pardon, Mr. Chairman, but...

The Chairman: I have a further statement which I thought could probably be made after the Minister has had an opportunity to present his opening statement.

Mr. Gleave: Are you proposing, Mr. Chairman, to let the report of the Steering Com-

[Interprétation]

TÉMOIGNAGES

[Enregistrement électronique]

Le jeudi 6 mars 1969

Le président: Messieurs, nous avons le quorum. Nous reprenons l'étude du poste numéro 1 des prévisions budgétaires pour l'exercice 1969-1970 du ministère de l'Agriculture. J'ai l'honneur de présenter le troisième rapport du sous-comité du programme et de la procédure qui se lit comme suit:

(voir compte rendu)

Y a-t-il quelqu'un qui propose l'adoption de ce rapport?

M. Pringle: Je le propose.

M. Gleave: Le rapport qui vient d'être présenté ne mentionne pas la demande du Syndicat du blé de la Saskatchewan de voir ce comité effectuer un voyage vers l'Ouest. Comme ce n'est pas indiqué, j'aimerais le signaler à l'attention du Comité permanent. La demande du syndicat du blé de la Saskatchewan a été reçue par ce Comité le 14 janvier, laquelle demande a fait l'objet de discussions au sein du Comité de direction. Le Syndicat du blé de la Saskatchewan a également présenté d'autres demandes à la suite desquelles on a formulé des espoirs, à tort ou à raison, que...

L'hon. H. A. Olson (Ministre de l'Agriculture): Monsieur le président, puis-je interrompre le député pour ajouter quelque chose, et j'en prends la responsabilité. J'ai demandé au président si vous vouliez discuter de cette question et il me semble que cette discussion pourrait durer quelque temps. Je dois assister vraiment à une réunion du Cabinet à 10 heures et j'aurais préféré que vous discutiez de cette question à la fin de cette réunion aujourd'hui plutôt que tout de suite.

M. Gleave: Je regrette, monsieur le président, mais...

Le président: J'ai une autre déclaration que je pourrais peut-être faire après que le Ministre aura eu la possibilité de nous présenter son exposé.

M. Gleave: Monsieur le président, avez-vous l'intention de réserver le rapport du

[Text]

mittee stand until after the Minister has made his statement? I interjected because I thought that once the Steering Committee reported it would be assumed that this matter had been dealt with. I do not believe it has, and I would be prepared to move a motion...

Mr. Olson: The only other thing, Mr. Gleave, is that inasmuch as the National Farmers Union wanted to appear here at 10.30 a.m., the suggestion was made that you should deal with that matter before they come and not defer it until after 10.30 a.m.

Mr. Gleave: Mr. Chairman, I fail to see why this motion cannot be moved now. What you have suggested is related to one segment of the Committee report. If you move that now will you agree to put the other part on before the end of the meeting?

The Chairman: Absolutely.

Mr. Gleave: Mr. Chairman, I think this matter can be dealt with rather quickly in the form of a very short motion put before the meeting and...

• 0945

An hon. Member: It is only one motion.

Mr. Gleave: If the National Farmers Union appears before us at 10:30 a.m., and we do not deal with this now, it is inevitable that they will carry on for the hour, I would think, considering the interest that people have in this matter. This is something of an urgent enough nature that it should be dealt with today. Therefore I move:

That this Committee ask leave of the House to travel from place to place in Western Canada from the 14th of April, 1969, to the 20th of April 1969. And further, that its principal purpose shall be to examine the circumstances of the grain...

The Chairman: We have a motion before the Chair, Mr. Gleave, and we cannot entertain two motions at one time. We must first of all dispose of the motion to hear the National Farmers Union at 10.30 a.m. This motion has been duly moved. Does that meet with the approval of the Committee?

Some hon. Members: Agreed.

The Chairman: Then if the National Farmers Union is available they will be heard at 10.30 a.m. May we now have your motion?

[Interpretation]

Comité de direction jusqu'à ce que le Ministre ait fait son exposé? Je m'y suis opposé parce que je pensais qu'une fois que le rapport du Comité aurait été lu, il serait considéré comme adopté. A mon avis, il ne l'est pas et je serais disposé à proposer une motion...

M. Olson: Monsieur Gleave, étant donné que la «*National Farmers Union*» a voulu se présenter ici à 10:30 a.m., on avait proposé que vous vous occupiez de cette question avant leur arrivée et non pas la remettre après 10:30 a.m.

M. Gleave: Monsieur le président, je ne vois pas pourquoi cette motion ne peut être proposée tout de suite. Ce que vous avez proposé se rapporte à une partie du rapport. Si vous proposez cela à présent, seriez-vous d'accord pour que l'on présente l'autre partie avant la fin de la réunion?

Le président: Absolument.

M. Gleave: Monsieur le président, il me semble que cette question peut être réglée assez rapidement par une motion présentée très rapidement à la réunion.

Une voix: Ce n'est qu'une seule motion.

M. Gleave: Si la «*National Farmers Union*» comparait devant nous à 10h. 30, et que nous ne réglons pas cette affaire maintenant, la discussion se poursuivra toute l'heure étant donné l'intérêt que portent les gens à cette question. Il s'agit ici d'une affaire très urgente qui devrait être réglée aujourd'hui même. C'est pourquoi je propose:

Que le Comité demande le consentement de la Chambre de se déplacer d'une place à l'autre dans l'Ouest du Canada à partir du 14 avril 1969 jusqu'au 20 avril 1969. Et d'autre part que le but principal soit d'étudier la situation du blé.

Le président: Nous avons une motion déjà. Nous ne pouvons pas examiner deux motions. Nous devons tout d'abord trancher la motion qui est d'entendre les représentants de la «*National Farmers Union*» à 10:30 a.m. Cette motion a été dûment proposée. Est-ce que vous êtes d'accord?

Quelques voix: D'accord.

Le président: Si la «*National Farmers Union*» a des représentants, on les entendra à 10 heures 30. Voulez-vous nous présenter votre motion.

[Texte]

Mr. Gleave: I move:

That this Committee ask leave of the House to travel from place to place in Western Canada from the 14th of April, 1969, to the 20th of April, 1969.

And further, that its principal purpose shall be to examine the circumstances of the grain industry as it exists in that area, and that the Clerk of the Committee and the necessary supporting staff do accompany the Committee.

The Chairman: Gentlemen, may I say...

Mr. Pringle: May I suggest, Mr. Chairman, that this motion be deferred until after the Minister has made his statement. There is bound to be considerable discussion regarding this motion in view of the circumstances relating to other committees which will be travelling, and various other problems. I think we should respect the wishes of the Minister and permit him to make his statement at this time and we can take this motion up afterwards.

Mr. Howard (Okanagan Boundary): I move that the motion be tabled...

Mr. Horner: Mr. Chairman, do we have a motion? We cannot have another motion. I would like to speak to the motion.

The Chairman: I think we are getting into deep water; I hope they are not troubled waters. Mr. Horner would like to speak to the motion.

Mr. Howard (Okanagan Boundary): Mr. Chairman, I do not believe a motion to table is debatable.

Mr. Horner: I had my hand up before you even started to talk. I did not break in when you were speaking. I was polite. I wanted the Chairman to recognize me first. I wish to draw this as a point of order to your attention, Mr. Chairman. I had my hand up and you acknowledged the fact my hand was up, but the hon. member broke in and made his motion without being duly recognized by the Chair. Therefore I request permission to speak to the motion made by the member for Saskatoon-Biggar, and with your permission I will do so.

I think the question about whether or not we are going to travel to Saskatchewan is a pretty important one. The offer has been made by a very knowledgeable and earnest

[Interprétation]

M. Gleave: Je propose:

«que le comité demande le consentement de la Chambre de se déplacer d'une place à l'autre dans l'Ouest du Canada, à partir du 14 avril 1969 jusqu'au 20 avril 1969. Et d'autre part, que son but principal soit d'étudier la situation de l'industrie du blé telle qu'elle se présente dans cette région, et que ce comité soit accompagné du greffier du comité et du personnel nécessaire.»

Le président: Messieurs, permettez-moi de dire...

M. Pringle: Monsieur le président, permettez-moi de proposer que cette motion soit retenue jusqu'à ce que le Ministre ait fait son exposé. Cette motion fera certainement l'objet d'une longue discussion, étant donné les circonstances ayant trait aux autres comités qui voyageront, et à divers autres problèmes. Nous devrions tenir compte du désir du Ministre et lui permettre d'abord de faire son exposé et nous reprendrons ensuite cette motion.

M. Howard (Okanagan-Boundary): Monsieur le président, nous sommes saisis d'une motion.

M. Horner: Monsieur le président, avons-nous une motion? Nous ne pouvons avoir une autre motion. J'aimerais parler au sujet de la motion.

Le président: Il me semble que la discussion commence à s'exacerber, j'espère que les choses ne vont pas se gâter. Monsieur Horner, voulez-vous discuter de la motion?

M. Howard (Okanagan-Boundary): Monsieur le président, je ne crois pas qu'une motion déposée soit sujette à débat.

M. Horner: J'ai levé la main avant que vous ne preniez la parole. Je ne vous ai pas interrompu. Par politesse. J'ai voulu attirer l'attention du président. Monsieur le président, j'attire votre attention sur une motion d'ordre. J'avais la main levée et vous m'avez donné la parole, mais l'honorable député m'a interrompu et a présenté sa motion sans votre autorisation. Par conséquent, je demande l'autorisation de parler de la motion présentée par l'honorable député de Saskatoon-Biggar, et avec votre permission je le ferai. Je pense que la question de savoir si le voyage en Saskatchewan se fera ou non est très importante. L'offre a été faite par une organisation très sérieuse et assez bien connue dans cette province. En examinant les dates du 14 et 20

[Text]

organization in that province. Looking at the dates, April 14 and April 20, which is the period the motion suggests we travel to Western Canada, you will see it follows shortly after our return from the Easter recess.

If my calculation is right the Easter recess will start somewhere in the neighbourhood of April 2, or thereabouts, so we have to make up our minds. Today is March 6. We have to confront ourselves with this problem and make up our minds if we are going, because no group, even one as big as the Saskatchewan Wheat Pool, can lay on briefs and work for the Committee in that province without having some notice that the Committee is actually going out there. I think it is only fair to them that we give them two weeks notice in order to prepare something for us in the line of briefs and conditions to see in Saskatchewan. I fully acknowledge the demands on the Minister's time.

I am fully aware, though, Mr. Chairman that the Minister can come back to the next meeting of this Committee and deal at length with Item 1, because if we are going to hear the National Farmers Union it is not likely we will get through Item 1 today, and so if the Minister does not get enough time today to tell us all he wants to divulge he will have ample time at a later meeting. Although I should be very concerned about his time allotment in this Committee, I do not really believe that it should take precedence over the very worthwhile suggestion made by the Saskatchewan Wheat Pool and the invitation to this Committee and we should at least acknowledge that invitation by discussing it in this Committee and giving them plenty of notice that we are accepting or rejecting it. I say that the Committee should confront itself with this problem; at least give it some serious thought before offhandedly referring it to some later date.

The Chairman: Gentlemen, we have a motion to table the motion at 11.30. This motion is not debatable. All those in favour of this motion?

Mr. Gleave: On a point of order, Mr. Chairman, I do not think a tabling motion can be qualified. If the motion is deferred, yes, but I do not think you can qualify a tabling motion. Am I wrong?

Mr. Olson: I do not see any difference between a tabling motion being deferred to a specific hour and a motion being deferred...

[Interpretation]

avril, proposées pour notre voyage vers l'Ouest, vous remarquerez qu'elles suivent de très près notre retour des vacances de Pâques.

Si mon calcul est exact, ces vacances débutent le 2 avril, ou à peu près, par conséquent il faudra se décider et bien vite. Nous sommes aujourd'hui le 6 mars. Nous devons faire face à ce problème et nous décider si nous comptons partir ou non, car aucun groupe, si important soit-il, ne peut se fier sur des mémoires, sans qu'il sache exactement si le Comité compte effectivement voyager. Il n'est que juste que de leur donner deux semaines de préavis, ce qui leur permettra de s'y préparer en ce qui concerne les mémoires et les conditions matérielles. Je me rends compte que le Ministre a très peu de temps. Je sais que le Ministre peut revenir cet après-midi au Comité pour examiner le poste numéro 1 car si nous devons entendre la «*National Farmers Union*», je doute fort que nous puissions en finir avec le poste 1 aujourd'hui.

Je sais que le Ministre a un tas de choses à nous dévoiler. Il aura assez de temps à une réunion ultérieure. Bien que cela m'intéresse de savoir combien de temps il consacre à ce Comité, je ne crois pas que la visite doive réellement primer la précieuse proposition faite par le syndicat de la Saskatchewan. Nous devrions en tenir compte, connaître son importance en la discutant à fond et lui donner suffisamment de temps à l'avance pour préparation de travail. Voilà pourquoi il convient d'y réfléchir avant de déferer la question à une autre à une date ultérieure.

Le président: Messieurs, nous avons la motion de déposer la motion jusqu'à 11 heures. Si cette motion n'est pas débattable, que tous ceux qui sont en faveur... j'invoque le règlement, M. l'Orateur.

M. Gleave: Je ne pense pas qu'on puisse déposer cette motion. Si la motion est différée, oui, mais je ne pense pas que vous ayez le droit de demander le dépôt de la motion. Est-ce que je me trompe?

M. Olson: Je ne vois pas la différence entre une motion tendante à déposer une motion et une motion tendante à différer...

[Texte]

An hon. Member: We have been talking about it for about seven minutes. I think we have been deferring it for seven minutes.

The Chairman: Is there agreement that this motion be deferred until 11.30?

Mr. Horner: Now you are deferring it for one hour and a half.

The Chairman: I think that was the agreement. Leaving time—was the motion 10.30 or 11.30?

Mr. Howard (Okanagan Boundary): I understood the Minister was leaving at 10 o'clock and it is nearly 10 o'clock now.

Mr. Horner: Let us clear up the motion. Is it until 10 o'clock or 11.30?

The Chairman: Let us have the motion at 10.30. Would that be agreeable?

Mr. Horner: He made the motion. Are you amending it, Mr. Chairman?

Mr. Howard (Okanagan Boundary): Mr. Chairman, do we not have the National Farmers Union coming at 10.30?

The Chairman: Yes, I am assuming they are. But I am assuming that you intended to dispose of this motion prior to hearing the National Farmers Union. If that is not your wish then we will accommodate them.

Mr. Horner: Prior to?

The Chairman: Yes.

Mr. Burton: Mr. Chairman, if the Minister is going to leave at 10 o'clock there is hardly any point in his starting his remarks now.

The Chairman: I think probably, with due respect, if we could have contained our remarks a little bit, the Minister would have finished by this time. Is there agreement that we defer this motion until 10.30, or prior to hearing the National Farmers Union? Is this agreed?

Some hon. Members: Agreed.

The Chairman: Gentlemen, the Minister is present and we are pleased to have him here. As is customary he will make an opening statement on Vote 1. Mr. Olson, we would be happy to hear you now.

Mr. Olson: Mr. Chairman and members of the Committee, in introducing the 1969-70 estimates, I would like first to draw attention to the fact that these are documented in two forms: the official Blue Book on which parlia-

[Interprétation]

Une voix: Nous en avons parlé pendant 7 minutes maintenant. Je pense qu'on l'a différée de 7 minutes.

Le président: Êtes-vous d'accord de différer cette motion jusqu'à 11 h 30?

M. Horner: Maintenant on la diffère d'une heure et demie.

Le président: Je pense qu'on a en convenu comme ça. L'heure de départ, était-ce 10 h 30 ou 11 h 30?

M. Howard (Okanagan Boundary): Je pensais que le ministre va partir à 10 heures et c'est presque 10 heures maintenant.

M. Horner: Ceci tranche la question—est-ce que c'est 10 heures ou 11 heures et demie?

Le président: Abordons la motion de 10.30. Êtes-vous d'accord.

M. Horner: Il a présenté la motion, l'avez-vous modifiée monsieur le président.

M. Howard (Okanagan Boundary): Monsieur le président, est-ce que le National Farmers Union viendra à 10:30?

Le président: Je pense que oui. Mais je suppose que vous aviez l'intention de trancher cette motion avant d'entendre la *National Farmers Union*. Sinon, nous nous arrangerons.

M. Horner: Avant, monsieur le président?

Le président: Oui.

M. Burton: Monsieur le président, si le Ministre va nous quitter à 10 heures, il est inutile de commencer son exposé maintenant.

Le président: Je crois que si nous avons abrégé notre discussion un peu, le ministre aurait terminé maintenant. Êtes-vous d'accord qu'on diffère cette motion jusqu'à 10 h. 30 ou avant d'entendre la *National Farmers Union*? D'accord?

Des voix: D'accord.

Le président: Messieurs, le ministre est là, nous sommes heureux de lui souhaiter la bienvenue. Il va nous faire sa déclaration habituelle sur le crédit numéro 1. M. Olson, nous serions heureux de vous entendre maintenant.

M. Olson: Monsieur le président, Mssrs les membres du comité, en présentant les crédits de 1969-70, je voudrais tout d'abord signaler qu'ils se retrouvent sous deux formes—le livre bleu donnant les crédits parlementaires

[Text]

mentary appropriations will be voted, and in a new format which presents estimates based on programs and activities.

The "forward" section appearing in the new booklets refers to the specific recommendations of the Royal Commission on Government Organization, in other words, the Glassco Commission, and this gives rise to this newly-developed form, which is one aspect of a comprehensive program of financial management improvement whereby the concept of planning-programming-budgeting and responsibility reportings will be coming into full

• 0955

operation in the federal government. Several other features of the system will be implemented throughout the amended Financial Administration Act. As you know that is Bill No. C-172 recently introduced in the House.

In the Blue Book format, elements of expenditure are shown by standard objects under a vote structure oriented principally toward organizational segments of the department. The new estimates form is expected to become the official instrument for appropriation in 1970-71. It will bring certain mechanical advantages, such as a substantial reduction in the number of items on which voting action is required, but the more important aim is to reveal more clearly to Parliament the purposes of expenditure.

This is accomplished by identifying departmental objectives, programs and activities and relating these to resource requirements. Notwithstanding that refinements may yet be made in either the program and activity structure, the objectives or the vote structure, the new form now before you is the prototype of estimates for the future. As I would like to rely on this form and test its capabilities, I do not propose to indulge in general descriptions of the department's functions.

The estimates before you for the fiscal year 1969-70 reflect the prevailing policy of expenditure constraint, the dollar total of \$250.8 million (including the statutory items) being approximately \$5 million below the main estimated provision for the current fiscal year. These figures are for the Department of Agriculture proper, excluding the Farm Credit Corporation, the Canadian Livestock Feed Board and the Canadian Dairy Commission. The principal decrease is \$11.3 million reduction in funding for price support programs and a \$2.8 million reduction in hog premiums.

[Interpretation]

qui seront approuvés par le Parlement et sous une nouvelle forme qui présente les crédits en fonction des programmes et des activités.

Les premières pages du Livre blanc donnent les grandes lignes de la commission royale sur l'organisation du gouvernement, suite à la recommandation de la commission Glassco. C'est-à-dire on y retrouve les grandes lignes de cette nouvelle forme, qui constitue un aspect d'un programme général de la mise au point de l'administration financière, par laquelle la planification et la programmation de l'état du budget et de la répartition des comptes au Parlement seront pleinement mises en services dans le gouvernement fédéral. Plusieurs d'autres caractéristiques de la Chambre seront appliquées en même temps, notamment la modification de la loi sur l'administration financière. Comme vous le savez, c'était le bill n° C-172 qui a été récemment présenté à la Chambre.

Dans le Livre bleu, chacun des postes de dépenses sont montrés d'une façon normale dans une finance de crédits principalement orientée vers l'Organisation du ministère. La nouvelle forme de présentations des crédits deviendra l'instrument officiel de la présentation des crédits en 1970-71 et aura certain avantage matériel tel qu'une réduction considérable du nombre des crédits demandant un vote particulier. Mais ce qui est plus important, c'est de montrer plus clairement au Parlement le but des dépenses.

Ceci est accompli en identifiant chacun des objectifs, des programmes et des activités qui se rapportent aux besoins des ressources financières. En dépit, cette amélioration qui doit encore être apportée au programme et à la structure de l'activité, à la structure des objectifs ou des crédits ce qui vous est présenté est le prototype des crédits pour l'avenir. Voilà pourquoi je voudrais m'en tenir à cette forme et vérifier ces possibilités; je n'ai pas l'intention de décrire de façon générale les fonctions du ministère.

Les crédits dont vous êtes saisis sont pour l'année financière 1969-1970 et reflètent la modération des dépenses. Le total de 250.8 million de dollars, y compris les crédits statutaires, qui sont d'environ cinq millions inférieurs aux crédits principaux de l'année financière en cours. Ces chiffres sont pour le ministère de l'Agriculture même sans compter à l'exclusion de la Société du crédit agricole, de l'Office canadien des provendes et de la Commission canadienne laitière. La diminution la plus importante est de 11.3 millions dans le fond aux programmes de prix de sou-

[Texte]

An increase occurs in salaries and wages needed to cover current wage agreements reached under collective bargaining and to provide for anticipated settlements in 1969-70. The salary provision in the current year is \$77.1 million, that is including retroactive payments. New year provision is \$79.2 million or an increase of \$2.1 million.

In regard to price support funds, that is in the Blue Book, Vote 17, members are no doubt aware that price support measures are financed initially through a statutory account of \$250 million and that losses are reimbursed annually through parliamentary appropriations.

The reduced provision in this item, at \$133.4 million for 1969-70 is based on a calculation of the amount required to maintain current support levels for all applicable products. In this calculation, estimates are made of market price relationships and potential marketing volumes for the forthcoming year. Any policy change requiring additional funds would be subject to provision in supplementary estimates.

When speaking to this Committee on the 1968-69 estimates last October, I mentioned special endeavours designed to establish policies and programs in the interest of agriculture and thus of the economy as a whole. I am pleased to report progress in these areas and to assure the Committee that through the 1969-70 estimates high priority continues to be assigned to measures promising basic improvement in farm productivity and marketing and in the level and stability of returns.

Provision is made for the National Farm Management Service to staff regional data preparation centres and commence serving farmers directly with computer analyses of individual farm records. The Agriculture Task Force has submitted its first general report and is filing position papers as the basic documentation for the Canadian Agricultural Congress to be held in Ottawa at the end of this month, specifically starting on the 24th. As I reported to the House of Commons on February 4, further progress has been made in organizing the Canada Grains Council, forming the Council executive and defining their terms of reference. Steps are being taken to establish the Council as a legal entity and provision is made in these estimates for a measure of financial support, a contribution not exceeding \$100,000 shared equally by the Department of Agriculture and the Department of Industry, Trade and Commerce.

[Interprétation]

tient et 2.8 millions de dollars pour les primes de porcs.

Une augmentation des salaires et traitements nécessaires pour faire suite aux ententes collectives salariales et prévoir les règlements à venir en 1969-1970, a été prévue. Les traitements et salaires représentent 77.1 millions, y compris les versements rétroactifs, pour l'année suivante, 79.2 millions, soit une augmentation de 2.1 millions. En ce qui concerne les fonds de prix de soutien dans le livre bleu, crédit numéro 17, les députés savent sans doute que ces mesures sont financées d'abord par un crédit de 250 millions et que les pertes sont remboursées chaque année par des crédits parlementaires.

Nous avons fixé ce montant réduit à 133.4 millions pour 1969-70 en fonction d'un calcul du montant nécessaire pour maintenir les niveaux d'appoints pour tous les produits en question. Dans ce calcul, on a tenu compte du rapport entre les prix et le volume éventuel de la mise en marché de l'année prochaine. Tout changement de la ligne de conduite entraînant un crédit supplémentaire doit former l'objet des crédits supplémentaires.

En parlant au même comité à propos des crédits de 1968-69 en octobre dernier, je disais que nous voulions établir une politique et des programmes dans l'intérêt de l'agriculture et, par conséquent, de l'économie dans son ensemble. Je suis heureux d'annoncer un certain progrès dans ces secteurs et d'assurer le comité que, dans les crédits de 1969-70, on a donné la priorité à l'amélioration de base de la productivité agricole et de la mise en marché des produits ainsi que de la stabilité des recettes.

On a pris des mesures pour le service de gestion agricole d'établir des centres régionaux de préparation des données et de commencer à fournir directement aux cultivateurs des analyses par ordinateur électronique de certaines données agricoles. L'équipe spécialisée de l'agriculture a présenté son premier rapport général et rempli des questionnaires comme documentation de base pour le Congrès canadien de l'agriculture à Ottawa à la fin du mois, c'est-à-dire, commençant le 24. Comme je l'ai dit à la Chambre des communes le 4 février, un nouveau progrès a été fait dans l'organisation du Conseil des grains du Canada, qui forme l'exécutif du conseil, et nous lui avons donné un mandat. On a pris des mesures pour fonder le conseil comme une personne morale et juridique et on prend des mesures pour l'appuyer financièrement. Jusqu'à \$100,000.00 sont payés à part égale par les ministères de l'agriculture et de l'industrie et du commerce.

[Text]

Mr. Chairman, I know that the Agriculture Committee may wish to examine many details of these estimates which make provision for all essential services of the department and my officials and I shall be pleased to come. The appropriate officials will be here on hand throughout the course of the discussions.

That, Mr. Chairman, is the opening statement I wanted to make so that there is an explanation for the change in the format of the estimates, along with the explanations that I gave for it and, as I said, we will be very happy to provide as much detail as members would like on any particular vote as we get to them.

Mr. Southam: Referring to this new format that we plan to use for the 1970-71 Estimates, a confusion developed in relating the different figures. Are we going to use the 1969-70 blue book at these meetings, are we going to use this proposed new format that the Minister referred to?

Mr. Olson: We would like to try to use the new format so that we can familiarize ourselves with it. I do not say that there is not going to be any confusion. There will be some misunderstanding—perhaps lack of understanding is a better way of putting it—until we get used to it. However, the actual votes will be under the old format.

Mr. Southam: Under the old one?

Mr. Olson: This other blue book.

Mr. Southam: This is what we had to revert to the other day on the standing committee because of the confusion. As you say, we want to adapt ourselves to the new one but we still have to depend on this one for this particular set of Estimates.

Mr. Olson: I hope that the discussion will take place on the new format so that we can familiarize ourselves with it, but formal votes will be taken on the old book.

The Chairman: Gentlemen, I am sure I voice the wishes of the Committee when I express to Mr. Olson our appreciation for his opening statement. May I say that your brevity, Mr. Minister, is in keeping with your usual eloquence.

Mr. Olson: Thank you, Mr. Chairman.

The Chairman: I have Mr. Douglas, Mr. Horner, and Mr. Gleave who wish to be recognized. Mr. Douglas?

[Interpretation]

Monsieur le président, je sais que le comité de l'agriculture voudrait examiner en détail chacun des crédits pour ses différents services de mon ministère, et je serai heureux de venir avec mes fonctionnaires. Les fonctionnaires concernés pourront fournir tous les renseignements étudiés à la discussion de mercredi.

C'était l'exposé que je tenais à faire pour expliquer le changement de présentation des crédits. Je répète, nous fournirons volontiers tous les détails que vous voudrez nous demander sur chacun des crédits, au fur et à mesure de leur étude.

M. Southam: A propos de cette nouvelle présentation que nous avons l'intention d'utiliser pour le budget de 1970-1971, on s'est embrouillé dans les chiffres. Est-ce qu'on va utiliser le Livre bleu de 1969-1970 à ces réunions, ou bien la nouvelle présentation que le ministre mentionnait?

M. Olson: Nous aimerions utiliser la nouvelle présentation de sorte que l'on pourrait se familiariser avec. Je ne dis pas qu'il n'y aura pas un peu de confusion. Il y aura des malentendus ou, plus précisément un absence de compréhension, avant qu'on s'y habitue. Toutefois, les crédits réels seront présentés de la vieille façon au Livre bleu.

M. Southam: De la vieille façon?

M. Olson: En utilisant cet autre Livre bleu.

M. Southam: Nous avons dû y recourir l'autre jour, à cause de la confusion, au Comité permanent. Comme vous le dites, nous désirons nous adapter à la nouvelle présentation, mais nous devons utiliser celle-ci pour ce groupe de crédits.

M. Olson: J'espère que les discussions se feront avec la nouvelle présentation, pour que nous puissions nous y habituer. Toutefois, le vaste officiel devra se faire en utilisant la vieille formule.

Le président: Je pense que le Comité désire féliciter M. Olson de sa déclaration d'ouverture. La concision de votre déclaration, monsieur le Ministre, s'accorde avec votre éloquence habituelle.

M. Olson: Merci, monsieur le président.

Le président: Il y a M. Douglas, M. Horner et M. Gleave qui désirent prendre la parole.

[Texte]

Mr. Douglas (Assiniboia): A couple of questions occur to me, Mr. Chairman. In reference to the Task Force, Mr. Olson made reference to the first general reports which have been made, plus some position papers which have been issued. I have not received the first general report.

Mr. Olson: That is right.

Mr. Douglas (Assiniboia): Is it available to the members?

Mr. Olson: It will be available. It is completed, it has been delivered to my office and is now being translated and printed and as quickly as that can be done it will be sent to you and to all the members of the Committee.

Mr. Douglas (Assiniboia): Another question I want to ask has to do with the Canada Grains Council; the Chairman is Mr. Runciman. Will this be a full-time job for Mr. Runciman?

Mr. Olson: Not over a period of time. I do not think it will be considered a full-time job permanently. However, I think it is fair to say that in the initial stages, and because of a number of extremely important matters that we would like to refer to the Canada Grains Council, it will be tantamount to a full time job in the initial stages.

Mr. Douglas (Assiniboia): Is he continuing as president of the United Grain Growers?

Mr. Olson: I think he still holds the position but he is certainly devoting a great deal of time and, as I said, almost full time to this other position and has made arrangements so that he is free from the obligations to his company to that extent.

Mr. Douglas (Assiniboia): Is it fair to ask what salary he is getting from the Canada Grains Council?

• 1005

Mr. Olson: You can ask, but I cannot answer you because the details of the financial structure and the assessments that will be put on the various members of the council have not yet been determined.

Mr. Douglas (Assiniboia): Can more members be added to the council than—what is it? I think 27 or so?

Mr. Olson: Yes, there is provision in there to add some. I should also say this, that we contemplated a special act of parliament to set up this council but we are now proceeding, as I said in my opening remarks, to set them up under Letters Patent under the Com-

[Interprétation]

M. Douglas (Assiniboia): Pour ce qui est du groupe d'étude, M. Olson a parlé du premier rapport général de ce groupe d'étude et d'un document de principes qui a été publié. Je n'ai pas encore reçu le rapport.

M. Olson: C'est exact.

M. Douglas (Assiniboia): Est-ce que les députés peuvent l'obtenir?

M. Olson: Oui. Le rapport est terminé, il a été déposé à mon bureau, et on est en train de le traduire et de l'imprimer avec toute la diligence possible. Il vous sera remis ainsi qu'à tous les membres du Comité.

M. Douglas (Assiniboia): Deuxièmement, je voudrais demander où en est la Commission canadienne des céréales? M. Runciman, occupera-t-il un emploi à plein temps?

M. Olson: Pas sur une longue période de temps. Je ne pense pas qu'on puisse considérer ça comme une fonction à plein temps; toutefois on peut dire qu'aux premières étapes, à cause du nombre des questions très importantes que nous aimerions voir étudiées par la Commission, ce travail, au début, équivalra à un travail à plein temps.

M. Douglas (Assiniboia): Est-ce qu'il demeurera président du *United Grain Growers*?

M. Olson: Je pense qu'il occupe encore ce poste mais il consacre presque tout son temps au premier poste: c'est pourquoi, il a pris des dispositions pour se libérer de ses obligations antérieures.

M. Douglas (Assiniboia): Peut-on demander quel traitement il reçoit de la Commission canadienne des céréales?

M. Olson: Vous pouvez me poser cette question mais je ne puis vous répondre parce que les détails de l'organisation financière et de la répartition des tâches n'ont pas encore été déterminés.

M. Douglas (Assiniboia): Peut-on ajouter des membres à la Commission? Je crois qu'il y a 27 membres environ à l'heure actuelle.

M. Olson: Oui, il existe des dispositions à cet effet. Je dois ajouter que nous envisageons une loi spéciale du Parlement pour établir ce Conseil, mais comme je l'ai dit dans ma déclaration d'ouverture, nous allons régler cette question dans les lettres patentes émises

[Text]

panies Act. That came out of a recommendation that the council had in their meeting on February 14.

Mr. Douglas (Assiniboia): Thank you Mr. Chairman.

The Chairman: Thank you, Mr. Douglas. Mr. Horner?

Mr. Horner: Yes Mr. Chairman. I was particularly interested in the Minister's remarks. I attempted to follow his figures and in looking at the new format failed to see the \$11,000,000 reduction. At least, I did not see it, but it may be there.

In any case, the words I really want to say are not concerned with figures; they are concerned with people. The people that I think the Agricultural Committee and the Department of Agriculture should be concerned about are the individual farmers, the people actively engaged. Today we see in this world and in this country a growing degree of mechanism; a growing degree of the lumping together of human beings, and saying, "We will move them here, and we will move them there". We are shuffling them around with no thought and not enough concern for the people involved in the business.

I can think of one particularly glaring example in the Minister's own department: the Canadian Dairy Commission, for example is suddenly deciding that if you are a producer of less than 35,000 pounds of milk, then you cannot get a quota. If you buy a part herd and try to start out small and work your way into a quota system, it is pretty near impossible to develop or acquire a new quota. We are starting: this is the initial step towards licensing in the farming business. You are creating an artificial value for quotas. I have long been one who thought that the quota system in the fluid milk business in and around the cities in the watershed area is an area in which quotas themselves have created an artificial value for the right to produce. I do not really think that the Department of Agriculture should be engaged in the business of creating artificial values and making it more difficult for young farmers to get into the business.

I think the Department of Agriculture should in the years ahead and in this year's estimates, and under the new format—and the Minister says there are going to be less votes but more details.

Mr. Olson: More information, yes.

[Interpretation]

en vertu de la Loi sur les compagnies. Cette décision fait suite à une recommandation que la Commission a faite à sa séance du 14 février.

M. Douglas (Assiniboia): Merci, monsieur le président.

Le président: Merci, monsieur Douglas.

M. Horner: Monsieur le président, je m'intéressais surtout aux remarques du Ministre et essayais de suivre ses chiffres et je n'ai pas vu la réduction de 11 millions de dollars en observant la nouvelle façon de présenter les crédits. Enfin, il se peut qu'elle y soit mais je ne l'ai pas vu.

Ce que je voulais dire ne concerne pas les chiffres mais les gens. Les gens dont le ministère de l'Agriculture et le Comité agricole devraient se préoccuper sont les cultivateurs particuliers, ceux qui s'engagent activement dans l'agriculture. Nous constatons de nos jours qu'il y a au pays, et à l'étranger, une mécanisation croissante et une tendance de plus en plus forte au regroupement des populations. Mais, nous déplaçons les gens sans nous préoccuper de leur sort.

Par exemple, la Commission canadienne du lait a décidé tout d'un coup qu'on ne peut pas obtenir un contingentement si on ne produit pas 35,000 livres de lait. Le fermier qui achète un petit troupeau et qui utilise le système des contingentements se heurtera à un moment donné à l'impossibilité d'obtenir de nouveaux contingentements. C'est le début des mises à pied dans l'industrie agricole. Vous créez une valeur artificielle pour les contingentements. Pour ma part, je crois que le système des contingentements dans l'industrie du lait liquide, lorsqu'il s'applique aux villes et dans un bassin déterminé, a créé dans cette région même une hiérarchie artificielle des valeurs affectant le droit de produire.

Le ministre de l'Agriculture ne devrait pas s'occuper d'établir des valeurs artificielles, rendant ainsi plus difficile à des jeunes cultivateurs de s'implanter dans l'agriculture.

Le ministère de l'Agriculture devrait à l'avenir se pencher sur ce problème. Le ministre prétend qu'il y aura moins de crédits mais plus de détails dans la nouvelle présentation.

M. Olson: Il y aura plus d'information, en effet.

[Texte]

Mr. Horner: This may be so. I think the Committees though and I hope that I and the rest of the Committee members will be concerned with the individual, the human being on the farm today. There is too much concern for the industry at large, the industry *per se*, but not enough concern for the individual engaged in the industry.

We have recently seen a great description of...

The Chairman: Will you come to your question, Mr. Horner, please.

Mr. Horner: I am making an opening statement on Item 1 of the agricultural estimates, Mr. Chairman.

The Chairman: I beg your pardon.

Mr. Horner: I did not intend to ask a question at this time. I will deal with questions later on. I am really concerned about the agricultural industry and the effects the department's initiative will lead the farmer towards in the regional development aspect. The description of farmers in Prince Edward Island, for example, two weeks ago in *Times* magazine really concerns me if they are going to shuffle and move farmers about. They were going to be great: they were going to allow the farmer to live on one acre of land if he wanted to remain in the same house, but that would be all, they were not really concerned about the individual. There is a growing feeling in the Department of Agriculture and across the country that agriculture is the real sick calf of Canada, and if we can cure all the agricultural ills, all Canadian economic ills will be cured. This is evident and why they are pilot projecting Prince Edward Island to quite an extent; that if they cure the agricultural ills of that province, then it will be on sound footing.

I want the department to concern itself in the year ahead and in the years ahead more with the individuals on the farms in the

• 1010

agricultural industry, not particularly with the overall aspects of the agricultural industry as an entity in itself. It is not an entity. It is composed of a number of individuals, a number of individuals who may well want to carry on their enterprise as poorly as they like or as efficiently as they like. This is a free country.

[Interprétation]

Mr. Horner: C'est possible et j'espère que mes collègues du comité se préoccuperont de l'individu, de l'être humain qui s'occupe de l'agriculture. On se préoccupe trop de l'industrie en général, de l'industrie en tant que telle mais pas assez de l'individu qui s'engage dans l'agriculture.

On nous a fait récemment une grande description...

Le président: Au fait, s'il vous plaît.

Mr. Horner: Je fais une déclaration sur le poste 1 des crédits pour l'agriculture, monsieur le président.

Le président: Je vous demande pardon.

Mr. Horner: Je n'avais pas l'intention de poser une question à ce moment-ci. Je le ferai plus tard. Je me préoccupe de l'industrie agricole et des conséquences de l'action du ministère sur le développement régional de l'agriculture. Je pense aux cultivateurs de l'Île-du-Prince-Édouard, dont on a décrit la situation dans le magazine *Time*. Imaginez! On allait forcer le cultivateur à habiter un terrain d'un acre, s'il désirait demeurer dans la même maison. On ne se préoccupe pas assez du particulier. On a de plus en plus la conviction, au ministère et à travers le pays, que l'agriculture canadienne est bien malade. Si on peut régler tous les problèmes agricoles, tous nos problèmes économiques seront réglés. C'est évident. Je me demande pourquoi tous ces chambardements sur l'Île-du-Prince-Édouard. Si on rétablit l'agriculture de cette province, l'économie de cette région reposera sur une base beaucoup plus solide.

Le ministère devrait se préoccuper davantage des particuliers qui travaillent dans l'agriculture. L'agriculture ne doit pas être con-

sidérée de façon globale, car elle est constituée d'un certain nombre de particuliers qui aimeraient pouvoir poursuivre leurs entreprises comme ils l'entendent, avec des moyens simples ou développés, selon leur goût. C'est un pays libre, n'est-ce pas? Nous voyons une tendance nouvelle dans la façon de traiter les Indiens. Je prends cela comme exemple. Nous disons qu'il faut leur donner plus d'autorité, qu'ils doivent conduire leurs propres affaires, être riche ou pauvre à leur guise; mais pendant ce temps, nous avons au ministère de l'agriculture une tendance à restreindre la liberté de l'individu.

[Text]

We are seeing a growing trend in the handling of the Indians, and I just use this as an example. Suddenly we say we got to give them more authority to run their own affairs, to go broke if they like or make a success if they like, but give them more authority; while all the while we see a continual drift in the Department of Agriculture to restrict the individual's authority, that if he is not making money, then he has to go. If he is not producing 35,000 pounds of milk or the equivalent in cream, then he has to go. He cannot have a quota, or he should not be given a quota.

We see this drift. The hog position is becoming the same. The Farm Credit Corporation position is becoming the same. If you are not a big farmer, if you cannot take advantage of \$100,000 or \$40,000 as an individual, you are not wanted in the agricultural industry anymore. You are a kind of a drug on the market, and if we could just get you out, the whole industry would be better off without you. This is the atmosphere into which I see the Department of Agriculture evolving.

As an individual I object strongly to this, and as a farmer I object strongly to it. I believe that the farmer should be able to engage in business in a manner in which, of course, it is most successful to him. But what are we all looking for? We are looking for happiness and contentment, not \$1 million perhaps, or not \$1 million worth of debt perhaps. And this is one thing the Department of Agriculture has to bear in mind. To me agriculture and farming might well become a business, but it is still going to be a way of life, and should be a way of life.

Some mention has been made of the Canada Grains Council, and I want to speak to that because I noticed in the Department's estimates there is \$100,000 awarded towards it, and the Department of Trade and Commerce there is another \$100,000 appropriated towards it. That is \$200,000. I think these figures are accurate. It may be only \$50,000 and \$50,000. It is either one or the other, but it is not very much. The point I am making is that it is not very much.

We were told this morning it is not a full-time job. I never thought for a minute it was. They appointed something like 27 people towards it.

Well, you can imagine that the administrative costs of the Canada Grains Council are going to consume all the money the federal government is appropriating towards it. Who is going to cover the travelling expense? Who is going to pick up the research aspect of the Canada Grains Council? Who is going to pick

[Interpretation]

Nous préconisons plus d'autorité pour les Indiens, plus de pouvoirs mais nous voyons entre-temps le ministère de l'Agriculture qui restreint l'autorité de l'individu. Alors, s'il ne fait pas d'argent, il doit abandonner l'agriculture. S'il ne peut pas produire 35,000 livres de lait ou l'équivalent en crème, il doit renoncer à ses entreprises. On ne lui fixe pas de quote-part.

Nous voyons que c'est cela qui se passe. La Société du crédit agricole est victime de la même tendance. Si vous n'êtes pas un gros cultivateur, si vous ne pouvez pas produire \$100,000 ou \$40,000, on n'a plus besoin de vous au sein de l'agriculture. Alors, vous êtes un boulet au pied de l'industrie qui se portera mieux lorsque vous l'aurez quittée. Je vois que le ministère de l'Agriculture évolue vers cette tendance.

En tant que particulier, je m'oppose énergiquement à cette tendance tout comme le cultivateur. Le cultivateur devrait pouvoir se consacrer à cette entreprise de la façon qui lui apporterait le plus de succès. Mais, qu'attendons-nous tous? Nous cherchons le bonheur et la satisfaction, et non pas 1 million ni \$1 million de dettes. Et voilà un facteur que ne doit pas perdre de vue le ministère et l'agriculture pourrait bien devenir une entreprise mais ce sera toujours une façon de vivre.

On a parlé de la Commission canadienne des céréales et je veux en parler parce que le ministère lui accorde \$100,000 et le ministère du Commerce accorde aussi \$100,000. Voilà qui fait \$200,000 et je pense que mes chiffres sont exacts. Peut-être qu'il s'agit de deux subventions: \$50,000 et \$50,000. Mais cela ne suffit pas; cet argent ne suffit pas.

Ce n'est pas un travail à plein temps bien que le ministre ait laissé entendre le contraire. Cet argent consacré ici engagera 27 personnes.

Vous pouvez imaginer les frais administratifs de cette commission qui va absorber toutes les sommes qui sont affectées par le gouvernement fédéral. Qui va payer les frais de déplacement, qui va financer les recherches de la Commission, qui va financer les expansions et la promotion des marchés autant de

[Texte]

up the development of markets, and the promotional aspect of markets that the Canada Grains Council is supposed to do? These are the questions that I am going to be confronted with because as a grain producer I firmly believe that I am not getting enough for my grain right now.

I do not believe the government should come along and add on another body. It may be a productive body, but no real farmer is on that council. I have the fullest regard and the fullest respect for Mr. Runciman, but he is not a farmer as such. He is not an actively engaged farmer. He is engaged in handling the farmer's part, but the elevator companies have not really played a full part in handling the farmer's products. They should be out selling it, themselves, as elevator companies. I have always thought that. They are actually just storing the farmer's product; that is, in a sense, what they are really doing.

I say to the Committee that, if it is the intention of the Department of Agriculture to pay so much to the Canada Grains Council and hope to get the rest on a percentage basis or a bushel basis from the farmer himself, they should go carefully. The farmer has seen costs added on, built into the cost of producing his product, and marketing his product, to the point where there is a very little left for himself to live on, particularly in light of the restricted amount of that product which he can sell. And so I say to the Committee that we should look at this particular aspect of the Canada Grains Council very closely.

● 1015

While it may be a productive body in a sense, it has to prove itself, and unless it is worth three or four cents a bushel, we should not tax the farmer with that three or four cents a bushel. Unless it can be worth more than that three or four cents a bushel to the farmer, we should not tax the farmer with that three or four cents.

I wanted to say just a word or two about the hog marketing grades. We see them working to some extent successfully, but here again they are not designed to help the individual farmer. When they were introduced here last fall I said I would take a close look at them, but I suspected that they would help the commercial hog producer, the integrated hog producer far more than they might help the individual farmer. And I suggested that we are reaching a grain surplus in western Canada which would see many farmers get into the hog business in order to move their grain. But they may not be the most efficient hog producers, although they are the most efficient grain producers. And this new

[Interprétation]

choses que doit entreprendre le conseil. Voilà la chose qui me préoccupe parce qu'à titre de producteur de céréales, je ne crois pas recevoir assez pour mes céréales à l'heure actuelle.

J'estime que le gouvernement ne devrait pas instituer un autre organisme. Il peut être productif mais il n'y a aucun véritable cultivateur au sein de cette commission. J'ai tous les respects du monde pour M. Runciman, mais il n'est pas cultivateur en tant que tel. Il doit veiller aux intérêts des cultivateurs, mais les compagnies d'élevateurs n'ont pas joué le rôle qu'ils devraient pour faire écouler les céréales des cultivateurs. Elles devraient s'occuper de les vendre mais elles ne font qu'entreposer les produits du cultivateur et voilà ce qu'elles font.

Et je déclare au Comité que si le ministère de l'Agriculture a l'intention de verser de l'argent à la Commission et espère obtenir le reste en pourcentage ou en fonction des boisseaux de la part du cultivateur, il devrait être très prudent. Le cultivateur a vu relever ses frais de production et de commercialisation. Alors, il y a très peu d'argent qui lui reste si on tient compte des restrictions qui s'imposent aux produits qu'il peut vendre. Alors, je déclare au Comité que nous devrions réexaminer attentivement cet aspect de la Commission. C'est peut-être un organisme assez productif; dans un certain sens, il doit cependant

faire ses preuves. Mais s'il ne vaut pas \$0.03 ou \$0.04 le boisseau; on ne devrait pas pressurer le cultivateur.

Je tiens à dire quelques mots à propos des catégories dans la commercialisation du porc. On voit que cette formule est quelque peu heureuse mais elle ne se préoccupe pas des particuliers. Lorsqu'on a présenté le budget l'automne dernier, j'avais promis de l'examiner minutieusement mais je pensais qu'on allait aider davantage le producteur de porcs, bien plus que le cultivateur particulier. J'ai déclaré qu'il y aurait bientôt un excédent de céréales dans l'Ouest du Canada, qu'on aurait d'autres cultivateurs se lancer dans la production du porc afin d'écouler leurs céréales. Ils ne sont peut-être pas très efficaces comme producteurs de porcs mais ils le sont comme producteurs de céréales. Mais cette nouvelle

[Text]

grading system may not help a temporary hog producer.

Well, I think the new grades—we have seen enough of the new grades to convince me that I was right in that assumption, that the new grades are basically better for the commercial hog producer, for the man in the business permanently, the man who is going to be in the business permanently, the integrated businessman who is in the business with a company or in a packing plant along with a partner. They are going to help him.

But they are not really going to help the individual. And this is a trend which I point out.

In the dairy industry and in the hog business, we see that the cattleman is still an operator and an individual. But I am becoming concerned about that position too. To quite an extent it is practically impossible for the individual to get into the new breed of Charolais cattle, because the Department continually gives the permits to the established person. The person who had them last year has a far better chance of getting them this year.

This has been the pattern. Now maybe it is going to change. Maybe the new producer, the young man, is going to be allowed in on this permit business, but I doubt it. I doubt if very many will be. I think these things should be thought out.

We are going to receive a great demand in the cattle industry for a new grading system where more accent will be put on leaner beef to please the housewife. Well, this may be desirable, but I would caution the Department again about devising new grades which will make it more beneficial for the commercial operation, for the integrated operation, and make it more difficult for the individual producer. I would caution the Department because this seems to be a growing trend.

I end on the remarks with which I began in saying that I want the Department to concern itself more with the individual producer, rather than with the growing atmosphere of the industry itself. We are still people, human beings, engaged in, I think, the best occupation in Canada, farming and working with the land. And I think we should concern ourselves more with the individual. I thank you.

The Chairman: Thank you, Mr. Horner. I recognize Mr. Gleave.

Mr. Gleave: Mr. Chairman, like the previous speaker, I am concerned about the direction in which farming is going, how it is going to affect the people in the industry. I

[Interpretation]

formule ne peut pas aider les producteurs temporaires de porcs. La nouvelle formule est plus avantageuse pour l'éleveur de porcs, mais l'homme d'affaires qui s'associe à une entreprise ou à une conserverie mérite aussi de l'aide.

Mais cela ne va pas aider les cultivateurs particuliers et c'est la tendance que je veux souligner.

Dans l'industrie laitière et celle de l'élevage des porcs, on constate que l'éleveur aussi est aussi exploitant que particulier. Mais je me préoccupe de cette attitude aussi. L'individu, dans une certaine mesure, ne peut pas s'engager dans l'élevage d'une nouvelle race comme le Charolais parce que le Ministère accorde les permis aux déjà installés. Ceux qui étaient installés l'année dernière ont meilleure chance cette année.

Cela va peut-être changer. Le nouveau producteur, le jeune ne pourra pas s'astreindre à ce régime de permis. Jen doute. On devrait réfléchir à ces choses...

L'industrie du bétail nous demande instamment un nouveau système de cotation où l'on mettra davantage l'accent sur le bœuf plus maigre pour plaire à la ménagère. Voilà qui est peut-être souhaitable mais je mets en garde le ministère contre toutes formes de classification qui seraient à l'avantage d'une exploitation commerciale, d'une exploitation intégrée, et qui rendra les choses plus difficiles aux producteurs individuels. Je mets en garde le ministère contre cette tendance, cette tendance qui est croissante à mon avis.

Et je conclus là où j'ai commencé en disant que je veux que le ministère se préoccupe davantage du particulier plutôt que de la tendance générale de l'industrie. Nous sommes des gens, des êtres humains qui sont consacrés la meilleure profession au Canada, la profession agricole. Nous devrions nous préoccuper davantage de ces gens-là.

Le président: Merci M. Horner. M. Gleave.

M. Gleave: Monsieur le président, comme le préopinant, je m'intéresse aussi de l'orientation de l'agriculture et de ses effets sur l'industrie. Je m'intéresse de savoir quel effet,

[Texte]

am concerned about the specific moves which are proposed here, and how they are going to affect the farmer. We have a proposal to set up a Canada grains council. At the same time we have a task force issuing a report which says that 30 per cent, practically one-third, of our acreage in western Canada must come out of our present grains practice, that is, the production of bread wheat.

And we have a grains council which is going to be very influential in this area—let us make no mistake about it—according to the statement of these who have been set to head it up, Mr. Runciman and Mr. Heffelfinger. They say their proper areas of concern shall be production, varieties, research and marketing, to go straight to the core of the whole farming industry in western Canada.

• 1020

It is proposed to set this council up, not by an Act of Parliament, but by Letters Patent. What this Committee should be concerned about is the clear line of responsibility of this proposed council. We should be concerned who they are reporting to, and whether the reports of that council are going to come before this Committee and before Parliament to be examined.

I fully expect the government intends to use the findings of this council on research and marketing as guidelines for the farming policy and the farming future of western Canada. These decisions should be made, when they affect a spectrum of people as broad as this, by the people who are responsible to the farmers of western Canada.

In regard to the financing, this is not yet clear. I suppose it will be as we on. I regard the present proposal, the \$180,000, as an interim measure.

We are faced with change in our farming structure, and what change is going to do the people in that farming structure is most important. We have had the report of the operations of the Canadian Dairy Commission and responsible people in that commission have said that the surplus is coming not from the small farmer but from the larger operators. Yet it is the small farmer that is coming under pressure, as pointed out by the previous speaker. Now are we going to have the same thing in the farming industry regarding grain?

We see in the hog business that one grain company is establishing a plant down on the coast which is going to, if I remember the figures, produce 25,000 hogs a year. What is

[Interprétation]

quelle répercussion cela va avoir sur les gens et comment les nouvelles formules, les nouvelles mesures vont toucher l'agriculteur. Nous avons une proposition qui veut établir un conseil des grains. Nous avons une équipe de travail qui nous donne un rapport disant que dans 30 p. 100, $\frac{1}{3}$ des terres, cultivateurs dans l'Ouest du Canada, on doit abandonner les pratiques actuelles de la culture, c'est-à-dire le blé.

Le Conseil des grains qui sera établi aura beaucoup d'influence dans ce secteur; il n'y a pas à s'y tromper. D'après ceux qui vont les diriger, MM. Runciman et Heffelfinger. Ils disent qu'ils s'intéresseront surtout à la production, aux variétés, à la recherche et à la commercialisation; cela va droit au cœur de l'industrie agricole de l'ouest du Canada.

Et on propose d'établir ce Conseil non pas par un acte parlementaire mais en vertu de lettres patentes. Mais le Comité doit surtout s'intéresser, à mon avis, aux responsabilités, aux attributions de cette commission. Nous devons nous préoccuper de leur compétence et à qui ils doivent rendre compte et savoir s'ils doivent faire rapport au Comité et au Parlement. Ils ont aussi donner leurs données sur la recherche et sur la commercialisation. J'espère que le gouvernement va utiliser ces données pour établir les principes directeurs d'une politique agricole et de l'avenir agricole de l'ouest du Canada. Ces décisions doivent être prises, lorsqu'elles touchent un si grand nombre de gens, par les personnes qui doivent rendre compte aux cultivateurs de l'ouest du Canada.

Pour ce qui est du financement, les choses ne sont pas encore tirées au clair. Je crois que la proposition actuelle de cent milles dollars est une mesure intérimaire.

Mais nous sommes aux prises avec le changement dans notre structure agricole, et l'effet qu'aura ce changement sur les gens qui s'y trouvent est ce qui compte le plus. Nous avons eu le rapport des exploitations de la Commission canadienne du lait et aux dires de personnes responsables dans cette Commission, les excédents ne viennent pas du petit cultivateur, mais du gros. Encore est-ce le petit cultivateur qui est sous pression comme l'a signalé l'Orateur précédent. Allons-nous avoir la même chose dans l'industrie agricoles au sujet des grains?

Nous voyons dans le commerce des porcs, qu'une entreprise de grains va établir, sur la côte ouest, une exploitation qui produira, si je me souviens bien, vingt-cinq milles porcs

[Text]

this going to do to the Alberta hog industry, or to the Saskatchewan hog industry? I mention Alberta because much of their production does flow in that direction. Who is going to make their living out of the farming industry. Is it going to be dominated by big industry, or is it going to be taken over and controlled by the farmers? Are the farmers themselves going to have the say-so in their future destiny?

These are the real questions that are facing farmers today and I think these are facing them whether they are farming in western Canada or in Ontario. I think that when the National Farmers Union comes before this body I would be willing to bet a nickel to the hole in a doughnut that they will be talking in part about this very thing.

We need answers from a government which proposes to set up a national grains council offset from control of this government and this committee. We need answers to know what is going on. We are not going to meet the problems of farming and agriculture in isolation from the rest of the Canadian community. Farming does not operate in isolation from the effects of the Canadian economy as a whole. The action of the Canadian economy as a whole towards industrialization and centralization is affecting the farming industry, and the farming industry is going to have to live with it. And we are going to have to be concerned that we come out of it with the kind of a farm structure that will serve the people who are on the land and will serve all Canadians.

I am not too sure that this is the real direction in which we are heading, Mr. Chairman.

The Chairman: Thank you, Mr. Gleave. I recognize Mr. Danforth.

Mr. Danforth: Mr. Chairman, rather than make a general statement I would like to take advantage of this opportunity to pose a series of short questions to the Chairman and wit-

• 1025

nesses here this morning for clarification purposes and a better understanding of how this series of investigations into the estimates of the Department of Agriculture are to be carried on.

Since this is a new departure and we are operating under the new rules, and since we have without objection entertained the request of the National Farmers Union to make a presentation this morning, it occurred to me that perhaps we might adopt a policy, when we are discussing the estimates under a particular vote that is directly connected with a farm commodity group on perhaps a nation-

[Interpretation]

par an. Quel effet cela va-t-il avoir sur l'exploitation des porcs de l'Alberta ou de la Saskatchewan, mais surtout de la Saskatchewan parce que la plupart de leur production est justement dans ce secteur. Qui va pouvoir faire sa vie avec l'exploitation agricole? Sera-t-elle dominée par la grosse industrie, sera-t-elle reprise et contrôlée par les cultivateurs? Est-ce que les cultivateurs, eux-mêmes, vont avoir leur mot à dire quant à leur avenir?

Ce sont là les questions qui confrontent les cultivateurs à l'heure actuelle, qu'ils soient cultivateurs dans l'Ouest ou dans l'Ontario. Lorsque le Syndicat national des cultivateurs comparaitra, je suis prêt à parier que ses représentants aborderont, en partie, ce sujet.

A mon avis, il nous faut des réponses d'un gouvernement qui propose d'établir un conseil national du grain qui ne serait contrôlé ni par le gouvernement ni par le présent Comité. Il nous faut des réponses pour savoir ce qui se passe parce que nous n'allons pas envisager les problèmes de l'exploitation agricole de l'agriculture en les isolant du reste de la communauté canadienne. Après tout, l'agriculteur n'exploite pas isolément des effets de l'économie canadienne dans son ensemble. L'action de l'économie canadienne dans son ensemble vis à vis l'industrialisation et la centralisation touche l'industrie agricole, et celle-ci devra s'y soumettre. Nous devons nous inquiéter d'en ressortir avec une structure agricole de nature à servir l'agriculteur et les Canadiens en général.

Je ne suis pas trop certain de l'orientation actuelle, monsieur le président.

Le président: Merci, monsieur Gleave. M. Danforth maintenant.

M. Danforth: Monsieur le président, au lieu de faire une déclaration d'ordre général, j'aimerais profiter de l'occasion pour poser une série de brèves questions au président et aux

témoins qui sont ici ce matin pour obtenir des éclaircissements et pour mieux comprendre comment toutes ces enquêtes sur les prévisions budgétaires du ministère de l'Agriculture vont être faites.

Puisque voilà une nouvelle initiative et que nous siégeons selon les nouvelles règles, et puisque nous avons fait bon accueil à la demande du Syndicat national des cultivateurs qui veut faire un exposé au Comité ce matin, il me semble que nous pourrions peut-être adopter une politique selon laquelle, lorsque nous discutons des prévisions budgétaires au sujet d'un crédit de particulier qui a direc-

[Texte]

al basis, that the committee consider inviting representatives from the agriculture group concerned to meet with this in conjunction with the Department of Agriculture in order that we might first hand ascertain the direct effect of the government's policy on the agricultural commodity, and by an exchange of views between the commodity group and the department itself be able to make a determination as a Committee on future recommendations to the government. I am wondering, Mr. Chairman, if this might not be considered.

Then, too, I wonder if we might not consider going into depth on this particular series of estimates before us because, as the Minister pointed out, they are different and the emphasis is perhaps moving in a different direction than formerly.

I was very interested in the indication of the Minister that emphasis is being placed on the computer system, for example, and I am wondering in the process of our deliberations if we might not have the officials directly responsible for setting up this particular aspect appear before us and perhaps give us a demonstration of the way it is proposed to use the computer system and how it could directly affect an individual farmer by perhaps a graphic illustration which the Committee might be able to observe first hand—because, Mr. Chairman, I believe that if this system is to be successful and it can be demonstrated to the satisfaction of all the Committee members that it is going to be to the advantage of farmers, we ourselves then will be able to indicate to the farmers we represent how it might be used to advantage.

I am wondering, Mr. Chairman, if suggestions of this sort might not be considered. I would place special emphasis on the change in our Committee hearings since the estimates are now moved from the House. I would ask that we have dual witnesses present whenever possible in order that we as a committee might hear both sides of the story, thereby being more able to form a more sound judgment on the recommendations we might be prepared to make to the government.

The Chairman: Mr. Danforth, the Committee is its own master and we are at liberty to direct our own proceedings. If there is some observation that some other member of the Committee wishes to make on how we should proceed, we are quite prepared to hear them.

[Interprétation]

tement trait à un groupe de denrées agricoles peut-être sur une base nationale, le Comité songe à inviter les représentants du groupe agricole en cause à envisager le sujet de concert avec les fonctionnaires du ministère de l'Agriculture afin que nous puissions nous rendre compte de première main de l'effet direct de la politique du gouvernement sur les denrées agricoles et échanger des opinions pour pouvoir, à titre de Comité, décider des recommandations qui devront être faites à l'avenir au gouvernement.

Je me demande, monsieur le président, si on ne doit pas songer.

Je me demande également si nous ne pourrions pas étudier à fond cette série particulière de prévisions budgétaires dont nous sommes saisis, parce que, comme le ministre l'a dit, elles sont différentes et on met peut-être l'accent sur autre chose.

Je suis très intéressé par les propos du ministre, savoir qu'on met l'accent sur le système d'ordinateurs, par exemple, et je me demande si, au cours de nos délibérations, nous ne pourrions pas faire comparaître devant nous les fonctionnaires directement responsables de l'établissement de ce système, et leur faire donner une démonstration de la façon dont on entend utiliser ce système d'ordinateurs et de la manière dont il touchera directement un agriculteur particulier, en nous donnant peut-être une illustration graphique que le Comité pourrait observer de première main, car, monsieur le président, si le système doit réussir et si on peut convaincre tous les membres du Comité qu'il profitera aux cultivateurs, nous serons en mesure d'indiquer à nos commettants la manière dont il peut leur être profitable.

Je me demande, monsieur le président, si des propositions de cette nature peuvent être étudiées. Je mettrais un accent spécial sur le changement dans nos séances de Comité maintenant que les prévisions budgétaires nous sont renvoyées de la Chambre. Je demande que nous fassions comparaître simultanément les témoins en question lorsque c'est possible, pour que nous puissions en tant que Comité, entendre les deux versions de l'histoire et prendre ensuite des décisions beaucoup plus saines et logiques sur les recommandations que nous serions disposés à présenter au gouvernement.

Le président: Monsieur Danforth, le Comité est libre de conduire ses propres délibérations. Si quelque autre membre a des commentaires à faire sur note façon quant à la marche à suivre, nous sommes prêts à les entendre.

[Text]

Mr. Whicher: Mr. Chairman, might I ask just a supplementary to Mr. Danforth's question?

The Chairman: Mr. Whicher.

Mr. Whicher: For example, when we talk about research will we have the research people here?

Mr. S. B. Williams (Deputy Minister, Department of Agriculture): Mr. Chairman, when any vote is underway the officials responsible for the administration of that particular vote will be available, always provided that we have sufficient notice. But they will be on call and will be available, yes.

Mr. Whicher: Might I ask in respect of research, so that you will have notice, that whoever is responsible for the research in respect of Latham raspberries be on hand, please.

Mr. Williams: That certainly can be arranged, yes.

Mr. Douglas: As a matter of procedure, Mr. Chairman, do you not think it is about time we dealt with the motion in regard to the wheat pool request.

The Chairman: Your point is well taken. I am not under any real pressure because the National Farmers Union is not present as yet.

Mr. Danforth: Mr. Chairman, I am prepared to stand the questions I had at the present time if you wish to proceed with this other matter before the Committee.

The Chairman: I have on my list Mr. Côté and Mr. Pringle. Since the National Farmers Union is not here I think probably we could hear two more questioners and then go directly to the motion before us, which has been deferred at the moment. Is that the wish of the Committee.

An hon. Member: Agreed.

Mr. Horner: It is 10.30, Mr. Chairman.

Mr. Danforth: Mr. Chairman, if you are going to proceed to other speakers then I shall withdraw my proposition that I stand the remainder of my questions. I understood that you wished a discussion on this amendment, that it might be a protracted one, and this is why I made my offer to the Committee.

The Chairman: There seems to be some disposition on the part of the Committee to deal with the motion which was presented earlier and deferred until 10.30.

[Interpretation]

M. Whicher: Monsieur le président, puis-je ajouter une question supplémentaire à celle de M. Danforth?

Le président: M. Whicher.

M. Whicher: Lorsque nous parlerons de recherches, ferons-nous venir les chercheurs?

M. S. B. Williams (sous-ministre de l'Agriculture): Monsieur le président, quand un crédit est à l'étude, les fonctionnaires chargés de l'administration de ce crédit seront toujours disponibles pourvu qu'ils soient notifiés suffisamment à l'avance, mais ils sont toujours disponibles, oui.

M. Whicher: Puis-je demander, quand il sera question de recherches, vous en serez ainsi avertis, que quiconque est chargé de la recherche sur les framboises Latham soit présent au Comité?

M. Williams: Cela peut certainement s'arranger.

M. Douglas: Comme question de procédure, monsieur le président, ne croyez-vous pas qu'il serait à peu près temps que nous traitions la proposition relative à la demande du syndicat de placement du blé.

Le président: Votre point est bien reçu. Il n'y a pas de pression d'exercée, parce que le Syndicat national des cultivateurs n'est pas encore ici.

M. Danforth: Monsieur le président, je suis disposé à réserver les questions que j'ai à poser, si vous désirez continuer avec l'autre question dont est saisi le Comité.

Le président: J'ai sur ma liste Messieurs Côté et Pringle. Puisque le Syndicat national des cultivateurs n'est pas ici, peut-être pourrions-nous entendre deux autres interlocuteurs et passer ensuite directement à la proposition. Le Comité est-il d'accord?

Une voix: D'accord.

M. Horner: Il est 10h. 30, monsieur le président.

M. Danforth: Si vous êtes pour passer à d'autres membres alors, je vais retirer la proposition de réserver le reste de mes questions. Je croyais que vous vouliez discuter de l'amendement et c'est pour ça que j'ai offert de passer outre à mes questions.

Le président: Le Comité semble disposé à passer directement à la proposition qui nous a été soumise plus tôt et déferée jusqu'à 10:30.

[Texte]

Mr. Muir (Lisgar): May I speak to this, Mr. Chairman?

The Chairman: May I read the motion and then indicate to you what the feelings of the steering committee were? Then we will throw it open for discussion. Is that reasonable?

The motion is:

That this Committee ask leave of the House to travel from place to place in Western Canada from the 14th of April, 1969, to the 20th of April, 1969.

And further, that its principal purpose shall be to examine the circumstances of the grain industry as it exists in that area, and that the Clerk of the Committee and the necessary supporting staff do accompany the Committee.

The steering committee met yesterday to discuss the invitation that was extended to us some time ago by the Saskatchewan Wheat Pool. There seemed to be general agreement that in informal discussions the subcommittee has considered the possibility of the Committee's travelling to Western Canada and because of circumstances beyond our control it is not possible to consider this travel for the time contemplated, namely mid-April, and accordingly the matter is deferred. By way of further explanation I may tell you that it has been decided, I suppose by the House Leader or by the government, that one committee could be away at any one time.

The Fisheries Committee had made plans and are leaving Ottawa on April 19. I am not sure when they will be back. Our trip was planned for April 13 or 14, coming back roughly April 22, as we felt that was the shortest amount of time that we could use to do justice to a western trip. In view of the fact that there cannot be overlapping of committees when they are away, the steering committee suggested that probably this matter of the Agricultural Committee going West or East should be deferred for the time being. That is the explanation. I will recognize other speakers but I think Mr. Pringle wanted to speak to the motion.

Mr. Gleave: Mr. Chairman, may I be permitted, as mover of the motion, to offer some explanation...

Mr. Horner: On a point of order, if I might, Mr. Chairman, the steering committee has no right to defer a suggestion. It has the right to suggest a deferment to the Committee; that is all. But if I heard you correctly you said the matter has been deferred. You have the right as the Chairman of the steering committee and the Chairman of this meeting to suggest

[Interprétation]

M. Muir (Lisgar): Puis-je parler sur ce sujet, monsieur le président?

Le président: Puis-je d'abord lire la motion et vous dire ensuite quelle était l'opinion du sous-comité? Nous passerons ensuite au débat. Cela vous convient-il?

La motion est la suivante:

Que le Comité demande à la Chambre permission de se déplacer à travers l'Ouest du Canada du 14 avril 1969 au 20 avril 1969.

Et, de plus, que l'objet principal du Comité soit d'examiner la situation de l'industrie céréalière dans cette région, et que le secrétaire du Comité ainsi que le personnel de soutien nécessaire, accompagnent le Comité.

Le comité de direction s'est réuni hier pour parler de l'invitation que nous avons reçue, il y a quelque temps, du *Wheat Pool* de la Saskatchewan. Il semblait, par accord unanime, que, lors d'entretiens officiels, le sous-comité avait envisagé la possibilité que le Comité se déplaçât à travers l'Ouest du Canada, mais que, pour des raisons indépendantes de notre volonté, ce voyage ne pourrait se faire aux dates envisagées, à savoir, à la mi-avril, et que la question serait donc remise à plus tard. Je pourrais ajouter qu'il a été décidé, sans doute par le leader de la Chambre ou par le gouvernement, qu'un seul comité pourrait s'absenter à la fois.

Le Comité des pêcheries avait déjà des projets, et il quitte Ottawa le 19 avril. Je ne sais pas exactement quand il reviendra. Nous avions projeté de voyager du 13 ou 14 avril au 22 avril environ, car nous estimions que c'était vraiment un minimum de temps à consacrer à un voyage dans l'Ouest. Puisqu'il ne peut pas y avoir deux comités absents à la fois, le comité de direction a décidé que l'on remette à plus tard ce voyage dans l'Ouest ou dans l'Est, du Comité de l'agriculture. Voilà l'explication. Je donnerai ensuite la parole à d'autres membres du Comité, mais je crois que M. Pringle a des observations à faire au sujet de la motion.

M. Gleave: Monsieur le président, puisque c'est moi qui ai présenté la motion, puis-je donner quelques explications...

M. Horner: Si vous me permettez un rappel au Règlement, monsieur le président, le comité de direction n'a pas le droit de différer une proposition. Il peut proposer au Comité de remettre la chose à plus tard; c'est tout. Mais, si j'ai bien compris, vous avez dit que la question avait été remise à plus tard. Vous avez le droit, en tant que président du Comité

[Text]

that the Committee defer the trip, but the final decision rests with this Committee. I urge all members in the studying of this problem to consider it not deferred as yet—not deferred as yet—but possible—possible—until we all have discussed the whole matter.

The Chairman: That is the purpose of presenting the report of the subcommittee; it is only a recommendation to the general Committee and the decision is the decision of this Committee as now constituted.

Mr. Gleave: May I have the privilege, Mr. Chairman?

The Chairman: I think as the mover of the motion we should recognize you.

Mr. Gleave: Thank you. The request from the Saskatchewan Wheat Pool came to us immediately after the Christmas-New Year's

• 1035

recess on January 14, 1969. On January 16, it was discussed by the steering committee and the Chairman pointed out that such an invitation had been received and a special committee at that time was constituted, with Mr. Lessard as Chairman, to consider the ways and means—I think this would be the proper way to put it—by which we could meet the request of the Saskatchewan Wheat Pool. We were thinking in terms, of course, of a little wider scope than just Saskatchewan. Now, what has happened in the meantime is that the Saskatchewan Wheat Pool has gone forward with a lot of tentative arrangements on the assumption, rightly or wrongly, that this Committee was going to come to Western Canada and that it was going to look into the grain situation as it existed there.

What I want to point out to this Committee is that if we do not follow through, even for the limited time that I have put forward in my motion, there will be a great deal of disappointment. I would not think that it would be in the interest of this Committee that the people of Saskatchewan should come to the conclusion that this Committee was not really interested enough in their problems to come and take a look. This is primarily the reason why I moved the motion. I do not need to go at great length into the situation that exists. The problem of how to condition grain, the marketing problem and the transportation problem have all been discussed, and what the farmers of Western Canada, and the farmers of Saskatchewan in particular, really are asking is that this Committee

[Interpretation]

et du comité de direction, de proposer que le Comité remette le voyage à plus tard, mais la décision finale est entre les mains du Comité. J'encourage vivement tous les membres du Comité, lorsqu'ils étudieront ce problème, à considérer le projet non comme remis à plus tard, mais comme possible, jusqu'à ce que nous ayons tous débattu la question.

Le président: C'est justement là le but de la présentation du rapport du sous-comité; ce n'est qu'une recommandation au Comité, et c'est au Comité qu'il appartient de prendre la décision.

M. Gleave: Puis-je avoir la parole, monsieur le président?

Le président: Je pense que, puisque c'est vous qui avez présenté la motion, nous devrions vous donner la parole.

M. Gleave: Merci. L'invitation du *Wheat Pool* de la Saskatchewan nous est parvenue immédiatement après l'intersession de Noël et

du Jour de l'an, le 14 janvier 1969. Le 16 janvier, on en a parlé au sous-comité de direction; le président a signalé qu'une invitation avait été reçue, et l'on a alors constitué un comité spécial, sous la présidence de M. Lessard, qui avait pour tâche d'examiner les moyens de répondre à l'invitation du *Wheat Pool* de la Saskatchewan. Nous songions, bien sûr, à ne pas limiter notre voyage à la Saskatchewan. Ce qui est arrivé entre-temps, c'est que le *Wheat Pool* de la Saskatchewan a pris toutes sortes de dispositions, croyant, à tort ou à raison, que le Comité allait se rendre dans l'Ouest du Canada, et examiner la situation de l'industrie céréalière dans cette région.

Ce que je veux signaler au Comité, c'est que si nous ne nous rendons pas là-bas, même pendant la brève période que j'ai proposée dans ma motion, cela causera une grande déception. Et je ne crois pas qu'il soit de l'intérêt de notre Comité que les gens de la Saskatchewan en arrivent à conclure que le Comité ne s'intéresse pas suffisamment à leurs problèmes pour aller examiner la situation de près. C'est surtout pour cela que j'ai présenté cette motion. Je n'ai pas besoin de préciser la situation. Nous avons déjà parlé des problèmes que posent le conditionnement des céréales, la commercialisation et le transport. Ce que les agriculteurs de l'Ouest, et surtout ceux de la Saskatchewan, demandent vraiment, c'est que le Comité consacre un peu de temps à aller examiner lui-même la situation.

[Texte]

take some of its time to go and see for itself the situation that exists.

Therefore I urge, Mr. Chairman, that you give very careful consideration to doing this. I realize the point brought up by the Chairman that another committee is moving but I think we do have time. After all Saskatchewan is not on the outer edges—we are not like those astronauts up on the moon—you can fly out there in a pretty short period of time and you can fly back just about as fast.

Thank you, Mr. Chairman.

The Chairman: I think I should recognize Mr. Lessard, who was the Chairman of the subcommittee, to present his view and then I will go on with other questioners.

M. Lessard (Lac-Saint-Jean): Alors si nous faisons une revue de ce qui s'est passé à la suite de la réception de l'invitation des gens de la Saskatchewan, disons que nous avons eu une réunion comité directeur, où il a été décidé de répondre positivement et d'essayer d'organiser un voyage dans les quatre provinces de l'Ouest. Vous savez que l'an dernier, le comité de l'Agriculture a fait un voyage dans l'Ouest et qu'il devait faire un voyage dans l'Est du Canada. Ce voyage n'a pas été possible à cause de la dissolution des chambres. De toute façon, lors d'une de nos premières réunions l'automne dernier, il avait été suggéré qu'on aille dans l'Est avant d'aller dans l'Ouest, de façon à éviter les critiques des cultivateurs des différentes provinces qui prétendent que l'on accorde plus d'attention à l'agriculture de l'Ouest qu'à celle de l'Est.

Mais lorsque nous avons discuté au comité directeur, de cette possibilité d'aller en voyage, à la suite de cette invitation des gens de la Saskatchewan, j'ai rencontré plusieurs députés des Maritimes et consulté certaines organisations de l'Est du Canada pour connaître leurs réactions au voyage du Comité de l'agriculture dans l'Ouest d'abord. Y avait-il des obstacles à ce que comité aille dans l'Ouest du Canada, au mois de mars, par exemple?

La réponse des gens de l'Est du Canada a été unanime. Ils ne sont pas intéressés à ce que nous allions dans l'Est au mois de mars parce que disent-ils, ils ne pourront pas nous montrer dans le champ même les problèmes qu'ils ont. Ils sont bien d'accord pour nous parler autour d'une table, comme ici, mais ce n'est pas uniquement cela qu'ils veulent nous faire voir, et je pense que ce n'est pas uniquement cela que les membres du comité

[Interprétation]

C'est pour cela, monsieur le président, je vous demande de songer à la chose très sérieusement. Je comprends bien ce qu'a signalé le président, à savoir, qu'un autre comité va se déplacer, mais je pense que nous avons suffisamment de temps. Après tout, la Saskatchewan n'est pas à l'autre bout du monde—nous ne sommes pas comme les astronautes dans la lune—et nous pouvons aller là-bas en avion en fort peu de temps et en revenir tout aussi vite.

Merci, monsieur le président.

Le président: Je vais donner la parole à M. Lessard, qui était président du sous-comité. Je vais lui demander de nous donner son avis, puis nous passerons aux autres questions.

Mr. Lessard: Thank you, Mr. Chairman. If we review what went on after the invitation of the Saskatchewan people, we had a Steering Committee meeting where it was decided that we would reply positively and try to organise a trip to visit the four Western Provinces. You know that last year the Agriculture Committee went West. It was supposed to make a trip in the East too, but it was countermanded because the House was dissolved. At one of our earlier meetings last fall, it was suggested that we would go to Eastern Canada before going West, so as to avoid criticism among the farmers of various provinces who claimed that we are giving more attention to the Western Provinces than to the Eastern ones.

But then when we discussed in the subcommittee the proposed trip following the Saskatchewan people's invitation I met many Maritime Provinces Members. I even consulted some of the Eastern Canada farm organizations to try and find out what would be their attitude about the Agricultural Committee going West before going East. Did they want us to go to Eastern Canada in March, for instance?

The answer from the Eastern people was unanimous. They were not interested in us going East in March because, as they say, and I think they are right to say so, that they will not be able to show us what they want to show us on the spot—the kind of problems that they are faced with. They perfectly know they can talk to us at hearings like this one, but this is not only what they want to show us and this is not only what the Committee

[Text]

veulent eux aussi. Ils veulent également se rendre sur place voir ce qui se passe dans le champ même, les activités agricoles de l'Est.

Ayant eu cette «permission», des gens de l'Est de retarder à la fin de mai ou aux début de juin notre voyage dans les Maritimes et dans le Québec, nous pouvions alors préparer notre voyage du côté de l'Ouest. Nous avons discuté la semaine dernière du temps minimum dont nous devons disposer pour aller dans l'Ouest. Nous avons convenu qu'à moins de 9 jours, évidemment, c'est à vous de décider, il était impossible de couvrir raisonnablement les 4 provinces de l'Ouest. Nous

• 1040

avons alors demandé à la Chambre la permission de partir le 14 pour revenir le 22 ou le 23. C'est à ce moment qu'on nous a dit que nous ne pouvions partir en même temps qu'un autre comité; le Comité des pêcheries a prévu son voyage depuis déjà un bon moment. Il fut d'abord prévu qu'il partirait le 17 avril; on a demandé de retarder le départ au 19 avril et nos confrères seront donc en voyage du 19 au 27 avril.

Au sujet de la proposition de M. Gleave, à l'effet de ne partir que pour une semaine, c'est-à-dire une période plus courte que neuf jours, il est évident qu'à ce moment-là, il n'y aurait pas de conflit avec le Comité des pêcheries, du fait que nous serons de retour quand eux partiront.

Évidemment, la solution est en partie acceptable. La question qui se pose toutefois, est celle-ci: Pouvons-nous partir pour cinq jours, en passer trois en Saskatchewan car le voyage est d'une journée, dans un sens et dans l'autre, et ne pas aller au Manitoba ni en Alberta, ni en Colombie-britannique? Les fermiers des trois autres provinces seront frustrés, et pas contents des membres du Comité si nous n'allons pas les voir en même temps. C'est un point qu'on doit considérer. Maintenant, si nous allons en Saskatchewan pendant trois jours, pouvons-nous passer deux jour au Manitoba et faire un autre voyage plus tard en Alberta et en Colombie-britannique? Encore là, c'est une autre solution. Pouvons-nous obtenir la permission de faire deux voyages dans l'ouest du Canada, nous les membres du Comité de l'agriculture? En somme, vous l'avez bien dit d'ailleurs, le comité directeur n'a aucun pouvoir.

C'est tout le Comité de l'agriculture qui a, jusqu'à un certain point, des pouvoirs. C'est à nous, ensemble, de décider de demander à la Chambre la permission de voyager pendant

[Interpretation]

wants either. This is not only what the Members want. They want to see things on the spot. They want to analyse the eastern farm activities.

So, having what one might call a "permission" from the Eastern people to delay our trip until May or even early June in order to visit the Maritimes and the Province of Quebec, we now can contemplate a Western trip. Then last week we discussed the timetable for this trip. We decided that unless we had at least nine days—this, of course, is up to you decide—we could not reasonably cover the four Western provinces in less than nine days. Therefore we ask the House permission to leave from April the 14th to the 23rd. Then we were told that we could not leave at the same time as another Committee and that the Fisheries Committee has already planed its trip for a while. It was scheduled first from April 17 on. They asked them to delay it to April 19. They would be then away from April 19th to 27th.

In respect of Mr. Gleave's proposal from this morning saying that we should only leave for one week—this is shorter than nine days—five days to be precise, it is obvious that it won't be any conflict with the departure of Fisheries Committee, as we will be back before they leave.

This now becomes partly acceptable, but the question is still there: can we leave for five days, spend three days in Saskatchewan, travel one day to go there and another day to come back, and then not even visiting Manitoba, Alberta or British Columbia? Would be the farmers of the three other provinces not frustrated by this and dissatisfied with the Committee Members if we do not go to see them at the same time? This is something we have to look into. But if we go to Saskatchewan for three days and spent two days in Manitoba and make another later trip to Alberta and British Columbia, it is may be another solution. Can we obtain a permission in order to make two trips West, we the members of the Agriculture Committee? In other words, the steering committee has not decisional power of course.

It is up to the Committee to decide it, so it is up to us to decide whether we should ask the House to leave for a five days trip, even if we have to plan a further trip. This is the

[Texte]

cinq jours quitte à retourner plus tard. C'est la situation actuelle, c'est à nous ensemble de décider. Merci monsieur le président.

The Chairman: Thank you, Mr. Lessard. I want to recognize Mr. Pringle. A supplementary, Mr. Roy?

M. Roy (Laval): J'ai une question supplémentaire, monsieur le président. J'aimerais ajouter quelque chose aux remarques de M. Lessard pour remercier les gens de M. Gleave de nous inviter là-bas. Je pense que si le problème existe dans l'Est non seulement d'aller visiter des producteurs, mais également de voir leurs problèmes de production. M. Gleave a souligné tout à l'heure, le problème de mise en marché et le problème de l'administration des grains. Je pense qu'à titre de membres de ce Comité, nous désirons rencontrer des producteurs au temps de la récolte et voir réellement leurs problèmes de production. Je pense que c'est la base: Si on veut faire du «marketing» on doit produire. Je pense qu'il serait bon que nous, de l'Est, voir voyons ce qui se passe au niveau de la production et également au temps de la récolte. Alors, c'est un peu pour cela que nous avions pensé à retarder à l'automne ce voyage-là.

Nous pourrions faire venir les gens de l'Ouest pour nous expliquer leurs problèmes mais je pense que ce «tour d'horizon» ne serait pas complet. Je pense que si nous pouvions retarder notre voyage à l'automne, cela serait beaucoup plus utile pour les membres du Comité.

• 1045

The Chairman: Thank you; I would like to recognize Mr. Pringle and then Mr. Muir, who is also a member of the steering committee.

Mr. Pringle: Thank you, Mr. Chairman. With all respect to my good friend from Saskatchewan, Mr. Gleave, I think there is a little danger here. It is true that we have received a request from the Saskatchewan Wheat Pool to visit them, but the problems of agriculture in the West are not necessarily concentrated in the Province of Saskatchewan and I believe we should also consider at some time in the not too distant future that grain is not the only product produced agriculturally in Canada.

There are many other products. We must think of some of the animals that eat the grain and help to use it up and there we other areas we must at least consider, where we must at least listen and at least recognize that there are problems. British Columbia will

[Interprétation]

present situation. It is up to us to decide. Thank you very much, M. Chairman.

Le président: Merci, monsieur Lessard; je donne la parole à M. Pringle. Une question supplémentaire, monsieur Roy?

Mr. Roy (Laval): A supplementary, Mr. Chairman, I should like to add something to the remarks made by Mr. Lessard as to thank the friends of Mr. Gleave for their kind invitation. I believe that if the problem exists in the East above all not only to visit the farmers but also to see their production problems. It has been emphasized by Mr. Gleave a few minutes ago that the marketing problems and the Grain administration problems, I think, as a Member of the Committee, that we should also meet the producers at harvest time and see their actual problems of production. It seems to me that it is the crux. If we want to use marketing, we have to produce. We should inquire about the feelings and thoughts of eastern farmers at the harvest. Therefore we should postpone the trip until next fall.

We can have those western people come here to discuss their problems, but that would not be complete. Therefore, I believe that if we can postpone the trip until next fall, it would be far more useful for everyone in the Committee.

Le président: Merci. Je vais donner la parole à M. Pringle, puis à M. Muir, qui est aussi membre du comité directeur.

M. Pringle: Merci, monsieur le président. En toute déférence pour mon bon ami de la Saskatchewan, M. Gleave, je pense qu'il y a un danger qui se présente ici. Il est vrai que la Saskatchewan Wheat Pool nous a invités à lui rendre visite, mais les problèmes de l'agriculture, dans l'Ouest, ne sont pas nécessairement concentrés dans la province de la Saskatchewan. Nous devrions aussi envisager, d'ici peu de temps, le fait que les céréales ne sont pas les seuls produits agricoles du Canada.

Il y en a beaucoup d'autres. Nous devons penser à certains des animaux qui mangent les céréales, qui aident à les utiliser, et nous devrions penser au fait qu'il existe d'autres régions que nous devons au moins étudier, que nous devons au moins écouter et dont nous

[Text]

be very unhappy if our Committee goes into Saskatchewan and then returns without a visit there. I would suggest that Alberta would not be too happy. I would like us make a proper, extended trip.

The emergency has been discussed until 2 o'clock in the morning in the House of Commons. We have had innumerable questions answered in the House of Commons with regard to the grain problem. I am not belittling the grain problem; it is a serious problem. As a matter of fact, I think at one time it was actually an emergency; it might even have been called a disaster area.

Now, it may be that April is the only time they can meet us because this is the time they are getting right on the ground and they will just be coming back from their winter vacations. I have flown from Edmonton to Winnipeg many times. I have flown over farm after farm where there are not any footprints of any description anywhere on the place, either from cattle or people, and it may be that that is the only time, before the summer vacations come along. The people who are in the dairying, poultry and cash crops sectors of the agricultural industry, Mr. Chairman, must be there all year round. They have to be there and they will be interested in seeing this Committee.

I am really not attempting to be facetious...

An hon. Member: Oh, no! Oh, no!

The Chairman: Order, please!

Mr. Pringle: ...and I say this to Mr. Gleave: I am trying forcefully to point out that we should consider this to be a real trip and not just hie off to Saskatchewan to investigate the grain problems and then return to Ottawa. Manitoba has grain problems, Alberta has grain problems and the whole of Canada has agricultural problems, believe me, including all of those provinces, and I hope that we should include agriculture in its entirety when we visit these provinces.

The Chairman: Gentlemen, may I simply say for the information of the Committee that I have spoken with Mr. Hansen of the Saskatchewan Wheat Pool this morning. They would be disappointed, of course, if we are not able to accept their invitation and go in April, but he did then suggest that probably June 10 or thereabouts might be another time when they would be willing to see and entertain us. I point that out only for the information of the Committee. I would like to recognize...

[Interpretation]

devons au moins reconnaître les problèmes. La Colombie-Britannique serait très malheureuse que le Comité se rende en Saskatchewan et revienne à Ottawa sans s'arrêter en Colombie-Britannique. L'Alberta ne serait pas très heureuse non plus. J'aimerais qu'on fasse un long voyage comme il convient.

La question a été discutée jusqu'à 2 heures du matin à la Chambre des communes. Nous avons répondu à nombre de questions posées en Chambre au sujet des céréales. Je ne minimise pas le problème, il est grave. En fait, à un moment donné, c'était un cas d'urgence, même, on aurait pu dire que c'était un désastre.

Il se peut que le mois d'avril soit la seule période où on peut se réunir, avant qu'ils retournent au travail.

Ils reviennent alors de leurs vacances d'hiver. J'ai voyagé plusieurs fois de Winnipeg à Edmonton. J'ai survolé ferme après ferme, où il n'y a absolument aucune trace d'activité; on n'y voit ni bête, ni gens. C'est peut-être le moment d'y aller avant que les vacances d'été commencent. Ceux qui s'occupent de la production de lait, de volailles et de culture maraîchère doivent être sur place toute l'année. Ceux-là seront intéressés à rencontrer notre Comité.

Je ne veux pas être facétieux...

Une voix: Non, non!

Le président: A l'ordre!

M. Pringle: ...et je dis à M. Gleave: nous devrions voir cela comme un véritable voyage. Nous ne devrions pas nous en tenir à aller en Saskatchewan pour étudier les problèmes des céréales seulement, puis revenir à Ottawa. Le Manitoba a des problèmes de céréales, l'Alberta a des problèmes de céréales et tout le Canada a des problèmes agricoles, croyez-moi, y compris ces provinces. Voilà pourquoi j'espère que nous incluons tous les aspects de l'agriculture en visitant ces provinces.

Le président: Messieurs, puis-je dire simplement pour la gouverne du Comité, que j'ai parlé à M. Hansen de la Saskatchewan Wheat Pool, ce matin. Ils seraient déçus que nous ne puissions pas nous rendre en Saskatchewan en avril, à leur invitation, mais il nous a proposé que le 10 juin serait peut-être une autre date où nous pourrions nous y rendre, où ils pourraient nous recevoir. Je tenais uniquement à le dire pour la gouverne du Comité. Je donne maintenant la parole à...

[Texte]

Mr. Horner: Mr. Chairman, on a point of order. You had no authority to tell them that we are not going because the Committee has not reached that decision yet.

The Chairman: I beg your pardon, Mr. Horner. I did not say we were not going. I simply told them that the steering committee was recommending to the Committee this morning that probably we would not be able to go and gave the reasons why the steering committee thought it might not be possible, but that I would call him later today and give him the decision of the Committee.

Mr. Horner: All right; that is different.

• 1050

The Chairman: I would like to recognize Mr. Muir who was pinch-hitting for Mr. Danforth on the steering committee yesterday. Mr. Muir?

Mr. Muir (Lisgar): Mr. Chairman, notwithstanding the decision which the steering committee felt they had to recommend to this Committee because of the government decision that two committees could not travel at the same time, I think we have a real crisis in the West at the present time and I think this is the time for the Committee to see it.

I am getting reports that there are thousands of bushels of grain that it is not going to be possible to dry. The grain is already deteriorating in the fields and I think it is up to the Committee to see this at first hand to give us some idea of the problems that Western Canada is facing at the present time. Mr. Danforth has a suggestion here that I would like him to give to the Committee which I think would settle the problem, as far as travelling through the West is concerned, at this time.

The Chairman: I will recognize Mr. Danforth.

Mr. Danforth: Mr. Chairman, we all realize this is a serious matter and regardless of the time or the season we might pick, it is going to be an inconvenience to some of the members concerned because of their duties.

As a member of the Steering Committee, I understand the difficulty arises through the government decision of allowing only one Committee to travel at a time. Perhaps this is a proper decision and I have no quarrel in this respect. However, I would like to suggest to the Committee that perhaps we could solve

[Interprétation]

M. Horner: J'invoque le Règlement, monsieur le président. Vous n'avez aucune autorité de lui dire que nous n'y allons pas, parce que le Comité n'a pas encore pris cette décision.

Le président: Je m'excuse, monsieur Horner. Je n'ai pas dit que nous n'y allons pas; je lui ai simplement dit que le Comité directeur a recommandé au Comité, ce matin, que nous ne pourrions probablement pas y aller; j'ai donné les raisons pour lesquelles le Comité directeur pensait que nous ne pourrions pas y aller, mais j'ai dit que je l'appellerais plus tard au cours de la journée pour lui faire part de la décision du Comité.

M. Horner: Très bien; c'est différent.

Le président: Je voudrais donner la parole à M. Muir, qui a remplacé M. Danforth au Comité directeur, hier. Monsieur Muir?

M. Muir (Lisgar): Monsieur le président, en dépit de la décision que le Comité directeur a cru bon de recommander au Comité, à cause de la décision du gouvernement, qui veut que deux comités ne peuvent pas voyager en même temps, je crois qu'il se produit une véritable crise dans l'Ouest à l'heure actuelle. Et c'est le moment que le Comité s'en rende compte.

On me dit qu'il y a des milliers de boisseaux de céréales qui ne pourront pas être asséchés; le blé pourrit dans les champs, et le Comité doit s'en occuper. Ce qui donnerait au Comité une idée des problèmes auxquels l'Ouest canadien fait face à l'heure actuelle.

M. Danforth a une proposition que je voudrais qu'il expose au Comité, ce qui résoudrait le problème en ce qui concerne les voyages dans l'Ouest.

Le président: Monsieur Danforth.

M. Danforth: Monsieur le président, nous nous rendons tous compte que c'est une question sérieuse quelle que soit la saison que nous choisirons, la date entraînera des inconvénients pour les députés étant donné leurs différentes occupations.

En tant que membre du Comité directeur, la difficulté qui se présente découle de ce que le gouvernement a décidé de ne permettre qu'un Comité à voyager à la fois. C'est peut-être une bonne décision. Je voudrais dire au comité que nous pouvons résoudre le problème si nous sommes disposés à abandonner,

[Text]

this if we as members showed our determination and consideration of the importance of the problem by being prepared to give up part of our Easter recess. We could leave here on April 9—providing our recess starts April 2—which would give us all a week at home with our families and in our ridings. We could then leave on April 9, spend two days in Alberta, go to Vancouver and spend two days there, then return and be able to keep our commitment with the wheat pool, view all of the facilities that we wish to view, and be back in Ottawa representing our constituencies before the estimated time of departure of the Fisheries Committee. In this way I think we would meet our obligations both at home and to the farmers and to these men in the West who have definite problems. I would like the Committee to consider this suggestion, which I feel will completely solve our problem.

The Chairman: Mr. Horner.

Mr. Horner: I would like to support Mr. Danforth's suggestion. In fact, I was wondering why the Steering Committee had not thought of that yesterday. I would also like to say to Mr. Roy that next fall is not good enough. We have had a difficult year in marketing grain. There has been a tremendous deterioration in the grain, as Mr. Muir suggested.

The very fact that in the grading the Board of Grain Commissioners has been swamped with samples in the last week or two weeks suggests that the farmers are all of a sudden becoming aware of the fact that this grain has deteriorated a great deal throughout the winter and that drying operations in the individual dryers are not quite as satisfactory as they might be, and they are rushing their grain to the Board of Grain Commissioners for grading samples. I do not suppose in April the grain will have started to heat yet, but it will be doing so shortly thereafter. The bins will be getting warm at the end of April or the beginning of May, if they have not already done so by the early part of April. So, this is a very crucial time. We will be able to see combines starting out in the fields trying to pick up crops perhaps from last year, depending on the weather in April, but this is the time the trip should be made.

I would also like to urge the Committee to consider Mr. Danforth's suggestion. There is no reason we could not take two or three days off at the end of the Easter recess, whatever it amounts to, and go out there and look at this problem. I realize, as Mr. Pringle suggests, there are other aspects of the agricultural industry that are very important.

[Interpretation]

à titre de député, une partie de nos vacances de Pâques. Nous pourrions partir d'ici le 9 avril, ce qui nous donnerait tous une semaine dans nos familles et dans notre circonscription. Nous partirions le 9 avril, passer deux jours en Alberta, deux jours à Vancouver, puis revenir et tenir notre rendez-vous avec l'office de commercialisation du blé, visiter toutes les installations qui nous intéressent, puis ensuite revenir ici pour représenter nos circonscriptions, avant le départ du Comité des Pêcheries. De cette façon, nous assumerions nos responsabilités vis-à-vis de nos circonscriptions et des cultivateurs et de la population de l'Ouest qui a des problèmes bien précis. Je voudrais que les députés examinent cette proposition qui résoudrait bien des problèmes.

Le président: M. Horner.

M. Horner: J'appuie M. Danforth. Je me demande pourquoi le comité n'y avait pas pensé hier. Je voudrais dire à M. Roy que ce n'est pas une solution de retarder le voyage à l'automne. Nous avons des problèmes difficiles qui se posent pour la vente du blé. Comme M. Muir l'a dit, la situation des céréales a détérioré sensiblement.

Le simple fait que les commissaires de la Commission canadienne des céréales nous disent que, depuis deux ou trois semaines, ils ont été inondés d'échantillons, montre que les cultivateurs constatent, tout à coup, que le blé s'est détérioré considérablement au cours de l'hiver et que les séances de séchage, dans les sécheurs particuliers, n'ont pas donné de bons résultats. Voilà pourquoi ils se dépêchent d'envoyer leurs céréales à la Commission canadienne des céréales pour qu'elles soient évaluées. J'imagine qu'en avril, les céréales n'auront pas commencé à s'échauffer mais elles commenceront bientôt, mais ce processus commencera bientôt. De sorte que c'est un moment critique. Nous allons voir les moissonneuses-batteuses dans les champs en train de récolter les céréales qui y furent laissées l'année dernière, si le temps le permet. C'est à ce moment qu'il faudrait faire le voyage.

Voilà pourquoi je demande au Comité de prendre en considération l'idée proposée par M. Danforth. Je sais, comme M. Pringle le dit, qu'il y a d'autres aspects de l'agriculture qui sont très importants. Je rappelle aux députés qu'ils ne devraient rien avoir contre les céréales. Il fut un temps où c'était l'exportation la plus importante, même plus impor-

[Texte]

I am fully aware of this. However, I want to draw to the Committee's attention that you should not begrudge grain. You must remember that for Canada a couple of years ago wheat and grain products was the largest single export; it even surpassed pulp and wood, which has long been Canada's sole biggest export.

Do not hold it against grain because you might have heard about grain around here until it is coming out your ears. Mr. Pringle

• 1055

has suggested that the odd farmer has been away on a holiday. I say to Mr. Pringle, "bully for that odd farmer". Why should a farmer not be able to have a holiday the same as a lawyer, a doctor, a hatchery expert or whoever it may be.

Mr. Pringle: I fully agree.

Mr. Horner: I do not hold this against the farmers, I say bully for them, but I do urge this Committee to go out West and see the problem first hand. If anyone thinks there is a gravy train in farming, I do not think anyone would begrudge you staying right there and buying a farm and going to work. There is a lots of land out there for sale, I will say that. You can take over any time you like.

But I really do want to see this Committee give serious consideration to this suggestion. I know that in the past the agricultural Committee has always functioned quite independently of its parent bodies, the parties on either side of the House. What is good for agriculture has always been their main key decision. Therefore I do not want you members to consider the fact from a party point of view, I want you to consider it from a necessity point of view and whether or not you can actually do yourself and the country some good by going out there.

I would also take objection to the fact, Mr. Chairman, and point out at this time that there has been no House decision. A number of members have said there was a House decision that only one committee could be away at one time. There was no House decision to that effect. It may well be a government decision but I do not think there was any House decision to that effect. With the overwhelming majority which the government finds itself in, I cannot see—I could understand it if it was in the old minority position—they being so frightened that we are going to overlap the Fisheries Committee three days that all hell will break loose in Ottawa if "X" number of members are away that extra three days. I do not see this as a

[Interprétation]

tante que la pâte à papier qui avait été si longtemps le principal produit d'exportation du Canada.

N'en voulez pas au blé parce que le blé pose des problèmes. Maintenant, si M. Pringle dit que certains cultivateurs sont partis en

voyage, je dis: «Bravo pour lui». Pourquoi est-ce qu'un cultivateur ne pourrait pas avoir autant de vacances qu'un avocat, qu'un médecin ou un expert agricole ou qui que ce soit?

Mr. Pringle: Je suis d'accord.

M. Horner: Tant mieux s'il prend des vacances mais j'exhorte le Comité à se rendre en Saskatchewan pour voir le problème sur place. Si quelqu'un pense qu'on gagne si facilement de l'argent en produisant du blé, on ne vous en voudra pas si vous achetez une terre et décidez de rester dans l'ouest. Il y a beaucoup de terres à vendre. Vous pouvez les acheter si vous voulez.

Je voudrais que le Comité examine attentivement la question. Je sais que par le passé le Comité de l'agriculture a toujours agi de façon très indépendante des partis de chaque côté de la Chambre. Son principal souci a toujours été ce qui était bon pour l'agriculture. Voilà pourquoi, monsieur le président, je ne voudrais pas que l'on considère tout cela du point de vue des partis mais du point de vue des besoins et des avantages qu'on prouverait au pays et à nous-mêmes en se rendant sur place.

Je m'oppose également, monsieur le président, à ce que beaucoup de députés ont dit qu'il y avait une décision de la Chambre, mais la Chambre n'a jamais décidé qu'un seul Comité serait autorisé à voyager à un moment donné. La Chambre n'en a pas décidé ainsi. C'est peut-être le gouvernement qui l'a décidé mais pas la Chambre. Étant donné la majorité du gouvernement, je le comprendrais s'il était encore en minorité; je ne vois pas pourquoi nous ne pourrions pas être absents en même temps que le Comité des Pêcheries pour trois jours; étant donné sa majorité écrasante, je ne vois pas que cela mettrait le gouvernement en danger et il me semble que ce n'est pas un critère pour exclure l'idée du voyage. Voilà pourquoi j'exhorte chacun d'entre nous de

[Text]

criterion for ruling out the whole trip, or anything like it, so I urge you, Mr. Chairman and everyone on the Committee, to reconsider this whole position from the point of view of doing this Committee and the country some good. British Columbia, Alberta and Manitoba have their problems, but the grain industry has a particular problem this spring which we could better understand by a firsthand visit.

The Chairman: One little correction I do not think anyone said this was a House decision.

Mr. Horner: I am sorry.

The Chairman: I think I said it was a government decision that only one Committee would be away at a time. I think the government is certainly charged with the responsibility of administering the affairs at the moment. I think it will be a House decision if we are given permission to travel. I think I should also say—and I think I accurately expressed the opinion of the Steering Committee in this respect—that there was a real desire to go and the only complication was in finding the time to do a proper job at that particular time.

Mr. Pringle: Mr. Chairman, may I add one short supplementary to Mr. Horner's remarks. My objection was to just going to Saskatchewan and returning, as it was suggested. I am opposed to that. If we can give equal time to the various Western provinces and look into all of agriculture, I would be prepared to agree to the proposal that we take our time.

The Chairman: Gentlemen, Mr. Peters asked to be recognized. Do you have a question or a comment, Mr. Peters?

Mr. Peters: Mr. Chairman, I think the motion that has been moved was to visit from place to place in Western Canada it was not specifically Saskatchewan, although I presume that is probably the place that we as members could probably learn the greatest amount about the largest problem at the present time. We had the opportunity of going to Western Canada a couple of years ago with the Committee, and I think that the members of Parliament gained a great deal from that. Perhaps the country did not because we really have not yet developed the committee system to the stage where it is a pseudo-legislative process, but I am sure that the investigation which the members made taught a lot of us from Eastern Canada something about the problems that they have in Western Canada.

[Interpretation]

repenser à la question et de l'examiner pour le bien du Comité et pour le bien du pays. Je sais que la Colombie-Britannique, l'Alberta et le Manitoba ont leurs problèmes, mais un problème important se pose pour les céréales ce printemps. Un problème que nous comprendrions davantage en nous rendant sur les lieux.

Le président: Un instant. Personne n'a dit que c'était une décision de la Chambre.

M. Horner: Je m'excuse.

Le président: J'ai dit que c'était une décision du gouvernement, qu'un seul comité pouvait s'absenter à un moment donné. Je crois que le gouvernement a la responsabilité de l'administration de la Chambre. Ce serait une décision de la Chambre si nous avions la permission de voyager. J'ai bien exprimé l'opinion du comité directeur à cet égard en ce qu'on désire vraiment partir pour l'Ouest, mais la question est de trouver le temps pour faire un travail convenable.

M. Pringle: Une question supplémentaire. Je me suis opposé à ce qu'on aille en Saskatchewan et qu'on revienne tout de suite. Si on pouvait trouver assez de temps pour accorder à toutes les provinces de l'Ouest une période égale, et étudier tous les aspects de l'agriculture, j'accepterais probablement cette proposition.

Le président: M. Peters demande la parole. Avez-vous une question ou des commentaires, monsieur Peters?

M. Peters: Monsieur le président, je crois que la motion qui a été proposée était de visiter l'Ouest du Canada, et non pas seulement la Saskatchewan, bien que c'est probablement la province où l'on apprendrait le plus sur le problème le plus important de l'heure. Le Comité a eu l'occasion de visiter l'Ouest du Canada il y a quelques années et bon nombre de députés en ont tiré de grands profits. Peut-être que le pays n'en a pas tiré autant de bénéfices, car nous n'avions pas encore conçu le système de comité comme un processus quasi-législatif, mais je ne doute pas que les députés de l'Est en ont beaucoup appris sur les problèmes de l'Ouest.

[Texte]

I agree that it is difficult for all members to be away from the House at the same time. Certainly we have tried this once or twice before and the House has even closed down if the reasons were good enough. This motion, of course, has produced a great number of members in this Committee—I think I counted 29 this morning—so apparently the government is very interested in what this Committee does. I think that is a shame, too. I do not like to see the attendance here for that purpose.

The Chairman: Mr. Peters, we recognize your presence this morning.

Mr. Peters: Mr. Chairman, I do not think I have to apologize for my attendance. I have missed only two meetings of this Committee—and usually when I am here I am heard.

I do not think we should look at travelling as some form of a trip. I have been on several and they are tough going. I can remember sitting at a hearing in a hotel in Winnipeg at one o'clock in the morning and being at the airport at six o'clock the same morning to catch a plane for Port Arthur. It is really no cinch.

However, I think that these meetings do give members of Parliament firsthand knowledge of problems.

I would like to give one example. For years the Moose Jaw elevator was empty. When we went there I think there were 12 bushels of wheat in an elevator which held something like five million bushels. We went there by accident, more or less, but the morning we were there they started putting grain in that elevator. I understand it has been used ever since. I think this sort of thing does give members an indication of how they can help, and I think this is one field in which they could help. The suggestion Mr. Danforth made is a very good one and perhaps we will change the minds of some members of the Committee who look at this in a certain light.

Mr. Pringle's point, that we should not fail to go to other areas is a very good one, but I fail to really see how, in going to British Columbia, that we are going to gain much by looking at the dairy industry in that area for the purpose of solving a particular problem. I am sure that members from Ontario would agree that we have that same problem. I am sure that Mr. Lessard from Quebec would agree that they have exactly the same problem there. However, we do not have the same grain problem. The only place that problem arises is where the majority of grain is produced.

[Interprétation]

Je sais qu'il est difficile à tous les membres de s'éloigner en même temps de la Chambre. Nous l'avons déjà fait à quelques reprises et avons même interrompu la session s'il y a d'assez bonnes raisons. Cette motion a évidemment suscité beaucoup d'intérêt de la part du gouvernement, si on en juge par le nombre de députés ici présents. J'en ai compté 29 ce matin.

Je n'aime pas voir les gens ici à cette seule fin.

Le président: Monsieur Peters, nous reconnaissons votre présence ici ce matin.

M. Peters: Monsieur le président, je ne crois pas savoir m'excuser de ma présence. Je n'ai manqué que deux réunions du Comité et quand je suis ici, on m'écoute. Nos voyages ne sont pas une partie de plaisir. J'en ai fait plusieurs et ce n'est pas une sinécure. Nous avons déjà siégé jusqu'à une heure du matin pour ensuite prendre l'avion à six heures vers Port-Arthur. Ce n'est pas facile, mais cela permet aux députés d'avoir une connaissance pratique des problèmes.

Voici un exemple—pendant des années, les élévateurs de Moose Jaw ont été vides; lors de notre visite, il n'y avait que douze boisseaux dans un élévateur à capacité de 5,000,000 de boisseaux. Le matin de notre arrivée, ils ont commencé à remplir les élévateurs et c'est ce qu'ils ont fait depuis lors. Le comité, grâce à ce voyage, pourra alors faire quelque chose, et je crois que c'est un domaine où il le peut. Alors la proposition de M. Danforth est excellente et cela changera l'opinion d'un bon nombre des membres du comité qui voient ce problème sous un certain aspect.

L'argument de M. Pringle est excellent mais je comprends mal qu'une visite en Colombie-Britannique nous permettrait d'examiner le problème de la distribution dans cette région dans le but d'y régler un problème particulier. Les députés de l'Ontario conviendront que nous avons ce problème ici même. M. Lessard admettra que le Québec a le même problème. Nous n'avons cependant pas le même problème parce que le problème se concentre là où les céréales sont produites. Je suggère au Comité de penser avant d'agir. Je ne partage pas l'idée de mon autre collègue parce que la situation est tout à fait

[Text]

I suggest the Committee think about going. I do not agree with the idea suggested by Mr. Roy, that we go in the fall, because you would be looking at a totally different situation in the fall than you would be at the present time. We should try to make our time available while the problem is present.

The Chairman: Thank you, Mr. Peters. Gentlemen, I have a number of members who wish to offer comments. I have Mr. Douglas, Mr. Southam, Mr. Côté, Mr. Benjamin, Mr. Cyr, Mr. Burton, Mr. Whicher, Mr. LaSalle, and Mr. Gauthier. It looks as though we are going to go on for some little time. I will recognize Mr. Douglas.

Mr. Douglas (Assiniboia): Mr. Chairman, I think we have to recognize that we did have a special invitation from the Saskatchewan Wheat Pool to go at a specific time. I think we should recognize too that the Wheat Pool has been organizing a winter program of discussion on this matter for all their members, which comprise a great majority of the farmers in Saskatchewan.

I believe they are going to go ahead and hold those meetings, regardless. They may be able to put them off until June, I am not certain, or perhaps they will have a second round in June if we cannot go until June. I do not think we have any guarantee that we can go in June, because of the number of standing committees we have. Our time may be all taken up, the same as the time we had hoped to get has all been taken up, because we were too late in speaking for it.

This organization is not just a wheat producers' organization, it is very active in the livestock and feed grain business too. I think all these aspects will be discussed by the farmers who will be present at the meetings that are organized for April.

Mr. Chairman, I question the correctness of any decision that may have been made to the effect that only one committee can be absent at one time. I cannot see, when committees are balanced like they are, the great harm of more than one being away at the same time. However, this is not important right now.

As to vacations, there may be a very small percentage of farmers in Western Canada who do go away for part of the winter at least. A figure that has been mentioned is a maximum of 2 per cent. Certainly the ones who have livestock will not be away, and there are a lot of livestock producers.

It has been said that we will not see all the agricultural problems by just going to Saskatchewan, but I suggest that most of the problems facing western agriculture at least can

[Interpretation]

différente à l'automne de ce qu'elle est à l'heure actuelle et voilà pourquoi nous devrions répartir notre temps pour examiner ce problème.

M. le président: Merci, monsieur Peters. Il y a quelques députés qui désirent prendre la parole—M. Douglas, M. Southam, M. Côté, M. Benjamin, M. Cyr, M. Lessard, M. Gauthier. Je crois que cela va prendre quelque temps. Je vais donner la parole à M. Douglas.

M. Douglas (Assiniboia): M. le président, nous devons admettre que la Saskatchewan Wheat Pool nous a invités à visiter cette région un moment donné. Nous devons admettre aussi que le Saskatchewan Wheat Pool a organisé un programme pour discuter de cette question cet hiver avec ses membres qui représentent la grande majorité des agriculteurs de la Saskatchewan.

Je pense qu'ils vont tenir la séance néanmoins. Ils peuvent retarder ces discussions jusqu'en juin, ou peut-être en tiendront-ils d'autres si nous ne pouvons nous y rendre avant juin. Rien n'est certain à propos d'une visite en juin parce que nous avons plusieurs comités permanents d'ici là. Nous serons peut-être très pris comme nous l'avons été parce que nous avons tardé à en parler.

Cet organisme n'est pas seulement une association de producteurs de blé. Elle s'occupe aussi de l'élevage et de grains de provende. Ces éléments seront examinés par les cultivateurs qui seront présents aux réunions prévues pour le mois d'avril, en passant, je mets en doute l'exactitude des décisions qui ont été prises lorsqu'on dit qu'un seul comité peut être absent à un moment donné. Je ne vois pas en quoi ça fera du tort si deux comités voyagent en même temps. Mais ce n'est pas un élément important pour le moment.

Quant aux vacances, il peut y avoir très peu de cultivateurs de l'ouest du Canada qui s'absentent pendant l'hiver—une partie de l'hiver tout au moins. On peut dire que le maximum de vacances est de 2 pour cent et les éleveurs ne seront pas absents, et il y a beaucoup d'éleveurs.

On a déclaré que nous ne pouvons pas examiner tous les problèmes de l'agriculture en ne visitant que la Saskatchewan mais je soutiens que la plupart des problèmes de l'agri-

[Texte]

be seen in Saskatchewan. There is not that much difference between Alberta, Manitoba and Saskatchewan, and at least the grain producing area in British Columbia. It may be that we can see all these provinces, if the majority of the Committee wishes to use part of their Easter vacation. I am in favour of doing this. If the majority want to do this, it is just fine with me.

But if they are not willing to do this, I cannot see anything wrong with splitting our trip to the West and going to Saskatchewan at the time best suited to go there and then going to the other provinces in June, if it can be arranged.

I would hope that we would see our way clear to accepting the Wheat Pool invitation to go to Saskatchewan in the third week of April.

Mr. Southam: Mr. Chairman, my remarks will be brief. The Committee has been faced with a dilemma on the timing of the Agriculture Committee's trip. I would like to support the suggestion made by Mr. Danforth to meet this problem.

I think we have to take this trip at this time, if at all possible. As was pointed out earlier by Mr. Gleave, the invitation of the Saskatchewan Wheat Pool was received and discussed in advance of Fisheries setting up their itinerary.

Another point I would like to make is this. Most of the problems that we want to discuss at the present time are in the West, and I go along with Mr. Pringle in respect of going to the four provinces—British Columbia, Alberta, Saskatchewan and Manitoba—at this particular time.

Also, as all Western members no doubt will be out in their ridings at that time, there is a matter of convenience and economy involved here. It would be much easier and less costly for members of the Committee to get together at Winnipeg or wherever they decide to start the trip.

Because of all these considerations I would like to support Mr. Danforth's suggestion—sacrifice two or three days of our holiday, get out there, and not just deal with the problems in Saskatchewan which are very grave at this time, but go right across the four provinces and complete this part of it.

[Interprétation]

culture de l'ouest peuvent être vus en Saskatchewan. Il n'y a pas grande différence entre l'Alberta, la Saskatchewan et le Manitoba et les régions de la Colombie-Britannique qui produisent les céréales. Nous pouvons visiter toutes ces provinces si la majorité des membres veulent consacrer une partie de leurs vacances de Pâques. Je suis en faveur si tous veulent le faire.

S'ils ne le veulent pas, je ne vois pas pourquoi on ne ferait pas un voyage dans l'ouest, visitant la Saskatchewan au moment idéal et après, visitant les autres provinces en juin, si tout cela peut être arrangé. J'espère que l'on pourra avoir la voie libre pour accepter l'invitation du Wheat Pool et visiter la Saskatchewan pendant la troisième semaine d'avril.

M. Southam: Mes remarques seront brèves M. le Président. Le comité doit faire face à un problème relatif à l'horaire du voyage du Comité de l'agriculture. La proposition de M. Danforth est excellente.

Nous devons entreprendre ce voyage le plus tôt possible. L'invitation du Saskatchewan Wheat Pool a été reçue et discutée avant que les Pêcheries fixent leur itinéraire. Je tiens à signaler aussi que la majorité des problèmes que nous voulons régler, pour le moment, se situent dans l'ouest, et je conviens avec M. Pringle que nous devrions visiter les quatre provinces, la Colombie-Britannique, l'Alberta, la Saskatchewan, le Manitoba.

Comme tous les députés de l'ouest seront alors dans leurs circonscriptions à l'époque, ce sera plus économique et conviendra mieux. Il sera plus facile et moins onéreux de nous réunir à Winnipeg ou à n'importe quel point de départ. C'est pourquoi je tiens à appuyer la proposition de M. Danforth. On pourrait bien emprunter deux ou trois jours de nos vacances pour nous rendre là-bas et non seulement brasser les problèmes de la Saskatchewan qui sont graves mais visiter les autres provinces pour compléter nos travaux.

The Chairman: Mr. Benjamin?

Le président: M. Benjamin.

[Text]

[Interpretation]

Mr. Benjamin: Mr. Chairman, I am only a visitor to this Committee and I must apologize for taking up a few minutes of its time.

I would like to point out to the Committee that this invitation was extended on January 14 and that almost two months have gone by. The Saskatchewan Wheat Pool organization has been very patiently waiting for a reply one way or the other. Since the reply has taken this long, they have had no choice but to proceed to get ready for these meetings. For the information of Committee members who are not from Saskatchewan, there are several hundred people in this province right now preparing briefs. At three locations proposed for meetings there are a total of 30 briefs now ready to be presented—and it is not just about tough and damp wheat.

I would like also to submit to the Committee that this invitation came long before any proposals were made for a Fisheries Committee to make any trips, and I am not downgrading the importance of the work of that committee.

If there was to be any fairness in this in terms of which committee goes when, it seems to me that the Agricultural Committee should go first, take the time required, and the Fisheries Committee immediately follow. I say this because of the time the invitation was extended and the length of time it has taken to reply to that invitation.

The Saskatchewan Wheat Pool are suggesting that week because they thought it would be the most convenient for the Agricultural Committee immediately following the Easter recess. It is also occurring at a time when between 50 and 100 million bushels of grain will be spoiling. You are talking about somewhere between \$50 million and \$150 million. I hope the Committee will decide that they are quite prepared to take two or three days out of their Easter recess plus the five days proposed in the motion and accept this invitation. I understand the Saskatchewan Wheat Pool hopes to arrange the meetings in such a manner that all of them will occur in the space of two or a maximum of three days—one or two in every constituency in that province—with the Committee broken up in groups of two or three or four to attend on behalf of the the whole Committee each of these meetings to hear these briefs.

I think you will be doing a great courtesy and disservice if this Committee does not decide today and so inform the Saskatchewan Wheat Pool that it is in fact going to meet with them on the date that they invited it to do so.

The Chairman: Thank you, Mr. Benjamin.

M. Benjamin: Je ne suis qu'un visiteur et je m'excuse de prendre quelques minutes du temps du comité.

Je tiens à signaler que cette invitation a été lancée le 14 janvier, il y a près de deux mois. Le Saskatchewan Wheat Pool attend patiemment une réponse quelle qu'elle soit. Vu que la réponse tarde tant, ils ne peuvent que procéder. Aux membres du comité qui ne sont pas de la Saskatchewan, je dis qu'il y a des centaines de milliers de personnes en Saskatchewan et il y a trente mémoires qui attendent la venue du comité, à plusieurs endroits. Et ce ne sont pas des mémoires qui ne concernent que le blé.

Je tiens aussi à soutenir que cette invitation a été reçue longtemps avant que le Comité des pêcheries ait envisagé un voyage. Je ne m'oppose pas à l'importance des travaux du Comité des pêcheries.

En toute justice et sur le plan des voyages de plaisir des comités, il me semble que le Comité de l'agriculture devrait faire une visite d'abord, prendre le temps nécessaire, et le Comité des pêcheries viendra ensuite. Et je le dis à la lumière de l'invitation qui a été reçue et du temps qu'il a fallu pour répondre à cette invitation.

Le Saskatchewan Wheat Pool suggère cette semaine, car l'organisme pense qu'au lendemain des vacances de Pâques, nous aurions du temps disponible. Il y a entre 50 et 100 millions de boisseaux de blé qui risquent de se gâter, ce qui représente entre 100 et 150 millions de dollars. J'espère que le Comité décidera de prendre deux ou trois jours de leurs vacances de Pâques, en plus de cinq jours proposés dans la motion, et acceptera cette invitation. Je crois comprendre que le Saskatchewan Wheat Pool espère organiser les réunions de la façon qu'elles se tiennent toutes dans une période allant de 2 à 3 jours. Au nombre d'une ou deux séances dans chaque circonscription de cette province. Le Comité pourrait se répartir en deux, ou trois ou quatre groupes afin d'entendre au nom de tout le Comité les mémoires qui seront présentés.

On rendrait un piètre service à ces gens si le Comité ne décide pas aujourd'hui et informe le Saskatchewan Wheat Pool que le Comité se rendra à son invitation le jour convenu.

Le président: Merci, monsieur Benjamin.

[Texte]

M. Côté (Richelieu): Monsieur le président, je voudrais essayer d'analyser ce problème avec le plus d'objectivité possible. À mon avis, c'est un problème grave. On a déjà fait deux propositions qui semblent acceptables. Mais, il ne faudrait pas oublier que nous sommes allés dans l'Ouest du Canada, il y a deux ans. Je partage un peu l'opinion de M. Horner. Il y a deux ans, alors qu'on n'avait peut-être pas une majorité écrasante, on est allé dans l'Ouest, en disant qu'on voulait montrer à la population qu'on comprenait leurs problèmes. L'objectif n'était pas bien fixé à ce moment-là.

On a fait un beau voyage; mais si c'est seulement pour faire croire à la population qu'on veut régler ou étudier leurs problèmes, ça ne vaut rien. Parfois, on peut les étudier beaucoup mieux à l'extérieur. À ce moment-là, nous de l'est du Canada, qui ne connaissons pas tellement les problèmes de l'Ouest, nous aurions aimé voir les désastres qui se produisent dans les champs.

Il y avait des amoncellements de grain que les cultivateurs devaient porter aux entrepôts. Nous n'avons pas pu y aller parce que la température ne le permettait pas et parce que la neige nous y empêchait. Nous n'avons pas pu voir toute l'ampleur du problème à ce moment-là.

Quelques-uns de cette région sont revenus avec l'idée qu'on avait fait croire à la population que leurs problèmes étaient réglés. Mais, rien n'a changé. J'accepterai d'y aller si c'est la volonté de la majorité. Mais, il ne faut pas perdre de vue le principe de l'affaire. Si on accepte l'invitation d'aller en Saskatchewan, est-ce que les personnes intelligentes vont croire qu'on s'en va réellement régler leurs problèmes? Non, on va constater ce qu'on sait déjà.

Je pense qu'on doit, avec le plus d'objectivité possible, trouver la meilleure date. Il ne s'agit pas d'essayer de régler le problème qui existe actuellement ou le problème qui existait l'automne dernier, alors qu'on a souvent dit à la Chambre des Communes que le Comité ne s'occupait pas du problème. Tous savaient que le problème était dû à une grosse production et à la température mais on faisait mine de l'ignorer.

Je serais d'accord pour laisser au comité directeur, qui nous ferait un rapport, le soin de choisir la meilleure date, celle qui nous permettra de voir tous les problèmes, et non pas les solutionner. Il ne faut pas y aller simplement pour faire croire à la population qu'on va essayer de régler leurs problèmes. Même si on voit les silos chauffer au mois d'avril, on ne pourra pas les arrêter de chauffer.

[Interprétation]

Mr. Côté (Richelieu): Mr. Chairman, I would like to try to analyse this problem as objectively as possible. As I see it, it is a serious problem. Two proposals have already been made which seem acceptable. But we must not forget that we went out West two years ago. I share a bit Mr. Horner's opinion. Two years ago, when we maybe did not have a crushing majority, we went out West, saying that we wanted to show the population that we understood their problems. The objective was not quite set at that time.

We made an excellent trip, but if it is only with the intention to make the population believe that we are going to study or solve their problems, it is no good, often, we can study them better from the outside. At that time, we from Eastern Canada who do not know too much about the problems of the West, we would have liked to see the disasters which occur in the fields.

There were piles of wheat that the farmers had to send to the elevators. We were unable to go because the weather would not permit and the snow was an obstacle. We could not fully see the scope of the problem at that time.

We came back from this area, with the idea that we had given the impression to the population that their problems were solved. But nothing has changed. I will accept to go if it is the will of the majority. But we must not forget the principle of the thing. If we accept the invitation to go to Saskatchewan will intelligent persons believe that we are going there to solve the problem? No, we will go and find out what we know exists already.

I believe that we must, in all fairness, find out the best date. It is not a question of trying to solve the problem that exists now, or the problem that existed last fall. It was often raised in the House of Commons that the Committee did not deal with the problem. Everybody knew that the problem was due to overproduction and weather; but there was a tendency to ignore it.

I would agree to let the Steering Committee, which would report to us, choose the best date which will allow us to see all the problems and not to solve them. We must not go simply to give the impression to the population that we will try to solve their problems. Even if we saw the silos heating in April, we will not be able to stop them.

[Text]

Il faut y aller à un temps où la température nous permettra d'observer. Il y a deux ans, on n'a pas pu voir tout ce que l'on voulait voir. Ceux de l'Ouest connaissent peut-être les problèmes, mais nous de l'Est, on aurait voulu aller dans les champs et voir les éleveurs, mais il faisait trop froid.

A mon avis, si on veut bien régler les problèmes d'agriculture, il faut trouver une date qui va nous permettre de voir le véritable problème et de visiter peut-être les quatre provinces de l'Ouest, et après, les provinces de l'Est. Mais, je ne serais pas d'accord pour prendre une décision immédiatement. On a des problèmes dans l'Est, en ce qui concerne l'industrie laitière. M. Horner en a parlé tout à l'heure, mais je pense qu'il a passé complètement à côté en spécifiant la question du quota sur le lait, qui a été décidé par les associations des cultivateurs. Mais, si on allait visiter l'Est, M. Horner et tous les autres ne seraient pas plus au courant des problèmes de l'Est. On n'est pas en mesure de les voir actuellement.

Monsieur le président, je suis peut-être aller trop loin, mais ce que je veux c'est le bien de l'ensemble du Comité. En collaboration avec la Chambre, on pourrait choisir le moment le plus propice pour voir tous les problèmes.

Il ne faut pas leur faire croire qu'on va les régler, parce que, même si on est sur les lieux, on ne les réglera pas.

The Chairman: Gentlemen, I have a number of other members who wish to direct questions. I detect a willingness on the part of the Committee generally, I think...

Mr. Whicher: I have an amendment to the motion, Mr. Chairman, which I think the Committee might accept.

The Chairman: May I conclude by saying that I feel there is a willingness to consider Mr. Danforth's suggestion. How can we decide this right now?

Mr. Whicher: Why not? Do you think Bell Telephone or the Royal Bank takes a year? Why can we not decide right now?

The Chairman: Because we do not know yet whether it is really possible.

Mr. Whicher: We make it possible.

Mr. Chairman, to me the only question is, would we be welcome in British Columbia, Manitoba and Alberta? I am sure that we would be.

[Interpretation]

We must go there at a time when the weather will permit us to find out. Two years ago we could not see everything we wanted to see. Of course you, from Western Canada, maybe know the problems, but us from the East wanted to see the fields and the elevators, but it was too cold.

In my opinion, if we want to solve properly the problems of agriculture, we must find a date which will allow us to see the real problem and maybe visit the four Western provinces, and afterwards, the Eastern provinces. But, I would not agree to decide immediately. We have problems in the East with regards to the dairy industry. Mr. Horner spoke about it awhile ago, but he missed the point completely by specifying the question of milk quotas, which has been decided by the farmers' associations. But is we could visit Eastern Canada, Mr. Horner and all the others would not be aware of the Eastern problem. You cannot see them presently.

Excuse me, Mr. Chairman, maybe I went too far but what I wanted to say is for the good of the Committee. In cooperation with the House, we could choose the most appropriate time to see all the problems.

We must not lead them to believe that we will solve them, even if we are there, because we cannot.

Le président: Merci. Merssieur, Il y a d'autres députés qui désirent poser des questions. Je remarque que le Comité désire en général,

M. Whicher: J'ai un amendement à proposer envers la motion que le Comité pourrait accepter.

Puis-je dire en conclusion que le Comité désire examiner la proposition de M. Danforth mais comment pouvons-nous nous décider maintenant.

M. Whicher: Pourquoi pas, pourquoi ne pouvons-nous pas décider tout comme les autres entreprises, telles que Bell Telephone ou la Banque Royale qui n'attendent pas une année..

Le président: Parce que ce n'est pas possible. Nous ne savons pas si c'est possible.

M. Whicher: Alors nous le rendrons possible. Pour moi la seule question est de savoir si nous serons bien accueillis en Colombie Britannique, au Manitoba et en Alberta. Je suis sûr que nous le serons.

[Texte]

[Interprétation]

Mr. Horner: You are welcome in Alberta.

M. Horner: Vous êtes les bienvenus en Alberta.

Mr. Whicher: I am sure that we would be and I wish to support Mr. Danforth's suggestion. I think it is a very good one. The amendment that I am going to make to Mr. Gleave's motion really should be made by Mr. Danforth but he has not presented it and I hope that he will not mind my giving this to you, Mr. Chairman. I think that we should go out there. I realize that the problem is acute, and in saying this I do not want to go over the story. I hope that the Western people on this Committee will, in the future, that is when we get back from this trip if we go, realize that we have great problems in Eastern Canada too. In the Province of Ontario where I came from the agricultural industry is just as trampled, perhaps not at the moment but in the over-all, as it is in the West. If we go to the West I hope that they will appreciate this fact. I move: that Mr. Gleave's motion be amended by changing the date to April 9th to the 18th and that we visit all four western provinces.

An hon. Member: April 20.

Mr. Whicher: April 20?

Mr. Danforth: April 20 is a Sunday. Never travel on Sunday.

Mr. Whicher: Is that what you wish, April 20? I hope with this motion that some of the people around here will appreciate that as far as Dr. Foster and I are concerned, we are under no obligations; we have not been instructed what to say.

Mr. Pringle: While we are studying that, I think Mr. Horner should be delegated to speak to our wives. I was planning on visiting my wife although she is in Ottawa. Perhaps Mr. Horner might clear it with my wife. I

• 1120

would be most happy. She is very small but she operates on the premise that the bigger they are the harder they fall.

Mr. Horner: My past experience would lead me to decline that invitation. I have no authority with wives whatsoever.

The Chairman: Gentlemen, please. In trying to expedite the amendment and the motion, I am wondering if it would be agreeable to Mr. Whicher and Dr. Foster and also to Mr. Gleave to have the original motion read: "from the 9th to the 20th"

M. Whicher: J'appuie la proposition de M. Danforth. C'est une proposition excellente et l'amendement que j'apporterais à la motion de M. Gleave devrait émaner de M. Danforth, mais il ne l'a pas fait. J'espère qu'il ne m'en voudra pas de l'avoir fait à sa place. Nous devons visiter l'Ouest. Le problème est grave, et en toute justice, j'espère que les députés de l'Ouest, à l'avenir, au retour de notre voyage, verront que nous avons aussi des graves problèmes dans l'est du Canada. En Ontario, d'où je viens, l'industrie agricole connaît un marasme aussi grave que dans l'Ouest. Si nous visitons l'Ouest, j'espère qu'ils apprécieront ce fait. Mais voici mon amendement: que la motion de M. Gleave soit amendée en changeant la date du 9 avril au 18 avril et que nous visitions les quatre provinces de l'Ouest.

Une voix: Le 20 avril.

M. Whicher: Le 20 avril?

M. Danforth: Le 20 est un dimanche. On ne voyage pas le dimanche.

M. Whicher: Le 20 avril? C'est ce que vous voulez? J'espère que certaines personnes ici présentes apprécieront que M. Foster et moi-même n'avons aucune obligation. Personne ne nous a fait la leçon.

M. Pringle: Puisque nous étudions cette proposition, je crois que M. Horner devrait être délégué auprès de nos épouses. J'avais l'idée de rendre visite à ma femme même si elle se trouve à Ottawa. Peut-être que M.

Horner arrangera l'affaire avec ma femme. J'en serais fort heureux. Elle est très petite, mais elle fonctionne sur les principes que plus ils sont grands, plus dure est la chute.

M. Horner: Mon expérience passée m'incline à rejeter une telle invitation. De toute façon, je n'ai aucune autorité sur les femmes.

Le président: Messieurs, pour expédier plus rapidement la modification et la motion, M. Whicher, M. Foster et M. Gleave accepteraient-ils que la motion originale soit ainsi rédigée: «du 9 au 20»?

[Text]

Mr. Barrett: And that we visit all four western provinces.

An hon. Member: Why not the amendment first, Mr. Chairman?

The Chairman: I thought it might simplify the whole thing if we just changed the motion a bit and...

Mr. Horner: I think it is agreeable if the Chairman just accepts the suggested amendment, and...

The Chairman: Mr. Gleave's motion then would read:

That this Committee ask leave of the House to travel from place to place in Western Canada from the 9th of April, 1969, to the 20th of April, 1969.

And further, that its principal purpose shall be to examine the circumstances of the grain industry as it exists in that area...

Now, I think the motion as presented is broad enough. It does not really mention any particular province.

You have heard the motion, Mr. Burton.

Mr. Burton: I have a few remarks I wish to make in view of the amendment which has been offered and which appears to be generally acceptable. I shall cut down on the number of remarks I had originally intended to make.

The Chairman: We have a number of others who wish to make remarks also. If it is a matter of recognizing other members of the Committee, I will have to recognize Mr. Cyr, Mr. Burton, and then Mr. Lessard and Mr. Gauthier. What is the wish of the Committee?

An hon. Member: Question.

Mr. Whicher: Mr. Chairman, I have another remark to add. Now that we have got down to Mr. Danforth's very sensible suggestion, let us cut out the nonsense and do something for the farmers of Canada. We all agree that they are in a deplorable state. We can talk here for months and months...

Some hon. Members: Hear, hear.

The Chairman: Gentlemen, the question has been called. All those in favour of the motion will please signify.

Motion agreed to.

M. Roy (Laval): Tout cela montre l'objectivité des gens de l'Est comme des gens

[Interpretation]

M. Barrett: Et la tournée des quatre provinces de l'ouest?

Une voix: Pourquoi pas d'abord la modification, monsieur le président?

Le président: Je crois qu'il serait plus simple de modifier légèrement la motion et...

M. Horner: Il serait convenable que le président accepte la modification proposée et...

Le président: La motion de M. Gleave se lirait donc comme suit:

Que le Comité demande à la Chambre permission de voyager à travers l'ouest du Canada du 9 avril 1969 au 20 avril 1969. Et de plus, que l'objet principal du Comité soit d'examiner la situation de l'industrie céréalière dans cette région.

Telle qu'elle se présente, cette motion est suffisamment large. Il n'est question d'aucune province en particulier.

Vous avez entendu la motion, monsieur Burton.

M. Burton: J'ai quelques observations à faire sur la modification proposée et qui semble en principe acceptable. Je limiterai le nombre de mes observations.

Le président: D'autres personnes ont des observations à faire. Je donnerai donc la parole à M. Cyr, puis à M. Burton et ensuite à MM. Lessard et Gauthier. Qu'en pense le Comité?

Une voix: Une question.

M. Whicher: Monsieur le président, j'ai une autre observation à ajouter. Maintenant que nous connaissons la proposition très sensée de M. Danforth, finissons-en une fois pour toutes et faisons quelque chose pour les agriculteurs canadiens. Nous savons tous qu'ils sont dans une situation déplorable. Nous pouvons continuer à parler pendant des mois...

Des voix: Bravo.

Le président: Messieurs, la question est mise aux voix. Ceux qui sont en faveur?

La motion est adoptée.

Mr. Roy (Laval): This shows the objectiveness of the Eastern people, as well of the

[Texte]

de l'Ouest. Comme je le mentionnais plus tôt, il faut considérer que, pour la cause de l'agriculture, nous perdons une semaine. L'ouverture de la Chambre aura lieu le 14, mais nous sommes très heureux de contribuer à l'expansion de l'agriculture canadienne en allant dans l'Ouest une semaine avant la date d'ouverture de la Chambre. Mais je pense que seul le Comité de l'agriculture accepte une telle chose. Je pense que tous les membres du Comité sont conscients de l'importance de l'agriculture et j'espère que cette collaboration durera tout le temps que nous siégerons. Nous avons également des problèmes dans l'Est et nous espérons avoir la même collaboration des membres qui viennent de l'Ouest pour trouver la solution à nos problèmes.

The Chairman: Mr. Danforth.

Mr. Danforth: Mr. Chairman, I do not wish to question in any way the reasons for the motion contrary to the one just passed, but would it not be an opportune time, since we

• 1115

appear to have a few moments, for us to express the determination that at a later date we will make a similar trip into eastern Canada in order to study the problems of that part of the country as well.

M. Côté (Richelieu): J'invoque le règlement, monsieur le président. Juste un mot pour noter que j'ai voté contre la motion, non pas parce que je ne voulais pas aller dans l'Ouest, mais tout simplement que la date proposée ne me convient pas. Le problème de l'Ouest m'intéresse énormément, mais cette date-là ne me convient pas. J'accepte la décision de la majorité parce que s'il faut attendre une date qui convienne à tous, nous n'irons jamais. Je voudrais être bien compris: si j'étais contre la motion, c'est parce que j'ai des engagements à cette date. Je vais faire l'impossible pour changer mes engagements.

Il ne faudrait pas non plus oublier une chose lorsqu'il est temps pour nous, les cultivateurs, de nous manifester, nous sommes prêts à tout sacrifier, même nos comtés, contrairement aux autres classes de la société. Les autres classes de la société prennent le temps d'aller visiter les gens pour bien les approfondir, pendant leur travail. Mais nous, les cultivateurs, sommes des bons gars, nous changeons la formule. Je trouve que c'est beau de la part de l'ensemble des cultivateurs. Mais je ne suis pas contre, cependant. Je ne suis pas contre le voyage, et je vais faire l'impossible pour y aller.

Mr. Chairman: Mr. Gauthier?

[Interprétation]

Western people. As I said before, we must consider that for the sake of agriculture, we are losing a week. The House will open on the 14th, but we are happy, however, to contribute to the extension of Canadian agriculture by going out West for one week before the opening of the House. I think we are the only ones—the Committee of Agriculture—who are accepting such a thing because we realize the importance of agriculture and I hope this co-operation will last for all our sittings. We also have problems in the East and we hope we are going to get the same co-operation from the Western members to find solutions to our problems.

Le président: Monsieur Danforth.

M. Danforth: Je ne discuterai pas des raisons qui ont poussé les membres à adopter une motion contraire à la précédente, mais il me semble qu'il n'est pas opportun d'expri-

mer notre intention d'effectuer plus tard une visite dans l'est du Canada pour étudier les problèmes de cette région.

Mr. Côté (Richelieu): On a point of order, Mr. Chairman, I just want to say a word. I voted against the Motion, not because I did not want to go out West, but because the proposed date does not suit me. But the Western problem does interest me greatly. But that date does not suit me so I will accept the decision of the Committee, because if we wait for a suitable date for all, we will never go. I want it well understood that if I was against the Motion, it is because I have engagements during that time. I will do my utmost to change these engagements. We must not forget one thing. When we farmers, when it is time to do something, we are ready to sacrifice everything, even our riding, to the other classes of the society. Other classes of society take the time to visit and to look during working hours. But we farmers are good guys, we change the formula so as to do our bit. That's very nice on the part of the farmers. I am in favour of the trip but it does not suit me as to time.

Le président: Monsieur Gauthier?

[Text]

M. Gauthier: Merci, monsieur le président. Je veux tout simplement expliquer mon opposition à la motion. Vous prenez une semaine de nos vacances qui, pour nous, ne sont pas des vacances. Nous devons travailler jour et nuit, dans nos comtés, et nous devrions encore sacrifier nos vacances pour aller dans l'Ouest. Comme M. Côté le disait tout à l'heure, nous nous soumettons à la majorité. Mais je trouve curieux que la majorité soit toujours du côté de l'Ouest. Et je me demande sincèrement ce qui arriverait si nous demandions aux gens de l'Ouest de venir étudier dans l'Est pendant leurs vacances.

Maintenant, je veux tout simplement attirer votre attention sur le fait que, nous aussi, avons des problèmes dans l'Est, surtout depuis trente ans. Et nous et nos problèmes semblons ignorés pas des gens de l'Ouest. Et je voudrais tout simplement insister ici pour que, lorsque nous demanderons aux gens de l'Ouest de venir enfin dans les provinces de l'Est, de nous accompagner et de ne pas se soustraire à leur travail, ils viennent aussi dans l'Est pour étudier la situation sur place.

Nous irons deux fois dans l'Ouest alors que nous avions promis, lors du dernier voyage, le prochain voyage se fera dans l'Est. Nous attendons depuis deux ans, mais rien ne s'est encore produit. Nous invitons le Comité, et tout particulièrement les gens de l'Ouest, à jeter un regard sur les problèmes de l'Est, et à montrer autant de bonne volonté que nous. S'ils le font, je crois que cela ira mieux à la grandeur du Canada.

Mr. Peters: Mr. Chairman, on a point of order. I have been a member of this Committee for 10 years now and in that time this Committee has never to my knowledge received a request from any organization in the East to visit any segment of eastern Canadian agriculture. I think it is unfair to make the statement that we go to the West but not to the East. We have gone to the West for specific purposes on specific invitations, and I think it should be up to some of the agencies in Eastern Canada to make an invitation to the Committee if they wish us to visit them. We would not, in my opinion, be in a very good position...

An hon. Member: On a point of order, Mr. Chairman.

The Chairman: Gentlemen, I think these points of order will serve no useful purpose. I am sure that all members of the Committee will be just as eager to go east as the western members are eager to have us go west at this particular time.

[Interpretation]

Mr. Gauthier: Thank you, Mr. Chairman. I just want to explain why I oppose the motion. Simply, you are taking one week of our holidays away from us. These are not true holidays for us. We have to work in our riding night and day and we have to give up these holidays to go West. As was said, we are submitting to the majority vote and I find it funny the majority is always in favour of the Western farmers and I am wondering whether they would come and study the farming situation in the Eastern part of Canada, I wonder what they would say.

I just want to draw this to the attention of the Committee because we too have problems in the East especially for the last 30 years and we have been ignored. They seem to have ignored our problems—the Western people have and I just want to point out that when we will ask the Western people to finally come and visit the Eastern provinces, I hope they will come and not withdraw. I want them to come also to the Eastern part of Canada and consider our problems.

We will have gone twice out West when on the last Western trip we said the next trip will be out East. We have been waiting now two years and yet there have been no repercussions nor effects. We invite the Committee, and especially the Western people to come and study our Eastern problems and to show as much good will as we do. If they do, I think everything will go better in Canada.

M. Peters: Un appel au Règlement, monsieur le président. Je suis membre du Comité depuis dix ans et pendant tout ce temps notre Comité n'a jamais, que je sache, reçu d'invitation d'un organisme de l'est d'aller visiter l'est du pays. Je crois qu'il est injuste de dire que nous allons visiter l'ouest mais que nous n'allons pas dans l'est. Nous allons dans l'ouest dans un but bien précis à la suite d'une invitation, je crois qu'il appartient aux organismes de l'est du Canada de nous inviter. Je crois qu'il ne conviendrait pas que...

Une voix: Un appel au Règlement, monsieur le président.

Le président: Messieurs, il me semble que ces points d'ordre n'avancent à rien. Je suis sûr que tous les membres du Comité manifesteront autant d'empressement pour aller dans l'Est que les députés de l'Ouest quand il s'agit d'aller dans l'Ouest.

[Texte]

Mr. Gleave: I merely wanted to ask what happened to the National Farmers Union.

Mr. Pringle: Mr. Chairman, may I make a motion?

The Chairman: You may make a motion.

Mr. Pringle: I move, seconded by Mr. Douglas:

• 1130

That the subcommittee of the Standing Committee on Agriculture take immediate steps to plan a trip into Eastern Canada at a date considered acceptable to representatives of Eastern farmers.

The Chairman: You have heard the motion.

Mr. Roy (Laval): On a point of order, Mr. Chairman.

The Eastern people never make a request to organize a trip in the East but I remember at the time I was not a member of Parliament, and I remember it well, the Ontario and Quebec farmers were here—over 28,000 to present a brief on behalf of the agricultural community. That might be the reason they did not have to go on a trip in the East.

The Chairman: Gentlemen, we have a motion before the meeting. May I read it? It is moved by Mr. Pringle...

Mr. McKinley: Just a minute, Mr. Chairman. I want to say a word of explanation concerning the feelings of the people from the East. At the present time the build-up of grain in the West jeopardizes very much the position of the Eastern farmers and if it can be cured and the grain gotten rid of this will do more for the Eastern farmers—I do not care whether it is Ontario or Quebec; they are both the same—than any one thing. If it is not gotten rid of and it goes into hogs, cattle, milk, poultry and turkeys our Eastern farmers will be out of business, and I think we should be going to where we can do the most good.

Mr. Roy (Laval): It is not a bad feeling from the Eastern people. I vote for the motion and we have the people who use your grain. We know it is quite a problem.

[Interprétation]

M. Gleave: Je voulais seulement demander ce qu'il advient du Syndicat national des cultivateurs.

M. Pringle: Monsieur le président, puis-je présenter une motion?

Le président: Vous pouvez présenter une motion.

M. Pringle: Secondé par M. Douglas, je propose:

Que le sous-comité du Comité de l'Agriculture prenne immédiatement l'initiative de projeter une tournée dans l'Est du Canada à une date qui soit acceptable aux représentants des cultivateurs de l'Est.

Le président: Vous avez entendu la motion.

M. Roy (Laval): Un appel au Règlement, monsieur le président.

Les gens de l'Est ne demandent jamais d'organiser un voyage pour aller dans l'Est mais je me souviens qu'alors que je n'étais pas encore député, je m'en souviens bien, les cultivateurs de l'Ontario et du Québec sont venus ici au nombre de 28,000 pour présenter un mémoire au nom de la collectivité agricole. C'est peut être la raison pour laquelle ils n'ont pas eu à faire un voyage dans l'Est.

Le président: Messieurs, nous sommes saisis d'une motion. Je vais la lire. Proposé par M. Pringle...

M. McKinley: Un instant. Un mot d'explication. Au sujet des griefs des gens de l'Est, il semble qu'à l'heure actuelle l'accumulation du grain de l'Ouest est une question très sérieuse et compromet beaucoup la situation des fermiers de l'Est. Si on pouvait trouver un remède et se débarrasser du blé, ceci accomplirait davantage pour les fermiers de l'Est. Peu importe si c'est l'Ontario ou le Québec: la situation est la même. Si nous ne l'écoulons pas et si le grain va aux porcs, au troupeaux de bétail, à l'industrie laitière, à la volaille et aux dindons, nos fermiers de l'Est seront en mauvaise posture et je crois que nous devrions nous orienter où cela pourrait faire le plus de bien.

M. Roy (Laval): Ce n'est pas de la rancune de la part des gens de l'est. J'ai voté en faveur de votre motion et nous sommes les gens qui utilisons votre grain. Nous savons que cela représente un problème.

[Text]

[Interpretation]

The Chairman: Gentlemen, the question has been called. It has been moved by Mr. Pringle, seconded by Mr. Douglas that:

The subcommittee of the Standing Committee on Agriculture take immediate steps to plan a trip into Eastern Canada at a date considered acceptable to representatives of Eastern Canada.

You have heard the motion. All those in favour, please signify. All those opposed, please signify.

Mr. Gauthier, may I recognize you.

Mr. Horner: ...to go to Eastern Canada and study and see their problems—the first time we have been asked.

The Chairman: Gentlemen, please! Order! Gentlemen, may I recognize Mr. Gauthier.

Mr. Gauthier: Monsieur le président, je veux attirer l'attention du Comité sur le dernier vote. Cette proposition avait été discutée au comité directeur, au sujet du voyage dans l'Est. Pourquoi apporter ici une autre proposition? C'est décidé, le Comité s'y rendra. Il ne reste qu'à choisir la date. Qu'on se décide. On a parlé tout à l'heure du voyage dans l'Ouest; je vous l'ai dit, nous sommes en faveur, mais nous sommes contre le fait de prendre toutes nos vacances pour aller dans l'Ouest.

The Chairman: I think, Mr. Gauthier, in all fairness that this is the first time the Committee has really put on record its desire to go to Eastern Canada and observe the problem—by motion, that is. Gentlemen shall Item One stand? Item 1 stood. The meeting is adjourned to the call of the Chair.

Mr. Peters: Mr. Chairman, on a point of order.

The Chairman: The meeting is adjourned.

Mr. Gleave: What are you going to do with the Farmers Union? Surely you can tell us that.

Mr. Peters: Mr. Chairman, is it the intention of the Chair to have this Committee reconvene this afternoon if the National Farmers Union is in town?

The Chairman: No; by way of explanation may I tell you that I called the National Farmers Union yesterday afternoon and extended an invitation for them to be here at 10:30 this morning. I requested that they inform us whether or not they were going to be here. I have received no information so there is nothing more I can do. I assumed

Le président: Il a été proposé par M. Pringle, appuyé par M. Douglas, que:

Le sous-comité de l'agriculture du Comité permanent de l'agriculture projette une tournée dans l'Est du Canada, à un moment qui conviendra aux gens de l'Est.

Ceux qui sont en faveur? Veuillez lever la main. Tous ceux qui ne le sont pas, veuillez lever la main.

Mr. Gauthier puis-je vous donner la parole?

M. Horner: Aller dans l'Est pour étudier leurs problèmes. Je crois que c'est la première fois qu'on nous le demande.

Le président: A l'ordre s'il vous plaît! Monsieur Gauthier, puis-je vous donner la parole?

Mr. Gauthier: Mr. Chairman, I want to point out to the Committee that what we have just voted, this was discussed in the Steering Committee, this Eastern trip. Why are we coming in with another motion? It is decided we are going there. We are trying to decide on the time to go. This is a joke. We have decided on this we spoke about the Western amendment. We are in favour of the Western trip but we are not in favour of taking our holidays, all our holidays for this trip.

Le président: Je crois M. Gauthier, en toute justice, que le Comité a vraiment versé au dossier son désir d'aller dans l'est du Canada pour observer quel est le problème. Je dis bien à la suite d'une motion. Messieurs, l'article un est-il réservé. L'article un est réservé. L'assemblée est ajournée après décision du président.

M. Peters: J'invoque le Règlement, monsieur le président

Le président: L'assemblée est levée.

M. Gleave: Qu'allez-vous faire dans le cas du syndicat des cultivateurs. Sans doute, vous pouvez nous dire cela.

M. Peters: Monsieur le président, est-ce qu'il va y avoir une autre séance du Comité cet après-midi si le syndicat national des cultivateurs est en ville?

Le président: Non. Comme explication je vous dirai que j'ai appelé le Syndicat des cultivateurs hier après-midi et je leur ai donné l'invitation d'être ici ce matin à 10 h. et demi. Je leur ai demandé que s'ils étaient pour être ici ou non, ils devraient nous aviser. Je n'ai pas eu de réponse, alors il n'y a rien que je puisse faire. J'ai pensé que puis-

[Texte]

that when the invitation was extended they would be here. Since they are not here no provisions have been made.

An hon. Member: That is how interested the Western farmers are in the Agriculture Committee.

[Interprétation]

que l'invitation avait été faite, des représentants seraient ici. Puisqu'ils ne sont pas ici, nous ne pouvons rien faire.

Une voix: Voilà comment les cultivateurs de l'ouest s'intéressent au Comité de l'agriculture.

MINUTES OF PROCEEDINGS

TUESDAY, March 11, 1969.
(27)

The Standing Committee on Agriculture met at 9:46 a.m. this day, the Chairman, Mr. Beer, presiding.

Members present: Messrs. Beer, Clermont, Cobbe, Côté (*Richelieu*), Danforth, Douglas (*Assiniboia*), Gauthier, Gleave, Korchinski, Lambert (*Bellechasse*), Lessard (*Lac-Saint-Jean*), McKinley, Moore (*Wetaskiwin*), Peters, Pringle, Roy (*Laval*), Southam, Thomson (*Battleford-Kindersley*), Turner (*London East*), Whicher, Yanakis—(21).

Appearing: The Honourable H. A. Olson, Minister of Agriculture.

Witness: Mr. S. B. Williams, Deputy Minister of Agriculture.

The Committee resumed consideration of Item 1 of the 1969-70 Estimates relating to the Department of Agriculture.

It was agreed that Item 5 of those Estimates, under "RESEARCH", would be considered at the Committee's next meeting.

On Item 1, the Minister and Mr. Williams answered questions.

Item 1 was allowed to stand.

At 11:02 a.m., the Committee adjourned to the call of the Chair.

Michael A. Measures,
Clerk of the Committee.

(Traduction)

PROCÈS-VERBAUX

Le MARDI 11 mars 1969.
(27)

Le Comité permanent de l'agriculture se réunit ce matin à 9 h. 46, sous la présidence de M. Beer.

Présents: MM. Beer, Clermont, Cobbe, Côté (*Richelieu*), Danforth, Douglas (*Assiniboia*), Gauthier, Gleave, Korchinski, Lambert (*Bellechasse*), Lessard (*Lac-Saint-Jean*), McKinley, Moore (*Wetaskiwin*), Peters, Pringle, Roy (*Laval*), Southam, Thomson (*Battleford-Kindersley*), Turner (*London East*), Whicher, Yanakis—(21).

A comparu: L'honorable H. A. Olson, ministre de l'Agriculture.

Témoin: M. S. B. Williams, sous-ministre de l'Agriculture.

Le Comité reprend l'examen du crédit 1 des prévisions budgétaires du ministère de l'Agriculture pour l'année 1969-1970.

Il est convenu d'examiner le crédit 5 de ces prévisions budgétaires, à la rubrique «RECHERCHES», à la prochaine séance du Comité.

Sur le crédit 1, le Ministre et M. Williams répondent à des questions.

Le crédit 1 est réservé.

A 11 h. 02 du matin, le Comité s'ajourne jusqu'à nouvelle convocation du président.

Le secrétaire du Comité,
Michael A. Measures.

EVIDENCE

[Recorded by Electronic Apparatus]

Tuesday, March 11, 1969.

● 0945

The Chairman: Gentlemen, I am informed that 16 members have been counted.

When the Committee rose we were considering Item 1 of the Estimates and I presume that the Committee will want to continue discussing Item 1 until all opening statements have been expressed. Then I assume the Committee might wish to move on to Item 5.

In the meantime the Minister and the departmental officials would like to have some idea of what you would like to discuss on Thursday so that they might have the appropriate officials here. May we leave that until the conclusion of the meeting and indicate it to you then?

Hon. H. A. Olson (Minister of Agriculture): Yes, I think that would be fine.

The Chairman: Do you have some comments, Mr. Minister?

Mr. Olson: Mr. Chairman, there are a number of Branches, of course, that members will want to study such as Research, Production and Marketing, and Health of Animals. It would be helpful if we could have some idea at a prior meeting which particular Branch you want to discuss so that we would have the appropriate officials here. On Thursday, it will not be possible for me to be present so it would be helpful if we could have some indication of which officials you would like to question on that day.

Mr. Danforth: I can appreciate the problem before the Minister and the staff and I am wondering if this morning we might perhaps allow a wide-ranging and general question area on Item 1. Personally, I would like to suggest that Thursday be devoted to a start on the research program in order to have the witnesses here to give us the general working of the research program, the administration and the field. Then perhaps we could go on and deal in depth with that particular vote as a separate part under the new proposed estimates.

Before we get into this, on a point of order, Mr. Chairman, we were informed that an

[Interprétation]

TÉMOIGNAGES

(Enregistrement électronique)

Le mardi 11 mars 1969

Le président: Messieurs, nous sommes seize.

Lorsque la dernière séance a été levée nous étudions le crédit 1 des prévisions budgétaires. Je suppose que vous voudrez poursuivre cette étude après quoi nous passerons au crédit 5.

Pour l'instant, le ministre et ses fonctionnaires aimeraient savoir ce dont nous allons discuter jeudi afin de s'assurer de la présence des fonctionnaires appropriés. Pouvons-nous attendre jusqu'à la fin de la séance pour vous faire part de ces détails, monsieur le ministre?

L'hon. H. A. Olson (ministre de l'Agriculture): Certainement.

Le président: Désirez-vous faire une déclaration, monsieur le ministre?

M. Olson: Le ministère comporte diverses Directions et les membres de ce Comité voudront certes poser des questions sur l'une ou l'autre de ces Directions. Il nous serait utile de savoir, à l'avance, sur quelle Direction vous aimeriez faire porter vos questions afin que nous puissions déléguer ici les fonctionnaires appropriés. Jeudi, je ne pourrai être présent. Il serait donc utile que nous sachions dès maintenant quels fonctionnaires vous voudriez pouvoir interroger.

M. Danforth: Je comprends le problème du ministre et de ses collaborateurs. Je me demande si, ce matin, il ne serait pas possible de permettre des questions d'ordre général, face à l'étude du crédit 1. Personnellement, je suggère que, jeudi, nous entreprenions l'étude du programme de recherches afin que nous puissions questionner les fonctionnaires du ministère sur la façon dont se déroule ce programme et sur son administration. Nous pourrions par la suite étudier ce crédit plus en détail.

Question d'ordre, monsieur le président, on nous avait dit qu'un certain groupe devait se

[Text]

invitation had been accepted for an agriculture group to be present last week and although we waited they were not available. May I enquire, Mr. Chairman, if there was any explanation why this group was unable to meet with us at that time? Was any explanation forwarded?

The Chairman: There has been no explanation. The Committee would be entitled to know the history of the situation. The National Farmers Union asked to appear before the Committee on Thursday of last week and it was generally agreed that we would hear that group at 10.30 in the morning and an invitation was communicated to the National Farmers Union through Mr. Stuart A. Thiesson. I particularly asked that they let us know whether or not they would be here. I got no information on that point and I assumed that they would be coming. I have not had any further information as to why they did not come. There has been no communication.

Mr. Danforth: Mr. Chairman, now can we perhaps deal with the suggestion that we stay on Item 1 today because under Item 1 we can range over the whole agriculture program while the Minister is here.

The Chairman: You may have noticed, that we have this room only until 11 o'clock so our meeting will be brief this morning. We also have a suggestion that this morning be used for general questioning under Item 1 and that on Thursday we proceed with the Research Department, which I believe is Vote 5. Does this meet with the approval of the Committee?

Some hon. Members: Agreed.

The Chairman: Then the meeting is open for questioning. Will you indicate your desire to ask questions? Mr. Thomson, I recognize you.

Mr. Thomson (Battleford-Kindersley): Thank you, Mr. Chairman. I have several questions to start with. First, there is the matter of an Item on page 11, Contributions to the Superannuation Account. Why is there this sudden jump here?

The Chairman: Is that in the Blue Book?

Mr. Thomson (Battleford-Kindersley): Yes, it is on page 11 of the Blue Book. It jumps from \$7 million to almost \$12.5 million, Contributions to the Superannuation Account.

Mr. Chairman, while they are looking may I ask another question in connection with the

[Interpretation]

présenter devant le Comité, la semaine dernière, mais bien que nous ayions attendu, il ne s'est pas présenté. Puis-je demander pourquoi ce groupe n'a pu se présenter à ce moment-là. Avons-nous reçu des explications?

Le président: Non, mais le Comité a certes le droit de savoir ce qui s'est produit. La *National Farmer's Union* avait demandé que le Comité reçoive ses représentants jeudi dernier. Il avait été décidé que nous les recevions à dix heures trente. L'invitation faite à cet organisme a été adressée à monsieur Stuart A. Thiesson. J'avais bien demandé qu'ils nous fassent savoir s'ils viendraient ou non. Comme je n'ai pas reçu de réponse, j'ai supposé qu'ils viendraient. Et je n'ai pas su pourquoi ils ne sont pas venus.

M. Danforth: Nous pouvons peut-être nous en tenir à la suggestion qui a été faite et étudier le crédit 1 ce qui nous permettra de poser une foule de questions sur l'ensemble du programme agricole pendant que le ministre est ici.

Le président: Vous avez peut-être remarqué que nous n'avons cette salle que jusqu'à onze heures, ce qui signifie que notre séance devra être de courte durée. On nous a proposé de profiter de cette réunion pour poser des questions d'ordre général et de réserver jeudi à l'étude de la question des recherches, qui est le crédit 5. Est-ce que vous êtes d'accord?

Des voix: D'accord.

Le président: Eh bien alors maintenant, messieurs, vous avez la parole. Vous pouvez poser les questions. Monsieur Thompson, vous avez la parole.

M. Thompson (Battleford-Kindersley): Eh bien, monsieur le président, j'ai un certain nombre de questions pour commencer. Tout d'abord, il y a une question portant sur la page 11, c'est-à-dire, contributions au fonds de retraite. Est-ce que vous pouvez me dire pourquoi il y a un saut si brusque ici?

Le président: Est-ce dans le Livre bleu?

M. Thompson (Battleford-Kindersley): Dans le Livre bleu, il y a un saut de \$7 millions à près de \$12 et demi millions, contributions au compte de pensions de retraites. Monsieur le président, pendant qu'il cherche, est-ce que je pourrais vous poser une question concernant

[Texte]

contribution to the National Grains Council. Speaking for myself only, I am still a little bit vague about the intents and purposes of the National Grains Council and what it is going to be, and I wonder whether we could have a statement from the Minister, since he is here, on this particular item. Just what we are going to do with the National Grains Council?

Mr. Olson: Mr. Chairman, I made a statement in the House about that some time ago. However, if there are still some questions I am prepared to try to answer them. Very briefly, in reply to the question, we hope that the National Grains Council will be a forum where representatives of all sectors of the grain industry—the producers, the elevator companies, the transportation companies, the terminal operators, the shippers, and indeed even some of the milling and baking industry, although the representation is not large from that part of it—will get together from time to time on a more or less formal basis and discuss the problems that have arisen within their section of the industry so they can discuss them and try to find solutions. That, generally is the purpose.

Now, they are also charged with the responsibility of attempting to find better ways of promoting the sale of Canadian grains, and this includes a number of things such as the consideration of what standards Canada ought to have. For example, we have followed the qualification as far as milling and baking is concerned of marquis or better for a very long while, and it is now being questioned whether we should confine our licensing in the area where bread wheats are grown to this quality.

Then, of course, there are other matters about varieties that are grown, and so on, generally. I should inform you that the Grains Council have undertaken as their top priority item for consideration—and that meeting, I believe, is in a few days—the matter of the transportation aspect of the grain business.

● 0955

We ran into some problems, as you know, with the severe cold weather and other things when we were unable, perhaps to deliver the grain to the West Coast export or terminal position as rapidly as would have been desirable. This was during a certain number of weeks when the temperatures were very low. Another matter for consideration is the equipment that is being used, and all of the other techniques involved.

[Interprétation]

la contribution à la cotisation au Conseil national des grains? Est-ce qu'on pourrait avoir une déclaration du ministre sur ce point pour nous indiquer ce que va être le Conseil national des grains?

M. Olson: Monsieur le président, j'ai fait une déclaration à la Chambre à ce sujet il y a quelques temps déjà, toutefois si des questions me sont posées à ce sujet, je m'efforcerai de vous répondre brièvement. J'espère que le Conseil national des grains sera une tribune où les représentants de tous les secteurs de l'industrie, producteurs, compagnies d'éleveurs, de transport, exploitant des terminus, expéditeurs; y compris même les meuniers, les boulangers, tout le monde pourra venir devant cet organisme et les porte-parole de tous ces secteurs d'activité pourront se réunir de temps en temps sur une base plus ou moins officielle et discuter ensemble des problèmes qui se sont posés dans leurs secteurs d'activité pour pouvoir ainsi y trouver une solution. Voilà la façon générale dont l'organisme va fonctionner.

Il va s'agir également de trouver un moyen de favoriser, de développer les ventes de céréales canadiennes et pour cela, il y aura plusieurs sujets, notamment l'étude des normes que devrait imposer le Canada, par exemple, nous avons suivi les normes fixées pour le blé marquis ou mieux et nous cherchons à avoir au moins cette qualité, maintenant il y a eu d'autres questions également touchant les variétés de céréales. Je voudrais vous dire également que le Conseil national des grains a accepté comme sujet prioritaire, l'étude d'un point portant sur les transports des céréales.

Il y a eu des problèmes comme vous le savez à la suite du grand froid et d'autres éléments qui nous ont empêchés peut-être de livrer les céréales aux exportateurs de la côte Ouest aussi rapidement qu'il eut été souhaitable de le faire pendant plusieurs semaines, alors que les températures étaient très basses. Cela ajouté au problème de la nature du matériel utilisé et des autres techniques employées; voilà les aspects de cette étude.

[Text]

I cannot tell you when they will get around to other things, but I would like the Grains Council to consider this matter of quality and standards soon. I would like them to take under consideration a number of matters with respect to some new varieties that are coming on the market, because certainly conflicting advice and recommendations are coming to my Department respecting these matters.

Generally, to sum up, the purpose of it is to consider all of the problems that arise from time to time and have formal meetings on a regular basis where all of these people get together and talk about these things so that we can come up with what may be a consensus from the whole industry on what steps ought to be taken to enhance the position of the grain producers.

Mr. Thomson (Battleford-Kindersley): Mr. Chairman, I have another question or two in connection with this. I take it the Grains Council is a sort of task force, if you will, with power to recommend. Is there some intention to assess the grain industry to help to defray part of the cost here?

Mr. Olson: Yes, there is. Of course, it will be on a voluntary basis, but I should say that while I think two of the producer groups have passed resolutions at their annual meetings to deduct one-tenth of a cent a bushel from the grain flowing through their elevator systems as their contributions, we expect that all the other members of the Council will be assessed and will be making contributions to help to defray the costs as well.

Mr. Thomson (Battleford-Kindersley): Concerning the other question that I raised, these people have only the power to consider and make recommendations. Is this correct?

Mr. Olson: They have not been given any—I suppose the right words are “delegated authority”. In other words, no act has been passed through Parliament giving them specific legislative authority to administer. At their meeting they decided they would like to be set up as a company or a corporation under the Companies Act, and this is now going forward, rather than by a special act of Parliament.

There are a number of reasons for that. I suppose the most important one is that they felt they should have some independence from the government so that they would not be directly responsible to the government but could have a somewhat greater

[Interpretation]

Je ne peux pas vous dire maintenant quand ils vont aborder d'autres sujets, mais j'aimerais que le Conseil national des grains étudie la question des normes et de la qualité. Très bientôt j'aimerais qu'ils étudient un certain nombre de points portant sur les nouvelles variétés qui entrent sur le marché, car il y a certainement des avis contraires qui sont envoyés à mon ministère à ce sujet. Disons donc, qu'en général le but du Conseil est d'étudier tous les problèmes qui se posent à l'occasion et d'avoir une réunion officielle permanente, permettant à toute une série de personnes de discuter ensemble de leurs problèmes et d'obtenir l'avis général de ce secteur d'activité afin de voir les mesures à prendre pour améliorer la situation.

M. Thompson (Battleford-Kindersley): Monsieur le président, j'ai également quelques questions à vous poser à ce sujet. Je conclus donc que le Conseil national des grains est en quelque sorte un groupe d'étude qui est habilité à faire des recommandations. J'ai une autre question à vous poser à ce sujet. Est-ce qu'il est prévu d'envisager la possibilité que les cultivateurs contribuent à défrayer une partie des coûts engagés?

M. Olson: Oui, je pense, mais ce serait sur une base volontaire. Je pense que deux groupes de producteurs ont voté des recommandations, des résolutions dans leurs réunions annuelles afin d'allouer un dixième de un pourcent de leurs revenus, à titre de contributions à cette entreprise et nous espérons que d'autres groupes de producteurs en feront autant.

M. Thompson (Battleford-Kindersley): Et l'autre question que j'avais soulevée. Ces gens ne peuvent faire qu'une chose, étudier et faire des recommandations, n'est-ce pas?

M. Olson: Ils n'ont pas reçu de délégation de pouvoir pour autant que je sache. Ils n'ont pas de pouvoir législatif. Ils ont décidé, lors de leur réunion, de se constituer en société, en vertu de la Loi sur les sociétés et c'est une mesure qui est en cours de réalisation.

Ils pensaient d'une part qu'ils devaient être assez indépendants du gouvernement pour ne pas être directement responsables envers le gouvernement. Ils voudraient avoir un certain degré de liberté pour étudier certaines questions et formuler des recommandations, et

[Texte]

level of freedom to consider and to make recommendations.

Also the view was expressed that there would be some danger in delegating to this Council what may amount to parallel authority; the function of the Canadian Wheat Board, for example. If there was, in fact, some parallel of authority it was thought this may at times be conflicting in that they may not see eye to eye on some matters.

Therefore, it was their considered opinion that they should be set up as a corporation under the Companies Act, rather than under a special act of Parliament although we are prepared, as a government, to propose legislation to Parliament had that been the manner in which they wanted to set up their legal entity.

There is one point that I should probably add to the other answer I gave. Under the Terms of Reference they have agreed to is the following:

4. Examine ways and means by which it could effectively assist in the promotion of exports of Canadian grains and grain products and recommend thereon to the Ministers, and implement agreed programs for its participation in assisting the promotion of exports;

Now, this may be somewhat different and yet similar to the Canadian Wheat Board in that they have in their Terms of Reference the authority to undertake programs of promotion of grain in the export market. Agreed programs.

The Chairman: Mr. Thomson.

Mr. Thomson (Battleford-Kindersley): I will pass, Mr. Chairman. Could I have the answer at another time to my other question?

Mr. Olson: I am sorry if I missed answering.

Mr. Thomson (Battleford-Kindersley): I asked for some statistics. We could perhaps have them a little later if they are not ready now.

The Chairman: Mr. Williams.

Mr. S. B. Williams (Deputy Minister, Department of Agriculture): I might mention in explanation that these items listed on page 11 before Vote 1 are not votes of this Department. They are votes that appear in other departments and the expenditure is made in other departments on behalf of this Depart-

[Interprétation]

également il a été reconnu qu'il serait dangereux de déléguer ce qu'on pourrait appeler des pouvoirs parallèles, à ceux par exemple de la Commission canadienne du Blé.

Et ils ont considéré que si cette délégation de pouvoir était accordée, il y aurait peut-être des conflits et les deux organismes ne seraient peut-être pas d'accord sur certaines questions et ils ont donc préféré que cet organisme se constitue en tant que société en vertu de la Loi sur les sociétés plutôt qu'en tant que commission. Nous étions prêts, au niveau gouvernemental, de soumettre une loi au parlement, si ça avait été là la solution qu'ils auraient choisies. Je voudrais également ajouter autre chose; c'est que d'après leur mandat, ils ont accepté: «d'examiner les moyens par lesquels il serait possible d'aider l'expansion des exportations des céréales et des produits des céréales, de recommander au ministre d'appliquer des programmes favorisant l'exportation.» Il s'agit peut-être là d'un organisme semblable à la Commission canadienne du Blé. Pourtant il y a une différence, en ce sens qu'ils ont le pouvoir d'entreprendre des programmes de promotion des ventes et des exportations. Pourtant, il y a une différence, en ce sens qu'ils ont le pouvoir d'entreprendre des programmes de promotion des ventes d'exportation. Programmes acceptés.

Le président: Monsieur Thomson.

M. Thomson (Battleford-Kindersley): Je cède mon tour, monsieur le président. Est-ce que vous pouvez me donner la réponse plus tard à l'autre question?

M. Olson: Je m'excuse si je n'ai pas répondu.

M. Thompson (Battleford-Kindersley): Je voulais avoir quelques statistiques que vous pourriez peut-être nous donner plus tard si vous n'êtes pas prêt maintenant.

Le président: Monsieur Williams.

M. S. B. Williams (Sous-ministre de l'Agriculture): Disons, à titre d'explication, que ces articles figurant à la page 11, au crédit 1, ne sont pas des crédits relevant de notre ministère. Il s'agit de crédit qui figurent dans d'autres ministères qui font les dépenses au nom de notre ministère. Autrement dit, nous n'a-

[Text]

ment. Therefore I am afraid we do not have that information, but we are obtaining it. That particular item is in the Treasury Board estimates.

Mr. Thomson (Battleford-Kindersley): Thank you, Mr. Chairman.

Mr. Gleave: Could I ask a supplementary question?

The Chairman: Mr. Gleave.

Mr. Gleave: Mr. Minister, will all the reports or studies which the Canada Grains Council undertakes be made public. Will they report to the government so that those reports may come to this Committee or be public knowledge?

Mr. Olson: Mr. Chairman, generally speaking I think that would be the case. But I should read Item 8 of the Terms of Reference, and it is:

The Canada Grains Council shall report its recommendations directly to Ministers, and subsequently make public such findings and recommendations as are approved by its members in session, except on specific matters on which Ministers have requested the Council's confidential advice;

So, as I said, generally speaking they will be made public. However, there is a reservation that if Ministers of the government request confidential advice on a matter, this would not be a public document.

Mr. Gleave: And in financing, it is proposed that they shall draw their money from farmers in the form of a levy or tax on farm production?

Mr. Olson: No, that is not proposed by us at all. That is their own decision to make as to how or in what amounts the assessments will be made to the member organizations of the Council.

Mr. Gleave: Is this Council then going to be allowed to make a voluntary or compulsory levy on grain in order to raise their funds?

Mr. Olson: No, the Council does not have any authority to make any compulsory deduction from any grain sales at the present time. And even though some of the wheat pools, for example, or any of the grain companies were to pass resolutions in their meetings for a deduction from grain, I think we would have to look at that very carefully and decide

[Interpretation]

vous pas encore ces renseignements; ils nous parviennent peu à peu. Il s'agit là d'un point particulier du budget du Conseil du Trésor.

M. Thomson (Battleford-Kindersley): Merci.

M. Gleave: Puis-je poser une question complémentaire?

Le président: Monsieur Gleave?

M. Gleave: Monsieur le ministre, est-ce que tous les rapports et études de la Commission canadienne des céréales vont être rendus public? Est-ce qu'il sera rendu compte au gouvernement pour qu'on puisse en prendre connaissance au Comité, ou communiqués au public?

M. Olson: Monsieur le président, en général je pense que ce sera le cas. Mais je voudrais vous lire l'article 8 du mandat:

«La Commission canadienne des céréales fera connaître ses recommandations directement au ministre et, par la suite, rendra publiques les conclusions et les recommandations qui seront approuvées par ses membres en session, sauf sur les questions particulières où le ministre a demandé le conseil confidentiel de la Commission.»

Comme je l'ai dit ces recommandations seront rendues publiques. Il est toutefois prévu que, si les ministres du gouvernement consultent la Commission confidentiellement, le document ne soit pas rendu public.

M. Gleave: Et pour le financement, on propose que l'argent vienne des cultivateurs sous forme de prélèvements ou de taxes sur la production agricole?

M. Olson: Non, ce n'est pas ce que nous proposons du tout. C'est à eux de décider des montants versés aux sociétés membres de la Commission, ainsi que des modalités de paiement.

M. Gleave: Est-ce que la Commission va être autorisée à faire des prélèvements volontaires ou obligatoires sur les céréales afin d'obtenir les crédits nécessaires?

M. Olson: Non. La Commission n'a absolument aucun pouvoir en matière de déductions obligatoires sur les ventes de céréales actuellement. Et même, si certains syndicats ou compagnies de céréales ou de blé, devaient décider de faire des déduction sur les céréales, je pense que nous devrions étudier la question très soigneusement et décider si oui

[Texte]

whether or not we need to amend the legislation, whether in fact they could make a deduction from all deliveries. I suppose they could with consent of each individual, but we would have to have a look at that and see whether or not we do not need amendments to some of the statutes to make certain that they would have the authority. At the present time they do not have that authority. But they have volunteered so far.

I am not certain how many grain elevator co-operatives have, but one or two of them have already passed these resolutions in their meetings.

The Chairman: Mr. Gleave, you are next on my list after I recognize Mr. Clermont.

Mr. Peters: May I ask another supplementary question? I have been listening very carefully to the question and the explanation because I have been confused about what this grain council is planning to do. It would seem to me that in everything the Minister has said there is a duplication of either what the Board of Grain Commissioners is now doing in development of new grades and expansion of promotion concerning what we can sell other countries, or the Wheat Board's operation. This grain council is going to overlap

• 1005

both of them, and perhaps we should consider changing the legislation affecting both those organizations so that they could go into this field. My point is that both of these organizations are independent of both the producer and the export market.

Mr. Olson: Those organizations are what?

Mr. Peters: They are independent of the pressures that obviously will be put on this grain council. And perhaps the responsibility should have been theirs for making these decisions, rather than the trade itself.

Mr. Olson: I suppose I ought to read Item 7 of the Terms of Reference. It says:

Without duplicating or replacing existing departmental or agency functions, formulate recommendations which represent a consensus of the industry as a whole;

I know it is true that the Wheat Board has certain responsibilities. So does the Board of Grain Commissioners, and the Department of Agriculture for that matter in certain other areas. But up until now at least, the co-ordination has been on an *ad hoc* basis between all of these sectors of the grain industry and indeed certain other private sectors. And, as is pointed out, we hope that they will have meetings, which I am sure they will from time

[Interprétation]

ou non il faudrait amender la Loi et si, en fait, ils pourraient faire une déduction sur toutes les livraisons. Je suppose qu'ils pourraient le faire avec l'autorisation de chaque intéressé mais il faudrait que nous étudions la question pour savoir s'il n'y avait pas lieu de modifier certaines loi afin de voir à ce qu'ils en aient le pouvoir. Mais ils ne l'ont pas actuellement. Malgré tout, ils se sont portés volontaires.

Je ne sais pas exactement le nombre d'éleveurs à grain qu'ont les coopératives, mais certaines d'entre elles ont déjà voté ces résolutions en réunion.

Le président: Monsieur Gleave, vous êtes le prochain sur la liste, après M. Clermont.

M. Peters: Puis-je poser une ou deux autres questions? J'ai écouté très attentivement la question et la réponse parce que je ne comprends pas très bien ce que va faire cette Commission. Il me semble que, dans tout ce que nous a dit le ministre, il y a un chevauchement avec les activités de la Commission canadienne des grains dans le domaine de la création de nouvelles variétés, de nouvelles qualités, et de la promotion des ventes d'exportations, ou avec celles de la Commission canadienne du blé. Donc, il semble bien qu'il va y avoir un chevauchement dans leurs entreprises. Nous pourrions étudier ces deux organismes afin qu'ils puissent œuvrer dans ce domaine. Ces deux organismes sont indépendants du producteur et des marchés.

M. Olson: Sont quoi?

M. Peters: Ils sont indépendants des pressions, qui seront éventuellement exercées sur la Commission canadienne du blé. Ce serait peut-être à eux de prendre ces décisions et non aux responsables de l'industrie.

M. Olson: Je crois qu'il serait bon que je vous lise l'article 7 du mandat:

«Sans répéter ou remplacer les fonctions d'organismes actuels, formuler des recommandations qui représentent l'avis général de l'industrie entière.»

Je reconnais effectivement que la Commission canadienne du blé a certaines responsabilités devant la Commission canadienne des grains et le ministère de l'Agriculture dans certains cas. Mais jusqu'à présent, la coordination s'est faite sur une base *ad hoc* entre tous ces secteurs d'activités de l'industrie des céréales et certains secteurs privés. Comme il est indiqué, nous espérons qu'il y aura des réunions occasionnelles mixtes où ils se réuni-

[Text]

to time, when they will all get together on a formal basis and talk these things over so they have a consensus.

What is happening now is that conflicting but sincerely held opinions about whether or not we should change varieties and standards come to my office. What we could do is call a meeting, I suppose, and have them talk it out to reach a consensus. But what happens now is that there is no formal basis on which meetings with all sections can be held from time to time.

Mr. Peters: But is it not true that the Minister will be co-ordinating a third group which is in the same field as the other two groups, and that he is still going to have to make the decision?

Mr. Olson: A third group? I am not clear on that.

Mr. Peters: I do not come from Western Canada so I may perhaps be confused, but my understanding is that the grain commissioners' powers are very broad in the field of new grades and developments in the whole cereal grain sector, including transportation and a number of other things. And the Minister co-ordinate this, or makes the decision on how far they will go because it is really a part of the Minister's responsibility. The same is true with the Wheat Board, and there have been conflicting views over a period of time of how much authority the Minister has in sales, and even export sales. This new agency again is going to have to report to the Minister and in the final analysis the Minister will make the adjudication anyway.

Mr. Olson: Well I think that is partially correct, but I think it would be useful if these discussions on what changes should be recommended could be discussed in a meeting, as I said, where they could test their opinion and their knowledge against equally knowledgeable people in the industry and try to come to some consensus rather than have the Minister try and sort all of this out in his own mind.

Mr. Peters: Is this not really what you called this agricultural congress for, the congress that will be held in a week or two?

Mr. Olson: Yes, but we think that a very useful purpose can be served by having a continuity in these meetings, particularly in the grain industry where it appears that there are going to be some significant changes that may be beneficial. Certainly the agricultural

[Interpretation]

ront tous pour en discuter afin d'avoir un avis général.

Ce qui se passe actuellement, c'est qu'on vient à mon bureau, avec des idées sincères mais contradictoires sur la question de savoir s'il faut changer les variétés et les normes. Et la seule chose, je pense, qu'il faille faire, c'est de convoquer une réunion et de permettre à ces responsables d'en discuter afin d'en arriver à un accord général. Mais jusqu'à présent, il n'y a aucune base officielle pour que des réunions périodiques puissent avoir lieu.

M. Peters: Mais n'est-il pas vrai que, malgré tout, le ministre va toujours coordonner un troisième groupe et c'est lui qui va devoir prendre la décision?

M. Olson: Qu'est-ce que vous appelez troisième groupe?

M. Peters: D'après ce que je peux voir—je ne viens pas de l'ouest, donc je ne comprends peut-être pas très bien—mais d'après ce que je crois comprendre, c'est que les pouvoirs des commissaires des grains sont très vastes en matière de nouvelles catégories et de nouveaux perfectionnements, y compris les transports et un certain nombre d'autres questions. Et c'est le ministre qui coordonne ou qui prend la décision quant à la limite de ces pouvoirs parce que, en fait, c'est une de ses responsabilités. Et il en est de même pour le conseil du blé, la Commission du blé. Parfois on s'est demandé quel était le pouvoir du ministre en matière de ventes, et même en matière d'exportation. Ce nouvel organisme devra faire rapport au ministre et là encore ce sera lui qui va, de toute façon, décider en dernier ressort.

M. Olson: Eh bien, oui, je pense que c'est en partie vrai. Mais je pense qu'il serait utile que ces discussions portent sur les changements à recommander et que ces décisions soient prises en commun par tous les responsables de ce secteur d'activité réunis ensemble, au lieu de laisser le ministre décider lui-même.

M. Peters: N'est-ce pas la raison pour laquelle vous avez convoqué ce congrès qui, je crois, va se réunir dans quelques semaines?

M. Olson: Oui, d'accord, mais ce qu'il serait bon malgré tout, c'est que ces réunions se tiennent régulièrement, et notamment dans l'industrie des céréales où il va y avoir des changements importants qui seront peut-être profitables. Et certainement, le congrès de l'A-

[Texte]

Congress will be doing this too to some extent, but this covers the whole field of agriculture.

The Chairman: Mr. Clermont.

M. Clermont: Merci, monsieur le président. Ma première question se rapporte à l'effectif constant et aux employés à temps partiel du ministère. Si mes chiffres sont exacts, je remarque que l'effectif constant du ministère de l'Agriculture sera moindre pour l'année 1969-1970. Est-ce à la suite d'une réorganisation? Prenons le crédit n° 5, sous Recherches, au chapitre des Sciences et professions. En 1968-1969, vous aviez un effectif de quinze années-hommes consacrés à la recherche et pour 1969-1970, vous en prévoyez sept. Ces chiffres se trouvent à la page 14, montrant l'importance de la recherche.

• 1010

Je vois ici au même crédit, le n° 5, au poste: «Instituts, Stations, Fermes, Laboratoires et Services—Fonctionnement et Entretien», en 1968-1969, vous aviez un effectif constant de 925 années-hommes et pour 1969-1970 vous en prévoyez 843 et je remarque que dans la majorité des cas, les sommes des salaires seront supérieures, en 1969-1970, à celles de 1968-1969.

Mr. Williams: The direct answer to the question is that both considerations Mr. Clermont raised are involved. First of all, the Department of Agriculture along with other departments is working at the present time and has been working for two years under a staff ceiling. It is varied from year to year but we were restricted in our staffing to 95% of our establishment.

The year 1968-69, as it is reported in the Blue Book, refers to establishment. In the new year, that is 1969-70, in the estimates that we are considering, Treasury Board no longer uses "establishment".

This has become an out-moded term and we are using actual strength in man-years. So there has been a cutback but the cutback is not as large as it would appear there because of the different method of reporting.

M. Clermont: Un exemple, monsieur le président. Au crédit n° 5 pour les recherches, «Administration, fonctionnement et entretien...», en 1968-1969 vous aviez un personnel de 15 années-hommes sous le Titre «sciences et professions». Pour 1969-1970 vous en aurez sept. Ce nombre est-il suffisant pour faire les recherches?

[Interprétation]

griculture va aborder cette question. Mais il s'agit là d'un domaine plus vaste.

Le président: Monsieur Clermont?

Mr. Clermont: Thank you, Mr. Chairman. My first question concerns the continuing staff and the part-time employees of the Department. If my figures are correct, I notice that the permanent staff of the Department of Agriculture will be decreased for 1969-70. Is this the result of a re-organization? Let's take vote No. 5, under Research, Scientific or Professional manpower. In 1968-69, you had a strength of 15 man-years for research, and for 1969-70, you expect to have seven. These figures are on page 14, showing the importance of research.

I see also in the same Vote No. 5, under Institutes, Stations, Farm, Laboratories and Services—Operation and Maintenance, that in 1968-69, you had a continuing establishment of 925 man-years, and that for 1969-70, you expect it to be 843, and I notice that in the majority of cases, salaries and wages votes will be higher in 1969-70 compared to 1968-69.

M. Williams: La réponse que je veux donner directement à la question, c'est que les deux points que M. Clermont a soulevés sont en cause. D'une part, le ministère de l'Agriculture, tout comme d'autres ministères, fonctionne actuellement, et ce depuis deux ans, avec un personnel limité à un certain niveau qui varie d'une année à l'autre, mais nous avons été limités, dans notre personnel, à 95 p. 100 de l'effectif.

L'année 1968-1969, comme il est dit dans le Livre bleu, concerne l'effectif. Pour la nouvelle année, soit 1969-1970, dans le budget que nous étudions, le Conseil du Trésor n'utilise plus le mot «effectif».

Il s'agit maintenant d'un terme démodé; nous utilisons maintenant le terme «année-homme». Il y a donc eu une réduction, mais cette réduction n'est pas aussi importante qu'elle semblerait l'être, à cause des différentes méthodes de calcul.

Mr. Clermont: Just one example, Mr. Chairman. In Vote No. 5, for research, under "Administration, Operation and Maintenance", in 1968-69, you had 15 man-years under "Scientific and Professional". In 1969-70, you are going to have seven. Is that sufficient to carry out research?

[Text]

Mr. Williams: That particular item, Mr. Clermont, represents a change in classification brought on through the reclassification program of the Bureau of Classification Revision that is associated with the complete change in the professional structure and the organizational structure of the various employment groups within the civil service. Whereas in previous years people tended to be listed depending upon where they were—that is to say, if he was in a scientific department he was listed as scientific and professional—all those positions have now been reviewed and while I can find out for you where those have moved to, I do not know exactly.

It represents a change in the classification, and somebody who before was classified in the scientific and professional series may now be classified in the administrative series.

M. Clermont: Monsieur le président, ma question ne cherchait pas surtout à connaître où ces personnes-là sont rendues. En la posant je voulais savoir si un personnel de sept personnes est suffisant pour mener à bien les recherches dont il est question au crédit n° 5. Je voulais savoir quelle importance on attache aux recherches, en 1969. C'était le but de ma question, et non pas de savoir s'il y en a 8 qui sont rendues dans un autre service. Pour moi, l'important est de savoir si, en 1969, au poste «Sciences et professions» et sous le titre «Administration de la direction—» du crédit n° 5 du ministère de l'Agriculture, 7 années-hommes sont suffisantes.

Mr. Williams: Mr. Clermont, that refers solely to the sub-allocation of the branch administration. All the people listed in the

• 1015

executive category are all scientific people as well. But if you look down a little further you will note that in Institutes, Stations, Farms, Laboratories we list 843 Scientific and Professional. They also of course are in the research branch.

Mr. Clermont: Last year for 1968-69, Mr. Williams, you had 925.

Mr. Williams: That is correct, sir. If you are asking me if that is enough I would say that you cannot ask anybody who is administering a research program and get any other answer but what they could do better if they had more.

M. Clermont: Mon autre question, monsieur le président, est au sujet du crédit n° 17,

[Interpretation]

M. Williams: Ce point particulier, monsieur Clermont, représente un changement dans la classification effectuée à la suite du programme de reclassification du Bureau de révision de la classification, qui est valable pour l'ensemble de la structure professionnelle, et la classification des différents groupes d'emplois de la Fonction publique. Au cours des années précédentes, les gens avaient tendance à être classifiés en fonction de l'endroit où ils se trouvaient, c'est-à-dire que s'ils travaillaient dans un ministère scientifique, ils étaient considérés comme faisant partie de la catégorie scientifique et professionnelle. Maintenant, tout est changé.

Je pourrais vous le dire plus précisément, il s'agit simplement d'un changement de classification. Quelqu'un qui, auparavant, appartenait à la catégorie scientifique et professionnelle peut maintenant être classé dans la catégorie administrative.

Mr. Clermont: Mr. Chairman, my question was not concerned especially with where these people are. I wanted to know if seven people is enough to do the research mentioned in Vote No. 5. I wanted to know what importance is given to research, in 1969. This was the purpose of my question, and not to find out whether eight have been sent to another service. I just want to know if, in 1969, under the item "Scientific and Professional" which comes under the heading "Branch Administration..." Vote No. 5, of the Department of Agriculture, seven man-years are sufficient.

M. Williams: Monsieur Clermont, cela ne concerne uniquement que les sous-affectations de l'administration du ministère. Toutes les personnes qui appartiennent à la direction sont également des scientifiques. Mais, si vous regardez un peu plus bas, vous remarquerez que, à «Instituts, stations, fermes, laboratoires», nous avons 843 membres de la catégorie scientifique et professionnelle. Ce sont aussi des chercheurs, bien entendu.

M. Clermont: Mais en 1968-1969, monsieur Williams, vous en aviez 925.

M. Williams: C'est exact, monsieur. Si vous me demandez si cela suffit, je dirais qu'on ne peut pas demander à quelqu'un qui exécute un programme de recherche et obtenir une réponse autre qu'il pourrait faire mieux s'il avait plus.

Mr. Clermont: I have another question, Mr. Chairman, regarding Vote No. 17, concerning

[Texte]

concernant le poste «Statutaire—Contributions aux provinces en vertu de la Loi sur l'assurance-récolte (c.42, S.R., modifié)». En 1968-1969, vous aviez un crédit de 4 millions sept cent mille dollars, et pour 1969-1970 vous prévoyez un crédit de 4 million deux cent mille dollars.

Or on sait, par exemple, que la province de Québec s'est jointe au programme d'assurance-récolte et si l'on se base sur l'expérience du passé, de plus en plus de cultivateurs se joignent chaque année au programme de l'assurance-récolte à travers le Canada.

Mr. Williams: The basic reason for the apparent decrease is that in 1968-69 the funds to reimburse Quebec for its crop insurance program were included in the estimates as a statutory item. Quebec, however, has not implemented a program that is in complete conformity with the Act, therefore the Vote for 1969-70 has been taken out of the statutory item and put in Vote 35 on page 26, because it requires a special Vote title to give authority to it—and it is in the amount of \$1.8 million.

So for an exact comparison one should read \$6 million for 1969-70 going to crop insurance, including Quebec, and \$4.7 million for the year 1968-69.

M. Clermont: Monsieur le président, M. Williams, a dit que le programme d'assurance-récolte de la province de Québec ne rencontrait pas les exigences du programme fédéral. Dans quel secteur? Est-ce dans le secteur de la ré-assurance?

Mr. Williams: No, the major difference of opinion lies between the actuarial experts of the Department of Insurance of the federal government and the actuarial experts of The Quebec Crop Insurance Board. Under the Act the requirement is that the premiums for the program must be such as to make the program self-sustaining. There is a distinct difference of opinion as to whether or not that is the case.

M. Clermont: Présentement, monsieur le président, le gouvernement fédéral contribue au programme d'assurance-récolte du Québec dans une mesure de 25 p. 100 de la prime et de 50 p. 100 pour l'administration?

Mr. Williams: That is correct, yes. Subject to an agreement being signed, the authority exists.

M. Clermont: L'entente n'est-elle pas encore signée?

[Interprétation]

the item entitled "Statutory—Contributions to the Provinces under the Crop Insurance Act (Chap. 42 R.S. as Amended)". In 1968-69, you had a Vote of \$4,700,000 and for 1969-70 your Vote is \$4,200,000.

Now, we know that, for instance, the Province of Quebec joined the crop insurance scheme and if we base ourselves on past experience, more and more farmers are joining the crop insurance scheme throughout Canada.

M. Williams: La raison fondamentale pour laquelle il y a une baisse apparente, c'est qu'en 1968-1969 les fonds pour rembourser le Québec pour son programme d'assurance-récolte étaient compris comme poste statutaire dans les prévisions budgétaires. Toutefois, le Québec n'a pas mis en vigueur un programme qui se conforme totalement avec la Loi. Par conséquent, le crédit pour 1969-1970 a été enlevé du poste statutaire; il figure donc au Crédit 35, à la page 26, car on a besoin d'un crédit spécial pour en donner l'autorisation et il s'élève à 1.8 million de dollars.

Pour avoir une comparaison exacte, il faut donc lire 6 millions de dollars pour 1969-1970 pour l'assurance-récolte, y compris le Québec, et 4.7 millions de dollars pour l'année 1968-1969.

Mr. Clermont: Mr. Chairman, Mr. Williams said that the crop insurance program for Quebec did not meet all the requirements of the federal program. In what areas? Is it in the sector of re-insurance?

M. Williams: Non, la plus grande différence d'opinions existe entre les actuaires du Département des assurances du gouvernement fédéral et les actuaires de l'Office de l'assurance-récolte du Québec. En vertu de la Loi, on exige que les primes du programme soient telles que le programme puisse se suffire à lui-même. Il y a une différence marquée d'opinions à ce sujet.

Mr. Clermont: Mr. Williams, the federal government, at the present time, contributes for the crop insurance scheme in Quebec to the tune of 25 per cent of the premium and 50 per cent for administration?

M. Williams: C'est exact, oui. Sous réserve de la signature d'un accord, l'autorisation existe.

Mr. Clermont: The agreement has not been signed yet?

[Text]

Mr. Williams: The agreement has not been signed yet. The explanation, I might say, is that The Quebec Crop Insurance Board published or were due to publish—I have not seen them yet—on Saturday morning or Friday night, in their Gazette, their regulations for the first time, and we could not enter into an agreement until these were passed. We anticipate that the agreement will be signed within a week or ten days.

M. Clermont: Voici, monsieur le président, il y a eu une semaine vendredi dernier, le ministre de l'Agriculture de la province de Québec, l'honorable Clément Vincent, déclarait devant les caméras de la télévision, que le gouvernement fédéral contribuait à la prime du cultivateur puis à l'administration.

Mr. Williams: That is quite correct. We have the funds and the minute the agreement is signed the contribution will be made. But legally we could not make the contribution until such time as the agreement was signed because this was the basis. There is every intention and I am quite certain that an agreement will be signed and the payment will be made, as I said, within a week or ten days.

M. Clermont: Ma dernière question, monsieur le président, traite du crédit no. 17, à la page 18, sous le titre

«Contributions

Montant estimatif requis pour remettre au compte de stabilisation des produits agricoles le montant net du déficit d'exploitation de l'Office de stabilisation des prix agricoles au 31 mars 1970»

En 1968-1969, vous prévoyiez un montant de \$144,500,000 et vos estimés prévisions pour 1969-1970, sont seulement de \$133,400,000. Pouvez-vous nous expliquer, la différence, monsieur Williams.

Mr. Williams: This is a problem that we face at all times in respect of the Agricultural Stabilization Act. There is extreme difficulty in forecasting what expenditures will be because they depend upon subsequent government decisions. I think you will appreciate that this estimate had to be made by the department back last summer. The basis for estimating for all items under the Agricultural Stabilization Act under this procedure that is being followed at the present time is that the Board is required to estimate the amount of dollars that will be required in the year for which the estimate is being made, presuming that the program continues at the same level of support as was in

[Interpretation]

M. Williams: On n'a pas encore signé l'accord. Pour expliquer, je pourrais peut-être dire que l'Office d'assurance-récolte du Québec doit publier, ou devait publier, je ne les ai pas encore vus,—samedi matin ou vendredi soir dernier, ses règlements, pour la première fois. Nous ne pouvions avoir un accord avant d'avoir les règlements. Nous nous attendons à ce que cet accord soit signé d'ici une semaine ou 10 jours.

Mr. Clermont: Mr. Chairman, a week ago last Friday, the Minister of Agriculture for Quebec, the Honourable Clément Vincent, was on television and mentioned that the federal government contributed for the premium of the farmer as well as administration.

M. Williams: En effet. Nous avons les fonds voulus et, du moment que l'accord sera signé, cette contribution sera versée. Mais du point de vue légal, nous ne pouvions verser la contribution avant que l'accord soit signé, car c'était là la base même de l'entente. Nous avons toutes les meilleures intentions du monde, et je suis absolument sûr qu'un accord sera signé et que le versement sera effectué, comme j'ai dit, d'ici une semaine ou dix jours.

Mr. Clermont: Now a last question, Mr. Chairman, with regard to Vote No. 17, on page 18, under the title:

«Contributions.—Estimated amount required to recoup the agricultural commodities stabilization account to cover the net operating loss of the Agricultural Stabilization Board as at March 31, 1970»

In 1968-69, you had an amount of \$144,500,000 and for 1969-70 your estimates are only \$133,400,000. Can you explain to me, Mr. Williams, what this difference is?

M. Williams: C'est un problème auquel nous nous heurtons sans cesse en ce qui concerne la Loi sur la stabilisation des prix agricoles. Il est extrêmement difficile de prévoir les dépenses, car elles dépendent de décisions ultérieures du gouvernement. N'oubliez pas que le Ministère a été forcé de faire ces prévisions budgétaires l'été dernier. Selon la façon de procéder actuelle, pour évaluer les crédits accordés en vertu de la Loi sur la stabilisation des prix agricoles, l'Office doit évaluer la somme qui sera nécessaire pour l'année sur laquelle portent les prévisions, à condition que l'aide accordée aux termes du programme reste au niveau qui était en vigueur au moment où l'on a fait les prévi-

[Texte]

effect at the time the estimate was made, and the Board at that time has to estimate price relationships and so forth.

The presumption is that if there is any change in government policy that would raise or lower level supports, the adjustments would be made or the funds provided by supplementary estimate procedure.

I think it will be recalled that it has only been in the last year or two that we have followed this procedure. Up until then stabilization funds were never shown in the Blue Book but were provided solely on the basis of recouping the revolving fund that is available under the Agricultural Stabilization Act. So this is an effort to try to forecast what the expenditures will be, but the only base of forecasting that can be used is a continuation of levels of support.

M. Clermont: Monsieur Williams, est-ce que les \$133,400,000 comprennent les subventions aux producteurs de lait industriel et aux producteurs de crème?

Mr. Williams: That includes all items, yes.

M. Clermont: Merci, monsieur le président.

The Chairman: I recognize Mr. Gleave.

M. Côté (Richelieu): J'ai une question supplémentaire au sujet de l'assurance-récolte. Si j'ai bien compris, vous avez dit tout à l'heure que \$6 millions étaient prévus pour l'année dernière et ont été reportés au crédit 37, je crois. Mais, cette année, vous avez \$4.8 millions. Je n'ai pas bien compris cela. Après une explication supplémentaire, j'aurai peut-être d'autres questions. Qu'entendez-vous par \$6 millions prévus pour l'année dernière, et \$4.8 millions pour cette année?

Mr. Williams: I am sorry if I misled the Committee, Mr. Chairman. Last year the total forecast was \$4.7 million. For the forthcoming year the total forecast is \$6 million divided into two parts; \$4.2 million in Vote 17 as a statutory item and \$1.8 million under special vote tilte under Vote 35, which is found on page 26, to provide for the Quebec item. You will also probably recall that in our supplementary estimates for the current year there is an item provided for Quebec to cover the current year.

M. Côté (Richelieu): Monsieur le président vous savez qu'actuellement la province de Québec est la province qui, pour sa première

[Interprétation]

sions; et l'Office doit alors évaluer le rapport entre les prix, etc.

On part du principe que s'il se produit un changement dans la politique du gouvernement qui fasse monter ou baisser le niveau de l'aide, on fera des ajustements ou l'on obtiendra des fonds grâce aux crédits supplémentaires.

On se souviendra, je pense, qu'il n'y a qu'un an ou deux que nous procédons de cette façon. Jusqu'alors, les fonds destinés à la stabilisation des prix agricoles ne figuraient jamais dans le Livre bleu, et on les fournissait seulement en dédommageant de ses pertes le fonds de roulement disponible en vertu de la Loi sur la stabilisation des prix agricoles. On essaie donc de prévoir quelles seront les dépenses, mais la seule condition sur laquelle on puisse fonder les prévisions, c'est le maintien du même niveau d'aide.

Mr. Clermont: Mr. Williams, do the \$133,400,000 include the subsidies paid to industrial milk and to cream producers?

M. Williams: Cela comprend tous les crédits, oui.

Mr. Clermont: Thank you, Mr. Chairman.

Le président: Je donne la parole à M. Gleave.

Mr. Côté (Richelieu): I would like to ask a supplementary question with regard to crop insurance. If I understood correctly, you said a little while ago that \$6 million had been provided for last year and have been referred to Vote No. 37, I believe. But, this year, you have 4.8 million. I didn't quite understand this. Following a supplementary explanation, I might have other questions to ask. What do you mean by \$6 million provided for last year and \$4.8 million for this year?

M. Williams: Excusez-moi si j'ai induit le Comité en erreur, monsieur le président. L'an dernier, les prévisions totales s'élevaient à 4.7 millions de dollars. Pour l'année à venir, le total prévu est de 6 millions de dollars, et se divise en deux parties: 4.2 millions pour le crédit 17, comme crédit statutaire, et 1.8 million en vertu du crédit spécial, au crédit 35, que l'on trouvera à la page 26, pour ce crédit relatif au Québec. Vous vous souviendrez sans doute que, dans les crédits supplémentaires pour l'année en cours, on prévoit aussi un crédit pour le Québec pour cette année.

Mr. Côté (Richelieu): Mr. Chairman, you know that at the present time the Province of Quebec is the province which for its first year

[Text]

année d'administration, a le plus de cotisations. On a fait 12,000 réclamations pour des dommages aux récoltes et des cultivateurs ne sont pas encore remboursés. La semaine dernière, à une réunion dans ma paroisse, des fonctionnaires auraient expliqué que si le paiement n'est pas encore fait, c'est parce que le gouvernement fédéral n'a pas encore envoyé les montants d'argent. Tant que l'entente ne sera pas signée, la province ne remboursera-t-elle pas les dommages causés aux cultivateurs? Faudra-t-il attendre que les ententes soient signées avec le ministère de l'Agriculture?

• 1025

Mr. Williams: The decision of the Quebec government as to whether they reimburse farmers for losses they have sustained under their program is a decision of the Quebec government, not of the federal government. But we have no authority to reimburse them for their administrative costs and for the 25 per cent of the premiums until such time as an agreement is signed because that is what the vote title says; that it is subject to an agreement being signed. It is my understanding, having discussed this matter with some of the Quebec people, that they are making and have made large payments to farmers and that they have transferred quite large sums into their crop insurance program, but there is one difference in respect of this—that the federal government does not reinsure the losses under this special arrangement with the Province of Quebec.

The Chairman: May I recognize Mr. Gleave. I will come back to you again, Mr. Côté.

Mr. Southam: I would like to inquire, for the benefit of our Committee members, exactly what sequence you are following here as far as the order of speaking is concerned. I thought we started out several meetings ago with those who were in regular attendance, and that by keeping our names on an orderly list we would get our opportunity. I understood at the last meeting that I was about next on the list. I had my hand up first thing this morning but there have been a series of supplementary questions and regular questions. They are all very important and we are glad to hear them all but I want to ask you for the sake of information how you are regulating the continuity.

The Chairman: Well, it is a bit difficult, I must admit, and it was particularly difficult

[Interpretation]

has the greatest number of assessments. 12,000 claims were made for damage to crops and some farmers have not yet been reimbursed. Last week, at a meeting in my own parish, officials are reported to have explained that if the payments had not yet been made, it was because the federal government has not yet sent the sums of money required. So long as the agreement has not been signed, will the province then not reimburse the damage caused to farmers? Will they have to wait for the agreements to be signed with the Department of Agriculture?

M. Williams: La décision du gouvernement du Québec de rembourser ou non aux agriculteurs les dommages qu'ils ont subis en vertu du programme de la province appartient au gouvernement du Québec, non au gouvernement fédéral. Toutefois, nous n'avons pas pouvoir de leur rembourser leurs frais d'administration et les 25 p. 100 des primes jusqu'à ce qu'une entente ait été conclue, car c'est ce que stipule le titre du crédit—que les remboursements se feront sans réserve de la conclusion d'une entente. Je crois comprendre, ayant parlé de la question avec des gens du Québec, que la province a déjà fait des versements importants aux agriculteurs et a transféré des sommes assez considérables à son programme d'assurance-récolte. Il y a tout de même une différence: c'est que le gouvernement fédéral ne réassure pas les pertes en vertu de ces ententes spéciales avec la province de Québec.

Le président: Permettez-moi maintenant de donner la parole à M. Gleave. Nous reviendrons à vous ensuite, monsieur Côté.

M. Southam: Je voudrais vous demander, pour le bénéfice des membres de notre Comité, dans quel ordre au juste vous donnez la parole aux députés? J'avais cru comprendre que nous avions commencé, il y a plusieurs séances de cela, par les députés qui assistent régulièrement aux réunions, et qu'en gardant nos noms dans l'ordre sur une liste, vous nous donneriez à tous l'occasion de parler. J'ai vu comprendre, à la dernière séance, que mon nom devait être à peu près le suivant sur la liste. J'ai été le premier à lever la main ce matin, mais il y a eu toute une série de questions régulières et de questions supplémentaires. Elles sont toutes très importantes, et nous sommes heureux de les entendre, mais je voudrais vous demander, à titre de renseignement, comment vous établissez la continuité.

Le président: C'est un peu difficile; je dois l'admettre. C'était tout particulièrement

[Texte]

at the last meeting. You will be recognized next, Mr. Southam. I want to point out to the Committee that this supplementary business is fine if it is a legitimate supplementary but if we intrude on a supplementary basis and become the main questioner then I think that it is probably imposing and we may have to take a firmer position with regard to supplementaries. I would like to recognize Mr. Gleave, Mr. Southam, Mr. Korchinski, Mr. Lessard, Mr. Douglas, and Mr. Côté.

Mr. Gleave: Mr. Chairman and Mr. Olson, I noted that the Canada Grains Council was proposing to set up a study on the transportation of grain. It is my understanding that at the present time there is a study on transportation being carried out by I think the Canadian Wheat Board, the Board of Grain Commissioners for Canada and the grain companies, and that out of this has come the initial move toward the block system which you yourself, Mr. Minister, I believe mentioned in the House. Will there not be conflict? Is it necessary to have two studies going along on this at the same time?

Mr. Olson: No. I do not think so, Mr. Chairman. I do not think you could quite refer to it as a study that has been going on. There have been some ideas put forward for better co-ordination and the block system on a trial basis comes out of that hope that there is a better way of co-ordinating the movement of grain from the prairies to the terminal elevators, but I think, if I understood the Canada Grains Council correctly, that the sentiment that was expressed is that the study or the examination with a view to making recommendations on the whole transportation methods and procedures in the grain industry would be somewhat more comprehensive than the attempt at better co-ordination that is being made now by the Canadian Wheat Board and the elevator companies, along with the railways.

Mr. Gleave: Can the Minister assure us that in regard to this proposal of the Council a levy will be made on producers? Can the Minister assure us that a report of all those moneys, if such a thing goes through and such a levy or tax is made, will be made to the government each year as to how this money is being spent?

• 1030

Mr. Olson: Yes, Mr. Chairman. Item 9 of the terms of reference says:

[Interprétation]

difficile lors de la dernière réunion. Vous serez le prochain à avoir la parole, monsieur Southam. Je voudrais faire remarquer au Comité que je n'ai aucune objection à ces questions supplémentaires à condition qu'elles soient vraiment des questions supplémentaires; mais si nous entrons dans le débat avec une question supplémentaire et que nous prenions ensuite la main, c'est un abus, et il faudrait peut-être adopter une attitude plus ferme à l'égard des questions supplémentaires. Je voudrais maintenant donner la parole à M. Gleave, M. Southam, M. Korchinski, M. Lessard, M. Douglas et M. Côté.

M. Gleave: Monsieur le président, monsieur Olson, je constate que la Commission canadienne des céréales à l'intention d'organiser une étude sur le transport des céréales. Si j'ai bien compris, à l'heure actuelle, la Commission canadienne du blé, la Commission des grains du Canada et les entreprises céréalières se livrent aussi à une étude du problème du transport, qui est d'ailleurs à l'origine des mesures initiales prises en vue du système de transport en bloc que vous avez, je crois, mentionné vous-même à la Chambre, monsieur le ministre. Ne va-t-il pas y avoir conflit? Est-ce qu'il est nécessaire d'avoir deux études à la fois de cette question?

M. Olson: Non, je ne le crois pas, monsieur le président. Je ne crois pas que l'on puisse qualifier ce qui s'est fait d'étude. Je crois que l'on a proposé certaines idées en vue d'une meilleure coordination, et l'essai du système de transport en bloc vient de l'espoir que l'on a de trouver un meilleur moyen de coordonner le transport des céréales des Prairies jusqu'aux éleveurs des terminus. Mais si j'ai bien compris, la Commission canadienne des céréales estime que l'examen ou l'étude en vue de formuler des recommandations à l'égard des méthodes et des procédés de transport dans l'industrie des céréales serait beaucoup plus complète que la tentative en vue de parvenir à une meilleure coordination que font à l'heure actuelle la Commission canadienne du blé et les entreprises d'éleveurs, de concert avec les chemins de fer.

M. Gleave: Est-ce que le Ministre peut nous assurer qu'à l'égard de cette proposition de la Commission, on imposera les producteurs? Est-ce que le Ministre peut nous assurer que, si l'on adopte cette mesure et que l'on exige cet impôt, ou cette taxe, un rapport sera présenté chaque année au gouvernement quant à la façon dont on dépense ces fonds?

M. Olson: Oui, monsieur le président. On dit, à l'article 9 du mandat de la Commission,

[Text]

9. Submit annual reports of its activities to the Government.

I am sure that all the activities, including the financial requirements for those activities would not only be reported to the government but would be reported to the members of the Council, which includes, as I have said, the producer organizations, transport and all sections of the grain trade.

Mr. Gleave: On another subject, there is an item on page 13 entitled "Contribution to the Agricultural Economics Research Council of Canada..." in an amount of \$50,000. So you have information available as to the contributions in the last year which the provincial governments, the farm organizations and the other people involved who committed themselves to support this Economic Research Council have made?

Mr. Williams: I am sorry, Mr. Chairman, we do not have that detailed information with us but we can obtain it and provide it to the Committee.

Mr. Gleave: Further to this, Mr. Chairman, I am concerned about the proliferation of these various bodies, all of which are supposed to be giving a helping hand to the farmer by telling him what to do and how to do it.

This Agricultural Economics Research Council was set up a number of years ago. Its purpose was to find out the facts and tell us what we should do. It started out with very great hopes and there was going to be large amounts of money available. However, I think the figures will show that these hopes have not been realized; this organization has been starved for money. Why could this Agricultural Economics Research Council not have done the same job that is now proposed for the Canada Grains Council?

Mr. Olson: In my opinion, Mr. Chairman, not at all. The Grains Council may or may not undertake research projects; it depends on what they decide. In my opinion the most important new feature of the activities of the Grains Council is that you will have representatives and spokesmen in that council from the practical people who are engaged in the industry and it will provide, as I have said a number of times, an opportunity for them to meet from time to time on a formal basis to exchange information and opinions on what can be done, based on their actual

[Interpretation]

qu'elle doit présenter au gouvernement un rapport annuel de son activité. Je suis certain que toute l'activité, y compris les exigences financières qu'elle entraîne, ferait l'objet d'un rapport adressé non seulement au gouvernement, mais aussi aux membres de la Commission, qui, je l'ai dit, se compose des associations de producteurs de l'industrie du transport et de tous les secteurs de l'industrie des céréales.

Mr. Gleave: D'autre part, il y a en page 13 un poste intitulé:

«Contribution au Conseil canadien de recherches en économie rurale» au montant de \$50,000.

Disposez-vous des renseignements sur les contributions apportées l'an dernier par les gouvernements provinciaux, les organisations rurales et les autres personnes qui ont promis leur appui au Conseil de recherches en économie rurale?

Mr. Williams: Je m'excuse, monsieur le président, nous n'avons pas ce renseignement détaillé, mais nous pourrions toutefois l'obtenir et le présenter au Comité.

Mr. Gleave: D'autre part, ce qui me préoccupe ici, monsieur le président, c'est la prolifération de ces divers organismes, qui sont tous censés aider le cultivateur en lui conseillant quoi faire et comment le faire.

Ce Conseil de recherches en économie rurale a été établi voilà quelques années. Il avait pour objet d'obtenir les faits et de nous conseiller. On avait beaucoup d'espoir au début et on devait y affecter de grosses sommes. Toutefois, les chiffres démontreront que les espoirs avaient été vains; cette organisation a déperî par manque de fonds. Comment se fait-il que le Conseil de recherches en économie rurale n'ait pas fait le même travail que l'on propose à présent pour la Commission canadienne des céréales?

Mr. Olson: A mon avis, monsieur le président, pas du tout. La Commission canadienne des céréales peut ou ne peut pas entreprendre des projets de recherches; cela dépend de ce qu'ils décideront. A mon avis, l'aspect le plus important de l'activité du Conseil des grains, c'est que vous aurez là des représentants et des porte-parole de gens pratiques qui s'intéressent à l'industrie et qui leur fournira, comme je l'ai dit plusieurs fois, l'occasion de se rencontrer et de se réunir plusieurs fois par année, afin d'échanger des renseignements et des opinions sur ce qui peut être

[Texte]

practical involvement in the industry in one area or another.

Mr. Gleave: The makeup of the Agricultural Economics Research Council included government and it included the federations of agriculture; it included all these same people—at least they all had access to it through what is termed agri-business. Is it proposed that we should continue to make money available to the Agricultural Economics Research Council which, for example, made studies in feed grain, and feed grain is a very part of the thing which the Canada Grains Council is going to look at.

Mr. Olson: I think this research council could perhaps do some projects for the Canada Grains Council, but on a professional basis, if I may put it that way, I do not think there is an organization in existence today and indeed I do not think there is any substitute for having—and I repeat again—a forum where everybody who is actually involved on a daily basis in the grain industry can get together from time to time and try to come to

• 1035

a consensus on what changes need to be effected. They may have some problems because of an action in another part of the industry.

What I hope will come out of it is some practical day-to-day solutions to these problems. And ad hoc committee on transportation has been set up from time to time and it has been very helpful. Perhaps this should have been done on a more formal basis so that we do not have to wait until we are faced with the problem before we set up these kinds of committees or co-ordination functions.

Mr. Gleave: A final question, Mr. Chairman. Would the Minister perhaps consider making a recommendation to this Committee in regard to these various agencies? I am concerned about the fact that here we have the Agricultural Economics Research Council and then on top of that we have regular agencies, such as the Canadian Wheat Board, which in essence is a Crown corporation, and also the Board of Grain Commissioners. Can these be straightened out? Can we get a clear line through here and avoid a proliferation? I see these various institutions, shall we say, scrambling among themselves to get the technical and the research people they each want for their undertakings. We do not have that many really top technical people. This matter concerns me. The universities and the

[Interprétation]

réalisé en se basant sur leur participation pratique à l'industrie dans un secteur comme dans un autre.

M. Gleave: La composition du Conseil de recherches en économie rurale comprenait le gouvernement ainsi que les diverses fédérations agricoles; tous ceux-là en faisaient partie, ou du moins, ils avaient accès à ce Conseil par l'entremise de ce qu'on appelle agriculture. On nous propose de continuer à fournir des fonds au Conseil de recherches en économie rurale qui, par exemple, a effectué des études sur les grains de provende, et les grains de provende font justement partie de ce que la Commission canadienne des céréales est supposée étudier.

M. Olson: Ce Conseil de recherches pourrait peut-être s'occuper de certains programmes pour le Conseil des grains, mais je ne crois pas que du point de vue professionnel, si je peux parler ainsi, il y ait un organisme qui existe aujourd'hui, et je ne crois pas qu'il y ait de substitut pour—et je le répète encore une fois—un forum où tous ceux qui participent au jour le jour à l'industrie des céréales, puissent se réunir de temps à autre et essayer de s'entendre sur les changements qui doivent être effectués. Une certaine façon de faire dans un autre secteur de l'industrie peut leur occasionner des problèmes.

J'espère que l'on parviendra à quelques solutions pratiques de ces problèmes. On a organisé de temps à autre un comité spécial sur les transports qui a été très utile, peut-être aurions-nous dû le faire d'une façon plus officielle pour que nous n'ayons pas à affronter le problème avant d'organiser ces genres de comités ou ces tâches de coordination.

M. Gleave: Une dernière question monsieur le président. Je me demande si le Ministre pourrait nous donner son avis au sujet de ces divers organismes. Je me préoccupe du fait que nous avons ici le Conseil de recherches en économie rurale et nous avons de plus des organismes réguliers tels que normales comme la Commission canadienne du blé, la Commission canadienne du blé qui est en fait une société de la Couronne, ainsi que la Commission canadienne des grains. Peut-on tirer cela au clair? Et éviter une multiplication de ces organismes.

Je vois tous ces organismes en train de faire des mains et des pieds pour s'accaparer tous les techniciens et chercheurs qu'ils veulent pour leurs programmes. Nous n'avons pas autant d'experts et de techniciens de premier

[Text]

Research Council will be fighting among themselves to get . . .

Mr. Whicher: As if we were into religion.

Mr. Gleave: That is right, they will be just like a clutch of churches fighting for the preachers.

Mr. Olson: Mr. Chairman, we had a discussion about this Agricultural Economics Research Council last summer when we had a meeting with all of the provincial ministers of agriculture, and some work has been underway since then to reorganize and restructure the Council. Perhaps the deputy minister could fill you in on what has been done since that time to try to achieve this reorganization.

Mr. Williams: If I might say a word about it, this Agricultural Economics Research Council was originally designed and organized in order to provide a forum where independent agricultural research might be done. The idea was that contributions would come to it from producer organizations, from agri-business and from both levels of government, and that anybody could refer problems to them and they could hope to have them looked at on an objective basis, and in that way provide a service to the industry.

They were also empowered to undertake research of their own, and an organizational structure was set up that was designed to more or less insulate them from what might be called the normal pressures of the organizations to which they might be reporting. At the meeting of the agricultural ministers of all the provinces and the federal Minister of Agriculture last July the entire question of the organizational structure of this Council—and I think this is the fourth year it has been in effect—was queried as to whether or not it was accomplishing its objective. The decision was taken at that meeting that the ministers would recommend to the body that it endeavour to reorganize itself in order to better meet its original objectives, and the ministers agreed that they would support it for a further trial period. No definite time was set as to the trial period. They had troubles along the lines that Mr. Gleave mentioned; that is to say, staffing troubles.

[Interpretation]

ordre. Cette situation me préoccupe. Bientôt les universités et les divers conseils de recherches, se feront la lutte pour . . .

M. Whicher: Comme s'il s'agissait de religion.

M. Gleave: C'est vrai, la situation ressemblera à un groupe d'églises qui s'arrachent les prédicateurs.

M. Olson: L'été dernier nous avons eu une discussion au sujet du Conseil de recherches en économie rurale lors d'une réunion tenue avec tous les ministres provinciaux de l'Agriculture, et depuis lors on a entrepris certains travaux pour essayer de réorganiser et de restructurer le Conseil. Le sous-ministre pourrait-il vous donner des détails sur ce qui a été fait depuis ce temps-là pour essayer de parachever cette réorganisation?

M. Williams: Permettez-moi de dire que le Conseil de recherches en économie rurale a été constitué et organisé au tout début pour essayer de mettre sur pied un organisme où l'on pourra entreprendre des travaux indépendants de recherche en matière d'agriculture. On avait conçu l'idée que des contributions proviendraient des associations de producteurs, des deux niveaux de gouvernement, des sociétés agricoles, et que n'importe qui pourrait leur soumettre des problèmes et pourrait espérer de les faire examiner de façon objective, fournissant ainsi un service à l'industrie.

Ils ont, d'autre part, reçu l'autorisation d'entreprendre des recherches indépendantes et une structure d'organisation fut établie et avait pour objet de les isoler plus ou moins de ce que l'on pourrait appeler les pressions normales appliquées par les organismes auxquels ils pourraient faire rapport. Lors de la réunion des ministres de l'Agriculture de toutes les provinces et du ministre fédéral de l'Agriculture, toute ferme en juillet dernier, la question de la structure d'organisation de ce Conseil, et je crois que c'est le quatrième Conseil cette année, a été l'objet d'études pour savoir si oui ou non ce conseil servirait son but. Lors de cette réunion-là, les ministres ont décidé de recommander à l'organisme de tenter de se réorganiser, afin de mieux atteindre son objectif original, et les ministres ont convenu qu'ils l'appuieraient pour une autre période d'essai. On n'avait pas fixé de date pour cette période d'essai. Les difficultés n'ont pas manqué en cours de route, selon monsieur Gleave; c'est-à-dire des difficultés en vue d'obtenir du personnel.

[Texte]

[Interprétation]

• 1040

They now have a new president, as I believe he is called at the present time, rather than a chairman, and the executive group is most hopeful that this new organization will result in a more effective approach to their reaching the objectives that were originally set for them.

Mr. Gleave: The Canada Grains Council is now making noises about feed grain, about the varieties we should use, about the way we should deal with the feed market in Eastern Canada and about how we should deal with the feed market overseas. Are they both going to be looking into these matters? One of the reports of the Agricultural Economics Research Council, for example, was on freight subsidies on feed grain. Are they both going to be working in this area?

Mr. Williams: Mr. Chairman, I think that although they might be giving consideration to the same area their functions within that area would be quite different. In other words, I could envision the Grains Council employing the Economic Research Council to conduct professional studies for them.

Mr. Gleave: The Canada Grains Council would employ the Agricultural Economics Research Council to make studies for it?

Mr. Williams: Yes; that would be the type of relationship that I would expect between them.

Mr. Gleave: You would have the same thing going there as you are going to have with a transportation study by the Canada Grains Council, and it would be taking over the study that has been made by the Canadian Wheat Board and the grain companies. This whole area of conflict needs to be resolved.

Mr. Whicher: We should be in good shape, with all these...

Mr. Gleave: We should, really; if studying will make us, we will sure be studied.

The Chairman: Thank you, Mr. Gleave. I will recognize Mr. Southam.

Mr. Southam: Thank you, Mr. Chairman. My remarks will be relative to Item 1 of the Estimates of Agriculture. They will be general in nature for a few minutes, and then I would like to ask several specific questions, some of which have already been touched on.

Ils ont à présent un nouveau président, c'est ainsi qu'on l'appelle à l'heure actuelle, et le groupe exécutif est très confiant que cette nouvelle organisation pourra atteindre les objectifs établis à l'origine, de façon plus efficace.

M. Gleave: La Commission canadienne des céréales fait beaucoup de bruit au sujet des grains de provende, au sujet des variétés que nous devrions adapter, et la façon que nous devrions organiser le marché des provendes dans l'Est du Canada et outre-mer. Est-ce que les deux vont examiner cette question? Dans un de ses rapports, le Conseil canadien de recherches en économie rurale mentionnait les subventions de transport aux grains de provende. Est-ce que les deux vont travailler dans ce domaine?

M. Williams: Je crois que bien qu'ils étudient le même secteur, leur travail dans ce même secteur sera tout à fait différent. En d'autres termes, j'imagine que la Commission canadienne des grains puisse demander au Conseil canadien de recherches en économie rurale de faire des études pour eux.

M. Gleave: La Commission canadienne des céréales demanderait au Conseil canadien de recherches en économie rurale de faire des études pour eux?

M. Williams: Oui, je le crois. Ce serait le genre de rapport que je m'attendrais à voir entre les deux.

M. Gleave: Et alors vous auriez la même situation que si la Commission canadienne des céréales faisait une étude du transport; elle reprendrait l'étude qui a déjà été effectuée par la Commission canadienne du blé et les autres sociétés de céréales. Il faut évidemment résoudre tous ces différends.

M. Whicher: Nous devrions être en bonne posture avec toutes ces...

M. Gleave: C'est certain. Il est certain en tous cas que ce n'est pas les études qui manqueront.

Le président: Merci. La parole est à M. Southam.

M. Southam: Merci, monsieur le président. En ce qui concerne le crédit de l'Agriculture, je vais faire quelques remarques de caractère général en ensuite répondre à certaines questions précises, dont certaines ont déjà été évoquées.

[Text]

In opening our discussion under Item 1 last Thursday I think Mr. Horner, the Member for Crowfoot, expressed the sentiments and concern of a great many members of this Committee about where we are heading in the agricultural industry, as a way of life.

I do not think we should treat this subject too lightly. I ask, where are we heading as a matter of government policy? This is why we are interested in it this morning and in having the Minister here to give us some advice.

I wish to refer to the trend that seems to be taking place of people moving off the farms and into the urban centres where we now have an over-abundance of people who are, in fact, creating many problems with which other committees of the House of Commons are presently dealing; and whether we, as an agricultural committee, and as a matter of developing policy, should be forcing this trend.

I was interested in an article in a farm paper of January, 1969. The headline is "Trend to Big Farms Pushed." I propose to read one or two excerpts from it, because I think it puts into concise terms the concern that I have. It is by a Canadian Press reporter from Ottawa. It says:

Farmers will remember 1968 as the year agriculture made the irrevocable shift from rural life to industrial enterprise.

The trend to larger commercial farms and the consequent decline of rural populations has been going on for years. But in 1968 the government, through its policies and pronouncements, made it clear that farmers were expected to tackle food production the way Henry Ford tackled automobiles.

Farming is going to be a much different business than heretofore.

It goes on to refer in another paragraph to the fact that,

... "the chicken on the manure heap" concept of farming is over...

That is not really a very complimentary reference, but nevertheless it was reported.

He can, however, get government assistance in closing out his farming operation and getting established in the city.

Then it goes on to say:

New farm credit legislation increased the maximum for loans and encourages the creation of corporate farms. At the same time higher interest rates force a more-realistic appraisal of the ability of

[Interpretation]

Lorsque nous avons commencé à examiner le crédit, jeudi dernier, je crois que M. Horner avait bien exprimé les sentiments et les préoccupations d'un grand nombre d'entre nous en ce qui concerne l'orientation générale de l'industrie agricole.

Ce n'est pas une question qu'il faut traiter à la légère. Lorsque je parle d'orientation, je songe évidemment à la politique gouvernementale. C'est la question qui nous préoccupe ce matin. Le Ministre est d'ailleurs ici pour nous éclairer.

J'aimerais dire un mot de cette tendance qui semble exister. On voit en effet des gens qui quittent les fermes et qui vont s'installer dans les villes, qu'il y a vraiment trop de gens, ce qui suscite un grand nombre de problèmes urbains dont les Comités de la Chambre sont présentement saisis.

Je me demande si le Comité de l'Agriculture ne devrait pas travailler en ce sens.

Un article paru dans un journal agricole, en janvier 1969, au sujet d'encourager cette tendance à accroître la superficie des fermes, m'a intéressé. Je voudrais vous la citer car il fait ressortir ma préoccupation actuelle. L'article est d'un journaliste de la *Canadian Press*, à Ottawa. On dit que: «Les cultivateurs se souviendront de l'année 1968 comme l'année où l'agriculture a passé définitivement de la vie rurale à la vie industrielle. L'accroissement de la superficie des fermes et le déclin de la population rurale se poursuivent depuis quelques années. Mais en 1968, le gouvernement, par ses déclarations et ses politiques, a fait comprendre qu'il s'attendait à ce que les agriculteurs s'attaquent aux problèmes de l'alimentation tout comme Henry Ford s'est attaqué à l'automobile.» Et un peu plus loin, on dit que: «L'ancienne conception de l'agriculture est désuète».

Ce n'est pas vraiment un compliment mais c'est ce qu'on lisait. «Le cultivateur peut obtenir de l'aide du gouvernement fédéral pour vendre son exploitation agricole et déménager dans les villes.» On a dit que: «De nouvelles mesures législatives relatives aux crédits agricoles ont haussé le maximum prévu pour les emprunts et encourage la création de coopératives. En même temps, les taux d'intérêt plus élevés ont entraîné une évaluation plus réaliste des possibilités de l'exploitation agricole à produire un rendement convenable.»

[Texte]

the farm operation to produce an adequate return on investment.

• 1045

I am not saying this to be political, but one could couple with this the statement, which has created widespread concern in Western Canada, by the Prime Minister in Winnipeg on December 20 at that fund-raising dinner.

A farmer who came there to listen to the Prime Minister was very concerned about the marketing of wheat, and the Prime Minister in his wisdom—we did not think it was very wise so far as the west was concerned—said that it was not the responsibility of the government to be interested in the selling of wheat unless we were in a society which had collective farming, or words to that effect—communal farm. It was the farmer's responsibility to sell wheat. I must say this left, a very, very bad impression in the minds of western agriculture.

Heretofore, we have been very interested in, and a lot of our discussion has revolved around, government policy in assisting the agricultural industry to market. That type of statement, coupled with the type of legislation that we have been passing, leads many people in the agricultural sector to think that it is a foregone conclusion—a matter of government policy—to shove the little fellow out of his normal way of life and to establish nothing but co-operative farming.

This article goes on to say:

The preservation of the family farm is vital to North America and, if the family farm concept is to prevail, we must make it possible for young men and women to find careers in agriculture as satisfying and as remunerative as those in all other fields of endeavour.

This, of course, brings us to the crux of a lot of the discussions that have been going on there. I think I must emphasize again—and I have done this once before in the House, and I would like to do it again to get the Minister's comments on it—that in spite of this apparent policy of getting away from assistance or subsidies to agriculture we should still be thinking of it as a way of life, of its importance to us as an industry in Canada, and recognizing some of the special vicissitudes to which the agricultural economy is exposed.

I am thinking of the farmer, in his position in our economy, who has to deal first with the vicissitudes of nature and conditions of weather and climate.

This last fall was a very specific example of what can happen to the agricultural industry

[Interprétation]

Je n'essaie pas de faire de la politique ici, mais il y a une grande préoccupation dans l'Ouest du Canada, à la suite de la déclaration du premier ministre à Winnipeg le 20 décembre 1968 lors d'un dîner pour obtenir des fonds.

Un cultivateur venu pour l'écouter se préoccupait beaucoup de la vente du blé; et nous ne croyons pas que c'était tellement sage en ce qui concerne l'Ouest, mais le premier Ministre, dans sa sagesse, a dit que ce n'était pas la responsabilité du gouvernement fédéral de voir à la vente du blé, sauf si nous nous trouvions dans une société où le système agraire est la ferme collective, ou quelque chose de ce genre. Mais que la responsabilité de vendre son blé incombe au cultivateur, ce qui a laissé une fort mauvaise impression aux cultivateurs de l'Ouest.

Jusqu'à maintenant nous nous sommes préoccupés et intéressés surtout à la politique du gouvernement pour aider l'industrie agricole à commercialiser ses produits. Ce genre de déclaration, en plus des mesures législatives que nous avons adoptées, portent les agriculteurs à croire que le gouvernement a décidé d'éliminer le petit cultivateur pour n'avoir plus que des fermes coopératives. L'article ajoute: «La conservation de l'exploitation agricole familiale est vitale pour l'Amérique du Nord, et si l'on veut préserver ce concept, il faut faire en sorte que les jeunes puissent faire une carrière aussi intéressante en agriculture que dans tous les autres secteurs d'activité.»

Cela nous amène évidemment au nœud de nos discussions. Je voudrais encore une fois insister, comme je l'ai fait à la Chambre. J'aimerais avoir l'avis du ministre à ce sujet. C'est que, en dépit de cette politique qui, apparemment, vise à éviter toute subvention à l'agriculture, il nous faudrait malgré tout reconnaître que l'agriculture est un style de vie, qu'elle est une industrie importante au Canada, et constater les vicissitudes que connaît l'économie agricole.

Je pense particulièrement à la situation du cultivateur qui doit subir les vicissitudes de la nature, les conditions atmosphériques et climatiques. L'automne dernier a été un exemple très frappant de ce qui peut arriver à l'industrie agricole dans une crise nationale.

[Text]

relative to a national emergency. The Minister has heard this statement many times before, but it has to be repeated.

He has to compete with Mother Nature. He is not going to allow his tractor to sit in the farm yard and rust away; his cows are going to calve, his pigs are going to farrow and his hens are going to lay eggs, and so on. In other words, he is in perpetual motion, as it were. He has to go out and continue to be active, and regardless of what is happening to his economy generally he is providing the basic function in our society of providing food as cheaply as possible. Consequently I think he deserves the same respect as that paid to any other sector of our industry.

The farmer has no control over the cost of goods and services. I, as a small-town businessman, can go out and buy cattle beef, for instance, for my food plant, to sell wholesale to another farmer or another citizen who is not producing meat. If it is 25 cents a pound live weight, it is approximately 50 cents a pound wholesale price. I can ask that from my customer, get my processing charges, and the customer is satisfied. I get my mark-up, and my business continues to prosper.

The same with the man in the labour market. He has his union to represent him. If he is not satisfied with the cost of the goods and services he has to purchase he can go on strike and society will grant him an increase in wages which is commensurate with what he feels is realistic relative to the cost of living at that particular time.

The farmer is not in this happy position. His position is such that unless governments continually take direct and concerted action to see that his products are marketed at a satisfactory price he is in dire straits.

In the west this year we are living almost hungry in a land of plenty, if I may put it that way. We have farmers with bins of grain held over for the last two years, and in some cases three years. Because of the collapse of the International Wheat Agreement, as we knew it, that grain was not moved.

We have been faced with a large pile-up of damp grain, with the result that the farmer is spending extra money in trying to store it and to dry it, and still, in many cases, he has not even been assured of markets for this product even after he dries it.

[Interpretation]

Le ministre a déjà entendu tout cela, mais il est bon de le répéter.

Le cultivateur doit lutter contre la nature. Il ne peut pas laisser son matériel dans la cour de la ferme à rouiller. Ses vaches vont vêler, ses truies vont mettre bas, et ses poules vont pondre. Autrement dit, il est toujours en activité. Il doit sortir et se mettre à l'œuvre et quoi qu'il arrive à l'économie, il remplit un rôle essentiel à l'égard de la société, celui de fournir des aliments au meilleur prix possible. Par conséquent, il mérite d'être pris en considération comme tous les autres secteurs d'activité.

Le cultivateur n'a aucun contrôle sur le coût des biens et services. Si, en tant que petit homme d'affaire, je dois acheter du bétail pour mon usine d'alimentation, pour le revendre au cultivateur ou un autre citoyen qui n'en produit pas, si je dois payer 25 cents la livre sur pied, je le vendrai 50 cents la livre au prix de gros. Je peux le vendre à ce prix, recouvrer mes frais de transformation et mon client sera satisfait.

C'est la même chose dans le secteur du travail. L'ouvrier est représenté par son syndicat. S'il n'est pas satisfait du prix des biens et services, il peut se mettre en grève et obtenir l'augmentation de salaire qu'il considère réaliste en fonction du coût de la vie.

Or, le cultivateur ne peut pas agir ainsi à moins que le gouvernement agisse directement et de façon concertée pour s'assurer que ses produits se vendent à un prix satisfaisant, il se trouve dans une mauvaise situation.

Dans l'Ouest cette année, on crève pratiquement de faim dans une terre d'abondance. Certains cultivateurs accumulent des céréales depuis deux ou même trois ans, à la suite de l'effondrement des accords internationaux et nous n'avons pas pu transporter de céréales.

Nous nous retrouvons actuellement avec des stocks considérables de céréales humides de sorte que le cultivateur doit maintenant dépenser de l'argent pour les emmagasiner et les faire sécher. Et il n'est pas encore assuré, bien souvent, de trouver un marché pour ces produits une fois qu'ils seront secs.

● 1050

As the result of this situation, as I say, we are in dire straits in many areas in Western Canada, and when we find, as I say, that government policy is, as I feel it is, being

Le résultat c'est que la situation est critique dans certaines régions de l'Ouest du Canada. Et quand on s'aperçoit que la politique du gouvernement, comme je le pense, est fondée

[Texte]

directed towards the survival of the fittest, I do not think it is a fair approach.

That concludes my general remarks, but I would like to refer back to the National Grains Council that was referred to by Mr. Thompson when we opened up our discussions this morning. Originally when this was set up there was talk of it having only two meetings a year. I immediately reacted to this statement. I said this Grains Council would not be very effective if we could meet only a couple of times a year, unless it was only going to be a body that would spend most of its time doing research and nothing else.

We now have three very important organizations in Western Canada. We have the pools that market grain; we have the Canadian Wheat Board which is actually the agent for the handling of the grain; and we have the Board of Grain Commissioners which looks after quality and other matters in connection with the whole marketing process.

Is it going to be a case of too many cooks spoiling the broth? We do not want to see another organization set up unless it can serve some effective purpose, because I have noticed in my experience over the years that if you get too many people involved in the same thing, it gives the other people that have been involved a sort of lackadaisical or indifferent attitude. They say, "Well, we will let George do it". I do not want to see this happen.

I am just wondering where we are heading in this. Because the agricultural industry is so important, I would hope, as should every member of Parliament, that this will serve a useful purpose but I am just wondering what further comments the Minister might make regarding the actual function of this new organization. I think myself that we should be concentrating some of our effort on trying to get the members of the International Wheat Agreement together again at some emergency meeting some place to put a few more teeth in our new agreement, or activate it in a way that Canada at least will be able to hold her own and get her share of the present world market.

I find there were many instances in the last year or two where this agreement did not work effectively. Only last fall it came to my attention that France, one of the major partners in this agreement, sold a large amount of barley to Japan at a price of 45 cents a bushel, when under the agreement it should have been around \$1 per bushel. When this type of information gets out into agricultural areas, you can imagine the concern of people. It indicates to me that we are not getting the

[Interprétation]

sur la survie du plus fort, je ne pense pas que ce soit juste.

Ceci met un terme à mes remarques générales. J'aimerais me rapporter à la Commission canadienne des céréales dont a parlé M. Thompson au début du débat, ce matin. À l'origine, lorsque cela a été établi, on envisageait d'avoir seulement deux réunions annuelles. J'ai aussitôt réagi en disant que la Commission n'aurait aucune efficacité si elle ne se réunissait que deux fois par an, à moins qu'elle ne soit qu'un organisme de recherches qui passe une très grande partie de son temps à la recherche et à rien d'autre.

Nous avons déjà trois organisations très importantes dans l'Ouest. Nous avons les syndicats de commercialisation des céréales, la Commission canadienne du blé qui veille à la manutention des céréales et la Commission canadienne des grains qui s'occupe de la qualité et d'autres questions relatives à la commercialisation. Trop de marmitons gâtent la sauce. Nous ne voulons pas créer une nouvelle organisation à moins qu'elle ne serve à quelque chose d'utile. Mon expérience m'apprend que si trop de gens s'occupent de la même chose, plusieurs tombent dans l'apathie ou deviennent indifférents. Ils disent: «George va le faire». Je ne veux pas que cela se produise.

Je me demande où l'on s'en va parce que l'industrie des produits agricoles est très importante, à mon avis. Comme chaque député, je souhaite que cela serve à des fins utiles. Je me demande seulement quels seront les autres commentaires qu'apportera le ministre, sur la fonction actuelle du nouvel organisme. Je pense vraiment qu'il faudrait concentrer nos efforts pour convoquer encore une fois les membres de l'Accord international sur le blé à une réunion d'urgence, afin de consolider notre nouvel accord et de le stimuler de façon à ce que le Canada puisse au moins jouer son rôle et prendre sa place sur le marché mondial des céréales.

A plusieurs reprises, au cours des deux dernières années, l'accord s'est, à mon avis, révélé inefficace.

Ainsi, l'automne dernier, j'ai remarqué que la France, un de nos partenaires les plus importants, avait notamment vendu au Japon une quantité considérable d'orge à 45c. le boisseau, alors que d'après l'entente, il aurait dû se vendre \$1 le boisseau. Lorsque ce genre de renseignements parvient aux oreilles des cultivateurs, vous pouvez vous imaginer leur

[Text]

benefits of this agreement at the present time. There are many other questions, but Mr. Chairman I would like to have the Minister's reply to some of these comments and the odd question, and as we continue on under other items I will have more to say.

Mr. Olson: Mr. Chairman, in replying to Mr. Southam's general remarks I would like to say that he has raised many problems without suggesting any solutions. I am not being critical about that, because I am sure that the agriculture industry in Canada as well as in almost all the other countries in what we refer to loosely as the developed world are searching for solutions to these same problems.

I want to say this, though, that we are not forcing the trend toward urbanization in Canada by any deliberate government policy. I suggest to the member that technology is doing this, because with the advance of technology it is possible for fewer and fewer people to produce more and more agricultural goods. This is something that I think we in Canada have to live with, because if we try to hold back the application of this technology we will be run over by activities in the international sphere. Technology and science are not national. They are international.

● 1055

I want to say, too, that this is going on all over the world and I do not think Canada is far behind in these things.

Indeed, we have some programs that many of the other nations of the world look at as being perhaps not perfect but the best that are in effect anywhere in the world today. I could look, for example, at the dairy policy and the arrangements that we have for supporting it. We have said that this is going to be designed to meet the effective demand, because as long as we are constantly producing against surpluses in all of these agricultural commodities, it is, I think, sensible to try and equate that production to the demand.

Of course, we cannot do that with wheat, because we have to live with the international market in wheat. Because wheat forms so high percentage of our production, we must find a way into the international market. I would like the member to know, too, that we are concerned about the marketing of wheat.

[Interpretation]

réaction. Pour moi, cela signifie que nous ne retirons pas les bénéfices de cette entente à l'heure actuelle. Il y a tout une foule d'autres questions à poser, monsieur le président, mais le ministre voudra peut-être nous dire ce qu'il pense de ces remarques et au fur et à mesure que nous aborderons la discussion d'autres points, je parlerai.

M. Olson: Monsieur le président, pour répondre brièvement aux remarques de monsieur Southam, je dirais qu'il a soulevé beaucoup de problèmes sans pour autant proposer des solutions. Je ne le critique pas parce que je suis certain, de toute façon, que pour l'agriculture au Canada, comme pour l'agriculture dans presque tous les autres pays que l'on inclut dans le monde développé, on cherche à résoudre les mêmes problèmes.

Ce que je veux dire pourtant, c'est qu'aucune politique gouvernementale délibérée ne pousse le Canada à l'urbanisation. Je fais seulement remarquer aux députés que cet état de choses provient de la technologie, car avec le progrès technologique, il est de plus en plus possible à moins de gens de produire plus de denrées agricoles. Et c'est là, à mon avis, une situation que la population canadienne doit accepter parce que si elle se refuse à appliquer la technologie, elle sera alors débordée par les événements internationaux. La technologie et la science ne sont pas des phénomènes nationaux. Ce sont des phénomènes internationaux.

Je voudrais également ajouter que cela se produit dans le monde entier et je ne pense pas que le Canada soit très en retard dans ce domaine.

En fait, nous avons même des programmes que bien des pays considèrent peut-être comme imparfaits, mais disons comme étant les meilleurs qui existent actuellement dans le monde. Je pourrais, par exemple, vous parler de notre politique en matière des produits laitiers et des mesures que nous avons prises pour soutenir cette politique. Elle est conçue, a-t-on dit, pour répondre à la demande réelle car, aussi longtemps que nous produisons toujours à la limite des excédents, dans le domaine des denrées agricoles, je pense qu'il est bon de chercher à avoir une production qui soit à la mesure de la demande.

On ne peut naturellement pas le faire avec le blé parce qu'il nous en faut subir le marché international. Le blé représente un pourcentage tellement élevé de notre production qu'il faut que nous nous introduisions dans le marché international. J'aimerais que les députés sachent également que nous nous intéres-

[Texte]

I am sorry that people continue to misinterpret what the Prime Minister said in Winnipeg, but if they choose to do that we will just simply have to continue to answer it. What he said and what was misinterpreted was that marketing wheat was not the direct responsibility of the government, but that responsibility for selling wheat had been handed by the government and the producers to the Canadian Wheat Board.

I think my friend will agree with me that is what we expect the Wheat Board to spend most of its time doing.

As far as credit is concerned, I think the amendments that we made to the Farm Credit Act and to the Farm Machinery Syndicates Credit Act provide additional amounts of credit for family farms to compete with corporation farms that are having credit injected into them in addition to what is available from the Farm Credit Corporation.

Now to get to the one or two other questions that were asked, the organizational structure of the Canada Grains Council requires it to meet a minimum of twice a year. Article 5 reads:

The Council shall meet twice yearly, or more frequently as it decides, or at the call of the Ministers. The Executive Committee shall meet as often as may be necessary to provide continuity to the work of the Council.

So that twice a year is a minimum.

Regarding the other question you raised about barley and the alleged sale by France at 45 cents a bushel or whatever it was to Japan, all I can say to that is that barley is not included in the arrangements under the International Grains Agreement.

Mr. Southam: Mr. Chairman, can you state why it was not, because under this new International Grains Agreement I thought there was a 52-nation grains council who were taking all of these various grains into consideration.

Mr. Olson: I do not believe that feed grains have ever been under either the old International Wheat Agreement or the new International Grains Agreement.

Mr. Southam: I may be wrong, but we understood that there was a sort of gentleman's agreement to this effect anyway.

Mr. Olson: The reason is very simple. In spite of Canada's representations, the other

[Interprétation]

sons à la commercialisation du blé. Je regrette que les gens continuent à mal interpréter ce que le premier ministre a dit à Winnipeg, mais s'ils persistent dans ce sens, nous ne pouvons que continuer de leur répondre ce que le ministre a dit et que l'on a mal interprété, c'est que le domaine de la commercialisation du blé ne relève pas du gouvernement mais que la vente du blé avait été déléguée à la Commission du blé par le gouvernement et les producteurs.

Je crois que mon ami sera d'accord avec moi pour dire que c'est le rôle que nous attendons de la Commission du blé.

En matière de crédit, je dois dire que les modifications que nous avons apportées à la Loi sur le crédit agricole, et à la Loi sur le crédit accordé aux syndicats de machines agricoles, prévoient une augmentation des crédits accordés aux exploitations agricoles familiales, pour qu'elles puissent concurrencer les sociétés agricoles qui bénéficient de crédits accordés, en plus de ce qui est offert par la Société du crédit agricole.

En ce qui concerne les autres questions qui ont été posées, l'organisation de la Commission canadienne des céréales en a besoin environ deux fois l'an. L'article 5 stipule que: «La Commission se réunira deux fois l'an, ou plus fréquemment comme elle le décidera, ou à la demande des ministres. Le comité exécutif se réunira aussi souvent que possible afin d'assurer une certaine continuité dans le travail de la Commission.»

Par conséquent, deux fois l'an est un chiffre minimal. En ce qui concerne l'autre question que vous avez soulevée au sujet de l'orge et de la présumée vente au Japon, par la France à 45c le boisseau ou quel qu'en soit le prix, tout ce que je peux dire c'est que l'orge ne figure pas aux dispositions de l'Accord international sur les céréales.

M. Southam: Monsieur le président, est-ce que vous pourriez nous dire pourquoi? Je croyais qu'il s'agissait pour l'Accord international sur les céréales, d'un conseil de 52 pays qui tenait compte de toutes les céréales.

M. Olson: Je ne crois pas que les grains de provende n'aient jamais figuré dans l'ancien Accord international sur le blé ou dans le nouvel Accord international sur les céréales.

M. Southam: Je me trompe peut-être mais j'ai cru comprendre qu'il y avait en quelque sorte une entente à l'amiable à cet égard.

M. Olson: La raison en est très simple. Malgré les démarches du Canada, les autres pays

[Text]

countries have never agreed to include feed grains in any of these international arrangements.

Mr. Southam: The cereal council was working in co-ordination with it, was it? This is a question that many people have been asking.

Mr. Olson: I think the answer to the question is that Canada has tried on a number of occasions under the old International Wheat Agreement and under the new one to have feed grains included, but the other nations have not agreed to do so.

The Chairman: Mr. Korchinski has a brief question.

Mr. Korchinski: Mr. Chairman, I have several questions but I just want to say now, because of some remarks the Minister made about technology being to blame, that if technology is the cause of our trouble, then I would suggest that perhaps through technology we are producing food much cheaper and consequently we should have been expanding our markets. And the fact is that that is not so. It is not just a question of wheat, but also the butter subsidy and in other areas.

• 1100

Without opening this issue up for a wide discussion, I just want to say that perhaps since we have discussed the whole grain problem, the terms of reference could be included in today's proceedings so that we would have the whole list of terms in the Minutes of our meeting.

Mr. Olson: It could be. I can table it, but this has been distributed to the members.

Mr. Korchinski: For anybody who is referring to these minutes, the terms of reference could be included as part of the minutes.

Mr. Olson: Mr. Chairman, I do not mind, but my objection is that we have done this repeatedly. I made a statement in the House of Commons on February 4 and I tabled these documents along with it, so it is already fully accessible.

Mr. Korchinski: I have questions that I want to ask on another day, but I am simply saying that anybody studying these reports

[Interpretation]

n'ont jamais voulu que les grains de provende figurent dans aucun accord international sur les céréales.

M. Southam: La Commission sur les céréales travaillait en étroite collaboration, n'est-ce pas? Voilà la question que beaucoup de gens se posent.

M. Olson: Pour répondre à votre question, je crois que le Canada a, à plusieurs reprises, essayé dans le cadre de l'ancien accord international sur le blé et du nouvel accord d'y faire figurer les grains de provende mais les autres pays ont refusé.

Le président: M. Korchinski a une brève question à poser.

M. Korchinski: Monsieur le président, j'ai plusieurs questions à poser. Mais je voudrais simplement dire, à propos des remarques que le ministre a faites et par lesquelles il jetait le blâme de l'état de choses actuel sur la technologie, en disant qu'elle était la cause de nos difficultés, que, pour ma part, je pense que la technologie nous permet de produire des aliments à meilleur compte et que, par conséquent, nous aurions dû étendre notre marché. Mais la réalité nous prouve le contraire. Ce n'est pas qu'une question de blé mais il en est de même pour les subventions accordées pour le beurre et dans d'autres domaines.

Alors, je ne voudrais pas soulever une grande discussion à ce sujet, je peux dire simplement que peut-être, depuis que nous avons débattu la question des céréales, les attributions pourraient figurer au compte rendu d'aujourd'hui, de sorte que nous aurions la liste complète des attributions de ce conseil dans le procès verbal de notre Comité.

M. Olson: Ce document a été distribué.

M. Korchinski: Celui qui se rapporte à ce procès-verbal pourrait considérer les attributions comme en étant une partie.

M. Olson: Monsieur le président, je n'y vois aucune objection, mais on l'a fait à plusieurs reprises. J'ai déjà fait une déclaration à la Chambre des communes le 4 février à ce sujet et j'ai déposé le document en même temps qui est donc déjà entièrement disponible.

M. Korchinski: Non, j'ai d'autres questions à poser un autre jour, mais je voudrais dire simplement que toute personne qui voudrait

[Texte]

would have all of the terms of reference and that is all I am asking. I see no reason—

Mr. Olson: I have no objection.

Mr. Korchinski: I will hold the questions that I have because they will take quite a while.

Mr. Olson: I would like to answer one question that you had about technology. In the last 15 years we have been producing 67 per cent more food with half as many people. This in my opinion, is a direct result of advanced technology in production.

Mr. Korchinski: Why has the market not expanded also?

Mr. Olson: I do not know that it has not.

The Chairman: Gentlemen, we are rapidly approaching the hour of adjournment. I want to thank the members of the Committee for being completely constructive this morning. I think our meeting has been orderly and good. There will be a meeting of the steering committee at 3.30 p.m. It is my understanding that there has been agreement in the Committee that we would proceed with Vote 5, which is the Research Department, at our next meeting on Thursday morning. Shall Item 1 stand?

Item 1 stood.

Gentlemen, the meeting is adjourned to the call of the Chair.

[Interprétation]

étudier nos procès-verbaux, aurait la possibilité de consulter le document en même temps, c'est tout.

M. Olson: J'ai aucune objection à faire.

M. Korchinski: J'attendrai pour poser mes questions parce qu'elles prendront un certain temps.

M. Olson: Maintenant, j'aimerais répondre à la question que vous aviez posée au sujet de la technologie. Au cours des dernières 15 années, nous avons produit 67 p. 100 de plus de produits alimentaires avec la moitié moins de gens. D'après moi, c'est un effet direct du progrès technologique dans la production.

M. Korchinski: Mais pourquoi le marché n'a-t-il pas augmenté aussi?

M. Olson: Je l'ignorais.

Le président: Messieurs, nous en arrivons bientôt à la fin de la réunion.

Je voudrais remercier les membres du Comité d'avoir été très constructifs ce matin. Je pense que notre réunion s'est bien déroulée. Le comité directeur se réunira à 15h30. Je crois comprendre qu'il a été convenu au Comité de poursuivre l'étude du crédit 5, ce qui est le service des recherches, au cours de notre prochaine réunion le jeudi matin.

Est-ce que l'article 1 est en réserve?

Le crédit 1 est réservé.

Messieurs, la séance est levée à l'appel du président.

MINUTES OF PROCEEDINGS

THURSDAY, March 13, 1969.

(28)

The Standing Committee on Agriculture met at 9.44 a.m. this day, the Chairman, Mr. Beer, presiding.

Members present: Messrs. Beer, Clermont, Cobbe, Côté (*Richelieu*), Danforth, Douglas (*Assiniboia*), Foster, Horner, Korchinski, Lessard (*Lac-Saint-Jean*), Lind, McBride, Moore (*Wetaskiwin*), Pringle, Smith (*Saint-Jean*), Southam, Smerchanski, Thomson (*Battleford-Kindersley*), Whelan, Whicher—(20).

Also present: Mr. LeBlanc (*Rimouski*), Member of Parliament.

Witnesses: From the Department of Agriculture: Dr. J. C. Woodward, Assistant Deputy Minister (Research); Dr. A. W. S. Hunter, Director, Ottawa Research Station, Research Branch; Mr. C. B. Grier, Director, Financial and Administration Branch.

The Committee entered upon consideration of Item 5 of the 1969-70 Estimates relating to the Department of Agriculture, namely

RESEARCH

- 5 Administration, Operation and Maintenance, etc. ...\$39,238,100

The Chairman introduced Dr. Woodward who, in turn, introduced the other Departmental officials present.

On Item 1 of the Estimates, Mr. Grier answered a question asked previously; Item 1 continued to stand.

On Item 5, Dr. Woodward and Dr. Hunter answered questions, and Dr. Woodward gave a statement.

(Traduction)

PROCÈS-VERBAL

Le JEUDI 13 mars 1969.

(28)

Le Comité permanent de l'agriculture se réunit ce matin à 9 h. 44, sous la présidence de M. Beer.

Présents: MM. Beer, Clermont, Cobbe, Côté (*Richelieu*), Danforth, Douglas (*Assiniboia*), Foster, Horner, Korchinski, Lessard (*Lac-Saint-Jean*), Lind, McBride, Moore (*Wetaskiwin*), Pringle, Smith (*Saint-Jean*), Southam, Smerchanski, Thomson (*Battleford-Kindersley*), Whelan, Whicher—(20).

De même que: M. LeBlanc (*Rimouski*), député.

Témoins: Du ministère de l'Agriculture: M. J. C. Woodward, sous-ministre adjoint (Recherche); M. A. W. S. Hunter, directeur, Station de la Recherche d'Ottawa, Direction de la recherche; M. C.B. Grier, directeur, Direction des affaires financières et administratives.

Le Comité passe à l'examen du crédit 5 des prévisions budgétaires du ministère de l'Agriculture pour l'année 1969-1970, à savoir:

RECHERCHES

- 5 Administration, fonctionnement et entretien, etc.\$39,238,100.

Le président présente M. Woodward, qui, à son tour, présente les autres représentants du Ministère.

Sur l'article 1 des prévisions budgétaires, M. Grier répond à une question posée précédemment; l'article 1 demeure réservé.

Sur l'article 5, M. Woodward et M. Hunter répondent à des questions, et M. Woodward fait une déclaration.

After some more questions, it was agreed that copies of the following would be distributed to Committee members:

Report...on the Scientific Activities of the Canada Department of Agriculture.

With questioning continuing, Item 5 was allowed to stand.

At 10.58 a.m., the Committee adjourned to the call of the Chair.

Après quelques autres questions, il est convenu de distribuer aux membres du Comité des exemplaires du document suivant:

Rapport...sur l'activité scientifique du ministère de l'Agriculture du Canada.

L'interrogatoire se poursuivant, le crédit 5 est réservé.

A 10 h. 58 du matin, le Comité s'ajourne jusqu'à nouvelle convocation du président.

Le secrétaire du Comité,
Michael A. Measures,
Clerk of the Committee.

[Texte]

EVIDENCE

(Recorded by electronic apparatus)

Thursday, March 13, 1969

• 0944

The Chairman: Gentlemen, I am informed that a quorum has been counted. When we last met it was agreed that we would move to Item 5:

Department of Agriculture Research

5. Administration, Operation and Maintenance including the costs of publishing departmental research papers as supplements to the "Canadian Entomologist" \$39,238,100

I did have on my list at that particular time a number of questions. I assume, since we have moved to a new item, it probably will not be necessary to recognize the list from last week.

We did have a question asked which was not completely answered. I think our Departmental officials are prepared to do that for us this morning, but before they do I think I am slightly in error in not introducing the gentleman on my right. I would like to introduce Dr. Woodward who is the Assistant Deputy Minister, Research Branch. Dr. Woodward, would you introduce the other gentlemen from the department, please?

Dr. J. C. Woodward (Assistant Deputy Minister, Research Branch, Department of Agriculture): Mr. Chairman and gentlemen, on my right, Dr. Ludwig, the Assistant Director General of Administration in the Research Branch; next, is Dr. K. Rasmussen, the Associate Director General of the Research Branch.

In the corner, first, Mr. C. B. Grier, who is the Director General of the Financial and Administration Branch; next, Mr. D. H. Costley, the Supervisor of Financial Planning and Program Review, and finally, Dr. A. W. S. Hunter who is the Director of our Ottawa Research Station. Thank you, sir.

[Interprétation]

TÉMOIGNAGES

(Enregistrement électronique)

Le jeudi 13 mars 1969

Le président: Messieurs, on vient de me dire que nous avions quorum. Lorsque nous nous sommes réunis mardi dernier, nous avions convenu de passer au crédit 5.

Ministère de l'Agriculture Recherche

- Crédit 5—Administration, fonctionnement et entretien, y compris les frais de publication de rapports de travaux de recherche du ministère comme suppléments à «L'Entomologiste canadien» \$39,238,100

A ce moment-là, j'avais sur ma liste un certain nombre de personnes voulant poser des questions. Je suppose, étant donné que nous avons abordé un nouveau ministère, qu'il sera probablement inutile de conserver la liste de la semaine dernière.

Nous avons une question à laquelle on n'avait pas complètement répondu. Je pense que les fonctionnaires du ministère sont maintenant disposés à le faire. Mais avant de leur donner la parole, je pense que je devrais les présenter.

D'abord, le D^r J. C. Woodward, sous-ministre adjoint, Direction de la Recherche, Ministère fédéral de l'Agriculture qui voudra bien présenter les responsables de son ministère.

Dr J. C. Woodward (Sous-ministre adjoint, Direction de la Recherche, Ministère fédéral de l'Agriculture): Monsieur le président, messieurs, à ma droite, il y a le docteur R. A. Ludwig, Directeur général adjoint de l'administration, Direction de la Recherche, Ministère fédéral de l'Agriculture. À côté de lui, il y a le D^r K. Rasmussen, Directeur général associé, Directeur de la Recherche, Ministère fédéral de l'Agriculture.

Dans le coin vous avez d'abord M. C. B. Grier, Directeur, Direction des affaires financières et administratives, Ministère fédéral de l'Agriculture; ensuite M. D. H. Costley, Planification financière et analyse des programmes, Direction des affaires financières et administratives, Ministère fédéral de l'Agriculture; et enfin le D^r A. W. S. Hunter, Directeur, Station de la Recherche d'Ottawa, Direction de la Recherche, Ministère de l'Agriculture.

Je vous remercie, messieurs.

[Text]

The Chairman: Thank you, Dr. Woodward. I understand the question which was asked last week by Mr. Gleave could be answered this morning. Mr. Grier are you prepared to answer the question? If so, it then will be in our record.

Mr. C. B. Grier (Director, Financial and Administration Branch, Department of Agriculture): Yes, Mr. Chairman, this question dealt with the contributions to the Agricultural Economics Research Council. I believe the question was, what contributions were made by the federal government to provinces and the agri-business and farm organizations in the last complete year? The last year for which we have complete information is 1967-68, when the combined contribution to the provinces, agri-business and farm organizations was \$55,755 of which the federal government contributed half or \$27,877.

The Chairman: Thank you, Mr. Grier.

The meeting is open for questions. I have on my list Mr. Whicher and Mr. Lessard. I recognize Mr. Whicher.

Mr. Whicher: Mr. Chairman, I am very interested in the research that was done in the last few years with what we call Latham raspberries and I think probably the Department knows I am interested in this. I understand this was a joint program between the Research Branch of the Ontario Department and the Canadian one.

I would like to know from Dr. Woodward or any of his officials just where the federal Department is involved in this program. For example, did they supply the original plants to the certified growers? Is the Canadian Department of Agriculture involved along with the Ontario one? When I get the answer to that, I will go a little further.

The Chairman: Dr. Woodward?

Dr. Woodward: Mr. Chairman, I would like to ask Dr. Hunter, our Director, who was co-operating immediately with the Ontario Department to give an answer to this question.

Dr. A. W. S. Hunter (Director, Ottawa Research Station, Research Branch, Department of Agriculture): Mr. Chairman, the answer to the first question is yes. The federal Department is involved in this program and we are responsible for supplying the initial stock—virus indexed stock—to the Ontario Department of Agriculture. This is

[Interpretation]

Le président: Je vous remercie docteur Woodward. Je crois savoir que la question posée par M. Gleave pourrait recevoir réponse maintenant. Est-ce que M. Grier pourrait maintenant nous donner une réponse? Dans l'affirmative, elle sera portée au compte rendu.

M. C. B. Grier (Directeur, Direction des affaires financières et administrative, Ministère fédéral de l'Agriculture): M. le Président, cette question portait sur les contributions au Conseil de recherches en économie rurale. Je pense que la question était de savoir quelle était la contribution du gouvernement fédéral, des provinces, des entreprises et des organisations agricoles au cours de la dernière année. La dernière année pour laquelle nous avons des renseignements est 1967-1968. Les contributions combinées aux provinces, aux entreprises et aux organisations agricoles étaient de 55,557.00 dont la moitié, soit 27,877.00, venait du gouvernement fédéral.

Le président: Merci monsieur Grier. Maintenant, messieurs, vous pouvez poser vos questions. J'ai M. Whicher et M. Lessard sur ma liste. Je donne la parole à M. Whicher.

M. Whicher: Monsieur le président, je m'intéresse beaucoup aux travaux de recherches effectués au cours des dernières années sur les framboises de variété Latham. Je crois savoir qu'elle a fait l'objet d'un programme conjoint entre l'Ontario et le Service fédéral Canadien.

Je voudrais savoir si le docteur Woodward ou ses fonctionnaires pourraient nous dire dans quelle mesure le ministère fédéral y participe. Par exemple, ont-ils fourni les plants originaux aux producteurs certifiés? Le ministère fédéral de l'Agriculture y participe-t-il de concert avec celui de l'Ontario? Lorsque j'aurai reçu réponse à cela, je continuerai.

Le président: Docteur Woodward?

M. Woodward: Monsieur le président, j'aimerais demander au docteur Hunter qui s'occupait de coordonner le programme avec le ministère ontarien, de répondre à cette question.

M. A. W. S. Hunter (Directeur, Station de la Recherche d'Ottawa, Direction de la Recherche, Ministère fédéral de l'Agriculture): Monsieur le président, la réponse à la première question est affirmative. Le ministère fédéral de l'Agriculture participe à ce programme et son rôle est de fournir les plants d'origine—des plants éprouvés et clas-

[Texte]

supplied in the form of a small number of plants; I cannot tell you how many, but something of the order of probably 50 to 100 plants. These are supplied to the Ontario Department of Agriculture and Food, Horticultural Research Institute of Ontario at Vineland where they are multiplied for one generation and turned over to a grower of what we call foundation stock. That grower multiplies them in the field for one year and provides plants to men who are known as growers of certified stock.

Mr. Whicher: Mr. Chairman, may I ask Dr. Hunter, did you select or did the Ontario Department select the growers of certified stock? There would be a limited number.

Did you select these people and after they were picked, did you or did the Department of Agriculture in Toronto draw up a contract whereby the growers guaranteed to propagate the foundation stock as supplied by you and, in turn, did you guarantee absolutely that these were Latham raspberries?

Dr. Hunter: The answer to the first part of your question is that our responsibility for this material ended when we turned the plants over to the Ontario Department at Vineland.

Mr. Whicher: But did you guarantee that they were Latham stock?

Dr. Hunter: No, sir.

Mr. Whicher: You did not?

Dr. Hunter: No, sir, there was no guarantee.

Mr. Whicher: I have documents in front of me here that may be from the Ontario Department; I will not deny that. In fact, that is why I asked how you got involved. I have a document here, for example, dated November 15, 1968 which reads as follows:

The Ontario and Canada Departments of Agriculture have been investigating the performance of the virus-free Latham being grown in our Certification Program.

There is no other word at all, it says, "Latham", that these are Latham. I have here a contract with one of the certified growers which guarantees that they are Latham, and I have here a tag affixed when the producer sells these so-called Latham raspberries, that absolutely guarantees them. The tag says, "Raspberry Certification Programme" with

[Interprétation]

sifiés—au ministère de l'Agriculture de l'Ontario. Ceux-ci sont fournis sous la forme d'un petit nombre de plants de 50 à 100. Je n'en connais pas le chiffre exact. Ces plants sont fournis au ministère de l'Agriculture de l'Ontario à la station de recherches horticoles d'Ontario où elles sont multipliées en une génération puis ensuite remis à un producteur de plants de base. Le producteur les multiplie sur le terrain pendant un an et fournit ce que l'on appelle des plants certifiés qui sont remis à des producteurs de plants certifiés.

M. Whicher: Puis-je demander alors au docteur Hunter si c'est lui ou le ministère de l'Ontario qui a choisi les producteurs de plants certifiés.

Est-ce vous qui les avez sélectionnés et une fois la sélection faite, est-ce que vous ou le ministère de l'Agriculture de Toronto avez passé un contrat en vertu duquel les producteurs garantissaient de propager les plants de base. Leur avez-vous garanti en retour que vous leur remettiez de véritables framboises Latham.

M. Hunter: En ce qui concerne la première partie de votre question, notre responsabilité à l'égard de ce produit se restreignait à transmettre ces plants au ministère de l'Ontario à Vineland.

M. Whicher: Mais est-ce que vous avez garanti qu'il s'agissait de framboises Latham?

M. Hunter: Non, absolument pas.

M. Whicher: Vraiment?

M. Hunter: Non, absolument pas. Il n'y avait aucune garantie.

M. Whicher: J'ai des documents sous les yeux qui proviennent peut-être du ministère de l'Agriculture de l'Ontario, je ne vais pas le nier. De fait, c'est pourquoi je veux savoir comment vous y avez été mêlés. Ainsi, j'ai un document en date du 15 novembre 1968 où il est dit:

«Le ministère de l'Agriculture de l'Ontario et le ministère fédéral de l'Agriculture ont étudié le comportement des «Latham» sans virus cultivé, dans le cadre de notre programme de certification.

Il n'est rien dit d'autre, seulement «Latham», que ce sont les «Latham». J'ai également un contrat ici avec un producteur certifié qui garantit que ce sont des «Latham» et j'ai ici une étiquette qui y est attachée lorsque le producteur vend ces prétendues framboises Latham, et qui les garantit entièrement. L'étiquette indique «Programme de

[Text]

which you have admitted you are involved, "Certified Stock, Variety—Latham". It does not list any other name, it says, "Latham". Now what about that?

Dr. Hunter: Certainly there is no guarantee so far as we are concerned. Of course, being reputable people, we would do our utmost to make sure that the stock is true to name. There is no written guarantee, however, any more than any nursery firm will guarantee to a grower that the plants they provide are the variety as stated.

Mr. Whicher: Dr. Hunter, did you not change the name after the program started?

Dr. Hunter: Yes, we had to change the name because we found that the variety did not conform with what we generally accept to be true Latham variety.

Mr. Whicher: In other words, these were sent to the Ontario Department as Latham?

Dr. Hunter: That is right.

Mr. Whicher: But then you changed the rules in the middle of the game and they became something else?

Dr. Hunter: I do not think you are being quite fair in saying that we changed the rules.

Mr. Whicher: You changed the name?

Dr. Hunter: We changed the name, yes.

Mr. Whicher: From hockey to baseball?

Dr. Hunter: No, sir.

Mr. Whicher: Well, it says right here in the letter "Because the Latham in our Program". This letter is dated November 15, 1968:

Because the Latham in our Program has some characteristics which differ from the Latham commonly grown in Ontario in the past, we have designated it as "Ottawa Latham".

Dr. Hunter: That is right.

Mr. Whicher: In other words, whether you absolutely guaranteed the stock was Latham or not, certainly the poor grower who had to sign this certificate which he guaranteed to put on his plants as they were sold—this is the certificate right here—certainly the grower thought they were Latham. For the benefit of the Committee, and I am only an amateur at this, Latham raspberries are a recognized

[Interpretation]

certification des framboises», auquel vous avez admis participer, et «stock certifié catégorie Latham». Il n'y a aucun autre nom d'énuméré, seulement «Latham». Alors, qu'est-ce que vous en pensez?

M. Hunter: Certainement, il n'y a pas de garantie en autant que nous sommes concernés. Nous, comme nous sommes des gens honorables, nous faisons de notre mieux pour nous assurer que le stock est conforme à l'étiquette, mais il n'y a aucune garantie par écrit, pas plus qu'un pépiniériste garantirait à un producteur que les plants qu'il lui fournit sont de la variété déclarée.

M. Whicher: Docteur Hunter, est-ce que vous n'avez pas changé le nom après le début du programme?

M. Hunter: Oui, il a fallu changer ce nom parce que nous avons constaté que la variété n'était pas conforme à ce que l'on considère généralement comme véritable catégorie Latham.

M. Whicher: Autrement dit, elles ont été envoyées au ministère ontarien au titre de «Latham»?

M. Hunter: C'est exact.

M. Whicher: Ensuite, vous avez changé les règles au milieu du jeu, et elles sont devenues autre chose.

M. Hunter: Non, je ne pense pas que ce soit juste de dire qu'on a changé les règles.

M. Whicher: Vous avez changé le nom...

M. Hunter: Nous avons changé le nom, oui.

M. Whicher: Du hockey au baseball?

M. Hunter: Non, monsieur.

M. Whicher: Mais c'est marqué ici très clairement, dans la lettre du 15 novembre 1968;

«Parce que la catégorie «Latham», dans notre programme, a certaines caractéristiques qui sont différentes de la catégorie «Latham» cultivée normalement dans l'Ontario, nous l'avons nommé «Latham d'Ottawa».

M. Hunter: C'est exact.

M. Whicher: Autrement dit, que vous garantissiez le stock comme étant des «Latham» ou non, le pauvre producteur qui a dû signer ce certificat qu'il s'est engagé à mettre sur ces plants lors de la vente—voici le certificat—certainement le producteur, lui, croyait que c'était des «Latham». Au profit des membres du Comité, je dirai, sans vouloir passer pour un professionnel, que les fram-

[Texte]

fine plant. So this man, the one I am thinking about, invested many thousands of dollars and he sold to export trade. I call your attention to Item 4, in Part 2 of the contract which the dealer and the Department of Agriculture signed. The dealer had to offer for sale not less than 50 per cent of the total number of plants of each variety produced and that variety, in this instance, was Latham. Afterwards the name was changed from "Latham" to "Ottawa Latham".

The Chairman: Mr. Whicher, you said "the Department of Agriculture"; I think probably you should specify whether it is the Ontario Department of Agriculture and Food, or the Canada Department of Agriculture.

Mr. Whicher: The Ontario Department of Agriculture obtained these Latham, as I understand it according to Dr. Hunter, from our Experiment Station and they accepted them as Latham—this is a combined program. Then the Research Institute at Vineland, Ontario turned them over to this grower who had to guarantee to put this tag on every bundle that he exported, guaranteeing, not Ottawa Latham, gentlemen, but Latham; there it is right there.

Now, this man exported many and they have just caught up to it. Last spring, in 1968, this Department, along with the gentleman concerned, got complaints from New York. So the Department here and/or in Ontario changed the name of it from Latham to Ottawa Latham. This man is stuck at the present time with 200,000 plants heeled in the ground ready for export in the spring and the Department refuse to let him export because they are not Latham, which was guaranteed before.

• 0955

Now, Mr. Chairman, what I say is this: I think this is terrible thing. If there was ever a case where we needed an ombudsman in Canada it is now. This poor innocent fellow—who, incidentally is not in my riding—a Czech who has been here for ten years and has been successful in his business, is going to lose every nickle he has—he is involved to the tune of approximately \$100,000—because he has been advised by the Research Institute at Vineland, which is the Ontario Department of Agriculture in this instance in co-operation with the federal Department of Agriculture, to burn the plants. Why? Because they are

[Interprétation]

boises Latham sont reconnues comme des plants très recherchés. Eh bien, cet homme auquel je songe à investi plusieurs milliers de dollars et il a vendu à l'exportation. J'attire votre attention sur l'article 4 de la deuxième partie du contrat intervenue entre le commerçant et le ministère de l'Agriculture. Le commerçant avait dû mettre en vente 50 p. 100 de la totalité des plants de chaque variété qu'il a produite et cette variété, dans le cas présent, c'est la «Latham». Par la suite, le nom a été changé et est devenu «Latham d'Ottawa» au lieu de «Latham».

Le président: Monsieur Whicher, vous avez dit «le ministère de l'Agriculture»; je pense que vous devriez préciser s'il s'agit du ministère de l'Ontario ou du fédéral?

M. Whicher: Le ministère de l'Agriculture de l'Ontario a obtenu ces «Latham», d'après ce que j'ai pu comprendre, d'après ce qu'a dit M. Hunter de notre succursale expérimentale et les a acceptées comme telles, c'est là un programme combiné. Ensuite, l'Institut de recherches de Vineland (Ontario) les a passées à ce producteur qui a dû garantir qu'il mettrait cette étiquette sur chaque paquet qu'il exporterait, garantissant non pas des «Latham d'Ottawa», mais des «Latham». Et c'est marqué ici.

Alors cet homme a exporté beaucoup de ces produits et on ne fait que de s'en apercevoir. Au printemps dernier, en 1968, le présent ministère et la personne concernée ont reçu des plaintes de New York. Le ministère fédéral ou provincial a donc changé le nom de «Latham» à «Latham d'Ottawa». Cet homme, à l'heure actuelle, est bloqué avec 200 mille plants qui sont mis en jauge dans le sol prêts pour l'exportation au printemps et le ministère refuse de les lui laisser exporter parce qu'il ne s'agit pas de «Latham», alors que c'est là ce qui était garanti.

Eh bien, monsieur le président, je dois avouer qu'il s'agit d'une chose très grave et si nous avons besoin d'un ombudsman au Canada, c'est bien maintenant. Cet homme innocent, qui, incidemment, n'est pas dans ma circonscription, mais qui est Tchèque et qui est au Canada depuis dix ans et a réussi en affaires, va perdre chaque centime qu'il possède—il est engagé pour un montant de l'ordre de \$100,000—parce que l'Institut de recherches de Vineland, qui relève du ministère de l'Agriculture de l'Ontario, dans le présent cas, en collaboration avec le ministère fédéral de l'Agriculture, lui a conseillé de

[Text]

not Latham. The fruit is just not satisfactory and I have all sorts of letters to prove this.

I know that the Department have evidently taken the attitude that they have no responsibility. Mr. Chairman I leave it up to you and to the Committee: is there any responsibility in a situation like this? Perhaps I am barking up the wrong tree, but other members may feel sympathy for this chap and I would appreciate it if they would ask questions about this. Perhaps Dr. Hunter would like to elaborate. There are always two sides to every story and I am sure that he has a side.

The point is that this program was started in 1962 by Ontario and by the Research Branch right here, and I have the information here. Also I have the contract here in front of me; it tells the grower what to do and there is every indication these plants were guaranteed to be a certain name variety and now that name is changed because the fruit is no good. I do not think one man should get stuck for this.

Dr. Hunter: I would just like to elaborate to a degree. In distributing a variety of this nature, of course, we make every effort to be sure that the variety is as named. This is sometimes very difficult to do; to be 100 per cent sure. Early in the Certification Program there were questions raised about this particular stock of Latham because it appeared to be somewhat different from Latham as it was commonly grown in Ontario at the time. We had it examined by people who are authorities in raspberry variety identification and they passed it as true Latham. In April 1967 it was noticed that trial plantations of this variety were producing somewhat small and soft fruit. A letter was written by the man in charge of the Ontario program to Mr. Hartman...

Mr. Whicher: What date?

Dr. Hunter: It was April 11, 1968.

Mr. Whicher: I am not challenging Dr. Hunter, of course, but I only say that on November 15, 1968 I have a letter letting Mr. Hartman know...

The Chairman: Would you permit Dr. Hunter to finish his statement?

[Interpretation]

brûler ses plants. Et pourquoi? Simplement parce que ce ne sont pas des «Latham». Le fruit n'en est simplement pas satisfaisant et j'ai reçu plusieurs lettres pour le prouver.

Le ministère adopte l'attitude selon laquelle il n'a aucune responsabilité. Et bien, monsieur le président, je laisse cela entre les mains du Comité. N'existe-t-il aucune responsabilité dans une situation comme celle-ci. Peut-être que je frappe à la mauvaise porte, je ne sais pas, mais je serais très heureux que les députés, si ils pensent que cet homme a raison, posent des questions à ce sujet. Peut-être que le D^r Hunter a quelque chose à ajouter. Bien sûr, il y a toujours deux versions dans une même affaire. Il y a toujours deux versions dans une même affaire, je pense donc qu'il peut donner sa version de l'affaire.

Le programme a été lancé par l'Ontario et par la Direction de la recherche du ministère fédéral de l'Agriculture, en 1962, et j'ai les renseignements ici. J'ai également le contrat sous les yeux et je vois clairement ce que le cultivateur devait faire. Et bien, tout est clairement indiqué, il y a un nom qui devait être garanti, ce nom a été changé simplement parce que le bruit n'était pas bon. Et je ne pense pas qu'un homme doit être bloqué à cause de cela.

M. Hunter: J'aimerais en parler dans une certaine mesure. En distribuant une variété de cette nature, nous faisons tout ce que nous pouvons pour nous assurer qu'elle est bien la variété dont le nom est indiqué. C'est parfois difficile à faire. Au début du programme de certification, des questions ont été soulevées quant à cette variété particulière de «Latham» parce qu'il semblait que cette variété était différente des «Latham» normalement cultivés en Ontario à cette époque-là. Nous avons fait faire des examens auprès de gens qui sont experts en la matière, nous avons catégorisé, et ils l'ont identifiée comme étant de véritables «Latham». Puis en avril 1967, on a constaté que les plans d'essai de cette variété produisaient des fruits plus petits et mous. Le préposé au programme de l'Ontario a alors écrit une lettre à M. Hartman.

M. Whicher: A quelle date.

M. Hunter: Le 11 avril 1968.

M. Whicher: Je ne vous mets pas en doute, D^r Hunter, mais je veux simplement vous dire que le 15 novembre 1968, j'ai ici une lettre informant M. Hartman...

Le président: Veuillez laisser M. Hunter terminer sa déclaration.

[Texte]

Dr. Hunter: In this letter, sir, it was stated that in view of the rather small fruit and soft fruit of this variety it would not be recommended for extended planting in Ontario. I am not sure this is the exact wording, but it was to that effect. This letter was sent to Mr. Hartman.

It was not until October, 1968 that what we now call the Ottawa Latham and the United States Department of Agriculture strain of Latham were planted side by side in the one nursery. Our people went down to New York State and examined it and agreed that the variety we had been distributing as Latham was not the Latham that is commonly called Latham.

It was agreed that the variety that is commonly known as Latham was most likely to be true Latham and that it should be called the true Latham. In order to avoid selling something under false pretences which was not what we had expected it to be, it was decided to call this variety Ottawa Latham. I think, if we had gone on and called it Latham, Mr. Hartman might have been able to sell his plants, but then he would eventually have been subject to considerable criticism and reprisal because what he was selling was not Latham. We realized by this time that it was not Latham.

• 1000

Mr. Whicher: Mr. Chairman, you realize that this program started in 1962. I have a letter in front of me which is dated November 15, 1968, which starts as follows:

Dear Sir,

The Ontario and Canada Departments of Agriculture have been investigating the performance of the virus-free Latham being grown in our Certification Program. The plants have been vigorous,...

This was November 15, 1968.

... hardy, and considerably resistant to powdery mildew and, in these respects, the variety has performed well. However, the berries have generally been somewhat small and soft and in these respects inferior to the Latham commonly grown in Ontario in the past. Also, yields have been somewhat disappointing.

Because the Latham in our Program has some characteristics which differ from the Latham...

Guaranteed, gentlemen, by the Department ... commonly grown in Ontario in the past, we have designated it...

[Interprétation]

M. Hunter: Dans la lettre monsieur, il était donc indiqué que, en raison de la petitesse et la mollesse de ces fruits, il n'était pas possible d'en recommander l'extension dans l'Ontario. Enfin je ne sais pas exactement comment cela a été dit mais c'était sous cette forme. Cette lettre a été envoyée à M. Hartman.

Ce n'est qu'en octobre 1968, que ce qu'on appelle maintenant la «Latham d'Ottawa» et la variété américaine «Latham» du ministère de l'Agriculture des États-Unis ont été plantée côte à côte dans une pépinière. Les gens sont allés dans l'État de New York, les ont examinées et ont reconnu que les variétés que nous avions distribuées sous le nom de «Latham» n'étaient pas la même variété que celle qu'on appelle ordinairement «Latham».

Et il a été convenu que la variété que l'on appelle ordinairement «Latham» devrait être véritablement la «Latham» et qu'elle devrait être appelée la véritable «Latham». Afin d'éviter de vendre un produit sous de fausses représentations, ce que nous n'avions pas prévu, et bien il a été décidé d'appeler cette variété la «Latham d'Ottawa». Je pense que si nous avions continué à l'appeler «Latham», M. Hartman aurait peut-être vendu ses plants, mais à la fin on l'aurait critiqué parce qu'il vendait de fausses Latham. Nous nous sommes rendu compte à ce moment qu'il ne s'agissait pas de vraies Latham.

M. Whicher: Monsieur le président, ce programme a débuté en 1962. La lettre que j'ai sous les yeux, en date du 15 novembre 1968, commence comme suit:

«Monsieur,

Les ministères de l'Agriculture de l'Ontario et du Canada ont étudié le comportement des Latham sans virus cultivées aux fins du programme de certification. Les plants sont vigoureux,...

C'était le 15 novembre 1968.

...et sont très résistants au milieu poudreux; cette variété s'est donc très bien comportée à cet égard. Mais, en général, les baies étaient plus petites et plus molles et en ce sens inférieures aux Latham produites en Ontario dans le passé. Et même les rendements étaient inférieurs.

Étant donné que certaines caractéristiques de la Latham de notre programme diffèrent de la Latham...

Garanti, messieurs, par le ministère.

...normalement cultivée en Ontario, nous l'avons désignée...

[Text]

Now this tag is no good, you see.

...we have designated it as "Ottawa Latham". Therefore, the name "Ottawa Latham" must be used in all advertising and sales and certification tags will be issued as "Ottawa Latham".

Since its performance has been disappointing,...

Remember it was good from 1962 to 1968.

...we will no longer be recommending Ottawa Latham for commercial production. ...

But this was after the man had a fortune invested in this venture. The plants had already been planted the previous spring, but in November 1968, the 200,000 plants that he had heeled in the ground, ready for export the next spring, were no good.

... It is also unlikely there will be an export market for this variety. We will not be releasing any more plants for production of Foundation stock and existing plants should be phased out as soon as possible. Prospective customers of Latham should be informed of our findings on its performance and we would request you to do this.

We will attempt to bring a new strain of virus-free Latham into the Program as soon as possible and you will be kept informed of our progress in this respect.

Now here is the letter of April 11, 1968, but remember all the plants had been planted by then and they had been ordered from the Research Institute at Vineland.

You will recall that in my letter of April 11, 1968,

That is the one Dr. Hunter was talking about.

...I expressed concern about the performance of Latham and Viking and about the high proportion of Latham in the certified plantings. I also sent you a list of recommended varieties, their descriptions, and mimeographed results of our variety trials at Vineland and Simcoe. Additional copies of this information is enclosed. You may wish to use it in dealing with your customers.

Now the point is,

I will send you a small supply of certification tags...

[Interpretation]

Cette appellation ne veut rien dire;

...nous l'avons désignée «Ottawa Latham». Par conséquent, l'appellation «Ottawa Latham» doit figurer dans les annonces et les ventes, et des étiquettes de certification portant la mention «Ottawa Latham» seront émises.

Comme leur culture a été décevante...

N'oubliez pas que cela est valable de 1962 à 1968.

«Nous ne recommanderons plus la production commerciale des «Ottawa Latham».

Mais tout ceci se passe après que cet homme ait investi une fortune dans cette entreprise. Les plants étaient déjà en terre le printemps précédent, mais en novembre 1968, les 200,000 plants qu'il avait mis en terre et qu'il était prêt à exporter dès le printemps ne valaient plus rien.

«...Il n'est pas probable que l'on trouve un marché pour cette variété-là. Nous cesserons de distribuer de nouveaux plants pour la production de base, et les plants actuels devront être remplacés. Les clients éventuels de Latham doivent être tenus au courant de cette situation, et nous aimerions que vous le fassiez.

Nous tenterons dès que possible d'inclure au programme une nouvelle variété de Latham sans virus, et nous vous tiendrons au courant des progrès que nous aurons faits dans ce domaine.

A présent, voici la lettre du 11 avril 1968, mais n'oubliez pas que les plants étaient déjà en terre et qu'ils avaient été commandés de l'Institut de recherches à Vineland.

«Vous vous souviendrez que dans ma lettre du mois d'avril 1968 ...»

C'est celle dont le Dr Hunter parlait.

«...j'avais manifesté mon inquiétude à propos de la qualité du Latham et du Viking et au sujet de la forte proportion de Latham parmi les jeunes plants certifiés. Je vous avais également fait parvenir une liste de variétés recommandées, leur description ainsi que les résultats miméographiés des essais effectués sur nos variétés à Vineland et à Simcoe. Nous vous envoyons, sous ce pli, des copies supplémentaires de ces renseignements au cas où vous voudriez vous en servir en traitant avec vos clients.

La question est

«Je vous enverrai quelques étiquettes de certification. ...»

[Texte]

These are the tags, gentlemen.

Please send me an estimate of the number of tags per variety which you will require for stock produced in the 1968 season. Please estimate your requirements as closely as possible. Tags left over from last year should not be used. The expiry date stamped on these tags was July 1st, 1968. We do not want to set a precedent by changing information stamped on tags.

In other words, we do not want to put "Ottawa Latham" on the tags instead of "Latham."

Unused tags will be picked up by Mr. Jackson when he calls again.

• 1005

Gentlemen, may I just take another minute. Mr. Chairman, I have no criticism of the Research Branch. My goodness, anywhere in the world in any branch of research mistakes are made, but in this particular instance, tags were issued and contracts were signed guaranteeing this to be a certain product. However, that product was not as it was named. This man took the word of the Governments of Canada and Ontario, invested his money in these plants, signed contracts with New York producers and now he is going to pay these producers back, gentlemen, because he happens to be a Jack who works hard. He is going to pay the producers and replace these plants and he is going to sell his farm to do it. His boy who was to go to the Ontario Agricultural College next fall will not be going to the Ontario Agricultural College because he will not have the money. Now I say this, if we have an honest citizen who is going to pay this money back then the Departments of Agriculture in Canada and in Ontario have some responsibility. They should pay for...

The Chairman: Gentlemen I have permitted, I think, some latitude here to enable you, Mr. Whicher, to make your point. I do not think the Committee could undertake to constitute itself as a court of law to assess the degree of injury that has been done and what compensation, if any, should be awarded. I think the Committee could not assume that kind of responsibility. I wonder if we could recognize some of the other questioners and go on to consider the estimates that are before us on Item 5. This adjudication, if I may use that term, could be referred to a

[Interprétation]

Messieurs, voici les étiquettes.

Veuillez nous faire savoir le nombre d'étiquettes, par variété, que vous aurez besoin pour les plants qui pousseront en 1968. Veuillez faire en sorte que l'évaluation de vos besoins soient la plus précise possible. Les étiquettes de l'année dernière ne doivent pas être utilisées. La date d'expiration de ces étiquettes était au premier juillet 1968. Nous ne voudrions pas changer les renseignements figurant sur cette étiquette et établir ainsi un précédent.

Autrement dit, je ne voudrais pas que les étiquettes portent l'inscription «Ottawa Latham» mais simplement «Latham».

«Et M. Jackson passera pour ramasser les étiquettes non utilisées.

Messieurs, permettez-moi de prendre encore une minute de votre temps. Monsieur le président, je ne critique pas du tout la Direction de la recherche. Mon Dieu, aucun service de recherche au monde n'est infaillible, mais dans ce cas particulier, les étiquettes ont été émises, les contrats garantissant ce produit comme étant sûr, ont été signés. Malgré tout, ce produit était autre que ce que le nom disait. Or, cet homme a cru en la parole du gouvernement, en la parole de l'Ontario, en la parole du Canada. Il a investi beaucoup d'argent dans cette affaire. Il a passé des contrats avec des producteurs de New-York et maintenant, messieurs, il est obligé de rembourser tous ces producteurs, parce que c'est un type qui travaille dur. Il va devoir vendre sa ferme pour pouvoir rembourser les producteurs et remplacer ces plantes. Son jeune fils qui devait se présenter en automne au Collège d'agriculture de l'Ontario devra remettre cela à plus tard pour manque de fonds. Je dirai donc que si cet homme doit rembourser tout cet argent, c'est en partie de la faute du gouvernement de l'Ontario et du gouvernement fédéral. Ce sont eux qui devraient payer pour...

Le président: Eh bien, monsieur, je pense que j'ai été assez tolérant pour vous permettre d'expliquer votre point de vue. Je ne pense pas que le comité veuille ici se poser en tribunal afin d'évaluer l'importance du tort causé et quelle compensation devrait être versée. Je pense que le comité ne va pas assumer ce genre de responsabilité et j'espère qu'il faudra maintenant donner la parole à d'autres personnes, afin d'étudier le crédit 5. Cette adjudication devrait être référée à un tribunal ou à d'autres endroits où des évaluations

[Text]

court of law, probably, or some other place where proper assessments and awards could be made. Is this fair?

Mr. Whicher: The only thing, Mr. Chairman,—

Mr. Danforth: May I speak to that?

The Chairman: I have two other questioners ahead of you, Mr. Danforth, and unless they agree to yield—

Mr. Danforth: Mine is not a question, Mr. Chairman, I would like to speak to this proposition that you have just given to the Committee.

Mr. Thomson (Battleford-Kindersley): Let Mr. Danforth have the floor.

The Chairman: I will recognize Mr. Danforth.

Mr. Danforth: Mr. Chairman, I am in sympathy with the presentation that has just been made and it does fall within the purview of the Research Branch. There is a dual responsibility here, I think, and there is also the proposition that although this gentleman is in a very precarious position now due to certain actions that have taken place, had these actions not taken place, this same gentleman because of his preferred position would be in a position to make a considerable profit on his undertaking. So we have both sides of the story.

May I suggest, Mr. Chairman, while I know that we cannot deal in depth with this problem this morning, if the Committee is agreeable, that we study in depth the present federal research program and the allied programs that we have with the universities and with the provincial governments because it is of major importance to all of us. I wonder, Mr. Chairman, if it is decided that we should do this study and in order to be fair to all parties concerned, could we be provided with a chart, which may be available already in the Department, of the actual construction of the Research Branch of the federal Department and its allied branches?

I am certain that many of us here are not aware of the tremendous programs that are being entertained and the responsibility that is being placed—it is major responsibility—on some individuals.

• 1010

I think the Committee will want to know whether we have a Research Branch that is large enough and has practical application

[Interpretation]

appropriées peuvent être faites. Cela est-il raisonnable?

M. Whicher: La seule chose, monsieur le président ...

M. Danforth: Puis-je parler à ce sujet?

Le président: J'ai deux autres personnes avant vous, monsieur Danforth, et à moins qu'ils ne soient disposés à vous laisser ...

M. Danforth: Ce n'est pas une question que je veux poser, monsieur le président, j'aimerais simplement parler au sujet de la proposition que vous venez de faire au comité.

M. Thomson (Battleford-Kindersley): Donnez la parole à M. Danforth.

Le président: Je le reconnais, monsieur Danforth.

M. Danforth: Monsieur le président, je suis d'accord avec la proposition qui vient d'être faite, et elle cadre avec la Direction des recherches. Il y a une double responsabilité, ici, bien que ce monsieur se trouve dans une situation très précaire à cause de certaines mesures prises. Mais, si ces mesures n'avaient pas été prises, sa position privilégiée lui aurait permis de faire de grands bénéfices.

Donc, nous avons les deux aspects de la médaille. Bien que nous ne puissions pas traiter à fond cette question ce matin, monsieur le président, j'aimerais, si le comité est d'accord, que nous étudions à fond la question de la recherche de l'actuel programme fédéral de recherche ainsi que le programme que nous avons avec les universités et les gouvernements provinciaux, parce que c'est une question d'importance majeure pour nous tous. Je me demande, monsieur le président, s'il est décidé que nous devrions entreprendre cette étude, et, pour être équitable envers toutes les parties, pourrions-nous obtenir une carte que le ministère pourrait avoir de l'édifice de la Direction des recherches actuellement en construction?

Je crois que beaucoup d'entre nous ne se rendent pas compte des programmes qui sont entrepris ainsi que les responsabilités de chacun.

Le comité voudra savoir si nous disposons en ce moment d'une Direction des recherches suffisamment grande et si cette Direction dis-

[Texte]

towards our agricultural problems today. I want to know if they are being restricted in any way from carrying on programs. I want to know whether sums of money are being spent for which we are not getting our fair market value and I think the fact that this problem was brought up this morning is an indication—this is just one problem; there are others that I could name—that we should, as a Committee, know exactly what this Research Branch is and how it functions.

This was my reason for wishing to speak to your proposition, Mr. Chairman. I do not want to see this passed over and I do not agree with you, Mr. Chairman, that it is strictly a legal matter. I think this is a matter concerning the operation of the Department and we should, if there has been some mistake or some responsibility, perhaps not be so concerned about the monetary redress, we should see if there are loopholes in our departmental operation that make such a thing possible. This is what we are interested in as a Committee.

Mr. Chairman, with these remarks I will pass and take my turn in questions which are not along this line. However, I think a situation such as this is too major to be allowed to pass. I think this does fall directly within the purview of our Committee investigation.

The Chairman: Mr. Lind?

Mr. Lind: Dr. Hunter, I cannot see how we do not have a responsibility. We expect the growers to be responsible for their stock, we expect the Ontario Department of Agriculture to be responsible for their stock and if we supplied the original stock, I think there is a responsibility here that rests with the federal Department. I do not think it is all right to say that because we are the Government of Canada we can shake off this responsibility. I think there is a definite responsibility by this Department to provide not only assistance, but some compensation. When the error about these plants was made at the top level.

I do not think it is fair at all. I think it would be much better if they came to an orderly settlement of this thing on the basis of the federal Department of Agriculture, the provincial Department of Agriculture and the grower, who in this matter has followed all of the instructions given to him by the Department. I think we do have a responsibility in this, Mr. Chairman. I think it is part of our job as members of Parliament to see that these things are carried through on a gentlemanly basis, rather than referring everything to the courts of the land.

[Interprétation]

pose de moyens pratiques pour traiter des problèmes de l'agriculture. J'aimerais savoir si quoi que ce soit les empêche d'entreprendre ces programmes. J'aimerais savoir si les fonds ne sont pas dépensés avec discernement et je pense que le fait que ce problème ait été mentionné ce matin, en est une indication. Ceci n'est qu'un problème. Ce que nous devrions savoir exactement en tant que comité, c'est ce que veut dire cette Direction des recherches et de quelle façon fonctionne-t-elle?

C'est la raison pour laquelle je voulais vous entretenir à ce sujet. Je ne veux pas qu'on néglige cette question et je ne suis pas d'accord avec vous, monsieur le président, lorsque vous dites que cette question est strictement juridique. Je pense que c'est une question concernant le fonctionnement du ministère et s'il y a eu des erreurs, nous ne devrions peut-être pas nous occuper tellement de l'indemnité monétaire, mais il faut voir s'il y a des erreurs dans nos ministères, dans notre ministère qui permet que de telles chose se passent.

Monsieur le président, je vais passer, maintenant, et je poserai mes questions à mon tour. C'est une question trop importante pour qu'on la laisse de côté, c'est quelque chose qui relève du mandat de notre Comité.

Le président: Monsieur Lind?

M. Lind: Monsieur Hunter, par votre intermédiaire, je ne vois pas pourquoi nous n'assumons pas de responsabilité. Le producteur doit être responsable de son stock, le ministère de l'Agriculture de l'Ontario doit être responsable de son stock et si nous donnons le stock d'origine, il y a une responsabilité qui incombe au ministère fédéral. Ce n'est pas parce que nous sommes du gouvernement du Canada que nous pouvons nous débarrasser de cette responsabilité. Le ministère doit non seulement donner de l'aide, mais des subventions lorsqu'une telle situation se présente.

Je pense que ce n'est pas du tout juste, lorsqu'on fait une erreur au sujet de ces plants, au plus haut niveau. Je crois qu'il vaut mieux que l'on en arrive à un règlement ordonné entre le ministère fédéral de l'Agriculture, le ministère provincial de l'Agriculture et le producteur qui a suivi toutes les instructions qui lui ont été données par le ministère. Nous avons une responsabilité dans ce domaine, monsieur le président. Ça fait partie de notre travail de député de voir à ce que ces choses se passent d'une façon équitable, plutôt que d'avoir à en référer aux tribunaux.

[Text]

The Chairman: I only wanted to suggest that I think the Committee is in its perfect right examining the operation of the Research Branch to see whether dollars paid by Canadian taxpayers are properly used, but I do not think it is the job of this Committee to assess the degree of injury or the extent to which an award should be made. Our job is to scrutinize the expenditure of money in research; that is our term of reference.

I quite agree with Mr. Danforth that we are at liberty to go into the whole operation of the Department. Dr. Woodward, the Assistant Deputy Minister of Research is here. He is prepared to make an opening statement concerning the operation of the Department. Would the Committee agree to hear Dr. Woodward at this time, and then we might go on with further questioning?

Mr. Lind: Mr. Chairman, I would like to hear Dr. Woodward's views on this particular case. I know Dr. Hunter has given his, but what has been the procedure in the past? If we cannot discuss it today, let us set a time for the next meeting of the Committee to go into this thoroughly because this is a very serious situation.

The Chairman: I am sure you would agree that Dr. Woodward should be able to select his remarks. If you feel at the conclusion of his remarks that you would like him to comment further on this particular situation, then I am sure you would be at liberty to ask questions, but in the meantime...

Mr. Whicher: May I ask a question first?

The Chairman: May I recognize Dr. Woodward first and then we will go on to questions.

• 1015

Mr. Whicher: I have only one supplementary remark because I brought this up. I agree that we cannot assess the amount of damages, if there were damages, but our job is to find out if a mistake has been made by the Research Branch because we are voting large sums of money here. Our job is to find out whether a mistake has been made, not the amount of the assessment, but yes or no.

The Chairman: I think that is a reasonable approach.

Mr. Whelan: May I ask you one question?

The Chairman: Privately?

[Interpretation]

Le président: Je voulais simplement dire que le Comité a le droit de voir comment fonctionne notre Direction de la recherche, si le dollar contribué par les contribuables canadiens est bien utilisé. Je crois que ce n'est pas au Comité d'évaluer le dommage et le montant de la compensation qui devrait être payé. Notre tâche, c'est d'étudier la question de l'argent qui est dépensé en recherches, c'est là notre mandat.

Je suis d'accord avec M. Danforth sur le fait que nous pouvons étudier l'ensemble du fonctionnement du ministère. M. Woodward, sous-ministre adjoint à la recherche, est ici. Il pourra faire un exposé préliminaire sur le fonctionnement du ministère. Je me demande si vous seriez prêts à écouter M. Woodward à ce stade-ci et ensuite nous reprendrons l'interrogatoire.

M. Lind: Monsieur le président, j'aimerais avoir le point de vue de M. Woodward sur ce cas. Je sais que M. Hunter a donné le sien, mais quelle procédure a-t-on suivie dans le passé? Si nous ne pouvons pas avoir un débat aujourd'hui, est-ce que l'on pourrait prévoir une période, lors de la prochaine séance du comité, pour étudier cette question à fond, car c'est une question extrêmement sérieuse?

Le président: Vous seriez d'accord, j'en suis sûr, que c'est à M. Woodward de choisir ce qu'il aura à dire. Si vous croyez, à la fin de ses remarques, qu'il devrait expliquer davantage cette situation, vous aurez alors toute latitude pour poser des questions, mais entre-temps...

M. Whicher: Puis-je poser une question d'abord?

Le président: Je vais d'abord donner la parole à M. Woodward, puis nous pourrions poser des questions.

M. Whicher: Je n'ai qu'une remarque supplémentaire, c'est moi qui ai soulevé cette question. Je suis d'accord que nous ne pouvons pas évaluer les dommages, s'il y en a eu, mais c'est à nous de voir si une erreur a été faite par la Direction de la recherche, parce que nous votons ici de fortes sommes d'argent, et nous devons nous assurer s'il y a eu, oui ou non, une erreur, et non pas vérifier le montant de l'évaluation.

Le président: Je crois que c'est une façon raisonnable de voir les choses.

M. Whelan: Puis-je vous poser une question?

Le président: En privé?

[Texte]

Mr. Whelan: No. You stated that you thought it was a legal problem and should be settled through the courts. I think this is wrong and I want your opinion on whether you think I am right. I think it is only too often that the government forces people. If this man is forced to go to court—from what Mr. Whicher says he is in no position to go to court—he may have to apply for legal aid and I do not think we, as a government, should force people into such action. It seems plain here, unless something else is brought out by Dr. Woodward, that the government made a mistake.

The Chairman: We are prejudging the situation. I do not think the Committee has had an opportunity to decide whether or not a mistake was made. Until that has been decided, I do not think we are in a position to make any assessment whatever. I am only saying that in the event compensation is to be granted, then it is not our responsibility to decide how much or how little or anything else. May I recognize Dr. Woodward?

Mr. Southam: On a point of order, Mr. Chairman. I think you have put the situation very well with the exception that we, as a Committee, want to hear the facts so that we will be in a position to make a judgment on whether there has been an error here, or whether there has been an injury done. This is all the Committee is asking the privilege of doing. After we have heard all the evidence, then we will make the determination.

The Chairman: I am asking the tolerance of the Committee to recognize Dr. Woodward so he may do that. Dr. Woodward?

Dr. Woodward: I would like just to say that there has been an indication that there may have been negligence on the part of your servants and I want you to know that we make every effort to close the gap between knowledge and practice as quickly as we can. In this particular instance, I do not consider that any members of my staff were negligent. Now, this has nothing to do with the responsibility. I would like you to know however that these plants were obtained for our virus indexing program from a nursery; they were labelled "Latham", our plant pathologist heat treated these plants and indexed them to determine that there were viruses in them. He indexed by indexing, then he heat treated them to produce virus-free stock.

I want you to know that we had a very, very successful experience in producing and in aiding the provinces to distribute virus-free strawberry stock. We immediately got into a raspberry program in this area and I

[Interprétation]

M. Whelan: Non. Vous avez dit qu'il s'agit d'un problème juridique à régler par les tribunaux. Je crois que c'est faux, et je veux savoir si j'ai raison. Je trouve que le gouvernement force trop souvent les gens. Si quelqu'un doit se présenter devant le tribunal et qu'il n'est pas en mesure de le faire, il peut bien faire une demande d'assistance juridique. Mais je crois que le gouvernement ne doit pas forcer les gens à s'adresser aux tribunaux. Il semble donc évident, à moins que M. Woodward puisse indiquer d'autres éléments, que le gouvernement a fait une erreur.

Le président: Nous préjugeons de la question. Je ne pense pas que le Comité ait la possibilité de décider si une erreur a été faite ou non. Avant que cela ait été décidé, je ne crois pas que nous soyons en mesure d'évaluer la situation. Et si on doit accorder une compensation, ce n'est pas à nous de décider combien. Je donne la parole à M. Woodward.

M. Southam: J'en appelle au Règlement, monsieur le président. Vous avez bien résumé la situation, sauf que nous voulons entendre les faits; à ce moment-là, on pourra juger s'il y a eu erreur, ou non, ou s'il y a eu des dommages. C'est tout ce que nous demandons. Après avoir entendu tous les témoignages, nous pourrions prendre une décision.

Le président: Est-ce qu'on veut bien donner la parole à M. Woodward?

M. Woodward: Monsieur le président, j'aimerais dire qu'il y a un indice comme quoi il y a eu négligence de la part de vos fonctionnaires. J'aimerais que vous sachiez que nous faisons tous les efforts pour combler l'écart qui existe entre la connaissance et la pratique, aussi rapidement que possible. Mais dans ce cas particulier, je ne pense pas que les membres de mon personnel ont été négligents. Mais cela n'a rien à voir avec la responsabilité. J'aimerais que vous sachiez qu'on a obtenu ces plants d'une pépinière pour notre programme de classification des virus; on les a étiquetés «Latham», notre pathologiste a traité ces plants et les a classés pour déterminer s'il y avait des virus. Il les a classés, puis il les a traités à la chaleur pour avoir un stock sans virus.

J'aimerais que vous sachiez que nous avons eu des expériences très réussies en aidant les provinces à distribuer des stocks de fraises sans virus. Nous avons abordé un problème de framboises dans cette région et, très fran-

[Text]

admit, quite frankly, that we had no experience with the virus-infected and virus-free stock of the same variety or how freeing the variety from viruses might change its appearance. So as far as our pathologist was concerned, he was involved in taking a variety which was labelled Latham, indexing it and ensuring that it was free from viruses before he released it to the Ontario Department of Agriculture and Food.

I just make this statement in case you may feel there has been negligence on the part of one of your servants.

● 1020

Now, if I may, Mr. Chairman, I know that the Honourable Mr. Olson wishes me to express his regrets at not being here today. As you may know, he and my Deputy, Mr. Williams, are in British Columbia on government business. Also, Dr. Migicovsky, the Director General of the Research Branch, is on government business in Quebec City. However, I assure you that the Branch is well represented by Dr. Rasmussen, Dr. Ludwig and Dr. Hunter.

When Mr. Olson introduced our 1969-70 Estimates he explained that the elements of expenditure are shown by the customary standard objects in the Blue Book and that the additional White Book presents estimates by activities within programs as well as by standard objects.

Your Chairman has indicated that the Research Branch estimates include Votes 5, 10 and 12, and these are found on pages 14 and 15 of the Blue Book, and on pages 14 to 19 in the White Book. These three votes are summarized by activities on pages 16 and 17 of the White Book and they occur side by side across the top of the page and are totalled under total budgetary expenditures on the right.

You will note that the proposed total estimates for 1969-70 amount to \$45,743,000, some \$90,000 less than the forecast expenditure for 1967-69.

My best information is that it is necessary to increase financial support by from 10 to 12 per cent per annum in order to maintain the established level of activity. I know you will bear this in mind as you question us on our proposed program and it is reflected on page 18 in the White Book in the table "Details of manpower allocation and utilization" where we show a decrease of 317 man years in our total authorized for 1969-70.

In spite of this curtailment of resources we are proposing some strengthening of our

[Interpretation]

chement, nous admettons que nous n'avons pas pu voir comment le stock à virus et le stock sans virus pouvait agir. Et le fait d'enlever les virus, cela modifiait l'aspect de la plante; donc on a pris une variété qui s'appelait les «Latham», on l'a classée, et on s'est assuré qu'il n'y avait pas de virus avant de la donner au ministère de l'Agriculture de l'Ontario.

Je dis simplement cela au cas où vous pourriez penser qu'il y a eu négligence de la part de l'un de vos fonctionnaires.

Si vous permettez, monsieur le président, le ministre m'a prié de vous dire qu'il regrette de ne pas être ici. Comme vous le savez, il se trouve en Colombie-Britannique, avec mon adjoint, M. Williams, pour les affaires du gouvernement. De même, M. Migicovsky, directeur général de la Direction de la recherche se trouve à Québec. Je peux vous assurer que la Direction est bien représentée par MM. Rasmussen, Ludwig et Hunter. Lorsque l'honorable ministre a présenté les prévisions 1969-1970, il a indiqué les articles courant dans le Livre bleu et le Livre blanc indique les prévisions par activité dans le cadre des programmes et aussi par articles courants. Le président a indiqué que les crédits 5, 10 et 12 du département de recherches aux pages 14 et 15 dans le Livre bleu, et aux pages 14 à 19 dans le Livre blanc. Ces trois crédits sont résumés par secteurs d'activités aux pages 16 et 17 du Livre blanc.

Vous remarquerez que le total des prévisions pour 1969-1970 représente un montant global de \$45,743,000 soit environ \$90,000 en moins que ce qui avait été prévu pour 1968-1969.

Au mieux de mes connaissances, je pense qu'il faut augmenter le support financier de 10 à 12 p. 100 par année pour maintenir le niveau d'activités. Je pense que vous aurez ceci à l'esprit lorsque vous poserez des questions sur notre programme. A la page 18 du Livre blanc, dans le tableau intitulé «Répartition et utilisation de la main-d'œuvre» se reflètent les diminutions de la main-d'œuvre, 317 années-hommes de moins que le total autorisé pour 1969-1970.

En dépit de ces coupures dans les ressources, nous nous proposons de renforcer quel-

[Texte]

activities relating particularly to cereals, to agricultural engineering and to pollution. This will be achieved, of course, by some curtailment of other activities and it will be principally in the field of horticulture and of entomology.

The Chairman: Thank you, Dr. Woodward. I would recognize Mr. Lessard.

M. Lessard (Lac-Saint-Jean): Monsieur le président, ce qui m'intéresse particulièrement, c'est la ferme expérimentale que nous avons dans la région du Lac Saint-Jean, à Normandin.

J'ai eu l'occasion de discuter avec les organisations agricoles de ma région. Malheureusement, dû à un manque de communication, à un manque d'information ou à un manque d'activité réellement importante dans cette ferme, il semble qu'elle ne rende pas les services qu'elle pourrait rendre à la région. C'est la seule ferme expérimentale dans la région du Saguenay-Lac-Saint-Jean. Si le gouvernement y ajoutait du personnel, y conduisait des expériences sur l'adaptation de certains grains au climat de la région et sur les animaux, cette ferme pourrait certainement rendre de très grands services aux cultivateurs de ma région.

Je demande donc aux représentants du ministère, de me dire ce qu'ils pensent faire au cours de l'année financière qui va débiter le 1^{er} avril, pour améliorer la situation de cette ferme qui, en somme, a été pratiquement abandonnée. Des six ou sept employés qu'il y avait, il y a quelques années, on me dit qu'actuellement il n'en reste que deux, dont un n'est pas en très bonne condition physique.

Il est urgent, monsieur le président, pour le gouvernement de considérer que dans cette région, il y a des fermiers qui ont besoin d'assistance et de direction. Si, dans cette région, on ne joue pas notre rôle en tant que gouvernement fédéral, d'autres vont le faire. A ce moment-là, ce sera une raison de plus pour les gens du Québec de dire: «Ottawa c'est pas bon; il ne nous donne rien. On paie des impôts, mais en somme, Ottawa ne nous donne pas de services».

Il y a tellement peu d'occasions, tellement peu d'endroits où on peut réellement aider les gens. Pourquoi n'agit-on pas pleinement au moins là où on a de l'autorité? C'est ce que je demande encore une fois. Je l'ai demandé l'automne dernier et je le demande instamment aujourd'hui. Qu'avons-nous l'intention de faire à cette ferme de Normandin?

Dr. Woodward: Mr. Chairman, Dr. Migicovsky is in Quebec City today reviewing and

[Interprétation]

que peu nos activités particulièrement en ce qui concerne les céréales, le matériel agricole et la pollution. Ceci sera accompli, bien sûr, en réduisant quelque peu certaines activités, ce qui se fera principalement sentir dans le domaine de l'horticulture et l'entomologie.

Le président: Merci, monsieur Woodward. Je passe maintenant la parole à M. Lessard.

Mr. Lessard (Lac-Saint-Jean): Mr. Chairman, I am particularly interested in the experimental farm that we have in the Lac Saint-Jean region, at Normandin.

I have discussed with the agricultural organizations we have in my region and unfortunately, it seems that through a lack of communication of information or of really important activity at this experimental farm, it seems that it does not render service as it should to the region. This is the only experimental farm we have in the Saguenay-Lac-Saint-Jean district. If the government added staff and carried out experiments at that station for the adaptation of certain types of grain to the climate of the region, if they carried out experiments on animals, this farm could certainly render very great service to the farmers in my region.

Therefore, I would like the departmental representatives to tell me what they envisage doing during the fiscal year starting April 1, to improve the situation of this farm which has been for all practical purposes abandoned. Of the six or seven persons who were there a few years ago, I am told that there are only two left one of whom is not in very good physical shape.

Mr. Chairman, it is urgent for the government to consider that in that region there are farmers who need assistance and direction. If we do not play our role as a federal government in that area, others will do it and this will be another reason for Quebeckers to say: "Ottawa does not do us any good. We are paying taxes but we do not get any service from Ottawa."

There are so very few opportunities, so very few instances where we can help people. Why do we not go all out when acting, at least there where we are fully entitled to do so? I asked this last fall and I am asking this again now. What are we going to do at the Normandin experimental farm?

M. Woodward: Monsieur le président, le docteur Migicovsky se trouve à Québec,

[Text]

planning a program for the eastern part of Quebec. As you know and as you will see in these Estimates, we have made a start on a major research centre for eastern Quebec where we have turned the sod for a building valued at approximately \$3 million and we have appointed a senior director for eastern Quebec, and the organization for that area includes the resources at this laboratory plus at our research station, which is on the Laval campus, plus our experimental farm at Normandin and our experimental farms at La Pocatière and at Caplan.

We are in the process of appointing a new superintendent at Normandin because unfortunately after a period of illness our former superintendent passed away. Our proposal for 1969-70 is that we will be able to expend approximately \$198,000 at Normandin.

The Chairman: Are there further questions? I recognize Mr. Thomson.

Mr. Thomson (Battleford-Kindersley): Mr. Chairman, let me say at the outset that Mr. Whicher, as a very excellent prosecuting attorney, had me judging the government guilty before I had even heard the defence. But I think a better approach to the solution might be to consider Mr. Danforth's idea in this respect as to how we might deal with the question.

Mr. Chairman, the only reason I am raising this question is that we have here today the Director General of the Finance branch and this has to do with the reorganization of the government and it affects the research branch as well as any other. As I understand the reorganization, the Finance department will no longer run a pre-audit of the various departments.

Does this mean that you will have to hire additional help in the research or any other section of the Department of Agriculture to make sure that you are within the bounds of any legislation that might be considered in this respect?

The Chairman: Mr. Grier.

Mr. Grier: Mr. Chairman, this question relates to the amendments of the Financial Administration Act which will place pre-audit and commitment control responsibility within the departments rather than in the Comptroller's office. The amendments have not been passed but we are considering the impact of the change in terms of our staffing requirements within all of the branches of the Department of Agriculture, and I am sure all other departments are making the same assessments.

I would assume that there would likely be transfers of staff from the Comptroller's office

[Interpretation]

aujourd'hui, pour examiner un programme pour l'Est du Québec.

Comme vous le savez, comme vous verrez dans ces prévisions, nous avons posé la première pierre d'un Centre de recherche pour l'Est du Canada où nous allons construire un édifice de \$3 millions. Nous avons nommé des directeurs pour l'Est du Québec. L'organisation comprend les recherches, les laboratoires, au campus de l'Université Laval, plus la ferme expérimentale de Normandin, les fermes expérimentales de La Pocatière et de Caplan.

Nous sommes en train de nommer un nouveau surintendant à Normandin, après le décès de notre ancien surintendant, à la suite d'une longue maladie.

Nos propositions pour 1969-1970, envisagent des dépenses de \$198,000 à Normandin.

Le président: D'autres questions? Monsieur Thomson.

M. Thomson (Battleford-Kindersley): Je pensais que le gouvernement était coupable, après avoir entendu M. Whicher, un excellent procureur, même sans avoir entendu la défense. Mais je crois qu'une meilleure façon d'aborder la solution, serait d'envisager la solution de M. Danforth dans ce domaine, pour traiter de la question.

La seule raison pour laquelle je pose cette question, c'est parce que nous avons aujourd'hui avec nous le directeur général de la division des finances. Et cette question a trait à la réorganisation du gouvernement et ses incidences sur la section des recherches. Si je comprends bien, d'après la nouvelle organisation, la section des finances ne fera pas la vérification des comptes.

Est-ce que cela veut dire qu'il vous faut de l'aide supplémentaire? Je suis assuré que vous vous trouvez dans la limite de la législation.

Le président: Monsieur Grier.

M. Grier: Les travaux de vérification se feront à l'intérieur du ministère, plutôt qu'au bureau du contrôleur. Les amendements n'ont pas encore été votés, mais nous envisageons l'incidence de cette nouvelle réglementation concernant le personnel supplémentaire qu'il nous faudra.

Je suppose qu'il y aura des transferts de personnel à partir du bureau du contrôleur

[Texte]

to the departments in order that this function would transfer into the various departments.

Mr. Thomson (Battleford-Kindersley): Mr. Chairman, I would take it then that in your case, if you were in charge of this, you would probably request additional help.

Mr. Grier: No additional help has been requested at the moment. That is to say, the 1969-70 Estimates do not reflect any change in organization to respond to the anticipated change in the Financial Administration Act.

Mr. Thomson (Battleford-Kindersley): I understood Mr. Drury to say that they hoped to have this passed by the end of March so that you could start the new year under this new Act.

Mr. Grier: That is correct. The prospect is that the Comptroller's office will continue to carry the function until departments have either re-organized to provide the staff or have transferred staff from the Comptroller's office, if that is the solution to the question.

Mr. Thomson (Battleford-Kindersley): Thank you.

The Chairman: Thank you, Mr. Thomson. I recognize Mr. Danforth.

Mr. Danforth: Mr. Chairman, as I am very interested in dealing in depth with the Research Branch at this time could there be made available to each member of the Standing Committee some sort of a graph which would indicate the actual physical structure of the Research Branch? Many of us are perhaps not aware of its relation to experiments carried on at the university level, its relation to experiments which may be carried on at a private level, its tie-in with private laboratories and its affiliation with the provincial governments.

I am also very interested in knowing in detail the degree to which our Canadian Department of Agriculture is carrying on allied research with all other international organizations of the world and the degree to which there is an exchange of information, in order that we may assess whether there is in our department a duplication of programs carried on to the *nth* degree in other countries.

I appreciate that perhaps this information could not be made available right now, unless there is in the Research Branch libraries such a graph already prepared. Could this information be made available to the members?

[Interprétation]

aux différents ministères ou qui seront affectés aux différents ministères.

M. Thomson (Battleford-Kindersley): Donc, dans votre cas, si dans votre cas vous êtes responsables de cela, vous demanderiez de l'aide supplémentaire?

M. Grier: On l'a déjà demandé mais les prévisions de 1969, 1970 ne traduisent aucun changement d'organisation correspondant au changement anticipé dans la loi sur l'administration financière.

M. Thomson (Battleford-Kindersley): Mais j'ai entendu M. Drury dire qu'il espérait que ceci serait adopté à la fin de mars, afin que l'année nouvelle puisse commencer avec cette nouvelle loi.

M. Grier: C'est exact. Nous nous attendons à ce que le bureau du Contrôleur poursuive ses fonctions jusqu'à ce que les ministères se soient réorganisés pour fournir le personnel ou avoir du personnel qui aurait été transféré du bureau du Contrôleur, si cela doit être la solution à apporter à ce problème.

M. Thomson (Battleford-Kindersley): Merci.

Le président: Merci, monsieur Thomson. M. Danforth a la parole.

M. Danforth: Monsieur le président, je suis très intéressé à travailler en profondeur avec la Direction de la recherche en ce moment et pourrait-on mettre à la disposition de chaque membre du comité permanent une sorte d'organigramme représentant la structure matérielle de la Direction de la recherche. Je pense que beaucoup d'entre nous ne se rendent pas compte des expériences qui se font au niveau de l'université, leur relation avec les travaux qui peuvent être accomplis à titre privé, leur rapport avec les laboratoires privés et leur affiliation à des gouvernements provinciaux.

Je suis également très intéressé à savoir dans quelle mesure notre ministère de l'Agriculture entreprend de la recherche avec les autres organisations internationales du monde et s'il y a un échange de renseignements nous permettant de savoir s'il y a au sein de notre ministère une répétition de programmes qui seraient exécutés à un stade très avancé dans d'autres pays.

Je crois que peut-être ces renseignements pourraient nous être communiqués immédiatement, à moins qu'il ne se trouve à la bibliothèque de la Direction de la recherche un tableau du genre qui serait déjà préparé. Ces renseignements pourraient-ils être mis à la disposition des membres?

[Text]

Dr. Woodward: Mr. Chairman, this information would be very complex in graph form. I do agree that it is a very, very important area but it is an area that we covered very thoroughly in our 200 and more page submission to the Lamontagne Senate Committee on Science policy. I suggest, sir, that we could make copies of this report, if you have not already received them, available to you. This printed report has a section that deals with our international commitments and relationships with FAO and OECD. It explains in great detail the operation of our Canadian Agricultural Services Co-ordinating Committee, the research section of that committee, and the sort of communication, collaboration and cooperation that goes on between the Research Branch and the universities. I believe, sir, that this report would serve to supply the sort of information in some detail—in about 200 pages—that Mr. Danforth would like to study.

Mr. Danforth: Mr. Chairman, in listening to the explanation I feel that perhaps this would be far more valuable to us than the graph that I have suggested.

I would like to know if this also contains the actual operational chain of direction right from the top level down to the various segments of the research Branch.

I think I speak for all the members here, Mr. Chairman, when I say that we are all aware of the many complex problems that are facing agriculture which are in need of direct research, new varieties, and I do not need to go into it in detail. But I think we are all interested in knowing how priorities are arrived at in respect of the various major problems that research is directed to, how these programs are enlarged and developed, what access the private agriculture sector has to the promotion of such research, and how this information is disseminated after it is available in the various departments. Through no fault of government perhaps, but there seems in many instances to be a major lack of communication. Personally I have found dust collecting on reports that have been made available to agriculture—not at the government level where the work was done but out at the extension service. It was available and nobody picked it up. I am just wondering if this report that has been referred to does contain this type of information.

Dr. Woodward: Yes, sir.

Mr. Danforth: It does deal with this.

[Interpretation]

M. Woodward: Ces renseignements seraient très complexes sous forme de graphique. Je suis d'accord avec vous que c'est très important. C'est un domaine que nous avons traité avec soin dans notre rapport de plus de 200 pages au Comité du Sénat sur les sciences et nous pourrions reproduire des exemplaires de ce rapport pour les mettre à votre disposition si vous ne l'avez pas déjà reçu. C'est un rapport imprimé. Il y a une section qui traite de nos engagements internationaux nos rapports avec la F.A.O. et O.A.C.D. qui explique en détail le fonctionnement de notre comité de co-ordination, la section de la recherche de ce comité et la nature des communications, de la collaboration et de la coopération échangées entre la Direction de la recherche et les universités. Je pense que ce rapport pourrait fournir les renseignements désirés et couvrirait environ 200 pages: les renseignements que Monsieur Danforth voudrait étudier.

M. Danforth: Monsieur le président, en écoutant ces explications, cela serait probablement plus utile que le graphique que j'avais suggéré. J'aimerais savoir si ce document contient aussi la hiérarchie administrative depuis le niveau supérieur jusqu'aux différents paliers de la recherche.

Je parle au nom de tous les députés en disant que nous nous rendons compte qu'il y a bien des problèmes complexes qui se posent dans le domaine de l'agriculture qui a besoin d'une recherche directe, et de programmes variés et nouveaux. Il ne serait pas utile que j'entre dans les détails. Je pense, toutefois, que nous sommes tous intéressés à savoir comment sont établis les priorités relativement aux divers problèmes majeurs vers lesquels s'oriente la recherche, comment ces programmes sont-ils élargis et comment ils progressent, de quel accès dispose l'agriculture privée à cette recherche et comment se fait la diffusion de ces renseignements après qu'ils ont été mis à la disposition des divers ministères? Sans que le gouvernement soit en faute, il semble peut-être y avoir dans de nombreux cas un important manque de communications. Personnellement j'ai vu la poussière s'amasser sur des rapports qui avaient été mis à la disposition de l'agriculture, non pas au niveau du gouvernement, où on s'était acquitté du Travail, mais dans le service de diffusion. La documentation était là mais personne ne s'en occupait. Je me demande si ce genre de rapport dont il a été question renferme ces renseignements.

M. Woodward: Oui, monsieur.

M. Danforth: Il en parle?

[Texte]

Dr. Woodward: Yes, and it is a problem of narrowing the gap as much as possible between knowledge and practice and this very complicated link of communication.

Mr. Danforth: Mr. Chairman, I do not wish a reproduction of this document if it can be provided in its original form. Would there be extra copies available for the Committees?

Dr. Woodward: Yes, sir.

Mr. Danforth: I am sure Committee members would be prepared to accept copies as they are rather than have the further work of reproduction of particular sections of it.

The Chairman: Is it the wish of the Committee that these reports be made available to members of the Committee.

Some hon. Members: Agreed.

Mr. Whelan: Can I ask a question about the report, sir.

The Chairman: Yes, Mr. Whelan.

Mr. Whelan: How many pages make up the report that you presented to the Senate Committee on Science Policy?

Dr. Woodward: Well, sir, it is about three-quarters of an inch thick, but it has the evidence as well as the report. I would say the report was about 200 typewritten pages. I cannot tell you exactly how many printed pages that would be. It is in quite a readable form now and there are organizational charts reproduced in this report.

Mr. Whelan: The reason I asked that question, Mr. Chairman, is that I saw the one that was presented to the Senate Committee by the Fisheries Department and I never saw such an elaborate report as that one. It was stacked away in a great big room over in the Senate Chamber.

The Chairman: Thank you, Mr. Whelan.

Mr. Danforth: If I may be allowed perhaps one or two more questions, Mr. Chairman, then I will pass if I am allowed to come back.

Dr. Woodward said that there should be a normal increase in expenditures in the Research Branch—around ten per cent a year. I think he used the words “just to maintain”; this was not for expansion. Can we have an explanation why it would be necessary to increase ten per cent just to maintain? We have our own ideas but I would like to have it from the official source.

[Interprétation]

M. Woodward: Oui, et c'est une question de combler le plus possible le fossé entre la connaissance théorique et la pratique et cet écart très complexe dans les communications.

M. Danforth: Monsieur le président, je ne voudrais pas que l'on reproduise ce document s'il existe dans sa forme originale. Est-ce qu'on pourrait avoir des exemplaires supplémentaires pour le Comité.

M. Woodward: Oui.

M. Danforth: Je suis certain que les membres du Comité sont disposés à accepter les exemplaires comme ils sont plutôt que d'avoir à en faire reproduire certains chapitres en particulier.

Le président: Le Comité désire-t-il que ces rapports soient mis à la disposition des membres du Comité?

Des voix: Accepté.

M. Whelan: Je voudrais avoir un renseignement au sujet du rapport.

Le président: Oui, M. Whelan.

M. Whelan: De combien de pages se compose le rapport que vous avez présenté au Comité du Sénat sur l'application des sciences?

M. Woodward: C'est environ $\frac{3}{4}$ de pouce d'épaisseur, mais il y a le rapport et le témoignage. Le rapport représente 200 pages dactylographiées, je ne sais pas combien de pages imprimées. On peut le lire facilement sous sa forme actuelle et il y a des reproductions d'organigrammes dans le rapport.

M. Whelan: J'ai posé cette question parce que j'ai vu celui que le ministère des Pêcheries a présenté au Comité du Sénat et je n'avais jamais vu un rapport aussi élaboré que celui-là. Il était empilé dans une très vaste pièce au-dessus de la Chambre du Sénat.

Le président: Merci M. Whelan.

M. Danforth: Si vous me permettez une ou deux questions, je donnerai la parole ensuite aux autres membres avant de revenir à des questions. Monsieur Woodward a dit qu'il y a ou devrait y avoir une augmentation normale des dépenses de l'ordre de 10 p. 100 par an. Je pense qu'il a utilisé les mots: «seulement pour nous maintenir»; il ne parlait pas d'expansion. Est-ce qu'on pourrait nous expliquer pourquoi nous aurions besoin d'une augmentation de 10 p. 100, seulement pour nous maintenir? Nous avons nos idées personnelles, mais nous aimerions avoir une explication d'une source autorisée.

[Text]

Dr. Woodward: Mr. Chairman, I quoted this figure of ten to twelve per cent to maintain the level of activity. I based this on a guideline from the Treasury Board which indicated that we should increase our support to the universities by twelve per cent in order that they could maintain the level of activities. This would not represent an increase in support of activities.

I base it on data that has come out of studies in the United States. I base it on discussions that I have had with the directors of other research organizations and it involves the factors of the tremendous change in salary structures. It involves the great increase in sophistication of equipment. It involves the increased costs in construction and in almost all areas where we operate.

For example, in our operation and maintenance budget on both sides, about 80 per cent of this is salaries and wages, and we all know what is happening in this field. We have in our nonsalary operation and maintenance a number of items where we are contracting janitorial services and security work where the same increase has occurred in the actual cost of maintaining and has continued to increase annually. I did say that to the best of my information this is the increase and I feel that there is considerable evidence for this statement. And I made this statement, Mr. Chairman, just to put our discussions in the right perspective of what we could hope to achieve in 1969-70.

The Chairman: Thank you, Dr. Woodward.

Mr. Danforth: Mr. Chairman, I have just one more question right along this line. I am prepared to accept the statement that has been made, but in looking at the estimates I find that the proposed estimates for 1969-70 are less—quite considerably less than 10 per cent. Certainly I do not want to embarrass the witness in any respect, but would I be fair in assuming that since this increase has been less than portrayed by Dr. Woodward—actually there is very little of this increase that we see before us devoted to actual expansion of service—the major portion would be for increased salaries, increased administration costs and the actual increase in the costs of new facilities, rather than an increase in the actual program itself? Would that be a fair assessment?

Dr. Woodward: Yes, sir, that is a fair assessment, remembering that our program is under continuing review—and this will be described in this Senate document to which I have referred—and that with our continuing review there is almost a continual re-alloca-

[Interpretation]

M. Woodward: Eh bien, j'ai cité ces chiffres de 10 à 12 p. 100 pour maintenir le niveau d'activité. J'ai basé cette affirmation sur les directives du Conseil du Trésor qui a indiqué que nous devrions augmenter notre appui aux universités de 12 p. 100 afin qu'elles puissent maintenir le niveau de leurs activités. Ceci ne représenterait pas une augmentation de l'appui aux universités. Je me fonde sur des discussions avec les directeurs d'autres organismes de recherches; cela comporte des changements énormes des structures salariales, un perfectionnement considérable de l'équipement, des coûts plus élevés de construction et de presque tous les secteurs où nous intervenons.

Dans notre budget de l'entretien et de l'exploitation, par exemple, 80 p. 100 est consacré aux salaires, et nous savons tous ce qui se passe dans ce secteur. Certains de nos frais d'exploitation et d'entretien non salariaux relatifs aux services de concierge et de gardiens ont subi une augmentation égale au coût d'entretien et continuent d'augmenter. Je dis que, au mieux de ma connaissance, c'est l'augmentation qui a eu lieu et je crois que je peux prouver cette déclaration. Je l'ai fait, monsieur le président, pour mettre nos discussions dans la bonne perspective, quant aux réalisations espérées pour 1969-1970.

Le président: Merci, monsieur Woodward.

M. Danforth: Une autre question, monsieur le président. Je suis prêt à accepter ce que vous avez dit mais en regardant le budget, on s'aperçoit que l'augmentation est bien inférieure à 10 p. 100. Je ne veux absolument pas gêner le témoin mais est-ce que vous pensez qu'il est juste de considérer que étant donné que l'augmentation a été inférieure à celle envisagée par monsieur Woodward, il y a en fait une très faible partie de cette augmentation qui est due à l'expansion des services, la plus grande partie serait plutôt consacrée aux augmentations de salaire, des frais administratifs et du coût des nouvelles installations, plutôt qu'une augmentation du programme. Est-ce que vous pensez que c'est une description exacte de la réalité?

M. Woodward: Oui, c'est exact, à la condition que l'on sache que le programme est continuellement révisé, ce qui est expliqué dans le document du Sénat dont je parlais, accompagné d'une réallocation presque continue des ressources. Il y aura des change-

[Texte]

tion of resources. There will be changes in program, but the total level of activities will be shrunk.

The Chairman: Thank you, Mr. Danforth.

Mr. Danforth: If I may come back, I will pass, Mr. Chairman.

The Chairman: I recognize Mr. Smerchanski.

• 1045

Mr. Smerchanski: Mr. Chairman, under Vote 5 in particular, on casual observation it would appear that some of these things are out of balance and no doubt there is an explanation for it. In particular on page 14 from 1968 to 1969 there appears to be an increase in part-time, seasonal and casual of some \$699,660. On page 15 under the same section the utilities, materials and supplies are increased by only \$84,900, which would mean that the supplies and materials are increased by some 2 per cent, whereas the dollar value on the part-time, seasonal and casual has increased some 40 per cent.

Also if you take the actual increase of expenditure as against the reduction of man years, this is an average of some 100 per cent increase. This hardly appears to be in line with a 10 per cent annual increase, Mr. Chairman, and I am sure there is an explanation for it. I just took out that one particular item as a check and I am sure there is an explanation and I would like to have it, please.

The Chairman: Dr. Woodward.

Dr. Woodward: Mr. Chairman, this comes back to the answer that I gave to Mr. Danforth, that with the implementation of collective bargaining and with the closing of the gap in the lack of compensation for government employees as compared to employees in the field this situation occurs.

We have gone through the operation of converting our staff to new classes as established by the Bureau of Classification Division of the Treasury Board and what we are seeing here is the impact on our program of this, if you like, and of the distribution of the moneys that are available in our estimates.

Mr. Smerchanski: Mr. Chairman, I accept that explanation, but quite honestly if you average the 1968-69, the average is some \$2,000 per part-time, seasonal and casual employee, as against an average of \$4,100 for the year 1969-70. There must be some other reason or explanation why there is a 100 per cent increase besides taking into consideration the reclassification and anything else that might have taken place.

[Interprétation]

ments au programme, mais le niveau total d'activité sera réduit.

Le président: Merci, Monsieur Danforth.

M. Danforth: Je reviendrai plus tard, si vous le permettez, monsieur le président.

Le président: M. Smerchanski.

M. Smerchanski: Monsieur le président, j'aimerais jeter un coup d'œil au crédit 5; il semble qu'il y a des déséquilibres qui s'expliquent certainement. Notamment à la page 14 entre 1968 et 1969 il semble y avoir une augmentation pour les employés à temps partiel, saisonniers et occasionnels de l'ordre de \$699,660. A la page 15, sous la même rubrique, les services d'utilité publique, fournitures et approvisionnements ne sont augmentés que de \$84,900, ce qui représente une augmentation de seulement 2 p. 100 alors que la valeur en dollars des employés à temps partiel, saisonniers et occasionnels a augmenté d'environ 40 p. 100.

Ensuite, si vous tenez compte de l'augmentation des dépenses par rapport à la baisse du nombre d'hommes-années, c'est une augmentation moyenne de 100 p. 100. C'est loin d'une augmentation de 10 p. 100 et je suis certain qu'on peut l'expliquer. J'ai simplement soulevé ce point particulier pour vérifier, mais s'il y a une explication, comme je le crois, j'aimerais la connaître.

Le président: Monsieur Woodward.

M. Woodward: Je reviens à la réponse donnée à M. Danforth, que la mise en œuvre de la négociation collective et le désir d'éliminer l'écart entre la rétribution des fonctionnaires par rapport aux employés de l'entreprise privée ont créé cette situation.

Nous avons dû reclassifier notre personnel selon des catégories établies par la section de la classification du Conseil du Trésor. Nous en avons donc les effets sur notre programme. Il ne faut pas négliger, par ailleurs, l'incidence de l'affectation des crédits accordés dans le budget.

M. Smerchanski: Monsieur le président, j'accepte cette explication, mais très honnêtement si vous faites la moyenne de 1968-1969 vous voyez qu'elle est de \$2,000 en moyenne pour les employés à temps partiel, saisonniers et occasionnels, contre \$4,100 pour 1969-1970. Il y a peut-être une explication pour cette augmentation de 100 p. 100 en dehors des questions de classification ou autres qui ont eu lieu.

[Text]

Dr. Woodward: Mr. Chairman, I would like to ask Mr. Grier or Mr. Costley if they could give a better explanation of this than I can. Mr. Grier, can you answer?

Mr. Grier: I do not think I can give a precise explanation in detail, Mr. Chairman, other than to demonstrate how the total salaries and wages item in the Research Branch has built up and to indicate the factors which have contributed to the increase in 1969-70.

There are a number of factors but the principal one is the effect of collective bargaining on the general labour and trades contract which increases the base level for 1969-70 by \$1,440,000. We have costing factors for the heating, power and stationary engineers group for research scientists. These factors have been used to build up the estimates for 1969-70 and also to make provision in 1969-70 for agreements that are not yet settled.

• 1050

The principle here is that for agreements that are reached in the old year, the Department is responsible for the effect or the increase in salaries falling in the new year, whereas the Treasury Board's vote in general salaries provides the sums required for retroactive settlements and agreements that are reached in a current year.

The factors used in estimating salaries for the forthcoming year are, starting with the base salary in the old year, adding 3 per cent for general salary revisions, 1.5 per cent for promotions, reclassifications and annual increases and 6 per cent for group bargaining which is not yet settled, so that the estimates are based on anticipated settlements which have not yet been reached, and to that extent they may appear to be out of balance with the actual changes in establishment levels.

The Chairman: Thank you, Mr. Grier.

Mr. Smerchanski: Mr. Chairman, I would like to make one more comment on it. I do not want to belabour the fact, but I can appreciate the fact and I can accept the 10 per cent increase. I appreciate the fact that there is an adjustment of some 8.5 per cent for group bargaining and labour reclassification. But I would suggest, Mr. Chairman, that the factor in excess of 100 per cent is completely unrealistic and if there has been an error made, I think that possibly whoever is in charge should have a good hard look at that because this is certainly not in line with the

[Interpretation]

M. Woodward: Monsieur le président, j'aimerais demander à Monsieur Grier ou à Monsieur Costley s'ils pourraient donner une meilleure explication, que je ne pourrais le faire.

M. Grier: Je ne pense pas que je puisse donner une explication détaillée et précise, monsieur le président, autre que de montrer comment la totalité des salaires et traitements de la Direction de recherches ont augmenté et indiquer les facteurs qui ont contribué à l'augmentation en 1969-1970.

Il y a un certain nombre de facteurs en cause mais le principal entre eux est la répercussion des conventions collectives sur les contrats des manœuvres et des techniciens qui a entraîné l'augmentation de \$1,440,000 pour les salaires de base en 1969-1970.

Nous avons les facteurs qui composent le coût des responsables du chauffage et de l'électricité parmi ces facteurs qui ont servi à calculer le budget de 1969-1970 et également préparer les accords de 1969-1970 qui n'ont pas encore été réglés.

Le principe suivi est que pour le contrat signé au cours de l'année en cours le ministère est responsable de l'augmentation qui entre en vigueur l'année suivante, tandis que le crédit général des salaires consenti au Conseil du Trésor couvre les effets rétroactifs des ententes passées dans l'année en cours.

Les facteurs utilisés pour calculer les salaires pour l'année suivante sont le salaire de base de l'année précédente, auquel on ajoute 3 p. 100 pour la révision générale des salaires, 1.5 p. 100 pour les promotions, les reclassifications et les augmentations annuelles, et 6 p. 100 pour les négociations collectives qui ne sont pas terminées encore. Par conséquent, le budget repose sur des règlements anticipés qui n'ont pas encore été effectués et ils peuvent donc paraître un peu déséquilibré par rapport au niveau établi.

Le président: Merci, monsieur Grier.

M. Smerchanski: Monsieur le président, je voudrais faire une remarque. Je ne veux pas éreinter le fait, mais je l'apprécie et je peux accepter une augmentation de 10 p. 100. J'apprécie le fait qu'il y a un réajustement de 8.5 p. 100 pour les négociations collectives et la reclassification des travailleurs. Mais malgré tout, monsieur le président, je dois dire que le facteur supérieur à 100 p. 100 est parfaitement utopique et s'il y a eu une erreur de faite, j'espère que celui qui en est responsable devrait étudier la question de près par ce que certainement cela n'est pas conforme du tout

[Texte]

other increased proportional estimates that are in the submission. I think that somebody should have a close look at that. Thank you, Mr. Chairman.

The Chairman: I am advised by Dr. Woodward that the departmental officials will take the matter under review and if there is supplementary information they would like to give at the next meeting, then they will take that opportunity.

Mr. Danforth on a supplementary?

Mr. Danforth: No, Mr. Chairman, I am on a point of order for the convenience of the Committee. My point of order is that for the convenience of the witnesses and also of the Committee members, the witnesses be allowed to take chairs at the table so that they will be at the microphones and ear phones and will be right in the proceedings.

The Chairman: Your point of order is well taken, and I think we can recognize it at the next meeting. We are on a time limit this morning which concludes at 11 o'clock and that is very rapidly approaching. I would like to recognize one other questioner if I may. Mr. Moore.

Mr. Moore (Wetaskiwin): Thank you Mr. Chairman. I notice that many millions of dollars are spent, and rightly so, on soil crop and animal research, and I would like to ask how the Department gets out pertinent information to the actual producers, that is, the favourable results of their research.

The Chairman: Dr. Woodward.

Dr. Woodward: Mr. Chairman, at the departmental level we have an information division and you will be examining its estimates. Its full-time job is getting out information from the Department to the agricultural press, to the producers, to the provinces. In research, we have working relationships with the provinces. We have the mechanism, through our research officers working on provincial and regional committees, to ensure input from the results of our soils and plant and animal programs in terms of specific recommendations as to fertility practices for particular crops, as to spray regimes for crop protection.

• 1055

Our information goes directly into recommendations to the producers from these provincial committees. This information does not come to headquarters at all; it goes directly across and, of course, this is one of the reasons we have establishments across Canada.

[Interprétation]

avec les autres augmentations qui sont prévues dans la soumission. Je pense donc qu'il faut étudier la question de près. Merci, monsieur le président.

Le président: Le Dr Woodward m'annonce que les fonctionnaires du gouvernement vont étudier la question de près et donnerons les renseignements à ce sujet à la prochaine réunion.

Monsieur Danforth, une question supplémentaire?

M. Danforth: Non, monsieur le président, c'est une question de règlement. Je me demande si, pour le bon déroulement de la réunion du Comité, les témoins ne pourraient pas venir tous à la table pour pouvoir être directement devant un micro et être au cœur des délibérations.

Le président: Vous avez parfaitement raison et nous y veillerons à la prochaine séance. Ce matin, on doit s'arrêter à 11 heures, c'est donc très bientôt; je voudrais encore donner la parole à une autre personne. Monsieur Moore.

M. Moore (Wetaskiwin): Merci, monsieur le président. J'ai remarqué que beaucoup de millions de dollars sont dépensés pour la recherche animale et sur les récoltes. Je voudrais savoir comment le ministère fournit des renseignements précis aux producteurs, c'est-à-dire des résultats favorables de ses recherches.

Le président: Docteur Woodward.

Dr. Woodward: Monsieur le président, au niveau ministériel, nous avons un service d'information et vous examinerez son budget. Son travail est de fournir des renseignements du ministère à la presse agricole, aux cultivateurs, aux provinces. Dans le domaine de la recherche, nous travaillons avec les provinces. Nous avons les structures, les agents de recherche qui travaillent aux comités régionaux et provinciaux, pour fournir les résultats de nos recherches sur les sols, la flore et la faune en termes de recommandations précises sur l'utilisation d'engrais pour des récoltes données, sur l'utilisation des insecticides pour la protection des récoltes.

Nos renseignements sont transmis directement aux comités provinciaux. Ces renseignements ne viennent absolument à la direction générale; ils sont transmis directement et c'est une des raisons pour laquelle nous avons des bureaux dans tout le Canada. Nous avons,

[Text]

We have, for example, our 26 major research stations supported by experimental farms and project farms. So that our information goes directly from these stations into the recommendations that are going to the producers.

We have one other relationship with the provinces that we value a great deal. Our policy is to encourage provincial extension people to locate themselves at our stations, and we offer them accommodation to encourage this. And at a considerable number of our research stations now the provincial extension people are working right with the research scientists. This is a great assist in closing this gap between knowledge and practice.

Mr. Smerchanski: Thank you. I might say I am aware of the liaison between the Department and the provincial representatives. I just feel that for a producer there has not been too much direct information pertaining to that particular producer's type of farming, but I could be wrong on this. I just feel that there has been a weakness here.

Dr. Woodward: Well, Mr. Chairman, I would certainly agree that this is an area in which we have to work very hard, and that it must involve continually improved communication and co-operation with the extension people, with the press, and on the availability of information, ensuring that it gets to the producer, the man who is going to use it.

Mr. Smerchanski: Thank you, Doctor, I realize that time is up.

The Chairman: Gentlemen, our time has expired.

Item 5 stood.

The Chairman: I will endeavour to recognize at our next meeting those who are still on my list.

The meeting is adjourned to the call of the Chair.

[Interpretation]

par exemple, 26 stations de recherches principales, toutes associées à des fermes expérimentales ou pilotes. Nos renseignements vont donc directement de ces stations aux producteurs.

Nous attachons une grande importance à une autre forme de liaison avec les provinces. Notre politique est d'encourager du personnel provincial à venir s'installer dans nos stations, et nous leur offrons le logement. Dans beaucoup de stations de recherches, nous avons ainsi du personnel provincial qui travaille directement avec les chercheurs. C'est très important pour combler cette lacune entre le savoir et la pratique.

M. Smerchanski: Merci. Je pourrais dire que je suis au courant de cette liaison entre le ministre et les représentants provinciaux. Je pense seulement que pour un producteur, il n'y a pas eu trop de renseignements directs relatifs à l'exploitation familiale, mais je me trompe peut-être. Je pense tout simplement qu'il y a ici une faiblesse.

Dr. Woodward: Eh bien, monsieur le président, je suis parfaitement d'accord pour reconnaître que c'est un domaine où il nous faut beaucoup travailler et il faut améliorer les communications et la coopération avec le service de vulgarisation, avec la Presse et s'assurer que les documents sont transmis aux personnes qui vont s'en servir.

M. Smerchanski: Je vous remercie beaucoup, je crois qu'il est l'heure.

Le président: Messieurs, donc nous en avons terminé.

Article 5, réservé.

Le président: Je donnerais la parole à la prochaine réunion à ceux qui sont toujours sur ma liste.

La séance est levée jusqu'à convocation du président.

MINUTES OF PROCEEDINGS

[Text]

Tuesday, March 18, 1969.
(29)

The Standing Committee on Agriculture met at 9.42 a.m. this day, the Chairman, Mr. Beer, presiding.

Members present: Messrs. Beer, Cobbe, Côté (*Richelieu*), Douglas (*Assiniboia*), Foster, Gauthier, Gleave, Korchinski, Lambert (*Bellechasse*), La Salle, Lind, McBride, McKinley, Moore (*Wetaskiwin*), Pringle, Roy (*Laval*), Smith (*Saint-Jean*), Southam, Thomson (*Battleford-Kindersley*), Whicher—(20).

Appearing: The Honourable H. A. Olson, Minister of Agriculture.

Witnesses: From the Department of Agriculture: Mr. S. B. Williams, Deputy Minister; Dr. J. C. Woodward, Assistant Deputy Minister (Research); Dr. B. B. Migicovsky, Director General, Research Branch; Dr. R. A. Ludwig, Assistant Director General (Administration), Research Branch.

The Committee resumed consideration of Item 5 of the 1969-70 Estimates relating to the Department of Agriculture.

Questions were answered by the Minister and the witnesses.

With questioning continuing, Item 5 allowed to stand.

At 10.59 a.m., the Committee adjourned to the call of the Chair.

PROCÈS-VERBAL

[Traduction]

Le mardi 18 mars 1969
(29)

Le Comité permanent de l'agriculture se réunit ce matin à 9 h. 42, sous la présidence de M. Beer.

Présents: MM. Beer, Cobbe, Côté (*Richelieu*), Douglas (*Assiniboia*), Foster, Gauthier, Gleave, Korchinski, Lambert (*Bellechasse*), La Salle, Lind, McBride, McKinley, Moore (*Wetaskiwin*), Pringle, Roy (*Laval*), Smith (*Saint-Jean*), Southam, Thomson (*Battleford-Kindersley*), Whicher—(20).

A comparu: L'honorable H. A. Olson, ministre de l'Agriculture.

Témoins: Du ministère de l'Agriculture: M. S. B. Williams, sous-ministre; M. J. C. Woodward, sous-ministre adjoint (Recherche); M. B. B. Migicovsky, directeur général, Direction de la recherche; M. R. A. Ludwig, directeur général adjoint (Administration), Direction de la recherche.

Le Comité reprend l'examen du crédit 5 des prévisions budgétaires du ministère de l'Agriculture pour l'année 1969-1970.

Le Ministre et les témoins répondent à des questions.

L'interrogatoire se poursuivant, le crédit 5 est réservé.

A 10 h. 59 du matin, le Comité s'ajourne jusqu'à nouvelle convocation du président.

*Le secrétaire du Comité,
Michael A. Measures,
Clerk of the Committee.*

[Texte]

EVIDENCE

(Recorded by electronic apparatus)

Tuesday, March 18, 1969.

● 0941

The Chairman: Gentlemen, I am informed that we have a quorum.

Last week a question was raised by Mr. Smerchanski. We did not have the complete information at that time. That information will be made available at this morning's meeting.

I think the only new faces we have this morning are those of Dr. Migicovsky and Mr. MacRae.

When the Committee rose on Thursday last we were engaged in our consideration of Item 5. I direct your attention thereto this morning. I propose to recognize those who were on the list last week and did not have an opportunity to question. However, before I do that I will ask Dr. Woodward to give us the information that Mr Smerchanski requested last week.

Dr. J. C. Woodward (Assistant Deputy Minister, Research Branch, Federal Department of Agriculture): Mr. Chairman, I would like to ask Dr. Ludwig to take this question.

Dr. R. A. Ludwig (Assistant Director General, Administration, Research Branch, Federal Department of Agriculture): Mr. Chairman, the question that was raised last week had to do with the man-year versus budget figures on the bottom of page 14 of the Blue Book. The question was a very valid one. The 1969-70 figures as given in the Blue Book are correct. The apparent discrepancies in 1968-69 in the Blue Book result from a Treasury Board change in the format of the Blue Book. There are two errors. If you look at about the middle of the page under the Branch Administration item you will notice the figure of \$1,829,800 and below that \$41,900, totalling \$1,871,700.

The total, Mr. Chairman, is correct. The discrepancy arises, in comparing this figure with the 1968-69 Blue Book, in the fact that in this 1969-70 Blue Book we are talking about Part-time, Seasonal and Casuals and the 1968-69 Blue Book reads Casuals and Others. A correction in the man-years on the left-hand side of the page was made, the corresponding dollar correction was not made. So that instead of \$1,829,800 that should correctly read \$1,819,400, and \$41,900 should

[Interprétation]

TÉMOIGNAGES

(Enregistrement électronique)

Le mardi 18 mars 1969.

Le président: Messieurs, on me dit que nous avons quorum.

La semaine dernière, une question a été soulevée par M. Smerchanski. Nous n'avions pas tous les renseignements voulus à ce moment-là et ces renseignements seront mis à la disposition des membres ce matin. Avant de commencer toutefois, je crois que les seuls nouveaux visages que nous avons ce matin sont ceux de M. MacRae et de M. Migicovsky. Quand le Comité s'est ajourné jeudi dernier, nous étions en train d'étudier le crédit 5. Je voudrais donc attirer votre attention sur ce crédit ce matin. Je me propose de donner la parole à ceux qui étaient sur ma liste la semaine dernière et qui n'ont pas eu la chance de s'exprimer; mais avant de le faire, je demanderais à M. Woodward de nous donner les renseignements demandés par M. Smerchanski la semaine dernière.

Dr J. C. Woodward (Sous-ministre adjoint, Direction de la Recherche, Ministère fédéral de l'Agriculture): Monsieur le président, j'aimerais demander à M. Ludwig de répondre à cette question.

M. R. A. Ludwig (Directeur général adjoint (administration), Direction de la Recherche, Ministère fédéral de l'Agriculture): Monsieur le président, la question posée la semaine dernière avait trait aux chiffres du bas de la page 14 du Livre bleu. La question en était une très valable. Pour les chiffres de 1969-70 qui figurent dans le budget des dépenses, ils sont exacts. Les différences qu'on trouve dans le Livre bleu sont une erreur par suite d'un changement de format par le Conseil du Trésor. Il y a deux erreurs. Si vous voulez regarder au milieu de la page, sous le titre «*Division de l'administration*,» vous verrez le chiffre \$1,829,800 et ensuite \$41,900 en dessous pour un total de \$1,871,700 dollars.

Le total est exact, monsieur le président, pour l'effectif, mais la différence provient d'une comparaison des chiffres de 1968-69 dans le Livre bleu, parce que pour l'année 69-70, nous parlons des employés à temps partiel, saisonnier et occasionnel, alors qu'en 1968-1969, il était question d'employés occasionnels et autres. Une correction dans l'effectif en année-homme a été faite, mais le chiffre correspondant en dollars n'a pas été changé, alors au lieu de \$1,829,800

[Text]

be \$52,300. The total of those figures is the \$1,871,700 figure shown.

A corresponding error appears in the vote under Institutes, Stations and Services. Do you wish figures on that, Mr. Chairman?

● 0945

The Chairman: Yes, if it is not too lengthy.

Dr. Ludwig: No, it will just take a minute.

The total, again, \$25,682,200, is correct. If you compare with the 1968-69 Blue Book you will see the figure \$24,900,560. There was a cut last year in this item of \$300,000 after the Blue Book was printed so that the figure \$24,600,560 is last year's Blue Book figure.

Again, the man-years were corrected, the dollars were not. The two figures should read \$24,017,760 and \$1,664,440. These total up, if I am correct, to \$25,682,200. The additional \$100,000 in the new format was transferred from Item 10—a nominal casual labour charge against own forces construction projects. So adding \$100,000 you have \$24,682,000, as it appears. The difference between that \$1,664,440 and \$1,781,330 is correctly attributable to wage increases resulting from staff conversion and other factors.

The Chairman: Thank you, Dr. Ludwig. Mr. Douglas, you were on the list last week and wished to be recognized. Are you prepared this morning? If you are, I will recognize you now.

Mr. Douglas (Assiniboia): Yes. My question had to do with research.

I was particularly concerned about some of the recommendations of the task force on agriculture and also the Council's report last fall with regard to the lack of adequate research in the field of agricultural marketing—not only the question of marketing but finding out what is marketable. Has the Department of Agriculture concerned itself at all with market research for agriculture.

Hon. H. A. Olson (Minister of Agriculture): Mr. Chairman, I will ask Mr. Williams to comment on that. I think though that probably under the production and marketing section of the Department of Agriculture there has been perhaps more concentrated activity on this than in the research department, and under Item 5 of the Estimates.

[Interpretation]

cela devrait être \$1,829,400; \$41,900 devrait être \$52,300 et le total des deux se trouve à être \$1,871,700 qui est lui, exact.

Une erreur analogue paraît dans le crédit: Instituts, Stations, Fermes, Laboratoires et Services—fonctionnement et entretien. Si vous voulez les chiffres à ce sujet, je vais vous les donner.

Le président: Si cela ne prend pas trop de temps.

M. Ludwig: Non, un instant seulement. Le total de \$25,682,200 est exact. Si vous faites la comparaison avec le Livre bleu de 1968-1969 vous verrez le chiffre \$24,900,560. Il y a eu une réduction l'an dernier dans ce crédit de \$300,000 après l'impression du Livre bleu et alors le chiffre \$24,600,560 de l'an dernier était le bon. \$1,081,640 figurait aussi dans le Livre bleu de l'an dernier.

Encore une fois, on a corrigé les années-homme sans corriger pour autant les chiffres en dollars, et alors les chiffres devraient se lire \$24,017,760 et \$1,664,440. Les deux font un total, si j'ai raison, de \$25,582,200 et les \$100,000 qui restent dans le nouveau format ont été transférés du crédit 10, pour le coût de la main-d'œuvre occasionnelle, pour les ouvrages de construction des Forces armées et alors si vous avez \$100,000 de plus, vous avez donc un total de \$25,682,200—la différence entre \$1,664,440 et \$1,781,330 devrait vraiment figurer parmi les augmentations de salaire par suite de la reconversion du personnel et autres facteurs.

Le président: Merci, Monsieur Ludwig. Monsieur Douglas, vous étiez sur la liste la semaine dernière. Voulez-vous toujours avoir la parole ce matin? Si oui, vous avez maintenant la parole.

M. Douglas (Assiniboia): Oui, j'avais une question au sujet de la recherche, nous parlons toujours de la recherche, n'est-ce pas?

Je me préoccupais surtout de certaines recommandations de l'équipe de travail sur l'agriculture et du Conseil qui a fait rapport l'automne dernier, je crois, au sujet du manque de recherches suffisantes dans le domaine de la mise en marché ou de la commercialisation en agriculture. Mais aussi cette question de savoir ce que l'on pourrait commercialiser. Je me demande alors si le ministère de l'Agriculture s'est préoccupé de la recherche en commercialisation pour l'agriculture?

M. Olson (ministre de l'Agriculture): Je demanderais à M. Williams de commenter sur ce sujet et je pourrais peut-être dire que, en ce qui concerne le personnel de la production et de la commercialisation du ministère, il y a peut-être une activité plus grande prévue à ce sujet que dans le domaine de la recherche, en vertu du crédit 5 du budget.

[Texte]

Mr. S. B. Williams (Deputy Minister, Department of Agriculture): To answer the question somewhat more directly, we are taking two steps in order to recognize this problem. These steps have been under way for some time, although they have culminated in a re-organization of our economics branch, which will place increasing emphasis on the research into marketing.

There will be an announcement very shortly as to the organizational changes within that branch. In addition to that, as Mr. Olson pointed out, increased emphasis is being placed in the functions of the production and marketing branch in the various commodity divisions on marketing and we have been doing a considerable amount of work, particularly in relation to marketing boards and their role and function on a national basis.

Mr. Douglas (Assiniboia): I am a little disappointed at the small increase in some places and the reduction in others in the research budget. I think that agricultural research is something that we have not had enough of and that instead of holding at a steady pace, requiring a 10 to 12 per cent increase each year just to

● 0950

maintain the status quo, perhaps we should be putting more money into research.

The Chairman: Thank you, Mr. Douglas, I will recognize Mr. Korchinski.

Mr. Korchinski: Mr. Chairman, I want to ask a few questions with regard to the reduction of manpower in some areas and the increase in others, and first of all I would like to know to what extent any reductions were made within the Department as a result of the effort on the part of the government to curtail expenditure. There was some attempt at that reduction a year or so ago. I want to know just to what extent your Department was affected by that . . .

Mr. Olson: Well, Mr. Chairman, would Mr. Korchinski want the answer in the number of vacant positions, for example, where there was a freeze? Is that the kind of information you are seeking?

Mr. Korchinski: Well, I have looked at the Estimates, and I note in Vote 5 for example, under Institutes Stations, Farms, Laboratories and Services, that in the scientific and professional positions there was a reduction. I am just wondering how that one particular phase of the Department was affected. Were there definite instructions to curtail some work at the experimental farms or the laboratories? What suffered as a result, if anything?

Mr. Olson: Mr. Williams.

[Interprétation]

M. S. B. Williams (sous-ministre, ministère de l'Agriculture): Pour répondre un peu plus directement à la question, je dirais que nous prenons deux mesures afin de reconnaître ce problème. Ces mesures sont en cours depuis un certain temps et résulteront en une réorganisation de notre Direction de l'économie pour insister un peu plus sur la recherche dans le domaine de la commercialisation.

Sous peu, il y aura une série de changements à cet égard et en plus, comme M. Olson l'a dit, on insiste un peu plus sur les fonctions de la Direction de la production et de la mise en marché pour les différents produits. Nous avons fait passablement de travail, tout particulièrement dans le domaine des bureaux de commercialisation et de leurs rôles et de leurs fonctions sur le plan national.

M. Douglas (Assiniboia): Je suis un peu déçu des petites augmentations ici et là, et par ailleurs de la réduction dans le domaine de la recherche. Je crois que la recherche agricole est délaissée depuis un certain temps. Au lieu de nous en tenir à un rythme qui nous permettrait de donner une augmentation de 10

p. 100 ou 12 p. 100 juste pour maintenir le *statu quo*, nous devrions peut-être consacrer plus de fonds à la recherche au lieu de nous en tenir au même point.

Le président: Merci, monsieur Douglas. Je donne la parole maintenant à M. Korchinski.

M. Korchinski: Monsieur le président, je voudrais poser certaines questions au sujet de la réduction de l'effectif dans certains domaines et d'une augmentation dans certains autres domaines. Tout d'abord, j'aimerais bien savoir jusqu'à quel point il y a eu réduction au sein du ministère à la suite de la tentative de la part du gouvernement de réduire ou de limiter les dépenses, quand on a essayé il y a un an d'effectuer cette réduction. Je me demande alors en quel point votre ministère a été touché par cette tentative.

M. Olson: Monsieur Korchinski, est-ce que vous voulez la réponse en chiffres ou en postes gelés. Est-ce le genre de renseignements que vous désirez obtenir?

M. Korchinski: Je regarde le budget ici, par exemple la catégorie scientifique et professionnelle alors qu'il y a eu une réduction aux institutions, stations, fermes, laboratoires et services. Alors je me demande, comment a été touché cet aspect de l'activité du ministère. Est-ce qu'il y a eu réduction du travail à la Ferme Expérimentale ou aux laboratoires? Qui en a souffert en d'autres termes, quel a été le résultat de ces réductions?

M. Olson: M. Williams.

[Text]

Mr. Williams: The basic premise on which the Department prepared these estimates was that there was a restriction, a dual restriction as a matter of fact, in respect of staffing and it applied across the entire Department irrespective of the function. One restriction was the dollar restriction, in other words so much money was allowed for salaries, and the other restriction was on total man-years. The actual position that we were instructed to hold was our actual strength as at a fixed time.

I think you gentlemen will appreciate that a department normally runs with a certain establishment and that normally you cannot at any time have all your establishment filled simply because there is a continuing turnover that averages about 5 per cent. This includes separations, retirements, and the normal time required to fill them. So any department normally runs at about 95 per cent strength. The larger the department the closer you can get to the full strength,

● 0955

but it is only within a half a per cent or something of that nature that you can move on either side of this, based on the normal administrative problems associated with filling a position and finding suitable people to fill positions.

As happened right across the entire government, our establishment was frozen at our strength at a fixed time, and this did reduce the number of people that we could have in our employment at any time. It is a little difficult to exactly compare the figures because there are some changes, but basically our full-time ceiling at present is 8,786 positions. For the new year it is 8,789 positions. However, in the old year, that is to say in the current year 68/69, the listing is the establishment rather than the actual man-years. So in fact we have authority this year for three more positions than we had last year.

But I must qualify this by saying that the figure that is shown in the right-hand column of "Strength" right throughout this entire book is establishment as opposed to actual strength. In the new year it is the strength authority. So they are shown on a somewhat different basis. The fact is, though, that there is a limitation that did not exist last year.

Mr. Korchinski: Well, I think you are trying to give me the general attitude at the time, but I want to be a little more specific. On page 14, under Research, you will notice that Executive dropped by 2, but Scientific and Professional dropped by 8 from 15 to 7. Now I go down to Institutes, Stations, Farms, Laboratories and Services, and I see that Executive increased by one. At the same time Scientific and Professional was decreased by 83. I am just wondering what type of freeze this was where you reduced the scientific help, the professional help, and all of a sudden somebody got boosted

[Interpretation]

M. Williams: La façon dont le ministère a préparé les prévisions budgétaires, c'est qu'il y a eu une double restriction en ce qui concerne l'effectif à travers le ministère, indépendamment de la fonction. Une restriction était une restriction monétaires par conséquent, une certaine somme d'argent était prévue pour la rémunération, le traitement; et l'autre restriction visait le total en années-homme. En fait, on nous a demandé de maintenir la situation de l'effectif à un moment donné.

Vous comprendrez facilement, j'en suis sûr, messieurs, que normalement un ministère possède un certain effectif et que d'habitude vous ne pouvez pas remplir tous vos postes simplement parce qu'il y a continuellement un roulement qui se chiffre par une moyenne de 5 p. 100 de l'effectif total. Cela comprend les retraites, ceux qui ont quitté le service ainsi que le temps normal requis pour remplir les postes, donc, un ministère fonctionne normalement avec le 95

p. 100 de son effectif autorisé. Plus un ministère est important, plus vous êtes près du total de votre effectif, mais la différence est toujours d'au moins ½ p. 100, selon les problèmes normaux de l'administration pour remplir les cadres et trouver les gens voulus pour les postes vacants.

Comme il s'est produit partout au gouvernement, notre effectif a été gelé à l'effectif que nous avions à un moment donné, ce qui a réduit nécessairement le nombre de personnes que nous pouvions employer en tout temps. Il est un peu difficile de faire la comparaison exacte car il y a eu des changements mais, en somme, le plafond de l'effectif constant que nous avons à l'heure actuelle est de 8,786 postes.

Pour la nouvelle année, il est de 8,789 mais vous verrez qu'au cours de cette année 1968-1969, vous avez en fait le chiffre de l'effectif plutôt que le chiffre en années-homme. En fait, nous avions l'autorisation cette année d'avoir trois postes de plus que nous avions l'an dernier.

Je dois peut-être ajouter toutefois que le chiffre qui se trouve dans la colonne de droite «effectif» partout dans le budget se trouve être l'effectif autorisé plutôt que l'effectif réel et dans la nouvelle année ce sera l'effectif réel que nous mentionnerons. Le fait demeure qu'il y a une restriction qui n'existait pas l'an dernier.

M. Korchinski: C'est un peu difficile d'après votre réponse, vous essayez de me donner l'attitude générale à un moment donné mais je voudrais être un peu plus précis. A la page 14, si vous regardez dans le domaine de la recherche, vous verrez que les postes exécutifs ont baissé de deux mais que les emplois de la catégorie scientifique et professionnelle ont baissé de 8 postes. Je tombe ensuite aux instituts, stations et fermes et je vois que la direction a augmenté de 1 alors que les sciences et les professions ont été réduites de 83. Alors de quelle sorte de

[Texte]

upstairs or something, and I would like an explanation as to why you need more executives and fewer professionals.

Mr. Williams: These changes—we can get the information and complete detail on it—represent re-allocation of the resources between the headquarters in Ottawa and the various field establishments, but overall it does represent a decrease in the total establishment.

Mr. Korchinski: Yes, it is quite obvious that it does indicate a decrease, but who got the axe? Where did these people go? What happened to them? What research are we not doing now that we were doing before?

Mr. Williams: Well, there were no people laid off or fired in the scientific and professional category under this. It was only that as positions became vacant, we could not fill them, and we were held to one strength. I think possibly I should ask Dr. Woodward or Dr. Migicovsky to indicate the areas that we have strengthened in our research, that is to say where we have transferred positions—this is a normal function that we go through—the areas that have been strengthened and the areas where we have tended to restrict the work because of the restrictions that have been placed upon us in terms of dollars and manpower.

Dr. Woodward: Mr. Chairman, our proposals for 1969/70, coupled with the general curtailment of the other programs are some strengthening in our cereal research program, in our engineering research, and some strengthening in our research in regard to pollution. Our intention is to hold our animal research program at just about its present level. You will appreciate that these are adjustments within the resources available, so that the strengthening of these programs is coordinated with the general curtailment of other programs.

• 1000

Mr. Korchinski: I understand that you were not allowed to hire when vacancies occurred. Am I correct in that assumption?

Mr. Williams: Within certain limitations, that is correct. The method by which we were restricted to a certain level was that we could not refill positions as they became vacant, up to a certain level. But once we dropped below that fixed level, which was the strength as at the first of April last year, we of course can refill the positions.

Mr. Korchinski: But in the event there were some categories of employees who had reached retirement

[Interprétation]

gel s'agit-il? Est-ce que nous réduisons les postes scientifiques et professionnels et tout d'un coup quelqu'un a eu une promotion, ou un avancement, que se produit-il? Pourquoi avons-nous besoin de plus de directeurs et de moins de professionnels?

M. Williams: Je pourrais vous obtenir tous les détails de ces changements mais ces changements effectivement représentent une nouvelle répartition des ressources en personnel entre le siège d'Ottawa et les différentes institutions à travers le pays. Mais dans l'ensemble il s'agit d'une réduction dans le total de l'effectif.

M. Korchinski: C'est évident qu'il y a une réduction mais qui s'est fait limoger, où sont allés ces gens, qu'est-ce qui leur est arrivé, quelles recherches ne faisons-nous plus que nous faisons avant?

M. Williams: Il n'y en a pas qui ont été limogés ou congédiés dans la catégorie scientifique et professionnelle mais, au fur et à mesure que les postes étaient vacants on ne pouvait les repourvoir et on s'en est tenu à ce chiffre. Je devrais peut-être demander au Dr. Woodward ou au Dr. Migicovsky de nous indiquer là où nous avons renforcé notre effectif de recherche c'est-à-dire, là où nous avons muté les gens, c'est une procédure normale de muter les gens qui étaient en fonction dans des domaines où nous avons eu à restreindre le travail par suite des restrictions qui nous ont été imposées soit sous forme de main-d'oeuvre soit sous forme monétaire.

M. Woodward: Monsieur le président, nos prévisions pour 1969-1970, en plus de la réduction générale dans les autres programmes et quelques augmentations dans la recherche sur les céréales, le génie et la pollution. Nous avons l'intention de maintenir les programmes en recherche animale au niveau actuel, vous comprendrez donc qu'il s'agit d'ajustement intérieur des ressources dont nous disposons. Par conséquent, si nous renforçons ces programmes, cela sera coordonné avec la réduction générale des autres programmes.

M. Korchinski: Je crois comprendre qu'on ne vous a pas permis d'engager du personnel pour combler les postes vacants. Ai-je raison de supposer cela?

M. Williams: Jusqu'à un certain point, oui, c'est exact. La méthode par laquelle on nous a restreint à un certain niveau, c'est que nous ne pouvions plus remplir les postes au fur et à mesure qu'ils deviennent vacants jusqu'à un certain niveau. Mais une fois que nous étions en dessous de ce niveau, ce qui est arrivé en avril de l'an dernier, évidemment nous pouvions alors remplir ces postes.

M. Korchinski: Au cas où certaines catégories d'employés avaient atteint l'âge de la retraite ou quitté

[Text]

age, or perhaps had left the service for one reason or another, and they were in the midst of a certain type of research, were you permitted to rehire and replace these people or was this just set aside, shelved temporarily?

Mr. Williams: If we were within the ceiling we could rehire; if we were at the ceiling we could not rehire.

Mr. Korchinski: In other words, if some particular phase of research was being conducted and a man became sick and ended up in hospital, that was it; everything had to stop?

Mr. Williams: Unless we were able to find a position somewhere else to transfer into that, yes.

Mr. Korchinski: In Vote 5, under administration, operation, and so on, you have a reduction from 15 to 7 and I wonder if you could give us a breakdown of the types of services that were affected there, and also in regard to the institutes, stations, farms, laboratories, and so on. Could you give me a breakdown as to the type of work that was actually being conducted by those 925 people. You are now apparently quite satisfied with 843 people working in that area. I do not expect you can give me the answer immediately, but could you possibly get this type of information for me?

It seems to me that you would probably have had to set up a system of priorities, and if there was a genuine reduction and if it was necessary that is fine, but if something has suffered because of that I would like to know about it. I also want to know at this particular time how you went about setting up a system of priorities to decide what must be continued and what areas received the preference over other areas, and so on.

Mr. Olson: Mr. Chairman, I think Dr. Woodward just read out a list of the areas where the research establishment was strengthened, so the question has already been answered. I suppose we could . . .

Mr. Korchinski: It may have been answered . . .

Mr. Williams: Excuse me, I would like to say one thing. I endeavoured to say this earlier but undoubtedly I was not quite clear. Many of these decreases are decreases on the basis of bookkeeping. That is to say, before this it was establishment irrespective of whether the positions were filled or not and at the present time it is man-years. I pointed out that for the department as a whole our ceiling is three higher this year than it was last year in actual fact, but the figure shown for last year was the establishment.

I will say one word in an attempt to define these terms, because I am sure this is part of the difficulty.

[Interpretation]

le service pour une raison ou pour une autre, et qui se trouvaient en train de faire certains travaux de recherche, est-ce qu'on vous autorisait à les remplacer ou de les reprendre à votre service, ou bien est-ce qu'on a simplement mis cette question de côté pour le moment?

M. Williams: Si nous étions dans la limite du plafond, on pourrait embaucher quelqu'un, mais si nous avons atteint la limite, on ne pourrait le faire.

M. Korchinski: Autrement dit, si certains travaux de recherche étaient en cours et que la personne tombe malade, est-ce que les travaux s'arrêtent?

M. Williams: Tout est arrêté, à moins que l'on puisse transférer quelqu'un à son poste.

M. Korchinski: Au crédit 5 «administration, fonctionnement, etc.» vous avez une diminution de 15 à 7. Je voudrais avoir une ventilation des différents services qui ont été touchés ici et également pour les Instituts, fermes, stations, laboratoires, etc. Est-ce que vous pourriez me donner une ventilation des travaux qui étaient accomplis par les 925 personnes. Vous semblez maintenant satisfaits des 843 employés dans ce domaine. Je ne vous demande pas une réponse immédiate, mais je me demande si vous ne pourriez pas nous trouver ce genre de renseignements.

En effet, je crois que vous auriez probablement dû créer un système de priorités, et s'il y a eu une réduction véritable qui était nécessaire, c'est très bien, mais si quelque chose en a souffert, j'aimerais savoir quoi. J'aimerais également savoir maintenant comment vous avez pu établir votre liste de priorités pour décider quels travaux poursuivre et à qui on donne la préférence.

M. Olson: Monsieur le président, je pense que le docteur Woodward a donné lecture d'une liste des domaines où les travaux de recherche ont été accrus. Vous avez donc déjà reçu une réponse.

Je pense que . . .

M. Korchinski: On y a peut-être répondu . . .

M. Williams: Je m'excuse, j'aimerais ajouter quelque chose. C'est ce que j'ai voulu dire plus tôt, mais j'ai l'impression de ne pas me faire comprendre. Bon nombre de ces diminutions, ne le sont que du point de vue comptable. C'est-à-dire qu'avant, on parlait de l'effectif que le poste soit rempli ou non, alors que maintenant on parle d'années-homme. J'ai déjà indiqué, pour l'ensemble du Ministère, que le plafond est trois fois plus élevé cette année que l'année dernière, mais l'année dernière on parlait globalement de l'effectif.

Je vais tenter de définir les termes, car à mon avis, c'est de là que vient la difficulté. Ce que l'on appelle

[Texte]

The establishment is simply the total numbers of authorized positions that the department had at a certain point. Last year we had an establishment of 10,352 man-years. I pointed out earlier that once we had this establishment we could never be more than about 95 per cent of it at any time because of the turnover. The system of using an establishment was wiped out and in place of it we were given what was known as a ceiling. This simply means that at no time can we have more people on strength than the ceiling but we still have the total number of positions, so to speak, that we can fill.

● 1005

In other words, we do not have to restrict ourselves to the 95 per cent because of the turnover; we can staff right up to the level of our new authorized strength. The new authorized strength for last year, which is the ceiling beyond which we are not allowed to have one extra person on strength, was 8,786 and that was based upon the number of people that we actually had in our employ at a certain time. For the new year we have a ceiling that is three higher than the previous year, and this is because of internal transfers.

Mr. Korchinski: I am sure the Minister has certain information that I do not have because he would be more familiar with the operation of the department and he might feel that the answer is adequate. I once worked for the civil service and I know that some people in a department work twice as hard as others and I know there are some areas within departments that you could reduce. For example, if you had someone running around full time with a car doing service, and that sort of thing, that could be reduced. However, your total man-years could be maintained at a certain level.

There is reference in this Blue Book to the scientific and professional people and I am trying to find out what work these people were doing that is no longer going to be done. Is there somebody in animal Research that is not working now? This is the breakdown that I would like at another time. I realize there are certain priorities and you can perhaps do away with some casual help.

The Chairman: I think Dr. Migicovsky has some supplementary information that he would like to give to the Committee.

Dr. B. B. Migicovsky (Director General, Research Branch, Department of Agriculture): Mr. Chairman, I assume that the member is concerned about the changes in program that would result from the fact that there are less scientific and professional positions in one year than there is in the other.

It must be understood that what we lost were vacant positions at the particular time of year that Mr. Williams referred to. There was nobody in them. True,

[Interprétation]

l'effectif c'est le nombre total de postes autorisés pour un ministère à un moment donné. L'année dernière nous avions un effectif de 10,352 années-hommes. J'ai déjà indiqué qu'une fois que l'effectif serait établi on n'en atteindrait jamais 95 p. 100 à cause du roulement de personnel. Le système de l'effectif maintenant a été supprimé et on a fixé un plafond à la place. Ce qui veut dire qu'on ne peut à aucun moment avoir plus d'employées que le nombre fixé, mais nous avons toujours le nombre total de postes à pourvoir.

Autrement dit, on n'a pas besoin de se limiter à 95 p. 100 de l'effectif à cause du roulement on peut recruter tout le personnel autorisé. Le plafond autorisé pour l'année dernière, qui est le nombre au-delà duquel on ne peut pas recruter qui que ce soit, était de 8,786, et était basé sur le nombre d'employés que nous avions effectivement à notre service à un moment donné. Le plafond pour la nouvelle année nous accorde trois postes de plus que l'année précédente, en raison des transferts internes.

M. Korchinski: Je suis certain que le ministre a des renseignements que je n'ai pas parce qu'il doit connaître beaucoup mieux le fonctionnement de son ministère, et il lui semble peut-être que la réponse est satisfaisante. J'ai déjà travaillé pour la fonction publique, et je sais qu'il y en a certains dans les ministères qui travaillent deux fois plus que d'autres, et je sais, par ailleurs, qu'il y a certains secteurs où on pourrait effectuer des réductions. Par exemple, si vous avez quelqu'un qui rend des services avec sa voiture à plein temps, on pourrait réduire ces services, tout en conservant le même nombre d'années-homme.

Dans ce Livre bleu vous mentionnez le personnel des sciences et professions; j'aimerais savoir quels travaux que faisaient ces gens ne seront pas poursuivis. Alors est-ce qu'il y a des gens de la recherche animale qui ne travaillent plus? Voilà le genre de ventilation que je voudrais avoir. Je comprends qu'il y a certaines priorités et vous pourriez peut-être éliminer certains employés occasionnels.

Le président: Je pense que le docteur Migicovsky a des renseignements supplémentaires à communiquer.

M. B. B. Migicovsky (Directeur général, Direction de la recherche, ministère de l'Agriculture): Monsieur le président, je suppose que ce qui intéresse le député c'est les changements des programmes à la suite du nombre inférieur de postes des sciences et professions cette année par rapport à l'année dernière.

Il faut comprendre que ce que nous avons perdu au moment de l'année qu'a indiqué M. Williams, c'étaient des postes vacants. Autrement dit, ces postes n'étaient

[Text]

these positions were assigned to programs. Obviously at any one time the positions we are filling, could vary from 93 to 95 and they could vary the other way. We were caught with this many vacancies and we lost so many positions. What we proceed to do is to take advantage of the continuing movement of positions. That is as positions become vacant after this particular time we restructure our more important programs and we give high priorities.

Secondly, we now attempt to fill to 100 per cent. Of course, we may not go to 100 per cent but we go considerably higher than we were before as Mr. Williams pointed out. You could fill to 100 per cent and if the variety of people you have to hire is not as great it is easier to get people.

This is how we get around it. We really could not show you exactly where we lost people because we did not lose people in positions, we just decreased the number of vacancies. This is what happens, in effect, when it is held up by the money ceiling. We cannot go beyond that. There may be the odd change but it is of relatively small importance. All the time we are reviewing our research program, and so far as we are able we have to shift from a program which is of a lower priority to one of a higher priority. We retread people; we take advantage of a vacancy that appears in a low priority program and change that position to a high priority program. This is what happens.

If you spread the number of people in respect of these 925 positions right across the country into the stations and institutes you really do not have anything very significant in any one particular program. This is how we have managed to do it. Do you understand what I am getting at?

Mr. Korchinski: Yes, I know. When you spread them all over you wonder what goes on.

Dr. Migicovsky: Of course, if there are changes, if a program has lost its priority, if we can we naturally decrease the amount of manpower involved in that program and put it into a program of a higher priority.

• 1010

Mr. Korchinski: At any rate, I wonder if you could just look at that matter and see if you cannot prepare something for me. I will not labour that any further.

Mr. Olson: Mr. Chairman and Mr. Korchinski, if you are looking for some specific personalities who were laid off and specific programs that were discontinued because of this change, it is almost impossible to

[Interpretation]

pas pourvus au moment. Certes, ces postes étaient affectés à des programmes. Mais le nombre de postes que nous remplissons à un moment donné peut varier de 93 à 95 p. 100. Mais nous étions pris avec ces vacances et nous avons perdu ces postes. Nous avons essayé de profiter du mouvement continu des postes, c'est-à-dire que, au fur et à mesure que les postes sont devenus vacants depuis, nous restructurons nos programmes les plus importants et nous leur accordons la priorité.

Deuxièmement, nous tentons maintenant de recruter 100 p. 100 de l'effectif autorisé. On n'atteint peut-être pas ce chiffre, mais nous le serons de beaucoup plus près. On pourrait atteindre 100 p. 100 et si la diversité des personnes recrutées n'est pas aussi grande, c'est plus facile.

C'est ainsi qu'on peut y parvenir. Autrement dit, on ne pourrait pas vous indiquer exactement à quel endroit nous avons perdu des gens parce qu'en fait nous n'avons pas perdu de gens en poste, nous avons simplement diminué le nombre de postes vacants. C'est ce qui se passe lorsqu'on est restreint par le budget. C'est un plafond qu'on ne peut pas dépasser. Il peut y avoir quelques changements, mais ils sont relativement peu importants. Nous réexaminons constamment notre programme de recherche et il nous faut passer, dans la mesure du possible, d'un programme dont la priorité est moins élevée aux programmes qui bénéficient d'une plus grande priorité. Nous reclassons notre personnel; nous profitons de ce qu'une vacance se présente dans un programme moins prioritaire pour transférer ce poste à un programme plus prioritaire. C'est ce qui se passe.

Si vous répartissez le nombre d'employés par rapport aux 92 postes dans tout le pays, dans les stations et les instituts, on ne remarque pas de changement importants dans un programme particulier. C'est ainsi que nous avons pu contourner la difficulté. Avez-vous compris ce que je voulais dire?

M. Korchinski: Oui, je comprends très bien. Lorsque vous répartissez votre personnel dans tout le pays, on se demande ce qui se passe.

M. Migicovsky: S'il y a des changements, si un programme n'est plus prioritaire, on diminue, si possible, le nombre de personnes attaché à ce programme et on les attache à un programme d'une plus haute priorité.

M. Korchinski: Est-ce que, de toute façon, vous pourriez étudier cette question et me préparer quelque chose à ce sujet. Je ne poursuivrai pas ce sujet plus loin.

M. Olson: Monsieur le président et monsieur Korchinski, si vous cherchez à trouver, le nom de personnes qui ont été mises à pied à cause de programmes qui ont été interrompus, je crois qu'il est

[Texte]

answer the question in those terms because, as has been pointed out, there were none. We have been reduced in the number of positions that are available but, as has been pointed out, those positions were vacant although they were authorized within the establishment. In respect of the number that we are talking about here, those positions were vacant at the time, and that is what has been reduced in these figures that you are looking at. So we are not able to give you the names of anyone or the programs that have been cut, because they were not filled at the time the cut was made in the establishment.

Mr. Korchinski: Mr. Olson, I think Mr. Williams indicated by nodding that he was quite prepared to look at it and perhaps give me something on it.

Mr. Whicher: It really means that we have not saved any money after all.

Mr. Olson: Well I think there is some saving. In some of these votes that you are looking at there is a reduction in the authorization that we are asking Parliament to make for the Department of Agriculture, and of course there are some increases too.

Mr. Korchinski: Could I approach it from another angle. Were there any positions advertised for employment within the civil service that were not actually filled? If so, could I be provided with the types of positions that were advertised and not actually filled?

Mr. Williams: We do not have a comparison.

The Chairman: This is a proper question: Were there positions advertised that were not filled because of a cut-back? If so, what positions were advertised and not filled?

Mr. Williams: I am afraid that I cannot answer that absolutely, but it would be my view that we never advertise a position unless we have an authority to cover it. In other words, we do not simply go out and advertise a position and then wonder afterwards whether we will be putting ourselves above the ceiling, or whether we will be able to pay the man. We clear that before the position is advertised.

I think I can say that, there may have been the very odd position that may have been advertised and not filled because a suitable candidate was not turned up by the competition. We probably could get you a list of that type of advertisement where the position was not filled because a suitable candidate did not apply.

Mr. Korchinski: I wonder if you might look at another aspect of this. Could you give me an indication of some work that you think at the moment the department should be doing but perhaps, because of

[Interprétation]

malheureusement impossible de vous répondre dans ce sens, car comme on vous l'a indiqué, personne n'a été mis à pied. On a simplement diminué le nombre de postes disponibles, mais comme il a déjà été indiqué, ces postes étaient déjà vacants, bien qu'ils faisaient partie de l'effectif autorisé. Au sujet du nombre dont nous parlons ici, ces postes étaient vacants à ce moment-là. Et, c'est cela qui a été diminué dans les chiffres que vous avez vus. Par conséquent, on ne peut pas véritablement vous donner de noms, ni de personnes, ni de programmes qui ont été réduits, parce que ces postes-là n'étaient pas remplis lors de la réduction en question.

M. Korchinski: Monsieur le ministre, je pense que M. Williams a indiqué qu'il est tout à fait disposé à étudier la question et peut-être me fournir des renseignements.

M. Whicher: Cela veut dire qu'il n'y a pas eu d'économie d'argent de réalisée?

M. Olson: Eh bien, il y a eu quelques économies certainement. Il y a eu une réduction dans le nombre d'autorisations qui ont été demandées pour le ministère de l'Agriculture et il y a eu certaines augmentations également.

M. Korchinski: Est-ce que je pourrais aborder la question sous un autre angle? Est-ce qu'il y a eu des postes annoncés dans la Fonction publique qui n'ont pas été occupés? Si la réponse est oui, est-ce que vous pourriez me donner les postes qui ont été annoncés et non comblés?

M. Williams: Nous n'avons pas de chiffres comparatifs.

Le président: Voici la question mieux formulée: est-ce qu'il y a eu des postes qui n'ont pas été remplis à la suite de ces réductions? Si oui, quels postes ont été annoncés et n'ont pas été comblés?

M. Williams: Eh bien, je regrette, je ne peux pas vous donner une réponse absolue. Mais, d'après moi, nous ne faisons jamais de publicité pour un poste, à moins d'avoir le pouvoir d'embaucher quelqu'un. Autrement dit, nous n'allons pas annoncer un poste pour nous demander ensuite si nous ne dépassons pas notre plafond ou si nous pouvons payer. Nous établissent tout cela avant d'annoncer.

Maintenant, il a pu se produire qu'un poste ait été annoncé et n'ait pu être comblé faute d'un candidat compétent. On pourrait éventuellement vous donner une liste des postes qui ont été annoncés et n'ont pu être comblés faute de candidats compétents.

M. Korchinski: Je me demande si vous ne pouvez pas étudier un autre aspect de la question. Est-ce que vous ne pourriez pas me citer certains travaux qui, normalement, devraient être effectués actuellement par le

[Text]

some curtailment, you have had to defer. I am not saying that you have dropped it entirely but, are there some areas where you feel there is a need but that because there are certain curtailments you do not feel you should proceed at this time?

Mr. Olson: Mr. Chairman, I wonder if we could do it the other way. We could provide you with a list in some detail and the professional man-years that have been assigned to each one of them. I could give you some examples. Under the heading of Soils there is 123 professional man-years assigned to that in the new program. Then under Crops, Cereal, General there are 42 under cereal, there are 61 under forage, 64 under oils, 12, and so on all the way down. Then you could make the decision whether or not —

Mr. Korchinski: That is fine.

Mr. Olson: —it is enough because, as far as we are concerned, we could use some more people in almost all of these programs.

Mr. Korchinski: This is fine, but the point is that when providing me with a list I would also like you to provide me with the number of people actually at work in some areas—you mentioned soils, cereal and so on—and compare that number, with this year. I

● 1015

am thinking in terms of where research was being conducted and now it has been dropped. I really want to see whether or not you have really reduced or cut back. If you provide me with a complete list I will have a look at it and perhaps, it will satisfy me.

Mr. Olson: We will do that.

Mr. Korchinski: Could you indicate what areas of research may have been affected right here at the Experimental Farm in Ottawa? Was there any reduction at all in certain research work? Were any projects at all dropped as a result of this situation?

Mr. Olson: You mean specific programs that were discontinued?

Dr. Migicovsky: No specific projects were discontinued. You might say small parts of a program were discontinued and shifted, because of the vagary of scientific research, but all in all one might say that the over-all attention given to research in the Ottawa area has not changed significantly. I can give you an example, if you wish.

For example, we have a small reduction in the amount of physiology research being done in the Ottawa area largely because we are restructuring the physiology program and moving people from one institute to another institute in order to give us what we

[Interpretation]

ministère, mais que vous avez dû remettre à la suite de réductions. Je ne dis pas que vous les avez abandonnés complètement. Y a-t-il des secteurs où vous croyez qu'il faudrait faire quelque chose mais où vous ne procédez pas à cause d'une réduction?

Mr. Olson: Eh bien, monsieur le président, je me demande si on ne pourrait pas faire cela en sens inverse. On pourrait vous donner une liste détaillée avec les programmes et le nombre d'années-homme de travail qui y ont été consacrées. Par exemple, sous la rubrique «Sols» il y a eu 123 années-homme de travail dans ce programme. Sous la rubrique «Récoltes, Céréales, Général» il y en a 42; «Céréales» il y en a 61; «Forages» 64, «Huile»: 12, etc., etc. Vous pourriez décider alors si...

Mr. Korchinski: Très bien.

Mr. Olson: ...c'est suffisant ou si ce ne l'est pas, parce que, en ce qui nous concerne, nous aurions besoin de plus de personnel dans chacun de ces programmes.

Mr. Korchinski: Mais c'est très bien, ce que je voulais dire c'est que, si vous me fournissez cette liste, vous pouvez également me donner le nombre de gens qui ont réellement participé à ces programmes, vous avez parlé de «Sols», «Céréales» etc., et le comparer à celui

de cette année. Je pense à la recherche qui était faite et qui est maintenant discontinuée. Je veux savoir véritablement si vous avez diminué ou non, réduit ou non. Alors, si vous me fournissez une liste complète, je pense que cela me sera très utile.

Mr. Olson: Nous le ferons.

Mr. Korchinski: Maintenant, est-ce que vous pourriez nous dire quel domaine de recherches a pu être affecté ici à la ferme expérimentale d'Ottawa? Est-ce qu'il y a eu des réductions dans certains programmes de recherches? Est-ce qu'il y a des projets qui ont été abandonnés à la suite de cela?

Mr. Olson: Vous voulez dire des programmes précis qui ont été abandonnés?

Mr. Migicovsky: Eh bien, il n'y a eu aucun programme d'interrompu. Vous pourriez peut-être dire qu'une partie d'un programme a pu être interrompue ou déplacée, parce que cela fait partie du caractère incertain de la recherche scientifique. Mais, disons que, dans l'ensemble, la recherche dans la région d'Ottawa n'a pas changé de façon importante. Je peux vous donner un cas précis.

Par exemple, nous avons une petite réduction, de la recherche en physiologie qui s'est faite dans la région d'Ottawa, simplement parce qu'on est en train de restructurer le programme de physiologie, en déplaçant des gens d'un service à l'autre pour leur

[Texte]

believe is to be a better attack on the particular problems that present themselves. But these are continuous changes in program—you might call them almost vibrations—in structuring a large research program of the kind we have in the branch. We always have small changes going on throughout the year.

Mr. Korchinski: I know you are doing some research into rapeseed here at the Farm and I wonder if you could tell me what phase of research we are entering now—whether we have completed the one aspect, making it edible for human consumption and that sort of thing by removing the toxicity?

Dr. Migicovsky: There are two phases of research on rapeseed. The important thing is not particularly being done in Ottawa. One of the more important areas is being done at Saskatoon, where the geneticists appear to be making great progress in breeding out the toxic compounds present in rapeseed meal. They are doing it by genetics. At the same time the people in the Food Research Institute have come up with a method whereby they can process the meal and remove the toxic properties and get a colourless, high protein product which has possibilities—I want to emphasize the word “possibilities”—of becoming a human food. Much more work has to be done. In particular, the cost of this process has to be brought into line with the same costs that prevail in terms of producing other high protein foods. Also, work has to be done in what one does with this high protein food. I think we are looking to the future now, where we think in terms of protein deficiencies throughout the world and how one is going to go about producing foods of a kind that will meet world requirements for protein.

At the present time people in the project are conferring with people in the universities, with people in industry, with an idea to producing a product that might be marketable. At this stage one cannot say it is going to be a marketable product.

Mr. Korchinski: Would you be prepared to make any type of a prediction as to how much longer it will take to come up with some of these answers? I am thinking in terms of what is happening in the field of wheat and barley production, sales and so on, and I am thinking of the production of rapeseed as a cash crop alternative. I am just wondering whether enough work is being done in this area and whether we are anywhere near getting answers to some of these problems,

● 1020

which seem to be very, very important at this particular time.

Dr. Migicovsky: Well rapeseed, as you know, is becoming an alternate crop. Obviously, the main product is oil, which is being produced very effectively in this

[Interprétation]

permettre d'avoir selon nous une meilleure vue du problème qu'ils abordent. Mais, ce sont là simplement des modifications continues à l'intérieur d'un programme. On peut qualifier cela des petites vibrations simplement, rien d'autres, dans la structuration des grands programmes de recherches qui nous avons aussi dans notre division. Nous avons toujours des petits changements comme cela qui se font tout au long de l'année.

M. Korchinski: Je sais que vous faites certains travaux sur le colza, à la ferme. Est-ce que vous pourriez me dire du moins à quel stade en est la recherche maintenant? Est-ce que nous avons terminé l'aspect, disons, comestible du produit en en supprimant le caractère toxique, etc.?

M. Migicovsky: Eh bien, il y a deux stades dans la recherche sur le colza. Le plus important n'est pas fait à Ottawa, mais à Saskatoon, où les généticiens sont en train de faire des progrès pour supprimer l'agent toxique de ces graines. En même temps, l'Institut des recherches sur les aliments a mis au point un système par lequel on peut produire la farine, supprimer la toxicité et obtenir un produit à haute teneur de protéine sans couleur. C'est un produit qui pourra—et j'insiste sur le mot «pourra»—devenir un produit alimentaire. Et, il reste beaucoup de travail à faire. Surtout le coût de ce procédé de production doit être aligné sur celui des autres aliments protéiques. Il faut aussi trouver un usage à cet aliment à haute teneur protéique. Je crois que nous envisageons le futur lorsque nous parlons en termes de carences protéiques dans le monde et qu'on se demande comment produire des aliments pouvant satisfaire à la demande mondiale.

À l'heure actuelle, les chercheurs confèrent avec les universités, les industries et tous veulent produire un produit commercialisable. Et, actuellement, on ne peut pas dire que ce sera un produit qui va être commercialisable.

M. Korchinski: Est-ce que vous pouvez faire des prédictions quant à la durée qu'il faudra encore pour que l'on puisse avoir des réponses à ces problèmes. Je pense, notamment, à ce qui se passe dans le domaine de la production du blé et de l'orge, des ventes, etc., et à la production de colza comme culture de remplacement. Je me demande si le travail effectué est suffisant et si nous en arriverons bientôt à savoir si ces problèmes qui semblent être très im-

portants, pourront être résolus.

M. Migicovsky: Comme vous le savez, le colza ne devient qu'une culture de remplacement. Bien sûr, le produit principal c'est l'huile. Le sous-produit, la

[Text]

country. The by-product, the meal, has been improved and is being improved by genetics to the point where it is making a very excellent protein supplement for cattle. A few years ago a big advance was made—the geneticists were able to remove erucic acid which was considered to have been an undesirable fatty acid present in the rapeseed oil. Now we have an erucic-free rapeseed, the acreage of which is growing and growing.

I think this is a very valuable crop to Canada and it has become valuable by virtue of the last 15 years of intensive research that has been going on. We produce it very effectively and very economically. It holds great promise.

Mr. Korchinski: In these experiments are you able to incorporate these qualities into the known varieties that you have or are you developing a new strain?

Dr. Migicovsky: That is correct; they become new varieties.

The Chairman: Gentlemen, I hesitate to limit the discussion, but I do have a number of others who wish to ask questions and as we are restricted to an 11 o'clock adjournment, would you be in a position, Mr. Korchinski, to terminate?

Mr. Korchinski: I have had a good go at it.

The Chairman: Thank you very much.

Mr. Thomson (Battleford-Kindersley): I have a question that is supplementary to Mr. Korchinski's.

The Chairman: All right, I will recognize Mr. Thomson.

Mr. Thomson (Battleford-Kindersley): Mr. Chairman, I am impressed with the research in rapeseed, but perhaps this question more properly might be directed to the Minister. In connection with what the Department has done in research, I wonder if this has been advertised in the industry itself? I am thinking of oil—the possibility of using rapeseed oil as compared to corn oil—for cooking purposes. In effect, how much work has the Department done in advertising the successes they have had in this industry or in the commercial field of our country.

Mr. Olson: I will ask Mr. Williams to comment on that subject. Very, very briefly and generally, of course, the Department of Industry does some of this promotional work and there are a number of instances that perhaps he can name for you. For example the Saskatchewan Wheat Pool did, in fact, take over the promotion of this in parts of Saskatchewan when some new varieties and some new techniques in processing came along.

[Interpretation]

farine, a été amélioré et est encore amélioré par la génétique au point où il peut être un complément protéique pour le bétail. Il y a quelques années, on a fait un énorme progrès lorsque les généticiens ont pu supprimer l'acide érucique. C'est un acide gras qui se trouve dans le produit de l'huile. Et, maintenant, nous avons un colza sans acide qui se cultive de plus en plus.

C'est là un produit qui, donc, est devenu très utile à la suite des 15 dernières années de recherche intensive. Il y a une conduction maintenant très utile, très efficace et qui est très prometteuse.

M. Korchinski: Eh bien, au cours de cette expérimentation, est-ce que vous êtes en mesure de mettre toutes ces qualités dans les variétés que vous avez déjà ou bien, est-ce que vous êtes en train de mettre au point une nouvelle variété?

M. Migicovsky: C'est exact. Ça devient une nouvelle variété.

Le président: Messieurs, je m'excuse d'interrompre votre discussion mais un certain nombre de membres veulent poser des questions et, comme vous le savez, on doit arrêter à onze heures, êtes-vous en mesure, monsieur Korchinski, de mettre fin à la discussion?

M. Korchinski: Je m'en suis donné à coeur joie.

Le président: Je vous remercie beaucoup.

M. Thomson (Battleford-Kindersley): Je voudrais ajouter quelque chose aux propos de M. Korchinski.

Le président: Très, bien, je vous donne la parole.

M. Thomson (Battleford-Kindersley): Je suis très impressionné par la recherche relative au colza, mais cette question devrait plutôt être posée au Ministre. En ce qui concerne les travaux de recherche du Ministère, j'aimerais savoir si cela bénéficie d'une certaine publicité dans l'industrie? Je pense par exemple à l'huile de colza par rapport à l'huile de maïs pour la cuisson, pour la cuisine par exemple. J'aimerais savoir si le ministère a fait de la promotion publicitaire sur les réussites qu'ils ont connues dans cette industrie ou dans le milieu commercial de notre pays.

M. Olson: Eh bien, je vais demander à M. Williams de nous faire quelques remarques mais très générales; bien sûr, le ministère de l'Industrie fait ce genre de promotion et il y a un certain nombre de cas qu'il pourrait nous énumérer. Par exemple, le «Saskatchewan Wheat Pool» s'est occupé de la publicité de cette variété dans certaines régions de la Saskatchewan alors qu'on a mis au point certaines nouvelles variétés et certaines nouvelles techniques.

[Texte]

Mr. Williams: In products such as this, when new varieties are developed, the procedure that is followed may differ somewhat depending upon the type of commodity, but the general procedure is that the varieties are made available to somebody whom we feel will do an effective job of promotion, development and distribution.

In this particular case, a contract was entered into with the Saskatchewan Wheat Pool, who showed a great deal of interest in this particular rapeseed, to undertake the development of seed stock and the actual growing and promotion of it. We engaged the services of the Department of Industry because it is an industrial crop with the result that the Saskatchewan Wheat Pool made arrangements to have people grow this under contract so that it would be available to them for full-scale testing in factories. The Department of Industry also made the necessary arrangements in respect of the industrial side of it, namely the processing in factories.

The Chairman: Mr. Lind, I believe has a supplementary.

Mr. Lind: I do not want to ask a supplementary, I would like to have an explanation of this term "man-years". I am very interested in knowing why this terminology is used, rather than the number of people who are involved. Is it the fact that a scientist may work half a year on, say, one cereal crop and then move over to another crop for half a year? Is it to break it down or do a specific number of hours of

● 1025

work per year represent one man-year? This is what I would like to know. It is a new term to me; I have never heard it used in industry. If this were explained, I think possibly we would have a better understanding of the number of employees and everything that is involved.

Mr. Williams: Thank you very much for that suggestion, Mr. Lind, I appreciate the fact that it is a different term and I am sorry I did not explain it earlier. A "man-year" is simply a term of convenience. We have basically four types of employees within the Department. We have full-time employees; we have seasonal employees; we have casual employees and we have, what are called, part-time employees. If we have authority for so many dollars for casual employees, for example, we could hire 365 people for one day—I should not say 365 because there are not 365 working days in the year. I think 240—odd working days represent a man-year.

We could hire theoretically 240 men for one day or we could hire one man for 240 days on casual employment. It is particularly useful for some of our farms,

[Interprétation]

M. Williams: Lorsque de nouvelles variétés dans ce genre de produits sont mises au point, la procédure suivie peut varier quelque peu selon la denrée mais disons qu'en général, les variétés sont mises à la disposition de quelqu'un qui d'après nous, pourra faire un bon travail de promotion, de développement et de distribution.

Dans ce cas particulier un contrat a été passé avec la Saskatchewan Wheat Pool qui s'est beaucoup intéressé à cette graine de colza, en vue d'entreprendre le développement possible de ces variétés, c'est-à-dire la culture proprement dite, ainsi que la promotion. D'autre part, nous nous sommes assurés les services du ministère de l'Industrie parce qu'il s'agissait surtout d'une culture industrielle et ce qui s'est passé c'est que le Wheat Pool de la Saskatchewan a pu passer des contrats à certaines personnes pour cultiver ces produits de telle sorte qu'ils puissent en faire les essais pour les usines. Le ministère de l'Industrie de son côté, qui a pris toutes les dispositions nécessaires en ce qui concerne l'aspect industriel c'est-à-dire le traitement des usines, etc. . .

Le président: Je crois que M. Lind a une question complémentaire à poser.

M. Lind: Ce n'est pas une question, je voudrais tout simplement connaître la signification du terme «années-homme»—j'aimerais savoir pourquoi on utilise ce nouveau terme plutôt que de mentionner le nombre de personnes. Est-il exact qu'un savant peut travailler six mois de l'année sur une culture puis passer à une autre culture le reste de l'année? Est-ce pour une répartition ou est-ce qu'un certain nombre d'heures de travail

représente une année-homme? C'est ce que je voudrais savoir. Voyez-vous, ce terme m'est tout à fait étranger; on ne s'en est jamais servi dans l'industrie. Cela nous permettrait de mieux comprendre le sujet, pourvu qu'on nous explique ce que ce terme veut dire.

M. Williams: Eh bien, je vous remercie beaucoup de cette suggestion, monsieur Lind. Et je comprends parfaitement qu'il s'agit d'un terme inhabituel et je m'excuse de ne vous l'avoir pas expliqué plus tôt. Le terme d'homme-année est simplement une question de pratique. Il y a généralement quatre genres d'employés au sein du Ministère. Il y a d'abord les employés réguliers à plein temps, les employés saisonniers, les employés occasionnels et nous avons ce qu'on appelle des employés à temps partiel. Si nous sommes autorisés de dépenser un certain montant d'argent pour tant d'employés occasionnels on pourrait embaucher 365 hommes dans l'année, en fait ce n'est pas 365 jours de travail—je crois que c'est quelque 240 jours de travail.

Donc, disons qu'en théorie on pourrait soit recruter 240 hommes qui travailleraient un jour chacun, nous pourrions embaucher un seul homme qui travaillerait

[Text]

stations and institutes, for example, during apple harvesting. It might be we would need a lot of men for one day, but the next day we would not need any and so forth.

So really what it does is put together all these different types of positions and if we say we have 10 man-years, by this we mean we have authority to hire 10 men for 240 days or whatever a year represents.

We also have seasonal people, for example, in our fruit and vegetable inspection. These are seasonal positions, but they are continuing positions in which the man may be hired only for five months every year. However he can come back to the same position the next year provided he has done a satisfactory job. This is quite different from the casual position which is usually filled by somebody from the local Manpower office.

The Chairman: Thank you. May I recognize Mr. Southam?

Mr. Southam: Mr. Chairman I would like to put a question to the Minister—it may be a matter of policy—concerning the topic that was introduced by Mr. Douglas earlier this morning on the over-all policy of research as far as the Department of Agriculture is concerned and as it relates to world conditions and changing conditions. I think we must agree that we are in serious difficulty here in Canada at the present time in many areas of agriculture and it concerns me when we have a cut-back in the budget for research with respect to this industry which could lead to a lot of trouble later on.

Would the Minister say whether he is satisfied, as far as the government is concerned, on this matter of economy and cutting-back in light of the circumstances. I am thinking of all the areas of scientific research, as they apply in Canada, compared with what they are doing in other countries. You are aware of what has happened recently in Japan where they have developed a technique of utilizing wheat for the production of a meat substitute.

Another example would be the tomato growers in Mexico. There are also the different grades of wheat that are being produced which are high in yield, but may be lower in protein content and so on. I am not too familiar with the types, but no doubt, you or your Department would be familiar with these grains which are being produced say, in Mexico and which are competing with our grains here and so on right across the whole field. I am concerned about this. Is it economic to cut-back?

Mr. Olson: Firstly, I would like to say, Mr. Chairman, that in terms of the number of people involved and actually working, it is not a cut-back, it is lack of growth. In other words, it prevents the expansion of the actual positions that were occupied and, indeed, functioning.

[Interpretation]

240 jours, ce qui serait un emploi occasionnel. Comme vous voyez, c'est très pratique surtout pour certaines de nos fermes, centres et instituts, spécialement durant la récolte. Un jour nous pourrions avoir besoin de plusieurs hommes, le jour suivant, aucun.

C'est-à-dire que ce système ne fait que grouper ces différents types de postes, et lorsqu'on nous dit «Vous avez 10 années-homme», cela veut dire que nous pouvons embaucher dix hommes pour 240 jours. Nous avons également les employés saisonniers, par exemple ceux qui travaillent pour l'inspection des fruits et légumes. Ces postes sont saisonniers et les titulaires travaillent sans interruption pendant disons cinq mois par année. Ces employés peuvent revenir l'année suivante, pourvu qu'ils aient fait un bon travail. Ces positions diffèrent de l'emploi occasionnel, lequel est pourvu par le service local de main-d'œuvre.

Le président: Merci. Monsieur Southam, vous avez la parole.

M. Southam: J'aimerais adresser une question au Ministre,—elle pourrait porter sur la politique,—au sujet de la question soulevée plus tôt ce matin par M. Douglas sur la politique globale de recherches du ministère de l'Agriculture par rapport à la situation internationale et aux conditions changeantes. Il faut reconnaître que nous avons en ce moment des difficultés assez graves au Canada dans plusieurs secteurs de l'agriculture et je constate avec inquiétude les réductions dans le budget de la recherche ayant trait à cette industrie, ce qui pourrait entraîner un tas de difficultés par la suite.

Le ministre peut-il nous dire s'il est satisfait de la politique actuelle du gouvernement en ce qui concerne les réductions du budget? Je pense particulièrement à tous les domaines de la recherche scientifique au Canada par rapport aux autres pays. Vous savez que le Japon a mis à point des techniques pour produire à partir du blé une denrée qui remplacerait la viande.

On pourrait citer en exemple les producteurs de tomates au Mexique. Il y a également les différentes variétés de blé dont le rendement est très élevé mais faible en protéine, et ainsi de suite. Je ne suis pas très au courant de ces variétés, mais peut-être que vous-même ou votre Ministère seriez plus au courant de ces graines qui sont cultivées au Mexique et qui font la concurrence de nos céréales. Voilà ce qui m'inquiète. Est-il vraiment économique de réduire le budget.

M. Olson: Tout d'abord, monsieur le président, j'aimerais dire qu'en ce qui concerne le nombre de personnes en cause, et qui travaillent, il ne s'agit pas d'une réduction, c'est plutôt un manque de croissance. En d'autres termes, elle empêche l'augmentation des postes disponibles qui étaient occupés et qui

[Texte]

In so far as the other very general question that you raised, I suppose there are programs that could be expanded. In fact, there could be expansion in almost every one of the research programs, there is no question in my mind about that, and perhaps, indeed very likely, something useful could come out of it but, of course, we have to live. I think, with the limitations.

Let me say, however, that as far as production technology is concerned, I think Canada compares very well with other nations. Indeed, we exchange technical personnel and information with almost all of the other nations of the world, and we certainly intend to continue evaluating all of these programs so that we stay competitive in respect of advancing technology.

To answer your question in the general terms you have outlined I think it would be very easy and perhaps desirable to expand some of the programs, but we have to live with some limitation and what we have laid out before the Committee is the limitation we are proposing for the ensuing year.

Mr. Southam: Thank you, Mr. Olson, for your answer. I still think it is a very important area in our whole economy. As we all know, agricultural products are the second largest source of income to Canada and we cannot afford under any circumstance to lag behind in developing improved varieties, improved techniques and so on right down the line. I should like to suggest to the Minister that he continue—I am sure he must be doing it at the present time—to put up the best fight he possibly can from within the Treasury Board to see that he gets an allocation of funds to maintain scientific research and development in so far as the Department of Agriculture is concerned. As I say, we will have to do this if we are even going to keep in step with progress in other parts of the world. That is all, thank you, Mr. Chairman.

The Chairman: Thank you, Mr. Southam. I recognize Mr. Roy.

M. Roy (Laval): Monsieur le Président, je pense qu'on étudie maintenant une question très importante, si on considère que la recherche est certainement la base de notre production et de notre agriculture. Je ne veux pas savoir quel est le nombre des employés du Ministère attachés au département de la Recherche, ni quel montant d'argent est destiné à la recherche. Ces questions ont été demandées et très bien répondues.

Mais, ce qui me fascine beaucoup, c'est que, par exemple au Canada, nous avons 9 universités qui font beaucoup de travaux de recherche. Je parle des facultés d'agriculture qui, je pense, reçoivent des subsides du fédéral ou du provincial. Il existe également des compagnies qui ont des fermes de recherche, ici au pays, et aussi aux États-Unis.

[Interprétation]

vraiment fonctionnaient bien. Pour ce qui est de l'autre sujet que vous avez soulevé, je suppose qu'il existe des programmes qui pourraient être élargis. En fait, on peut, sans aucun doute, élargir presque chacun des programmes de recherches et très probablement parvenir à quelque chose d'utile, mais évidemment il nous faut vivre avec les restrictions et les limitations qui nous sont imposées. Permettez-moi, toutefois, de dire ceci.

En ce qui concerne la production et la technique, le Canada, à mon sens, se porte très bien par rapport aux autres pays. Nous avons, en effet, beaucoup d'échanges de personnel technique et de renseignements avec presque tous les autres pays du monde. Nous avons l'intention de continuer l'évaluation de tous ces programmes pour que nous demeurions concurrentiels en ce qui concerne les progrès techniques. Mais pour répondre à votre question précise et dans les termes généraux que vous avez énoncés, je crois qu'il serait très facile, peut-être souhaitable aussi, d'étendre certains programmes, mais il faut nous restreindre à certaines limites et ce que nous avons exposé au Comité sont les limites que nous nous proposons de faire pour l'année à venir.

M. Southam: Je vous remercie, monsieur le Ministre, de cette réponse, mais je crois toujours que c'est un domaine très important dans notre économie. Nous savons tous que les produits agricoles sont la deuxième source de revenus au Canada et par conséquent nous ne pouvons pas nous payer le luxe de tirer de l'arrière. Pour continuer à améliorer les variétés, les techniques, etc. j'aimerais donc suggérer au Ministre qu'il continue et je suis sûr qu'il doit songer à l'heure actuelle de mener la meilleure lutte possible au sein du Conseil du Trésor pour essayer d'obtenir les fonds nécessaires pour maintenir la recherche et le développement en ce qui concerne le ministère de l'Agriculture. En fait, il faut le faire si nous voulons nous en tenir au pas avec le progrès accompli dans les autres parties du monde. C'est tout, monsieur le président.

Le président: Merci. Monsieur Roy.

Mr. Roy (Laval): Mr. Chairman, I think we are now studying a very important question, if we consider that research is certainly the basis for our production and our agriculture. I do not want to know the number of people within the Department who are attached to the Research Branch nor the amount of money devoted to research. I think these questions have been asked and good answers have been given.

What greatly fascinates me, is that, in Canada for instance, we have 9 universities doing a great deal of research work. I am referring to the Faculties of Agriculture, which receive, I believe, subsidies from the federal government or the provincial governments. There are also companies which have research farms, here in Canada, and also in the United States.

[Text]

Je me demande s'il y a une sorte de lien entre ces travaux de recherche effectués par le Ministère, ceux effectués par les universités et ceux effectués par des compagnies. Existe-t-il réellement un lien entre ces trois organismes qui font de la recherche très sérieuse? C'est ma première question.

Mr. Olson: Mr. Chairman, I think there is. Indeed we have establishments on the campuses of some of these universities; Laval is an example; the University of Manitoba is another example; the University of Saskatchewan; the University of British Columbia and so on. So there is a very close liaison with our Department. Indeed, there is a segment of our Department established right on the campuses of these universities. I think we exchange information on a continual basis about whatever research industry is doing.

There is one other point. We make grants from time to time to certain specific research programs that are going on within the universities; in some cases to specific programs and in other cases to a person who is carrying on a program that we are interested in. So I think there is very close co-ordination between the Research Branch of our Department and the universities, faculties of agriculture.

Mr. Roy (Laval): Merci, monsieur le Ministre. J'ai une autre question. Est-ce que cette recherche est réellement au service des producteurs? Car, il me semble que dans les différentes spécialités, soit dans l'agriculture, soit dans l'élevage des porcs ou soit dans l'industrie laitière, nous avons énormément de travaux de recherche qui sont assez concluants, mais qui demeurent sur les tablettes de nos chercheurs. A titre d'agronome, j'ai travaillé dans le secteur agricole et, bien souvent, on découvrirait, dans le domaine des engrais chimiques, des choses assez simples qui existaient sûrement, mais qui n'étaient pas parvenues au niveau du producteur.

Je me demande si, avec les méthodes d'information, on ne pourrait pas s'approcher davantage du cultivateur et du producteur, de façon à ce qu'ils connaissent réellement les conclusions de ces travaux de recherche. Par exemple, dans l'industrie laitière, la moyenne de la production dans la province de Québec est encore au-dessous de 6,000 livres de lait. Dans le domaine de l'élevage des porcs, il y a encore 20 p. 100 des porcs qui ne se rendent pas sur le marché, ou même au sevrage. Nos éleveurs perdent donc des sommes considérables d'argent.

Peut-être devrions-nous penser à orienter davantage notre budget de façon à pouvoir transmettre les informations de recherche au niveau des producteurs et permettre l'application des résultats de ces recherches, quel que soit le domaine de production.

Mr. Olson: In reply, Mr. Chairman, I think it has always been so and probably will be for some time and

[Interpretation]

I therefore wonder whether there is any link between the research work done by the Department, and research being carried out by the universities as well as that being carried out by companies. Is there really any link between these three organizations which carry out very advanced research? That is my first question.

M. Olson: Je crois qu'il y en a effectivement. En effet, nous avons une partie de nos établissements ou de notre effectif dans les campus universitaires, l'Université Laval, par exemple, l'Université du Manitoba, est un autre exemple, l'Université de la Saskatchewan, l'Université de la Colombie-Britannique, etc., et par conséquent il y a une liaison, un lien très étroit avec notre ministère. En fait, il y a une partie de notre ministère qui se trouve même sur les terrains universitaires. Il y a un échange de renseignements continuels en ce qui concerne les recherches que font l'industrie.

Il y a un autre point aussi et c'est que nous donnons des subventions de temps à autre pour certains programmes de recherche très précis qui se font dans les universités; pour des programmes très précis dans certains cas et aussi à certaines personnes qui font de la recherche qui nous intéresse dans notre ministère. Je crois donc qu'il y a une très bonne coordination entre la Direction de la recherche de notre ministère et les facultés d'agriculture dans les universités.

Mr. Roy (Laval): Mr. Minister, I have another question. Is this research really in the Service of the producers? Because, it seems to me that we have, in the different specialties, whether in agriculture, in the dairy industry or in hog raising, a great deal of research work that is fairly conclusive, but which remains on the shelves of our researchers. As an agronomist, I worked in the agricultural sector and very often when dealing with chemical fertilizers, we discovered fairly simple things which certainly existed already, but which had not reached the level of the producer.

I wonder whether, with our methods of information, we could not get closer to the farmer and to the producer, so that they could be informed of the conclusions arrived at in research? For instance, in the dairy industry, the average production in the province of Quebec is still below 6000 lbs. of milk. In the hog industry, 20 per cent of the hogs do not even get to the market, or do not even get weaned. Therefore, our producers are losing considerable sums of money.

We should be thinking perhaps of directing our budget a little bit more to transmitting research information to the level of producers and to make it possible to apply the results of this research in no matter what field of production.

M. Olson: En réponse à cela, Monsieur le Président, je crois que cela a toujours existé et existera pour

[Texte]

that does not say we should not try to take steps to correct it. There is a time lag between the research findings and recommendations, and the actual practice application of those recommendations. You mentioned the dairy and hog industries; I could name several other areas of research activity where it is completely clear to me, or at least I am completely persuaded, that the findings and recommendations of the research stations have brought forth something that could be applied very profitably at the practical level. In some cases there is a very serious time lag—several years as a matter of fact—that we hope we can improve on.

On page 12 you will notice that we are proposing to spend \$1,123,000 in the Information Division. This constitutes something like 79 man-years and includes disseminating the information, much of which is from the Research Branch of the Department. Of course, there are the provincial departments of agriculture and their district agriculturists who are involved in extension work. We are not involved in that at the present time but our Information Division and our research establishments wherever they are, try to be as helpful and co-operative as they can with the field men the provinces have for doing this kind of extension work.

It is not completely satisfactory; I do not suppose there ever will be immediate application of the recommendations coming out of the Research Branch.

But we try to disseminate this information and encourage its use at the practical level just as quickly as possible.

M. Roy (Laval): Monsieur le président, j'ai une dernière question, concernant un sujet d'actualité. Nous avons une grosse campagne sur les dangers de la cigarette. Je pense que cette campagne va certainement entraîner une demande plus grande pour les cigares. J'ai ici une lettre concernant la production des cigares dans la province de Québec, qui représente, je crois, 85 p. 100 de la production totale au pays. Je me demande si le Ministère a l'intention de se pencher sur cette lettre qui a été envoyée, je crois au docteur Hamilton. C'est une lettre qui date déjà de quelque temps, mais qui a été envoyée le 18 février. C'est au sujet de l'étude possible sur la production du tabac à cigare à la ferme expérimentale de l'Assomption. Nous devrions regarder et considérer cette demande. Je pense qu'au point de vue de recherches, nous avons diminué le personnel de la station expérimentale de l'Assomption. Alors puis-je demander qu'on reconsidère ce mémoire, préparé il y a déjà quelques années qu'on a envoyé le 18 février à M. Hamilton.

Ma dernière question concerne toujours la culture maraîchère. Dans le budget que l'on nous présente, je ne sais pas quelle est la somme prévue pour la recher-

[Interprétation]

longtemps à venir, mais cela ne veut pas dire que nous ne devrions pas prendre les mesures voulues pour le corriger. Il s'agit de l'écart de temps qui existe entre les recherches et l'application pratique des recommandations qui en résultent. Vous avez mentionné l'industrie laitière et l'industrie du porc; je pourrais mentionner plusieurs autres domaines de recherche, ou activités de recherche où il m'est très évident, du moins moi je suis personnellement convaincu que les résultats et les recommandations formulées par les stations de recherche ont donné quelque chose qui pourrait être appliqué facilement et pratiquement, mais parfois il y a un très long retard, des années même.

Nous espérons pouvoir améliorer cette situation, mais à la page 12 vous remarquerez que nous nous proposons de dépenser un million cent vingt-trois milles dollars dans la Division de l'information. Cette dépense représente environ 79 années-homme et comprend la diffusion des renseignements, et vient en grande partie de la Direction de la recherche du ministère. Évidemment il associe les ministères provinciaux de l'Agriculture ainsi que les agronomes régionaux qui font des travaux exhaustifs. À l'heure actuelle nous ne sommes pas engagés dans ce domaine, mais notre Division de l'information et nos établissements de recherches, où qu'ils se trouvent, essaient d'être utiles et aussi coopératifs que possible pour les agronomes de la province qui font ce travail.

Ce n'est pas satisfaisant; j'ai l'impression qu'il n'y aura peut-être jamais une mise en oeuvre immédiate des résultats de la recherche.

Nous essayons de transmettre ces renseignements et d'en favoriser l'emploi pratique le plus tôt possible.

Mr. Roy (Laval): My last question now, Mr. Chairman, is on a very current topic. There is a tremendous campaign on, dealing with the hazards of cigarette smoking. I think that this campaign is certainly going to result in a greater demand for cigars. I have a letter here with regard to cigar production in Quebec, which represents, I believe, 85 per cent of total production of the country. I wonder whether the Department intends to study this letter that was sent to Dr. Hamilton, I believe. This is a letter that was written quite some time ago, but which was sent on February 18. It deals with the possible study of cigar tobacco production at the experimental farm at l'Assomption. We should consider this request. I think that from the point of view of research, we have reduced the staff at the Experimental Farm at l'Assomption. Could I ask that this brief which was prepared some years ago and which was sent on February 18 to Mr. Hamilton, be reconsidered?

My last question is still concerning market gardening. I do not know, in the budget which is new before us, what amount is provided for research in the field

[Text]

che dans le domaine de la culture maraîchère, et plus précisément aux stations expérimentales de St-Jean et de Ste-Clothilde.

Je voudrais connaître la situation de la recherche sur la production des légumes, soit en terre noire soit dans des sols minéraux. J'ai déjà mentionné que, dans la région de Montréal, près de la métropole du Canada, il y existe un potentiel de terre organique de plus de cinquante milles acres. Et je pense qu'on étudie encore la cartographie des sols.

C'est parfait, mais il y a actuellement un potentiel existant là-bas, et je me demande si nous ne pourrions pas consacrer une certaine somme, par exemple à la création d'un nouveau complexe visant justement à exploiter le potentiel qui existe.

Mr. Olson: Mr. Chairman, may I ask Dr. Woodward to deal with this question?

Dr. Woodward: Mr. Chairman, our Assistant Director General Eastern, Dr. Hamilton, is working with the group interested in promoting the production of cigar tobacco in L'Assomption area. At St. Jean one of our main problems has been the question of obtaining adequate staff for the Research Station and we are certainly using all available resources towards the backup research for the vegetable industry. The limitation here has been, perhaps, even more the availability of real specialists in vegetable crops than in the resources to carry out the program.

The Chairman: Thank you, Dr. Woodward.

M. Roy (Laval): Cela signifie-t-il qu'il y a manque de personnel ou un manque de ressources?

Dr. Woodward: Mr. Chairman, we lack trained people because we have been prepared for several years to deploy financial resources to St. Jean, Quebec, at the same pace as trained people became available, but, as you know, Mr. Chairman, there has been a tremendous increase in the utilization of professional people in the Province of Quebec at the university, in the provincial department and for some of the programs under ARDA. Consequently, we are faced with a serious shortage of mature specialists in the province.

The Chairman: I have the following names on my list, Mr. Gleave, Mr. Thomson, Mr. Cobbe and Mr. Moore. Mr. Lind has indicated he wishes to ask a supplementary. I will permit a single supplementary, Mr. Lind.

● 1045

Mr. Lind: I am interested in how we motivate these people to do research in small vegetable gardens and so on. How do we motivate them? In industry if they are no good they are fired. What do you do with them?

[Interpretation]

of market gardening, and more specifically to the experimental farms at St. Jean and Ste. Clothilde.

I would like to know what the situation is regarding research on vegetable production in black soil or in mineral soil. I have already mentioned that in the Montreal area, near the metropolis of Canada, there is a potential of over 50,000 acres of organic soil. And I think that the soil maps are still being studied.

This is fine, but right now there is an existing potential out there, and I wonder whether we could not devote a certain amount of money, for instance, in order to create a new system to develop that potential.

M. Olson: Est-ce que je pourrais demander au Dr. Woodward de traiter de cette question?

M. Woodward: Notre directeur régional de l'est le Dr. Hamilton, travaille dans les intérêts du groupe qui veut promouvoir la production du tabac à cigares dans la région de l'Assomption. Evidemment, un de nos principaux problèmes à St-Jean a été la question d'obtenir le personnel voulu pour notre centre de recherches en horticulture. Nous employons toutes les ressources qui nous sont disponibles pour appuyer la recherche qui se fait dans le domaine des légumes. Il y a des limites ici et c'est le fait que nous n'ayons pas de spécialistes dans les récoltes légumineuses, ainsi que les ressources voulues pour le programme.

Le président: Merci beaucoup, M. Woodward.

Mr. Roy (Laval): Does that mean that there is a lack of staff or a lack of resources?

M. Woodward: Nous manquons de personnel formé car depuis plusieurs années, nous avons été prêts à donner les ressources voulues à St. Jean au fur et à mesure que nous avions le personnel qualifié voulu. Mais vous savez, monsieur le président, il y a eu une augmentation considérable de personnel formé et professionnel dans la province de Québec, à l'université, auprès du ministère provincial et aussi pour les programmes de l'ARDA, et par conséquent, il y a des lacunes très graves en ce qui concerne les spécialistes formés dans la province.

Le président: Les noms de M. Gleave, M. Thomson, M. Cobbe et de M. Moore sont inscrits sur la liste. M. Lind désire poser une question supplémentaire. Une seule question supplémentaire M. Lind vous sera permise.

M. Lind: Ce qui m'intéresse, c'est de savoir comment nous pouvons motiver les gens pour faire des travaux de recherches dans les domaines des petits jardins de légumes? Comment les motiver? Dans l'industrie, s'ils

[Texte]

Dr. Woodward: Mr. Chairman, I think we have a very small percentage of mediocre people. However, I would say that in the case of someone who has not become motivated to research the problems in the field to which we wish to contribute, one of the tools we use is to starve him to death. He does not get any merit increases. Another is that we do our best to assist him to find employment where his talents and interests would be used to better advantage. There is always a small percentage of staff for whom we would be very pleased to find other employment, but I do not believe this is a serious problem in the Research Branch.

Mr. Williams: If I could comment further on this, I think I should point out that we do have available to us within the Research Branch probably the best system that is possible in respect of the motivation of research people, if they can be motivated by dollars and I am sure that most people can, by having every research position in the Research Branch essentially open-ended. A man, if he is a research officer, does not have to be promoted to another position with increased responsibility. How he advances in terms of salary and in terms of level, depends almost entirely on his own ability and not on the fact of where he is or in what particular line of work he is engaged.

The Chairman: Mr. Gleave.

Mr. Gleave: Mr. Chairman, I asked the other day for the amount of contributions that were made by governments and organizations to the Agricultural Economics Research Council of Canada to which we contribute \$50,000 because this is supposed to be a shared grant. Do you have that information?

Mr. Williams: I am sorry, I was not at the last meeting. I thought this information had been given at that time, but we certainly have it, Mr. Gleave. If it was not given at the last meeting—

Mr. Gleave: I was not at the last meeting.

Mr. Williams: Neither was I, unfortunately. I checked this morning and I understood they had given that information, but obviously they did not.

The Chairman: Would you repeat the question. I am afraid the Chairman . . .

Mr. Gleave: I asked at the meeting a week ago on Tuesday what the matching contributions were from

[Interprétation]

ne sont pas satisfaisants, nous les congédions; que faisons-nous au ministère?

Dr. Woodward: Monsieur le président, je crois que nous avons un très petit pourcentage de personnel médiocre mais je dirais toutefois que, dans le cas de personnes qui ne sont pas motivées pour faire des recherches sur le problème et qui pourraient peut-être contribuer à y trouver une solution, une des deux solutions, c'est qu'il n'obtient pas d'augmentation de traitement, et, par conséquent, il finit par être affamé; deuxièmement, on suggère qu'il essaie de trouver un emploi où ses talents seraient mieux exploités. Il y a toujours un petit pourcentage du personnel pour lequel nous serions très heureux de pouvoir trouver un autre emploi, mais je ne crois pas qu'il s'agisse vraiment d'un gros problème à la Direction de la recherche.

M. Williams: Je pourrais peut-être ajouter un autre mot, je devrais peut-être dire que nous avons à notre disposition à la Direction de la recherche un système qui est probablement le meilleur en ce qui concerne la motivation des chercheurs. S'il y a un moyen de le faire grâce à des dollars, la plupart des gens sont motivés, d'ailleurs. Les postes de chercheurs à la Direction de la recherche, n'ont pas de plafond. Un chercheur ne doit pas nécessairement monter en grade, avec une augmentation des responsabilités. Son avancement, quant au niveau et au salaire, dépend uniquement de ses capacités et non pas d'où il se trouve ni de la sorte de travail qu'il fait.

Le président: Monsieur Gleave.

M. Gleave: Monsieur le président, j'ai posé une question l'autre jour au sujet du Conseil de recherches en économie rurale, du Canada, pour lequel nous avons contribué cinquante mille dollars; j'ai demandé quelles étaient les subventions versées, par les gouvernements et les organismes, puisqu'il s'agissait d'une subvention partagée. Avez-vous ce renseignement maintenant?

M. Williams: Je m'excuse, mais je n'étais pas à la dernière assemblée, et j'avais l'impression qu'on vous avait répondu à la dernière réunion, mais nous avons certainement le renseignement si vous ne l'avez pas eu, monsieur Gleave.

M. Gleave: Je n'étais pas à la dernière réunion.

M. Williams: Moi non plus malheureusement; j'ai vérifié ce matin, et j'ai cru comprendre qu'on avait donné le renseignement mais apparemment on ne l'a pas donné.

Le président: Pourriez-vous répéter votre question?

M. Gleave: J'avais posé une question à la réunion de mardi dernier, en ce qui concernait le Conseil de

[Text]

the provincial governments, from agricultural co-ops and industry in regard to the Agricultural Economics Research Council of Canada to which we contribute \$50,000.

Mr. Williams: I was assured this morning that that information had been given, but I will make a point of checking and will supply you with a copy of it immediately, Mr. Gleave, if that is suitable to you.

The Chairman: I believe Mr. Grier reported on that at last week's meeting.

Mr. Williams: He told me this morning that he had reported on it.

Mr. Gleave: Could it be included in the proceedings?

The Chairman: It is in the proceedings.

Mr. Gleave: All right. I am also interested in the report of Economic Council of Canada where it pointed out there was a serious lack of researchers in the grain industry and when we were discussing the tailend estimates here earlier I think it was mentioned that there were something like six full-time agronomists or research men in grain in Western Canada. This figure might be right or wrong, but I would like to know if it is proposed to increase the number of researchers or man-hours, as it is put now, in grain research in the Prairie region.

Mr. Williams: Yes, we are giving increased resources this year to cereal breeding. The researchers, to which you were referring, Mr. Gleave, I believe, were the people directly involved in wheat breeding in the Prairie Provinces. The total number of people involved in cereal breeding projected for the year under discussion, 1969-70, is 61 full-time professional man-years for Canada as a whole. Those figures are not comparable, as I think you will appreciate, because they only apply to wheat in certain of the Western Provinces, I believe.

Mr. Gleave: What percentage of an increase will this be over the last year? Can you come close on that?

Dr. Migicovsky: For 1969-70, the percentage will be relatively small because, obviously, the situation is fairly fixed.

[Interpretation]

recherches en économie rurale. Nous y contribuons cinquante mille dollars; alors j'ai demandé quelles étaient les contributions des gouvernements provinciaux des coopératives et de l'industrie?

M. Williams: On m'a assuré ce matin que ces renseignements avaient été donnés, mais je vais certainement m'occuper d'obtenir le renseignement et vous en faire parvenir copie immédiatement, si cela vous convient, monsieur Gleave.

Le président: Je crois que M. Grier a fait rapport à ce sujet la semaine dernière.

M. Williams: C'est ce qu'il m'a dit ce matin.

M. Gleave: Est-ce qu'on pourrait l'insérer dans le compte rendu?

Le président: C'est déjà compris dans le compte rendu.

M. Gleave: Très bien. Un autre domaine qui m'intéresse, c'est que le rapport du Conseil économique du Canada a souligné qu'il y avait un manque de chercheurs dans l'industrie des céréales. Lorsque nous avons discuté les derniers articles des prévisions budgétaires ici il y a peu de temps, on a vu qu'il y avait six agronomes ou chercheurs à plein temps dans le domaine des céréales dans l'ouest du Canada. Ce chiffre est peut-être exact ou inexact, mais ce que je voudrais savoir, c'est si l'on se propose d'augmenter le nombre de chercheurs ou les heures-hommes comme on l'exprime à l'heure actuelle dans le domaine des recherches sur les céréales dans la région des Prairies.

M. Williams: Oui, en effet, nous accordons des ressources accrues cette année pour l'hybridation des céréales. Les chercheurs que vous avez mentionnés, Monsieur Gleave, je crois, étaient les gens qui étaient directement intéressés à l'hybridation du blé, mais le total projeté des chercheurs dans le domaine des

céréales, pour l'année en cause, 1969-1970, est de 61 années-hommes à plein temps pour le Canada dans son ensemble. Évidemment, il n'y a pas moyen de faire la comparaison car, je crois, cela s'applique uniquement au blé dans certaines des provinces de l'Ouest.

M. Gleave: Et quel sera le pourcentage d'augmentation sur l'année dernière? Pouvez-vous me donner une idée de cela?

M. Migicovsky: Pour l'année 1969-1970, le pourcentage sera plutôt restreint; la situation étant fixe comme vous le savez, nous avons une révision continue du programme.

[Texte]

As you are aware, we undergo a program review continuously and in the program review being undergone at present the co-ordinators of the Research Branch are projecting an increase of approximately four to six professionals into this area to try to combat the pressures that are upon us in the cereal field, particularly wheat.

Mr. Gleave: I see.

The Chairman: You have a supplementary, Mr. Roy? Are you agreeable Mr. Gleave?

M. Roy (Laval): M. le Président, pourrions-nous connaître les budgets votés pour chacune des fermes expérimentales du pays?

Mr. Williams: I think it might be better if we tabled this information in tabular form. It is quite a long table and I think it would be difficult to explain.

The Chairman: It will be presented at our next meeting.

Mr. Gleave: I have another question in this research field. I believe I noted that you were transferring the fur farming experimental station from Prince Edward Island to Ottawa. If this is correct, is it the policy to transfer this sort of research into the centre of the nation? I think it would provide employment in that area and it seems to me it would be a natural place to carry on that type of work.

The Chairman: Mr. Williams.

Mr. Williams: The policy is not to transfer in or to transfer out; it depends entirely upon the subject matter. The difficulty in respect of fur bearing animal research is that it is a rather small operation in our total operation. Having it located where it was the number of professional man-years available for this particular function were such that it really meant there was too much isolation. It was not possible to provide the backup services of associated scientists in the fields of genetics, physiology and so forth to complement the work of the fur research specialists. Therefore, it was decided we would have a much more efficient operation and would be able to provide better service by moving it to the animal research centre here where these backup services would be available.

Mr. Gleave: With regard to rapeseed, I am interested in the program you have of developing better varieties which are free of certain undesirable acids and so on. Should we not be considering a program of segregation? It seems to me that once we have developed the variety then if we are going to get the maximum benefit from a variety that is free of undesirable characteristics we should be thinking in terms of segregating this in fields with an inspection system. If

[Interprétation]

Nous sommes en train de revoir le programme à l'heure actuelle et les coordonnateurs de la Direction de la recherche s'attendent à une augmentation d'environ 4 à 6 diplômés dans ce domaine pour essayer de lutter contre les pressions dans le domaine des céréales, tout particulièrement dans le domaine du blé.

M. Gleave: Je vois.

Le président: Une question supplémentaire pour M. Roy; êtes-vous d'accord monsieur Gleave?

Mr. Roy (Laval): Mr. Chairman, could we know the appropriations that have been voted for each of the experimental farms throughout the country?

M. Williams: Ce serait peut-être préférable que nous déposions ces chiffres sous forme de tableau; c'est plutôt long.

Le président: Nous pourrions l'avoir pour notre prochaine réunion.

M. Gleave: Une autre chose dans le domaine des recherches; je crois que vous avez transféré la station expérimentale de recherches en fourrures de l'Île-du-Prince-Édouard à Ottawa! Si c'est exact, est-ce votre politique de transférer ce genre de recherches vers le centre du pays? Je pense qu'on assure ainsi des emplois. Il me semble que ce serait donc normal et naturel de laisser ce genre d'exploitation où ils sont.

Le président: Monsieur Williams.

M. Williams: La politique n'est pas de transférer ici ou ailleurs, mais tout dépend du genre de recherches. La difficulté, en ce qui concerne la recherche sur les animaux à fourrure, c'est que la recherche est plutôt restreinte par rapport à la totalité de notre exploitation, et alors, le nombre donné d'années-hommes de la catégorie professionnelle disponible pour cette fonction était tel qu'il y avait trop d'éparpillement; il n'était donc pas possible d'assurer les services analogues ou connexes dans les domaines de la génétique, de la physiologie, etc... pour assurer un complément aux spécialistes de la recherche sur les animaux à fourrure; par conséquent, nous avons trouvé que l'opération serait beaucoup plus efficace, que nous pourrions offrir de meilleurs services, si nous transférions ces services à Ottawa, où nous avons les services connexes.

M. Gleave: En ce qui concerne le colza, je m'intéresse beaucoup au programme que vous avez, à l'heure actuelle, en vue de développer une meilleure espèce qui ne contiendrait pas d'acides indésirables. Est-ce que nous ne devrions pas étudier la possibilité d'avoir un programme de sélection? Il me semble qu'une fois une variété développée, si vous voulez en tirer le meilleur parti possible, et avoir une variété qui est libre de toutes caractéristiques indésirables, ne devrions-nous

[Text]

a farmer begins to grow this variety, he is going to have to stick with this variety. Also should we not be keeping it pure in our handling system? Where do we get the advantage when this goes into the grain handling system?

There is nothing now to stop it from being mixed with undesirable varieties. What thought has been given to this?

Mr. Williams: There has been a great deal of thought given to that, Mr. Gleave. We are doing our best, working with the Canadian Seed Growers' Association to develop a program exactly along the lines you have suggested.

Mr. Gleave: That is, of field inspection and segregation right through the handling system?

Mr. Williams: That is right, and contract growing in specified areas.

Mr. Gleave: You would be looking to assist a farmer if he were going to use this seed because he would have to use this variety exclusively?

● 1055

Mr. Williams: I am afraid I cannot comment on the details of the program, but conceptually that is exactly what we are trying to do.

Mr. Olson: If I may add, Mr. Chairman, what the techniques or the mechanics of applying the system may be needs, of course, to be worked out. We hope we can work out a way of being able to offer our customers what they want in wheat; protein content, for example, is one thing, and there are many other things. The factors involved in doing that, such as varieties, is very important. Also, the area where the grain is being grown is a very important factor, regardless of the variety.

The techniques and the mechanics of actually doing it are not completely clear but we think we would be in a better selling position if, in fact, we were able to offer some more specific quality factors and were able to guarantee it to our customers.

Mr. Gleave: I have one final question on another subject. Is biological research for pest control being given any more emphasis than it has received in the past or is it still quite a small area of research within the Department?

Mr. Olson: I will ask Dr. Woodward or Dr. Migicovsky to comment on that. However, it is growing. Last week for example, we were in Summerland, B.C. and officially opened the new facility there for biological control of the codling moth. A massive

[Interpretation]

pas songer à la sélection de ces variétés par un système d'inspection? Par conséquent, si le cultivateur a l'intention de s'adonner à cette culture, il devrait se limiter à cette variété; et alors, ne devrions-nous pas en assurer la pureté? Où se trouve l'avantage une fois lorsque ces semences sélectionnées tombent aux mains de l'industrie des semences. Il n'y a rien qui empêche que ces semences soient mélangées aux variétés indésirables. Quelles sont les mesures prises dans ce cas?

M. Williams: Nous y songeons sérieusement, M. Gleave, et nous faisons de notre mieux en collaboration avec l'Association canadienne des producteurs de semences pour travailler dans ce sens.

M. Gleave: Par conséquent, une inspection sur place et la sélection à travers le système de distribution...

M. Williams: Oui, et aussi la culture de semences donnée à contrat dans des régions précises.

M. Gleave: Et alors, en ce qui concerne l'assistance aux cultivateurs, devant utiliser ces semences aux fins qu'ils emploient cette variété exclusivement?

M. Williams: Je ne peux pas vous donner les détails du programme, mais c'est l'idée générale.

M. Olson: Est-ce que je pourrais ajouter, monsieur le président, que ce sont des techniques où le mécanisme du système doit encore être mis au point. Mais nous espérons pouvoir offrir à nos clients ce qu'ils désirent en fait de blé. La teneur en protéine, par exemple, il y a aussi plusieurs autres facteurs. Évidemment, la variété est très importante, mais, la région où on cultive les semences est aussi très importante, quelle que soit la variété. En ce qui concerne les techniques, le mécanisme de culture, ce n'est pas encore tout à fait au point. Mais nous croyons être éventuellement dans une meilleure position pour vendre nos produits si nous avions à offrir une meilleure qualité et des garanties à nos clients.

M. Gleave: Une question sur un autre sujet, maintenant. En ce qui concerne la recherche biologique pour les pesticides, est-ce qu'on insiste un peu plus que par le passé, ou est-ce que c'est toujours un domaine limité de la recherche au sein du Ministère?

M. Olson: Je demanderais à M. Woodward ou à M. Migicovsky de commenter... Il y a cependant toujours progrès. La semaine dernière, nous étions en Colombie-Britannique, et nous avons inauguré officiellement les installations de recherches biologiques

[Texte]

experiment at commercial level is being conducted there now to find out whether controlling the moth by this method will be successful. There may be some other areas which I am not familiar with where pest control research is going ahead.

Dr. Migicovsky: There is a continuing program in terms of this type of control. Obviously biological control itself is a term that is not being used any more because we are striving for what is called an integrated control or the kind of control that utilizes both biological and chemical parameters to reduce the amount of chemical and take advantage of existing biological qualities or properties in order to control the pest population.

This is not a small area of research in the branch; it is reasonably large. The institute at Belleville is devoted to this area and we have entomology groups throughout the country, at Ottawa, Saskatoon, St. Jean and other areas where this forms a part of the particular program. As you are aware, a great deal of basic knowledge must be obtained before we can effectively use this kind of control technique.

The Chairman: Gentlemen, I apologize to those who are still on my list and who have not been recognized; they will be recognized at the beginning of Thursday's meeting.

Shall item 5 stand?

Some hon. Members: Agreed.

The Chairman: There will be a meeting of the steering committee this afternoon at three o'clock. The meeting is adjourned to the call of the Chair.

[Interprétation]

à Summerland. Ce qui se fait là-bas, à l'heure actuelle, c'est une grande expérience au niveau commercial pour savoir si on réussira à enrayer l'épidémie de lépidoptères. Il y a peut-être d'autres régions que je ne connais pas où des recherches sur les pesticides sont menées à bien.

M. Migicovsky: Le programme est à long terme, et, évidemment, le contrôle biologique ne serait pas, à l'heure actuelle, dans le sens que nous essayons d'obtenir ce que vous appelez le contrôle intégré ou le genre de contrôle qui emploie aussi bien les moyens biologiques que les moyens chimiques pour réduire la somme des produits chimiques et profiter de l'aspect biologique du milieu pour contrôler les parasites.

Ce n'est pas un domaine de recherches restreint au sein de la direction, au contraire. L'Institut de Belleville se consacre uniquement à ces travaux. Nous avons des groupes d'entomologistes à travers le pays, à Ottawa, à Saskatoon, à St-Jean et dans d'autres régions. Tout cela fait partie de ce programme; comme vous le savez, il faut obtenir un grand nombre de renseignements, avant de pouvoir, de façon efficace, employer ce genre de techniques d'éradication.

Le président: Messieurs, je m'excuse, à l'égard de ceux qui n'ont pas eu la parole aujourd'hui; ils pourront parler à la réunion de jeudi. Est-ce que le vote 5 est réservé?

Des voix: Oui, d'accord.

Le président: Il y aura une réunion du comité sous-directeur cet après-midi à trois heures. La séance est levée jusqu'à nouvel avis.

MINUTES OF PROCEEDINGS

THURSDAY, March 20, 1969.
(30)

The Standing Committee on Agriculture met at 9.43 a.m. this day, the Chairman, Mr. Beer, presiding.

Members present: Messrs. Beer, Clermont, Cobbe, Côté (*Richelieu*), Danforth, Douglas (*Assiniboia*), Foster, Gleave, Korchinski, LeBlanc (*Rimouski*), Lind, McBride, McKinley, Moore (*Wetaskiwin*), Pringle, Roy (*Laval*), Smith (*Saint-Jean*), Southam, Thomson (*Battleford-Kindersley*), Whicher—(20).

Appearing: The Honourable H. A. Olson, Minister of Agriculture.

Witnesses: From the Department of Agriculture: Mr. S. B. Williams, Deputy Minister; Dr. J. C. Woodward, Assistant Deputy Minister (Research); Dr. B. B. Migicovsky, Director General, Research Branch.

On the matter of the Committee's travel to western Canada, the Chairman presented the Fourth Report of the Subcommittee on Agenda and Procedure as follows:

Your Subcommittee recommends the following draft itinerary as a plan:

Wednesday, April 9, 1969

Air travel to Edmonton

Thursday, April 10, 1969

Morning Hearings in Edmonton hotel

Afternoon Visit to University Experimental Farm at Kinsella—cattle breeding, feeding, etc.

Friday, April 11, 1969

Morning & Afternoon Bus from Edmonton to Lacombe Experimental Farm for tour and lunch. Bus to Calgary.

[Traduction]

PROCÈS-VERBAL

Le JEUDI 20 mars 1969
(30)

Le Comité permanent de l'Agriculture se réunit à 9h.43 ce matin, sous la présidence de M. Beer, président.

Présents: MM. Beer, Clermont, Cobbe, Côté (*Richelieu*), Danforth, Douglas (*Assiniboia*), Foster, Gleave, Korchinski, LeBlanc (*Rimouski*), Lind, McBride, McKinley, Moore (*Wetaskiwin*), Pringle, Roy, (*Laval*), Smith (*Saint-Jean*), Southam, Thomson (*Battleford-Kindersley*), et Whicher—(20).

A comparu: L'honorable H. A. Olson, ministre de l'Agriculture.

Témoins: Du ministère de l'Agriculture: MM. S. B. Williams, sous-ministre; J. C. Woodward, sous-ministre adjoint (Recherches); B. B. Migicovsky, directeur général, Direction de la recherche.

Relativement au voyage du Comité dans l'Ouest du Canada, le président présente le quatrième rapport du Sous-comité de l'ordre du jour et de la procédure:

Votre Sous-comité recommande le projet d'itinéraire suivant:

Le mercredi 9 avril 1969

Vol à Edmonton.

Le jeudi 10 avril 1969

Matinée Audiences dans un hôtel d'Edmonton

Après-midi Visite de la Ferme expérimentale universitaire à Kinsella—élevage, alimentation, etc.

Le vendredi 11 avril 1969

Matinée et après-midi Départ d'Edmonton par autobus for visiter et prendre le déjeuner à la Ferme expérimentale de Lacombe. Départ par autobus vers Calgary.

Evening	Fly Calgary to Vancouver	Soirée	Vol de Calgary à Vancouver.
<i>Saturday, April 12, 1969</i>		<i>Le samedi 12 avril 1969</i>	
Morning	Travelling by bus, visit Fraser Valley Milk Producers plant in Burnaby, and via Cloverdale area to Abbotsford to visit modern egg factory, broiler growing farm, and turkey growing farm.	Matinée	Voyage par autobus, visite des installations de la <i>Fraser Valley Milk Producers</i> à Burnaby, en passant par Cloverdale pour se rendre à Abbotsford et visiter l'usine moderne d'œufs, et la ferme d'élevage de poulets à gril et de dindes.
1.30 p.m.	Hearings in Abbotsford.	13h.30	Audiences à Abbotsford.
4.30 p.m.	Continue on tour of Fraser Valley, visiting cash crop area and dairy farm.	16h.30	Reprise de la visite de la vallée du fleuve Fraser en passant par une région de culture maraîchère et une ferme laitière.
6.00 p.m.	Visit Experimental Farm, Agassiz.	18h.00	Visite de la Ferme expérimentale à Agassiz.
7.00 p.m.	Bus to Harrison Hot Springs Hotel for reception by B.C. Broiler and Turkey Marketing Board.	19h.00	Départ par autobus pour la <i>Harrison Hot Springs Hotel</i> et la réception offerte par la <i>B.C. Broiler and Turkey Marketing Board</i> .
9.00 p.m.	Bus to hotel in Vancouver.	21h.00	Départ par autobus pour l'hôtel à Vancouver.
<i>Sunday, April 13, 1969</i>		<i>Le dimanche 13 avril 1969</i>	
9.00 a.m.- 12 noon	Tour of Vancouver grain elevator terminals and harbour facilities.	de 9h.00 à 12h.00	Visite des installations céréalières et portuaires de Vancouver.
12.00- 12.30 p.m.	View Roberts Bank port proposals.	12h.00 à 12h.30	Examen du projet portuaire de Roberts Bank.
1.00 p.m.	Ferry trip to Victoria on bus (lunch on ferry) and tour of Butchart Gardens near Victoria.	13h.00	Voyage par autobus en prenant le bac pour Victoria (déjeuner à bord du bac) et visite du Butchart Gardens près de Victoria.
6.30 p.m.	Reception at chalet near Butchart Gardens with B.C. Government and B.C. Federation of Agriculture.	18h.30	Réception au chalet près du Butchart Gardens avec les fonctionnaires du gouvernement de la Colombie-Britannique et de la <i>B.C. Federation of Agriculture</i> .
8.00 p.m.	Fly Victoria to Kelowna.	20h.00	Vol de Victoria à Kelowna.

Monday, April 14, 1969

9.00 a.m. In Kelowna area, bus tour of orchards and processing plants are arranged with B.C. Fruit Growers Association.

1.30 p.m. Hearings in Board Room of B.C. Fruit Growers Association.

Evening Fly Kelowna to Saskatoon. Those going to Regina fly on.

Tuesday, April 15, 1969

Saskatchewan

The Committee having divided into two Subcommittees, one at Saskatoon, one at Regina, further Subcommittees of one and two members each tour Saskatchewan agriculture as arranged by the Saskatchewan Wheat Pool.

Wednesday, April 16, 1969

Saskatchewan

Same as previous day, except in the evening the Saskatoon Subcommittee flies to Regina.

Thursday, April 17, 1969

Regina

Morning Free time

Noon Luncheon

Afternoon 2.00 p.m. Bus to Moose Jaw, Saskatchewan, to view Canadian Government Grain Terminal and railway marshalling yard.

Evening Fly Regina to Winnipeg, Manitoba.

Friday, April 18, 1969

Winnipeg

Morning Tour of Winnipeg Grain Exchange

Noon Luncheon

Le lundi 14 avril 1969

9h.00 Dans la région de Kelowna, voyage par autobus aux vergers et aux usines de transformation organisé par la B.C. Fruit Growers Association.

13h.30 Audiences dans la Salle du conseil de la B.C. Fruit Growers Association.

Soirée Vol de Kelowna à Saskatoon. Ceux qui vont à Regina poursuivent leur vol.

Le mardi 15 avril 1969

Saskatchewan

Le Comité étant divisé en deux sous-comités, un à Saskatoon et l'autre à Regina, d'autres sous-comités d'une ou de deux personnes chacun visiteront les aspects de l'agriculture en Saskatchewan selon l'itinéraire préparé par la Saskatchewan Wheat Pool.

Le mercredi 16 avril 1969

Saskatchewan

Même programme que la journée précédente, sauf que dans la soirée, le sous-comité de Saskatoon s'envole vers Régina.

Le jeudi 17 avril 1969

Regina

Matinée Libre

Midi Déjeuner

Après-midi 14h.00 Voyage par autobus vers Moose Jaw (Saskatchewan pour visiter le terminus de céréales du gouvernement canadien et la gare de triage.

Soirée Vol de Regina à Winnipeg (Manitoba).

Le vendredi 18 avril 1969

Winnipeg

Matinée Visite de la Winnipeg Grain Exchange

Midi Déjeuner

Afternoon	Hearings at the Canadian Wheat Board, of representatives of the Board, the Winnipeg Grain Exchange and the Board of Grain Commissioners.	Après-midi	Audiences à la Commission canadienne du blé, des représentants de la Commission, de la <i>Winnipeg Grain Exchange</i> , et de la Commission canadienne des céréales.
-----------	--	------------	--

Saturday, April 19, 1969

8.00 a.m. Leave hotel by bus for Altona, Manitoba for tour of oil seed plant.

11.00 a.m. Leave Altona and travel through agricultural area to Portage la Prairie, Manitoba for lunch with Mayor, Council, Chamber of Commerce and Campbell Soup executives.

2.30 p.m. Visit Campbell Soup plant at Portage la Prairie.

3.15 p.m. Leave Portage la Prairie for Selkirk, Manitoba, touring en route a registered Lacombe hogs operation and a large dairy farm.

5.30 p.m. Arrive Selkirk, Manitoba, for reception hosted by Mayor and Council, with ARDA District Board representatives present.

6.30 p.m. Leave Selkirk, Manitoba for Winnipeg airport. Fly to Ottawa.

Le samedi 19 avril 1969

8h.00 Départ de l'hôtel par autobus vers Altona (Manitoba) pour visiter l'usine de traitement des graines oléagineuses.

11h.00 Départ d'Altona et voyage, traversant une région agricole, vers Portage la Prairie (Manitoba), pour prendre le déjeuner avec le maire, le Conseil municipal, la Chambre de commerce et la direction de la société Campbell Soup.

14h.30 Visite de l'usine de la société Campbell Soup à Portage la Prairie.

15h.15 Départ de Portage la Prairie pour Selkirk (Manitoba) avec arrêt en route à une ferme d'élevage de porcs de race Lacombe et à une importante ferme laitière.

17h.30 Arrivée à Selkirk (Manitoba) pour une réception offerte par le maire et son Conseil en présence des représentants du conseil local de l'ARDA.

18h.30 Départ de Selkirk (Manitoba) vers l'aéroport de Winnipeg.
Vol vers Ottawa.

Your Subcommittee also recommends that:

—finalizing of details of the itinerary be left with the Subcommittee;

—written briefs to be presented to the Committee for its use be in 40 copies;

Votre sous-comité recommande également:

—que les détails définitifs de l'itinéraire soient laissés aux soins du sous-comité.

—que les mémoires écrits présentés au sous-comité, pour sa gouverne, le soient en 40 exemplaires:

- the deadline for accepting them in Ottawa be April 1st, otherwise they may be filed with the Committee on the trip;
- oral presentations at Committee hearings be limited to 10 minutes, in order to afford members an opportunity to ask questions;
- any member of the Committee not going on the trip inform his Whip for a possible substitution and also inform the Clerk of the Committee, by Thursday, March 27th.

During a discussion of the Subcommittee's Report, on motion of Mr. Southam,

Resolved,—That the possibility of the Committee holding hearings in Saskatchewan be considered by the Subcommittee. (See Note below.)

On motion of Mr. Côté (*Richelieu*),

Resolved,—That the Subcommittee's Report be adopted.

The Committee resumed consideration of Item 5 of the 1969-70 Estimates relating to the Department of Agriculture.

The Minister, Mr. Williams, and Dr.'s Woodward and Migicovsky answered questions.

With questioning continuing, Item 5 was allowed to stand.

At 11.48 a.m., the Committee adjourned to the call of the Chair.

Le secrétaire du Comité,
Michael A. Measures
Clerk of the Committee.

Note: The Subcommittee, at a meeting held at 11.50 a.m. this day, decided to schedule hearings in Regina, Saskatchewan, on Thursday, April 17, 1969 in the morning.

- que la date limite à laquelle ces mémoires seront acceptés à Ottawa, soit fixée au 1^{er} avril, sinon ils peuvent être présentés au Comité au cours du voyage;
- que les exposés présentés oralement lors des audiences du Comité soient restreints à dix minutes, de façon à permettre aux députés de poser des questions;
- que tout membre du Comité qui ne désire pas faire le voyage en informe le Leader en Chambre de son parti, afin qu'on puisse le remplacer, et en informe également le secrétaire du Comité avant le jeudi 27 mars 1969.

Au cours de l'étude du rapport du sous-comité, sur une motion de M. Southam,

Il est décidé—que le sous-comité étudie la possibilité de prévoir des audiences pour le Comité en Saskatchewan. (voir la note ci-dessous).

Sur une motion présentée par M. Côté (*Richelieu*),

Il est décidé—d'adopter le rapport du sous-comité.

Le Comité reprend l'étude du crédit 5 du budget de 1969-1970 relatif au ministère de l'Agriculture. Le Ministre, MM. Williams, Woodward et Migicovsky répondent aux questions.

Comme la période de questions se prolonge, on réserve le crédit 5.

A 11h.48 le Comité s'ajourne jusqu'à nouvelle convocation du président.

Nota: Lors d'une réunion tenue à 11h.50 ce matin, le sous-comité décide de prévoir une audience à Régina (Saskatchewan) dans la matinée du jeudi 17 avril 1969.

[Texte]

EVIDENCE

(Recorded by Electronic Apparatus)

Thursday, March 20, 1969

● 0956

The Chairman: Gentlemen, we will resume. Do I have a motion that the Report of the Subcommittee on Agenda and Procedures be accepted?

Mr. Gauthier: I so move.

Mr. Foster: I second the motion.

Motion agreed to.

The Chairman: Gentlemen, I direct your attention to Item 5. I did have a list of questioners who had not been recognized last week. As it is not readily available I will start afresh. Mr. Danforth will proceed, followed by Mr. Douglas and Dr. Foster.

Mr. Danforth: Mr. Chairman, since I was not present at the last meeting I think I should give way to those who were here. My question at this time will be short and for information only. May I ask if the material that I requested regarding the departmental structure and the program of the research department has been made available yet to members?

Dr. J. C. Woodward (Assistant Deputy Minister, Research Branch, Department of Agriculture): Yes, Mr. Chairman, this material is included in the Report to the Senate Special Committee on Science Policy, which was made an appendix to the proceedings of this Committee. I believe copies were distributed to the members of this Committee.

Mr. Danforth: My apologies, Mr. Chairman. Perhaps I did not receive mine because of absence.

The Chairman: Thank you. I recognize Mr. Douglas.

Mr. Douglas (Assiniboia): Mr. Chairman, during discussion in the latter moments of the last meeting a question was raised about cigars which reminded me that I have some objection to spending the kind of money we are on research in the tobacco industry.

[Interprétation]

TÉMOIGNAGES

(Enregistrement électronique)

Le jeudi 20 mars 1969

Le président: Messieurs, nous allons commencer. Est-ce que quelqu'un veut bien proposer qu'on adopte le Rapport du sous-comité de l'ordre du jour et de la procédure?

M. Gauthier: Je propose que nous l'adoptions.

M. Foster: J'appuie la proposition.

La proposition est adoptée.

Le président: Messieurs, je porte le crédit 5 à votre attention. J'avais certains noms de personnes qui n'ont pas pu poser de questions la semaine dernière, mais comme je ne la trouve pas, on peut recommencer. M. Danforth, puis M. Douglas et le D^r Foster. Monsieur Danforth?

M. Danforth: Monsieur le président, étant donné que je n'ai pas assisté à la dernière réunion, je devrai céder ma place à ceux qui y étaient. Ma question n'est que pour obtenir des renseignements. Est-ce que je pourrais savoir si les documents que j'ai demandés en ce qui concerne la structure ministérielle et le programme du service de recherches ont été distribués aux membres du comité?

Dr J. C. Woodward (Sous-ministre adjoint, Direction de la Recherche, ministère de l'agriculture): Monsieur le président, cette documentation se trouve dans le Rapport présenté au Comité spécial du Sénat sur la politique scientifique, qui a été porté en annexe du compte rendu de ce comité. Je pense qu'on en a distribué des exemplaires aux membres du Comité.

M. Danforth: Je m'excuse, monsieur le président, peut-être que je n'ai pas reçu ce document parce que j'étais absent. Je vous prie de m'excuser.

Le président: Merci, Monsieur Douglas.

M. Douglas (Assiniboia): Monsieur le président, au cours de la discussion à la fin de la dernière réunion, on a posé une question sur les cigares, ce qui m'a rappelé que je trouve que l'on dépense trop d'argent pour la recherche dans l'industrie du tabac.

[Text]

I know that the tobacco industry is important to a number of farmers in Eastern Canada but I also know that cigarettes are not recommended by the Department of National Health and Welfare. They are a health hazard. Cigars may not be quite as serious. Certainly they are not a necessity of life. It seems to me that if research is required in the tobacco industry it should be paid for by the tobacco companies who make the profits, and large profits too, from this industry. I would suggest that we seriously consider getting out of the business of research into tobacco and support prices, if there are any, for tobacco.

I think there was a large payment made to a tobacco marketing board a few years ago. I do not think it is at all right that the Government of Canada should be supporting this industry which, in my opinion, is really a detriment to the country.

The Chairman: That should be a good controversial subject.

Mr. Danforth: I wonder if the member knows what he is saying.

The Chairman: Order, order. Gentlemen, may I recognize Dr. Foster.

Mr. Olson: Mr. Chairman, the opinions expressed by Mr. Douglas respecting the hazards of tobacco are a matter of opinion and I am not either agreeing or disagreeing with that opinion. However, as long as it is legal to both grow and sell tobacco in Canada and around the world we in the Department feel that we have a responsibility to do what we can to make it as easy and as efficient and as profitable as it can be for and on behalf of the producer of tobacco.

You get into a lot of other arguments when you get into that section administered by the Department of Health and Welfare, the commercial aspects and so on but our research is for and on behalf of the producer of tobacco, the same as it is for the producer of all other agricultural commodities. Until such time—if such a time ever comes—as it is not either legal or whatever it is to grow and sell tobacco in Canada, I think that we have as much responsibility to the tobacco grower as to any other grower. Now I suppose if we are going to get involved in some of the other matters that you have raised then we should also withdraw from cereals being used to make whiskey and that sort of thing. You can get into the same kind of argument and I am not

[Interpretation]

Je sais que l'industrie du tabac est importante pour certains agriculteurs de l'est du Canada, mais je sais également que les cigarettes ne sont pas recommandées par le ministère de la Santé nationale et du Bien-être social. Elles représentent un danger pour la santé. Les cigares ne sont peut-être pas aussi dangereux, mais ils ne sont certainement pas d'une nécessité vitale. Et, il me semble que, s'il faut faire des recherches dans l'industrie du tabac, il faudrait que ce soit les compagnies de tabac qui financent cette recherche, parce que ce sont elles qui font des bénéfices, et des bénéfices énormes. Je pense, pour ma part, qu'il faudrait envisager de cesser toute participation à la recherche sur le tabac, et aux prix de soutien, s'il y en a.

Je crois qu'il y a quelques années on avait versé de fortes sommes à un office de commercialisation du tabac. Je ne pense pas qu'il soit juste que l'État soutienne une industrie qui, à mon avis, porte tort à l'ensemble du pays.

Le président: Cette question ferait l'objet d'une bonne controverse.

M. Danforth: Je me demande s'il sait ce qu'il dit.

Le président: A l'ordre, s'il vous plaît. Messieurs, je voudrais passer la parole à M. Foster.

M. Olson: Eh bien, les avis exprimés par M. Douglas en ce qui concerne les dangers du tabac, c'est une question d'opinion et je ne suis ni en accord, ni en désaccord avec ce qu'il a dit. Cependant, dans la mesure où il est légal de cultiver du tabac au Canada et dans le monde entier, nous pensons, au ministère, que nous avons la responsabilité d'organiser un système aussi efficace, aussi facile et rentable que possible pour le producteur de tabac.

Il y a toute une série d'autres considérations lorsqu'on entre dans le domaine du ministère de la Santé, l'aspect commercial etc.—mais en ce qui nous concerne, notre recherche est faite au nom du producteur de tabac de même que nous faisons de la recherche pour les autres producteurs de produits agricoles. Jusqu'au moment, s'il survient un jour, où il sera illégal entre autre de cultiver et de vendre du tabac au Canada. Nous avons ainsi autant de responsabilité à l'égard du producteur de tabac qu'à l'égard des autres producteurs, et je pense que si nous commençons à soulever les points que vous avez avancés, je pense qu'il nous faudrait alors cesser de soutenir le prix des céréales qui servent à fabriquer le whisky! Enfin, on a

[Texte]

sure that I would like to support that kind of an argument either. There is one other point; we also carry on some research in an attempt to find ways and means of reducing the health hazard from tobacco.

The Chairman: Thank you. I recognize Dr. Foster.

Mr. Foster: Mr. Chairman, I am on the Health and Welfare Committee which is studying this matter of tobacco. I am sure that they will be going into this in much detail but I think for the sake of the people from Western Ontario on the Agriculture Committee it would be well to break down this figure spent on tobacco research which, I understand, is in the amount of \$300,000. It might be well to have that figure broken down to show how much is spent on plant research, how much is spent on producing strains which are low in nicotine and tar and this sort of thing. I am sure it is not all spent on developing new varieties and that some of it is spent on other facets.

What amount of the Department's research is farmed out to universities' research programs, and how much money do we spend on this? I hear a lot of criticism from people at universities across Canada to the effect that the federal government tries to do all the research themselves and do not spend enough by farming it out to universities.

What is the thinking of the Department on this, and how do they justify it? Many people at universities believe that the academic setting has a certain advantage for research workers in that they have larger groups of scientific people and a larger supporting group of academic people, as a result of which they are in a better position to stimulate research. What is the Department's thinking on farming out research as opposed to doing all of it in their own institutions?

• 1005

Mr. S. B. Williams (Deputy Minister, Department of Agriculture): Mr. Chairman, we seem to move from one controversial subject to another, because certainly the subject that has been raised by Dr. Foster is indeed a controversial one. Basically within the Department we have two types of research that we, as the saying goes, farm out. One is where we need special work done for which a particular university or some outside organization is particularly well suited to support a special project or special work that we are doing which may be relatively short-term and for which we do not wish to staff.

The second major area for which we let out work to universities is where we wish to

[Interprétation]

ainsi toute une série d'arguments disponibles, je ne suis pas certain d'être d'accord avec ce genre d'argument. Nous sommes responsables également de la recherche qui est destinée à réduire les dangers que présente le tabac.

Le président: Merci. M. Foster.

M. Foster: Monsieur le président, je fais partie du comité de la Santé et des affaires sociales qui s'occupe de cette question du tabac. Je suis sûr que ce comité étudiera la question dans tous ses détails, mais je pense que pour le bien des gens de l'ouest de l'Ontario de ce comité sur l'agriculture il serait bon de ventiler ce chiffre de \$300,000 qui si j'ai bien compris est dépensé pour la recherche sur le tabac. Il serait bon de diviser ce chiffre pour savoir combien est dépensé pour l'étude de la plante, combien sur l'étude de souches renfermant moins de nicotine et de goudrons, etc. Je suis sûr que tout n'est pas dépensé sur la recherche de nouvelles variétés et qu'une partie est dépensée à d'autres aspects.

Quelle est la proportion des recherches qui est confiée aux programmes de recherche des universités? Combien dépense-t-on pour cela? J'ai entendu beaucoup d'universités canadiennes se plaindre du fait que le gouvernement fédéral essaie de faire toute la recherche lui-même et ne confie rien aux universités. Qu'en pense le ministère? Comment justifie-t-il cette politique? Beaucoup d'universitaires sont d'avis que le milieu académique présente des avantages pour les chercheurs, en ce sens qu'ils y trouvent un plus grand nombre de scientifiques et un plus grand groupe de soutien; en conséquence, ils sont dans une meilleure situation pour leurs recherches.

Que pense le ministère du fait de confier des projets de recherche, plutôt que de les faire lui-même?

M. S. B. Williams (sous-ministre, ministère de l'Agriculture): Monsieur le président, nous passons d'un sujet de controverse à un autre, car voici un sujet qui se prête à beaucoup de controverse. Dans le ministère, nous avons deux genres de recherche que nous confions à d'autres. Dans le premier cas, il nous faut des travaux spéciaux et une université ou un organisme est plus apte à faire ces travaux de recherche pour un projet spécial que nous ou bien c'est un projet à court terme pour lequel nous ne voulons pas recruter de personnel.

L'autre domaine dans lequel nous confions le travail de recherche aux universités, est le

[Text]

stimulate the development of research officers and scientists in a particular field of expertise. For example, at the present moment, pesticide workers are relatively in short supply and we therefore tend to direct our support of university programs into that area as opposed to some other areas where we may not need as many graduates in the foreseeable future.

I do not suppose that is really answering your question because what you are really asking is the level of support. All I can report is that we are increasing or have increased up until the current year our level of support to outside research. At the present moment it runs somewhere between \$750,000 and \$1 million a year in grants for research done outside the Department itself.

Mr. Foster: In other words, something like only 3 per cent of the federal Department of Agriculture's research money is spent on research not carried out by fulltime employees and institutions owned and operated by the Department of Agriculture.

Mr. Williams: If we consider the total vote, that is correct, but I think you appreciate in the total vote there is the capital vote as well the operational one. But that is a fair guess.

Mr. Foster: Is it not difficult to get pure research workers that have no connection with a university? This is what people in university settings doing research tell me. They feel that we as a federal government are perhaps not getting the best mileage out of our research dollar because we are trying to do it all in closed institutions where it is difficult to get people to come and work because they do not have the academic setting along with the research setting.

Mr. Williams: Well, I think that our policy in that respect is—and I think Mr. Olson mentioned this on Tuesday—to locate many of our major institutions on university campuses where they do have this interchange of thinking and discussion with the academic community. There is one point that I neglected to mention when I was answering your earlier question. Basically the Department of Agriculture is not a grant-providing organization in so far as agriculture is concerned; that is the function of the National Research Council and that Council provides about \$2.5 million over and above the figures that I have quoted.

[Interpretation]

domaine où nous voulons encourager la préparation des chercheurs dans un domaine spécialisé. Comme, par exemple, actuellement, dans le domaine des pesticides. Il y a très peu de gens qui se spécialisent dans les pesticides à ce moment-ci, et nous essayons d'encourager des programmes universitaires dans le domaine des recherches sur les pesticides, par opposition à d'autres domaines où nous n'avons pas besoin de diplômés dans un avenir immédiat.

Je ne crois pas que j'ai répondu à votre question, comme vous le vouliez. Ce que vous demandez, c'est l'importance de l'aide que nous fournissons. Tout ce que je peux dire, c'est que nous augmentons ces sommes de soutien payées aux organismes et aux universités. Actuellement c'est entre $\frac{3}{4}$ et un million de dollars par année, qui sont distribués en bourses de recherches à l'extérieur du ministère.

M. Foster: En d'autres termes, il n'y a que 3 p. 100 du budget de recherche qui aille aux recherches non effectuées par les fonctionnaires et les installations du ministère de l'Agriculture.

M. Williams: Si nous considérons le crédit total, c'est exact, mais dans le crédit il y a le capital et les frais.

M. Foster: N'est-ce pas difficile d'obtenir des chercheurs qui n'aient aucun rapport avec une université? C'est ce que disent les universitaires. Ils pensent que le gouvernement fédéral n'obtient pas le maximum de ses dollars parce qu'il essaie de faire toutes ses recherches dans des institutions fermées dans lesquelles il est difficile d'attirer des chercheurs parce qu'il n'y a pas le milieu académique et l'ambiance de recherche qui les inciteraient à venir travailler pour le gouvernement.

M. Williams: Ainsi que M. Olson l'a mentionné mardi, nous essayons de situer beaucoup des institutions les plus importantes auprès des universités, où nos chercheurs et les professeurs trouvent cette communauté scientifique. J'ai oublié un point lorsque j'ai répondu à votre première question. Le ministère de l'Agriculture n'est pas un organisme distributeur de bourses pour la recherche agricole, cela est du domaine du Conseil national des recherches et il fournit deux millions et demi de plus que ce que j'ai auparavant.

[Texte]

Mr. Foster: For agricultural purposes?

Mr. Williams: For agricultural research at universities?

Mr. Foster: I see.

Mr. Williams: I emphasize that the money that we spend on this is oriented to these two functions.

Mr. Foster: Yes.

Mr. Williams: The Research Council one is more in the nature of nonspecific grants whereas ours are all specific grants.

Mr. Foster: What is the percentage that we spend on research—as opposed to capital expenditures? We do not really get much for our capital dollar. I suppose we do over a long period of time but if we were to farm it out we would get an immediate return.

Mr. Williams: I suppose that one has to say that certainly for our people to do useful work we need buildings in which to do it and we have to make capital expenditures. I think it is true that our capital expenditures have been a relatively high proportion because of the need to build up facilities in recent years simply because of the turnover in buildings.

• 1010

We seem to have reached the time where our buildings are becoming of an age where they have to be replaced.

In the current year there is \$5.7 million for major construction and acquisition projects, which are basically our capital projects. That comes out of a total cost of \$45,743,000, so capital represents 12 per cent, or something like that.

Mr. Foster: Yes.

The Chairman: Thank you, Mr. Foster. Mr. Gleave, do you have a single supplementary question?

Mr. Gleave: I judge by the answers that the National Research Council is putting up considerable amounts of money for agricultural research. I know they carry on quite a bit of the forage in Saskatchewan. When do these figures relative to the money distributed to universities for research come before us as a Committee, or do they come before us as a Committee, for discussion?

Mr. Williams: It is my understanding, Mr. Chairman, that they do not come before this Committee under normal procedures.

[Interprétation]

M. Foster: Pour la recherche agricole.

M. Williams: Pour la recherche agricole dans les universités.

M. Foster: Je vois.

M. Williams: L'argent que nous dépensons là-dessus est orienté vers ces deux fonctions.

M. Foster: Oui.

M. Williams: Le Conseil national des recherches distribue des bourses ayant un caractère général, les nôtres le sont à des fins spécifiques.

M. Foster: Quel est le pourcentage que nous dépensons pour les recherches par rapport aux immobilisations? Nous n'obtenons pas beaucoup de nos immobilisations. Je suppose que sur une longue période, c'est rentable, mais nous aurions un rendement immédiat si nous confions ces travaux à des organismes spécialisés.

M. Williams: Pour que nos gens fassent un travail utile, il nous faut des locaux, ce qui représente une immobilisation de capital. Il est vrai que nos frais d'immobilisation ont été assez élevés parce qu'il nous a fallu construire de nouveaux locaux, car nos édifices sont plutôt désuets et il faut les remplacer.

Au cours de cette année-ci, il y a 5.7 millions de dollars pour des constructions et des acquisitions majeures. Ce sont des projets qui immobilisent des capitaux. Tout cela se monte à \$45,743,000. Donc, c'est 12 p. 100.

M. Foster: Oui.

Le président: Merci, monsieur Foster. Questions supplémentaires, monsieur Gleave?

M. Gleave: Je juge par les réponses que le Conseil national des recherches fait des octrois assez importants pour la recherche agricole. Je sais qu'ils font des recherches considérables dans le domaine fourrager en Saskatchewan. Quand ces chiffres, relatifs aux fonds distribués aux universités pour la recherche, seront-ils examinés par notre Comité, ou les étudions-nous?

M. Williams: Monsieur le président, ils ne sont pas soumis à ce Comité-ci selon la procédure normale.

[Text]

Mr. Gleave: Could they?

Mr. Foster: It is the Treasury Board.

Mr. Williams: National Research Council reports to the Chairman of the Treasury Board, and presumably they will be handled by whatever Committee handles those. But I cannot answer, Mr. Chairman, on whether they could come before this Committee. It is not within my competence to answer that.

The Chairman: I think we could ascertain the answer to your question and make it available next week.

Mr. Gleave: They are a very important part of the operations of agriculture, and I think we should have a look at that.

The Chairman: Thank you. I think Mr. Douglas had a supplementary on this.

Mr. Douglas (Assiniboia): I notice in the estimates some \$8 million for services provided by other departments. Has this to do with research that is being farmed out, or is this just other operating services? It is on page 16 of the white book, in the first column of the proposed estimates for 1969-70.

Mr. Williams: These do not enter into our estimates. That is to say, the money is not appropriated to the Department of Agriculture, but it is an estimate of the cost of the services that are used by agriculture, which appear in the votes used by the Department of Agriculture.

These votes appear in the votes of other departments, such as the Department of Public Works, who provide the services to some of our buildings in Ottawa; to the Comptroller of the Treasury for cheque issue; to the superannuation people; and to all different types and kinds of departments.

Mr. Douglas (Assiniboia): It has nothing to do with Dr. Foster's question, though, on research?

Mr. Williams: No.

Mr. Cobbe: Mr. Chairman, to get back to what Mr. Korchinski was discussing the other day, about the time that is being spent on developing other cash crops—and perhaps we could deal with rapeseed—we know work is now being done out at the Farm. It is natural for time to be an element in developing any research, but where does the biggest problem lie at the present time? Is it in time, people or money? In other words, money and people may be the same question.

[Interpretation]

M. Gleave: Est-ce que nous pourrions les étudier?

M. Foster: C'est le Conseil du Trésor.

M. Williams: Le Conseil national des recherches est responsable au président du Conseil du Trésor et ce serait le Comité en question qui s'occuperait de ces crédits-là. Je ne puis répondre, monsieur le président, en ce qui concerne le présent Comité. Il n'est pas de ma compétence de vous répondre.

Le président: Je pense que nous pourrions apprendre la réponse et vous la donner la semaine prochaine.

M. Gleave: Ils sont une partie importante des recherches agricoles et je crois qu'ils devraient être étudiés par le Comité.

Le président: Merci. Une question supplémentaire, monsieur Douglas?

Mr. Douglas (Assiniboia): Dans les crédits, je remarque qu'il y a 8 millions de dollars pour des services fournis pour d'autres ministères. Est-ce que cela a trait aux recherches faites en dehors du gouvernement? C'est à la page 16 du Livre blanc, dans la première colonne des dépenses prévues pour 1969-1970.

M. Williams: Ceci n'est pas inclus dans nos crédits. C'est-à-dire que l'argent n'est pas approprié par le ministère de l'Agriculture, mais que c'est une évaluation du coût des services utilisés par l'agriculture, et qui figure dans les crédits utilisés par le ministère de l'Agriculture. Ces crédits figurent dans les crédits d'autres ministères, tels que les Travaux publics qui fournissent les services dans certains de nos édifices à Ottawa; le contrôleur du Trésor qui émet les chèques; les gens qui s'occupent du fonds de caisse de la retraite; et les autres différents genres de ministères.

M. Douglas (Assiniboia): Ça n'a rien à faire à la question qui a été posée par M. Foster sur la recherche?

M. Williams: Non.

M. Cobbe: Monsieur le président, en revenant à ce que M. Korchinski discutait l'autre jour, au sujet du temps consacré au développement d'autres récoltes commerciales, et nous pourrions peut-être parler de la graine de Colza, nous savons que certains travaux sont faits présentement à la Ferme expérimentale. Il est naturel que le temps soit un élément dans tout programme de recherche, mais où est le problème majeur en ce moment? Est-ce qu'il s'agit de manque de temps, de fonds ou de personnel? Peut-être que le personnel et l'argent sont la même préoccupation.

[Texte]

Dr. B. B. Migicovsky (Director General, Research Branch, Department of Agriculture): As you say, sir, time, people and money really equate the same thing. Are you asking what is holding back the advances in research on rapeseed?

Mr. Cobbe: How could it be speeded up? Where is our basic problem?

Dr. Migicovsky: Actually we do not have a problem that we are not solving fairly readily relative to the improvement of rapeseed. I think we are doing this very, very effectively.

Naturally, if you put more people on this you probably could do it in a shorter time,

• 1015

but we think that the progress we are making in improving the varieties is very, very good. We are satisfied with this. There is also work going on at some of the universities, particularly the University of Manitoba.

Another problem arises in the use of the by-product which is, of course, rapeseed meal for animal feeding. At one time we had to restrict this use, but because of research we are now capable of using it much more effectively in animal feeding as a protein-supplement.

Another possibility that has arisen is its use for human food. Here, too, if we had more people and more money we could, for example, put up a pilot plant, which we are going to need in order to test the process developed by the Food Research Institute.

The Department of Industry is involved in this with us, and we are proceeding to formulate plans on what we can do to advance the work on using rapeseed meal as a very high protein supplement for human food.

Obviously with more money, a pilot plant and more people we will be able to do more work and we will get an answer yes or no more quickly. This is obvious. But within the confines of our expenditures I think we are doing as well as can be expected.

Mr. Cobbe: I realize that all of your various studies in trying to improve products, even tobacco, require time and money, but as we are telling the agricultural industry that they have to diversify, is it not thought that possibly more time and money should be spent on diversification at this time?

[Interprétation]

M. B. B. Migicovsky (directeur général, Direction de la recherche, ministère de l'Agriculture): Le manque de fonds, manque de personnel, manque de temps, sont tous concurrents. Demandez-vous ce qui empêche, entrave les progrès de recherche sur la graine de colza?

M. Cobbe: Comment pourrait-on procéder plus rapidement? Où se situe le problème?

M. Migicovsky: Nous n'avons pas de problème auquel nous ne trouvons pas de solution dans les recherches sur la graine de colza.

Naturellement, si vous consacrez plus de gens à la recherche sur la graine de colza, probablement pourriez-vous compléter le programme plus tôt. Mais les progrès que nous réalisons dans l'amélioration des variétés est très satisfaisant. Il y a du travail en progrès dans certaines universités, particulièrement l'université du Manitoba.

Un autre programme découle de l'utilisation des produits secondaires, tel que le moulu pour les animaux. Nous avons dû auparavant restreindre son emploi. A cause des recherches, nous constatons que l'on peut utiliser le moulu beaucoup plus efficacement, plus utilement comme supplément en protéines.

Nous songeons aussi à son utilisation pour un aliment destiné à la consommation des hommes. Ici encore, si nous avions plus de gens et plus d'argent, par exemple, nous aurions peut-être une petite fabrique pilote, dont nous aurons besoin pour mettre à l'essai le procédé mis au point par l'Institut de recherche sur les aliments.

Le ministère de l'Industrie s'intéresse à ceci concurrentement avec nous, et nous essayons d'élaborer des projets pour faire progresser les travaux, quant à l'utilisation du moulu de graine de colza à titre de supplément en protéines pour la consommation humaine.

Il nous faut plus de gens, plus d'argent évidemment et nous obtiendrons des solutions plus vite. Mais il me semble que notre progrès a été satisfaisant jusqu'ici.

M. Cobbe: Je constate alors, que toutes les études que vous entreprenez dans l'amélioration des produits, même le tabac, exigent du temps et de l'argent. Mais nous disons à l'industrie agricole qu'il faut diversifier ces productions. Est-ce qu'on ne devrait pas plutôt dépenser plus d'argent dans la diversification à ce moment-ci?

[Text]

Dr. Migicovsky: There, again, it is a question of priorities. We try to use the existing crops and plants that we grow more effectively; we cannot let those go by the board. And we have to spend some time on trying to introduce new crops and new varieties. We have pressures from all directions.

Our division of our effort is always under review. At present we are just completing a program review. There will be some shift in our program from what is referred to as subjects that have become of a lesser priority to others which are of a higher priority, but all within the constraint, of course, of the funds allotted to us.

If you feel we should get more funds, I can assure you we can spend them very effectively; but I guess there is a limit to what can be afforded

Mr. Cobbe: I hope the Committee will have the opportunity to discuss some of these decisions, naturally in an effort to impress upon the people with the purse strings that more money should be spent.

I wish to revert to another subject, and that is the cut-back, or the freeze, that has taken place. Does this at present affect the number of positions allotted to, or the number of persons employed in, your department? Has the freeze meant a definite cut-back in some areas?

Mr. Williams: I think I can best answer that question by directing your attention to page 18 of the white book. You will note that in the table at the bottom of the page—and this table refers only to the research program of the Research Branch—there is shown, for 1967-68, 1968-69 and projected for 1969-70, the strength and the establishment at certain fixed dates. On Tuesday I endeavoured to define the difference between these various terms, but let me take an example.

For the scientific and professional people, if you start over at the right hand side, you will note that on September 30, in the year 1967-68, we had 900 scientific and professional people on strength—actually employed; that is to say, we were 47 short of the number we had authorized at that point. Our establishment was 947. On September 30, 1968 we had 850 people on strength, but our establishment had fallen by only 7 people.

If we move now to the year ahead, you will note that there was neither a cut in the allowable continuing employees that we were allowed to have on strength as at the end of this month, nor in the total man-years authorized for the forthcoming year.

[Interpretation]

M. Migicovsky: Ici de nouveau, il s'agit des priorités. Nous essayons d'utiliser les récoltes et les plantes déjà cultivées; nous ne pouvons pas abandonner ces récoltes-là. Il nous faut essayer d'introduire de nouvelles variétés. Il y a des pressions qui s'exercent sur nous de toute part.

Je pense que, naturellement, nous étudions toujours la répartition de nos efforts. Nous sommes en train de réévaluer nos programmes. Il y a des questions qui sont devenues moins importantes que d'autres qui ont acquis une priorité augmentée. Et le tout est naturellement dominé par la question des fonds disponibles. Il y a une limite à ce que le pays peut consacrer à ces cas-là.

M. Cobbe: J'espère que le Comité pourra discuter de ces décisions, naturellement dans le but d'impressionner les gens qui disposent des crédits publics que plus d'argent devrait être dépensé.

On revient à un autre sujet maintenant, c'est-à-dire le retranchement qui a eu lieu. Est-ce que ceci affecte présentement le nombre de postes ou le nombre de gens employés dans votre ministère? Est-ce que vous avez dû réduire certains de vos programmes?

M. Williams: Je pense que je répondrais le plus sagement à cette question en vous référant aux pages 18 du Livre blanc. Vous noterez le tableau au bas de la page. Ce tableau n'a trait qu'au programme de recherches de la Direction de la recherche. On indique pour 1967-1968 et projeté pour 1969-1970 les effectifs et l'établissement à certaines dates. Mardi, j'ai essayé de définir la différence entre les différentes expressions.

Mais prenons un exemple. La main-d'œuvre des sciences et professions. Si vous commencez dans la colonne de droite vous noterez qu'en 1967-1968, au 30 septembre, nous avions 900 personnes de science et de profession employées. Cela veut dire, nous avions, nous étions à cours de 47 du nombre de postes autorisés. Le nombre autorisé était 947. Le 30 septembre, 1968, nous avions 850 gens employés mais notre établissement n'était diminué que de 7 personnes.

Si l'on passe maintenant à l'année qui nous fait face, vous noterez qu'il n'y a pas eu de réduction dans le nombre d'employés permanents que l'on nous alloue à la fin de ce mois-ci, ni dans le nombre total d'années-hommes autorisées.

[Texte]

Mr. Cobbe: But for 1968-69 it is shown as 940.

Mr. Williams: In total allowable man-years; that is correct.

Mr. Cobbe: Does this not indicate a cut to 850?

Mr. Williams: It indicates that Treasury Board has restricted our total strength to what our strength was or to the number of people we had on strength at a fixed date. That is correct.

Mr. Cobbe: All right.

Mr. Williams: I think I should say in explanation, however, that there is no restriction on the number of positions that we have any longer.

We can recruit right up to that full number. Before, each position as it became vacant had to remain vacant until it was filled. If you go back to 1967-68 when we had 947 authorized positions, we were only able at that point to have 900 filled. This was the normal turnover. While there is a cut from 900 to 850, the cut is not as big as it appears to be from 940 to 850, in that we can staff right up to that level, and as a matter of fact we are not under any real constraint if we were to go over it by two or three at any particular time, as long as we can reach that number for the year. As is indicated, we are not allowed to be over that as at March 31. Obviously we try to run within as few as possible on either side of it.

Mr. Cobbe: This partially answers my third concern which is that when funds are made available or estimates granted, in some government departments we quite often see a real surge right near the end of the year to use up the funds that have been allotted because of the fear that they will be cut next year if they are not being used. I am wondering whether this is a problem this Department faces as well.

Mr. Williams: I am afraid, sir, that I would have to say that our problem is in the other direction.

Mr. Cobbe: When you do not use the funds, they do not necessarily suspect that you do not require them.

Mr. Williams: When we try to defend a particular vote to Treasury Board, if we have lapsed money in it in the previous year we have much more difficulty defending it unless we have a very strong case to put forward. You will note from the supplementary esti-

[Interprétation]

M. Cobbe: Mais pour 1968-1969 on indique 940.

M. Williams: En total d'années-hommes, cela est juste.

M. Cobbe: Est-ce que cela n'indique pas une baisse à 850?

M. Williams: Cela indique que le Conseil du Trésor a coupé notre effectif comparative-ment à l'effectif que nous avions à une certaine date. C'est juste, oui.

M. Cobbe: Très bien.

M. Williams: Je devrais ajouter, cependant, qu'il n'y a plus de restriction quant au nombre de postes.

Nous pouvons recruter jusqu'au nombre total autorisé. Autrefois, lorsqu'un poste tombait vacant, il fallait le laisser vacant. Donc, lorsqu'on en revient à 1967-1968, quand nous avions 947 postes autorisés, nous n'avons pu, à ce moment-là, obtenir que 900, situation qui était normale. Même s'il y a une réduction de 900 à 850, la réduction n'est pas aussi grande qu'une de 940 à 850, puisque nous pouvons recruter jusqu'à ce niveau. Nous ne sommes pas sous contrainte maintenant, si nous augmentons d'un, de deux ou de trois, en autant que nous ayons cette moyenne pour l'année. Tel qu'indiqué, on ne nous permet pas de dépasser les chiffres au 31 mars. Mais il est clair que nous essayons de nous tenir à ce nombre autant que possible.

M. Cobbe: Cela répond en partie à mon troisième souci. Lorsque les fonds sont disponibles ou les crédits sont approuvés, nous voyons dans certains ministères une augmentation à la fin de l'année dans le but d'utiliser les fonds qui ont été alloués de crainte que l'année prochaine, ces fonds ne figureront pas dans les crédits, s'ils ne sont pas utilisés. Et je me demande si cela constitue un problème dans votre ministère aussi.

M. Williams: Notre problème est tout l'opposé, au contraire.

M. Cobbe: Lorsque vous n'utilisez pas les fonds, on ne soupçonne pas nécessairement que vous n'en avez pas besoin.

M. Williams: Lorsque nous essayons de défendre un crédit au Conseil du Trésor, si nous avons eu un surplus au cours de l'année précédente, la tâche est plus difficile à moins de présenter un cas solide. Vous remarquerez que sous les prévisions supplémentaires de

[Text]

mates this year, the ones that are prepared for the current year, that we have used every lapse that occurred in every vote, including the Canadian Livestock Feed Board lapse, and in addition to that we had to ask for additional funds.

Mr. Cobbe: Thank you, Mr. Chairman.

The Chairman: I recognize Mr. Moore (Wetaskiwin).

Mr. Moore (Wetaskiwin): Thank you, Mr. Chairman. In the field of dairy research I would like to know what areas of research are getting priority, and by that I mean are we trying to solve the problem of surpluses in some places and possible shortages in other areas as related to the problem of skim milk powder, butter, cheese and so forth, and the packaging and processing business?

Mr. Williams: We have two major areas of dairy research. The first of these is aimed at the production of milk more efficiently, that is to say more cheaply. We have a very major breeding program that is endeavouring to identify and select animals with superior ability to convert feed to milk, in other words with animals that have inherent superior efficiency of production.

In addition to that, of course, we do extend
• 1025

some work right across Canada on feeds, pastures, and various items of that kind, all aimed at the more efficient production of milk.

In the area of the utilization of milk we have work underway at our Food Research Institute. It is aimed at developing new uses for products and one of the major questions is the stabilization of quality in cheddar cheese so that there will be, theoretically at least, no low-grade cheddar cheese, no second-grade cheddar cheese. It is a process they are working on at one of the experimental research stations at the present time. Those are the two major areas where this work is being conducted to assist the dairy industry.

Mr. Moore (Wetaskiwin): Yes, I can vouch for the success of the animal improvement program. I can see the results, and I think it has been a very successful program. But I am not too sure of the other angle. I am not aware of any particularly new packaging that has been done, except possibly milk in plastic containers and so on, or any new markets in particular, or any new ways of disposing of dairy products. Or for that matter, Mr. Chair-

[Interpretation]

cette année, celles qui ont été préparées pour l'année en cours, nous avons utilisé chaque lacune sous chaque crédit, y inclus celle de l'Office canadien des provenances. Il nous a même fallu demander des crédits supplémentaires.

M. Cobbe: Merci, monsieur le président.

Le président: Monsieur Moore (Wetaskiwin).

M. Moore (Wetaskiwin): Merci, monsieur le président. Dans le domaine de recherche de l'industrie laitière, quels sont les domaines de recherche qui obtiennent la priorité? Est-ce qu'on essaie de résoudre le problème des surplus à certains endroits et de pénuries possibles à d'autres, touchant le problème de la poudre de lait écrémé, du beurre, du fromage, et la question de l'emballage et du traitement.

M. Williams: Il y a deux domaines où il y a des recherches qui se font dans l'industrie laitière. Le premier domaine est une production plus efficace de lait, c'est-à-dire une production moins coûteuse. Nous avons un important programme d'amélioration du bétail où nous essayons de choisir les animaux qui produisent le plus de lait, c'est-à-dire des animaux qui ont une efficacité de production élevée.

De plus, nous faisons des travaux à l'envergure du Canada dans les questions de moulée, de pâture, et diverses questions de ce genre, le tout dirigé vers une production plus efficace de lait.

Dans le domaine de l'utilisation du lait, dans l'Institut de recherches sur les aliments, nous avons un programme où nous essayons de développer de nouveaux usages pour les produits courants; une question importante est la stabilisation des qualités du fromage Cheddar, pour que l'on ne produise plus du fromage Cheddar de qualité inférieure, de deuxième catégorie, du moins en théorie. Ce sont là les deux domaines les plus importants où nous faisons des recherches pour aider l'industrie laitière.

M. Moore (Wetaskiwin): Je peux attester du succès de votre programme d'amélioration du bétail. J'ai pu constater les succès et je pense que votre programme a connu un grand succès. Mais je ne suis pas certain de l'autre aspect de la question.

Je ne suis pas au courant qu'on ait développé de nouveaux emballages, à moins que ce ne soit les contenants en plastique pour le lait, de nouveaux marchés qui aient

[Texte]

man, any new products. I think this is where our trouble lies at present in the dairy industry.

Mr. Williams: Quite frankly, Mr. Chairman, we are not doing work on packaging. This is considered to be industrial research rather than research of the Department of Agriculture. But we are working on a new products. I would say that there is a major problem of new products in the dairy industry, and it is associated with the fact that the dairy industry itself in general is not prepared to put the money into the promotion and development of new products. Their stated reason is, first, that the profit margins are extremely low. But more importantly they defend the position on the argument that it requires some company to go out and promote a new product. Let us take for example, and we have done a considerable amount of work on this, the improvement in quality of fluid milk through the addition back to it of solids not fat.

If one plant were to go out and spend a great deal of money promoting this product to try and put it on the market, there is nothing to stop the next plant from taking advantage of it, because in general these are not patentable products and patentable processes.

Our research people do feel that their work tends to lack recognition by the industry because of this inhibition the industry feels towards promotion and development of new products.

Mr. Moore (Wetaskiwin): I am aware of that, sir, and I agree, but here we are on the one hand making it possible and easier to produce more milk and being very successful in that particular aspect, and on the other hand—I am not saying where the fault is, I do not know, possibly with the plants—they are certainly not doing the same job as the people are in animal research and improvement. I think this is the problem with our dairy industry, and I am very concerned about it.

Mr. Williams: Mr. Chairman, I am not being critical of either side, but I think the outlook is a good deal more hopeful at the present time than it has been. The National Dairy Council of Canada have employed a man for the special job of promoting fortified milk, and I think he has a great deal of consensus among the industry, and I would not be at all surprised to see it go ahead quite

[Interprétation]

été établis, ou de nouveaux moyens d'empaqueter les produits laitiers, ni de nouveaux produits laitiers d'ailleurs. Il me semble que c'est là notre problème dans l'industrie laitière.

M. Williams: Franchement, monsieur le président, nous ne faisons pas de recherches au sujet de l'empaquetage. Cela est considéré comme étant de la recherche industrielle, plutôt que la recherche qui doit être confiée au ministère de l'Agriculture. Nous tentons cependant de développer de nouveaux produits. Il y a un problème d'ordre majeur au sujet de nouveaux produits dans l'industrie laitière, et il est associé au fait que l'industrie laitière elle-même n'est pas disposée à investir de l'argent dans le développement, ni la mise en marché de nouveaux produits. Leur argument est d'abord que les marges de bénéfices sont très basses. Mais encore plus important est l'argument qu'il faut qu'une société fasse de la réclame pour un nouveau produit. Par exemple, un domaine dans lequel on a fait beaucoup de travail est l'amélioration de la qualité du lait fluide en y ajoutant des solides non gras.

Si une fabrique dépense beaucoup d'argent pour faire la réclame d'un produit, il n'y a rien qui empêchera une autre fabrique d'en tirer avantage, parce qu'en général ce ne sont pas des produits ou des procédés pour lesquels on puisse demander un brevet.

Nos spécialistes en recherche ont l'impression que leur travail de recherche n'est pas reconnu à cause de l'inhibition de l'industrie envers la publicité et le développement de nouveaux produits.

M. Moore (Wetaskiwin): Je suis au courant de cette psychologie et je suis d'accord, mais d'une part, nous encourageons avec succès une production accrue de lait, mais d'autre part, je ne dis pas qui en est responsable, je ne le sais pas; ce sont peut-être les fabriques qui en sont responsables, on ne fait pas le même travail dans ce domaine-là que l'on fait dans l'amélioration du bétail.

C'est le problème de l'industrie laitière et je m'en préoccupe beaucoup.

M. Williams: Monsieur le président je ne critique aucun des deux partis, mais je pense que les perspectives d'avenir sont de beaucoup meilleures que par le passé. La Commission canadienne du lait a engagé un homme chargé spécialement de promouvoir le lait fortifié. Je pense qu'il a l'appui de l'industrie, et je ne serais pas étonné de voir ce produit devenir très vite populaire, c'est-à-

[Text]

quickly. That is, working through the National Dairy Council, I may say.

And we are strengthening our work in that field and our people have several commodities. I would like Dr. Woodward or Dr. Migicovsky to say a few words about some of the

• 1030

developmental work that is underway at the present time in terms of modified products, if they are not new products.

Dr. Woodward: Mr. Chairman, for several years in a very modest way—but quite immodestly as far as ideas are concerned and in a modest way as far as developmental work is concerned—we have been researching some of the possibilities in the field of filled milks, and when the dairy industry is ready for this information we will have a contribution to make.

Mr. Moore (Wetaskiwin): May I ask this then, Mr. Chairman? From what I can find to read on the subject, and there seems to be very little, it seems that dairy substitutes—and I am not speaking so much of filled milk as the straight substitute—have not turned out to be of much advantage over the natural product so far as the cost factor is concerned; there is not that much difference. Could you give me some information on that?

Mr. Williams: I would have to say that the consensus appears to be at the present time that a truly synthetic milk—that is to say, one that is based upon non-dairy fat, and non-dairy solids not fat such as soya proteins or something of that nature—is not only expensive but it is not particularly acceptable. A reasonably acceptable product is available using dairy solids not fat and non-dairy fats. There are nutritional problems and when it is brought up to the nutritional level of whole milk it is my understanding that the cost factors are not particularly favourable.

Mr. Moore (Wetaskiwin): That is what I understood and I think it is very good news.

Mr. McBride: Mr. Chairman, may I ask a supplementary to this?

The Chairman: Yes, I have one supplementary from Dr. Foster, and then I will recognize you; single supplementaries, please.

Mr. Foster: My question relates to filled milk again. Last fall I think you told us, Mr. Williams, that a group from the provinces and the federal government were studying

[Interpretation]

dire, en travaillant par l'entremise de la Commission canadienne du lait.

Nous encourageons le travail dans ce domaine et nos spécialistes possèdent plusieurs commodités. J'aimerais que M. Woodward ou M. Migicovsky disent quelques mots

au sujet du travail de développement qui se fait actuellement dans le développement de nouveaux produits ou de vieux produits qui sont améliorés.

M. Woodward: Monsieur le président, depuis quelques années, de façon très modeste, c'est-à-dire d'une façon peu modérée quant aux idées, mais sans prétention quant au travail d'élaboration, nous faisons des recherches dans les possibilités du domaine du lait vitaminé, et lorsque l'industrie laitière sera disposée à utiliser ces renseignements, nous aurons une contribution à apporter.

M. Moore (Wetaskiwin): Je voudrais poser une question. Lorsque je consulte la documentation sur cette question, il me semble que les succédanés du lait et je ne pense pas tant au lait vitaminé qu'au succédané, n'ont pas présenté beaucoup d'avantages par rapport au produit naturel, en ce qui concerne le facteur coût; il n'y a pas tellement de différence. Pourriez-vous me donner des renseignements à ce sujet?

M. Williams: Il semble que, à l'heure actuelle, le consensus d'opinions soit qu'un lait purement synthétique, c'est-à-dire un lait basé sur des matières grasses non laitières et des solides non laitiers qui ne sont pas les matières grasses comme les protéines des soya ou quelque chose du genre, qui, non seulement sont très coûteux, mais ne sont pas très acceptables. Il existe un produit relativement acceptable en se servant de solides laitiers non gras et des matières grasses non laitières. Ils causent des problèmes d'ordre nutritif, et, lorsque le produit est amené au même niveau nutritif que le lait naturel, je crois comprendre que le facteur coût n'est pas favorable.

M. Moore (Wetaskiwin): C'est ce que je crois comprendre et je m'en réjouis.

M. McBride: Puis-je poser une question supplémentaire?

Le président: Oui, et j'en ai une autre de M. Foster, de sorte que je ne vous en accorde qu'une.

M. Foster: Ma question se rapporte au lait vitaminé. L'automne passé, vous nous avez dit, monsieur Williams, qu'un groupe composé de représentants des provinces et du

[Texte]

this problem, and I am wondering what co-operation has taken place and what progress this Committee of federal and provincial government people have made in this problem.

Mr. Williams: I am afraid, Mr. Chairman, that I cannot report any particular progress at the moment, simply because I am not up to date in so far as their progress is concerned. This is a question of legislation; it is on the agenda for the meetings of CASSC which are to be held at the end of April, and this group should report at that time. Other than that I am afraid I cannot at this moment report any progress because I do not know what it is.

Mr. Foster: Have they been holding meetings, though?

Mr. Williams: Yes, meetings have been held.

The Chairman: Mr. McBride?

Mr. McBride: Mr. Chairman, I ask the Deputy Minister whether part of this objection—or reluctance perhaps is a better word—in the industry to sort of pick up the knowledge of the research that is being made available to them is a bit of a psychological problem growing out of the traditional idea that milk especially is nature's perfect food. It seems to me that the industry is caught on the horns of a dilemma; their very attitude in this sense almost totally prevents any flexibility to change and to adjust to medical research suggesting cholesterol problems in health from drinking milk. In other words, the dairy industry is painting itself into a corner here and is caught on this perfect food, milk, idea syndrome. This is a very serious problem and one of the most serious. Would you agree with this?

• 1035

Mr. Williams: I would say, Mr. Chairman, that the processing industry at the moment has taken quite a strong position that they are most anxious to get into some of these newer products in terms of filled milk and possibly synthetic milk. I was really referring to new uses for milk when I spoke earlier about this reluctance because of their lack of any assurance that the benefits from the money they have spent on promotion would accrue to them and not to the industry as a whole.

The processing end of the industry very definitely is making strong representations through the National Dairy Council for relaxation in provincial laws. The federal laws basically are not constraining them at pres-

[Interprétation]

gouvernement fédéral étudiaient cette question, et je me demande quelle coopération il y a eu et si ce Comité de fonctionnaires du fédéral et des provinces a réalisé quelques progrès?

M. Williams: Je crains, monsieur le président, de ne pouvoir faire rapport d'aucun progrès en particulier, parce que je ne sais pas au juste quels progrès ils ont réalisés. Il s'agit de mesures législatives. C'est à l'ordre du jour pour la réunion de la CASSC qui doit avoir lieu à la fin d'avril, et ce groupe devrait faire rapport à ce moment-là. Mais, pour le moment, je ne peux faire rapport d'aucun progrès, je ne suis pas au courant.

M. Foster: Est-ce qu'il y a eu des réunions?

M. Williams: Oui, nous avons eu des réunions.

Le président: Monsieur McBride?

M. McBride: Monsieur le président, je demande au sous-ministre si cette objection, ou l'hésitation plutôt de l'industrie à utiliser les connaissances qui leur sont offertes par la recherche, n'est pas un problème psychologique découlant du fait que traditionnellement, le lait, par exemple, est le produit alimentaire par excellence de la nature. Et peut-être qu'il y a là un dilemme, en ce sens que l'attitude de l'industrie interdit presque toute possibilité de changer et de s'adapter à la recherche médicale qui décèle des problèmes de cholestérol par suite de la consommation du lait. Autrement dit, l'industrie laitière est coincée et médusée sur cette idée du lait comme aliment par excellence. C'est là un problème très grave. Êtes-vous d'accord à ce sujet?

M. Williams: Monsieur le président, je dois dire que les industries de la transformation ont adopté une position très ferme. Ils sont très désireux de s'intéresser aux nouveaux produits, notamment, le lait vitaminé et le lait synthétique. Je parlais surtout des nouvelles utilisations du lait lorsque j'ai parlé de cette hésitation de leur part parce qu'ils n'étaient pas assurés que les bénéfices de l'argent qu'ils dépensent pour la publicité leur reviendra et non pas à l'ensemble de l'industrie.

Mais certainement les industries de transformation font connaître leurs demandes au Conseil national de l'industrie laitière pour avoir un assouplissement des lois provinciales à ce sujet. Les lois fédérales sont moins rigi-

[Text]

ent, although there are some minor constraints, but it is largely the provincial legislation against the use of filled products that presents a problem.

Mr. Moore (Wetaskiwin): Mr. Chairman, I do not believe that doctors particularly agree, at least so far as I can find from reading, on the benefits and possible harmful effects of cholesterol in dairy products, and so on, but there is one point I would like to be clear on. Possibly this concerns Health and Welfare more than it does dairying, but it certainly affected the dairy sales at one time, and that is the fact that the government used milk as a medium for testing fallout—strontium 90 in particular—and this gave a lot of consumers in the country the idea that milk was a dangerous product because it contained strontium 90. My information is that it is the safest product in this regard.

Possibly this is no longer such a serious problem because of the fact that any strontium 90 that the cow took into her system—and possibly the doctor could help us on this—by nature's method of protecting the young was taken into her tissue and more or less filtered out of the milk. Therefore, actually we are giving people in the country—the producers, in other words a false impression. Could you comment on the danger of strontium 90 in milk?

The Chairman: Mr. Williams?

Mr. Williams: Mr. Chairman, I would like to thank Mr. Moore for having given me the out by saying that this is probably the responsibility of Health and Welfare, and it is. The only other comment I would like to make is that in recent times there has been very little talk of this, and I suspect that the less talk there is about it, the better it will be for the dairy industry.

Mr. Moore (Wetaskiwin): I agree, but at one time everybody talked about it. It had very serious effects on milk sales.

The Chairman: Thank you. I recognize Mr. Danforth.

Mr. Danforth: Mr. Chairman, I would like to ask some questions about tobacco. Mr. Douglas, a Committee member, asked some questions about tobacco and I think he did it in all earnestness and with a sincere interest in the health of the nation. He asked—if I may paraphrase his remarks—whether or not the moneys allocated for research on this crop

[Interpretation]

des à ce sujet, bien qu'elles imposent certaines contraintes, mais ce sont surtout les lois provinciales qui s'opposent à l'utilisation des produits artificiels.

M. Moore (Wetaskiwin): Monsieur le président, je ne pense pas que les médecins soient particulièrement d'accord, du moins de ce que je peux constater par mes lectures, sur les avantages et les effets néfastes possibles du cholestérol dans les produits laitiers, et ainsi de suite. J'aimerais soulever un point malgré tout. Peut-être que cela concerne un peu plus le ministère de la Santé plus que l'industrie laitière, mais les ventes de l'industrie laitière ont certainement été touchées à un moment lorsque le gouvernement a utilisé le lait pour analyser les retombées du strontium 90, notamment, et pour beaucoup de consommateurs, le lait est devenu un produit dangereux parce qu'il contenait du strontium 90. A mon avis, c'est le produit le plus sûr à ce sujet.

Ce n'est peut-être plus maintenant un problème aussi grave, parce que tout le strontium 90 absorbé par la vache, et les docteurs pourront nous confirmer la chose, par le processus naturel de protection des jeunes, a été absorbé dans les tissus de la vache et en quelque sorte, ont été filtrés du lait. On donne donc aux producteurs du pays une fausse impression. Est-ce que vous avez des commentaires à faire en ce qui concerne les dangers du strontium 90 dans le lait?

Le président: Monsieur Williams?

M. Williams: Eh bien, j'aimerais remercier M. Moore d'avoir dit qu'il s'agit peut-être là de quelque chose qui relève de la santé publique, et c'est exactement le cas. Ce que je voudrais ajouter, simplement, c'est que récemment on a peu parlé de la chose et je pense que moins on en parlera, mieux ce sera pour l'industrie laitière.

M. Moore (Wetaskiwin): Je suis d'accord, mais, à un moment, tout le monde en a parlé malgré tout, cela a certainement affecté les ventes de lait.

Le président: Merci. Monsieur Danforth.

M. Danforth: Monsieur le président, j'aimerais poser des questions sur le tabac. M. Douglas, un membre du Comité, a posé une question sur le tabac et je pense qu'il l'a fait en toute honnêteté et en montrant un intérêt sincère pour la santé du pays. Il a demandé si l'argent consacré à la recherche de cette culture, ne pourrait pas être réduit, ou du

[Texte]

perhaps could be curtailed, or a greater responsibility placed in the hands of the industry itself.

On the face of it I must say that it sounds like a reasonable request. But, Mr. Chairman, I think perhaps Mr. Douglas is not aware of the fact that the value of Canadian sales of tobacco wholesale and the tax accrued from tobacco products together comprise a sum of money perhaps equal in value to the entire sales of all the grains that Canada produces, either for domestic or export use.

In the matter of research allocated to an industry, I was checking the material that the Department was kind enough to provide to us and I find that in Ontario, at the Chief research station where tobacco is the chief crop, the Department of Agriculture allocated

• 1040

39 personnel for this important work, and we are talking about a multi-million dollar crop.

In checking in Mr. Douglas' province alone, I find that personnel who are connected with the development of cereal grains or forage crops number 410, which seems to me quite a difference when we talk about perhaps allocating the moneys for research to the industry concerned.

Mr. Chairman, is there any concerted program now in effect engaged in by the tobacco industry itself at the producer, the manufacture level, working in concert with the Department of Agriculture, directed to the desire of removing the so-called harmful ingredients from the tobacco? If so, how long has this program been in effect? And could I have some idea of the governmental expenditures in this regard and the number of personnel allocated to this particular project?

Dr. Migicovsky: One of the projects at Delhi is being devoted completely to an attempt to breed tobacco with lower tars and nicotine. We have just very recently purchased equipment which is necessary for them to promulgate this particular program. You will, of course, understand that breeding tobacco with lower tars and nicotine is a very time-consuming, a rather long-time program. It is not going to happen overnight. We have put what effort we can in this and we have every hope that in due time we will improve the varieties so that they will have fewer tars and less nicotine but still retain the qualities that people want in tobacco—and this is the big trick.

[Interprétation]

moins, si on ne pourrait pas s'en remettre à l'industrie dans ce domaine.

Eh bien, je dois dire que cela semble être une demande parfaitement raisonnable. Mais, monsieur le président, je pense que peut-être M. Douglas ne sait pas que la valeur des ventes en gros de tabac et des impôts tirés des produits du tabac représentent une somme d'argent égale en valeur à la totalité des ventes de toutes les céréales vendues par le Canada à l'intérieur ou à l'extérieur du pays.

En ce qui concerne la recherche allouée à l'industrie, je regardais les documents que le ministère a eu la bonté de nous transmettre, et j'ai constaté que dans l'Ontario, la station de recherches où se trouve les laboratoires sur le tabac, il y a 39 personnes employées à

ces travaux importants de recherche puisqu'il s'agit d'une récolte de plusieurs millions de dollars.

En vérifiant ce qui se passe dans la province de M. Douglas, uniquement, j'ai remarqué que les chercheurs s'occupant des céréales étaient au nombre de 410 ce qui représente une différence quand on parle d'allocation de crédit de recherche pour différentes industries.

Monsieur le président, y a-t-il un programme concerté établi par l'industrie du tabac elle-même, à l'échelon des producteurs et des manufacturiers de concert avec le ministère de l'Agriculture? Est-ce qu'il y a actuellement, un programme en vigueur qui a pour but de chercher à supprimer les ingrédients qu'on dit néfastes du tabac. Si oui, depuis quand ce programme est-il en vigueur? Est-ce que je pourrais avoir une idée des dépenses du gouvernement dans ce domaine et du nombre de personnes qui sont intéressées dans ce projet?

M. Migicovsky: Un des projets à Delhi est consacré uniquement à cultiver des tabacs qui ont moins de nicotine et de goudron. Nous venons d'acheter du matériel, récemment, qui est nécessaire pour que ce programme soit développé. Vous comprendrez, bien sûr, que c'est un processus très consommateur de temps que de produire par hybridation du tabac ayant moins de nicotine et de goudron. Ce n'est pas une chose qui va se réaliser du jour au lendemain. Nous faisons tous les efforts possibles pour y parvenir et nous espérons qu'éventuellement nous pourrions améliorer les variétés, ce qui réduira le goudron et la nicotine tout en conservant la qualité que l'on recherche dans le tabac. C'est là le hic.

[Text]

I do not think that the health people are going to react very positively to this anyway because there has never been established what is a desirable level of tars and nicotine with respect to their cause of cancer. And tars, we must realize, have some hundreds and hundreds of chemical compounds in them. Which compounds are responsible for the toxic tar factor is not known. I daresay work is going on in various laboratories associated with health departments and medical schools trying to do some of this but as yet there have been no positive results.

Mr. Danforth: Is there a joint program at present between the Department of Agriculture, the producers and the industry in this regard, or is it on an individual basis?

Dr. Migicovsky: It is not a joint program but there is a great deal of contact, if you will, certainly between the producers of tobacco and our research people. They are in very close contact. They are within a small geographical area and they all know each other by their first names. There is also contact between the people who make the cigarettes and so on. There is contact but there is no co-ordinated project at the present time. The research project is conducted solely by the Delhi Station.

Mr. Williams: I might say this is on that particular aspect. There are others where there are co-operative projects.

Mr. Danforth: This is what I am interested in.

The Chairman: Would you yield for two supplementaries?

Mr. Danforth: If I may return to it, Mr. Chairman, I will be glad to.

• 1045

The Chairman: Mr. Roy has a supplementary.

M. Roy (Laval): Monsieur le président, lorsque j'ai soulevé la question du tabac, mardi dernier, je ne pensais pas en faire un débat. J'ai soulevé cette question à la suite d'une lettre que j'ai reçue de la Société coopérative agricole du tabac de la cité de Joliette, le 10 février.

Je ne voudrais pas me faire le défenseur de l'utilisation ou de la restriction du tabac. Je pense que cette question est actuellement assez discutée. Mais il y a des dangers dans toute production. On utilise également des céréales pour faire la boisson, et l'excès dans la boisson, comme l'excès dans le tabac, peut

[Interpretation]

Je ne pense pas que les responsables de la santé vont réagir positivement à cette étude, de toute façon, parce qu'on n'a jamais fixé la teneur souhaitable de nicotine quant aux causes du cancer. Il nous faut aussi reconnaître qu'il y a des centaines de composés chimiques dans ce produit: quel est le composé responsable de ce danger? Nous ne le savons pas. On fait beaucoup de travail à cette fin dans différents laboratoires des facultés de médecine et avec des ministères de la Santé, mais jusqu'à présent les résultats ne sont pas prometteurs.

M. Danforth: Est-ce qu'il y a un programme conjoint actuellement, entre le ministère de l'Agriculture, les producteurs de tabac et l'industrie elle-même, ou bien, est-ce que tout se fait sur une base individuelle?

M. Migicovsky: Ce n'est pas un programme conjoint, mais il y a de nombreux contacts et très étroits entre les producteurs de tabac et nos chercheurs; ces contacts sont très étroits dans de petites régions géographiques: ces gens se connaissent tous par leur prénom. Et il y a également des contacts entre les gens qui fabriquent les cigarettes. Autrement dit, il y a des contacts, mais il n'y a pas de projet coordonné proprement dit. Le programme de recherches se poursuit uniquement à la station à Delhi.

M. Williams: Je dois dire que c'est là un seul aspect. Il y a d'autres cas où il y a des programmes coordonnés.

M. Danforth: Voilà ce qui m'intéresse.

Le président: Céderiez-vous la place à deux questions supplémentaires?

M. Danforth: Si je pouvais revenir plus tard, à mon sujet, j'en serais heureux.

Le président: M. Roy, une question supplémentaire.

Mr. Roy (Laval): Mr. Chairman, when I raised the question of tobacco on Tuesday last, I did not want to make a debate of it. I brought this question up because of a letter that I had received from the Tobacco-growers' Co-operative of the city of Joliette, on February 10.

I would not like to become the defender of either the use or the restriction of tobacco. I believe that this question is being discussed to quite some extent at the present time. But there are dangers in all kinds of production. Grains are also used for making alcoholic beverages, and excessive drinking can be

[Texte]

devenir nuisible. Je voudrais répondre à M. Douglas au sujet d'un aspect économique.

M. Clermont: J'en appelle au Règlement, monsieur le président. Je vous ferai remarquer que notre collègue ne pose pas une question supplémentaire.

M. Roy (Laval): J'arrive à la question supplémentaire, monsieur Clermont.

Pour faire suite à M. Danforth, j'ai ici les chiffres. Au point de vue de producteurs, cela représente 1,400 producteurs dans la région de Québec, et 95 p. 100...

M. Clermont: Je m'oppose, monsieur le président. Ceci n'est pas une question supplémentaire. Ceux qui ont demandé le droit de poser des questions, voient leur temps s'écouler.

M. Roy (Laval): Je m'excuse, je veux simplement apporter des chiffres. Cela va prendre trois minutes.

M. Clermont: Monsieur Roy, vous auriez pu peut-être donner ces chiffres lorsque vous aviez la parole. Mais, à tout événement...

M. Roy (Laval): Merci. C'est qu'on discute actuellement du tabac.

Oui, très bien. J'ai ici les chiffres. Quant aux tabacs à cigares, 95 p. 100 sont manufacturés au Québec. Les salaires payés par cette industrie sont au-delà de 5 millions de dollars. Le montant des taxes que le gouvernement fédéral reçoit est, pour les droits d'accise, \$1 million; pour les taxes d'accise, \$3 millions; pour les taxes de vente, \$2 millions. Le budget qui est investi à la ferme de recherches, là-bas, représente moins de 1 p. 100 du revenu que l'on perçoit des taxes. De plus en plus, on remarque une importation considérable. Il y a une augmentation d'au-delà de 70 p. 100 dans l'importation des tabacs à cigares. Il s'ouvre des nouveaux débouchés, comme dans d'autres domaines, par exemple, le marché pour le «cigarellon». C'est pourquoi je demande d'étudier la possibilité de ne pas perdre l'industrie du tabac au Canada, qui, au point de vue de perception de taxes, est certainement rentable. Je vous remercie de votre collaboration.

M. Clermont: Je m'excuse de nouveau, monsieur le président. Je suis président d'un comité qui doit siéger à 11 heures. L'interprétation des questions supplémentaires est changée dans les comités, je regrette beaucoup. Je sympathise avec M. Roy, mais ce n'est pas une question supplémentaire. Ce sont des commentaires au sujet de commen-

[Interprétation]

harmful, just like excessive smoking. I would like to answer Mr. Douglas with respect to an economic aspect.

Mr. Clermont: Mr. Chairman, on a point of order. I wish to point out that this is not a supplementary question.

Mr. Roy (Laval): I am coming to my supplementary question, sir.

To follow up what Mr. Danforth was saying, I have figures with me. From the viewpoint of the producers, that represents 1,400 producers in the Quebec City area, and 95 per cent...

Mr. Clermont: Mr. Chairman, I object. This is not a supplementary question. As a result, time is running for those who have their names on the list to ask questions.

Mr. Roy (Laval): I am sorry, this is just to bring forward some figures. It will take only three minutes.

Mr. Clermont: Mr. Roy, you could have given these figures when you had the floor. But, anyhow...

Mr. Roy (Laval): Thank you. It is because we are now talking about tobacco. Yes, all right. I have the figures with me. With regard to cigar tobacco, 95 per cent is manufactured in Quebec. The wages paid by that industry amount to \$5 million. The amount the Federal Government collects in taxes is as follows: \$1 million for excise duties, \$3 million for excise taxes, and \$2 million for sales taxes. The budget that is invested in the Experimental Farm there, represents less than 1 per cent of the income drawn from taxation. More and more, we notice that imports are considerable. There is an increase which exceeds 70 per cent for the import of cigar tobaccos. New markets are opening up—like in other fields—take, for instance, the “cigarillo” market. This is why I would ask to study the possibility of not losing the tobacco industry in Canada which is a very profitable industry for taxation purposes. Thank you very much for your co-operation.

Mr. Clermont: I apologize again, Mr. Chairman. I am Chairman of a Committee that has to meet at 11 o'clock. The interpretation of supplementary questions have been changed in committees, I am very sorry. I appreciate Mr. Roy's point of view, but it is not a supplementary question. It is comments that he wanted to make on previous comments made

[Text]

taires que notre collègue, M. Douglas, avait faits au début de la séance. Je me vois dans l'obligation, à cause de conflits d'horaires entre comités, de m'absenter.

J'avais donné mon nom pour poser des questions, ce sera pour la prochaine fois. Merci.

The Chairman: Thank you, Mr. Clermont. I recognize Mr. McBride on a brief supplementary.

Mr. McBride: In view of Mr. Clermont's comment, several things that have come out of the Department of National Health and Welfare ought to be entered into the record here, but I will put my name on the list and forgo them. I think this tobacco dialogue has been rather misleading according to what is coming out now from the Department of National Health and Welfare.

The Chairman: Thank you. I have placed your name on the list. I will return to Mr. Danforth.

Mr. Danforth: Mr. Chairman, I can appreciate the concern of the various members of the Committee on this particular problem and I have a series of questions that I would like to direct on this which I feel are important on behalf of the industry. Instead of my pursuing this line of questioning at the present time I wonder if the Committee would not be of a disposition to entertain this one particular question at a definite meeting in order that we might have representation from the Department of National Health and Welfare here and perhaps representation directly connected with tobacco research in order that the Committee might be able to go into this in depth. I feel that the citizens of Canada are directly interested in it on a health basis, and

• 1050

I think the members of the Committee are very right to express a concern in this regard.

On the other hand, I think we have a very, very large and very vital Canadian industry involved and I think perhaps the onus is on us as committee members to obtain as much information as possible in order that we may make recommendations with regard to expenditures in research. Therefore, Mr. Chairman, if the Committee is willing perhaps to accept my suggestions in this regard, I will at this time forgo any further questions in this vein.

The Chairman: Thank you for forgoing. The suggestions I think should probably be discussed by the steering committee as to

[Interpretation]

by Mr. Douglas at the beginning of the meeting. I am bound, because of conflicting time schedules, to leave.

I had given my name to ask questions, but it will be for next time. Thank you.

Le président: Merci, monsieur Clermont. Monsieur McBride a une courte question supplémentaire.

M. McBride: Étant donné les remarques de M. Clermont, plusieurs renseignements venus du ministère de la Santé devraient être discutés, mais je cède. Je pense que ce dialogue sur le tabac a été relativement trompeur.

Le président: Très bien, alors. Monsieur Danforth.

M. Danforth: Monsieur le président, je comprends très bien l'inquiétude des membres du Comité à ce sujet et j'ai toute une série de questions que j'aimerais poser à ce sujet. Je les considère comme importantes pour l'industrie et ce que je me demande, c'est si, au lieu de poursuivre ce genre de discussion maintenant, le Comité ne pourrait pas aborder cette question en particulier pour que nous puissions à l'avenir entendre des représentants du ministère de la Santé publique et peut-être même un représentant des services de recherches sur le tabac; ainsi le Comité puisse étudier la question en profondeur parce que j'ai le sentiment que les citoyens du Canada sont intéressés à cet aspect de la question, au point de vue santé,

et que les membres du Comité ont parfaitement le droit d'exprimer leur inquiétude à ce sujet.

D'autre part, je considère qu'il s'agit d'une industrie très importante et très grande. Je pense qu'il serait à nous, les membres du Comité, d'obtenir tous les renseignements nécessaires pour pouvoir faire des recommandations concernant les dépenses élevées, pour la recherche. Par conséquent, si le Comité s'entend pour accepter ma suggestion à ce sujet, je vais laisser tomber mes questions.

Le président: Merci d'avoir fait cette suggestion. Je crois que le comité directeur va devoir déterminer s'il serait à propos d'avoir

[Texte]

whether or not there would be an opportunity to convene a joint meeting with representatives of the Department of National Health and Welfare.

Mr. Danforth: I will accept that, Mr. Chairman.

Mr. Foster: Mr. Chairman, may I make a comment?

The Chairman: I should first recognize Mr. Clermont and then Mr. Southam.

Mr. Clermont: I do not want any privilege or favour.

The Chairman: You are next on my list, Mr. Clermont. I recognize you.

Mr. Clermont: Thank you, Mr. Chairman.

Lorsque M. Douglas a fait ses commentaires au sujet de l'industrie du tabac, il a bien dit que c'était des commentaires personnels. Lorsque le ministre de l'Agriculture a commenté les paroles de M. Douglas, il a répondu que, tant et aussi longtemps que la vente du tabac serait légale au Canada, il ne voit pas pourquoi le ministère de l'Agriculture, dans son secteur des recherches, ne dépenserait pas des sommes pour aider les producteurs de tabac.

Je remarque qu'au crédit 5, monsieur le président, avec un effectif inférieur à 1968-1969, l'augmentation des salaires pour 1969-1970 représente plus de \$4 millions.

Monsieur le président, est-ce que cette augmentation est le reflet d'une augmentation générale des salaires à ce crédit?

The Chairman: Mr. Williams.

Mr. Williams: I am afraid, Mr. Clermont, that I cannot give you an exact breakdown for the Research Branch, but for the department as a whole the increase is covered by two items, that is, retroactive increases that were obtained through collective bargaining in the current year 1968-69 which are not reflected in those estimates that you see in front of you, the old year estimates. For the department as a whole, for example, we were provided with \$68,627,000 for salaries in the current year but that was increased, by special allocations to cover increases gained through collective bargaining, to \$75,845,000. This year we are provided with \$76,615,000, so the true increase this year as compared with last year is something less than \$1 million.

[Interprétation]

une réunion conjointe avec les représentants du ministère de la Santé nationale et du Bien-être social.

M. Danforth: Et j'accepte cette décision, monsieur le président.

M. Foster: Monsieur le président, puis-je faire une suggestion?

Le président: La parole est à M. Clermont, ensuite à M. Southam.

M. Clermont: Je ne demande pas de privilège ni de faveur.

Le président: Vous êtes le suivant sur ma liste.

M. Clermont: Merci, monsieur le président.

When Mr. Douglas made his comments regarding the tobacco industry he mentioned clearly that these were personal comments. And when the Minister of Agriculture made his comments on Mr. Douglas' comments, he said that as long as the sale of tobacco is legal in Canada, he sees no reason why the Department of Agriculture, in its field of research, should not spend money to help the tobacco producers.

I notice that under vote No. 5, Mr. Chairman, with a staff that is less than in 1968-69, the increase in wages for 1969-70 amounts to more than \$4 million.

Mr. Chairman, is this increase the result of a general increase in wages in this vote?

Le président: Monsieur Williams?

M. Williams: Je m'excuse, monsieur Clermont, de ne pouvoir vous donner la ventilation exacte de la division de la recherche, mais, disons, que pour l'ensemble du ministère l'augmentation est couverte par deux crédits, c'est-à-dire les augmentations rétroactives obtenues par les négociations collectives au cours de l'année, c'est-à-dire 1968-1969, qui ne figurent pas dans les prévisions que vous avez sous les yeux, c'est-à-dire les prévisions de l'année dernière. Pour l'ensemble du ministère, par exemple, on nous a alloué \$68,627,000 pour les salaires de l'année courante mais cela a été augmenté par des crédits supplémentaires pour couvrir les augmentations de salaires obtenues grâce aux conventions collectives et atteindre \$75,845,000. Cette année, nous avons \$76,615,000, par conséquent, l'augmentation en dollars de cette année apparaît ici et c'est quelque chose qui en fait est inférieure à un million de dollars par rapport à l'année précédente.

[Text]

M. Clermont: Merci, monsieur Williams. Ma deuxième question, monsieur le président, devrait peut-être être adressée aux représentants de la Commission des grains, mais je vais tout de même la poser. Lors de notre visite dans l'Ouest, nous avons été reçus par la Commission canadienne du blé et par la Commission des grains et j'avais posé la question suivante: Est-ce qu'on fait des recherches pour trouver d'autres espèces de grains de provenance? Je crois que certaines représentations ont été faites dans le passé, monsieur le président, demandant que des recherches soient faites pour trouver d'autres espèces de grains de provenance; car, ceci est un secteur très important pour l'Est du Canada.

The Chairman: Mr. Williams.

Mr. Williams: I must apologize, Mr. Chairman, but I am afraid I did not get the import of Mr. Clermont's question.

M. Clermont: Monsieur le président, je crois qu'il y a eu des représentations. Ma question devrait peut-être s'adresser aux représentants de l'Office canadien des provenances plutôt qu'à vous, monsieur Williams. Lors de notre voyage dans l'Ouest en 1967, je crois, nous avons été reçus par les représentants de la Commission canadienne du blé et de la Commission des grains et j'avais posé la question suivante: Est-ce qu'il se fait des recherches dans le secteur des grains de provenance pour trouver d'autres espèces que celles employées présentement?

Mr. Williams: I think I can answer the question in part. The Board of Grain Commissioners, which comes under this department, does research work in the utilization of cereals for human use, not for feeds. They are doing no work whatsoever in that area and the Canadian Wheat Board does not do any biological research at all. However, within the Department we are doing work on newer feeds. I think Dr. B. B. Migicovsky pointed out one element of it, the increased use of rapeseed meal through certain changes in processing and breeding practices. In connection with rapeseed meal, I believe at one point you were limited to a maximum of 15 per cent in any protein concentrate because of possible adverse effects of certain of the contents in it.

I think at the present time research is able to provide a meal that can be used almost exclusively as a source of protein without any detrimental effects to the animals or poultry to which it is fed. However, we are doing

[Interpretation]

Mr. Clermont: Thank you, Mr. Williams.

My second question, Mr. Chairman, could perhaps be asked to the representatives of the Board of Grain Commissioners, but I will still ask it. When we visited the West we were received by the Canadian Wheat Board and the Board of Grain Commissioners, and we had asked the following question: Is there any research done in order to find new types of feed grain? I think that representations were made in the past, Mr. Chairman, asking for research to be made in this field so as to find new types of feed grain, because this is an extremely important sector for the eastern part of Canada.

Le président: Monsieur William.

M. Williams: Je m'excuse, monsieur le président, je n'ai pas compris la question de M. Clermont.

Mr. Clermont: Mr. Chairman, I believe there were representations. Maybe my question should be put to the representative of the Canadian Feed Board rather than to you, Mr. Williams. When we visited the West in 1967, I believe, we were received by the representatives of the Canadian Wheat Board and of the Board of Grain Commissioners, and I had asked whether there was any research done in the feed grain sector to find new types of grain.

M. Williams: Je pense que je peux répondre à la question en partie. La Commission des grains, qui relève de ce Ministère effectue des travaux de recherches portant sur l'utilisation des céréales pour la consommation humaine et non pour les animaux. Aucun travail n'est fait dans ce domaine actuellement et la Commission canadienne du blé ne fait rien pour sa part en matière de recherches biologiques. Cependant nous effectuons, au sein du Ministère, des recherches sur de nouvelles provenances. Le Dr. B. B. Migicovsky en a indiqué un élément, l'utilisation toujours plus grande de la farine de colza grâce à certaines modifications dans le processus de transformation et d'alimentation des animaux. Je pense qu'à un certain moment vous étiez limité à un maximum de 15 p. 100 dans tout concentré de protéines à cause des effets néfastes possibles qu'il pourrait y avoir.

Je pense qu'actuellement la recherche est en mesure de développer une farine qui peut être utilisée presque exclusivement comme

[Texte]

some work in that area but it is not within the Board of Grain Commissioners.

M. Clermont: Merci, monsieur le président. Je m'excuse si, après mes questions, je dois m'absenter. J'ai donné la raison tantôt. Merci beaucoup.

The Chairman: I recognize Mr. Smith.

Mr. Smith (Saint-Jean): Mr. Chairman, I would like to ask a question regarding the research station at Ste. Clothilde, Quebec. We realize that in that section there are perhaps something like 50,000 acres being cultivated and it is principally used for market gardening. Does the Department intend to reactivate that station? There does not seem to be too much going on there.

Dr. Woodward: As you know, Mr. Chairman, our organization is organized around St. Jean as the central station, with one substation at Ste. Clothilde, one on the mineral soils and another one in the Frelighsburg area on tree fruits. I think I explained the other day that we had a problem in obtaining mature staff for our horticultural program. Our horticultural program on the muck soils at Ste. Clothilde is going ahead and we will be spending approximately \$500,000 in our St. Jean-Ste. Clothilde group program on horticultural crops in this area of western Quebec.

Mr. Smith (Saint-Jean): A supplementary, Mr. Chairman. Do you have any idea how many people are employed at this time at Ste. Clothilde station?

Dr. Woodward: Mr. Chairman, Ste. Clothilde is a part of our St. Jean station, so that the professional officers are head-quartered at St. Jean, sir, and there is just a subprofessional staff at Ste. Clothilde. However, I want to emphasize that we have no intention of phasing out the work at Ste. Clothilde; rather, it is a plan to strengthen it.

Mr. Smith (Saint-Jean): Very good. Thank you.

Mr. Southam: May I ask a supplementary to this question, Mr. Chairman? In this

[Interprétation]

source de protéines sans aucun effet néfaste aux animaux ou à la volaille. Disons que nous effectuons certaines recherches dans ce domaine, mais ce n'est pas dans le cadre de la Commission canadienne des grains.

Mr. Clermont: Thank you, Mr. Chairman. I am sorry that I have to leave after asking my questions, but I gave the reasons for that before. Thank you very much.

Le président: Merci, monsieur Clermont. La parole est à M. Smith.

M. Smith (Saint-Jean): Monsieur le président, si vous me permettez, je voudrais poser une question sur le Centre de recherche à Sainte-Clothilde (Québec), et nous savons très bien qu'à cette station il y a environ 15,000 acres de culture et surtout pour les fruits et légumes. Ce que je voudrais savoir c'est si le ministère a l'intention de stimuler cette station parce qu'elle ne semble pas être très active actuellement et c'est ce que je voudrais savoir pour le moment?

M. Woodward: Monsieur le président, comme vous le savez notre organisation est établie dans les environs de Saint-Jean comme station centrale, avec une station secondaire se trouvant à Sainte-Clothilde, une autre qui fait de la recherche sur les sols minéraux et une autre dans la région de Frelighsburg sur les arbres fruitiers. Et je crois que l'autre jour j'ai expliqué que nous avions des difficultés à obtenir le personnel nécessaire pour notre programme horticole. Notre programme de recherche horticole sur les sols enrichis va bon train et nous dépenserons environ \$500,000 pour le programme en cours dans la région de Sainte-Clothilde, Saint-Jean sur les cultures horticoles dans l'ouest du Québec.

M. Smith (Saint-Jean): Une question complémentaire, monsieur le président. Est-ce que vous avez une idée du nombre de gens qui travaillent en ce moment à Sainte-Clotilde?

M. Woodward: Monsieur le président, Sainte-Clotilde fait partie de notre station de Saint-Jean. Par conséquent, les chercheurs professionnels se trouvent à Saint-Jean, et il n'y a à Sainte-Clotilde qu'un personnel professionnel secondaire. Cependant ce que je voudrais dire c'est que nous n'avons absolument pas l'intention de supprimer les activités à Sainte-Clotilde; au contraire, elles seront renforcées.

M. Smith (Saint-Jean): Merci.

M. Southam: Une question complémentaire. Dans ce processus de suppression est-ce qu'il

[Text]

process of phasing out some of our experimental farms, is it a fact that the experimental farm at Indian Head is being phased out? If so, where will the work be carried on that was formerly carried on there? I am speaking of Indian Head, Saskatchewan.

Dr. Woodward: Mr. Chairman, there has been some reorganization of our effort as between Regina and Indian Head, but there are no plans to phase out Indian Head as a research station. There are plans to have our major research laboratory located at Regina, for what we consider to be sound reasons. This is at the headquarters of the provincial government and is also at the site of the university at Regina. So that in respect of a location for our main group of research officers for the Regina Indian Head area our plans are to consolidate our main research offices at Regina just as we have in Quebec with St. Jean and Ste. Clothilde.

The Chairman: Thank you. I recognize Mr. Korchinski. May I point out to the Committee that we are not confined to the 11 o'clock adjournment this morning; we can go on until 11.45.

Mr. Korchinski: Mr. Chairman, was the Department in any way involved in research which resulted in what appears to be a new process of manufacturing whole milk, maintaining it in containers without refrigeration and so on? I do not know whether the Department was involved in it or whether this was private initiative.

Dr. Migicovsky: The Department has not been involved in this kind of research. It is true that work has been done, largely in the United States originally, on the sterilization of milk and packaging so that its shelf life will be much longer than it is now.

Mr. Korchinski: Are you keeping an eye on that process?

Mr. Migicovsky: Yes. It must be understood that we are not only confined to the research that we do here in Canada; our scientists are aware and keep in touch with scientists all over the world and are "au courant" with all the work being done no matter where it is. In fact the great value in having scientists is not only for the work they do but for what they learn and ascertain so that we can use it here in Canada to our advantage.

Mr. Korchinski: Other than the work that is being done in upbreeding of animals, feed conversion and so on, is there much work being done in providing some sort of a stimulant such as was the case with stilbestrol and

[Interpretation]

est exact que la ferme de Indian Head sera supprimée? S'il en est ainsi, comment compte-t-on poursuivre les travaux qui s'y faisaient? Il s'agit de Indian Head en Saskatchewan.

M. Woodward: Monsieur le président, nous avons fait des travaux de réorganisation entre Régina et Indian Head et rien n'est prévu pour fermer la station de recherches de Indian Head. Par contre, on prévoit établir notre principal laboratoire de recherches à Régina, ce qui, d'après nous, constitue la meilleure chose à faire. Par conséquent, en tant qu'emplacement pour ce centre de recherches, Régina va être renforcé de même que cela a été fait au Québec pour Saint-Jean et Ste-Clotilde.

Le président: Merci. Monsieur Korchinski. Je dois indiquer au Comité que nous n'avons pas à finir à 11 heures; nous pourrions aller jusqu'à 11 h. 45 ce matin.

M. Korchinski: Monsieur le président, je voulais savoir si le ministère s'occupait de la recherche qui a abouti à un nouveau procédé pour le traitement du lait entier et le maintenir dans des contenants sans réfrigération. Je ne sais pas si le ministère s'est occupé de cela ou si c'est l'initiative privée qui en est responsable.

M. Migicovsky: Non, il est vrai qu'on a fait des travaux de recherches aux États-Unis au sujet de la stérilisation du lait et probablement que le lait se conservera beaucoup plus longtemps qu'actuellement.

M. Korchinski: Est-ce qu'on suit les développements du procédé?

M. Migicovsky: Oui. Nous ne sommes pas limités aux recherches que nous effectuons ici au Canada. Nos hommes de science se tiennent au courant des progrès à travers le monde entier et sont au courant de tous les progrès enregistrés. Non seulement nos hommes de science nous sont-ils utiles grâce à leurs propres recherches, mais aussi parce qu'ils se tiennent au courant de ces développements.

M. Korchinski: L'autre domaine au sujet duquel je voulais poser une question à part le travail qui s'est fait dans l'amélioration de la reproduction du bétail, y a-t-il de nombreuses études concernant les stimulants tels que le

[Texte]

so on? Is other research being done in this area to see if another chemical or some other additive might be produced which would not have any side effects?

Mr. Williams: The short answer is yes, Mr. Korchinski, there is other work being done along these lines. The one I can cite, for example, is investigations into the use of nicotine in producing leaner hog carcasses.

Mr. Korchinski: I wonder if you could just elaborate on what your results were in this case, because it might just be an answer to perhaps the problem that was discussed here earlier.

Mr. Williams: The preliminary results indicate that with certain levels of nicotine intake there is a decrease in the deposition of fat and an increase in the deposition of protein and lean meat in hog carcasses. But I must emphasize these are preliminary results. I would say that it has gone far enough that the Department of Agriculture has applied for a patent.

• 1105

Mr. Korchinski: Now that stilbestrol has been in use for a few years have you been able to detect any other side effects that may have been produced as a result of its use?

Mr. Williams: If you are referring to side effects in the animals themselves, there are areas where this could cause some problems and as a consequence the instructions in respect of feeding feeds that contain stilbestrol indicate the classes of stock to which it should be fed. No known side effects have ever been detected in respect of the human population because of these feed additives being used in the diet of animals.

Mr. Korchinski: How closely do you check the use of stilbestrol in respect of products consumed by humans?

Mr. Williams: This is a function of the Food and Drug Directorate and it is done on a continuing sampling basis of products entering the markets.

Mr. Korchinski: I know that there is a lot of work being done privately by individuals, breeders of cattle, and so on, but I wonder whether you have some particular project under way with the idea of perhaps producing the kind of cattle that the market may require in a few years. I am thinking in terms of the consumer perhaps demanding larger steaks, less fat and so on. Other than

[Interprétation]

stilbestrol? Y a-t-il d'autres recherches faites dans ce domaine pour voir si oui ou non un autre produit chimique ou des additifs pourraient être ajoutés sans créer des effets secondaires?

M. Williams: La réponse est «oui». On fait des travaux de recherche dans ce domaine. Il y a eu des études sur l'utilisation de la nicotine, afin de produire des porcs maigres.

M. Korchinski: J'allais poser une question à ce sujet-là. Voulez-vous me donner plus de détails? Quels ont été les résultats? Cela nous donnerait peut-être la solution au problème qui a été cité plus tôt.

M. Williams: Les rapports préliminaires indiquent qu'à des niveaux d'absorption de nicotine, il y a une diminution dans les dépôts de gras et une augmentation des protéines et de la chair dans les carcasses de porcs. Je dois souligner qu'il s'agit là des résultats préliminaires. Je pense que le ministère de l'Agriculture a demandé un brevet.

M. Korchinski: Dans le cas de l'utilisation du stilbestrol, savez-vous qu'on l'utilise depuis quelques années? Avez-vous détecté des effets contraires consécutifs à l'utilisation de ces produits chez les animaux eux-mêmes?

M. Williams: Oui, cela pourrait susciter des problèmes et les directives au sujet des moulées qui contiennent du stilbestrol spécifient les quantités à donner au bétail et à quel genre de bétail. Il n'y a pas d'autres effets qui ont été constatés sur les personnes humaines.

M. Korchinski: Jusqu'à quel point vérifiez-vous l'utilisation du stilbestrol dans la vente pour la consommation du public?

M. Williams: C'est au ministère de la Santé d'y voir, ce sont les fonctionnaires de ce ministère qui examinent les produits qui sont mis au marché.

M. Korchinski: Voulez-vous nous donner plus de détails, nous expliquer la quantité de travail qui s'effectue? Je sais que des individus et que des éleveurs de bétail s'occupent de recherches, mais avez-vous vous-mêmes un projet sur pied en vue d'améliorer le bétail qui sera en vogue sur le marché? Je songe aux consommateurs qui voudront peut-être des steaks plus grands avec moins de

[Text]

the work being done by private breeders, is the Department involved in a cross-breeding program of their own?

Mr. Williams: We certainly work in this area, and at several places. The major one is at our experimental research station at Lethbridge, Alberta. There, all beef breeds and several dairy breeds are involved in a very major cross-breeding experiment designed exactly along the lines that you have mentioned. It involves complete carcass evaluation of all animals and it involves not only first generation crosses but second generation crosses as well.

Mr. Korchinski: What has happened with the program undertaken several years ago in which there was an effort to cross cattle with buffalo resulting in an animal known as "cattalo".

Mr. Williams: The program has been discontinued.

Mr. Korchinski: What was the reason for dropping that program? Did it not produce the required result?

Mr. Williams: The basic problem was associated with fertility. A great deal of original research work was done which has been well recorded and well documented, but the economic benefits were not found to be of any particular specific value in so far as the beef cattle industry in Canada is concerned. However, a great deal of original research work was done in this matter. Major problems were encountered but this was not the reason for dropping it. The reason that it was dropped was that it was determined that these animals did not have any particular economic merit. The major problems were associated with fertility and calving problems.

Mr. Korchinski: I understand that there is an animal coming out known as a "Hays heifer". Is the Department interested in coming out with an entirely new breed or would they far rather direct the research at this time toward continued cross-breeding. What is the attitude at the present time?

Mr. Williams: I would say that in so far as the Department's attitude is concerned, they are not committed to either a continuing program of cross-breeding or the development of newer breeds. Our sole interest is in maintaining the animals that are best suited for Canada. We have sponsored cross-breeding and we have done some work on the development of new breeds.

As you are well aware, we have brought into this country for experimental use only

[Interpretation]

gras. Est-ce que le ministère s'occupe des études de croisement de races telles qu'elles se font par les éleveurs privés?

M. Williams: Nous faisons des travaux de recherche dans ce domaine. C'est à Lethbridge, en Alberta que nos projets les plus importants s'effectuent et nous avons un programme de très grande envergure qui est destiné aux fins que vous nous mentionnez. On évalue non seulement les carcasses de tous les animaux, non seulement de la première génération, mais aussi de la deuxième.

M. Korchinski: Et qu'est-ce qui s'est passé dans le programme où on a essayé de croiser des bovins avec des bisons.

M. Williams: Le programme a été discontinued.

M. Korchinski: Pourquoi? Est-ce que vous n'avez pas obtenu les résultats escomptés?

M. Williams: Le problème avait trait à la fertilité. Il y a eu beaucoup de recherches originales très bien documentées, mais les avantages économiques n'avaient aucune valeur spécifique en ce qui concerne l'industrie de la viande. On a laissé tomber le programme parce que les animaux n'étaient pas d'un rendement suffisant. Les problèmes majeurs étaient associés à la fertilité des animaux.

M. Korchinski: On est en train de produire un animal qui a pour nom «Génisse Hayes» ou quelque chose du genre. Pourriez-vous nous donner une idée de quoi il s'agit? Pouvez-vous répondre à la question? Est-ce que le ministère s'intéresse à développer un autre animal? Quelle est l'attitude du ministère à ce sujet?

M. Williams: Le ministère ne s'est pas engagé à continuer un programme de croisement des races, ni à développer un nouvel animal. Nous voulons produire les animaux qui sont les plus avantageux au Canada. Nous avons le croisement de races et le développement de nouveaux animaux. Comme vous le savez, nous avons importé en ce pays pour utilisation expérimentale de nouvelles races. Nous avons le limousin qui est à Grosse Île actuellement et que nous transférons à Bran-

[Texte]

two new breeds within the last two years. We have the Limousin presently in Grosse Ile and they will go to our station in Brandon, and there is a small herd of Pie Rouge, the French Simenthal, presently located at Lacombe, Alberta. It may be possible that you people will be seeing it.

Mr. Whicher: What about the Hays breed?

Mr. Williams: I have seen it, I can describe it to you and it has been on tests. The question was asked if the department was involved in this. This breed has been tested—bulls of this breed have been tested for performance—by the province under federal supervision.

Mr. Korchinski: I want to ask a few questions with regard to the artificial insemination program. I wonder if any further research is being conducted along this line. I realize the value of artificial insemination and so on but I also realize some people take the attitude that it is a little more cumbersome to administer and at the same time some people feel that it is more expensive. I wonder if research actually is being conducted to make it so inexpensive that it hardly would be advisable for the small herd owner to even maintain a bull. Is any work being conducted in that regard or are there any obstacles...

Mr. Williams: We are not conducting any work in that area. Artificial insemination now is well established and is in the public domaine. The only research work on the artificial insemination of cattle is being done by the various breeders organizations or the artificial insemination organizations. We do work on the physiology of reproduction. We are working in one area with sheep on the synchronization of oestrus aimed at shortening the lambing period. We also are doing some work on the physiology and reproduction in swine which involves the use of artificial insemination for swine where the program is not well developed or, at least, the technique is not well developed.

Mr. Korchinski: Is it the hope of the Department that there would be greater use of artificial insemination programs or are they quite satisfied that perhaps there is a need also for the maintenance of bulls on farms as is done at the moment? Are they satisfied that this program is progressing at a reasonable pace at the present time?

Mr. Williams: This is a matter of opinion, but it would be my personal opinion and, I think, the opinion of the Department that by and large artificial insemination is proceeding

[Interprétation]

don. Nous avons un petit troupeau de pies rouges, qui sont des Simmenthal françaises, qui est actuellement à Lacombe, en Alberta. Vous les verrez peut-être.

M. Whicher: A propos du croisement Hayes? ...

M. Williams: Je l'ai vu, je peux vous le décrire, et on a effectué des essais à ce sujet. On a demandé si le ministère y a participé. Cette race a subi des tests—notamment les taureaux—dans la province, sous la surveillance du gouvernement fédéral.

M. Korchinski: Je veux poser quelques questions quant à l'insémination artificielle. Est-ce qu'on a fait d'autres recherches à ce sujet? Je reconnais l'utilité de l'insémination artificielle, mais certaines personnes constatent que le programme est difficile à mettre en application et certains pensent que c'est une méthode trop coûteuse. Est-ce qu'on a entrepris des recherches pour rendre l'insémination artificielle si peu coûteuse que le petit éleveur n'aurait même pas besoin de garder un taureau? Est-ce qu'on a fait des recherches à ce sujet, ou y a-t-il des obstacles...

M. Williams: Nous ne faisons pas de recherches dans ce domaine-là. L'insémination artificielle est bien établie et fait partie des connaissances du public. Les seules recherches au sujet de l'insémination artificielle du bétail sont faites par les associations d'éleveurs ou les organisations qui s'occupent d'insémination artificielle. Nous travaillons sur la physiologie de la reproduction. Nous travaillons sur la synchronisation du rut chez les brebis, pour raccourcir la période de l'agnelage. Nous travaillons aussi sur la physiologie et la reproduction des porcs, ce qui implique l'usage de l'insémination artificielle lorsque le programme n'est pas au point, ou, ou moins, la technique.

M. Korchinski: Est-ce que le ministère espère que l'on utilisera l'insémination artificielle sur une plus grande échelle? Ou le ministère est-il satisfait du fait qu'il faut encore garder des taureaux sur les fermes? Est-ce que le programme progresse actuellement de façon satisfaisante?

M. Williams: C'est une question d'opinion, mais je suis d'avis, et le ministère est d'avis, je pense, que l'insémination artificielle est utilisée de façon satisfaisante. L'obstacle est

[Text]

at a regular and orderly pace. The major problem associated with artificial insemination programs that faces us at the present time is the identification of bulls of superior genetic worth. We are doing some work on that aspect of it whereby we use young bulls for a very short period and then do not use them again until their progeny have been tested—this is particularly applicable in respect of the dairy cattle—but if there is a major problem that is holding up artificial insemination in the dairy business, it is the question of the identification of superior sires.

In the beef industry, the problems are largely management. I am sure you gentlemen may recall a discussion in this Committee about the use of artificial insemination in small beef herds in eastern Canada when at least one of the members of the Committee stated it was completely impractical, from a management standpoint, particularly where a man only has a few beef cows out to pasture.

Mr. Korchinski: This may be a side question, but are there any areas in Canada where you do not have a purebred sire area?

Mr. Williams: I am not sure that I follow your question, Mr. Korchinski.

Mr. Korchinski: I understand that there are purebred sire areas and there has been legislation in this regard but I do not know whether or not this is under provincial administration.

Mr. Williams: There is no federal legislation on purebred sire areas, but some provinces have legislation.

Mr. Korchinski: I have one more question to ask and then I will forego. I think a lot of the answers with regard to the development of feed grains indicated a trend towards the production of a multi-variety and as a result of this experimentation they have perhaps come up with a good feed barley. However, there seems to be an attitude prevalent in the industry that there has not been enough research done on the production of a good feed barley with a higher yield for use, particularly, in the northern regions where we are subjected to frost and so on. I wonder if you could elaborate briefly on the work being done in that area?

Mr. Williams: If I could say one word to start with, the Department was honoured a short time ago when one of the research officers in this Department received the highest level of merit award—a \$2,500 award—from the Public Service Commission for his work in barley breeding. At that time it was estimated that the value of his work and that

[Interpretation]

l'identification des taureaux de valeurs génétiques supérieures. Nous faisons des travaux à ce sujet et nous utilisons de jeunes taureaux pour une période très brève, puis nous ne les utilisons pas de nouveau, avant d'avoir vu quelle est la progéniture,—ce qui s'applique particulièrement aux vaches laitières,—mais l'obstacle principal dans l'insémination artificielle, dans l'industrie laitière, c'est l'identification des taureaux de valeurs reconnues.

Dans l'industrie du bœuf, c'est la gestion qui pose des problèmes. Vous devez vous souvenir d'une discussion, dans ce Comité, au sujet de l'utilisation de l'insémination artificielle des petits troupeaux de l'Est du Canada. Au moins un d'entre vous a déclaré que le projet n'est pas viable du point de vue de la gestion, lorsqu'un fermier n'a que quelques vaches en pâture.

M. Korchinski: Une question secondaire. Y a-t-il des régions au Canada, où il n'y a pas un animal de race?

M. Williams: Je ne sais pas si je comprends votre question, monsieur Korchinski.

M. Korchinski: Je crois qu'il y a des régions de ce genre et qu'il y a une législation à ce sujet. Je ne sais pas si elle est provinciale, ou non.

M. Williams: Il n'y a pas de législation fédérale, mais quelques provinces en ont.

M. Korchinski: Une autre question que je veux poser est celle-ci. Lorsqu'on développe des graines de provende, on a soutenu, dans le domaine de l'orge, on a essayé de produire une variété à utilisations multiples et nous aurons peut-être une orge de valeur excellente d'utilité pour les troupeaux. Et l'industrie a l'impression qu'il n'y a pas eu assez de recherches d'effectuées en vue de produire une orge qui est nutritive pour les troupeaux, et qui aurait un rendement élevé, surtout dans les régions nordiques où il y a beaucoup d'orgelets. Est-ce que vous pourriez nous parler des travaux dans ce domaine.

M. Williams: Un mot, pour commencer. Le ministère fut honoré, il y a quelque temps parce qu'un de ses chercheurs a reçu, de la part de la Commission de la Fonction publique, une subvention de \$2,500 pour son travail de recherche dans le domaine du développement de l'orge. Et son travail a été très utile aux cultivateurs des céréales. On pensait

[Texte]

of his colleagues who worked with him to the cereal growers of Canada was around \$140 million, I believe. In other words, the farmers' returns potentially were increased by that amount because of the improved barley breeds.

We have produced quite a number of purely feed barleys and I might say that at the present time—Dr. Migicovsky mentioned this earlier when discussing some switches in our program—increasing emphasis is being placed upon feed barley breeding.

You are quite correct, sir, in your original statement that at one point a great deal of emphasis was placed on malting barley.

Mr. Korchinski: I have just one more question and I believe this matter arose the other day when we were discussing the recognition of work that had been done by some of these people. I do not know who is responsible for naming these grains and so on. We name streets and so on, after people so why should we not name the varieties of grain after the people who have done a lot of the research on this. This would be very apropos. I wonder whether any thought has been given to that kind of recognition.

Mr. Williams: We have given a great deal of thought to the development of names for our various varieties that have been produced and in general, we have taken the position that they should be anonymous rather than after the developer. We have tried, in general, to relate them somehow to their ancestry, that is to say, not the ancestry of the breeders, but the ancestry of the particular varieties.

Mr. Douglas (Assiniboia): What about Thatcher wheat?

Mr. Williams: That is an American variety, not a Canadian variety.

The Chairman: Thank you, Mr. Korchinski. I recognize Mr. Gleave.

Mr. Gleave: Thank you, Mr. Chairman. I want to ask some questions dealing with the buildings, works, land and equipment and purchase of livestock as shown on page 15 of the Blue Book. I note under the purchase of livestock the proposed expenditure is down \$1,000 and I note it is down also on the purchase of land, buildings and works. Reports published in the newspapers the other day said that we had inadequate facilities to look after our testing programs for livestock disease and that the facilities were overcrowded. Is this so, Mr. Chairman? Are these facilities inadequate; are they overcrowded?

[Interprétation]

qu'on avait augmenté de 140 millions les revenus des fermiers parce qu'on avait développé cette qualité d'orge.

Nous avons produit plusieurs variétés de valeur nutritive, et je peux le dire maintenant—M. Migicovsky l'a mentionné plus tôt—nous mettons l'accent sur ce genre de programme.

Mais vous avez raison, monsieur, en disant qu'on avait beaucoup mis l'accent sur l'orge utilisée pour le malt.

M. Korchinski: Je pense que cette question a été soulevée au sujet du travail fait par ces chercheurs. Je ne sais pas qui est responsable pour nommer ces graines, etc. On donne bien des noms de personne à des rues, pourquoi alors ne pas nommer les variétés de graines d'après les chercheurs qui les ont découvertes. Est-ce qu'on a songé à reconnaître les chercheurs de cette façon-là?

M. Williams: Nous avons bien étudié le problème de la désignation des nouvelles variétés, et, en général, nous avons opté pour leur anonymat, plutôt que de leur donner le nom des chercheurs, et nous avons essayé d'indiquer quels sont les ancêtres de variétés des plantes.

M. Douglas (Assiniboia): Et le blé Thatcher?

M. Williams: C'est une variété américaine, et non pas canadienne.

Le président: Merci, monsieur Korchinski. Je donne la parole à M. Gleave.

M. Gleave: Merci, monsieur le président. Je veux poser des questions au sujet de la construction ou de l'acquisition de bâtiments, ouvrages, terrains et matériel, et de l'achat d'animaux de ferme. C'est à la page 15 du Livre bleu. Je note que dans l'achat du bétail, il y a une diminution des dépenses prévues de \$1,000, de même que pour l'acquisition de bâtiments, ouvrages et terrains. L'autre jour, on a publié des rapports dans les journaux qui disaient que nous avons des installations inadéquates pour le programme de recherche technique sur les maladies du bétail, que les installations sont surpeuplées. Est-ce que c'est juste, monsieur le président? Est-ce que les services sont inadéquats?

[Text]

Mr. Williams: Mr. Chairman, first of all, I would like to say there is some misunderstanding about the estimates. The new year's estimates appear in the left hand column and both items you mentioned show an increase—a very marginal increase, I admit—for this year.

The construction of the Animal Diseases Research Institute is not included in these estimates nor would it be included in these estimates as it is a Public Works estimate. All major buildings built in the capital area are in the Public Works vote. There is no argument, at least in my mind, that the conditions over at the Animal Diseases Research Institute are extremely crowded.

The Animal Diseases Research Institute is part of the total complex at, what we call, our Greenbelt Farm and it is because of that overcrowding in our plant in Hull that it is programmed to be moved to the Greenbelt Farm. Obviously we are disappointed in the timing, but I understand that discussions are going on at the present time with a view to setting forward possibly the start of construction of the new buildings there. However, this item does not appear in these estimates.

Mr. Gleave: What is the timing? What is the schedule? When are these facilities to be moved and will they be a little more adequate? When is this proposed?

Mr. Williams: I am afraid in order to answer that I would have to talk off the top of my head. My recollection is that the current timing has scheduled the start of construction in the year 1970-71. In other words, the year following the one we are discussing. There is some hope, however, that we may be able to accelerate that. I might say that there has been some work done already. There has been a considerable amount of money spent on site development, roads, sewers, and things of this nature that are presently in position. There is no question of it going ahead, it is simply a matter of the timing.

Mr. Gleave: Do the present facilities, as charged in the report actually present a hazard for the spread of disease? Is the protection inadequate as charged?

Mr. Williams: It has never been reported officially to me that it constitutes a possible hazard for the spread of disease outside of the laboratory. There always has been a hazard no matter what the conditions are for the possibility of transmission of brucellosis—I believe that was the disease that was cited—to humans who are working with it because,

[Interpretation]

M. Williams: Monsieur le président, tout d'abord je voudrais dire qu'il y a malentendu quant aux crédits. Ceux de la nouvelle année figurent à la colonne de gauche et il y a des augmentations de ces deux crédits, mais très minimes, je dois avouer.

La construction de l'Institut de recherches vétérinaires n'est pas incluse dans ces crédits et n'y serait pas incluse, parce que c'est un crédit des Travaux publics. Tous les édifices importants construits dans la région de la Capitale, figurent dans les crédits des Travaux publics. Il est certain, selon moi du moins, que les installations de l'Institut de recherches vétérinaires sont inadéquates.

L'Institut de recherches vétérinaires fait partie d'un ensemble global situé dans ce que nous appelons notre ferme *Green Belt* et c'est à cause de cet encombrement à nos installations de Hull qu'on projette de le déménager à *Green Belt Farm*. Nous avons évidemment été déçus par le calendrier, mais j'ai été informé que des discussions sont en cours en ce moment dans le but d'avancer la date du commencement de la construction des nouveaux édifices à cet endroit. Toutefois cette écriture ne figure pas dans ces crédits.

M. Gleave: Quel est le plan d'exécution? Quand ces installations seront-elles déménagées? Seront-elles un peu plus convenables? Quand les installations seront-elles...

M. Williams: Je regrette, il me faudrait parler de mémoire. Il me semble que le début de la construction doit commencer dans les années 70 à 71, c'est-à-dire dans l'année qui suit l'année dont nous parlons. Mais on espère que nous pourrions peut-être accélérer les travaux. On a déjà entrepris certains travaux. Il y a eu beaucoup d'argent de dépensé pour aménager l'emplacement, les routes, les égouts et pour des travaux de cette nature qui sont présentement en place. Il ne s'agit pas de savoir si cela se fera; ce n'est qu'une question de date.

M. Gleave: Est-ce que les installations, comme le dit le rapport, présentent un danger que la maladie se propage? Est-ce que comme on le dit la protection est insuffisante?

M. Williams: Je n'ai jamais eu de rapport officiel que peut-être les installations représentent un danger de propagation de maladie en dehors du laboratoire. Il y a toujours eu un certain danger quelles que soient les conditions, parce qu'il y a possibilité de transmission de brucellose. Je crois que c'était la maladie mentionnée: La transmission de cette

[Texte]

as you gentlemen well know, this disease is transmissible to humans. There are people in Canada—those working with dairy cows, farmers and even our own people on some of our farms—who have come down with undulant fever after having worked with it. Obviously there is some risk in this.

Mr. Gleave: I understand, if I recall, the article said that four people had actually contracted the disease. You would have no record of this in the Department?

Mr. Williams: We must have a record, but I do not have it with me. My understanding, however, Mr. Gleave, was that there were two not four cases.

Mr. Gleave: I see. Would the moving of this fur farming operation from Prince Edward Island not aggravate the situation further or are you moving the fur farming operation into some other area?

Mr. Williams: It is in the same general area, but quite remote from the Animal Diseases Research Station. It is in the Animal Research quadrant of the total area.

Mr. Gleave: The thing that puzzles me a bit is why, if these conditions exist, another operation was moved in prior to adequate changes being made?

Mr. Williams: I am not sure that I follow you, sir.

Mr. Gleave: It rather puzzled me when I read the article why, if these conditions exist in our present facilities, you would propose to move the fur farming operation at this time.

Mr. Williams: I am sorry, I understand now. The fur farming operation will not, in any way, be associated with the operation in Hull.

Mr. Gleave: I see. I have another point to bring up. You have in the Department a fair number of economists. At the present time we are contemplating some real shifts in production. It has been suggested that we are going to take 30 per cent out of wheat and I noticed in reports published today that farmers' estimates to plant are down to 26 million from roughly 30 million last year.

[Interprétation]

maladie des animaux aux humains qui travaillent là. Comme vous le savez messieurs c'est une maladie qui peut se transmettre aux humains. Il y a des personnes au Canada, celles qui travaillent auprès des vaches laitières, des cultivateurs et même de nos gens dans certaines de nos fermes qui ont été atteints de la fièvre ondulante après un contact. Il est évident que cela comporte un risque.

M. Gleave: Si j'ai bonne mémoire, l'article disait que quatre personnes en fait avaient contracté la maladie. Auriez-vous un dossier à cet effet au Ministère?

M. Williams: Il doit y en avoir un mais je ne l'ai pas avec moi. Ce que je sais toutefois M. Gleave, c'est qu'il y a eu deux cas et non quatre.

M. Gleave: Maintenant si on déménage les opérations qui ont trait à l'élevage des animaux à fourrure de l'île du Prince Édouard, est-ce que vous n'aggravez pas d'avantage la situation, ou bien déménagez-vous l'élevage des animaux à fourrure dans un autre secteur?

M. Williams: Oui, c'est dans la même région mais dans un endroit assez éloigné du centre de recherches vétérinaires. C'est dans la partie de la recherche vétérinaire de tout le secteur.

M. Gleave: Ce qui me préoccupe c'est que si ces conditions existent, pourquoi a-t-on aménagé une nouvelle installation avant de faire des changements?

M. Williams: Je ne comprends pas très bien.

M. Gleave: Ce qui me préoccupe c'est que si ces conditions existent dans nos installations actuelles, vous proposiez en ce moment de déménager l'entreprise d'élevage des animaux à fourrure.

M. Williams: Excusez-moi, je comprends maintenant. L'entreprise d'élevage d'animaux à fourrure ne sera associée en aucune façon avec celle de Hull.

M. Gleave: Je vois. Je voudrais soulever un autre point. Vous avez au Ministère un bon nombre d'économistes. En ce moment, nous envisageons des changements véritables dans la production. Il a été proposé que nous prenions 30 p. 100 du blé, et j'ai remarqué dans les rapports qui ont été publiés aujourd'hui, que les prévisions d'ensemencement des cultivateurs sont réduites à 26 millions, de 30 millions qu'elles étaient l'an dernier.

[Text]

Is there any definite program underway by the economists within the Department to study these shifts and to start planning ahead on whether or not, for example, we should cease expanding land resources and in which direction we should shift in terms of production? Are these people working out a plan for farming or for agriculture?

Mr. Williams: There is extensive work underway in the Economics Branch at the present time and also by the Task Force on Agriculture on projections of demand for all agricultural commodities, both on a national and an international basis. I think, however, once one has said that, one has to reach the conclusion that there are many, many outside factors not controllable by Canada that may alter greatly these projections. While the question of demand is a relatively simple thing, the question of supply is a much more difficult one because policies of governments other than Canada may greatly influence them. For example, in the area of cereals, if the EEC were to reverse their position in respect of support for cereal grains, I am quite sure it would make a tremendous difference in the demand-supply position for grains throughout the world. So, to answer your question specifically, Mr. Gleave, yes, there is work being done along this line.

Mr. Gleave: There are projections being made, but are you actually moving into the field where you are going to be able to say to various sectors of agriculture that this or that increase or decrease should be made. Are you in a position to make a firm recommendation?

I have seen these projections year after year. You have the thing on filled milk, for example, which was discussed at some length here this morning. It is very fine for the industry which, I think, refers to the plants and so on to be considering what they are going to be doing about filled milk—that is lovely—but the real question is what is the farmer going to do who has a herd of cows in the barn and \$100,000 going for him. This is the real question and this is the real question that faces us out in Saskatchewan. We have X number of acres of land and thousands of dollars worth of machinery. Are the economists in the Department going to get down to work and say, "This is what is ahead of the farmer; this is what we are going to recommend". The provinces then could go ahead and work with the federal government to do

[Interpretation]

Y a-t-il un programme définitif en voie d'établissement par les économistes du Ministère pour étudier ces changements et pour prévoir, par exemple, si oui ou non nous devrions cesser d'étendre nos ressources en terrain et dans quelle direction nous devrions nous orienter en matière de production.

M. Williams: On fait énormément de travail à la Direction de l'économie en ce moment et l'équipe de travail en l'agriculture étudie les projections de la demande pour tous les produits agricoles du point de vue national et international. Mais je pense cependant qu'une fois la chose dite, on doit en arriver à la conclusion que les facteurs extérieurs sont très nombreux qui ne peuvent être contrôlés par le Canada et qui peuvent influencer grandement ces projections. Alors que la question de la demande peut être relativement simple mais la question de l'offre est beaucoup plus complexe parce que les politiques des pays autres que le Canada peuvent beaucoup changer les circonstances. Dans le domaine des céréales, par exemple, si la CEE devait renverser sa position relativement à l'appui accordé aux céréales, je suis presque certain qu'il y aurait une différence considérable dans l'offre et la demande des céréales dans le monde. Donc, pour répondre spécifiquement à votre question, monsieur Gleave, oui, il se fait du travail dans ce sens.

M. Gleave: Oui, on effectue des projections, mais en fait vous vous engagez dans un domaine où vous allez pouvoir dire à divers secteurs de l'agriculture que telle ou telle diminution ou augmentation devrait être faite. Êtes-vous en mesure de faire une recommandation ferme?

J'ai vu ces projections année après année. Par exemple, vous traitez de la question du lait fortifié dont on a discuté longuement ce matin. C'est une très bonne chose que l'industrie qui, je crois, s'en remet aux plans, etc. d'envisager ce qu'elle fera au sujet du lait fortifié, c'est très bien, mais la question véritable est celle-ci: que fera le cultivateur quand il y a un troupeau laitier dans l'étable, et 100,000 dollars d'investi? C'est là la véritable question et celle à laquelle nous devons faire face en Saskatchewan. Nous avons X acres de terre et des milliers de dollars de machinerie. Est-ce que les économistes vont se mettre au travail et nous déclarer: voici l'avenir du cultivateur... voilà ce que nous recommandons. Les provinces pourraient alors y aller et joindre ses efforts à ceux du gouvernement fédéral à cette fin, mais pour

[Texte]

this, but as far as their present projections are concerned, frankly, I would just as soon make my own.

Mr. Williams: Mr. Chairman, each year at the Outlook Conference the Economics Branch provides an estimate on what the Canadian demand is likely to be for most products and endeavours to indicate in that whether there should be an increase or a decrease in acreage and the magnitude of that increase or decrease. These projections that are done by our Economics Branch are sent to all provinces in advance and are sent to all farm organizations in advance to be scrutinized by them. A meeting is held in Ottawa, the aim of which is to try to develop a consensus as to what direction production should go.

I think I would have to say that in my view this is about as far as the Department can go in this sort of thing. We have no authority and, indeed, if we did have authority, I would very much doubt the advisability of exercising such authority to do any more than indicate the probable area of land that should or should not be put into production.

Mr. Gleave: The Report of the Special Committee on Farm Incomes in Ontario, "The Challenge of Abundance" published in January 1969 seemed to indicate to me that we will have to get down to cases and try to tailor our production to the known or projected—I do not think anyone ever knows what it is—but tailor our production in various fields to projected demands. I take it, then, the answer is that our federal Department of Agriculture is not doing this sort of thing and does not contemplate doing this sort of thing.

Mr. Williams: I do not think that is quite right, Mr. Gleave. I just said that we do not have the authority to say to people they should or they should not.

I think we also recognize, however, that the people themselves do have the authority to reach a decision on whether or not they should or should not produce and if there is to be a tailoring of supply and demand it should not be by fiat from on high, but by co-operation between the people who are doing the producing. I think that is what I was trying to indicate in so far as the Department's position was concerned, but I would say, of course, that I am sure that next week this entire question of supply and demand and the possibility of its regulation will receive a great deal of attention at the Canadian

[Interprétation]

ce qui est de leurs projections actuelles, je préfère faire les miennes.

M. Williams: Monsieur le président, à chaque année, à la conférence sur les prévisions agricoles, la Direction économique donne une évaluation de ce que sera vraisemblablement la demande du Canada dans le cas de la plupart des produits et entreprises afin d'indiquer par là s'il devrait avoir une augmentation ou une diminution dans le nombre d'acres et l'importance de cette augmentation ou de cette diminution. Ces prévisions préparées par notre division économique sont envoyées d'avance à toutes les provinces et sont envoyées d'avance à tous les organismes agricoles pour étude approfondie. Il se tient une assemblée à Ottawa dont le but est d'essayer d'en arriver à un consensus sur l'orientation que devrait prendre la production.

A mon avis, je dirais que c'est le plus loin que le gouvernement peut aller dans ce genre de choses. Nous n'avons pas les pouvoirs et même si nous les avions, je douterais fort qu'il conviendrait d'exercer ce pouvoir dans un but plus vaste que celui d'indiquer la surface du terrain qui devrait ou ne devrait pas être mise en production.

M. Gleave: Le rapport du comité spécial sur le revenu des cultivateurs en Ontario, «The Challenge of Abundance», qui a été publié en janvier 1969, semble m'indiquer qu'il faudra étudier les cas et essayer d'ajuster notre production à ce qui est connu et prévu. Je ne crois pas que personne sache jamais ce qu'elle sera, mais nous devrions ajuster notre production dans divers domaines en vue de la demande prévue. Je crois donc que la réponse de notre ministère fédéral de l'Agriculture ne fait pas ce genre de choses et ne projette pas de faire ce genre de choses.

M. Williams: Je pense que vous n'avez pas tout à fait raison. J'ai dit que nous n'avons pas l'autorité, pour dire au cultivateur ce qu'il doit ou ne doit pas produire.

Je crois cependant que nous reconnaissons aussi que les gens eux-mêmes peuvent prendre une décision sur ce qu'ils doivent ou ne doivent pas produire et s'il doit y avoir un ajustement en vue de l'offre et de la demande, que ce ne soit pas sur l'ordre de l'autorité, mais à la suite d'une collaboration entre les producteurs.

J'essayais de dire que telle était la position du ministère, mais je suis convaincu que toute cette question de l'offre et de la demande et de sa régulation sera étudiée au Congrès de l'Agriculture canadienne où la discussion sera certainement stimulée par le

[Text]

Agricultural Congress and I am sure you are as well aware as I am that the paper that has been put forward by the Task Force on Agriculture certainly will stimulate discussion in this area.

Mr. Korchinski: It will probably wipe out a few farmers in the process too.

An hon. Member: I thought that was nicely put.

Mr. Korchinski: I would like a supplementary on that if I may.

The Chairman: A single supplementary?

Mr. Korchinski: Yes, a single supplementary. I just want to say that I was quite surprised when I heard the figure of 12 per cent reduction in wheat this year. I was just wondering how these figures are compiled and who makes these decisions, because I, personally, had not made up my mind what we were going to do on our farm this year and in talking to many other farmers I found they were of the same opinion. I wonder whether you have some figures to back this statement up or is this an attempt to persuade the farmers that this reduction is perhaps desirable.

Mr. Williams: I can assure you that there is no propaganda element in it at all, Mr. Korchinski. The figure is based entirely upon economists using known economic methods of projecting demand and supply, projecting yields, projecting everything else on a formula basis and that is the cold hard figure that comes out at the end.

The Chairman: Mr. Pringle on a supplementary.

Mr. Pringle: I should like to ask a question in connection with Mr. Korchinski's remarks about estimates of projected production related to marketing. Over the years there has been some excellent work done by the Department of Agriculture in this respect and I can say this with assurance because I have done some studying myself, especially in recent years. Do you foresee a time when it will be possible to suggest to the farming population what should be done with regard to production and they will voluntarily cut back according to your recommendations? Have you any real proof that a voluntary cut back at the producer level has ever happened because of your recommendations?

[Interpretation]

document préparé par le groupe d'étude sur l'agriculture.

M. Korchinski: Il enlèvera peut-être quelques cultivateurs en chemin.

Une voix: Je pense que c'est bien dit.

M. Korchinski: J'aimerais poser une question supplémentaire si je peux.

Le président: Une seule?

M. Korchinski: Oui, une seule. Je voulais simplement dire que j'ai été surpris d'entendre le chiffre de 12 p. 100 pour la réduction du blé cette année. Je me demandais comment ces chiffres sont calculés et qui prend ces décisions, parce que, personnellement, je n'avais pas décidé de ce que nous allions faire sur notre ferme cette année. J'ai discuté avec plusieurs cultivateurs qui ne le savaient pas eux-mêmes. Est-ce que vous avez des chiffres pour justifier cette attitude ou tentez-vous de persuader les agriculteurs que c'est peut-être là une chose désirable?

M. Williams: Eh bien je peux vous dire, monsieur Korchinski, qu'il n'y a aucun élément de propagande là-dedans. Les chiffres sont fondés uniquement sur des méthodes d'économie utilisées par les économistes pour la projection de l'offre et de la demande, des rendements, la projection de tout autre chose d'après des formules établies, et c'est ce nombre brutal que l'on obtient à la fin.

Le président: Monsieur Pringle, une question supplémentaire.

M. Pringle: J'aimerais poser une question à propos des commentaires de M. Korchinski au sujet des prévisions de production relative à la mise en marché. Au cours des ans, des travaux remarquables ont été faits par le ministère de l'Agriculture à ce sujet et je peux le dire avec assurance puisque j'ai fait certaines études là-dessus, surtout au cours de ces dernières années. Mais est-ce que vous envisagez le moment où il sera possible de proposer à la communauté agricole ce qu'elle devra faire pour la production? Et est-ce que vous pensez qu'ils pourraient volontairement effectuer les réductions que vous recommanderez. Avez-vous une véritable preuve qu'il y a déjà eu une réduction volontaire au niveau de la production par suite de vos recommandations?

[Texte]

Mr. Williams: I would have to say, Mr. Pringle, that we do not have any real proof. I will say, however, that it is a failing of any kind of a prediction that if people pay attention to it it does not come true. I simply mean if the Department of Agriculture says that egg prices are going to be low this summer and production should be cut back, that if people take cognizance of this fact and do cut back, prices will not be low. In other words, the only successful prediction, to me, is one that fails because if we still have too much production and low prices, obviously people have not been listening to us. On the other hand, if you predict there will be a short supply and prices are going to be high, if everybody listens to you and increases production then prices will not be high.

Mr. Pringle: That is a very interesting statement because regardless of your predictions in my experience I have been unable to find any time when anybody took notice of them until prices got so low that they had to get out of the slump by cutting back and then prices went up. I just make that observation because I know that there will be a great deal of discussion next week with regard to marketing, planning and programming.

Mr. Williams: If I might say one word, Mr. Pringle, I personally have received many representations from poultry producers that if we think the price is going to be high we should not publicize it because this gets a lot of people into it that should not be into it.

The Chairman: Mr. Lind on a single supplementary.

Mr. Lind: Mr. Chairman, my supplementary is that we spend a lot on research, we spend a lot on market analysis, but when the final crunch comes how much do we spend on promotion to sell these products? This is the thing that worries me. In the big firms in private industry, if their sales staff are falling down on seilling their product they usually use the axe and get a bunch of younger fellows in who will go to work and get out and sell it. Now, are we doing anything in the Department of Agriculture to sell our products, to sell our information to the people of Canada, to really get out and sell it hard?

Mr. Williams: If you mean direct promotional programs, no, sir. We are not provided

[Interprétation]

M. Williams: Je dois avouer, monsieur Pringle, que nous n'avons pas de preuves. Je peux dire, cependant, que c'est le défaut de toute prédiction qu'elle ne se réalise pas si on lui porte attention. Autrement dit, si le ministère de l'Agriculture dit que le prix des œufs sera inférieur cette année et la production doit être réduite, si les gens prennent connaissance de ce fait et opèrent des réductions, alors les prix ne vont pas baisser. En d'autres termes, pour moi, la seule prédiction valable est une prédiction qui échoue, en ce sens que si nous avons une production trop élevée et des prix inférieurs, c'est évident que les gens ne nous ont pas écouté. Si, d'autre part, vous prédisiez une offre inférieure et des prix élevés, et si tout le monde vous écoute et augmente la production, alors les prix ne seront pas trop élevés.

M. Pringle: C'est très intéressant ce que vous nous dites là, parce que, de ma propre expérience, peu importe vos prédictions; je n'ai jamais pu trouver de situation où personne ne les avait remarquées jusqu'à ce que les prix baissent au point que les gens ont dû sortir de cette baisse en réduisant la production et alors les prix remontaient. Je fais cette remarque parce que je sais qu'il y aura de nombreuses discussions la semaine prochaine au sujet de la mise en marché, de la planification et de la programmation.

M. Williams: Je pourrais ajouter également, monsieur Pringle, que nous avons entendu beaucoup de producteurs de volailles qui nous disent que si les prix vont être élevés, il ne faudrait pas rendre la chose publique parce que beaucoup de gens se lancent dans cette entreprise alors qu'ils ne devraient pas le faire.

Le président: Monsieur Lind, une question supplémentaire.

M. Lind: Monsieur le président, ma question supplémentaire est la suivante. Nous dépensons beaucoup d'argent à la recherche et l'analyse du marché, mais le problème se pose quand il s'agit de savoir combien dépenser pour la promotion de vente de ces produits. Et c'est ça la question qui m'inquiète. Dans les grandes entreprises, dans l'industrie privée, si le personnel des ventes échoue dans la vente des produits, alors, ils en congédient et engagent des plus jeunes qui iront vendre les produits. Alors, est-ce que le ministère de l'Agriculture fait quelque chose pour vendre nos produits, pour vendre notre information, aux Canadiens, pour vraiment tout tenter pour la vendre?

M. Williams: Si vous parlez de programmes de promotion directe, non monsieur. Nous

[Text]

with any funds other than an extremely small item in production and marketing that is used under disaster circumstances to help some small segment of the industry. In so far as export promotion is concerned it does not fall within the competence of the Department of Agriculture to spend any funds on export promotion; this is a function of the Department of Trade and Commerce through its Trade Commissioner Service.

However, we have a very active Food Advisory Services, we have a very active Information Division, and we assist a great many organizations. Probably the most recent example is the honey people who were faced this past summer with a very depressed price situation. They had not sold their 1967 crop, they still had part of their 1966 crop on hand and they came to the Agricultural Stabilization Board requesting price support. We suggested to them that price support was possibly not the answer, but probably a major promotional program was.

I must compliment them because they did an excellent job and raised, I think, some \$40,000 themselves. Trade and Commerce pitched in and did a great deal of work on the export market. We went into it and not only gave them a small grant to assist their own promotional project but we also put out recipes, we made a film and we did some radio broadcasts. I would be less than frank if I said the result was entirely due to promotion, although promotion certainly helped, but they were also helped considerably by a short crop in terms of their total supply this year. Which helped. As a result, at the present moment their cupboard is pretty well bare.

Mr. Lind: Thank you, Mr. Chairman; that is encouraging news.

The Chairman: Thank you. I recognize Mr. McKinley.

Mr. McKinley: Mr. Chairman. There was something in the Minister's opening statement that disturbed me greatly and I have been waiting quite a few days to bring it up, but as you all know I am quite a patient person. He said that there was going to be a saving of over \$2 million in hog premiums paid for quality during the next fiscal year. In the next paragraph he said that there was going

[Interpretation]

n'avons aucun autre crédit si ce n'est quelques postes aux fins de la production et de la mise en marché qui servent à aider quelques parties de l'industrie en cas de catastrophe. Pour ce qui touche à la promotion des exportations, ce n'est pas au ministère de l'Agriculture de dépenser des argents à cette fin; c'est une tâche du ministère du Commerce par l'intermédiaire du Service des délégués commerciaux.

Malgré tout nous avons un Service consultatif alimentaire très actif, nous avons une Division de l'information qui est aussi très dynamique et nous participons à différentes organisations. L'exemple le plus récent peut-être est les producteurs de miel qui, l'été dernier, ont eu à faire face à une situation de prix très bas. Ils n'avaient pas encore vendu leur récolte de 1967 et avaient encore une partie de la récolte de 1966 sur les bras; ils sont allés voir l'Office de stabilisation des prix agricoles pour demander le soutien des prix. On leur a dit que possiblement le soutien des prix n'était pas la réponse mais que peut-être un important programme de promotion pourrait être utile.

Je dois les féliciter, car ils ont fait un travail excellent, et je crois qu'ils ont obtenu quelque quarante mille dollars par eux-mêmes. Le ministère du Commerce s'en est mêlé et a fait beaucoup sur le marché des exportations. Nous nous en sommes mêlés également et non seulement nous leur avons accordé une petite subvention pour aider leur programme de promotion des ventes, mais également nous avons publié quelques recettes et nous avons fait un film et des programmes de radio. Je ne serais pas sincère si je disais que le résultat est dû entièrement à la promotion, quoiqu'elle y a contribué, mais disons qu'une récolte, faible par rapport à l'offre totale de l'année en cours, a aidé considérablement. Par conséquent, leur stock est actuellement presque complètement écoulé.

M. Lind: Merci, monsieur le président, c'est très encourageant.

Le président: Monsieur McKinley.

M. McKinley: Monsieur le président, dans ce que le ministre a dit pour commencer, il y a quelque chose qui m'a inquiété. J'ai attendu plusieurs jours avant de soulever la question, mais comme vous le savez je suis moi-même très patient de nature. Il a dit qu'on économiserait plus de deux millions de dollars en primes pour porcs de qualité au cours de la prochaine année financière. Au paragraphe

[Texte]

to be an increase of over \$2 million in wages and salaries paid in the Department.

The Chairman: Mr. McKinley, we appreciate your patience but. . .

Mr. McKinley: I will come to the point, Mr. Chairman. What kind of research was done previous to the decision to change the method of calculating payments to hog producers on the premium quality basis? Also, what benefit will it be to the industry, if any?

Mr. Williams: Mr. Chairman, I am afraid I cannot specify in great detail the research that was done. Basically, however, it was the following. Research was done at our experimental station at Lacombe, which indicated, by and large, that the percentage of lean meat in a hog carcass was very closely correlated with the sum of two fat measurements; one at the shoulder and one at the loin. It was decided that we should look at this to see whether or not, based on commercial hogs, it was possible to develop a grading system that would relate the grade to the actual cut-out of lean meat in the carcass.

Consequently, we entered into a very large project involving the Research Branch. The Research Branch did the planning of the project and the analysis of the data and the Production and Marketing Branch did the actual cutting of the hogs. Some 10,000 hogs taken all across Canada on a scientific sampling basis of different grades and so forth were measured, cut and the lean meat content determined. From that tables were established and material was built up that indicated it was possible to develop a grading system and such a system was developed. Working with the Meat Packers Council and with the hog producers, a system was devised and is currently in effect.

It is the belief of this Department that this research will result in a system of providing the farmer with increased returns for high quality hogs.

Mr. McKinley: Do you anticipate that in the future, as farmers are able to breed hogs that will qualify for these premiums, that the money paid to farmers under this system might increase and come close to what it has been in the past? Is that so?

Mr. Williams: I do not think there is much doubt about that. My recollection is that in a top quality hog under this new system some-

[Interprétation]

suivant, il a dit qu'il y aurait une augmentation des traitements, de plus de deux millions de dollars payés par le ministère.

Le président: Nous prisons votre patience, monsieur McKinley, mais. . .

M. McKinley: J'en arrive à ma question. Quelles recherches ont été faites avant que l'on envisage de changer les méthodes de calcul des versements à effectuer aux producteurs de porcs pour les porcs de qualité?

M. Williams: Monsieur le président, je m'excuse de ne pouvoir répondre en détail à cette question. Malgré tout, je puis vous dire qu'il y a eu des recherches de faites à la Station expérimentale de Lacombe, qui ont indiqué que dans l'ensemble le pourcentage de viande maigre sur une carcasse de porc était très étroitement lié à la somme de deux mesures de graisse, une sur l'épaule et l'autre dans les cuisses. On a décidé qu'il fallait étudier la question pour voir si, sur la base des porcs commerciaux, il était possible d'élaborer un système de classement qui pourrait lier la qualité à la coupe maigre dans la carcasse.

Par conséquent, nous avons entrepris un projet très vaste avec la Direction des recherches qui a fait la planification du projet et l'analyse des données. La Direction de la production et des marchés s'est occupé de découpage proprement dit des porcs. Environ 10,000 porcs, pris à travers le Canada, sur une base échantillonnage scientifique des différentes qualités, etc., ont été mesurés, découpés et la quantité de viande maigre a été établie. De ces données, on a établi des tableaux et le matériel a été construit pour indiquer qu'il était possible d'élaborer un système de classification et ce système a été alors mis au point. Avec la collaboration du Conseil des préparateurs de viandes et des producteurs de porcs, un système a été élaboré et mis en ordre.

Notre ministère considère que ces recherches vont entraîner la création d'un système qui lui permettra de fournir de plus hauts bénéfices aux cultivateurs pour les porcs de haute qualité.

M. McKinley: Prévoyez-vous qu'à l'avenir, à mesure que les cultivateurs sont en mesure d'élever des porcs, ils deviendront éligibles à ces primes, que l'argent versé aux cultivateurs en vertu de ce système pourrait augmenter et approcher ce qui a été versé par le passé, c'est ça?

M. Williams: Je pense qu'il n'y a aucun doute. Si je me souviens bien, dans un porc de première qualité d'après le nouveau sys-

[Text]

thing in the nature of five to seven pounds of fat has to be trimmed off and sold as lard at a few cents a pound. In the low end it runs as high as 28 in the recognized grades and in exceptional cases can run much higher than that. Basically, this extra fat is sold at essentially no return to the farmer.

Obviously, if the farmer can produce hogs that do not require so much fat to be trimmed from them, his returns from the market, will be higher; presuming, of course, we have a market that does return these amounts to him. I think the Swine Council and the Meat Packers Council are working closely enough together at the present time to ensure that gains made by the farmer will, in fact, accrue to the farmer.

Mr. McKinley: Will it be of assistance in gaining export markets and being able to export more hogs because they will be marketed with less fat to try and get this premium?

Mr. Williams: It depends a little bit on what other people are doing. Our main export of pork is to the United States at the present time and in the past we have always enjoyed a premium over the United States market. Our hogs have always sold—at least cuts, we do not normally sell hogs, we normally sell cuts to the United States—at a premium over the American price because of their higher lean content.

The Americans, however, in recent years have been producing a better hog and it is our objective to try to stay that much ahead of them so we will be able to continue not only to export large quantities of pork to that country but to export it at a premium.

Mr. McKinley: It appears to me that the only way a saving of this kind can be justified is in some way to get it back to the farmer.

Now, I would like to ask another question on poultry. You do poultry testing for egg laying qualities in poultry; you run tests every so often. I would like to know how often and I would like to know how these tests are set up. Do you start off with eggs? Do you start off with chicks? Who decides where the eggs or the chicks come from and how many of each and how many altogether usually? That is about it for now.

Mr. Williams: Mr. Chairman, the estimate for this appears in in Item 15. However, it is

[Interpretation]

tème, il y a quelque chose de l'ordre de cinq à sept livres de graisse qui doit être coupée et vendue comme saindoux à quelques sous la livre. Vers l'arrière, ça peut même atteindre 28 livres dans les qualités reconnues et dans des cas particuliers, ça peut atteindre beaucoup plus. A la base, cette graisse supplémentaire est vendue avec peu de bénéfices pour le cultivateur.

Évidemment, si le cultivateur peut produire des porcs qui ne demandent pas une coupe si forte de graisse, ses résultats sur le marché seront plus élevés, supposant, bien entendu, que nous ayons un marché qui lui donne ces rendements. J'espère que le Conseil des producteurs de porcs et le Conseil des préparateurs de viandes discutent de la question actuellement pour s'assurer que les bénéfices vont être retournés aux fermiers.

M. McKinley: Cela aidera-t-il à accroître les marchés d'exportation et à permettre une meilleure exploitation des porcs s'ils sont moins gras et ainsi obtenir la prime?

M. Williams: En fait ça dépend de ce que font les autres. Notre principale exportation de porc se fait en direction des États-Unis actuellement et dans le passé, nous avons toujours reçu une prime par rapport au prix américain. Nous avons toujours vendu nos porcs, du moins des morceaux; nous ne vendons pas normalement nos porcs, nous vendons des morceaux aux États-Unis à un prix supérieur au prix américain parce que nous avons une teneur en graisse moins importante?

Malgré tout, les Américains au cours des dernières années ont produit un meilleur porc et notre objectif est de garder l'avance et de continuer non seulement à exporter de grandes quantités de porcs à ce pays, mais également à exporter à prime.

M. McKinley: Il me semble que la seule façon que des économies de ce genre peuvent être justifiées, c'est de les rendre au cultivateur.

En fin de compte, pour les volailles, vous faite des essais de volailles n'est-ce pas sur la ponte des œufs, vous faites des tests de temps en temps. Je voudrais savoir quand et comment ces tests sont faits. Est-ce que vous commencez avec les œufs? Est-ce que vous commencez avec les poussins? Qui décide d'où viennent les poussins, d'où viennent les œufs et combien de chaque et combien en tout, en général. C'est à peu près tout, pour le moment.

M. Williams: Monsieur le président, le crédit portant sur cette question, c'est le crédit

[Texte]

closely associated with research and with your permission, I will answer it very briefly. In a random sample test for poultry people nominate to ship a 30-dozen case of eggs to us; we hatch the eggs and raise all the chicks under standard conditions. They are put into pens and are maintained there under standard conditions. The tests are based upon the relative efficiency livability and many other factors. There are about 12 different factors, I think, that are measured. The net return or the net potential return for different strains are measured and these results are published.

Mr. McKinley: Are these pullets, which I imagine are the only ones you raise, raised all together in one pen from day old or are they raised separately in different pens?

Mr. Williams: They are raised under two different levels of nutrition. The objective here, of course, is that it has been discovered that certain strains can do better under certain nutritional status than other strains can. We use two different feeds, so subject to that they are raised together.

Mr. McKinley: Thank you. Just a minute, you have broiler tests too. I understand.

Mr. Williams: That is correct, yes.

Mr. McKinley: Do you still have?

Mr. Williams: Yes.

Mr. McKinley: Are they carried out under much the same conditions?

Mr. Williams: They are much more limited at the present time.

Mr. McKinley: In strains?

Mr. Williams: Yes, in the number of entries. There is not as much interest in the broiler test because the broiler people are bigger and are doing their own testing now.

Mr. McKinley: They are carried out under much the same conditions.

Mr. Williams: The identical broad situation; namely, we get the eggs and hatch them.

Mr. McKinley: One question which I do not think you answered was how often you run the random sample tests on egg-laying strains?

Mr. Williams: We have an entry per year.

[Interprétation]

15. Toutefois, il s'associe de près aux recherches. Je vais simplement vous répondre rapidement. Les gens qui veulent faire un essai, nous envoient une caisse de 30 douzaines d'œufs. Nous élevons les poussins dans les conditions normales. On les met dans des poulaillers, on les y maintient dans des conditions ordinaires et les tests sont alors effectués sur la base du rendement relatif et d'autres facteurs. Il y a douze facteurs, je pense, en tout. Le bénéfice net ou les résultats nets des différentes variétés sont alors mesurés et publiés.

M. McKinley: Est-ce que ces poulets sont élevés dans un seul poulailler depuis le premier jour ou bien est-ce qu'ils sont placés dans différents poulaillers?

M. Williams: Ils sont élevés à deux régimes alimentaires différents. Nous pensons qu'à la suite de ce que nous avons constaté certaines variétés se comportent mieux avec un certain régime alimentaire par rapport à d'autres. Donc nous avons deux types de provenances différentes et cela entraîne une situation différente.

M. McKinley: Merci. Vous avez également des tests sur les poulets à rôtir n'est-ce pas? Sur les poulets à griller?

M. Williams: Oui. C'est exact.

M. McKinley: En faites-vous encore?

M. Williams: Oui.

M. McKinley: Sont-ils faits à peu près sous les mêmes conditions?

M. Williams: Ils sont beaucoup plus limités présentement.

M. McKinley: C'est difficile?

M. Williams: Oui, dans un certain nombre de demandes. Il n'y a pas beaucoup d'intérêt dans le test des poulets à rôtir, parce que ces gens sont plus importants et font leurs tests eux-mêmes.

M. McKinley: Ils sont faits à peu près dans les mêmes conditions.

M. Williams: En grand, la situation est pratiquement la même, soit que nous obtenons les œufs et nous les incubons.

M. McKinley: Une question à laquelle, je crois, vous n'avez pas répondu, à savoir quand ces tests au hasard sont-ils faits?

M. Williams: Bien, nous avons par an une arrivée.

[Text]

Mr. McKinley: Have you a test going at the present time?

Mr. Williams: That is a very good question. I believe so, but I would hesitate to say positively. I believe there is yes. Yes, I am certain there is, I am sorry. Yes, I know there is.

Mr. McKinley: Are visitors allowed to get in and see this test under way at any time?

Mr. Williams: No, no random visitors.

Mr. McKinley: How about members of Parliament?

Mr. Williams: Under special arrangements visitors are let in. It is solely for disease prevention that visitors are restricted.

Mr. McKinley: Thank you, Mr. Chairman.

The Chairman: Thank you. Gentlemen, we have reached the hour of adjournment. I understand that there are still questions to be asked on Item 5.

Item 5 stood.

The Chairman: Would the Steering Committee remain for 5 or 10 minutes.

The meeting is adjourned to the call of the Chair and there will be no meetings next week because of the Canadian Congress.

[Interpretation]

M. McKinley: Actuellement, vous en avez actuellement?

M. Williams: La question est valable. Je le crois, mais je ne le dirais pas positivement. Je crois que oui. Oui, j'en suis sûr. Je m'excuse. Oui, je sais qu'il y en a.

M. McKinley: Est-ce que les visiteurs ont le droit de voir ce qui se passe, de voir le test?

M. Williams: Non. Non, pas de gens, pas de visiteurs accidentels disons.

M. McKinley: Et les députés?

M. Williams: Si on s'arrange à l'avance, bien sûr, c'est possible. Ce n'est que pour prévenir la maladie que les visiteurs sont exclus.

M. McKinley: Merci, monsieur le président.

Le président: Messieurs, nous devons maintenant lever la séance. Je crois savoir qu'il y a certaines questions qui doivent être posées sur l'article 5.

Le crédit 5 est réservé.

Le président: Le comité directeur pourrait-il attendre quelque cinq minutes encore? La séance est levée, jusqu'à nouvelle convocation du président. Il n'y aura pas de séances la semaine prochaine à cause du Congrès canadien.

BINDING CECT. JAN 26 1970
